Paul's description of James as a pillar occurs in the context of a discussion in Gal 2:1–10 about a conference in Jerusalem. James figures prominently also in the conference concerning Paul's work detailed in Acts 15:1–29. The two accounts are difficult to harmonize and discussion continues as to whether Galatians and Acts refer to the same meeting (see e.g. Catchpole 1976–77: 432–38). According to the latter account, James proposed certain minimum requirements for gentile converts to Christianity, the so-called apostolic decree. He recommended that a letter should be sent to gentile converts telling them "to abstain from the pollutions of idols and unchastity and from what is strangled and from blood" (Acts 15:20). Problems arise concerning the promulgation of this decree, however, since Paul never refers to it and Acts itself has James informing Paul about it only late in his missionary career (cf. 21:25) (see Schmithals, 1965: 97–102). In any case, the position taken by James at the Acts 15 conference depicts him in a mediating role, falling between those who would not impose the Jewish law on gentile Christians and those who would (see Brown, 1983: 77). At the same time, James's support was claimed by some who required full observance of Jewish dietary laws by Jewish Christians and thereby caused a dispute between Cephas and Paul in Antioch during table fellowship (cf. Gal 2:11–14). According to Paul, before "certain men came from James" (2:12) Cephas ate with gentiles. Their arrival, however, caused Cephas, Barnabas, and other Jewish Christians in fear of "the circumcision party" (2:12) to separate themselves from the gentiles. See BARNABAS.

Thus, while the Acts 15 conference reflects a minimal imposition of the Jewish law on the gentile Christians by James, his authority as felt in the Antiochian dispute conveys a strictness on his part concerning Jewish Christian observance of the law. That adherence to the law by James

is seen also in Acts' portrayal of his meeting with Paul at the end of the latter's third journey. Upon Paul's arrival in Jerusalem, James and the elders advise him to prove his respect for the law by taking part in a temple vow ceremony (Acts 21:18–24).

James's devotion to the law was underscored in later tradition. For example, according to Hegesippus (writing ca. 180 and as quoted by Eusebius, *Hist. Eccl.* II.23.4–18), "from his excessive righteousness he [James] was called the Just and *Oblias*, that is in Greek, 'Rampart of the people and righteousness,' as the prophets declare concerning him." While the precise meaning of the attribution *"Oblias"* remains obscure (see Barrett 1953:15), it appears to witness to James's role as a support, i.e. a pillar, among his people. Hegesippus also reports that James constantly prayed in the temple where he spent so much time on his knees that they became hard like a camel's.

According to this same source, James was martyred at the hands of Scribes and Pharisees in Jerusalem by being cast down from a pinnacle of the temple and then stoned and clubbed to death. Josephus (*Ant* 20.200) had earlier and in less detail reported a similar tradition according to which the high priest Ananus accused James and "certain others" of having "transgressed the law" and delivered them up to be stoned. Both of these traditions place the death of James shortly before the destruction of Jerusalem in 70 C.E. The Hegesippus narrative says James was buried on the spot by the temple where he was killed.

The source of Hegesippus's report was apparently an Ebionite *Acts of the Apostles*. This work is not preserved in its original form but is mostly incorporated into the pseudo-Clementine literature (i.e. the Clementine *Recognitions* and *Homilies*). The Ebionites' veneration of their patron James the Just is also reflected in the *Gospel of Thomas*, an Egyptian compilation evidently dependent in part on a Jewish-Christian, probably Ebionite, source (Bruce 1977:119). According to Saying 12: "The disciples said to Jesus, 'We know that you are going to leave us: Who will be chief over us?' Jesus said to them, 'In the place to which you go, betake yourselves to James the Just, on whose behalf heaven and earth alike were made'."

The patronage of James was also claimed in some gnostic writings, and the gnostic apocryphal Epistle of James was ascribed to him. In addition, James was accepted as having been the author of the apocryphal gospel, the *Book of James*, as well as the canonical Epistle of James. Concerning his reputed authorship of the latter, see JAMES, EPISTLE OF.

JAMES, EPISTLE OF. The epistle of James stands in the canon of the NT as the first of the "catholic" or "general" epistles: that is, letters addressed not to a specific church or person, but to a widely defined audience.

A. Canon History

The epistle appears fairly late in the history of the NT canon. It is first quoted with attribution by Origen of Alexandria (ca. 185–254 C.E.). The claims of Eusebius (*Hist. Eccl.* 6.14.1) and Cassiodorus (*Inst.* 8) that it had been earlier commented on by Clement of Alexandria are not substantiated by any reference to the epistle in Clement's surviving writings. It is probable that Origen came to know the epistle not from its use in his native Alexandria but in Palestine where he later settled, since it is quoted, though without attribution, in the pseudo-Clementine *Epistles to Virgins*, which are thought to be of 3d-century Palestinian provenance, and since the church of Jerusalem took a pride in preserving links with James, its traditional founder. After Origen the epistle came into use in the church of Alexandria: Eusebius classes it among the "disputed" books of the NT, that is those not in universal use in the Church (*Hist. Eccl.* 3.25.3, 2.23.24–25), but its place is unqualified by Athanasius in the canon list of his 39th Festal Letter of 367 C.E. It is not until the latter part of the 4th century that it begins to be similarly known and quoted in the Western church. It is absent both from the Muratorian Canon, thought to represent the scriptures of the church of Rome ca. 200, and from the Cheltenham List, similarly thought to represent the church in Africa ca. 359; but its place in the West is established through its use by Hilary of Poitiers, Augustine, and Jerome, and it appears in the lists affirmed by the Councils of Hippo in 393 and Carthage in 397. It is probable that the Western church came to know the epistle through leaders who had contact with the churches of Egypt and Palestine, though the Eastern church of Syria continued to be ignorant of it, or to ignore it. James appears in the "authorized" Syriac translation, the Peshitta, ca. 412 C.E., but contemporary

writers Theodore of Mopsuestia and Theodoret make no reference to it.

Once generally established in the canon, however belatedly, the epistle's place remained secure until Luther's celebrated attack on it as "an epistle of straw" in his 1522 Preface to the NT. Because of what he saw to be James's rejection of the Pauline doctrine of justification by faith, Luther denied that the epistle had apostolic authority; and in his translation of the NT he relegated it from its canonical position to the end, together with his equally disliked Hebrews, Jude, and Revelation. Despite Luther, however, James has maintained its position in the Protestant, as well as the Catholic, Bible.

B. Author, Date, and Place of Composition

Origen refers to the author simply as "James" or "James the apostle" (fr. 126 in *Jo.*). Eusebius assumes that this James is the one referred to in the NT as "the Lord's brother" (Gal 1:19), the leader of the church in Jerusalem (Acts 15:13, 21:18), and there is no reason to suppose that Origen thought otherwise, although reference to James as "the brother of the Lord" comes only in Rufinus's Latin translation of his *Commentary on Romans*, 4.8. There is no other serious contender among the Jameses of the NT. Jerome, who agonized about the degree of relationship between James and Jesus, identified James of Jerusalem with James the son of Alphaeus (Mark 3:18), whom he also argued was Jesus' cousin, and this has been widely accepted in Catholic tradition. The question is whether the "James" of the epistle's address is genuinely James of Jerusalem, or whether his name is being used as a pseudonym by an unknown author to give his writing authority.

Arguments in favor of the traditional authorship include (a) the simplicity of the introduction of "James, a servant of God and of the Lord Jesus Christ" (1:1), which a pseudonymous author might have been expected to embellish; (b) the author's reverence for "the perfect law, the law of liberty" (1:25, cf. 2:8–12), which is consistent with the tradition of James's loyalty to the Jewish Torah and concern for its observance (Acts 15:13–21, 21:18–24; Euseb. *Hist. Eccl.* 2.23.4–7, quoting Hegesippus); (c) some linguistic similarities between the epistle and the speech and letter of James in Acts 15; (d) reference to "the early and the late rain" (5:7), a phenomenon of the Palestinian climate.

Against the traditional authorship are (a) the quality of the written Greek of the epistle, which is higher than might have been expected of the family of a Galilean artisan, even though they would most probably have spoken the language; (b) the paucity of reference to Jesus himself which would be surprising for one who was so closely associated with him in his lifetime, even though the Gospels are unanimous that Jesus' brothers were unsympathetic to his ministry (Mark 3:21, 31–35 and par.; John 7:3–9), and who was also a witness of his resurrection (1 Cor 15:7). (c) the discussion of faith and works without reference specifically to "works of the law" (2:14–26).

The arguments on each side are of varying weight, and some may be readily countered: As, for instance, the supposed Palestinian reference may derive from a knowledge of the OT (e.g. Deut 11:14; Joel 2:23) rather than from actual experience; while the literary quality of the epistle's Greek might be due to James's using a secretary, or to a two-stage process of composition whereby some original sermons of James have been edited by another author. The last argument is, however, the most telling against the traditional authorship. The claim that "a man is justified by works and not by faith alone" (2:24) unmistakably recalls the terms of the Pauline debate about the role of the law in salvation (as in Rom 2:9–5:1; Gal 2:15–3:24), and James of Jerusalem—who knew Paul personally and was himself so loyal to the Jewish law—must have appreciated the content and terms of that debate.

If the traditional authorship is maintained, then the epistle must be dated before James's death, which is variously reported as in 62 C.E. during the interregnum between Festus and Albinus as procurators of Judea (Joseph. *JW* 20.200) or as in 67 C.E. immediately before Vespasian's invasion of Palestine (Hegesippus, in Euseb. *Hist. Eccl.* 2.23.18). It would remain to be decided whether the epistle belongs to the early period of James's leadership of the church in Jerusalem, in the 40s or early 50s, or to the later troubled times preceding the Jewish revolt.

If the authorship is pseudonymous, then the question is wide open, for the epistle contains no reference to external events by which it might be dated. Some have found internal indications of an early date in supposedly "primitive" features such as the simple, undeveloped Christology; allusions to the words of Jesus independent of their fixed form in the written gospels; the absence of developed forms of church leadership and organization, leaders being described simply as "elders" (5:14) and a meeting either taking place in or being described as *synagōgē* (2:2). On the other hand, a later date, into the second generation or even 2d century of Christianity, has been argued from some of the same material: from what is seen as growing institutionalization, in which charismatic gifts are vested in church officials (5:14–15, the elders who heal; cf. 3:1 where to teach is to choose to take on that role, not to exercise a spiritual gift); from indications of a settled community, conforming to the values of the surrounding society in welcoming a rich visitor to its meeting (2:2–4); and also from a waning of eschatological expectation seen in the translation of the idea of a "trial" to be endured from apocalyptic tribulation to psychological experience (1:12–15, cf. 1:2–4) or to everyday afflictions (1:27, 5:10–11). All of these considerations are not only speculative in themselves, but unreliable for dating purposes, since matters such as the development of institutions and the survival of oral tradition may be dictated by quite other considerations than merely the passage of time: for example, the cultural inheritance and environment of the community.

External evidence provides a more reliable guide to the document's date. If the author has adopted the pseudonym of James of Jerusalem, he is not likely to have done so in James's lifetime, but when he had become a revered figure of the past. In that case, the death of James would provide the *terminus a quo* for the epistle, and its quotation by Origen the *terminus ad quem*. It may be possible to narrow this bracket. Although Origen is the first to quote the epistle *verbatim* and with acknowledgment, there are considerable parallels in language and ideas between James and the *Shepherd of Hermas*, concentrated in certain

sections of that lengthy work (Mandates 5, 9 and 12), and these have led some scholars to conclude that the author of the *Shepherd* was also familiar with the epistle. The date of the *Shepherd* is itself debatable, since Hermas is presented in the book as a contemporary of Clement of Rome, ca. 96 C.E. (Vis. 2.4.3), but the author is identified by the Muratorian Canon as the brother of Pius, bishop of Rome from 139–54 C.E. A date in the early decades of the 2d century is usually preferred. See HERMAS' THE SHEPHERD. So far as dating James is concerned, then, we cannot confidently suggest anything more precise than the last three decades of the 1st century or the beginning of the 2d.

The address of James "to the twelve tribes in the Dispersion" (1:1) is impossibly wide for a real destination in geographical terms. It might serve to identify the readers racially or religously as Jewish Christians, or it may be an idealized description of them as the "new Israel." This epistle is not a letter sent from one place to another like the letters of Paul; rather the author has adopted the letter form as a literary convention, to address the community to which he belonged. He and his readers are to be located together. If James of Jerusalem is the author, then the place of origin is of course Palestine. If pseudonymous authorship is adopted, Palestine may still be claimed on such arguments as (a) the memory of James was most potent there, so that the choice of precisely that pseudonym is readily understandable; (b) contact with the oral tradition of the teaching of Jesus would be more readily available in the place of his actual ministry; (c) James emphasizes God's choice of and rewards for the poor and his retribution on the rich (1:9–11, 2:2–7, 5:1–6), which would be relevant to the church of Palestine whose real poverty occasioned Paul's charitable collection from his gentile churches and is likely to have been exacerbated by the Jewish revolt (Gal 2:10; 1 Cor 9:1–15; Rom 15:25–27); (d) it is likely that Origen came to know the epistle after his move to Palestine, and it may well have been preserved in its place of origin while remaining unknown elsewhere; (e) the allusion to the Palestinian climate already referred to (5:7). "The early and the late rain" is also experienced in Syria, which is another frequently suggested place of origin, and support for this is also found in similarities between James and the gospel of Matthew (e.g. James 5:12, cf. Matt 5:33–37), which is widely thought to have originated in Antioch. This argument, however, proceeds from an unknown to an unknown, and the continued neglect of the epistle by the church in Syria after it had been recognized in all other areas of the Church must militate against it.

If the evidence that James was known to the author of the *Shepherd of Hermas* is accepted, then Rome becomes a probable place of origin, since it is certainly there that the *Shepherd* was written, and this would be consistent with similarities between James and other Roman documents, 1 Peter and *1 Clement*. The subsequent disuse of the epistle in the Western church and its reappearance in Palestine would be explained by the general nature of the document's contents, which might only have a lasting appeal to those concerned to preserve links with the authority of James of Jerusalem.

C. Situation of Author and Readers

If the date and place of origin of the epistle cannot be conclusively identified, much more can be said about the general situation and environment of author and readers. The epistle envisages an established, settled community which holds meetings (2:2); has as leaders its own "elders" (5:14); and also recognizes individuals as "teachers" (3:1), a category in which the author appears to include himself. (Teachers might, of course, be included among the elders rather than having a separate ministry, cf. 1 Tim 5:17). The members of the community would no doubt regard themselves as among "the poor," but they are assumed to have the means to relieve each other's needs (2:15–16), and resentment of the rich does not prevent them welcoming a rich visitor to their meetings; indeed the vehemence of the author's attack on the rich in 2:6–7 and 5:1–3 may indicate that they were rather too ready to do so. They are not subject to persecution: the oppression and abuse referred to in 2:6–7 is more likely to reflect the legal and economic pressures that can be put on the disadvantaged by those more powerful in their society than an attack launched on the faith per se. The assumption that their meetings are open to visitors means that they have not been forced into a ghetto nor have they created a closed community as a defensive reaction. Not subject to external attack, they are also untroubled by internal divisions either on doctrinal and ideological or on economic and social grounds (contrast the church in Corinth which experienced all these). Tensions are those of personal relationships in a small society: anger (1:19–20), jealousy (4:1–2), slander and criticism (4:11–12). They need to be roused from inactivity to positive action (1:22–27, 2:14–17, 3:13–18) rather than deterred from any misguided enthusiasm.

This community is variously located in the country and the town: there is reference to agricultural conditions in 5:4, 7, and to trading activity in 4:13–15. The former may, however, be understood in terms of biblical allusion rather than of actual experience. An urban environment is more probable in general because Christianity first established itself in cities and towns, only gradually spreading into the countryside; and in particular because James clearly belongs to the multicultural environment of the Hellenistic cities. The author employs catchphrases from popular philosophy (1:21, "the implanted word"; 3:6, "the cycle of nature"); metaphors with little biblical background but common in Greek and Latin literature (3:3–4, horses and ships; 3:7, the four orders of nature; 4:14, the mist); the technical vocabulary, if somewhat inaccurately used, of astronomy (1:17); and the language of popular pious superstition (4:15, "If the Lord wills . . .") and magic (2:19, 4:7, the shuddering and flight of demons are known in the magical papyri).

Judaism, which took its place in this world, is also obviously part of his cultural heritage. He affirms the central Jewish proposition "that God is one," in the terms of its central prayer (2:19, cf. Deut 6:4, part of the *Shema*), and warns of Gehenna, the place of punishment (3:6). He draws freely on the OT for quotation (2:8, 2:11, 2:23, 4:6), for example (2:21, 2:25, 5:10–11, 5:17–18), and in the telling allusions that an author can make in the confidence that his readers will catch them (1:10, "the flower of grass," from Isa 40:6 LXX; 3:9, "men . . . made in the likeness of

God," from Gen 1:26; 5:4, "the ears of the Lord of hosts," *Sabaōth,* from Isa 5:9 LXX).

The epistle is often characterized as a document of "Jewish Christianity," but it is not clear from its contents that the author and readers were themselves Jews. Despite the puzzle of the unidentified quotation of 4:5, the appeal to the OT is straightforwardly to the text, without requiring any explanation from Jewish exegetical tradition. James's praise of "the perfect law, the law of liberty" (1:25, cf. 2:12), and his insistence that it be kept in full (2:10) may readily be paralleled in Jewish literature, but his appeal to actual tenets of the law is confined to the decalogue (2:11), and to Lev 19:18, singled out as "the royal law" most probably on the authority of Jesus (2:8). This may be contrasted with the implications drawn from the principle of the wholeness of the Law by Paul (Gal 5:3) and Matthew (5:18–19, 22:40). James shows no interest in the cultic observances that served to affirm Jewish identity in the Hellenistic world: the observance of the sabbath and the food laws, and the practice of circumcision which was a key issue in Paul's debate with Judaizing Christianity. It could be argued that, as a Jew, the author of James took these matters for granted; but against this has to be set his failure, already noted, to appreciate that the faith-works controversy had any implications for the Jewish law. His use of *synagōgē* in 2:2 is sometimes appealed to as indicating that James's community met in a Jewish synagogue, or, as Jewish Christians, had constructed their own "synagogue" after the model with which they were familiar; but, leaving aside the question of whether any Christian community could have had its own building at this time, the word is widely used in the general sense of "an assembly of persons," or "a meeting" as the occasion of an assembly, either of which would make sense in this context.

Even the adoption of James of Jerusalem as his pseudonymous authority does not mark the author out as a Jewish Christian, for although James was the leader of Jewish Christianity, and documents like the pseudo-Clementine *Homilies* and *Recognitions* show that he was revered by later heterodox Jewish Christians as their founding father, he is similarly revered in gnostic literature not obviously influenced by Judaism (*Gos. Thom.* 12; *Ap. Jas.* and *1 and 2 Apoc. Jas.*, NHC 1.2, 5.3,4), and his leadership is remembered and commemorated in the mainstream of Christian tradition (Clem. Alex. in Eusebius, *Hist. Eccl.* 2.1.3, 23.1; Epiphanius, *Haer.* 78.7). "James" is a pseudonym which might be adopted by a Christian author of any background who desired to address his specific community in terms, and with an authority, appropriate to the Church at large. The "twelve tribes in the Dispersion," too, could never be a literal address to Diaspora Jewry, since the reconstitution of the twelve tribes had long been part of eschatological hope only (e.g. Isa 11:11–16; Zech 10:6–12; 2 Esdr 13:39–47), but is most readily understandable as an ideal description of the Church in its role as the new, or true, Israel in the world (cf. Gal 6:16; Heb 4:9; 1 Pet 2:9–10; and for gentile Christian churches as the "dispersion," cf. 1 Pet 1:1 and the addresses of *1 Clement,* the *Epistle of Polycarp,* and the *Martyrdom of Polycarp.*)

James shows, then, something of the ethos of Judaism: its monotheism, its appeal to the holy book, and its broad moral concern, without the clear marks of belonging to the Jewish community. It is probable that the background of author and readers is to be found among the "god-fearers": those non-Jews who were attracted to what they saw as the Jewish philosophy, who stood on the fringe of the synagogues of the Diaspora, though possibly also of Palestine as well (cf. Luke 7:2–5), without being full proselytes; and who formed, it seems, a ready audience for Christian preaching (Acts 10:2, 22, 13:16, 26, 16:14, 17:4, 17, 18:7). They would bring that ethos into their Christianity, together with forms of organization with which they had been familiar in the synagogues, but without any concern to be involved in debates touching on Jewish identity, to which they had never committed themselves.

D. Christianity of the Epistle

The Jewish characteristics of James are thrown into prominence by its lack of a strong Christian coloring. "Jesus Christ" is referred to only twice, in 1:1 and 2:1, which some older scholars even suggested excising as glosses to reveal an originally Jewish tract. This expedient, which has no justification from textual evidence, is not to be adopted, since the evidence of Christian character is considerably more extensive than those two explicit references. In both of them, Jesus is identified as "the Lord" or "our Lord," using the title by which Christians acclaimed the risen Jesus (Acts 2:36; Rom 10:9; Phil 2:8–11). In 2:1 he is further described as "the Lord of glory" in a syntactically difficult phrase which might also be translated as "the glorious Lord" or "the Lord, the glory"; the association of Jesus with glory may relate either to his role as the revealer of the glory of God (cf. John 1:14; 2 Cor 4:6; Heb 1:3), or to his coming in glory at the last judgment (Matt 25:31; 2 Thess 1:7–10). In 5:7–8 "the coming of the Lord" certainly refers to the return of Jesus, since the word used, *parousia,* "coming," is a technical term for that event in early Christian literature (e.g. 1 Thess 2:19; 1 Cor 15:23; Matt 24:3; 1 John 2:28; 2 Pet 1:16). James's community is termed "the church," *ekklēsia,* (5:14), in the characteristic self-designation of the Christian community, considered both as a local group and an (at least potentially) universal phenomenon (Matt 16:18, 18:17; 1 Cor 1:2, 12:28; Phlm 2, Col 1:18); and its elders anoint "in the name of the Lord" as other Christian healers acted in the name of Jesus (Acts 3:6, 4:30, 16:18; Mark 16:17). The allusion in 1:18 to God's having "brought us forth by the word of truth" is probably to be understood as James's echoing the language of rebirth in which other Christians expressed their understanding of the experience of conversion and baptism (John 3:3–8; Titus 3:5; 1 Pet 1:3, 23; baptismal ideas and language may also be found in Jas 1:21 and 2:7); and parallels between James and 1 Peter have been taken to show their sharing in a common pattern of Christian catechetical teaching (1:2–4 and 1 Pet 1:6–7; 1:18, 21 and 1 Pet 1:23–2:2; 4:6–8 and 1 Pet 5:5–9). The two most interesting areas of discussion in assessing the Christianity of James are, however, his use of the teaching of Jesus and his involvement in controversy with Paul.

1. James and Jesus. James nowhere cites the teaching of Jesus as such, but his prohibition of oaths in 5:12 unmistakably recalls Jesus' prohibition in Matt 5:33–37. Although reticence in the use of oaths was counseled both by Jewish teachers and Greek philosophers, there is no cer-

tain evidence of a comparable absolute ban on their use, which would seem therefore to be unique to Jesus. If James may confidently be seen to draw on the teaching of Jesus here, then he may arguably do so in contexts where the similarity of language and distinctiveness of content are not so marked. Thus in 2:8 he identifies Lev 19:18 as "the royal law" to be fulfilled, as Jesus also singled it out in Mark 12:31 (with parallels in Matt 22:39 and Luke 10:27). R. Akiba (ca. 50–132 C.E.) also singled out Lev 19:18 as the most comprehensive principle of the law, so Jesus may not have been unique in doing so in his day, but James's description of the commandment may indicate that he regarded it as the law of "the kingdom of God" which Jesus preached. His encouragement to "ask . . . and it will be given (1:5) recalls Jesus' instruction to do so in Matt 5:7–11 and Luke 11:9–13; and his reminder that God has "chosen those who are poor in the world to be . . . heirs of the kingdom" (2:5) echoes Jesus' beatitude on the poor, who are promised the kingdom in Matt 5:3 and Luke 6:20.

Because the closest parallel between James and the teaching of Jesus occurs in material peculiar to Matthew's gospel, while all the others are with material present in Matthew as well as other gospels, it is often argued that James has a special connection with Matthew, either in terms of a literary knowledge of and dependence on that gospel or of belonging to the community or tradition from which the gospel also came. This is unlikely. Even in the closest parallel there are significant differences in wording between Jas 5:12 and Matt 5:33–37, while in the other parallels James is not markedly closer to Matthew's version than to the other gospels (in the beatitude on the poor he is closer to Luke's simple blessing of "the poor" than to Matthew's spiritualized "poor in spirit"). More generally, Matthew is clearly engaged in debate about the relation between Judaism and Christianity, hostile to the Jewish leadership yet concerned to maintain the integrity of the law; thus the prohibition of oaths is given a polemical edge in an attack on Jewish casuistry, and the great commandment is seen to involve "all the law and the prophets" (Matt 22:40). These concerns do not color James's teaching, and he and his community would not therefore seem to be in the same situation as Matthew's.

James's contact with the teaching of Jesus is more likely to have been with a continuing oral tradition than through dependence on any of the written gospels, since the various similarities, though striking, do not amount to exact verbal correspondence. If so, there are three points of particular interest. (a) His contact is with material across the range of what are usually identified as the sources of the Synoptic Gospels. The singling out of Lev 19:18 belongs to the Markan tradition; the encouragement to ask and receive, and the beatitude on the poor, to that common to Matthew and Luke ("Q"); the prohibition of oaths to Matthew alone. This might indicate that the gospel material was more widely transmitted, and sources less insulated from each other, than their separate identification sometimes seems to imply. (b) While James's material may be independent of gospel fixity and derived from oral tradition, it is not therefore necessarily the more-original form, for he has related it to his own interests. Thus he identifies the gift to be asked of God as specifically the gift of "wisdom" (1:5—contrast Luke's "Holy Spirit," 11:13, and Matthew's "good gifts," 5:11, but compare James's interest in wisdom in 3:13–18)—and raises the possibility of the request that is not answered (1:6–8, cf. the same concern in 4:3–4). (c) The comparisons between James and the Gospels show two ways in which the teaching of Jesus might be used. In the context of the Gospels, the teaching is obviously attributed to Jesus and carries his authority, whether or not it was uniquely (or even authentically) his. There is no such attribution of the teaching in James. Although he is most probably aware, especially in 2:8, that he is drawing on Jesus' words, it is not important to him to single them out as having a distinctive authority; rather they contribute to the general stock of Christian ethical instruction along with material from other sources and the author's own insights. We may compare the practice of Paul, for whom it was sometimes important to invoke a "word of the Lord" as such (1 Cor 7:10), but who would also draw the teaching of Jesus without discrimination into the course of his own argument (Rom 13:7; cf. Mark 12:17; Rom 13:9; cf. Mark 12:31).

2. James and Paul. James does not refer directly to Paul any more than he does to Jesus, but when, in the course of his discussion of the necessary association of faith and works (2:14–26), he conducts that discussion in terms of "justification" and of the example of Abraham (2:21–25), his argument inevitably recalls that of Paul in Romans 3–4 and Galatians 2–3. The differences between the two may be seen polarized in Paul's conclusion that "we hold that a man is justified by faith and not by works" (Rom 3:28, cf. Gal 2:15) and James's that "a man is justified by works and not by faith alone" (2:24). It is sometimes suggested that James's argument is prior to Paul's and that Paul wrote in part to answer it, but while Paul's argument on justification does not require James's to explain it, the strongly polemical tone of James's language indicates that he knows a position which he is concerned to refute: "and not by faith alone".

It is, however, unlikely that James was familiar with Paul's argument as Paul himself presented it, for he ignores a number of important points. (a) Paul talks specifically about works done in obedience to and fulfilment of the Jewish law, while James makes no such reference to the law, but thinks of works of charity in general. (b) Paul attacks such works when done with a view to gaining justification from God, which he deems to be impossible; James commends works as part of the response of faith in God. (c) Although both appeal to the example of Abraham and the statement of his justification in Gen 15:6, Paul relates Abraham's justifying faith to his acceptance of the promises of Gen 15:5; James relates it to Abraham's willingness to sacrifice his son in Genesis 22, thus missing Paul's carefully made point that Abraham's justification preceded, and had nothing to do with, his circumcision and implicit acceptance of the law in Gen 17:9–27 (Rom 4:10–11). (d) James does not deal with Paul's other major proof-text, Hab 2:4 (Rom 1:17; Gal 3:11); and conversely James's other example, Rahab (2:25), is not derived from Paul. In spite of the apparent similarity of their language, James does not seem to know what Paul's argument was really about, and it is highly improbable that he had either read Paul's letters or heard Paul's own exposition of his views.

Whether he thinks that the position he is himself concerned to refute has Pauline authority is another matter. The absolute detachment of faith from works in relation to justification seems to have been an original insight of Paul's, and justification as the language of salvation is as associated with him in the NT as it has been by later generations. The term appears in Acts only in Luke's record of Paul's speech in the synagogue at Pisidian Antioch (Acts 13:38–39); and in the Pastoral Epistles, written under the pseudonym of Paul, in a summary statement of salvation, perhaps in an attempt to "Paulinize" an existing credal formula (Titus 3:7). This latter passage shows that Paul's rejection of justification by works could be reinterpreted outside the context of the Judaizing argument to relate to righteous works in general which might be thought to earn salvation, and this reapplication is also found in *1 Clem.* 32:4, whose author is clearly familiar with Paul's argument in Romans. James has heard the language used even more generally, to support a religious attitude which emphasized the pious expression of trust in God and regarded works of active charity as of little importance, if not indeed to be actually discouraged. It is probable that those who thus appealed to "justification by faith" as their slogan did so on what they saw to be Paul's authority, and that James knew this; if so, the debate must have been conducted in an area of the Church where Paul was remembered and revered (as, for instance, Clement shows that he was in Rome a generation after his death).

James's Christianity, then, is characterized by a strong ethical concern, reinforced by the certainty of having entered a new life, and also by the certainty of eschatological rewards and punishment. The authority of Jesus as risen Lord is acknowledged, and his teaching drawn upon. There is room for ideological dispute in his community, over the relative importance of charity in the life of faith, but no evidence of any speculative interest in doctrinal matters. This is not a Christianity likely to produce either heresy or creative theology, but was no doubt congenial to those who had been attracted to a similar concern in Judaism, but were now offered a community centered on its own Lord and of which they could more fully and readily become part.

E. Content and Distinctive Ideas

Analyses of the structure of the epistle range between the detection of an underlying plan or pattern into which each section may be seen to fit, and regarding it as a collection of disparate material assembled from oral sources and linked together only by "stitch-words" or verbal echoes. The first suffers from the very general nature of much of James's material which seems artificially forced into too tight and comprehensive a scheme; the second ignores the presence of themes which run through the five chapters. It is better to see the author as developing some leading ideas in a variety of expressions and connections. His main concern is with Christian behavior, its consistency, and its community context. There should be consistency between faith and action; consistency in different activities; a common concern for each other. (There does not appear to be any impulse to mission outside the community.)

1. Faith and Action. The testing of faith produces wholeness of character (1:2–4). Since God tempts no one, the overcoming of temptation is the subduing of one's own destructive desires (1:12–15). To appropriate the baptismal word of salvation is to renounce evil deeds (1:21). To hold the faith of the Lord Jesus Christ is to exclude partiality (2:1). Faith must issue in works to be a living faith (2:14–26). God-given wisdom reveals itself in characteristic action (3:13–18, cf. 1:5). To follow one's own passions is to seek the friendship of the world and thus to be at enmity with God (4:1–4); the remedy being a wholehearted repentance and return to him (4:6–10). Plans for the future should be made subject to divine permission (4:13–15), and endurance of the present is rendered possible by the hope of the coming of the Lord (5:7–8), and by the example of former men of faith (5:10–11).

James returns frequently to the subject of prayer. As action should be consistent with faith, so prayer, as the expression of faith, should be wholehearted and related to action. God is one: an article of faith to which the demons rightly respond with terror (2:19), and as the one God he is the only giver of good gifts (1:17), giving generously and unreservedly (1:5). Requests to him should therefore be made wholeheartedly, with no doubt about his ability or willingness to give (1:5–8); and should be for objects consistent with his character (4:2–4). James sees no problem in unanswered prayer; it is to be explained by the inadequacy of the prayer, either untrusting or misdirected. He applies to the man whose prayer thus fails his most characteristic pejorative adjective "double-minded," *dipsychos* (1:8, cf. 4:8; a term unparalleled in the LXX or the NT, though found in other early Christian literature, notably the *Shepherd of Hermas,* Mandate 9, and perhaps related to the Jewish analysis of man as having "two impulses"). Even where prayer expresses a proper confidence in God, it should be accompanied by action if it is to be worth anything (2:15–16). True and fervent prayer is, however, powerfully effective, as in the example of Elijah (5:17–18). Prayer and praise are the proper response of the individual to suffering or joy (5:13), and James encourages prayer within the community for its members, both in the specific case of sickness (5:14–15) and in general as a remedy for sins (5:16).

2. Consistency in Action. As Christian behavior should be consistent with Christian faith, so it should be consistent in itself. Those who hear the word should also be doers of it (1:22–25). The law (whatever its contents in practice) should be kept in full, with each commandment given weight; and all persons should be treated alike under it (2:8–11). It is intolerable to bless God and curse men made in his image (3:9–11). James is especially concerned with "sins of speech," where he sees inconsistency as most blatant; this relates of course to his concern with prayer, but he expresses his concern at large. It is best to be swift to hear but slow to speak (1:19). True religion involves bridling the tongue (1:26, cf. 3:2–4). Teachers, who deal in words, are at greatest risk, and few should assume this responsibility (3:1). Speaking evil of each other in the community, whether in slander or criticism, is to be condemned (4:11–12). Speech should be a straightforward and truthful matter, where "yes" means yes and "no" no, without need of the dangerous reinforcement of oaths (5:12). James gives vent to his conviction of the seriousness

of sins of speech in a highly rhetorical description of the tongue, smallest but most powerful member of the body: It is "a fire"; "a world of wickedness"; untamable, polluting, poisonous, inflamed by hell (3:5–8).

3. Mutual Concern. The pursuit of consistency and integrity is not, however, a quest for personal and individual purity: James's concern is for Christian behavior in the community. As prayer for God to relieve hardship should be accompanied by efforts to do so oneself (2:15–16), so "true religion" involves both the care of widows and orphans and keeping oneself uncorrupted by the world (1:27). The epistle closes with the vision of a mutually supportive community, confessing sins to one another and praying for one another, each watchful for anyone who goes astray, since to reclaim him is for the benefit of both (5:16, 19–20).

Rich and poor are among the most basic of social divisions, and James's concern for the poor and hostility to the rich may relate to his desire to encourage the ideal of Christian community as much as to the empirical experience of his own group. He regards the rich as almost by definition excluded from the Church. The lowly brother may be confident of his future exaltation, but the rich man (surely not a "brother") can only look forward to humiliation and ultimate annihilation (1:9–11). Although the rich visitor is not to be excluded from the Christian meeting, those who are tempted to welcome him over-enthusiastically are reminded of the usual role of the rich as their oppressors (2:1–7). Prosperous traders are reminded of their essential impermanence (4:13–16); and, in a passage of dramatic invective like his tirade against the tongue, James calls upon the rich to "weep and howl," to recognize the corruption of their treasure, and to await their inevitable fate in "the last days" or "the day of slaughter" (5:1–5). In his equation of the rich as wicked and the poor as God's chosen, James is following a long-standing convention running from the OT (e.g. Psalms 10, 49, 140) into the self-understanding of the Qumran community and some early Christian groups. It should be noted though that he does not idealize poverty per se, but indicates that it is the poor who are in fact righteous, who are the object of God's favor. Thus it is the poor brother who will be exalted, not simply the poor man (1:9); the poor are chosen to be "rich in faith" and to inherit the kingdom (2:5); the oppression of the poor by the rich which calls for vindication is epitomized in the death of the unresisting "righteous man" (5:6). Here as elsewhere James is an interpreter and not merely an inheritor of tradition, and through his varied material runs his conviction of the need for the Christian man to be whole in word and deed, singleheartedly serving both the one God and his brethren.

F. Language and Text

The author uses the Greek language with fluency and a certain sense of style. Although not of the quality of classical literature, his writing shows grammatical ability and is virtually free of solecisms and colloquialisms. He opens with "Greeting", using the infinitive *chairein* as is usual in a Hellenistic letter (1:1, cf. 1 Macc 10:18, 25, 12:6; Acts 23:26); uses the rhetorical *age nun* (4:13, 5:1); and gives the correct oath form of the accusative of the thing sworn by (5:12), by contrast with Matthew's semitic idiom of *en* plus the dative. He has a wide vocabulary, including some words not found elsewhere in the NT or the LXX (e.g. "sea creature," *enalios,* 3:7; "daily," *ephēmeros,* 2:15; "dejection," *katēpheia,* 4:9). His style shows a fondness for alliteration, as in *peirasmois peripesēte poikilois* (1:2, "you meet various trials") and *mikron melos estin kai megala auchei* (3:5, the tongue "is a little member and boasts of great things"); and for the cadence of words with similar endings, as in *exelkomenos kai deleazomenos* (1:14, "lured and enticed") and *anemizomeno kai ripizomeno* (1:6, "driven and tossed by the wind"—the former word even may have been coined by James for this effect, as he may also have coined the evocative *chrysodaktylios,* "gold-ringed," 2:2). Alliteration and cadence are both found in James's admittedly imperfect hexameter: *pasa dosis agathē kai pan dōrēma teleion* (1:17, "every good endowment and every perfect gift").

This sensitivity to, and ability to make effective use of, the sound of the Gk language tells against any theory that the epistle has been translated from an Aramaic or Hebrew original. We have already illustrated his use of biblical quotation and allusion, and his familiarity with the LXX has influenced his language more generally. Most "semitic" idioms are to be explained by the author's knowledge of the LXX. Thus he uses the compounds *prosōpolēmpsia* and *prosōpolēmpteo* (2:1, 9, "partiality" and "to show partiality," derived from the LXX *prosōpon lambanein*), and compound phrases like *poiein eleos* (2:13, "to show mercy"); *poiētēs logou* (1:22, "a doer of the word," cf. 4:11, *poiētēs nomou,* "a doer of the law"); *prosōpon tēs geneseōs* (1:23, "natural face"); and *en pasais tais hodois autou* (1:8, "in all his ways," cf. 1:11). As he can draw on vivid Hellenistic imagery in his rhetorical attack on the tongue (3:2–8), so he can adopt an archaic or biblical style in his "prophetic" denunciation of the rich (5:1–6). There is no need to resort to theories of multiple authorship or different editors to explain this variety of style: It simply requires an author who is sufficiently at ease with his language. (Luke can similarly adapt his style to include the poetic and archaic birth-narratives of Luke 1–2 and the almost classically heroic account of Paul's shipwreck in Acts 27.)

The textual history of the epistle reflects its canon history. It was in the church of Alexandria that James first came into regular use, and it has early and strong support in mss of the Egyptian text-type: Among the papyri the fragmentary 3d-century papyri 20 and 23 and 5th-century papyrus 54 contain some verses each of the epistle, while the 6th or 7th-century papyrus 74 has a substantial part of the whole; the major 4th and 5th-century uncials Sinaiticus, Vaticanus (B), Alexandrinus (A), and Ephraem (C) all have it, Vaticanus being generally regarded as the best witness to the text. From Origen onwards quotations by Alexandrian authorities are also available to the textual critic, as also the Sahidic and later the Bohairic Coptic versions. Conversely, the long disuse of the epistle in the Western Church is apparent in its lack of representation in Gk mss of the Western text, and there is, of course, no quotation by the early Western fathers, whether in Greek or Latin. The Old Latin version is found in the 9th-century Codex Corbeiensis (ff) and *Speculum Pseudo-Augustini* (m), and peculiarities there indicate that James was translated separately from, and probably later than, the other catho-

lic epistles which earlier achieved popularity in the West. Augustine was to complain of the unusual badness of the Latin translation available to him (*Retractationes* 2.32), but the epistle came firmly into Latin textual history with the Vulgate, under the authority of Jerome. In Syria, canon history begins with the Peshitta, and so also the history of the Syriac text; the 9th-century mss K and L of the Koine or Lucianic text-type present James as it would have come to be read in the Greek-speaking church of Syria, and on into the Byzantine text of the Middle Ages.

The long neglect of the epistle may have served to insulate its text against copying error and emendation, for major textual variants are few. (It is always possible, of course, that errors could have been made at an early stage, left uncorrected, and so become entrenched with no textual variance to indicate them.) Some occur where James's language is obviously obscure or unfamiliar and scribes have tried to make the best of it: at 1:17, with the somewhat pretentious astronomical language; and at 5:8, where the "early and late" have been variously specified as "rain" or "fruit" by copyists more or less familiar with climatic conditions or biblical idiom. At 2:19 some have failed to catch the echo of the *Shema,* Deut 4:6, "God is one," and found instead a simple statement of monotheism, "there is one God." At 2:3 the poor man is offered a whole range of options as to where to place himself inconspicuously; at 4:4 "adulterers" have been pedantically added to "adulteresses"; and at 5:20 the epistle's seemingly abrupt ending has been rounded off with a final "Amen." Although not always easily soluble, none of these textual questions seriously affects the author's essential meaning.

JAMES, FIRST APOCALYPSE OF (NHC V,3).

The first of two apocalypses attributed to James, the brother of the Lord, in the collection of materials from Nag Hammadi. These two apocalypses and the *Apocryphon of James* (NHC 1,2) constitute the literature attributed to the brother of Jesus in the Nag Hammadi collection. The first apocalypse is a particularly clear example of what many now call a "revelation dialogue" (Perkins 1980: 25–73). Here the Lord responds to the anxious inquiries of James within the framework of a narrative setting connected with the death and resurrection of Jesus. Very little is said about the events themselves, however, and it is clear that the narrative is relatively unimportant. A curious literary feature of the apocalypse is the fact that the Lord addresses James in the first person in 3 passages at or near the beginning of the writing (24,11; 25,12; 27,18) and everywhere else in the third person. Also curious is the fact that a question of James is referred to near the beginning of the writing (24,26–27) that has not actually been asked. Such difficulties point to dislocations, the use of sources, or imperfect control of materials.

In the first part of the writing (24,10–30,11) the Lord answers questions of James that for the most part reflect his fearfulness at the prospect of the suffering in store both for the Lord and for himself. The various doctrines expounded by the Lord in this connection (concerning the One-Who-Is, the structure of the cosmos, the kinship between James and the One-Who-Is, and much else) are intended to encourage the anxious enquirer.

After he had promised to reveal the way of redemption to James, "the Lord said farewell to him and fulfilled what was fitting" (30,12–13). The brevity of this reference to the crucifixion is noteworthy.

"After several days" the Lord again appeared to James who was walking with his disciples on a mountain called "Gaugelan"—probably a variant of Golgotha (30,17–18). In the exchanges that follow, Jesus first indicates that he had never suffered in any way at the hands of his tormenters. He then comforts James at the prospect of his own suffering and provides him with a set of formulae to be used after his martyrdom in response to the challenges of the hostile powers (including three heavenly "toll collectors") who will attempt to block his ascent to "the Preexistent One."

The text of the apocalypse becomes more and more fragmentary as it concludes. The following points stand out. (a) We are told (36,13–38,11) that the secret tradition is to be entrusted by James to a succession of figures that will include Addai (= Thaddaeus), a certain Levi, a woman of Jerusalem, and 2 sons (the younger of whom will proclaim these things). (b) The value of women as disciples of the Lord (on condition, it seems, that "the female element" should "attain to this male element") is upheld in the face of James' perplexity on the point (38,15–41,18). (c) James is presented as rebuking the 12 disciples (42,20–24) who earlier are said to correspond to "12 pairs" associated with Achamoth, the lesser Sophia (36,1–6). (d) James' martyrdom (probably viewed as the prelude to the fall of Jerusalem announced earlier) is described in some detail (though the text is badly damaged).

Some features of the first *Apocalypse of James* suggest that it had roots in Jewish Christianity. Chief of these is the choice of James himself as the bearer of revelation and particularly the reference to him as James the Just (32,2–3). For this title is attested especially in Jewish-Christian tradition (Hegesippus in Euseb. *Hist. Eccl.* 2.23.4,7; *Gos. Heb.* in Jerome, *De viris inl.* 2; cf. *Gos. Thom.* log. 12). Yet Clement of Alexandria also mentions James the Just as one who (along with John and Peter) received a special *gnosis* from the Lord (Euseb. *Hist Eccl.* 2.1.3–5). And the Naassene Gnostics (never credited with Jewish-Christian connections) made special appeal to the authority of James the Lord's brother (Hippolytus, *Haer.* 5.7.1). To be sure, the surprising link forged between James and Addai probably points to a Syrian milieu for the apocalypse (cf. Euseb. *Hist. Eccl.* 1.13) and thereby possibly also to a semitically colored form of Christianity. But there is little in the doctrine of the apocalypse that is reminiscent of Jewish Christianity. The points listed by Böhlig (1968: 103–7) to indicate such a background are not sufficiently distinctive to prove any connection.

What is clear is that the formulae revealed to James to

assist him in his ascent to the Pre-existent One represent a dramatized version of texts that appear elsewhere as cultic expressions in the context of Valentinian Gnosticism (Iren. *Haer.* 1.21.5; Epiph. *Pan.* 36.3.1–6). And there are other elements in the apocalypse that have at least a Valentinian flavor (Tröger 1973: 44–45). It is interesting to note, however, that at least one characteristic line found in the formulae transmitted to James for recitation during his ascent ("I am an alien, a son of the Father's race") was more widely dispersed and appears in the *Corpus Hermeticum* 13.3.

Finally, esoteric Jewish doctrine may have something to do with the 72 heavens (i.e., 12 × 7 heavens) of the revised cosmology presented by the apocalypse (26,2–23; Schoedel 1970; Séd 1979). The selection of the number, however, was probably prompted by the number of apostles; and if this is so, a devaluation of the Twelve is again implied.

One striking feature of the apocalypse is a positive evaluation of martyrdom unusual in Gnosticism. Such a positive evaluation is in fact found in all three of the writings attributed to James at Nag Hammadi. Yet whereas the *Apocryphon of James* calls for imitating the suffering of Jesus and seeking martyrdom, the first apocalypse builds on docetic ideas and denies that Christ (or more precisely, he who was "within" Christ) suffered in any way (31,15–22). Closely connected with this is a more or less docetic treatment of history: The Jewish people are considered counterparts of the archons (31,23–26), and their destruction is apparently symbolic of the defeat of the cosmic powers that threaten James. For Jerusalem, which James is to leave behind (25,16–18), "is a dwelling place of a great number of archons" (25,18–19). Thus James' own martyrdom at the hands of his countrymen can affect only his "flesh" and loses its fearfulness (32,17–22).

The selection of James (and other "non-apostles" elsewhere) as the recipient of revelation has been persuasively interpreted as a final step taken by writers of "Gnostic revelation dialogues" to provide an alternative to the apostolic authority claimed by a steadily advancing catholic form of Christianity (Perkins 1980: 131–56). The Twelve, as we have seen, are rebuked by James and associated with Achamoth. Thus, although they are apparently pictured as no longer under the power of the archons like the Jewish people, they have not yet attained the highest gnosis. The "brother" of the Lord—although not the Lord's brother "materially" (24,15–16)—obviously will have a more intimate relation with the revealer than his disciples. That the revelation to James takes place both before and after the reappearance of the crucified Lord suggests that a response is being made to the emphasis in the catholic community on what was said and done by Jesus during his ministry. Moreover, although the apocalypse has evidently accepted the historical argument of catholic Christianity that gnostic doctrine appeared after the age of the apostles, it deals with the point by having the higher gnosis handed on secretly through an obscure succession of figures until some time after the fall of Jerusalem. This event is apparently singled out because it symbolizes the defeat of the archons and because it was itself occasioned, according to the tradition on which our apocalypse depends, by the martyrdom of James (36,16–19).

Thus the selection of James as the recipient of revelation makes sense of the history of 1st-century Christianity by providing a reason for the failure of the fall of Jerusalem to follow immediately on the crucifixion of Jesus (Origen, *Cels.* 1.47) and consequently also for the failure of gnostic truth to make itself known earlier. The crucifixion of Jesus and the martyrdom of James are seen as complementary events, both of which are required for the full exemplification of the possibility of the Gnostic's victory over the terrors of this world. Finally, it should be observed that the relative openness to women as disciples of the Lord in this writing reinforces the emphasis on the value of non-apostolic (non-catholic) versions of the meaning of the Christian tradition.

WILLIAM R. SCHOEDEL

JAMES, PROTEVANGELIUM OF. In the NT little information is given about the birth and childhood of Jesus. Except for the infancy stories in the Gospels according to Matthew and Luke, no other NT writings deal directly with that part of the life of Jesus. This gave rise to the origin of a number of so-called apocryphal infancy gospels, in which themes that were lacking in the canonical gospels were developed. The *Protevangelium of James (Prot. Jas.)* is usually classified as one of these apocryphal gospels of the early church.

F. Impact on the Church

A. Authorship, Place, and Date of Writing

Little is known about the author of *Prot. Jas.*, or the place and time of its writing. The James referred to in the postscript is presumably the brother of Jesus, who here recounts the life story of Mary. Because of the author's seeming ignorance about the geography of Palestine and religious practices there, we can safely assume that James is pseudonymous and that Palestine was not the place of origin. Egypt and Syria have been proposed as places of origin (de Strycker 1961: 412–23; Smid 1965: 20–22). There seems to be no decisive reason why Syria should be preferred to Egypt except perhaps for the fact that most of the virgin birth material probably originated in Syria (von Campenhausen 1962: 13). The book is normally dated in the 2d century. It was already known by Clement of Alexandria (*Str.* 7.16.93) and Origen (*Comm. in Mt.* 10:17), which necessitates a date before 200. It is sometimes argued that the author made use of material from Justin's *Apologia,* which means that it could not have been written before 160 (de Strycker 1961: 412–19; van Stempvoort 1964: 420–25).

B. Contents

In the *Prot. Jas.* the theme of the birth of Jesus is developed and retold from the perspective of the virgin Mary. It relates the life story of Mary, the daughter of a rich man Joachim and his wife Anne (Anna). Her birth is based on the OT story of Hannah in 1 Samuel 1–2 (*Prot. Jas.* chaps. 1–5). Chaps. 6–8 deal with her childhood in the temple. Then her "marriage" (cf. chap. 19) to a widower and building contractor, Joseph, who already had children, is recounted. The annunciation of the birth of Jesus in Jerusalem is told in chap. 11. This is followed by Mary's visit to Elizabeth (chap. 12); Joseph's doubt and comfort by an angel (chaps. 13–14); the vindication of Mary before the High Priest (chaps. 15–16); the birth of Jesus in a cave outside Bethlehem (chaps. 17–18); the vision of Joseph (chap. 18); Salome's unbelief about a miraculous virgin birth (chaps. 19–20) and the adoration of the Magi (chap. 21). The story ends with Herod's infanticide; the murder of Zechariah, the father of John the Baptist, in the temple (chaps. 22–24); and a postscript. In the postscript it is asserted that the story was written by James, who withdrew to the desert when a tumult arose in Jerusalem on the death of Herod. Then the title of the story follows: *Birth of Mary. Revelation. James.* Although a large part of *Prot. Jas.* deals with Mary, her background and childhood, the focus of the story is on the development of the theme of the miraculous birth of Jesus as is clearly indicated by the words in 20:1: "The controversy about you is not small."

The story consists of various episodes, mostly told from the third-person omniscient, narrative point of view. Only the vision of Joseph (18:2) and the postscript are narrated in the first person. The time covered in the narrative includes the period of Mary's parents, through her birth and childhood, the birth of Jesus to the massacre of the children by Herod and the death of Zechariah. The story takes place in Palestine and in particular Jerusalem. Prominent locations are the temple, the house of the parents, the house of Joseph and Mary, the road to Bethlehem, and the cave where Jesus was born. The main characters include Joachim and Anne, Mary, Joseph, the Jewish religious leaders, and minor helpers like Elizabeth, Zechariah, the midwives, Simeon, the Magi, and angels. Euthine, the servant of Mary's parents, Herod, and the Romans all act as opponents in the development of the story.

Despite similarities, the characterization of the main characters is in many aspects different from their characterization in the NT. Mary is the central character: It is she who is the long-expected child and whose childhood is based on OT examples. It is her name that is hailed by the entire nation because it will be remembered by all generations (*Prot. Jas.* 6:2; 7:2; 12:2); it is she who is raised for the service of the Lord and kept holy (6:3), beloved of the whole of Israel (7:3); and it is she who is fed like a dove by an angel (8:1). She is a *Davidid,* an undefiled, pure virgin (10:1). Put into the care of a widower at the age of 12 (9:1), she remains a willing servant of the Lord (11:3) who works in his temple. She is visited by angels (11 *passim*) and becomes bearer of a child conceived in an atypical way (11); she is the mother of the Lord (12:2) and is a chaste adherent to the moral strictures of Israel (12:3). Similar to her predecessor Eve (13:1), she is accused but later vindicated (16:3). She is a virgin who abstains from intercourse with her betrothed, and husband, Joseph (13:3; 15:3, 19); she is betrothed to Joseph (19:1); and she is a mother who cares for her child (17:2; 19:2; 22:2).

Joseph is portrayed as a widower with children, elected to take care of Mary (9:1). He is a builder (9:3), a man given to emotions of fear (9:3; 14:1; 17:3), reproach, doubt, suspicion (9:3; 13:1–2), and joy (13:2). He is also a "father" who cares for the girl Mary and her child (17:3; 22:2). Jesus is the child conceived in an unusual way (9:2) and whose name shall be Jesus because he will save his people from their sins (11:3; 14:2; 19:2). He is presented as conceived of the Holy Spirit (14:2; 19:1). He is the Christ (21:2, 4) and the Christ of the Lord (21:4), the king to be born for Israel (20:2, 21:2). Soon after his birth he is able to take his mother's breast and also to be a great salvation to Salome (20:3). He is a king to be worshipped (21:2, 3) and is cared for as a baby (22:2).

Unlike the canonical gospels where the Jewish religious leaders are presented negatively, in *Prot. Jas.* they are characterized in a positive manner: They perform religious rites (6:2, 8:2–3, 24 *passim*); bless (17:3 *passim*); pray (8:3 *passim*); take care of the temple and establish norms and beliefs (10:1; 15:3) by seeking the will of God and revealing it (8:3–10:1). In accordance with the narrative world of *Prot. Jas.* they are the helpers of, and not the opponents of Mary and her son. Israel is pictured positively in *Prot. Jas.* (1:2; 7:2 *passim*). In fact, the characterization of the Jewish religious leaders and Israel is such that the impression is given that the story is told on their behalf.

C. Sources and Language

It is commonly accepted that the author of *Prot. Jas.* used "biblical" material to create his story. At the end of the 19th century, it was argued that the infancy stories of Matthew and Luke as well as *Prot. Jas.* originated from a common Hebrew source, or that Matthew's and Luke's

versions of the birth of Jesus were based on *Prot. Jas.* (cf. Smid 1965: 193). Another view is that 3 independent sources, namely, *The Birth of Mary, The Apocryphon of Joseph,* and *The Apocryphon of Zechariah,* were used to produce this story (Cothenet *ANRW* 25/6: 4252–69). This was replaced by the idea that *Prot. Jas.* is a Christian midrash of the birth stories of Jesus told by Matthew and Luke, in which biblical models, phrases, themes, and words, along with other existing stories and traditions such as the martyrdom of Zechariah, were used (cf. van Stempvoort 1964: 410–26 and Smid 1965: 8; 178–80). The author used his imagination to create legendary material about the life of Mary and the birth of her child.

There is little doubt that the author of *Prot. Jas.* used existing material, free quotations, and allusions from a variety of texts. The remarkable thing, however, is that he integrated these "sources" into a new story. Even in passages such as chapter 11 (the annunciation of the birth of Jesus), where the narrative comes very close to the canonical gospel stories, the author has retold the story in such a manner that the canonical sources became integrated into the text. The episodic nature of *Prot. Jas.* accounts for various texts such as 1 Samuel 1 and 2, Num 5:1–11, Mark 1:9, Matthew 1–2, Luke 1–2, John 20:25, and others, being used in the composition of the story. On the whole it is the Lukan version of the infancy story of Jesus which seems to have served as basis for *Prot. Jas.* This becomes apparent from the many allusions to the Gospel of Luke (Vorster 1988: 266, n. 15).

The story was originally written in Greek. The style is simple and vivid. Sentences are mainly joined by "and" (parataxis) and not by participles as is often the case in Greek. It resembles "biblical" Greek. The language used in *Prot. Jas.* indicates the author's familiarity with the LXX and the NT. Although the major part is written in prose, the lamentations of Anne (chap. 3), her hymn of praise (6:3) and the vision of Joseph (chap. 18) are presented in poetic style.

D. Purpose

The purpose of *Prot. Jas.* is often said to be the glorification of Mary (Smid 1965: 14–20), since so much of the narrative focuses upon the virginal conception, virgin birth, and enduring virginity of Mary (20:1). However, one should be prepared to qualify this: The author of *Prot. Jas.* used the annunciation stories of the NT to convince his readers of the extraordinary birth of Jesus. The story was written with an apologetic interest to defend the virgin birth and origin of Jesus, and to refute accusations that he was an illegitimate child. At the end of the 2d century (when *Prot. Jas.* was probably written), Christians had to defend and explain the origin and birth of Jesus (as well as the reputation of Mary), as both Justin (*Dial.* 48) and Origen (*Cels.* 1.32) clearly show. The presentation of Mary as the child of rich parents and a virgin who was dedicated to the Lord is used in *Prot. Jas.* as a refutation of accusations about her background and conduct. The purpose of the book is not biographical, and therefore it has limited value as an additional source concerning the "Mary of history." On the other hand it is an important witness for the development of early Christian apologetic. That the story was later used to glorify Mary and that it was regarded as a plea for asceticism is clear, however, from its reception in the history of the church (de Strycker 1968).

E. Title and Transmission of the Text

The different titles attributed to the book demonstrate the different ways in which the *Prot. Jas.* was received by Christian readers. The designation "Protevangelium of James," commonly used in the West since the 16th century, indicates that the book contains information chronologically preceding (*proto-*) that given in the canonical gospels (*evangelium*). The French humanist Guillaume Postel discovered a Greek manuscript of the book on a trip to the East, and in 1552 published his Latin version of this book under a long title which started with the words "Protevangelium, or concerning the birth of Jesus Christ and his mother, the virgin Mary: A historical discussion of the divine James . . ." Since then the story has become known in the West as the *Protevangelium of James* (de Strycker 1968: 5). However, in the East, *Prot. Jas.* continued to be referred to by the title *Birth of Mary,* to which was sometimes added *Revelation of James* (as in the case of the 3d century Greek manuscript Papyrus Bodmer V, which is the oldest Greek manuscript of *Prot. Jas.* we have). In his commentary on Matthew 10:17, Origen (*Comm. in Mt.*) refers to it as the *Book of James.*

These different titles indicate the contents as well as the reception of the text. The reference to James in the postscript, as well as the addition of "revelation" which is probably not original, obviously served to authenticate the contents of the story. It was intended for the reader who had to relate it to James, the brother of Jesus. On the other hand, the title *Birth of Mary* prompted readers in the East to interpret the text as a story about the birth of Mary (de Strycker 1968: 5).

Due to the collection of manuscripts since the 16th century and the critical editions which followed, the history of the transmission of the text as well as the history of the Greek text of *Prot. Jas.* have been studied thoroughly (by de Strycker 1968). There are more than 147 complete manuscripts or fragments of manuscripts of *Prot. Jas* available, of which only a few are early uncials. The 3 oldest manuscripts were discovered in Egypt, the oldest being Papyrus Bodmer V. All 3 of these manuscripts were intended for private reading. Because of its use in Byzantine liturgy, especially on the 8th of September when the birth of Mary is celebrated, a large number of minuscules are extant. In addition to the Latin version, there are also Armenian, Ethiopic, Georgian, Sahidic, and Syriac versions, as well as many modern versions (cf. Culmann, *NTApocr* 1: 374–88 for an English translation based mainly on Papyrus Bodmer V).

F. Impact on the Church

The history of the transmission of the text of the *Prot. Jas.* (de Strycker 1968) clearly demonstrates its popularity, especially in the East, since it was written. It was used through the ages as an important witness to the miraculous birth of Jesus and the life of Mary, and was transmitted in various translations. However, *Prot. Jas.* was not accepted as an authoritative document of the Western church. Nevertheless, despite rejection by the Gelasian Decree (ca. 500 C.E.), where it is listed as an apocryphon not received by

the catholic and apostolic Roman Church, it has had a significant influence on the evolution of mariological tradition and dogma. This is confirmed by catholic piety, in eastern and western art, and also in the evolution of Mariology. The infancy gospels, and in particular *Prot. Jas.*, had a tremendous impact in the early church, and especially on the literature and art of the Middle Ages and the Renaissance.

WILLEM S. VORSTER

JAMES, SECOND APOCALYPSE OF (NHC V,4).

A Jewish-Christian gnostic text found in the Nag Hammadi Library, a collection of manuscripts discovered in Upper Egypt in 1946. It contains speeches by James "the Just" and Jesus, as well as an account of the death of James by stoning. It is the fourth tractate in Nag Hammadi Codex V, and has been given the modern title the *(Second) Apocalypse of James* in order to distinguish it from tractate three, since both documents have the same ancient prescript title (24,10; 44,11–12): the *Apocalypse of James.* The last 4 of the 5 tractates in NHC V bear the title "apocalypse." The inclusion of 4 apocalypses in one book is unusual in the Nag Hammadi Library and does seem to be the result of deliberate scribal collection.

A. Setting

The order of the two apocalypses of James in codex V appears to be the result of deliberate scribal interpretation. The two documents stress different aspects of the James tradition and in their present position complement one another. In both tractates it is James, the brother of Jesus, who receives the revelation (24,12–14; 50,1–23). In the *(First) Apocalypse of James* James is warned about future sufferings (25,12–14; 30,13–15) at the hands of an angry mob (33,2–5) whom James agitates (32,9–11). Although there is an allusion to James' suffering in the fragmentary conclusion to *1 Apoc.Jas.* (43,17–21), this document contains no account of the predicted suffering. See JAMES, FIRST APOCALYPSE OF.

On the other hand, the *2 Apoc.Jas.* gives a detailed account of James' stoning and death at the hands of a mob stirred to anger by James' preaching. In short, *2 Apoc.Jas.* fulfills the predictions of *1 Apoc.Jas.* and in that sense "completes" the narrative that *1 Apoc.Jas.* began.

B. Text

The manuscript is preserved in the Coptic Museum in Old Cairo (codex inventory number 10548). The 20 pages of text (44–63) are preserved in fragmentary condition. With 2 exceptions (53/54, 63) the bottoms of the pages are lost and the tops of pages 44–52 are also lacking except for a small strip of papyrus that preserves part of the first line. Pages 53–63 are all missing text in varying degrees.

As to date and provenence little can be said with certainty. It was probably originally written in Greek and then translated into Coptic (Sahidic dialect) sometime before the middle of the 4th century C.E., when the books of the Nag Hammadi Library were manufactured. Lack of allusions to the NT and the developed gnostic systems of the 2d century C.E. suggest an early date for the origin of the document, perhaps as early as the first half of the 2d century C.E.

C. Character and Contents

The document takes the form of a two-part report made to Theuda, or perhaps Theuda(s), the father of James, by a priest who apparently was present at the ritual stoning of James. The title, however, designates it as an apocalypse (perhaps to characterize the text as secret teaching) while the incipit (44,13–15) describes it as the "discourse that James the Just spoke in Jerusalem."

The first part of the priest's report contains several separate discourses in the form of a dialogue between James and Jesus; the second part is a description of the death of James. Because of the fragmentary character of the text it is not always clear when the speakers change. The following outline will help to make clear the shift between speakers:

A. Prologue: 44,11–20.
B. The report of Mareim: 44,21–63,32.
 1. Mareim comes to Theuda with the report: 44,21–45,30(?).
 2. The discourses of James: 46,1(?)–60,29(?).
 a. James claims to be the revelation bearer: 46,1(?)–47,30(?).
 b. The first discourse of Jesus reported by James: 48,1(?)–49,30(?).
 c. The report of James on the appearance of Jesus: 50,1(?)–30(?).
 d. The second discourse of Jesus reported by James: 51,1(?)–57,11.
 e. The reaction of James to the appearance of Jesus: 57,12–19.
 f. The final exhortation of James: 57,20–60,29(?).

3. The death of James: 61,1(?)–63,32.
 a. The setting: 61,1(?)–14.
 b. The account of the stoning: 61,15–62,12.
 c. The prayer of James: 62,12–63,29.
 d. Conclusion: 63,30–32.

At least four of these sections are written in a balanced and stylized prose that may possibly originally have been used liturgically. Three of these may be classified as aretalogies: 49,5–15 is a series of self-assertions by Jesus in the *ego eimi* style; a second (58,2–20) is a series of statements about the resurrected Jesus made by James in the third person *(autos estin)*; in the third (55,15–56,13) the resurrected Jesus describes James' special role as an illuminator figure in the second person *(sy ei)*. This third unit is remarkable in its lofty regard for James: He is called "illuminator" (55,17) and "redeemer" (55,18). He will astonish people by his "powerful deeds" (55,22–23). He is the one whom "the heavens will bless" (55,24–25), and because of him people "will reign and become kings" (56,4–5). The fourth unit (62,16–63,29) is an originally independent piece of liturgical tradition cast as the martyr's prayer James prays shortly before his death.

There is a noticeable difference in both style and perspective between the first part of the tractate (44–60) and the description of the death of James in the second part (61–63). It has been argued that the two parts were originally two separate documents brought together at the expense of the conclusion of the former and the beginning of the latter (Funk).

The overall tone of the document is clearly gnostic; yet its use of usual gnostic themes is remarkably superficial. Aeons (53,8) and Archons (56,19), common in the more speculative gnostic texts, are each mentioned only once. It does describe salvation through knowledge (57,4–8) and makes a contrast between the arrogant boastful creator (56,20–57,3), responsible for human imprisonment in the world (54,10–15), and the unknown gracious father who exists without the creator's knowledge (58,2–6). These motifs, however, are too general to be associated with any one particular group in antiquity.

The text draws extensively on Jewish-Christian traditions. James the Just, who held a position of special prominence in early Jewish-Christian circles is presented as the possessor of a special revelation from Jesus and assigned a role that rivals, and perhaps exceeds, that of Peter in canonical tradition. James is the revealer who escorts the "illuminated" ones through the door of the heavenly kingdom and rewards them (55,6–14; 55,15–56,13). The description is similar to Peter's charge as the keeper of the keys of heaven (Matt 16:19). The report on the story of James has certain verbal parallels with the report of Hegesippus in Eusebius (*Hist. Eccl.* 2.23), and follows exactly the Jewish regulations for ritual stoning in the Mishnah (*m. Sanh.* 6.6).

D. Significance

The text documents the elevation of James, an ideal leader in a Jewish-Christian gnostic community that looked to him as guarantor of their traditions, as fulfilling the role of a redeemer-illuminator figure rivaling and perhaps exceeding that of Peter in the canonical tradition. The text will help to clarify the processes by which authority evolved in early Christianity. But what is more important, it may help to unravel the processes by which cult leaders become redeemer figures, a shift that has occurred, for example, in Christianity and Manichaeism. In any case this text clearly attests one such shift in a Jewish-gnostic community.

CHARLES W. HEDRICK

JAMIN (PERSON) [Heb *yāmîn*]. JAMINITES. Three persons bear this name in the OT.

1. The second of the 6 sons of Simeon (Gen 46:10; Exod 6:15) who descended to Egypt with Jacob's family after Jacob had demonstrated his desire to see his long-lost son Joseph. Simeon's genealogy is given in four places in the OT. The genealogy in Gen 46:10 agrees with the one in Exod 6:15 and says that Simeon had 6 sons and that Jamin was his second son. However, the genealogy given in Num 26:12 agrees, with some variations, with the genealogy in 1 Chr 4:24. This genealogy declares that Simeon had 5 sons and omits the name of Ohad, one of Jamin's brothers. According to Num 26:12, Jamin was the clan leader of the Jaminites, one of the clans of Simeon.

2. A man from Judah who was the second son of Ram, the son of Jerahmeel, of the family of Hezron, an important clan of Judah (1 Chr 2:27).

3. A Levite who assisted Ezra in the reading and in the interpretation of the book of the Law of Moses (Neh 8:7). He is called Jadinus (Gk *Iadinos*) in the Gk text of 1 Esdr 9:48. According to the record in the book of Nehemiah,

Ezra read the law, probably in Hebrew, while the Levites helped the people to understand the reading by translating and interpreting it into Aramaic, the language the people spoke when they returned from Babylon. The name of Jamin and several other Levites who helped Ezra are omitted in the LXX.

CLAUDE F. MARIOTTINI

JAMLECH (PERSON) [Heb *yamlēk*]. A descendant of Simeon (1 Chr 4:34), described as one of the "princes in their families" (1 Chr 4:38). The name probably means "(Yahweh) reigns." (Indeed, Lucian translates, "he reigns.") In the LXX the name appears as *Iemoloch*. See Williamson *Chronicles* NCBC, 62.

CRAIG A. EVANS

JAMNIA (JABNEH), COUNCIL OF. The concept of the Council of Jamnia is an hypothesis to explain the canonization of the Writings (the third division of the Hebrew Bible) resulting in the closing of the Hebrew canon.

A. Theory of Jamnia and the Canon
B. The City
C. Jamnia Gatherings
D. Study of Jamnia and the Canon

A. Theory of Jamnia and the Canon

H. Graetz first cautiously proposed and defended the theory in his Excursus to Qoheleth (1871:155–56), a theory later stated positively by F. Buhl, H. E. Ryle, Robert Pfeiffer, O. Eissfeldt, and others. By the hypothesis, based on an interpretation of *m. Yad.* 3:5, the OT canon was closed for all time by the specific religious authority of 72 elders when R. Eleazar ben Azariah became head of the Academy at Yavneh about A.D. 90. The hypothesis rendered yeoman service in turning scholars from earlier positions that the canon was fixed either by Ezra or by the Great Synagogue.

Despite the absence of significant support in ancient Jewish, Christian, or classical texts, the hypothesis enjoyed vogue in the 20th century by repetition rather than by proof. Various degrees of dogmatism are encountered in assertions about actions of the council such as the closing of the canon with one stroke and the exclusion of the Apocrypha.

After the concept that the council closed the canon was accepted, some scholars projected that the standardization of the OT text also took place in formal action at Jamnia (also called Jabneh or Yavneh). According to S. Talmon (1970: 174–79), the 19th century began with Rosenmueller's contention that the MT went back to one recension. De Lagarde then projected that all texts depended on one exemplar considered to have been developed after the rise of Jewish-Christian controversy. The standardization then became attached to Jamnia and R. Akiba's exegetical method. Olshausen argued for a deliberate choice made by some official Jewish body, while Noeldeke argued for the use of a readily available manuscript as the basis of the standard text. An investigation of rabbinic citations revealed more text variety than earlier scholars had been aware of. P. Kahle, after studying manuscripts of the Cairo Geniza, postulated vulgar text-types existing beside the standard text; the latter he conceived of as being formed by rabbinic activity at Jamnia. Following the Qumran discoveries, the Jamnia portion of the hypothesis has found new advocates and is often stated as an established fact.

S. Krauss (1893) proposed that the *birkat hamminîm* (a prayer against sects) in the 18 benedictions must originally have had within it the term *nôṣrîm* (Jewish Christians). The theory, considered to be supported by the occurrence of *"mînîm"* and *"nôṣrîm"* in a Geniza text of the benediction, was popularized by I. Elbogen (1931: 36) and then accepted by many Christian theologians. In Johannine studies, when considering "casting out of the synagogue" (*aposynagogos*; John 9:22; 12:42; 16:2), the council is credited with accomplishing the breech between Judaism and Christianity. It is considered that the *birkat hamminîm,* composed by Samuel the Younger in the time of Gamaliel II (*b. Ber.* 28b–29a), was introduced into the 18 benedictions to expose and expel Jewish Christians despite the fact that the tradition is not attested in either the *Mishna* or *Tosephta.* Some Johannine scholars have hypothesized the Fourth Gospel to be a Christian response to Jamnia.

In short, the Council of Jamnia and its alleged date of about A.D. 90 is, in the absence of attestation in specific texts, used in scholarship as a convenient symbol for the culmination of long processes in early Judaism. Sometimes used for any development between A.D. 70 and 135, the terminology has the disadvantage of inviting the uninformed to assume official action taken at specific meetings on specific dates.

B. The City

Yavneh (LXX: *Iabne;* Vg: *Iabniae*), a Philistine city whose walls Uzziah demolished, is mentioned between Gath and Ashdod (2 Chr 26:6) and is conjectured to be identical with Jabneel (LXX: *Iabnel;* Vg *Iebnehel:* Josh 15:11; cf. Josephus *Ant* 5.1.22 [87] who describes it as a city of Dan) earlier mentioned in the border list of Judah. The town does not again appear in Judah town lists until the Maccabean period, but may be *Jemnaan* of the book of Judith (2:28) listed among coastal cities whose people feared Holofernes.

That Josephus at times mentions Jamnia as a coastal city (*Ant* 13.15.4 [395]) and at times as an inland one (*Ant* 14.4.5 [75]; *JW* 1.7.7 [156]) suggests that the inland city also had a harbor. Both Pliny (*N.H.* 5.13.68) and Ptolemy (5.16.2) suggest that there are 2 towns. Strabo (16.759) describes Jamnia as so populus that with its surrounding villages it could supply an army of 40,000 able soldiers. See also JABNEEL; YAVNEH-YAM.

Eusebius (Klostermann ed., 106) places Jamnia between Diospolis (Lydda) and Azotos (Ashdod). Bishops of the church in Jamnia participated in councils at Nicea, Chalcedon, and Jerusalem. Benjamin of Tudela, identifying Ibelin or Jabneh as the seat of the Academy, places it 5 parasangs from Jaffa, but commented that there were no Jews there in his day (Adler 1907: 27). E. Robinson (1841–57: 2.420), mentioning Jamnia in discussing the location of Gath, remarks that "Yebna is situated on a small eminence on the W side of the Wadi Rubin, an hour or more

distance from the sea." Robinson also notices "The crusaders built here the fortress Ibelin" (3.22, 23, n. 2).

Jamnia experienced varying vicissitudes during its later history. In the Maccabean period, Judas, having learned that the inhabitants of Jamnia intended to murder the Jewish inhabitants (as those of Joppa had earlier murdered its Jewish inhabitants), attacked the city at night and burned the harbor and fleet so that the glare of the fire was seen in Jerusalem 240 stades away (2 Macc 13:8, 9). Georgias, commander of Jamnia, routed the troops of Joseph and Azarias, whom Judas had left in command while he was in Galaaditis (Josephus *Ant* 12.8.6 [350–51]). Following Judas' routing of the troops of Georgias, Judas went to Adullam. After the Sabbath, his men went to recover the bodies of the slain for burial only to discover that under the shirt of each were consecrated objects of the idols of Jamnia (2 Macc 12:40), a fact the author of 2 Maccabees considers the cause of their deaths.

Later Simon (142–135 B.C.) captured Jamnia (Josephus *JW* 1.2.2 [50]; *Ant* 13.6.7 [215]) from the Syrians; and in the time of Alexander Jannaeus, Jews held it as well as other coastal cities (Joseph. *Ant* 13.15.4 [395]).

Jamnia was included in the cities Pompey liberated from Jewish rule, restoring it to its Syrian inhabitants and annexing it to the province of Syria under the administration of Scarus (*JW* 1.7.7 [156]; *Ant* 14.4.4 [75, 76]). Then Gabinus (57–55 B.C.), after defeating Alexander Jannai, rebuilt cities which he found in ruins (including Jamnia), and repeopled them with colonists (*Ant* 14.5.3 [88]; *JW* 1.8.1 [166]).

While it is conjectured that Jamnia must have been given by Augustus to Herod about 40 B.C. (Avi-Yonah 1977: 87), no actual record survives. It was a Judean toparchy (Avi-Yonah 1977: 96). Herod in 4 B.C. left the toparchy of Jamnia, Azotus, and Phasaelis in his will to his sister Salome (*Ant* 17.8.1 [189], 11.5 [321]; *JW* 2.6.3 [98]). When Salome died (ca. A.D. 9–12), she bequeathed the city and its territory to Julia (Livia) the wife of Augustus (Joseph. *Ant* 18.2.2 [31]; *JW* 2.9.1 [167]). At her death it became the property of Tiberius who entrusted a special procurator (apparently residing in Jamnia) with its administration as an inscription found at Jamnia (Avi-Yonah 1946: 84f, no. 1) and Josephus (*Ant* 18.6.3 [158]) attest. Jamnia is described by Philo as being one of the most populous cities in Judea with the majority being Jewish but also having others of alien races (*Gaium* 30 [200]).

In the time of King Agrippa, Cestius sent the tribune Neopolitanus to investigate charges against the Jews. Neopolitanus joined King Agrippa (who was returning from Egypt) at Jamnia. The chief priests of the Jews and the leading citizens of the council also came to Jamnia to welcome the king (Joseph. *JW* 2.16.1–2 [33–37]).

Upon Caligula's assertion of his divinity, the new settlers in Jamnia made themselves despicable to the indigenous inhabitants by making an altar of bricks which the Jews promptly pulled down. The non-Jews complained to Herennius Capito, the imperial procurator of Jamnia, who was in direct contact with the court at Rome (*Ant* 18.6.4 [163]), and he sent a report to the emperor. Capito, fearing an inquiry into his finances, wished to blacken the Jews in the emperor's eyes (Philo *Gaium* 199). Gaius (Caligula) then ordered the erection of a statue of gold of himself set up in the temple in Jerusalem (Philo *Gaium* 30 [200–3]); but the assassination of Caligula in Rome (Jan. 24, A.D. 41) terminated the crisis (Tacitus *Histories* 5.92) before the order was carried out.

During the Jewish revolt, Vespasian first subdued Jamnia following the fall of Gamla (*JW* 4.3.2 [130]. Then, while waiting for Jerusalem to destroy itself (A.D. 68–69), he set out from Caesarea, occupied Antipatris, captured Lydda and Jamnia, quartering on them an adequate number of residents from other places that had surrendered, and posted the 5th legion outside Emmaus (*JW* 4.8.1 [443]).

After the war, Jamnia was among the cities which Vespasian made autonomous as is attested by coins struck under the later empire (G. Hill 1914; Avi-Yonah 1977: 111).

C. Jamnia Gatherings

In the absence of any contemporary documents on the Yavneh (Jamnia) period, an account of actions of Yavneh must be drawn from sources redacted at a later period without any objective way to know how much the information has been distorted in the process of transmission. Legend was developing, and one is never certain what is legend and what is fact. The extant materials do not permit writing biographies of any of the participants of the gatherings. The sources are at variance on details with each other. The nature of the sources makes it impossible to be specific about the nature of the Yavneh gatherings as well as specific about their enactments, especially in the 3 areas discussed above—canon, text, and the exclusion of Christians.

In the tradition, R. Yohanan ben Zakkai, already an aged man of possibly 70 years, was brought out of besieged Jerusalem as a dead man by his 2 students Eliezer and Joshua. Yohanan asked Vespasian for Yavneh and its scholars. Qualified for leadership only by his knowledge and his teaching, Yohanan and his associates in Yavneh began the reconstruction of Judaism apart from the temple. The good life as he saw it was the life of study, and the good society was the academy. He removed from the priests the monopoly on the sacred calendar, festivals, and rites, making the priest subject to the rabbi. Temple practices were taken over "as a memorial." Enactments were established by precedent rather than by group vote or agreement. A late source has Yohanan state that good works take the place of sacrifice. There is no evidence of Yohanan's exercising civil authority and making civil enactments.

After a period of leadership of undefined length, Yohanan retired to Beror Hayil where he had a school and court, and leadership in Yavneh passed to Gamaliel II. With Gamaliel as *nasî* (prince), political institutions began to develop which flourished after the Bar Kokhba war. Gamaliel was confirmed by the governor of Syria, and his leadership was recognized by Rome which he visited in company with other prominent scholars. More important, his leadership was accepted by the Jewish communities which looked to Yavneh and its scholars for decisions on various ritual questions.

Gamaliel is depicted as being moody, domineering, and arbitrary. He forced R. Joshua ben Hananiah to yield to his calendar even when the testimony on which his decision rested was in error. After he had humiliated R. Joshua

over the question of the obligation of the evening prayer, the academy (*bêt hammidrāš*) rose in revolt, displaced Gamaliel as its head, and seated young R. Eleazar ben Azariah as head of the group. The doors were opened, and students previously denied admission were seated.

In the Mishna, the narrative of the seating of R. Eleazar is followed by a series of enactments introduced by the phrase *bô bayyôm* ("in that day"; *m. Yad.* 4:1–4; *m. Zeb.* 1:3) which suggested to scholars actions of one session and the concept, in part, of the Council/Synod of Jamnia. In later tradition (*b. Ber.* 28a) it is said that every *bô bayyôm* refers to this same occasion and that no legal question pending before the group was left undecided that day.

Gamaliel continued in attendance without missing an hour, ultimately apologized to Joshua, and was restored to leadership. In the compromise, he taught three sabbaths a month and Eleazar one. While Gamaliel was *nāsî* (Prince), the sources differ over whether Eleazar was *rêš mĕtîbtā'* (head of the academy) or *'ab bêt dîn* (head of the court). Gamaliel lived on to about A.D. 117. Following his death, a new *nāsî* was not immediately appointed; but R. Joshua, R. Tarfon, and R. Akiba exercised great influence. Ultimately the Sanhedrin moved to Usha (in one tradition back to Yavneh and then back to Usha). With the Bar Kokhba war (135 A.D.) the Yavnehian period was at an end.

In the sources the gatherings in Yavneh are spoken of as *bêt hammûlrāš* (house of study), *yĕšîbâ/mĕtîbtā'* (academy), *bêt dîn* (court), *bêt wa'ad* (meeting place), the vineyard in Yavneh, the *'ālîyâ* (upper room), and the *'ôṣār* (treasury). Whether the meetings were actually in a vineyard or the term is to be understood figuratively because the disciples sat in rows like vines is disputed. One Tosefta passage speaks of the Sanhedrin.

The participants are called *zĕqēnîm* (elders), rabbis, or *ḥākāmîm* (scholars). They are described as sitting in a half circle like a threshing floor so that each elder could see the other. The *nāsî* sat in the middle with elders on each side. The disciples were arranged by rank in 3 rows.

There was not a fixed plenary session in Yavneh. The sessions were not continuous, nor was there a full complement of scholars for each meeting. Over about a 60 year period, scholars, rich and poor, lay and priestly, rural and urban—some of whom lived in other towns and had their own courts and schools—came to Yavneh for meetings. The sources report continuous differences of opinion. While differing, however, the scholars did not divide into sects (Cohen 1986). Sometimes a consensus was reached without a formal vote. The majority opinion prevailed.

Catholic Christianity from the 2d century solved its problems by councils; Judaism did not. In the light of the concept of 21 ecumenical councils, as well as of modern meetings where delegates meet and vote on making binding decisions, use of the terminology "council" or "synod" invites a misconception when used for the Yavneh meetings. School, academy, or court is nearer the nature of the meetings (Lewis 1964).

D. Study of Jamnia and the Canon

Recent studies of legal traditions in the Mishna and Tosefta concerning prominent Yavneans such as R. Yohanan (J. Neusner 1970, 1973), Joshua ben Hananiah (W. S. Green 1981), Gamaliel II (Shamai Kanter 1980), Eliezer ben Hyrcanus (J. Neusner 1973), Eleazar ben Azariah (T. Zahavy 1977), R. Tarfon (J. Gereboff 1979), R. Yose (J. N. Lightstone 1979), R. Ishmael (Gary G. Porton 1982), R. Sadoq (J. N. Lightstone 1977), and R. Akiba (L. Finkelstein 1964) reveal concerns about the religious calendar, prayer obligations, sabbath, festivals, cleanness, family laws, release from vows, rules of testimony, and other questions of hypothetical and practical concern to Judaism of the period. However, there is only minor attention to the area of canon, possibly some to separation from Christians, but none to standardization of text.

As Lewis (1964) and Leiman (1976) pointed out, *m. Yad.* 3:5 speaks only of a discussion of the Song of Songs and of Ecclesiastes which discussion is continued after Yavneh times, furnishing no basis for the assertion that the canon was closed at Yavneh. To the contrary, the sources report later debate about these and also other books. No text speaks of the discussion and exclusion of apocryphal books at Yavneh.

Rabbinic scholars now point out that *bô bayyôm* may refer to the occasion of the preceding statement in the source (e.g., *m. Sabb.* 1:4) and not to the day of R. Eleazar's appointment. The questions said to have been discussed "on that day" are questions of distinctly Jewish interest; e.g., the gathering ruled that any animal offerings which must be consumed remain valid although slaughtered under some other name (*m. Yad.* 4:2; *m. Zeb.* 1:3). The scholars dealt with a footbath that is cracked (*m. Yad.* 4:1) and whether Ammon and Moab must give the poor man's tithe in the 7th year (*m. Yad.* 4:3). R. Joshua argued that Sennacherib had so mixed the races that the prohibition of an Ammonite or Moabite entering the Assembly no longer applied. An Ammonite proselyte was accepted (*m. Yad.* 4:4).

Talmud texts (*b. Ber.* 28b–29a; *b. Meg.* 17b; *Num. Rab.* 18:210) speak of the composition of the *birkat hammînîm* by Samuel the Little during Gamaliel's leadership of the academy, but not on the day of R. Eleazar's elevation. The debate continues among current scholars over the meaning of the term *mînîm* in rabbinic texts. Kimelman (1981) insists that there is a lack of evidence that the *birkat hammînîm* reflects a watershed in the history of the relations between Jews and Christians in the 1st centuries of our era. Horbury (1983) replies that patristic evidence supports the contention that Christians were cursed in the synagogues.

While a late tradition (*y. Ta'an* 4:2; *Sof.* 6:4; *Sifre* 2:356; *Abot R. Nat.* B. 46) speaks of the selecting of a text from 3 manuscripts in the temple, no specific text discusses standardization of the Hebrew text at a Council of Yavneh. Rabbinic literature does not discuss divergencies of opinion about Bible readings. The opinion that the text was standardized at Jamnia is an extrapolation from the types of texts attested in the Qumran materials, as compared with the texts from Wadi Murabba'at, and from the supposition that the type of exegesis connected with Akiba's name requires a fixed text. Further evidence is claimed from the type of translation produced by Aquila. However, seeing text stabilization as a long continued process, Segal (1974) tried to place the beginning as early as immediately after the restoration of the temple service in 164 B.C., but culminating near the mid-1st century A.D. Greenberg

(1974) pointed out that Akiba's method of hermeneutics went back to Nahum of Gimzu and that Hillel the elder already was using hermeneutical methods which presuppose a text verbally stable. Albrektson (1978) challenged the common conception that the text was standardized by deliberate text-critical activity. He showed that rabbinic exegesis sometimes relies on a spelling which deviates from the MT. Emphasis on carefulness in copying (*y. Sanh.* 2:6; *b. Meg.* 18b) is to be distinguished from standardization. Albrektson, admitting that we have little demonstrable evidence, suggested that rather than official activity, a group of scholars who became dominant may have preserved and transmitted their preferable type of text.

These ongoing debates suggest the paucity of evidence on which the hypothesis of the Council of Jamnia rests and raise the question whether it has not served its usefulness and should be relegated to the limbo of unestablished hypotheses. It should not be allowed to be considered a consensus established by mere repetition of assertion.

JACK P. LEWIS

JANAI (PERSON) [Heb *yaʿnay*]. A Gadite who was the son of Abihail and the third tribal leader named in the genealogy (1 Chr 5:12). It may be that "Shaphat," the fourth name in the list, should not be rendered as a personal name but as the noun "judge." In this case, Joel was the head of the tribe, Shapham the second in authority, and Janai a judge in Bashan (Rudolph *Chronikbücher* HAT, 47). This interpretation is supported by the Targum and LXX. Although Janai's name has been related to *yaʿanâ* ("ostrich"), others regard it as a derivative of the imperfect form of the verb *ʿānâ* ("answer") and interpret it as expressing the wish that deity answer the prayer of the name-giver (e.g., for health or strength; Noth *IPN,* 28, 198).

According to 1 Chronicles 5, Janai and the other Gadites lived opposite the Reubenites in "Bashan as far as Salecah" (v 11) and "in Gilead, in Bashan . . . and in all the pasture

lands of Sharon to their limits" (v 17). The tribe of Gad receives Gilead (Num 13:24–28), but Bashan and Sharon are not mentioned, since the first is too far N and the second too far W. The reference in 1 Chronicles 5 to Bashan may be the result of confusion in a later day about the N boundary of Gad or about the limits of Bashan (cf. Deut 3:10). Evidence of a city or region in Transjordania named Sharon is also found in the Mesha Inscription (line 13; *ANET* 320). Neither Janai nor the others named in the Chronicler's genealogy for Gad (1 Chr 5:11–17) appear in other lists of Gadites (Gen 46:16; Num 26:15–18; 1 Chr 12:9–16—Eng 12:8–15).

M. Patrick Graham

JANIM (PLACE) [Heb *yānîm*]. A village in the hill country of Judah alloted by Joshua to that tribe (Josh 15:53). The exact location is unknown, though it may possibly be identified with Beni Naʿim about 4 miles E of Hebron.

Elmer H. Dyck

JANNAI (PERSON) [Gk *Iannai*]. The father of Melchi and son of Joseph (an earlier ancestor of Jesus), according to Luke's genealogy tying Joseph, the "supposed father" of Jesus, to descent from Adam and God (Luke 3:24). D omits Jannai, substituting a genealogy adapted from Matt 1:6–15 for Luke 3:23–31, while some manuscripts and versions read *ianna*. The name Jannai occurs nowhere else in the biblical documents, including Matthew's genealogy, and falls within a list of 18 otherwise unknown descendents of David's son Nathan (Fitzmyer *Luke I–9* AB, 500). Kuhn (1923: 208–9) argues that two seemingly parallel lists of names—Luke 3:23–26 (Jesus to Mattathias) and 3:29–31 (Joshua/Jesus to Mattatha)—were originally identical, the first perhaps reflecting a Hebrew context and the second an Aramaic context, tracing Mary's line of descent (since it does not mention Joseph as Jesus' father). Jannai in the first list corresponds to Juda in the second list. With no textual variants for either name to support confusion of the two, Kuhn's theory has little plausibility.

JANNES AND JAMBRES (PERSONS) [Gk *Iannēs, Iambrēs*]. The names traditionally assigned to the magicians who, according to Exod 7:11–12, 22, opposed Moses and Aaron before Pharaoh on the occasion of Israel's exodus from Egypt. Tradition characterizes them as willful and persistent opponents to God and Moses (2 Tim 3:8–9). There was also a pseudepigraphic book entitled *Jannes and Jambres*.

A. The Traditions

Though not named in the OT and only once in the NT, the two brother magicians appear frequently in Jewish, Christian, and pagan sources extant in Arabic, Aramaic, Greek, Hebrew, Latin, Old and Middle English, and Syriac. Hebrew and Aramaic literature gives the names as *y(w)hny/ʾ* and *mmrʾ* as well as in more Hellenized guise with final *samek: ynys* and *ym(b)rys*. In Gk sources the usual forms are *Iannēs* and (through analogical development) *Iambrēs*, though the former occasionally appears in its typologically earlier form *Iōannēs*. (Syriac follows the Gk spelling.) Latin tradition features *Iamnes/Iannes* (and rarely *Iohannes*), but virtually uniformly gives the second name as *mambres*, a form to be traced via the VL (apparently corrected to *Iambrēs* by Jerome in conformity with the Gk of 2 Tim 3:8) to the early Jewish Church. That the first name is Semitic is no longer in doubt, but it is significant that Moses' chief opponent should have been assigned a popular Yahwistic name. The second name presents more of a problem. A derivation from the Heb root *mrh*, "be contentious, refractory, rebellious," has found widespread favor.

An early reference to two brothers as opponents of Moses and Aaron occurs in the *Damascus Document* (CD) 5, 17b–19: "For in earlier times Moses and Aaron arose with the help of the Prince of Lights, while Belial raised up Yoḥanah *(yḥnh)* and his brother." Though the Cairo Genizah mss of CD are medieval in date, the passage in question has also been identified among the finds in the Judean desert (6Q15 3; 1st century C.E.), but its date of composition is wrapped in the controversial literary history of CD. Beginning with S. Schechter's 1910 edition of CD, Yoḥanah and his brother have been equated, without qualification, with the Jannes and Jambres of later literature. Such an interpretation is, however, open to serious doubt, since in CD, as opponents of Moses and Aaron, they are portrayed as *Israelite* leaders of apostate Israel in Egypt (see CD 3, 5–6, Ezek 20:7–8; 23:3, Josh 24:14). Their role is typological for contemporary (non-Essene) Jewish leadership, reflecting, therefore, socioreligious conflict within Palestinian Jewry. A number of historical identifications have thus far been proposed.

Subsequent tradition identified Yoḥanah and his brother as pharaoh's magicians (Exod 7:11). By the 1st century C.E., the pagan writer Pliny the Elder mentions Moses, Jannes, and Lotapes (= Jambres?) as magicians among the Jews "many thousands of years after Zoroaster" (*HN* 30.2.11), and in similar vein Lucius Apuleius (2d century C.E.) includes Moses and Johannes (Jannes) in a list of renowned magicians (*Apol.* 2.90). However, the most interesting reference in pagan authors is the note preserved in Eusebius' *Praeparatio Evangelica* (9.8) from the Neoplatonist Numenius of Apamea (2d century C.E.) that Jannes and Jambres were able to undo even the greatest of the disasters which Moses brought against Egypt—a claim which contradicts the biblical account (cf. Exod 8:18). A statement by Origen (*Cels.* 4.51) that Numenius had recounted the story of Moses and the two magicians suggests that Origen must have been acquainted with extensive traditions about the magicians and may well have known the book entitled *Jannes and Jambres* (see B. below).

Because of their mention in 2 Tim 3:8–9, Jannes and Jambres frequently appear in later Christian sources which merely echo the NT reference or give more details of their wicked behavior. The story was clearly well-known since most references presuppose an acquaintance with it. Unfortunately, only snippets of the tale have survived. The two brothers are said to have been magicians at the court

of Pharaoh Ahmoses (John of Nikiu) or Pharaoh Chencheres, who was the pharaoh that drowned with his army in the Arabian Gulf (Ps-Dionysius of Telmaḥre). Pharaoh's daughter reputedly entrusted Moses to Jannes and Jambres for instruction in wisdom (e.g., Bar Hebraeus). They were regarded as gods by the Egyptians (*Acts Pil.*), and Satan counted them his brothers (*Ques. Bart.*). Moreover, Abezethibou, the demon from the Red Sea, claimed to have come to their aid (*T. Sol.*); it was they who were responsible for leading pharaoh astray until the king and his host met their death in the sea (*Mart. Pet. Paul; Pal. hist.*). Moses, in the course of their altercations with him, afflicted their adherents with sores and sent the mother of one of them (sic) to their death (Philostorgius). The two brothers tried to withstand God's mighty acts by means of fake magic; but when bested by Moses they confessed in pain from their sores that God was active in Moses (Ambrosiaster). They practised necromancy, (*A.Cath.*) and as a result of their wickedness they perished (Abdias). In spite of their having acknowledged "the finger of God," they received no divine forgiveness (*Pen. Cyp.*). Their garden tomb, a monument to their former power and wealth, was visited by Macarius of Alexandria, who found it inhabited by 70 demons (Palladius).

In Jewish literature of the common era Jannes and Jambres are especially prominent in legends connected with the birth and early years of Moses, but the time and circumstances of their demise vary in the sources. According to some traditions (*Tg. Ps.-J.; Yal. Reu.*) they were assistants of Balaam (cf. Num 22:22), Israel's staunch opponent at the pharaonic court. Commonly, however, they are called his sons, a tradition which may be as old as the 3d century C.E. A dream of pharaoh was interpreted by them to augur destruction for Egypt at the hands of an Israelite about to be born (*Tg. Ps.-J*). At a royal banquet, when Moses was two, he placed pharaoh's crown on his own head. Balaam, who was in attendance with his sons, reminded the king of his earlier dream and counseled Moses' death. Pharaoh, however, heeded contrary advice and decided to put Moses to the test. When the child was directed to choose between a glowing ember and a gem, under angelic prompting he picked the former, stuck it in his mouth, and thus contracted his speech impediment (cf. Exod 4:10). Balaam and his sons fled to Ethiopia where they usurped the throne during the king's absence. But when their city subsequently fell to a strategem of Moses, who had succeeded the king of Ethiopia, they returned to pharaoh's court. In due time Moses and Aaron presented themselves at pharaoh's palace, where they gained entrance by casting a spell on the two lions that barred their way. The king, frightened by their divine appearance, delayed answering until the following day their demand for the release of the Israelites. Meanwhile he summoned Balaam and his two sons who counseled him to put their authenticity to the test (*ShY* cf. *Yal. Sim., ChronJ, ChronM, Exod. Rab.*). Jannes and Jambres cheated at magic by exchanging their staffs for snakes. Though they managed to check the majority of the angels, they could not prevail against the angel of the (divine) presence (*ml'k pnyw*) who sided with Moses.

Outdone by Moses, they came to him to become proselytes and, against God's explicit directive, were accepted. Thus a "mixed multitude" (Exod 12:38) with Jannes and Jambres at the head accompanied Israel out of Egypt. It was they who were the real culprits in Israel's idolatrous debacle at Sinai and consequently were killed by the Levites (*Yal. Reu.*; cf. *Midr. Tanh.*). Alternatively in Jewish tradition, Jannes and Jambres, flying above the Red Sea on self-made wings, were destroyed by an angel dispatched by God (*Yal. Sim.*; cf. *Yal. Reu.*; *ChronJ* 54). A minor tradition as them executed together with Balaam and the princes of Midian in accordance with Num 31:8 (*ChronJ* 48, Zohar).

B. The Book

The earliest reference to a book entitled *Jannes and Jambres* is in the Latin translation of Origen's commentary on the gospel of Matthew (*comm. in Matt.* (GCS 11,250). This book was thought by Origen to have been the source for Paul the presumed author of 2 Timothy. Later references are found in the Ambrosiaster, the *Decretum Gelasianum*, and some Syriac and Middle English sources. Fragments of the book in Greek are extant in a Vienna papyrus (P. Vindob G 29456 + 29828 verso; 3d century C.E.), Papyrus Chester Beatty XVI (3d/4th century C.E.), and in a Michigan papyrus fragment (3d century C.E.). A fragment of a translation into Latin has been preserved in a manuscript of the British Library (Cotton Tiberius B.V fol. 87; 11th century C.E.). All texts are fragmentary, but they add a wealth of detail to our knowledge of the story.

The remnants of the book commence with the magicians' genealogy and then move through various phases of Jannes' opposition to Moses. Summoned to the palace, he matches Moses and Aaron's feats but is laid low by disease. In the course of events, clear omens of impending doom are sent his way; yet, his fight continues unabated. Ill and near death he takes leave of mother and friends, and, in Memphis, entrusts his brother with the book of magic. After receiving news of the disaster at the Red Sea, Jannes meets his own end. He is lamented by his mother who subsequently dies a violent death and is buried by her surviving son near the tomb of Jannes. Brought up from Hades by Jambres, the shade of Jannes launches into a lengthy admission of wrongdoing. We do not know the response of Jambres and his final end.

In at least its final literary form the book quite clearly is a confession, hence underscoring the title given it in the *Decretum Gelasianum: The Confession (Penitence) of Jannes and Jambres*. The essence of the tale is the magicians' deliberate and determined opposition to Moses (God) in the face of repeated divine warnings. Their obdurate behavior precluded forgiveness forever. It is this aspect of the plot that suggests *Jannes and Jambres* as one of the precursors of the Faust legend. The end of Jannes (and Jambres?) was no doubt intended to serve as a warning to the believing community.

Though the Jannes and Jambres *tradition* probably arose on Palestinian soil and in a Semitic-speaking environment, there is no indication that the original language of the *book* was other than Greek. The date of origin of the tradition can hardly be much later than the 2d century B.C.E., while the book was written probably at least as early as the 2d century C.E. For further discussion, see *OTP* 2: 427–42; *HJP*^{2} 3/2: 781–83; Str-B 3: 660–64.

ALBERT PIETERSMA

JANNEUS (PERSON). A Hasmonean king and high priest of Judea (103–76 B.C.E.). After Aristobulus died, his widow, Salome Alexandra, set free three of his brothers, one of whom, Janneus, she subsequently married. Janneus is known by the Gk form of his name to which he added Alexander. Alexander Janneus succeeded his brother as high priest and officially claimed the title of "king," which he inscribed on his coins.

Janneus was a ruthless ruler and profligate in character. Early in his career he arranged for the murder of one of his two surviving brothers. He was primarily a man of war. He instigated an aggressive plan of expansion, enlarging by conquest and proselyzation his kingdom to the size of the ancient kingdom under David and Solomon (Josephus *Ant* 13.15.4). Janneus attacked Greek cities which posed an economic threat to the survival of the Jewish state, particularly along the coast, and he forcibly converted the inhabitants to Judaism. After conquering the coastal cities from Carmel to Gaza, with the exception of Ascalon, Janneus successfully established his power in the Transjordan. Moving to the S, Janneus was severely defeated by King Obedas of the Nabateans (*Ant* 13.15.2) and later by King Aretas (*Ant* 13.15.2). As a result of his excessive drinking, Janneus contracted a disease and died, leaving control to his widow.

The orthodox Jews and the Pharisees resisted Janneus because they felt that his reprobate behavior and willful neglect of his spiritual duties disqualified him from the office of high priest. The controversy was heightened by Janneus' sympathetic support of Sadducaean families. The Pharisaic opposition was led by Simeon ben Shetah, who may have actually been the queen's brother. Rabbinical legends depict him as a fearless, hot-tempered opponent of the king's.

Janneus and the Pharisees were on a collision course. Unrest gave place to rebellion as Janneus was officiating one day as high priest at the altar during the Feast of Tabernacles. According to the Talmud, the riot was caused by Janneus' insolence when he deliberately poured a libation over his own feet rather than on the altar, as dictated by Pharisaic tradition. The crowds hurled citrons at him and declared that he was unfit to hold the office. According to Josephus, Janneus retaliated and 6,000 people were massacred by his foreign mercenaries. The Jews, incited by the Pharisees, rebelled in 94 B.C.E. A civil war broke out which lasted 6 years, during which time Janneus killed over 50,000 Jews with his mercenaries (*Ant* 13.13.5).

The Pharisees called for the assistance of the Seleucid, Demetrius III (Eukairos), who defeated Janneus at Shechem. This incident may be referred to in the commentary on Nahum found at Qumran which relates that "Demetrius sought to enter Jerusalem on the counsel of those who seek smooth things." If this passage is indeed referring to the Pharisees and to Demetrius the Seleucid, it may shed light on the turn of events which took place afterwards. While in hiding, Janneus was joined by 6,000 Jews who thought life under Janneus was preferable to Seleucid domination. With their aid, Janneus drove Demetrius out, reestablished his authority, and poured vengeance on the Pharisees. While Janneus banqueted and caroused with his concubines, he had 800 of his enemies crucified while their wives and children were slain before their eyes (*Ant* 13.14.1–2; *JW* 1.4.5–6). This incident is also related in the Nahum Commentary which states, "He hanged living men on wood . . . which was not formerly done in Israel."

According to Josephus, 8,000 of his enemies escaped from Jerusalem by night and remained in hiding until Janneus died, harboring a hatred for their king and the Sadducees. A number of scholars identify the flight of Janneus' enemies with the founding of the Qumran community. Janneus is identified as the Wicked Priest and persecutor of the Teacher of Righteousness, both appearing frequently in the Dead Sea Scrolls. Clearly, the Qumran Essenes were not Pharisees. It is argued, however, that the opposition to Janneus should not be confined strictly to the Pharisees and that among those who fled from Jerusalem were the Teacher of Righteousness and his disciples. Archaeological evidence indicates that Qumran was expanded at this same time.

According to tradition, before Janneus died he counseled his wife not to imitate his course of action with the Pharisees. He suggested to take the Pharisees into her confidence and to elevate them to positions of authority and thereby win the allegiance of the masses, which she did (*Ant* 13.15.5).

SCOTT T. CARROLL

JANOAH (PLACE) [Heb *yānôḥâ; yānôaḥ*]. The name of 2 Israelite towns.

1. A town listed after Taanath-Shiloh in the description of the E border of the territory of Ephraim (Josh 16:6–7). Since the name appears twice in the same form (Heb *ynwḥh*), the final *he* is apparently part of the name and not a *he* of direction. Eusebius identifies it with "Ianō in Acrabattene at the twelfth mile from Neas Polis eastwards" (Klosterman 1904: 108, line 20). Biblical Janoah and Ianō of Eusebius are identified with Yanun (M.R. 183172), 11 km SE of Nablus and 2 km NE of Aqraba, or with Kh. Yānūn (M.R. 184173), 1.5 km NE of Yanun. There is evidence of Iron Age occupation at both sites (*HGB,* 159). Textually it is not clear whether Janoah or Taanath-Shiloh is being referred to by the phrase "and passes along beyond it on the E" (Josh 16:6). The topography however leads to the conclusion that the territory of Ephraim included the hills to the E of both sites.

2. A city in Galilee captured by Tiglath-Pileser III in 732 B.C.E. (2 Kgs 15:29). It is mentioned in the Bible only once (MT *ynwḥ*) as the third of the 5 cities captured in that campaign: "Ijon and Abel-Beth-Maachah and Janoah and Kadesh and Hazor." The other 4 cities are all clearly identified and appear in the text in geographically logical order from N to S. They are situated near the N border

of the kingdom of Israel, 3 in the Jordan valley and 1 (Kadesh) in the mountains of upper Galilee to the W. Some have proposed identifying Janoah with Kh. en-Na'imeh (M.R. 205286), a site in the Jordan valley between Abel-Beth-Maachah (M.R. 204296) and Hazor (M.R. 203269; Vincent 1926: 470). Others have identified it with Giv'at ha-Shoqet (M.R. 203293; Kaplan 1978: 159–60). However, there exist 2 villages by the name of Yanuḥ: one in Upper Galilee (M.R. 173265) 18 km NE of Acco and the other in Lebanon 10 km E of Tyre. Klein (*EJ* 8:875) proposed identifying Janoah with the former, as did Aharoni (1957: 131), who suggested that an ancient route from Acre to Lebanon passed by this site. Conder, on the other hand, identified Janoah with the Lebanese Yanuḥ (*SWP* 1: 96), and Rainey (1981: 147–49) supported this identification by suggesting that the Assyrian army advanced from Abel-Beth-Maacah not only S but also W along the Tyre-Dan road to the Lebanese Yanuḥ and then S again to Kadesh. At the same time he identified the Tyre-Dan road with "the way of the sea" referred to in Isa 8:23 (—Eng 9:1).

RAFAEL FRANKEL

JAOEL (ANGEL). The name of an archangel (Gk *Iaoēl*) also called Jael in pseudepigraphic writings. In the *Apocalypse of Abraham* (from the late 1st or early 2d century C.E.) Jaoel serves as Abraham's heavenly guide and also strengthens and protects him (10:3). The name Jaoel is one of the indications that the work was originally composed in Hebrew. The reference to the archangel should probably be distinguished from the use of Jaoel in *Apoc. Ab.* 17:13, where it refers to God. However, Box (1918: xxv–xxvi) understood these two uses of Jaoel to be complementary. He described Jaoel as the supreme figure in Jewish angelology, God's vicegerent, and in fact a substitute for Yahweh.

The occurrences of the name Jael in the *Apocalypse of Moses* are very similar to those of Jaoel in the *Apocalypse of Abraham.* Again, the name Jael is one indication that the *Apocalypse of Moses* was originally written in Hebrew, probably in the 2d century C.E. "Jael" is found twice in the work (29:4; 33:5), both times as an epithet for God combining the Hebrew names Yahweh and Elohim. However, in the Slavonic *Life of Adam and Eve* (an important witness to the Greek version of the *Apocalypse of Moses*) the archangel Jael plays an important role. There are several references to Jael as a heavenly envoy (*L.A.E.* 31:1–2; 32:1–2; 43:4; and the doxology appended to chapter 43).

STEVEN L. MCKENZIE

JAPANESE BIBLICAL SCHOLARSHIP. See BIBLICAL SCHOLARSHIP, JAPANESE.

JAPHETH (PERSON) [Heb *yepet*]. The name of the third son of Noah. Japheth appears in the Hebrew Bible 11 times, in the primeval history and the Chronicler's history (Gen 5:32; 6:10; 7:13; 9:18, 23, 27; 10:1, 2, 21; 1 Chr 1:4, 5).

A. The Name

The etymological origin and meaning of the name Japheth is uncertain. Some modern interpreters, following Saadia Gaon (9th century C.E.), take it to mean "fair, beautiful," from *yph* "to be fair, beautiful." According to some earlier Talmudic sages the beauty refers to the Greek language. However, this etymology was already correctly rejected by Abraham Ibn Ezra (12th century). Others suggest that the name is related to the Egyptian Keftiu (Crete) or to the name of the Greek mythological Titan Iapetos, father of Atlas, Prometheus, and Epimetheus. A possible meaning of Japheth is hinted at in the Hebrew pun *yapt ʾĕlōhîm lĕyepet,* "May God make wide for Japheth" (Gen 9:27). Thus the name may mean "spacious," an allusion, at least in Genesis, to an expanded inheritance of land by Japheth. This possible interpretation is based in the name's derivation from the root *pty,* "to be wide, spacious."

B. Biblical Data

Japheth is the youngest of Noah's 3 sons, the brother of Shem and Ham (Gen 5:32; 6:10). According to the genealogical table, Japheth comes first (10:1–5). Therefore, some modern scholars (as some Talmudic sages) consider him the eldest; but this is merely conjectural. Japheth, together with his brothers Shem and Ham and their wives, joined Noah in the Ark and escaped the Flood (6:9; 7:13–15; 9:1–18). He also shares together with his brothers the divine blessing and covenant (9:1, 17). Children were born to him, as to his other brothers, after the flood (10:1). In the story of Noah's drunkenness (Gen 9:20–27), Japheth, after receiving the report of his father's nakedness from his brother Ham, discreetly walked backward, together with his other brother Shem, and covered his father. As a result, he became the beneficiary of his father's blessing. See also HAM.

Japheth had 7 sons (Gomer, Magog, Madai, Javan, Tubal, Meshech, and Tiras) and 7 descendants (Gen 10:2–5; 1 Chr 1:5–7). Unlike the sons and descendants of Shem and Ham, who are mentioned in numerous places throughout the Hebrew Bible, the sons and descendants of Japheth are conspicuous by their absence from most of the biblical books. Outside the genealogical tables in Genesis and Chronicles, four of Japheth's sons—Gomer, Javan, Tubal, and Meshech—are mentioned chiefly in two books: Isa 66:19 (Javan, Tubal, and Meshech) and Ezek 27:13; 32:26; 38:2, 3, 6; 39:1, 6 (Gomer and Tubal). Of Japheth's descen-

dants, the best known are two of Javan's sons: Tarshish (mentioned about 29 times in the Hebrew Bible) and Kittim (mentioned 5 times). According to ethnographic conceptions informing the primeval history, Japheth is the ancestor of the peoples who inhabit the lands N of Canaan. According to later Jewish tradition he also occupies the far east (cf. Jdt 2:25, "east of Gog"; *Jub.* 8:29, "east . . . as far as the region of the waters"; cf. 9:7–13).

C. Jewish Tradition

Hardly any references are made to Japheth in the Apocrypha or Pseudepigrapha outside of the genealogical references to Noah's family (*2 En.* 73:5; *Apoc. Adam* 4:1; *T. Sim.* 6:5; *T. Isaac* 3:15; *L.A.B.* 1:22; 4:1ff.). The most-extensive such reference to Japheth is in *Jubilees:* his birth (4:33), his role in the Noah story (7:9, 12), and his inheritance in the divine land distribution (8:10, 12, 25, 29; 9:7–13; 10:35, 36). *Jubilees* also gives the most detailed information about Japheth's land portion, "The third part [of the earth] was assigned to Japheth, the land beyond the Tina river to the north of its mouth . . . the direction of the northeast, all the area of Gog and all the land east of it, all the way to the farthest north . . . towards the mountains of Qelt . . . towards the Ma'uk Sea . . . east of Gadir . . . west of Fereg . . . towards the Me'at Sea . . . toward Mount Rafa . . . five big islands and a huge land in the north . . ." (8:25–30). "The land given to Ham is hot, to Japheth cold, to Shem neither cold or hot" *(ibid.)*. Josephus says that Phrygia belongs to Japheth. See Fig. GEO.05.

An interesting detail given in *Jubilees* about Japheth is that he became jealous of Ham and built a city named Adataneses (Athens?) after his wife (7:15). His granddaughter Melka, daughter of Madai (8:5), married Arphaxad, Shem's son. In the quasi-Jewish *Sibylline Oracles*—in which the sons of Noah are given the names of Greek gods—Shem is identified with Cronos, Ham with Titan, and Japheth as Iapetus (3:110–15). Sethian Gnostic tractate *Apocalypse of Adam* (V,5 72:17; 73:14, 25; 74:11; 76:13–14) deals with the division of the world and empires among the sons of Noah.

Tannaitic and Amoraitic teachers considered Japheth the eldest of Noah's sons. They held Shem to be Noah's youngest son, and said that in the Bible he is mentioned first among the members of his family because he was the most righteous, wisest, and most-important son, not because he was the oldest (*Sanh.* 69b; *Gen. Rab.* 26:3; 37:7). Japheth assisted Shem in covering Noah's nakedness and was blessed with a burial place for his sons Gog [Gomer?] (cf. Ezek 39:1) and Magog (*Gen. Rab.* 36; cf. Ezek 39:11). The sages propounded Gen 9:27 (see above) as referring to the rebuilding of the Temple by Cyrus, King of Persia, a descendant of Japheth (*Yoma* 10a). Another rabbi argued that Gen 9:27 refers to the teaching of the Law in the Greek language (*Gen. Rab.* 36: *Deut. Rab.* 1).

D. Christian and Islamic Literature

In the NT Japheth is mentioned, but his descendants Gog (see above) and Magog figure in the major international war of Revelation (20:8). In the early Christian literature, particularly in Irenaeus of Lyon, Lactantius, Hyppolytus of Rome, Clement, Origen, Epiphanius, and Eusebius, the sons of Noah and their generations are often alluded to but without much elaboration.

EPHRAIM ISAAC

JAPHETH (PLACE) [Gk *Iapheth*]. A region mentioned only in the book of Judith, Japheth is described as having S borders "fronting toward Arabia" and constitutes a landmark in the southward advances made by Holofernes (2:25). As Zimmerman suggests, this description may mean that the S borders of Japheth were on the same latitude as the Syrian desert (Zimmerman 1972: 73; cf. Moore *Judith* AB, 139). However, the book's geography is confused here, as well as elsewhere (Pfeiffer 1949: 296–97; Metzger 1957: 50), and the meaning of the phrase remains obscure (Cowley *APOT* 1: 250). The text of v 25 suggests that the author has Philistia in mind, but then in v 27, Holofernes is described as moving "down into the plain of Damascus," which suggests that the latter was still in Cilicia (Zimmermann 1972: 73).

FREDERICK W. SCHMIDT

JAPHIA (PERSON) [Heb *yāpîaʿ*]. **1.** King of Lachish (Josh 10:3). He was one of 5 Canaanite kings from cities SW of Jerusalem that came together at the instigation of Adonizedek, king of Jerusalem, to oppose the Gibeonites, who had just concluded a treaty with Israel (Josh 10:1–5). This challenge was born out of fear of the Israelites, in response to their conquests of Jericho and Ai, and their treaty with the powerful city of Gibeon. Japhia was executed by Joshua, along with the other kings, after Israel routed their armies with YHWH's help. Their bodies—like the king of Ai's had been (8:29)—were hung on 5 trees until sundown; ironically, they were then thrown into the very cave in which they had attempted to hide from Joshua earlier. The first time, Joshua had sealed them in with large stones in order to capture them; he now sealed them in permanently (Josh 10:6–27).

2. One of 13 sons of David listed as having been born to David's wives in Jerusalem (2 Sam 5:15; 1 Chr 3:7; 14:6), in addition to his 6 sons born at Hebron. His mother's name is unknown: 4 of the 13 sons born in Jerusalem were Bathsheba's sons; the remainder were born to unnamed wives. Besides these 13, David had numerous (unnamed) sons born to his concubines, according to 1 Chr 3:9. See also DAVID, SONS OF.

DAVID M. HOWARD, JR.

JAPHIA (PLACE) [Heb *yāpîaʿ*]. A town along the E portion of the S border of Zebulun, mentioned only once in the Bible (Josh 19:12). The location of the late Roman-Byzantine site of Japhia is clearly at modern-day Yafa, ca. 1.5 miles SW of Nazareth (M.R. 176232). The Bronze Age

and Iron Age site location is uncertain (Barag in *EAEHL* 2: 541–43); a case has been made for the early site being NE of Nazareth (Boling *Joshua* AB, 445). In a citation roughly contemporary with the events in the book of Joshua (LB), it appears in the Amarna Letters as "the town of Yapu" (*ANET,* 485). It was one of several cities that supplied corveé labor for Egypt. Japhia still stood in Josephus' day, as it was one of the cities he fortified during the great war with Rome in 66–70 C.E. (*JW* 2.20.6). Josephus described it as the largest village in Galilee, with strong walls, and he stayed there on occasion (*Life* 45, 52).

DAVID M. HOWARD, JR.

JAPHLET (PERSON) [Heb *yaplēṭ*]. An Asherite, son of Heber (1 Chr 7:32–33). Heber is listed as a son of Beriah in Gen 46:17 and Num 26:45, but 1 Chronicles 7 is the only place in the OT which lists the sons of Heber. Japhlet is possibly connected to the JAPHLETITES mentioned in Josh 16:3. The Chronicler also uses the similar name Pelet (1 Chr 2:47; 12:3).

TOM WAYNE WILLETT

JAPHLETITES [Heb *yaplēṭî*]. A group of people whose territory helped identify the border between Ephraim and Benjamin (Josh 16:3). Their territory was located somewhere between Bethel and Lower Bethhoron. In order to explain why the term Japhletites is found in Josh 16:1–3 but not in other descriptions of the border of Benjamin (Josh 16:5; 18:11–13), Aharoni (*LBHG,* 256) suggests that "these three parallel passages represent three shortened versions of the same list." The size, nature, and origin of this group of people is not known. It may have been a clan, family, village, or ethnic group. An Asherite named JAPHLET is mentioned in 1 Chr 7:32–33. See also *HGB* and Joshua AB.

JARAH (PERSON) [Heb *yaʿrâ*]. Son of Ahaz, a descendant of King Saul of the tribe of Benjamin according to the genealogy in 1 Chr 9:42. However, the textual attestation of this name is problematic; in the parallel genealogy in 1 Chr 8:36, this person is named Jehoaddah *[yĕhôʿaddâ],* and the more important LXX manuscripts to 1 Chr 9:42 read *Iada.* Finally, the etymology of MT's Jarah, somehow connected to *yʿr* "forest," is problematic; *yʿr* is not used in other Hebrew personal names, though it is known from NW Semitic names (Benz 1972: 324). Thus many scholars, accepting the LXX, have emended the name to Jadah (Heb *yaʿdâ*) (Noth *IPN,* 246; Rudolph *Chronikbücher* HAT, 90; *HALAT,* 404), which is etymologically related to "ornaments," and incorporates the element *ʿdh* typically used in Israelite names (Fowler *TPNAH,* 353–54). This emendation assumes confusion between the letters *dalet* and *reš,* which were graphically similar in both the old and new scripts. Many clear cases of *d-r* interchange are attested to (Delitzsch 1920: 105–7). The name Jenoaddah in the MT of the parallel genealogy would then be seen as an expansionistic form of an original Jadah. Alternatively, Demsky (1971: 19) has shown that this section of the Benjaminite genealogy relates various Benjaminite clans through geographical locations; he thus suggests that Jarah be connected to Kiriath-Jearim. If this is correct, the readings in the LXX and in 1 Chr 9:42 are scribal errors or are secondary attempts to understand the unusual personal name Jarah.

JARBA, ʿEIN EL- (M.R. 162227). A site located in the SW part of the Plain of Esdraelon about 100 m N of the Jokneam–Megiddo road, an area rich in springs and containing many prehistoric sites. In 1955, during the digging of a nearby drainage channel, fragments of pottery (including a hole-mouth jar decorated with reliefs of dancing people masked like rams), stone vessels, and flints were brought to the surface, all belonging to the Wadi Rabah culture. See RABAH, WADI.

In excavations in the drainage channel during July 1967, 4 strata of settlement (all belonging to the Wadi Rabah culture) were identified. In stratum I, close to the surface, only scattered stones but no buildings had survived, although parts of structures were uncovered in strata II–III. These consisted of a rectangular room with an enclosed courtyard adjacent. In stratum IV (on virgin soil) were discovered two sections of thin walls. Near one wall was a secondary burial, containing parts of 5 human skulls and fragments of a large jar, which probably served as a funerary offering. The decorated hole-mouth jar mentioned above, whose base was found in situ, apparently had also been deposited as one of the grave goods. A hearth and 7 shallow pits dug into the virgin soil were also discovered. Elliptical-shaped plastered floors were uncovered in all 4 strata, suggesting that these all existed close in time.

The pottery finds included all types of vessels and decorations already known from the excavations at Wadi Rabah and other sites attesting that culture. It also included hitherto unattested types of vessels and decoration (e.g., the hole-mouth jar with dancing figures, and the large jar of stratum IV). Carbon 14 tests from level IV indicate a date of 3740 B.C. ± 140 years. Even assuming that ʿEin el-Jarba is not the oldest Wadi Rabah settlement, it is hard to conceive that other sites of this culture will be attested earlier than 4000 B.C. The excavations at ʿEin el-Jarba have therefore added to our knowledge of the Wadi Rabah culture and of the Chalcolithic period in Palestine in general.

JACOB KAPLAN

JARED (PERSON) [Heb *yered; yāred*]. Son of Mahalalel, born when Mahalalel was 65 years old (Gen 5:15–20). At 162 years of age, Jared sired Enoch. Jared lived a total of 962 years. Comparison with the genealogy of Cain in Genesis 4 has suggested a correspondence between Jared and Irad (Gabriel 1959: 417; *GHBW,* 161; Sasson 1978: 174). However, the initial consonants of the two names differ (*ʿayin* vs. *yod)* to such an extent as to render explanations of parallel development from a common source unlikely. Explanations for the name Jared include: the Hebrew word for "rose" (Noth *IPN,* 231); the Akkadian word for "servant," *(w)ardu* (*HALAT* 2: 416); the Arabic word for "courageous"; the Hebrew root, *yrd,* "to descend." Noth's analysis is possible, but it lacks parallels. While the use of the Akkadian *(w)ardu* in personal names is extremely common, the word does not appear in W Semitic. There it is replaced by the root *ʿbd,* which is rendered *abdu* in cuneiform. The suggestion of an Arabic cognate also reaches outside of the W Semitic world for a comparison. On the other hand, the Hebrew root, *yrd,* "to descend," does appear in W Semitic personal names.

RICHARD S. HESS

JARHA (PERSON) [Heb *yarhāʿ*]. An Egyptian slave of Sheshan, who married his master's daughter (Ahlai?) and became the founder of a house of the Jerahmeelites (1 Chr 2:34, 35) cf v 31. No additional information is provided for this Egyptian. His 13 descendants can not be identified with any degree of certainty with names occurring elsewhere in the OT. The identity of Jarha's wife is a complex and unsolved problem centering on the name Ahlai. The masculine form of this name (however see Keil 1872: 67) and its appearance in the list of David's mighty men (1 Chr 11:41) presents some problem to this conclusion. Consequently, some suggest that Ahlai of v 31 should be read Attai as in v 36; or that Ahlai (if modified to mean "a brother to me") was a name given to Jarha at the time of his adoption into the family of Sheshan; or that Ahlai, though a son of Sheshan, was born after the marriage of his daughter (however note v 34); or that different sources are reflected in this genealogy. See Williamson (1979: 352) for a recent discussion of sources in this genealogy and the conclusion that 2:25–33 and 42–50a stand as a related unit, but that v 34 reflects a different source. See also Curtis (*Chronicles* ICC, 83) for an analysis of older, but still-debated, theories of genealogical sources. The wording of v 35 "So Sheshan gave his daughter in marriage to Jarha his slave . . ." is considered by some commentators as equivalent to making his servant his heir (Elmslie *Chronicles* CBC, 19), similar to Eliezer's relationship to Abraham (Gen 15:2–3). See NUZI for discussions of patriarchal customs possibly reflecting similar arrangements. From such records, a few scholars consider Jarha a proselyte and date this incident to the period of sojourn in Egypt; others, however, consider it difficult to understand how an Egyptian could be a slave to an Israelite at that time. Still others regard Jarha as an eponym of Jerahmeel and proceed to identify Sheshan with Sheshai of Hebron, concluding that the genealogy presents a northward movement of this tribe to the area around Hebron. Locating Jarha in time is difficult, and suggestions range from shortly before the Exodus (Keil 1872: 67) to the days of Eli, or even to some date nearer to the Chronicler's own time (see Braun, *Chronicles* WBC, 46). Lacking sufficient evidence the question must remain open.

W. P. STEEGER

JARIB (PERSON) [Heb *yārîb*]. A personal name utilizing an imperfect form of the verb *ryb* ("strive," "contend") and translated "he contends" in the sense of conducting a legal case or suit on behalf of someone. It may also mean "may he (i.e. Yahweh) contend" thus suggesting the possibility that it is a shortened form of *yĕ(h)ôyārîb* (*IPN,* 201, 245). See JOIARIB. Three individuals are so named.

1. The third of 5 sons of Simeon as recorded only by the Chronicler (1 Chr 4:24). In the other Simeonite lists (Gen 46:10, Exod 6:15—both of which name 6 sons; Num 26:12) the name *yākin* appears. See JACHIN.

2. One of 11 (Ezra 8:16) or 10 (1 Esdr 8:43—Eng 8:44) men who were sent by Ezra to Iddo at "Casiphia the place" with a request for "ministers for the house of our God" (Ezra 8:17) or "men to serve as priests in the house of our Lord" (1 Esdr 8:45—Eng 8:46). In Ezra he is listed among 9 "heads," understood by Blenkinsopp (*Ezra-Nehemiah* OTL, 164) as "heads of ancestral houses" with the 2 remaining individuals described as possessing understanding. When these 2 last-mentioned individuals—Joiarib (maybe a longer form of Jarib) and Elnathan (mentioned twice previously)—are deleted as a misplaced marginal gloss (Rudolph *Esra und Nehemia* HAT, 80; Williamson *Ezra-Nehemiah* WBC, 113), both designations ("head" and "understanding") apply to Jarib's group. In 1 Esdr he (Gk *Iōribos*) is included among 10 who are described as "leaders" and "wise" (8:43—Eng 8:44).

3. A priest of the house of Jeshua, son of Jozadak, who had married a foreign woman and pledged to put her away and offer a ram as a guilt offering (Ezra 10:18; 1 Esdr 9:19).

RODNEY H. SHEARER

JARMUTH (PLACE) [Heb *yarmût*]. The name of 2 towns in ancient Israel.

1. A town of Issachar which was allotted to the Gershonite family of the Levites as part of their inheritance (Josh

21:29). In a parallel list of the Levitical cities (1 Chr 6:57–58—Eng 6:72–73) the order of the towns appears to be the same, but Jarmuth is called Ramoth (Heb *ra'môt;* in which the *'alep* appears to function as a vowel letter [cf. GKC 7]). Ramoth, in turn, is probably a variation of the name Remeth (Josh 19:21; Heb *remet*). Each of these renderings preserve the same essential consonantal arrangements. The LXX refers to the town by various names: *Rhemmath* or *Iermōth* (Josh 21:29), and *Rhemmas* or *Rhamath* (Josh 19:21, B and A respectively).

Some earlier scholarship sought to identify the site with a village, *er-Rameh,* approximately 11 miles SW of Jenin (*ISBE* 4: 2557). While this site preserves the consonantal tradition, it lay outside Issachar's borders and hence is not likely the location of Remeth (or of Jarmuth).

In 1921, C. S. Fisher discovered a basalt stele at the site of Bethshan. While the stele was found in secondary use in Byzantine levels, it contained a hieroglyphic inscription of Seti I (ca. 1300 B.C.; Rowe 1930: 29–30). The inscription refers to some disturbances involving the *'apiru* of Mount Yarmuta and a group called "Teyer . . ." (so *ANET,* 255; but cf. Albright 1952) who were attacking Asiatics. Seti dispatched a contingent of infantry and chariotry who purportedly suppressed the rebellion and returned in 2 days.

While the plain of Issachar is not particularly mountainous or hilly, the most impressive site is the location of the Crusader castle of Belvoir (M.R. 199222), which Aharoni suggests as the possible site of Jarmuth (*LBHG,* 28). While only 312 m above sea level, it appears more dramatically high as it stands 550 m above the Jordan Valley providing a panoramic view of the valley into Gilead (*EAEHL* 1: 179). If the names of the site—*yarmût, ra'môt,* and *remet*—are all derived from the Heb root *rûm* ("be high, rise"; cf. BDB, 926–28), then several elements converge to lend credence to the identification of Belvoir with Jarmuth: (1) the correlation of the linguistic evidence with the geographic prominence of the site; (2) the inscriptional evidence of Seti I and its reference to a "Mount Yarmuta"; (3) its location within the recognized borders of Issachar; and (4) its proximity to Beth-shan (ca. 10 km N) which puts it within range of a two-day long military mission.

However, a significant and serious detraction from this identification is that essentially no Iron Age materials are known from the site. It is possible that either Crusader construction techniques have obliterated underlying ruins (which sometimes is the case), or the identification of Jarmuth with Belvoir is erroneous. Obviously, further investigation is necessary.

DALE W. MANOR

2. A town which joined the S Canaanite coalition (Jerusalem, Hebron, Jarmuth, Lachish, and Eglon) against Joshua (Josh 10:3, 5), whose king Joshua temporarily imprisoned in a cave before executing him (Josh 10:23; 12:11). The town was allotted to Judah (Josh 15:35) and was reoccupied following the return from Exile (Neh 11:29).

The biblical site is identified with a Byzantine village by the name of *Iermochos,* which is about 10 miles from Beth Govrin (Eleutheropolis) on the road to Jerusalem. Eusebius (*Onomast.* 106.24) identified this site with the LXX *Iermous.* This identification is now generally accepted, although archaeological evidence has neither confirmed nor dismissed its biblical connection. It is located (M.R. 147124) ca. 25 km SW of Jerusalem in the central Shephelah between the Sorek and Elah valleys. The site covers ca. 40 acres (640 × 420 m) including a small acropolis (ca. 3 acres).

First described by V. Guérin, who visited it in 1854 and suggested its biblical identification, the site was tested in 1970 by A. Ben-Tor and has been excavated since 1980 by P. de Miroschedji. Both the acropolis and the lower city were first settled during the 2d half of the 4th millennium B.C. (EB I) and was continuously occupied until the end of the EB III, ca. 2300, when the entire settlement was abandoned. Reoccupation took place in the LB, but only on the acropolis and its immediate vicinity. This restricted area remained inhabited more or less continuously until the 4th century A.D., when some sectors of the lower city were settled again for a brief period.

The EB II–III city was protected by a fortification system of exceptional size and complexity. Built in the early EB II, ca. 2900 B.C., the first rampart consisted of a stone wall 5–6 m thick with large buttresses placed at regular intervals and a massive stone bastion (30 × 15 m) in the corner. This rampart was later reinforced with a glacis, part stone and part earth. A second wall 3 m thick with cyclopean masonry was erected at the end of the EB II, bringing the total thickness of the fortification system to nearly 40 m. The area between the 2 walls was later subjected to a vast terracing operation. Finally, 6 monumental platforms, 30–40 × 10–12 m, were built in this intermediate space along the corner of the city in the EB III.

Access to this part of the city was through a monumental gate established in the outer wall. During the EB III period, it underwent several changes and rebuildings. It was approached from the outside by means of a plastered ramp limited on both sides by retaining walls. Rebuilt and raised 3 times, the ramp climbed in its final stage to nearly 8 m above bedrock.

A prominent feature of the topography of Tell Jarmuth is the existence over the slopes of the entire lower city of a terrace system with retaining walls up to 6 m high. The excavations suggest that these were artificial terraces built with a fill of stone with inner partition walls. Each supported a series of constructions which, once destroyed and levelled, served as foundations for new buildings.

The EB III strata have been extensively cleared in 3 areas in the lower city. Large buildings of a public character were identified in area C. The most interesting is the so-called "White Building," probably a sanctuary. It is a rectangular hall of the broadroom type (13.5 × 6.75 m) with a central row of 4 pillars resting on large stone bases. The main entrance was through a door in the middle of the S facade. This building was part of an architectural complex including a chamber built around its SE corner,

a courtyard established in front, and 2 adjacent rooms to the S. That this was a sanctuary is suggested by the typical features of its plan, its careful construction, and comparisons with similar buildings of a cultic nature, i.e., the temples at En-gedi (Chalcolithic), at Megiddo XIX (EB I), at ʿAi and Arad (EB II), and at Megiddo XV and Bâb edh-Dhrâʿ (EB III).

EB III private houses grouped in an *insula* surrounded by a street were also excavated (area G). The *insula* resulted from the progressive agglutination of several dwelling units which were modified, enlarged, and finally linked together. The typical dwelling was composed of 1 or 2 rooms and a courtyard with several domestic installations. On the other side of the lower city, an area of specialized activities, probably "industrial," has been identified (area H). A row of 6 small rooms and courtyards was cleared; they contained only coarse pottery, large mortars, and several enigmatic installations, including two kiln-like structures.

Given its size and the density of its construction, the EB III city of Jarmuth may have had a population of ca. 3,000, engaged mainly in agriculture (cereals, vegetables, grapes, and especially olives) and animal husbandry (mostly sheep and goats, cattle and donkeys being used for traction and transport). Finds indicate that the city had trade connections with the Golan in the N, the Dead Sea in the E, and the Negeb, and that it was in contact with Egypt. Tell Jarmuth is a type site for EB III pottery, where almost every known pottery shape is represented. An interesting corpus of EB III human and animal figurines was also discovered.

Soundings on the acropolis have revealed traces of more or less continuous occupation from the LB to the early Byzantine periods. Noteworthy is an Iron Age I destruction level dated to the mid-11th century with pottery similar to Tell Qasile XI–X. Surface finds include a Hellenistic cooking-pot handle bearing a stamp of a 5-pointed star and the letters *yršlm*, and a coin of Herod the Great. The early Byzantine remains (ca. 4th century A.D.) are represented on the acropolis by the ruins of a small village, to be identified with Eusebius' *Iermochos* and in the lower city by the remains of a large building, possibly square in plan and measuring ca. 75 m on each side. This complex was apparently unfinished and may have been intended as a large farm or a caravanserai.

PIERRE DE MIROSCHEDJI

JAROAH (PERSON) [Heb *yārôaḥ*]. A Gadite, who was the grandfather of Abihail (1 Chr 5:14), the father of the 11 (or 10; see SHAPHAT) sons listed in 1 Chr 5:12–13. His name may be cognate with an Arabic term *(wariḥa)* that means "soft" or "delicate" (Noth *IPN*, 226). The several textual variants in 1 Chr 5:14 that concern the spelling of the Gadite's name probably arose from scribes confusing Hebrew letters that sounded or were written similarly (e.g., *ḥet* with *ʿayin* or *he*, and *reš* with *dalet*). Neither Jaroah nor the others named in the Chronicler's genealogy for Gad (1 Chr 5:11–17) appear in other lists of Gadites (Gen 46:16; Num 26:15–18; 1 Chr 12:9–16—Eng 12:8–15).

M. PATRICK GRAHAM

JASHAR, BOOK OF [Heb *sēper hayyāšar*]. A lost source book of early Israelite poetry, quoted in Josh 10:12b–13a (Joshua's command to the sun and moon) and 2 Sam 1:19–27 (David's lament for Saul and Jonathan). A third probable excerpt appears in 1 Kgs 8:12–13, a couplet imbedded in Solomon's prayer at the dedication of the Temple, which survives in fullest form in the LXX where it appears at the end of the prayer, directing the reader to the "Book of the Song" (Gk *biblio tēs ōdēs*). It has been suggested that this reference stems from an accidental metathesis of letters in the Hebrew text *(šyr* for *yšr)*, though the reverse is also possible.

The term "Jashar" is a common Hebrew word meaning "one who [or that which] is straight, honest, just, righteous, upright." Thus, it is commonly assumed that the title refers either to the heroic individuals who are the subjects of its contents or perhaps to all Israel as the upright people. If the latter is the case, the title may be related to the term Jeshurun, a variant form of the name Israel (cf. Deut 32:15 and 33:5, 26).

The 3 quotations from the Book of Jashar are all archaic poetry, which is sometimes designated "song" *(šyr)* elsewhere when inserted in prose contexts (cf. Exod 15:1; Num 21:17; Deut 31:30). Because of this fact, and because the term "Jashar" in the title has not been satisfactorily explained and is obviously similar to various forms of the verbal root *(šyr)*, "to sing," some scholars have argued that the LXX rendering, "Book of Song," is the correct title. If so, there is some doubt whether the book ever existed in written form as such. The reference in each case may be to the familiar oral repertoire of professional singers in ancient Israel who preserved Israel's epic and lyric traditions within various worship settings, particularly in conjunction with the major festivals. In this regard it is interesting to note that the masculine noun *šîr* eventually becomes a specific term for Temple music on the part of Levitical choirs, with instrumental accompaniment (cf. 1 Chr 25:6–7).

The nature of the book may be inferred from its 3 citations. It seems to have been a collection of ancient national songs, the antiquity of which is suggested by the relatively poor state of preservation of the Hebrew text in each case. The book must have contained a variety of songs, for each of the 3 citations is quite different. The first (Josh 10:12b–13a) is apparently an ancient incantation addressed to the heavenly bodies to prolong daylight, or perhaps to lengthen predawn darkness—until Israel has time to complete its victory in battle against the Amorites (van den Bussche 1951; Eisler 1926; Holladay 1968). It has been rendered as follows:

Sun, stand still in Gibeon!
Moon, (stand still) in the valley of Aijalon!
The Sun stood still, the Moon stayed;
Until He had taken vengeance upon the nations of His enemies.

The second (2 Sam 1:19–27) is the well-known lament over Saul and Jonathan, which is a remarkable witness to David's poetic skill and to his personal friendship with the tragic heroes involved. The third (1 Kgs 8:12–13) appears to be a couplet taken from an ancient song establishing God's supremacy over nature and ritual, reminiscent of Ugaritic parallels (Loretz 1974; cf. also van den Born 1965); which has been translated:

A sun Yahweh established in the heavens,
but He hath purposed to dwell in thick darkness;
I have surely built a noble house for Thee,
a residence where Thou shalt dwell perpetually.

The content, structure, and origin of the Book of Jashar are all uncertain. In a detailed study of LXX traditions, Thackeray (1910) argued that the book included minor collections, like the Psalter, two of which are known: "Of the Children of Judah" and "Of the Children of Israel." He compared these names to both the J and E sources of Pentateuchal criticism and to the title "Of the children of Korah" in the Psalter, which apparently derived its title from a guild of temple singers in a later period. Some think the book was a written collection begun in premonarchic Israel and expanded from time to time. Others consider it a compilation of oral traditions, not earlier than the days of Solomon and perhaps much later. It's nearest parallel is the "Book of the Wars of the Lord" (Num 21:14). In fact, some scholars have identified these two books as one. There has been speculation as to whether such archaic works as the "Song of the Sea" (Exod 15:1–18), the Song of Miriam (Exod 15:21), the Song of Moses (Deut 32), the Song of Deborah (Judges 5), and the Song of Hannah (1 Sam 2:1–10) were included in these ancient anthologies of Israel's heroic past. If these collections are understood to be the oral repertoire of Israel's professional singers, there is little difficulty including such works in the so-called Book of Jashar (see Mowinckel 1935; Nielsen 1954: 39–62).

The mysterious nature of the Book of Jashar has given rise to false identifications and imitations of the book. The Talmud (*ʿAbod. Zar.* 25a) homiletically identifies the Book of Jashar with the "book of Abraham, Isaac, and Jacob" (i.e. Genesis), who were "upright." Certain ancient Jewish commentators considered the title to be a reference to the Torah. A medieval Book of Jashar paralleled, in part, the pseudepigraphic *Testament of Judah.* Still other medieval rabbinical works with this title appeared. An interesting example of a more recent forgery from Christian circles is associated with Alcuin, Bishop of Canterbury (d. A.D. 804), who is said to have discovered it in the city of Gazna on a "Pilgrimage into the Holy Land, and Persia." First published in 1829, it is reputed to have been the words of "Jashar, the son of Caleb" rediscovered in England in 1721. The Rosicrucian Order published a 5th edition of this particular text in 1953.

DUANE L. CHRISTENSEN

JASHEN (PERSON) [Heb *yāšēn*]. One of the members of the "the Thirty," the elite class of David's warriors (2 Sam 23:32 = 1 Chr 11:34). He was known as "the Gizonite," probably a description of the location of his origin. Both the personal name, Jashen, and the qualifying adjective, Gizonite, are uncertain due to the corrupt condition of the text in 2 Sam 23:32 (cf. 1 Chr 11:34) but are regarded by scholars as highly probable readings. The evidence and argument for them follows.

(1) The Hebrew orthography of 2 Sam 23:24 reads: *ʾlyḥbʾ hšʿlbny bny yšn yhwntn* ("Eliahba the Shaalbonite, the sons of Yashen, Jonathan"). The referent for *bny yšn* (sons of Jashen) is missing in the text. The expression has become *bny hšm* ("sons of fame") in 1 Chronicles as an attempt to make sense of it, but the referent is still lacking. (2) The word *bny* can be explained as dittography, the last 3 letters of the previous word *(hšʿlbny)* being the same (Luc does not translate *bny*). (3) The name, Jashen, does not have a qualifying adjective in 2 Samuel. This would be anomalous in the list of the warriors there, since every name is qualified by either a patronymic or a gentilic (accepting with LXX a patronymic for Jonathan). The missing description is preserved in 1 Chronicles as "the Gizonite."

A problem, however, remains. The term "Gizonite" is unique in MT and there is no evidence of a proper noun "Gizon." Two solutions have been proposed: (1) The LXX reads *Gōuni* (A), "the Gunite," a reference to a man who was the head of a clan in the tribe of Napthali (Num 26:48). This reading has arisen as a result of confusing the Heb *zayin* for *waw.* (2) The reading is a textual corruption of "Gimzoni," and thus a reference to the town, Gimzo, in S Judah (Elliger 1966: 73 n. 4, 96–97).

STEPHEN G. DEMPSTER

JASHOBEAM (PERSON) [Heb *yāšābĕʿām*]. Var. JOSHEB-BASSHEBETH. **1.** One of David's champions, a select class of warriors directly attached to the king for special assignments (1 Chr 11:10–47, v 11; = 2 Sam 23:8–39, v 8 in which the variant Josheb-Basshebeth occurs).

Jashobeam is identified as "a son of Hachmoni" (RSV "a Hachmonite"), a designation which means either he is a descendent of the unknown person Hachmoni or is one who came from an unidentified people or place named "Hachmon" (see, also, the variant in 2 Sam 23:8, "Tahchemonite"). Jashobeam stands exalted as foremost among David's champions, identified as the chief of a military unit of some sort, which due to the ambiguity of the term has been understood variously as: "the thirty," according to the consonantal text of the MT; "the officers," a conjectured meaning in accord with the vowel pointing of the MT; or "the three/s." As an example of his prowess, he is said to have killed 300 men with his spear in one encounter. The higher number of 800 in the parallel text (2 Sam 23:8) is to be preferred, since his exploits presumably surpassed that of Abishai (1 Chr 11:30–31 = 2 Sam 23:18–19; Williamson *Chronicles* NCBC, 102).

In certain Gk mss, both at 1 Chr 11:11 and 2 Sam 23:8, one finds a variant name *Iesbaal,* which would be the equivalent of the Heb *yišbaʿal* (possibly meaning, "man of Baal" [BDB, 36; for a review of contrary opinions see Tsevat 1975: 77–79; *TPNAH,* 57]). Generally, this name has been recognized as the original name. If this is the case, the form "Jashobeam" might have arisen through a confusion of the final letters, an *m* in the place of the *l.* The form of this name found in 2 Samuel is generally explained as having arisen in two steps. First, the element *bōšet,* "shame," was deliberately substituted for "baal," a term which could mean "lord" and refer to Yahweh, but which also was a title for a Canaanite god and, therefore, presented the possibility of theological offense (postulated first by Geiger, followed by Wellhausen and others; see *NHT,* 253–55, 363–64). (A tendency to transform names compounded with the element "baal" does not occur in Chronicles.) Secondly, an accidental repetition of the letter *b* occurred. Contrary to the above thesis, it has been pointed out that the element *baštu* occurs in Akkadian names in which it means "dignity, pride, vigor" or possibly "guardian angel, patron saint"; several characters in the OT were known by more than one name, and the postulated principle of substitution meets with various inconsistencies (Tsevat 1975: 75, 84–86).

Apparently the same Jashobeam is mentioned in a list of commanders found in 1 Chr 27:1–15 (v 2), since this list mentions 11 other mighty men found in 1 Chr 11:10–47. Here he is designated as the "son of Zabdiel" (v 2) and a "descendant of Perez" (v 3) of the tribe of Judah, a designation which differs from that of 1 Chr 11:11. Differences between the two lists in 1 Chronicles suggest that the composition of neither was dependent upon the other (Williamson *Chronicles* NCBC, 174). These commanders were each in charge of a monthly course of 24,000 men (or possibly 24 "units," rather than "thousands," Myers *Chronicles* AB, 183, 53, 98) in the armed service of the king; Jashobeam was in charge of the first month. This list of commanders and their functions is possibly a construct of its composer, since (a) no such monthly, conscripted, civilian army is mentioned elsewhere during David's reign; (b) the large number of 288,000 men, if the term is understood correctly, is improbable; and (c) one of the commanders, Asahel (v 7) was dead before David had rule over all Israel (Williamson *Chronicles* NCBC, 174–75). However, the author/redactor's thesis—that David made preparations for the proper ongoing cultic and national life of Israel (as illustrated throughout chapters 23–27)—draws on the fact that David took a census (vv 23–24; chap 21) which could have been utilized for designing a monthly plan of conscription; such a plan would have been analogous to Solomon's monthly courses for his provision (1 Kgs 4:7–19).

2. One of a group of Benjaminite warriors who defected from Saul, also a Benjaminite, and who gave their allegiance to David at Ziklag during the period in which David was banned from Saul's court (1 Chr 12:1–7). These men were noted for their ambidextrous fighting skills as bowmen and stone slingers (Judg 20:16). This Jashobeam is designated a "Korahite," and would, therefore, appear to be a different individual from the Jashobeam of 1 Chr 11:11 and 27:2. If the designation "Korahite" is a reference to the Levitical family of Korah, then Jashobeam was a Levite would had resided in Benjaminite territory. Otherwise, he originated from an unknown place named "Korah" (Rudolph *Chronikbücher* HAT, 104); or, as Miller (1970: 66–67) has suggested, there is some confusion in the list, and Jashobeam was really a non-Benjaminite who came from a group of Korahites located in S Judah.

RODNEY K. DUKE

JASHUB (PERSON) [Heb *yāšûb*]. The name of 2 individuals in the Hebrew Bible. Noth categorized "Jasub" as a "wish name" which means "may be (Yaweh) turn (to us again)" (*IPN,* 199).

1. One of the 4 sons of Issachar (Num 26:24; 1 Chr 7:1 [K *yšyb,* Q *yāšûb*]). Noth also stated that the section concerning Issachar in Num 26:23–27 appears in its "original form without additions" (*Numbers* OTL, 206). But Meyers argued that the final editor of the genealogy in 1 Chronicles probably drew from several census lists whose significance was lost (*1 Chronicles* AB, 53), while Williamson detected a military census put in genealogical form (*Chronicles* NCBC, 76). The 2 lists agree substantially, with only a slight variation in the spelling of one of the sons (Puvah [Num 26:23] and Puah [1 Chr 7:1]). The genealogy of Gen 46:8–27 names Iob (Heb *yôb*) instead of Jashub (v 13—LXX v 20). The LXX and the Samaritan Pentateuch list Jashub here, but these are probably corrections based on the texts in Numbers and 1 Chronicles. Even so, Jashub may be taken as part of the most ancient census tradition.

2. A descendent of Bani and one of the returned exiles who was required by Ezra to divorce his foreign wife (Ezra 10:29 = 1 Esdr 9:30). Jashub was a member of a family from which a group of exiles returned with Zerubbabel (Ezra 2:10; cf. Neh 7:8 which lists the family of Binnui). For further discussion, see BEDEIAH.

JEFFREY A. FAGER

JASON (PERSON) [Gk *Iasōn*]. **1.** A Christian in Thessalonica (Acts 17:5–9). Because his Greek name was often used in the Diaspora for such Hebrew names as Joshua or Jeshua, it may be assumed he was a Hellenistic Jew, and probably one of those converted during Paul's preaching in the Thessalonian synagogue (17:2–4). Jason became host to Paul and Silas (17:7), and it was therefore his house which was attacked by those in opposition to the missionaries. When the mob could not find Paul and Silas, they dragged Jason and other brethren to the city authorities. Jason was accused of welcoming people who had "turned the world upside down" (17:6). He and his guests were said to be "acting against the decrees of Caesar, saying that there is another king, Jesus" (17:7). Only when Jason and the others posted bond were they let go (17:9).

Jason may have been prosperous since he could offer hospitality to Paul and Silas and apparently host as well the housechurch they had begun. Once the missionaries had left Thessalonica, Jason probably was locally recognized as the leader of the church. It has generally been assumed that he and the brethren were arrested in Paul's stead and that the security they supplied functioned as a promise to the authorities to keep Paul from returning. Yet it is quite probable that Jason was in trouble not merely by default, but in his own right. Evidence for this is that the bond he posted seems related not directly to Paul's activities but rather to actions by the church members themselves (Jewett 1986: 117; cf. Gillman fc.). Whatever these actions were, they resulted in ongoing suffering for the Thessalonian Christians at the hands of their "countrymen" after Paul had left (1 Thess 2:14). A further argument that Jason's bond did not relate to Paul is the latter's remark in 1 Thess 2:18 that he had attempted to return to Thessalonica "again and again—but Satan hindered us." Paul attributes his inability to return not to a bond, but to Satan (Whitely 1969: 49–50). In sum, these observations suggest another perspective than the traditional view that Jason was a person who ended up in trouble with the authorities primarily because Paul could not be found. Jason and his brethren evidently posted bond for their own independent actions.

2. A person who along with two others, Lucius and Sosipater, is identified as one of Paul's kinsmen; thus a fellow Jewish Christian (Rom 16:21). Paul conveys greetings from these 3 to the recipients of Romans. This indicates that a person named Jason was present with Paul in Corinth as he wrote Romans, presumably ca. 58 C.E.

Although the commonality of the name argues against too readily equating this Jason in Corinth with Jason of Thessalonica, in fact it is probable that the two were the same person (Cranfield *Romans* ICC, 805–6). The association of Jason with Sosipater in Rom 16:21 when read in conjunction with Acts 20:4 suggests the link. Among those who travel with Paul after he leaves Corinth according to 20:4 are said to be Sopater of Beroea and various Thessalonians (Jason is not one of those named, however). Since Sopater's name is a shortened form of Sosipater and his town, Beroea, was located near Thessalonica, it seems that Sosipater and Jason of Rom 16:21 were in fact companions from Beroea and Thessalonica respectively. On this supposition, Rom 16:21 adds to what can be known of Jason of Thessalonica from Acts 17:5–9 that he was definitely a Jew and that at some point in the years following the Thessalonian church's founding, he apparently left to travel or move with Paul to Corinth.

FLORENCE MORGAN GILLMAN

JATHAN (PERSON) [Gk *Iathan*]. A son of Shemaiah and a possible kinsman of Tobit (Tob 5:14—Eng 5:13). The archangel Raphael (sent by God to help cure Tobit's blindness) identified himself as Azarias, the son of Ananias, a relative of Tobit. Tobit, in turn, mentioned the brothers Ananias and Jathan as persons with whom he used to travel to Jerusalem to pay his tithes. One might infer that Jathan was a kinsman of Tobit, though the text does not say so explicitly, and that Tobit might have been related to Ananias through marriage, and not to Jathan at all. While Codices Alexandrinus and Vaticanus read the name as "Jathan," Sinaiticus reads it as "Nathan." The second reading suggests a play on names. The name "Ananias" means "God favors," and the name "Nathan" means "he gives." Zimmermann (1958: 75) argues that the previous verse (5:13—Eng 5:12) exhibits word plays on the names Azariah (God helps) and Ananias (God favors). (Cf. 6:6 for another word play on Azariah.) Given the proclivity for word plays on names in the book of Tobit and its fictional character, the author of Tobit and/or the translator of Sinaiticus may have intended to delight the reader with the names "God favors" and "he gives" as those persons with whom Tobit worshipped in Jersualem.

PAUL L. REDDITT

JATHNIEL (PERSON) [Heb *yatnî'ēl*]. A Levitical gatekeeper from the Korahite family of Meshelemiah. The fourth son of this family, he is named only in 1 Chr 26:2, in the Chronicler's (Williamson *Chronicles* NCBC, 169) or perhaps a later (Rudolph *Chronikbücher* HAT, 173) organization of the gatekeepers in the temple at Jerusalem. The Lucianic recension renders this etymologically obscure (*IPN*, 248) name *Nathanaēl* (compare the Syriac, *ntn'jl*).

J. S. ROGERS

JATTIR (PLACE) [Heb *yattîr*]. The third Levitical city in the Judah/Simeon list. There are no Hebrew variations in either the Joshua (21:14) or 1 Chronicles (6:42—Eng 6:57) account. Besides being mentioned in the 2 Levitical city lists, Jattir appears in the allotment to Judah (Josh 15:48). Here Jattir is described as being in the hill country. Jattir also appears in one of the stories about David and the Amalekites. When David arrived at Ziklag and saw the city burned by the Amalekites he inquired of the Lord what

he should do. He was instructed to pursue and overtake the Amalekites and did so. The victory was great, only 400 young men and camels escaped. David's spoil was large; he recovered everything the Amalekites had taken from Ziklag, all of the flocks and herds, "nothing was missing, whether small or great, sons and daughters" (1 Sam 30:19). Then David divided the spoils, sending them to the elders of Judah. One of the recipients was the elder in Jattir (1 Sam 30:27).

Biblical Jattir has been identified with Khirbet ʿAttir (M.R. 151084). Khirbet ʿAttir is in the rolling hill and mountainous country NE of Beer-sheba, lying at one of the S outreaches of mountains stretching into the Negeb flatlands. The site is located 21 km SW of Hebron, 7 km SW of es-Samûʿ and 15 km SE of Tell Beit Mirsim. It is a difficult site to reach because of the rugged terrain.

Eusebius (*Onomast.* 108) was the first geographer to mention Jattir, but it was Robinson (1841: 194) who made the association between Jattir and Khirbet ʿAttir. The identification of Jattir with Khirbet ʿAttir has been accepted by Guérin (1869: 199), Conder and Kitchener (1881: 408), Alt (1932: 15), Noth (*Josua* HAT, 97), and Boling (*Joshua* AB, 493).

There have been numerous surveys conducted at Khirbet ʿAttir, but very few identifying the historical occupation of the site. Although the Archaeological Survey of Israel in 1967–68 examined many tells in the region S of Hebron, Khirbet ʿAttir was not one of them. In 1971 the Levitical City Survey found that the earliest occupation at Khirbet ʿAttir was late Iron II. There was also pottery from the Hellenistic, Roman, Islamic, and Arabic periods. Most of the Iron II pottery comes from the 7th/6th centuries; the 8th century was also represented. The identification of Khirbet ʿAttir with biblical Jattir stands. Although the archaeological evidence does not support an occupation of the site during the conquests of King David, it was occupied during the writing of the Deuteronomistic history.

JOHN L. PETERSON

JAVAN (PERSON) [Heb *yāwān*]. One of 7 sons of Japheth and a grandson of Noah according to the Table of Nations (Gen 10:2) and the parallel genealogy in 1 Chr 1:5. The former text presents him as the ancestor of maritime peoples ("islands of the nations," Gen 10:5). This refers to the area of the Aegean and E Mediterranean seas, as is shown by the inclusion of Elishah (Alashiya, Crete) and Kittim (Cyprus; Gen 10:4; 1 Chr 1:7) in the list. Maritime trade of Javan is highlighted in Ezek 27:13, 19, while their distance from Palestine is the point of Isa 66:19. This distance explains the severity of the wrong inflicted on the Judeans by the Tyrians and Sidonians, who sold them into captivity even as far away as Javan (Joel 3:6).

Javan is to be identified with Ionia, an area of Greek settlement in SW Asia Minor from at least the 1st millennium B.C., and possibly several centuries earlier. Cities in the area included Smyrna and Ephesus (cf. Rev 2:1–11). Contact between the Greeks and the Assyrians as early as the reign of Sargon II (8th century B.C.) is shown from Akkadian records, which call the area Jawan or Jaman (Parpola 1970: 186–87). Under Cyrus (late 6th century B.C.), this coastal area of Asia Minor became the satrapy of Ionia. Later the name was expanded to describe the entire Greek population on both sides of the Aegean—an example of the whole being identified by one of its parts, as in our use of the name Russia. Because of the territorial expansion of the Greeks under Alexander the Great (4th century B.C.), the related term Javana is known even in the Sanskrit of India.

The extended usage of the name is evident in the book of Daniel. Here the empire of the Persians will be replaced by that of Javan and its king, referring to Alexander (Dan 8:21; 10:20; 11:2). This, yet another foreign domination, will not satisfy Israel. Rather they will rise against their Greek overlords (Zech 9:13), possibly a prophetic allusion to the period of the Maccabees (mid-2d century B.C.).

A second identification of a more limited use of the name Javan associates it with Gaza (Berger). Some have proposed this based on the collocation of Javan with the Danites (Ezek 27:19), a tribe which has early S ties. The LXX and several other Greek and Persian texts also support this identification. This interpretation cannot be valid for most of the uses of Javan, however, because of its much more northerly association in most texts.

DAVID W. BAKER

JAVELIN. See WEAPONS AND IMPLEMENTS OF WARFARE.

JAZER (PLACE) [Heb *yaʿzēr*]. The fourth Levitical city allotted to the tribe of Gad is Jazer (Josh 21:39, 1 Chr 6:66—Eng 6:81). This city is mentioned many times in the OT, but its location is obscure. Jazer is first cited in the conquest narratives in Numbers and in an inheritance account in Joshua. When the Israelites arrived in the land of the Amorites, Moses sent messengers to Sihon to request permission to pass through the land; but Sihon refused. As a result Sihon came to Jahaz and fought against Israel. The forces of Israel were victorious "and took possession of his land from the Arnon to the Jabbok, as far as to the Ammonites: for Jazer was the boundary of the Ammonites" (Num 21:24). Israel therefore dwelt in

the land of the Amorites and "Moses sent to spy out Jazer; and they took its villages, and dispossessed the Amorites that were there" (Num 21:31). Jazer is to be understood not only as a city, but also as the name of a region. In Num 32:1 the land of Jazer is described as a place for grazing cattle. Moses gave Jazer, a fortified city with folds for sheep (Num 32:35; Josh 13:25), to God. The next reference to Jazer occurs in the reign of David when the city was part of a census list (2 Sam 24:5). Jazer is referred to in a "footnote" in 1 Chr 26:31 as the city garrisoned by Judah from Hebron. There are two references to Jazer in the prophets—one in Isa 16:8 in an oracle against Moab, and a parallel text in Jer 48:32 where Jazer weeps for the vines of Sibmah.

Jazer is mentioned in the early campaign of Judas Maccabeus. At that time the city was under the rule of the Amorites; but Judas "crossed over to the Amorites, and came upon a strong and numerous force under the command of a certain Timotheus. He fought many battles with them, and they broke before him and were crushed. After capturing Jazer and its dependent villages, he returned to Judaea" (1 Macc 5:6–8, NEB). Outside of the OT and Apocrypha, Jazer appears in Josephus' *Antiquities* (12.329–30) and in Eusebius' *Onomasticon* (12.1–4) where he describes the city as being 10 Roman miles W of Philadelphia, situated at the source of a large stream which flows into the Jordan, and 15 from Heshbon.

The location of biblical Jazer has been of considerable dispute since the early part of the 19th century. Four sites have been associated with this biblical city: Kh. Sar, Yajuz, Kh. es-Sireh, and Kh. Jazzir.

Seetzen and later Merrill (1883: 484) have identified Jazer with Kh. Sar. The first major survey of Khirbet Sar (M.R. 228150) was done by Conder (1899: 154) in October, 1881, but Conder did not accept Seetzen's identification because Sar had no etymological connection with the name Jazer. The tell is located 9 km W of Amman and 1.5 km SE of Ain es-Sir. It is located in a rolling, fertile expanse between Naʿur on the S and Suweileh on the N. The fields around the site are terraced. From Kh. Sar, a portion of the Dead Sea is visible and the Wadi esh-Shita descends to the S. The remains at Kh. Sar are extensive. The most extensive survey work has been conducted by N. Glueck (1937: 153–57), who found extensive Roman, Iron I, and Iron II.

There are 2 sites by the name of Yajuz that have been associated with biblical Jazer, one called Kom Yajuz, the other Yajuz. Oliphant (1880: 223–35) proposed identifying Yajuz (M.R. 237159) with Jazer and T. K. Cheyne (*EncBib* 2: 2340–41) has been the strongest defender of this association. Yajuz is located 7 Roman miles N of Philadelphia (Amman) and 33 S of Gerasa. During the Roman occupation Yajuz was on the road that ran from Philadelphia and Petra S to Arabia. When Glueck (1939: 177) visited Yajuz he found only Roman and Byzantine remains.

Cohen (*IDB* 2: 805–06) has suggested that Kom Yajuz (M.R. 238160) is biblical Jazer, but gives no reasons other than it is the site that best suits this location. Kom Yajuz is located less than 1.5 km E-NE of Yajuz situated between the Wadi Kom and the Wadi Yajuz. Glueck found pottery that was associated with EB IV, Iron I, and Iron II. On later surveys, 7th–6th century pottery was found.

In 1956, G. Landes (1956: 30–37) proposed that Jazer be identified with Kh. es-Sireh. Although Landes did not have any ceramic evidence for his identification, he argued for this "tentative" location on the basis of Eusebius and the prophetic passages in Isaiah and Jeremiah referring to the "spring." Landes pointed out that Eusebius located Jazer 8–10 Roman miles W of Philadelphia, 15 Roman miles from Heshbon, also that a large river flowed from the town emptying into the Jordan. Kh. es-Sireh is located 2 km NE of Kh. Sar, making Sireh 12.5 km or 8.5 Roman miles from Amman, and 18.7 km or 12 Roman miles from Heshbon. The Amman-Sireh mileage fits well with Eusebius' figures; however, that between Heshbon-Sireh is short. The major argument of Landes was a reconstruction of the Isa 16:9 and Jer 48:32 texts. Landes suggested that *bkh* in these 2 prophetic texts should be translated "water source, fountain, well." Because Eusebius commented that at Jazer there was a large river which emptied into the Jordan, Landes observed that the source of this river must have been the "fountain" at Jazer. However, there is no archaeological evidence to support this identification and furthermore, Landes' elaborate discussion on *bkh* really does not support the identification of Kh. es-Sireh any more than it would numerous other sites along the Wadi Sir and Wadi Kefren.

The most attractive identification for the location of Jazer has been made by Abel (*GP* 2: 69) and R. de Vaux (1941: 25–27), who propose that the ancient city was at Kh. Jazzir (M.R. 219156). Not only does it correspond to most of the location details of Eusebius, but the names do not present any difficulties, and de Vaux also found good ceramic evidence there. Kh. Jazzir is located 4 km S of es-Salt. Jazzir is at the head of the Wadi Šuʿeib which flows into the Jordan. Less than a km from Jazzir is ʿAin Hazer. On his survey de Vaux identified pottery from the Iron and Hellenistic periods. He suggested that the site was abandoned at the end of the Iron Age and was not reoccupied until the Hellenistic. Because de Vaux speaks only of the Iron Age it is impossible to date this city any more precisely. However, little doubt remains that the Levitical city Jazer is Kh. Jazzir.

JOHN L. PETERSON

JAZIZ (PERSON) [Heb *yāzîz*]. A state official; a Hagrite. The majority of the LXX mss by reading *iōaz* do not reflect the first *zayin* in his name. One of 12 stewards of royal

property appointed by David, his specific charge was to oversee the flocks (1 Chr 27:31). Of the 12 he is one of 7 identified with a gentilic rather than by paternity. Perhaps he was from a conquered group, making his nationality or ethnic origin more important than his particular genealogy. Although most of the 7 gentilics are not otherwise known, 1 Chr 5:10, 18–22 indicates that the Hagrites were conquered by the Reubenites, Gadites, and half of the tribe of Manasseh during the reign of Saul. In Ps 83:7ff (—Eng 83:6ff) they are mentioned as allied with the Ishmaelites (note Obil, the Ishmaelite, steward of the camels [1 Chr 27:30]), Moab, Edom, and other traditional enemies.

RICHARD W. NYSSE

JEARIM, MOUNT (PLACE) [Heb *har-yĕʿārîm*]. A mountain peak on the N boundary of the territory of Judah about halfway between Kiriath-Jearim and Beth-Shemesh (Josh 15:10). This is the only reference to the peak. Mt. Jearim, which probably means "mountain of forests" or "wooded mountain," is located at Chesalon, modern Kesla (M.R. 154132) approximately 17 km W of Jersualem. It forms part of a range referred to as the Jerusalem Hills. Because of the similarities between Jearim, "forest," and Seir, "shaggy," it has been suggested that the two peaks of Josh 15:10, Seir and Mt. Jearim, may be identical (see Boling, *Joshua* AB, 369–70). If so, this place also marks the farthest penetration of the abortive attempt by the Israelites to conquer Canaan after initially accepting the prejudiced report of 10 of the 12 spies (cf. Numbers 14 and Deut 1:44).

WANN M. FANWAR

JEATHERAI (PERSON) [Heb *yĕʾātĕray*]. A Levite of the exilic period, a descendant of Gershom (1 Chr 6:6—Eng 6:21). The origin of the name is unknown, perhaps resulting from a scribal error. Rudolph (*Chronikbücher* HAT, 54) suggested that it should be read as either Ethni (*ʾetnî*) as in 1 Chr 6:26—Eng 6:41 or Joel (*yôʾēl*) as in 1 Chr 15:7.

TOM WAYNE WILLETT

JEBEL. Geographic names containing the term "jebel," meaning "mountain," are found alphabetized under the second term of the name. For example, the Jebel Qa'aqir entry can be found under QA'AQIR, JEBEL.

JEBERECHIAH (PERSON) [Heb *yĕberekyāhû*]. The father of Zechariah, whom Isaiah summoned to witness a prophetic document announcing the impending overthrow of Israel and Syria by the Assyrians (Isa 8:2). Near the time of the Syro-Ephraimite War, Isaiah called on two witnesses to verify his prophetic announcement: Uriah the priest and Zechariah the son of Jeberechiah. Uriah is apparently the high priest (2 Kgs 16:10–16). Wildberger (*Isaiah 1–12* BKAT, 316) has suggested that the Zechariah in question is the father of Abi who was the wife of King Ahaz and mother of King Hezekiah (cf. 2 Kgs 18:2). In any case, since Uriah and Zechariah appear to be leading citizens, the same must also be true for Zechariah's father, Jeberechiah. All the names mentioned in Isa 8:2 belong to the world of cult piety which is best known to us from the Psalms (Wildberger *Isaiah 1–12* BKAT, 317; *IPN* 195). The name Jeberechiah means "May YHWH bless." This type of name (formed with an imperfect verb) occurs occasionally in texts dealing with ancient Israel down to the time of David, but then falls into general disuse until shortly before the Exile (*IPN* 28). This fact has led some to suggest that the name should actually be Berechiah (cf. LXX). It is interesting to note that the father of the postexilic prophet Zechariah is Berechiah (Zech 1:1, 7). See BERECHIAH.

JOHN H. HULL, JR.

JEBUS (PLACE) [Heb *yĕbûs*]. JEBUSITE. The name of the city where the Jebusites lived, which is used as the pre-Israelite name for Jerusalem.

A. Relationship and Use of Terms
B. Use in Lists of Nations
C. Ethnic Origin
D. Geographic Location
E. Historical Data

A. Relationship and Use of Terms

Boling and Wright (*Joshua* AB, 167) argue that Jebus was a clan name and that "linguistically, the name correlates with Amorite *yabusum* and the name of a town in Transjordan, Jabesh (-Gilead)." The term Jebusite may have been a gentilic adjective derived from the name Jebus, or Jebus may have received its name from its inhabitants (Simons *GTTOT*, 47). Since Jebus occurs only 4 times in the Hebrew Bible and is otherwise unknown, while Jebusite occurs 41 times, the latter possibility is more likely. While the term Jebusite can be used as a descriptive adjective with the name of an individual such as Araunah (2 Sam 24:16, 18), it is most often used with the article as a collective name for Jebusites.

B. Use in Lists of Nations

The term Jebusite is found in 22 of the 27 lists of pre-Israelite nations. In the most common 6-name lists, the Jebusites occur in the latter half of the lists among other little known nations, including the Perizzites and the Hivites (Exod 3:8; 33:2). The Jebusites usually occur last in the lists possibly because they were the last group to be conquered by the Israelites (Ishida 1979: 461–65).

C. Ethnic Origin

The Jebusites are listed in the Table of Nations as descendents of Canaan (Gen 10:16). Since the table seems to be organized by different criteria—ethnopolitical, linguistic, geographic, genealogical, socioeconomic, and sociocultural (Gen 10:5, 20, 31; Oded 1986: 14–17)—the precise meaning of the Jebusites in this list is debatable. They are probably listed as descendents of Canaan because they lived in the land of Canaan (Speiser *IDB* 3: 235–42).

Little is known about the origin of the Jebusites. Scholars have suggested that they may be related to the Hurrians (Hoffner *POTT*, 225) or to the Hittites—although this last possibility is unlikely. Ishida contends that the Jebusites

were a subdivision of the Perizzites (1979: 479–80). Most agree that the Jebusites were a non-Semitic people.

D. Geographic Location

The Jebusites were located in the hill country of Canaan (Num 13:29; Josh 11:3). The phrase "shoulder of the Jebusite" was a landmark for the S border of Benjamin (Josh 15:8; 18:16). While some have maintained that the "shoulder of the Jebusite" refers to the "western hill of the present-day Old City or perhaps to both of the hills," Kallai maintains that it refers to the E hill or the inhabited city of Jebus/Jerusalem of earliest times (*HGB*, 136–37). Jebus is usually located in Benjaminite territory except for one text in which it may be located in Judah (Josh 15:63). The confusion may be because Jebus was on the border of the 2 tribal regions or because of shifting boundaries over time (Aharoni *LBHG*, 251, 254, 315; Kallai *HGB*, 396–97).

The Jebusites are said to have been inhabitants of Jerusalem in Josh 15:63 and 2 Sam 5:6. In Judg 19:10, Jebus is mentioned with the explanatory note that it was Jerusalem (see also Josh 18:28). 1 Chr 11:4 mentions Jerusalem with the explanatory note that it was Jebus.

Some scholars have been troubled by this identification of Jebus and Jerusalem for several reasons. First, this identification is found in each case in a parenthetical note which could be a later redactional or scribal addition to the text. Second, while the name Jerusalem occurs in the 14th century Tell el-Amarna texts and in the 19th–18th century Egyptian Execration texts, no reference is made to Jebus (Soggin, *Judges*, ET, OTL, 1981: 286). Third, Jerusalem seems to be too far S to be located on the S border of Benjamin (Miller and Tucker, 121).

While the Jebusites inhabited and controlled Jerusalem, this does not necessarily mean that Jebus was Jerusalem. Miller contends that later scribes misidentified Jebus with Jerusalem on the basis of the Jebusite control of Jerusalem and suggests that Jebus should actually be located at present-day Shaʿfât (Miller 1975: 154; see map in Miller and Tucker *Joshua* CBC, 130). If Jebus was actually used as a name for Jerusalem, it must have been a temporary name and must have existed alongside the older name Jerusalem (Simons *GTTOT*, 47; see Josh 10:5 where the name Jerusalem is used by itself). D. R. Ap-Thomas (1967: 286) argues that the identification of Jebus with Jerusalem was useful "to distinguish in the story between pre-Israelite and Israelite occupation—especially where the inhabitants are guilty of 'Canaanite crimes.' "

E. Historical Data

While the land of the Jebusites was promised to Abraham and his descendents (Gen 15:21), the Israelites found it difficult to defeat these people, who remained in power during the period of the judges until the time of David (Judg 3:5). Neither the Judahites (Josh 15:63) nor the Benjaminites could drive the Jebusites out of Jerusalem (Judg 1:21). The puzzling mention of the Judahites' destruction of the city of Jerusalem in Judg 1:8 has been variously understood as only a partial conquest of the city or a temporary and indecisive victory (Boling *Judges* AB, 55–56). In Judg 19:10–12 the traveling Levite avoids spending the night at Jebus/Jerusalem because it is a city of foreigners. The reference to David bringing the head of Goliath to Jerusalem—still occupied by Jebusites—in 1 Sam 17:54 may have been an anachronism reflecting a tradition that the skull was later kept at Jerusalem as a trophy (see also 1 Sam 17:57; Klein *1 Samuel* WBC, 181).

David finally succeeds in capturing Jerusalem from the Jebusites (2 Sam 5:6–9; 1 Chr 11:4–9). The precise details of the event are difficult to reconstruct because of the complicated textual and redactional history of these two accounts (McCarter *2 Samuel* AB, 135–43). Assumedly, even though the city was taken, not all of the Jebusites were annihilated, because David later bought the threshing floor of Araunah the Jebusite (2 Sam 24:18–24). The descendents of the pre-Israelite nations who still lived in the land were reportedly reduced to slavery by Solomon (1 Kgs 9:20–21). Except for the Jebusites' place in the traditional lists of pre-Israelite inhabitants of Canaan (Ezra 9:1; Neh 9:8; Jdt 5:16; 1 Esdr 8:69) nothing more is said about these people.

STEPHEN A. REED

JECOLIAH (PERSON) [Heb *yĕkolyāh*]. Mother of Azariah, King of Judah (2 Kgs 15:2 = 2 Chr 26:3). Her name means "YHWH is able/has the power" (Stamm 1967: 311). Jecoliah was one of 3 queen mothers from Jerusalem (the others being Jehoaddan and Nehushta). Her father's name is unknown. The form Jecoliah reflects the *Qere* of 2 Chr 26:3. The spelling found in 2 Kgs 15:2 has a final *û* and reads *yĕkolyāhû*. See also AZARIAH; QUEEN.

LINDA S. SCHEARING

JECONIAH (PERSON) [Heb *yĕkonyāh; yĕkonyāhû*]. A variant form for 3 names in the Hebrew Bible and the deuterocanonical texts.

1. An alternate form of the name JEHOIACHIN king of Judah, the son and successor of Jehoiakim (1 Chr 3:16, 17). He was taken into exile by Nebuchadnezzar king of Babylon (Esth 2:6; Jer 24:1; 27:20; 28:4; 29:2; Bar 1:3, 9).

2. Occurs in 1 Esdr 1:9 as an alternate form of the name CONANIAH.

3. An alternate form of the name JEHOAHAZ, king of Judah, the son and successor of Josiah (1 Esdr 1:34).

JEDAIAH (PERSON) [Heb *yĕdaʿyāh; yĕdāyāh*]. There are 2 forms of the name Jedaiah, the first *(yĕdaʿyāh)* meaning "Yahweh knows" and the second *(yĕdāyāh)* meaning "Yah-

weh has favored." The first is represented by #1–#3 below, the second by #4–#5.

1. One of the major priestly houses of Judah which is regularly mentioned among those priests who returned from exile with Zerubbabel. The earliest tradition, likely reflected in Ezra 2:36 and Neh 7:39, lists Jedaiah as one of 4 priestly families which returned, and further identifies him as being "of the house of Jeshua," that is Joshua the high priest. In this early tradition Joshua rather than Jedaiah is the major eponym of the family.

In a secondary tradition, reflected in Neh 11:10, Jedaiah is listed alongside a number of other priests as among those living in Jerusalem after the return. Vv 10–11 seem badly damaged, however, and many scholars reconstruct the text in various ways. It may originally have listed the genealogies for only 3 such priests: Jedaiah, Jachin, and Seraiah. If correct, the effect would be to provide Jedaiah with the title "the ruler of the house of God" and with a linear genealogy reaching back 7 (or 8) generations through Zadok to Ahitub, thus legitimating his status in the postexilic community. This reconstruction would also bring vv 10–11 into line with the rest of the passage.

The lists in Neh 12:1–7 and 12–21 have also been disturbed, as is evidenced by the variance in names. They list Jedaiah as among the 22 (var. 21) priests who returned with Zerubbabel, but now only in 18th (var. 17th) position. Whereas in Neh 11:10 Jedaiah was listed as the son of Joiarib, here he is listed as a colleague. The same relationship may be inferred, however, in that Joiarib is the 17th (var. 16th) listed, that is one above Jedaiah.

The importance of Jedaiah as suggested by even the earlier texts is finally "codified" for the postexilic community by the Chronicler who gives to Jedaiah priority in the Davidic temple. In 1 Chr 24:7 Jedaiah is given the second lot in the Davidic establishment of the 24 priestly courses, still behind J(eh)oiarib. But in 1 Chr 9:10 Jedaiah finally has priority over his rival.

Rather than being considered individual persons, these names should be taken as family designations and as indications of fluctuating political dynamics in the Second Temple period.

2. In addition to this Jedaiah, there is also a minor priestly figure by the same name who is mentioned in the lists in Neh 12:7 and 21. That he is listed in last position, however, suggests that his place in tradition was slight. The LXX distinguishes between this person and the Jedaiah in v 19 by assigning different names. In v 19 the name is Idia, but in v 21 Iedeiou, Ideiou or Odouia, depending upon the manuscript.

3. One of 3 returned exiles who, according to Zech 6:10, 14, provided gold and silver to Zechariah so that a crown could be made for Joshua the priest. A major question concerns how many crowns were made and for whom. The Heb text suggests that 2 were made, and vv 12–13 certainly suggest that Zerubbabel, who would bear royal honor and would rule upon his throne, was the recipient of one. This question is connected to the issue of whether or not a diarchic messianism developed in the postexilic period.

The mention of the 3 "benefactors" also is problematic. First, the names Heldai, Tobijah, and Jedaiah are understood by the LXX not as individuals but as groups of people: "the leaders, those who are useful among it, and those who recognize it." The Heb *yĕdaʿyāh* was, like the others, understood as an appellative (Gk *epegnokotos*) rather than as a proper noun.

Assuming that they are personal names, however, the question is why these 4 men (including Josiah) should have been singled out for the giving of such "gifts" of silver and gold. Petersen (*Haggai Zechariah 1–8* OTL, 274) suggests that they were exemplary men who were chosen for their orthodoxy and faithfulness, symbolized by the fact that 3 of the 4 have theophoric "Yahweh" names. It seems more likely, however, that something more polemical is at work. In v 14 it is said that the crowns are to serve as "a reminder" to these four. A reminder of what? Often times a "reminder" is left in the midst of the people to fix their attention upon the broken apostasy of the past and as a warning for the future. Such a situation is suggested by Exod 30:16 and Num 10:9–10, cited by Petersen himself. The warning function of such a "remembrance" is particularly clear in Num 17:5 (—Eng 16:40), where the censers of "Korah and his company" are pounded out into a sheet for an alter covering as a "reminder" of the sin of the past and a warning for the future, "so that no one who is not a priest should draw near . . . lest he become as Korah and his company." If the crowns in Zech 6:14 are to function as such a "reminder," then Jedaiah appears to have been singled out with the others not for exemplary faithfulness but for some unstated act of resistance to the royal aspirations of Zerubbabel and Joshua.

4. A Simeonite who, according to 1 Chr 4:37, appears in the genealogical listing of 13 "princes" of Simeon. During the reign of Hezekiah these princes migrated to Gedor (Gerar?). Of the 13 princes named, 3 are attributed linear genealogies: Joshah (1 generation), Jehu (3 generations), and Ziza (5 generations). Jedaiah appears as the third in this last list of five.

The major critical question concerning this genealogy has been its connection to the prior list in vv 24–27. Most take the material concerning Simeon to be a combination of genealogical information, geographical notes, and miscellaneous scraps. As such, the list in vv 34–37 is taken to be totally unconnected to the earlier list, and may have found its way into the present context due to its traditional linkage with the historical note concerning the expansion of Simeon in vv 39–41.

In the present context, however, the genealogy of the princes of Simeon in vv 34–37 has the function of filling out the earlier genealogy, ending as it does with the expectant note that "Shimei had 16 sons and 6 daughters" (v 27). Some have taken the reference to Shemaiah in v 37 to be a scribal error for this same Shimei, thereby attributing to the genealogies a close connection. The LXX likewise tried to connect the 2 genealogies by reading the name Shemaiah in v 37 as Simeon. Though undoubtedly misinterpretations of the text, these efforts nonetheless demonstrate the purpose of the text in its final form.

5. In Neh 3:10 Jedaiah is listed as one of those who repaired a portion of the defensive wall on the W side of Jerusalem "opposite his house" during the days of Nehemiah. This note about the location of the wall "opposite his house" is peculiar, since otherwise this note is used only with regard to the building of the wall on the E side. It could, therefore, be a misplaced note. More likely,

however, it represents an intentional point made by the Chronicler. Modern commentators generally argue that, unlike the W wall, the E wall was totally rebuilt on a new line because of the extensive destruction involved (*Ezra Nehemiah* WBC, 200, 209). If so, then the frequent reference to "opposite his house" in relation to the E wall might suggest that this new defensive line was built into the existing walls of the houses on that side of the city. In this case, the note concerning Jedaiah rebuilding the wall "opposite his house" might mean that, in this particular place on the W wall, the wall had to be rebuilt on a new line and was built into the existing wall of Jedaiah's house.

RODNEY R. HUTTON

JEDIAEL (PERSON) [Heb *yĕdîʿā'ēl*]. Four persons in the OT bear this name which means "Known of God." In addition, it also appears in Neo-Babylonian texts as *Ia-di-iḫ-ilî*/*Ia-a-di-ḫu-ilî* (Coogan 1976: 27, 75) and *Ia-di-'-ilu* (Tallqvist 1905: 68). For similarly constructed names with the divine element *yh(w)*, see biblical JEDAIAH and Coogan 1976: 27, 75.

1. The third and smallest of 3 Benjaminite families named in 1 Chr 7:6–12, a postexilic list (Rudolph *Chronikbücher* HAT 67; Williamson *Chronicles* NCBC, 78) on the order of a military census which appears to be independent of the genealogies of the tribe of Benjamin given in Gen 46:21 and Num 26:38–41, where Jediael is not named. The proposal that this list is a corrupted form of the genealogy of Zebulun which is otherwise omitted in this context (Curtis and Madsen *Chronicles* ICC, 145–49) has lost favor (see Rudolph *Chronikbücher* HAT, 65; Williamson *Chronicles* NCBC, 77). The Syriac and Vulgate replace Jediael in 1 Chr 7:6 with the names following Becher in Gen 46:21 (see also the Syriac in 1 Chr 7:10, 11) in an attempt to harmonize the lists.

2. Jediael the son of Shimri is mentioned as one of David's mighty men in 1 Chr 11:45, in a list of 16 names which the Chronicler has appended to those given in 2 Sam 23:8–39. Noth's proposal that this list is a postexilic fiction (*ÜgS*, 136, n. 8), by which certain families attempted to establish their early association with David, has been rebutted (Rudolph *Chronikbücher* HAT, 101).

3. One of 7 Manassites of substantial status (the title "chief of thousands" refers to his leadership of a tribal sub-group, not a number of men—Mendenhall 1958) who deserted to David at Ziklag (1 Chr 12:21—Eng 12:20).

4. A Levitical gatekeeper of the Korahite family of Meshelemiah. The second son of this family, he is named only in 1 Chr 26:2, in the Chronicler's (Williamson *Chronicles* NCBC, 169) or perhaps a later (Rudolph *Chronikbücher* HAT, 173) organization of the gatekeepers in the temple at Jerusalem.

J. S. ROGERS

JEDIDAH (PERSON) [Heb *yĕdîdâ*]. The daughter of Adaiah of Bozkath and mother of King Josiah (2 Kgs 22:1). Bozkath is a place between Lachish and Elgon according to Josh 15:39, to the SE of Lachish (Gray *1 and 2 Kings* OTL, 721). The name of this individual means "Beloved [of Yahweh]" (*IPN*, 149, 223; cf. the name JEDIDIAH). In the Ugaritic texts, *ydd*, "Beloved [of El]," is an epithet of the god Mot (*UT*, p. 409 s.v. # 1074).

ROBERT ALTHANN

JEDIDIAH (PERSON) [Heb *yĕdîdĕyāh*]. The name given to Solomon by Nathan in 2 Sam 12:25. The name and its occurrence are unusual for several reasons. First, the Hebrew orthography, *ydydyh*, is similar to that for David, *dwd*. Second, since the child had already been named by his parents, as was the custom, one does not expect to read about another naming by the deity. Third, the name is unusual since its meaning, "beloved of Yahweh," does not fit the etymology suggested by the succeeding phrase, "for the sake of Yahweh," *bbr yhwh*.

It has thus been argued that Jedidiah was the child's private name and that Solomon was the throne name (Honeyman 1948). Others have argued that this was really the name of the first-born child of David and Bathsheba whose death is recorded in 2 Sam 12:18 (Klostermann 1887). Others have speculated that the closeness to the name of David suggests that the name is a sign to David of divine grace after the death of Uriah, marriage to Bathsheba, and death of the firstborn child (Caspari *Samuelbücher* KAT) and that the etymology be understood to mean "by the grace of Yahweh" (de Boer 1966). In this way the narrator signals that David's penance (2 Sam 12:17), though ineffective in averting the death of the first child, did exonerate him for future actions and that once again he could claim to be one "after Yahweh's own heart."

RANDALL C. BAILEY

JEDUTHUN (PERSON) [Heb *yĕdûtûn*]. A levitical singer in the time of David, said in some texts to be a founder (along with Asaph and Heman) of a family of musical singers (see 1 Chr 25:1–6; and cf. 2 Chr 5:12; 29:14; 35:15). Elsewhere, however, the name Ethan, rather than Jeduthun, is associated with Asaph and Heman (1 Chr 15:17, 19), leading some to suggest that they are 2 different names for the same person (Corney *IDB* 2: 809; but see below for a different reconstruction). In the list of

1 Esdras 1, the name Eddinus seems to occupy the position held by Jeduthun (v 15). To complicate matters even further, in 1 Chr 16:38, 42b, Jeduthun is said to be the father of some of the levitical gatekeepers, also in the time of David. The most noteworthy of these is one Obed-edom, who, however, is elsewhere said to be a singer (1 Chr 16:5; but note that in the list of singers in the previous chap. [see vv 16–24] where he is mentioned 3 times [vv 18, 21, 24], twice he is described as a gatekeeper [vv 18, 24]). Inasmuch as the more comprehensive lists of Davidic singers and gatekeepers found in 1 Chronicles 25–26 unequivocally place Jeduthun in the former category and Obed-edom in the latter, divergent levels of tradition seem to be attested side by side in the Chronicler's work.

Williamson, following Gese, has pointed to some 4 levels of tradition concerning the genealogies of the various families of singers as attested in 1–2 Chronicles, Ezra, and Nehemiah (1979: 263). Simply put, in the 1st stage, all the singers are reckoned as "sons of Asaph" (Ezra 2:41; Neh 7:44); in the 2d stage, the singers are designated sons of Asaph and sons of Jeduthun (Neh 11:3–19; 1 Chr 9:1–18; but see below); the 3d stage includes the 3 familiar groups, Asaph, Heman, and Jeduthun (references already cited); and finally, the 4th stage replaces Jeduthun by Ethan, and Heman is now more prominent than Asaph (1 Chr 15:16–22; cf. 1 Chr 6:16–32—Eng 6:31–47). Certainly, some reconstruction such as this is probably necessary to reconcile all the disparate genealogical data concerning these musical families (a similar situation obtains for the gatekeepers, as well).

As noted above, later references to Jeduthun and his descendants are found in 2 Chr 5:12 (Solomon's dedication of the First Temple), 29:14 (Hezekiah's cleansing of the Temple), and 35:15 (Josiah's famous Passover). Although all 3 of these references continue to link the family of Jeduthun with Asaph and Heman, the last reference uniquely describes Jeduthun as "the king's seer" *(hôzê hammelek)*. Such an appellation for Jeduthun accords with that given to Heman in 1 Chr 25:5, and, to a lesser degree, Asaph in 2 Chr 29:30; and it confirms the significant link between prophecy and musicianship attested elsewhere in the Hebrew Bible (e.g., 1 Sam 10:5, where a band of prophets is described as "prophesying" with harp, tambourine, flute, and lyre; 2 Kgs 3:15, where Elisha the prophet requests a minstrel to help him prophesy; and, not least, 1 Chr 25:1, where the sons of Asaph, Heman, and Jeduthun are commissioned to "prophesy" with lyres, harps, and cymbals [Williamson *1 and 2 Chronicles* NCBC, 166]).

Yet another reference to Jeduthun is to be found in Neh 11:17 MT (along with its parallel in 1 Chr 9:16), where a certain Abda (or "Obadiah," in the Chronicles text), descendant of Jeduthun, is listed as a temple musician in the days of Nehemiah (concerning the authenticity of this list and the likelihood that it originally represented a list of all those who lived in Jerusalem, see Williamson *Ezra, Nehemiah* WBC, 344–50). It should be noted that the earliest LXX mss of Neh 11:17 lack the name Jeduthun along with a number of other names (including Asaph) found in the MT; Tov (1981: 301) argues that the shorter LXX list of priests and Levites in Nehemiah 11 (and 12) is probably more original. Hence, the reference to Jeduthun in 11:17 MT may well represent a later addition (also cf. Batten *Ezra and Nehemiah* ICC, 271; Myers *Ezra-Nehemiah* AB, lxvi), and, if one assumes that the parallel list of priests and Levites in 1 Chronicles 9 is dependent upon the Nehemiah 11 list (cf. the arguments for this view cited in Williamson *1 and 2 Chronicles* NCBC, 87–88), one may query the likelihood of the existence of the hypothetical second stage of Gese and Williamson mentioned above.

Finally, there appear to be 3 references to the name Jeduthun in the titles to Psalms 39, 62, and 77. Mowinckel, however, has suggested that the term should be interpreted as a common noun derived from the root *ydh*, and translated as "confession" or the like, these Psalms being employed in some liturgical context of penance (1962: 213). As he pointed out, all 3 of these Psalms fit quite well into such a context. Nonetheless, it seems more likely that the term should be read as a personal name (cf. RSV), presumably a reference to the same Jeduthun which the Chronicler has reckoned as a musical leader in the time of David. As Craigie (*Psalms 1–50* WBC, 308) has pointed out, the names of the other 2 Davidic musical leaders, Asaph and Heman, are also found in Psalm titles (it should also be noted that there is a reference to "Ethan the Ezrahite" in the title of Psalm 89). Alternatively, the term may have come to refer to the name of a tune or musical setting which later tradition attributed to the Davidic musician (especially note the use of the preposition *ʿal*, "on, upon, after the manner of," in the titles of Psalms 62 and 77; see Craigie *Psalms 1–50* WBC, 308; cf. Corney *IDB* 2: 809).

WILLIAM H. BARNES

JEGAR-SAHADUTHA (PLACE) [Aram *yĕgar-śāhădûtāʾ*]. The Aramaic name given by Laban to the pile of stones heaped up by his and Jacob's households apparently near the stone pillar set up by Jacob and Laban in the mountain of Gilead (Gen 31:24, 45–47). Gilead was then a sparsely populated area, and the place was identified with Mizpah of Gilead (31:49) which later became Jephthah's hometown (Judg 10:17). The location is not identified yet. See MIZPAH. "They ate there on the heap" (Gen 31:46), but actually they might have eaten food set on top of the heap which functioned as an oversized table. The meaning of Jegar-sahadutha is "(Stone-)heap of testimony" which corresponds to Jacob's word *Galʿēd* "heap of witness." LXX translates Laban's Aramaic words "heap of testimony," and Jacob's word "witness heap." Laban's words are the oldest attestation of the Aramaic language in the historical books of the Bible. It suggests that Abraham's kinsmen spoke Aramaic at Haran and he came to know Hebrew in Canaan. See MBA, map no. 27.

YOSHITAKA KOBAYASHI

JEHALLELEL (PERSON) [Heb *yĕhallel'ēl*]. Name of 2 individuals in Chronicles. The etymology of the name is difficult to ascertain. Its verbal element *(yĕhallel)* is a *Pi'el*, and would seem to be derived from the *Pi'el* verb, *hillel*, "to praise," which is common in the Hebrew Bible. But as a Semitic name, the divine element, *'el*, must be the subject of this verb and not its object. Some scholars, therefore, have related the verbal element to a different root, *hll*, meaning "to shine," suggesting the meanings, "may God shine forth" from the Qal (*IDB* 2: 809) or "may God cause to shine" from the *Hip'il* (Noth *IPN*, 205). Another suggestion is that the *Pi'el* be retained and the name be understood as meaning "may God praise (the child)" (Fowler *TPNAH*, 136).

1. Descendent of Judah (1 Chr 4:16). The list of Jehallelel's descendants bears no obvious relationship either to the lists that precede it or to those that follow it. The only one whose name is otherwise attested is Ziph (Ziphah may be a dittography), a village S of Hebron (1 Sam 23:14–15). This suggests that the list is eponymic. Jehallelel and his "descendants" were probably Judahite or Calebite clans or villages.

2. A Levite, descended from Merari, whose son, Azariah, is listed among the Levites who cleansed the temple under Hezekiah (2 Chr 29:12).

STEVEN L. MCKENZIE

JEHDEIAH (PERSON) [Heb *yehdĕyāhû*]. **1.** A state official; a Meronothite. One of 12 stewards of royal property appointed by David, his specific charge was to oversee the donkeys (1 Chr 27:30). Of the 12, he is one of 7 identified with a gentilic rather than by paternity, indicating perhaps that he was from outside the tribal structure. The only other person identified as a Meronothite is Jadon, who worked on the reconstruction of the walls of Jerusalem during the time of Nehemiah (Neh 3:7). See MERONOTHITE.

2. A Levite of the clan of Shubael (1 Chr 24:20). 1 Chronicles 23–27 reports David's organization of the Levites in the light of the coming transition from tabernacle to temple worship. The list of Levitical officials in 1 Chr 24:20–31 in which Jehdeiah is mentioned extends by 1 generation the list in 1 Chr 23:6–23. The purpose of the 2 lists is to sharply differentiate the priests (sons of Aaron) from the Levites. Jehdeiah, a son of Shubael, is part of the Kohathite branch of the Levites; his lineage is traced from Kohath to Amran to Moses to Gershom to Shubael (1 Chr 24:12–16 [read Shubael for Shebuel in v 16]). See SHEBUEL.

RICHARD W. NYSSE

JEHEZKEL (PERSON) [Heb *yĕhezqē'l*]. Priest who received the 20th position in the priestly order of the Temple during the reign of David (1 Chr 24:16). 1 Chronicles 24 is the only place where Jehezkel appears in the OT. The name, however, represents a very slight modification from the name of the priest-prophet, Ezekiel, a variation that is preserved as early as the LXX (cf. 1 Chr 24:16 with Ezek 1:3 [LXX]). An evaluation of the historical reliability of the existence of Jehezkel in the time of David rests largely upon the literary context of 1 Chr 24:1–19 (see GAMUL), although the relationship between the name and the prophet Ezekiel may suggest an exilic or postexilic setting for the name Jehezkel. The stylistic characteristics of 1 Chr 24:1–19 seem to link the list to the time of the composition of Chronicles. Jehezkel may represent the Chronicler's use of the prophet Ezekiel's priestly lineage to complete an artificial 24-course arrangement of priests for the time of David.

JOHN W. WRIGHT

JEHIAH (PERSON) [Heb *yĕḥîyāh*]. A Levite who was appointed by David to serve with Obed-edom as a gatekeeper when the ark was moved to Jerusalem (1 Chr 15:24). Obed-edom and one Jeiel are named as gatekeepers in 1 Chr 15:18, but in 15:21 and 16:5, they are named among the musicians. The similarity of the names Jeiel and Jehiah has prompted many to suggest these are in fact the same individual, and that a reviser may have described the status of Obed-edom and Jehiah/Jeiel in his own day as it differed from the situation described at the time of the Chronicler. Many commentators identify various portions of the lists in 1 Chr 15–16 as later additions to the Chronicler's work, though differing on the specifics. Gese (1974) used the various lists of Levitical musicians in an effort to trace the postexilic development of the musical guilds; he assigned 15:16–24 to his stage IIIB, a stage reflecting later accretions to the work of the Chronicler (at stage IIIA). Others have accepted the disputed passages as essentially original material, though allowing for minor corrections and additions (Williamson *Chronicles* NCBC).

RAYMOND B. DILLARD

JEHIEL (PERSON) [Heb *yĕhî'ēl*]. Var. JEHIELI. Nine persons in the Hebrew Bible, along with the parallel references in 1 Esdras, bear this name.

1. A Levite musician appointed at the time of David. At the command of David, the levitical leaders selected musicians; Jehiel was among those of 2d rank (1 Chr 15:18). The list is repeated in the subsequent verses where Jehiel is listed as one of 8 harpists, the rest being either cymbalists or lyrists (1 Chr 15:19ff.). In 1 Chr 16:5–6 most of the names are repeated (including that of Jehiel) but without distinction by instrument. Despite variation among the three lists, Jehiel is consistently listed fourth among those of 2d rank.

2. A levitical official, descendant of Gershon. When David divided the Levites into groups according to the sons of Levi, the Gershonites were subdivided between Ladan and Shimei. Jehiel was the first of the sons of Ladan (1 Chr 23:7–11). In 1 Chr 26:21–22 Jehieli [Heb *yĕhî'ēlî*] (= Jehiel) and his sons Zetham and Joel are described as the ones in charge of the treasuries of the temple of the Lord; they are levitical heads of families belonging to Ladan the Gershonite. 1 Chr 29:8 later notes that, when

the gifts for the building of the temple were collected, the (precious) stones brought to the treasury of the temple were placed in the care of Jehiel, the Gershonite.

3. The son of Hachmoni. In 1 Chr 27:32–34 Jehiel is listed among several close associates of David; he attended the king's sons. He is not otherwise known, but one of David's warriors is also described as a son of Hachmoni (1 Chr 11:11).

4. Son of Jehoshaphat, brother of Jehoram. Among the 6 brothers of Jehoram, Jehiel is the second named in 2 Chr 21:2. The 6 brothers each received a lavish inheritance including fortified cities from Jehoshaphat, seemingly to provide them with a power base to offset the strength Jehoram would have as successor. Jehoshaphat's reticence about Jehoram, his firstborn, was borne out, for Jehoram killed these 6 as well as other princes when he assumed the throne (1 Chr 21:3–4). A subsequent letter from Elijah announced Jehoram's death and, in an aside, described the brothers as better than Jehoram (1 Chr 21:12–15).

5. A levitical temple official during the reign of Hezekiah (2 Chr 29:14, written as Jehuel, but read as Jehiel [so also the versions]). Jehiel and his brother Shimei, descendants of Heman (a family of levitical singers) are listed among the levitical families that responded to Hezekiah's call for temple cleansing after the desecrations of Ahaz (2 Chr 29:3–19). In 2 Chr 31:13 Jehiel is listed among 10 temple overseers who served under Conaniah, identified as a Levite, and his brother Shimei, who was second in command. These 12 were appointed by Hezekiah and Azariah, the chief officer of the temple, to oversee the storerooms for the contributions of the people. Since Jehiel is not connected explicitly to Shimei in both lists and it is a common levitical and priestly name, one cannot be certain that the references are to the same person.

6. A priestly official during the reign of Josiah. Jehiel was one of 3 administrators of the temple who contributed animals for the Passover offering in behalf of the other priests (2 Chr 35:8; 1 Esdr 1:8).

7. Father of Obadiah, of the family of Joab. Jehiel's son Obadiah headed the second largest family (218 men) to accompany Ezra on his departure from Babylon (Ezra 8:9; cf. 1 Esdr 8:35).

8. A priest during the time of Ezra, father of Shecaniah. Jehiel was one of 6 priests from the family of Elam found to have married foreign women (Ezra 10:26; cf. 1 Esdr 9:27). The family of Elam was among both the first returnees from the Babylonian exile (Ezra 2:7) and those who returned later with Ezra (Ezra 8:7). He is presumably the same as Jehiel, father of Shecaniah, also from the family of Elam (Ezra 10:2; cf. 1 Esdr 8:92). Shecaniah was the spokesman for those who confessed unfaithfulness to God because of marriage to foreign women. He suggested a pact to send them away, and expressed support and encouragement for Ezra (Ezra 10:2–4). As the son of one of the unfaithful, his own position was somewhat ambiguous (see Williamson *Ezra, Nehemiah* WBC, 149–50).

9. A priest during the time of Ezra. Jehiel was one of 5 priests from the family of Harim found to have married foreign women (Ezra 10:21; cf. 1 Esdr 9:21). The family of Harim was among the first returnees from the Babylonian exile (Ezra 2:39).

RICHARD W. NYSSE

JEHIZKIAH (PERSON) [Heb *yĕḥizqîyāhû*]. Jehizkiah, the son of Shallum, was one of the 4 leaders of the tribe of Ephraim during the time of Pekah, ruler of the N kingdom of Israel (2 Chr 28:12). He, with the others, urged the release of the Judean prisoners taken during a battle between Pekah and Ahaz, king of Judah. His name belongs to a class of names which is a phrase or sentence and means either "Yahweh is my strength" (interpreting the *-î-* as a 1st person sing. poss. suffix and *yeḥizqî-* as a noun) or "Yahweh strengthens me" (*yeḥizqî-* is understood as a verb with a 1st person sing. suffix as the object of the verb). Yet another way to translate the name is "the strength of Yahweh," the *î* being an archaic genitive ending as found in the name Melchizedek, "king of righteousness" (Heb *malkî-ṣedek,* Gen 14:18). Koehler (*HALET,* 388) along with Noth (*IPN,* 246) believe Jehizkiah to be a "contaminated" variant of the name Hezekiah (Heb *ḥizqîyâ*), in which case the third interpretation of the name's meaning would be most likely. Otherwise, the *yod* prefix marks a verb, the translation of the name being "Yahweh strengthens me."

KIRK E. LOWERY

JEHOADDAH (PERSON) [Heb *yĕhôʿaddâ*]. Son of Ahaz, a descendant of King Saul of the tribe of Benjamin according to the genealogy in 1 Chr 8:36. However, the textual attestation of this name is problematic; in the parallel genealogy in 1 Chr 9:42, this person is named Jarah [Heb *yaʿrâ*]. Furthermore, the Vaticanus LXX manuscript reads the name as *Iada,* equivalent to the LXX reading for MT's Jarah at 9:42, while other mss read *Ioiada,* implying the Heb *yĕhôyādāʿ*, Jehoiada. Thus, many scholars have reconciled the differences between the 2 genealogies in the MT and the LXX by accepting Jadah *[yaʿdâ]* as the original name (Noth *IPN,* 246; Baumgartner *HALAT,* 404), which is etymologically related to "ornaments," and incorporates the element *ʿdh* which is typically used in Israelite names (Fowler *TPNAH,* 353–54). Alternatively, the name may have *ʿdd,* "to count" as its root (*TPNAH,* 144); however, this root is not elsewhere used in names. The forms Jehoaddah in the MT and Jadah would then be seen as variant long and short forms of the same name (Rudolph *Chronikbücher* HAT, 80). Alternatively, Demsky (1971: 19) has shown that this section of the Benjaminite genealogy is relating various Benjaminite clans through geographical locations; he thus has suggested that Jarah of 9:42 is correct and should be connected to the town Kiriath-jearim. If this is correct, the reading in 1 Chr 9:42 is a scribal error or a secondary attempt to understand the unusual personal name Jarah.

MARC Z. BRETTLER

JEHOADDIN (PERSON) Heb *yĕhōʿaddîn*]. Var. JEHOADDAN. Mother of Amaziah, king of Judah (2 Kgs 14:2

= 2 Chr 25:1). She is one of the three queen mothers from Jerusalem (the others being Jecoliah and Nehushta). Her father's name is unknown.

LINDA S. SCHEARING

JEHOAHAZ (PERSON) [Heb *yehôʾāḥāz*]. Var. AHAZIAH; SHALLUM. **1.** The name once given (2 Chr 21:17) to Ahaziah, king of Judah, son of Jehoram and Athaliah. The idea that the Chronicler was using different sources (Maclean *IDB* 1: 66) is unsound. Such transfer of the elements of a name using the divine epithet is also seen in Jer 22:24, 28. In whichever form, the name is a longer version of Ahaz, and is a combination of the divine name and the verb *ʾāḥāz*, "to grasp." See also AHAZ. The full name is rare in extrabiblical inscriptions (see Avigad 1969). Hayes and Hooker (1988: 33–35) suggest that Jehoram of Judah and Jehoram of Israel were one and the same person and the father of Ahaziah/Jehoahaz (see also Strange 1975). The advantages of this proposal are many: (1) It would forge a stronger link between the house of Omri and the S throne, which would help explain Athaliah's accession to the Jerusalem throne after the death of Jehoram (her husband) and Ahaziah (her son). (2) A difference of one year in the accession dates of Jehoram to the thrones of Jerusalem and Samaria (852 and 851 B.C.E. respectively) would explain the variant figures for the accession of Ahaziah to the Jerusalem throne in 2 Kgs 8:25 (the 12th year) and 2 Kgs 9:29 (the 11th year), this latter being dated from his father's accession in Samaria. (3) It would explain the strong alliance between N and S against Aram-Damascus at this time, and the visit of Ahaziah to Jezreel to see his ailing father. It might also explain the role of the "inhabitants of Jerusalem" in the ascent to the throne of the youngest of Jehoram's sons (2 Chr 22:1). There is evidence to suggest that the "inhabitants of Jerusalem" were more than city-dwellers (note the associations they have in 2 Kgs 23:2; Jer 2:1; 8:1; 13:13; 17:20). The suggestion to identify the 2 Jehorams as one is attractive, but still quite speculative.

2. The son and successor of Jehu (2 Kgs 10:35; 13:1–9). Like all N kings he is judged as apostate by the Deuteronomist. The account of his reign in 2 Kgs 13:1–9 (there is no parallel account in Chronicles) begins with the typical introductory formula for N kings (13:1), and an evaluation (13:2). The conclusion of his reign (13:8–9) is also typical and formulaic. A number of commentators see secondary, albeit deuteronomistic material, in 13:3–7, and especially 13:4–6 (Gray *1 and 2 Kings* OTL, 591–93). Others (McCarthy 1973: 409–10) believe that 13:3 also betrays signs of a secondary character because of a parallel with the style of the Moabite Stone, line 5 (*ANET*, 320). (For an alternative view on these divisions see Hobbs *2 Kings* WBC, 163.)

Jehoahaz is normally given the dates 815–802 B.C.E. (adjusting the figure "17" of 2 Kgs 13:1 to "15"), but recently Hayes and Hooker (1988: 38–49) have suggested 821–805 B.C.E. Jehoahaz inherited from his father Jehu subservience to Assyria—the evidence of which is found in Shalmaneser III's "black obelisk" (*ANET*, 281)—and presumably the burden of annual tribute. He also inherited a kingdom severely truncated because of repeated wars with Aram-Damascus. These wars resulted in the final loss of the territories on the E side of the Jordan (2 Kgs 10:32–33).

The background to these conflicts was the intense pressure which had been exerted by Shalmaneser III (858–824 B.C.E.) on Aram-Damascus in the decades following the battle of Qarqar in 853 B.C.E. In response to the pressure from the NE, Hazael developed a strategy of strengthening his control of the states to the W (2 Kgs 12:17). Opportunity to do this would have increased in the confusion following the death of Shalmaneser III in 824 B.C.E., and during the reign of his successor, Šamši-Adad (824–810 B.C.E.). It is in this context that the comment in 2 Kgs 13:3 should be understood. During the reign of Adad-nirari III (810–783 B.C.E.) Syria suffered badly, and Hazael died. Adad-nirari's own records tell of the sacking of Damascus (*ANET*, 281–82) in the year 805 B.C.E. Damascus' fall undoubtedly would have relieved the Aramean pressure on Samaria. However, Adad-Nirari also claims to have conquered the coastal states from Tyre in the N to the Philistine territory in the S (*ANET*, 281).

As a result of the constant wars between Israel and Aram-Damascus during the reign of Jehoahaz, the army was greatly reduced until it consisted of 50 cavalry, 10 chariots and 10,000 infantrymen (2 Kgs 13:7). It is not necessary to adjust the figures to larger amounts (so Cogan and Tadmor *2 Kings* AB, 143). These figures as they stand tell a tale. Cavalry and chariotry were campaign units of the army, and would have been used in attacks on Aramean territory, as is seen in the case of the siege of Ramoth-gilead, at which Jehu was anointed king (2 Kings 9). A normal ratio of chariotry to infantry on such campaigns was from 1:30 to 1:50. Ahab fielded a force of 10,000 infantry and 2,000 chariotry at Qarqar. It was also a deliberate policy of Jehu to cultivate the chariot brigade of the army (2 Kgs 10:15–17), and one can imagine that this was a strong element of his forces. However repeated struggles to maintain the E side of the Jordan had taken their toll and the chariot brigade had been severely reduced, many of them no doubt captured as prizes of war with the loss of their skilled crews. The 10,000 infantry remaining might well have constituted a home-based force, but in an age of increasing tactical sophistication on the battlefield, infantry without chariot and cavalry support would have been very vulnerable.

From this situation of reduced territory, external pressure by Syria and the lack of adequate means of defense Israel was rescued by a "savior" (Heb *môšîaʿ*; (2 Kgs 13:5). This term has been the cause of much discussion among interpreters. Set against this political and military background, it seems reasonable that the "savior" should have been a political or military figure, and a number of scholars suggest that the relief brought by Adad-Nirari's campaign in 805 B.C.E. against Damascus qualifies the Assyrian for the title (Haran 1967; Hallo 1962; Cogan and Tadmor *2 Kings* AB, 143). Herrmann argued for Zakir of Hamath (*HHI*), but the dates are wrong. Other candidates have been Jeroboam II and Joash. A major alternative to these identifications is the prophet Elisha, who now returns to the scene of Israelite history after a gap of almost 50 years (so Hobbs *2 Kings* WBC; Gray *1 and 2 Kings* OTL; *UgS*). The description of Jehoahaz's reign and its misfortunes reflects the depiction of the theological significance of the

Exodus in Deut 26:7–9, and the activity of Elisha narrated in 2 Kgs 13:14–20 ensures further respite from the attacks of the Arameans, a fact not missed by the Deuteronomist (2 Kgs 13:23), and echoed later in the activity of Isaiah of Jerusalem in his dealings with Hezekiah (2 Kgs 20:1–11).

T. R. HOBBS

3. King of Judah for 3 months in 609 B.C.; fourth son and successor of Josiah; exiled to Egypt by Pharaoh Neco II. This king is called by two names: Jehoahaz and Shallum (1 Chr 3:15; Jer 22:11; see SHALLUM). It seems likely that Shallum was his personal name and that he assumed a throne name, Jehoahaz ("Yahweh has seized"), when he became king, emphasizing that he was the legitimate ruler. In similar fashion his successor Eliakim became Jehoiakim (2 Kgs 23:34). Jeconiah (Coniah) became Jehoiachin (Joiachin; 2 Kgs 24:6; Jer 22:24; 24:1; Ezek 1:2), and Mattaniah became Zedekiah (2 Kgs 24:17). See Honeyman 1948: 13–25. In 1 Esdr 1:34, Jeconiah occurs as an alternate form for Jehoahaz (though not to be confused with Jehoiachin; see JECONIAH).

Jehoahaz succeeded at the age of 23 and reigned for 3 months in Jerusalem. His mother was Hamutal (or Hamital), the daughter of Jeremiah of Libnah (2 Kgs 23:31; 2 Chr 36:2). According to the family tree in 1 Chr 3:15 Shallum was the youngest of Josiah's four sons, and yet the "people of the land" chose him as king after Pharaoh Neco had killed his father at Megiddo (2 Kgs 23:30). The anti-Egyptian sentiments of the group would have influenced this choice which the prevailing mood of the people may have supported (Malamat 1975: 126).

The brief reign of Jehoahaz coincides with Neco's expedition to Haran, where he tried to establish Ashur-uballit on the throne between June/July and August/September 609 B.C. (Wiseman 1956: 62–64). The Babylonians were, however, able to retain Haran which they had captured from the Assyrians the previous year. The pharaoh then proceeded to consolidate his possession of Syria and Palestine, territories that had belonged to the Assyrian empire. Jehoahaz was summoned to Neco's strategically placed headquarters at Riblah on the Orontes in central Syria and put in bonds "so that he should not reign in Jerusalem" (2 Kgs 23:33; see Dahood 1978: 92 n. 6). A fine of 100 talents of silver and a talent of gold was also levied. This is small when compared with the indemnity required of Hezekiah by Sennacherib 100 years earlier (2 Kgs 18:14: 300 talents of silver and 10 of gold), but the offense of Josiah was smaller. In fact he may have been victim rather than aggressor (Nelson 1983: 188). The pharaoh perhaps also wished to be conciliatory in view of his unresolved conflict with Babylon (Gray *1 and 2 Kings* OTL, 750–51). He therefore deposed Jehoahaz, who was allied with anti-Egyptian interests, and made his elder half-brother Eliakim king, giving him the throne name Jehoiakim. Jehoahaz was sent to Egypt where he died (2 Kgs 23:34; 2 Chr 36:4).

The Deuteronomistic judgment on his reign is that "he did evil in the sight of Yahweh according to all that his fathers had done" (2 Kgs 23:32), a standard formula which is hardly very meaningful in relation to the 3-month reign of Jehoahaz (Jones *1 and 2 Kings* NCBC, 631). It might simply be an inference from his fate, or he may have been too ready to go to Neco at Riblah, perhaps with a view to being confirmed in office (Gray *1 and 2 Kings* OTL, 749–50).

The prophet Jeremiah alludes to the exile of Jehoahaz in a dirge (22:10–12). People are not to weep for Josiah, who is dead, but for Shallum, who will never return from exile. Scharbert (1981: 47–48) considers that the prophet is not revealing any personal pity for either of them. The dirge is followed by a strong condemnation of Shallum's successor Jehoiakim (vv 13–19); no doubt the rampant injustice of this king furnished an important motive for regretting his predecessor.

The exile of Jehoahaz marked the end of Judah's independence, which had lasted about 20 years. Subsequent kings were reluctant to accept their dependent status, especially after Nebuchadnezzar's victories over the Egyptians in 605 B.C. resulted in Judah becoming subject to Babylon. Attempts to throw off the Babylonian yoke led to Jehoiachin being exiled in 597 B.C. and Zedekiah in 587 B.C. Both rulers were accompanied by many of their subjects. And so the fate of Jehoahaz foreshadowed that of the people in the Babylonian captivity.

ROBERT ALTHANN

JEHOHANAN (PERSON) [Heb *yĕhôḥānān*]. Eight persons in the OT bear this name, which means "Yahweh has been gracious." It also appears in the Elephantine papyri in *CAP* 30.18 and 31.17 (see 4. below). It is normally

rendered in Gk *Iōanan,* although 1 Esdr 9:29 see #5 below) reads *Iōannēs.*

1. A Levitical gatekeeper of the Korahite family of Meshelemiah. He is named as the 6th son of this family in 1 Chr 26:3, in the Chronicler's (Williamson *Chronicles* NCBC, 169) or perhaps a later (Rudolph *Chronikbücher* HAT, 173) organization of the gatekeepers in the temple at Jerusalem.

2. The second of 3 military "commanders of thousands" from Judah under Jehoshaphat named in 2 Chr 17:14–16. In the present setting, framed by vv 13b and 19, Jehohanan and the others named appear to have been officers over troops in the standing army. However, since within that framework they were mustered according to "their fathers' houses" (v 14) and organized by tribal divisions (vv 14, 17), Jehohanan may more likely have been a commander of the militia or conscript forces (Williamson *Chronicles* NCBC, 284).

3. The father of Ishmael, one of the leading officers named by the Chronicler as having supported Jehoiada in his revolt against Athaliah. However, the names of these men (with only one exception, including their fathers) are all priestly or levitical and are probably a tendentious replacement of "the captains of the Carites and of the guards" in the account of the conspiracy in 1 Kgs 11:4, since such would have been excluded from entering the Chronicler's temple (1 Chr 23:6) (Rudolph *Chronikbücher* HAT, 271).

4. The "chamber of Jehohanan the son of Eliashib" is named as the place to which Ezra withdrew to spend the night (1 Esdr 9:2) in fasting after his great call to the assembly in the temple for an end to mixed marriages (Ezra 10:6 = 1 Esdr 9:1). The identity of this individual is quite problematic.

(a) It has been argued that this designation of the chamber could be simply that by which it was known at the time of the Chronicler, and thus there may not have been a Jehohanan the son of Eliashib who was a contemporary of Ezra (Meyer 1896: 91; Ahlemann 1942/43: 97–98).

(b) The names Jehohanan/Johanan and Eliashib are sufficiently common that this person, even if a contemporary of Ezra, may have been a private individual, not of a priestly family, who was a friend or supporter of Ezra and his attempts at reform (Rudolph *Esra und Nehemia* HAT, 68–69; on temple chambers associated with such individuals see 2 Kgs 23:11; Jer 35:4; 36:10).

(c) If this Jehohanan ben Eliashib is identical to the Johanan who was apparently the grandson of Eliashib named in Neh 12:22 (see also 12:23), then he was the high priest Jehohanan named in the Elephantine papyri *AP* 30–31 (408 B.C.E.). In this case, the contemporaneity of Jehohanan and Ezra would imply that the latter's activity followed rather than preceded Nehemiah, who was a contemporary of the high priest Eliashib (Rowley 1965: 153–59).

(d) More recently, by assuming the practice of papponymy among the high-priestly family in Jerusalem (on the basis of its practice among the Sanballatids of Samaria) it has been proposed that haplography in the high-priestly genealogy has resulted in the loss of an Eliashib I and his son, Johanan I (between Joiakim and Eliashib named in Neh 12:10) (Cross 1975: 9–11). Restoration of these 2 names results in a Jehohanan/Johanan the son of Eliashib who was a high priest; he would have been a contemporary of Ezra according to the traditional dating of Ezra's activity in Jerusalem, and into whose chamber Ezra withdrew.

5. A layman of the family of Bebai named in Ezra 10:28 = 1 Esdr 9:29 in a list of those who were married to foreign wives at the time of Ezra's reforms.

6. A son of Tobiah "the Ammonite," one of Nehemiah's principal opponents in his attempts to rebuild Jerusalem's wall (Neh 6:18). This Jehohanan was married to a Jerusalemite woman, a daughter of Meshullam the son Berechiah who worked on the wall (Neh 3:4).

7. According to Neh 12:13, a certain Jehohanan was the head of the priestly family of Amariah at the time of the high priest Joiakim.

8. One of several Levites (see Clines *Ezra, Nehemiah, Esther* NCBC, 233) who participated in the temple service celebrating the dedication of the rebuilt wall of Jerusalem in the time of Nehemiah (Neh 12:42). The suggestion of Bertheau (1887: 341) that the names are representative of divisions of Levites rather than individuals is still worthy of consideration.

J. S. ROGERS

JEHOIACHIN (PERSON) [Heb *yĕhôyākîn*]. Var. JOIACHIN; JECONIAH; CONIAH; JECHONIAH. Son of Jehoiakim and king of Judah for 3 months from December 598 (or January 597) to March 597 B.C.E. Jehoiachin (or Joiachin; Heb *yôyākin*) was undoubtedly a throne name, meaning "Yahweh establishes" or "let Yahweh establish." His given name was Jeconiah (Heb *yĕkonyāhû; yĕkonyāh;* Jer 24:1; 27:20; 28:4; 29:2; 1 Chr 3:16–17; Esth 2:6; "Jechoniah" in Matt 1:11–12). A shortened form of this personal name is Coniah (*konyāhû;* Jer 22:24, 28; 37:1).

A. Jehoiachin's Brief Reign

Jehoiachin became king of Judah at the age of 18 (2 Kgs 24:8; the Hebrew text of 2 Chr 36:9 incorrectly states that he was 8 years of age [the LXX reads "eighteen"]), following the death of his father Jehoiakim (2 Kgs 24:6; 2 Chr 36:8; Matt 1:11–17, which fails to include Jehoiakim in the genealogy, presents Jehoiachin as the son of Josiah in v 11). Jehoiachin's mother was Nehushta, the daughter of ELNATHAN of Jerusalem (2 Kgs 24:8). This Elnathan is very possibly to be identified with Elnathan, son of Achbor, a high-ranking government official mentioned in Jer 26:22 and 36:12, 25. If Nehushta was the daughter of this Elnathan, her grandfather was probably Achbor son of Michaiah, an official who plays a prominent role in the account of Josiah's reform (2 Kgs 22:12, 14). The name Elnathan also appears in a contemporary document from Lachish (see Ostracon III in *DOTT,* 214).

With respect to establishing the chronology for Jehoiachin's reign, we are greatly indebted to a section of the Babylonian Chronicle first published in 1956. It is now known that the end of Jehoiachin's reign occurred on the 2d day of the month of Adar in the 7th year of Nebuchadrezzar (BM 21946 verso, line 12; see Wiseman 1956: 73; TCS 5, 102). This date corresponds to either March 15 or March 16 (the Babylonian day extended from sunset to sunset, and thus overlaps 2 days of our calendar), 597 B.C.E.

It may not be possible, however, to assign a precise date to the beginning of Jehoiachin's rule. 2 Kgs 24:8 states that he reigned for 3 months, a figure which is probably a round number. 2 Chr 36:9 assigns 3 months and 10 days to Jehoiachin's rule. Although many scholars favor the Chronicler's reading (which would enable us to date Jehoiachin's accession to December 9/10, 598 B.C.E.), it is possible that this more precise reading rests on a scribal error. After having served as vassal to Babylonia for 3 years, Jehoiachin's predecessor Jehoiakim rebelled in 601 or 600 B.C.E. (2 Kgs 24:1), provoking Nebuchadrezzar to take retaliatory measures. Babylonian reprisals (cf. 2 Kgs 24:2) culminated in the siege of Jerusalem (2 Kgs 24:10–17). According to the Babylonian Chronicle, it was during the month of Kislev in Nebuchadrezzar's 7th year (December 18, 598–January 15, 597 B.C.E.) that the Babylonian king and his troops left Babylon on an expedition directed against Judah (BM 21946 verso, line 11). It would appear that Jehoiakim died (possibly he was assassinated; cf. Jer 22:18–19; 36:30) during (or perhaps just before) the early part of the siege, prior to Nebuchadrezzar's arrival in Jerusalem (cf. 2 Kgs 24:10–11). See JEHOIAKIM.

Thus it was the young king Jehoiachin who found himself in the unfortunate position of having to confront Nebuchadrezzar in Jerusalem. Jehoiachin chose to surrender (2 Kgs 24:12), undoubtedly thereby hoping that the Babylonians would withdraw. The siege was indeed lifted, but Jehoiachin himself was deposed by Nebuchadrezzar and deported to Babylon. The Babylonian Chronicle states that Nebuchadrezzar "seized the city and captured the king. He appointed there a king of his own choice (lit. heart), received its heavy tribute and sent (them) to Babylon" (BM 21946 verso, lines 12–13 in Wiseman 1956: 73; TCS 5, 102). Although the Babylonian document does not provide the names of the two kings, it is clear that the deposed king was Jehoiachin (cf. 2 Kgs 24:12, 15; 2 Chr 36:10). The king of Nebuchadrezzar's choice was Mattaniah, Jehoiachin's uncle, who was then given the name Zedekiah (2 Kgs 24:17). According to the MT of 2 Chr 36:10, Zedekiah was Jehoiachin's brother; the LXX and other versions, however, read "father's brother" (cf. 1 Chr 3:15).

Also deported, in addition to the king, the queen mother, and other members of the royal family, were various court officials, leading citizens, military figures, craftsmen, artisans, prophets, and priests (cf. 2 Kgs 24:12, 14–16; Jer 24:1; 27:20; 29:1–2; most commentators believe that the passage Jer 13:18–19 relates to Jehoiachin and his mother Nehushta). Treasure from both the temple and the royal palace was taken as tribute (2 Kgs 24:13; 2 Chr 36:10; Jer 27:16–22; 28:3, 6).

B. Jehoiachin in Exile

Cuneiform tablets found at Babylon shed some light on Jehoiachin's fate in exile (Albright 1942). The tablets, which date from the 10th to the 35th year of Nebuchadrezzar (595/594–570/569 B.C.E.), list the rations distributed by the Babylonians to various captives and skilled workmen. A number of Judeans are among the foreigners named in these documents. The tablets include the monthly rations of oil for *Ya'u-kīnu* (alternately *Yakū-kinu*), "king of the land of *Yahudu*" (= Judah; alternately *Yaudu, Yakudu*) and his 5 sons (*DOTT*, 86; Weidner 1939: 925–26). One of the four texts which speaks of Jehoiachin and his sons is dated to Nebuchadrezzar's 13th year (592/591 B.C.E.). Since Jehoiachin was only 24 years of age at this time, some believe that the documents must be referring to Jehoiachin's brothers. However, it is most probable that the references are to Jehoiachin's young sons. That the 5 are infants is indicated by the mention made of the boys' attendant. Further, it should be noted that Jehoiachin apparently had more than one wife (2 Kgs 24:15). 2 Kgs 25:27–30 (a close parallel is found in Jer 52:31–34) implies that at least in the year 561/560 B.C.E., Jehoiachin was imprisoned.

Yet the Babylonian documents just cited give the impression that Jehoiachin and his family enjoyed relative freedom in exile and were treated very favorably. It is probable that Jehoiachin and his family, and perhaps some of the nobles, were placed under house arrest in the South Citadel in Babylon. The large quantity of oil allocated to Jehoiachin (he received approximately 5 liters of oil, this being 12 times the amount received by each of his sons) suggests that Jehoiachin was responsible for supporting his own household. Many scholars are of the opinion that the Babylonians continued to regard the exiled Jehoiachin as the legitimate king of Judah, and in these documents Jehoiachin is referred to as "king of Judah." It is doubtful, however, that such a use of Jehoiachin's title in these Babylonian documents supports this hypothesis. Nevertheless, the fact that Jehoiachin was well treated in captivity could indicate that the Babylonians were prepared to reinstate Jehoiachin should problems arise with Zedekiah's leadership in Jerusalem.

It is apparent that both in Babylonia and in Judah, there were circles which viewed Jehoiachin as the legitimate ruler of Judah, with Zedekiah being regarded as Jehoiachin's regent. The fact that the book of Ezekiel favors a dating system based on the year of Jehoiachin's deportation (e.g., Ezek 1:2) may reflect this view. In Judah, storage jar handles have been discovered at the sites of Tell Beit Mirsim, Beth-shemesh, and Ramat Raḥel, which bear the stamp *l'lyqm n'r ywkn* ("to Eliakim, steward of Yaukin"). Most scholars accept the identification of the Yaukin of this seal impression with Jehoiachin. It is assumed that although in exile, Jehoiachin continued to hold crown property in Judah, property which was administered by the Eliakim of the stamp. Some scholars, however, have argued that the evidence antedates Jehoiachin's reign, and thus cannot relate to Jehoiachin. It has also been hypothesized that in addition to the Eliakim seal impressions, 2 contemporary seals (inscribed "to Jaazaniah, servant of the king" and "to Gedaliah, who is over the house") may constitute further evidence that both the people of Judah and the

Babylonians continued to regard the exiled Jehoiachin as king, with Gedaliah acting as regent (following the supposed regency of Zedekiah) for Jehoiachin (see May 1939).

The political divisions which characterized this period were shared by Judah's prophets. Hannaniah prophesied (in either the 1st or 4th year of Zedekiah's reign) that Jehoiachin would return to Judah within 2 years, together with those taken captive and the temple vessels carried off as tribute (Jer 28:2–4). The prophet Jeremiah, who maintained a pro-Babylonian position throughout his ministry, strongly opposed such a view. He announced that Jehoiachin would never return to the land of Judah (Jer 22:27; cf. the lamentation Ezek 19:1–9, where many commentators believe that the king of vv 5–9 is Jehoiachin). Moreover, according to Jeremiah, none of Jehoiachin's offspring would sit on the throne of David (Jer 22:30; see Hermisson 1980). In a letter written to the exiles, Jeremiah enjoined them to prepare for a lengthy stay of 70 years (Jer 29:10). He cautioned against paying heed to prophets (addressing them in exile, Jer 29:8–9) who shared the political ideology of a figure like Hananiah. Whereas Jeremiah rejected any element of hope centered in Jehoiachin and his children, the messianic promise contained in Ezek 17:22–24 may refer to the descendants of Jehoiachin. Such hope is not expressed, however, in Ezek 19:10–14, a dirge which laments the full end of the monarchy in Judah.

The Deuteronomistic History closes with 2 Kgs 25:27–30 (cf. the close parallel in Jer 52:31–34), a passage which contains an account of the release of Jehoiachin by the Babylonian king Amel-Marduk (called Evil-Merodach in the Hebrew Bible; see Levenson 1984). This occurred in the 37th year of Jehoiachin's captivity (561/560 B.C.E.), and was possibly part of an amnesty marking Amel-Marduk's enthronement (cf. 2 Kgs 25:27; Jer 52:31). Jehoiachin put off his prison garments, and was given a seat above the other exiled kings. He dined regularly at the royal table, and was provided with an allowance for the remainder of his life (cf. especially Jer 52:34, which adds "until the day of his death"). As is indicated in particular by the words *waydabbēr ʾittô ṭōbôt* (usually translated "and he spoke kindly to him") in 2 Kgs 25:28 (Jer 52:32), it is possible that 2 Kgs 25:27–30 (cf. Jer 52:31–34) reflects the establishment of a treaty between the Babylonian king and Jehoiachin. Amel-Marduk may have intended to restore Jehoiachin or one of his sons to the throne as a vassal king; however, Amel-Marduk died in 560 B.C.E., shortly after Jehoiachin's release.

Jehoiachin's 7 sons are listed in 1 Chr 3:17–18. His son Shenazzar is very possibly to be identified with Sheshbazzar, the first governor of Judah during the Persian period (e.g. Ezra 5:14). Sheshbazzar is referred to by the title "the prince of Judah" in Ezra 1:8. He was succeeded in this office by Zerubbabel, the son of Jehoiachin's son Shealtiel (e.g. Ezra 3:2; Hag 1:1; 1 Chr 3:19 in the LXX; in the MT, 1 Chr 3:19 states that Zerubbabel's father was Pedaiah, another son of Jehoiachin).

JOHN M. BERRIDGE

JEHOIADA (PERSON) [Heb *yĕhôyādāʿ*]. **1.** The father of Benaiah who was commander of the personal bodyguard of King David (2 Sam 8:18). It is perhaps this same Jehoiada who joined David at Hebron (1 Chr 12:28—Eng 12:27). There Jehoiada is called a prince and is from the house of Aaron. The Chronicler appears to be emphasizing this Aaronic connection when he refers to Jehoiada as a priest (1 Chr 27:5).

2. The son of Benaiah (1 Chr 27:34). He was counselor to David after Ahithophel committed suicide during the revolt of Absalom. It is possible that the genealogical reference has been reversed here and that this should be "Benaiah son of Jehoiada" (*HAIJ*, 188). In this case, this individual would be the same as #1 above.

3. The priest in Jerusalem who organized the overthrow of Queen Athaliah and placed Joash son of Ahaziah on the throne as the rightful heir of the Davidic family (2 Kgs 11:4–20). Athaliah, the mother of Ahaziah, had seized control when her son was killed in battle. In order to secure her hold on the throne, she ordered all other members of the royal family executed. Joash, the infant son of Ahaziah, was hidden by his aunt Jehosheba and protected for 6 years. Jehoiada then enlisted the help of the palace guard and publicly revealed the existence of the young Joash. Queen Athaliah was taken from the palace and executed and the 7-year-old Joash was proclaimed king of Judah (2 Kgs 12:1—Eng 11:21). Jehoiada also renewed the covenant between the Lord and the king and the people (2 Kgs 11:17). In connection with this covenant renewal, the house of Baal was torn down and the priest of Baal was executed. The Baal worship probably had been supported by Athaliah who was the granddaughter of Omri king of Israel.

Jehoiada served as counselor and advisor to the young king Joash who is reported to have done "what is right in the eyes of the Lord" (2 Kgs 12:3—Eng 12:2). Joash, also called Jehoash, initiated repairs on the house of the Lord, but there was little progress. In the 23d year of his reign, he called Jehoiada the priest to account for this failure to complete the temple repairs. Jehoiada then placed a collection box and armed guards at the entrance of the temple in order to ensure that all money contributed would be used for the intended repairs. The work was carried out in stages as the money was collected (2 Kgs 12:10).

In the parallel account in 2 Chr 22:11, Jehosheba, the

aunt who hid the young king, was also the wife of Jehoiada. This would make Jehoiada the uncle of king Joash.

4. A priest in the time of Jeremiah who was replaced by Zephaniah (Jer 29:26).

PHILLIP E. MCMILLION

JEHOIAKIM (PERSON) [Heb *yĕhôyāqîm*]. King of Judah who reigned 609/8–598/7 B.C.E. Jehoiakim, whose given name was Eliakim (meaning "God raises up"), was the son of Josiah. His mother was Zebidah, daughter of Pedaiah of Rumah (2 Kgs 23:36) in Galilee.

A. Jehoiakim's Reign

Following the death of Josiah at Megiddo (2 Kgs 23:29) in 609, the "people of the land" (*ʿam-hāʾāreṣ*) anointed Josiah's son Jehoahaz king of Judah (2 Kgs 23:30; 2 Chr 36:1). It was undoubtedly because the "people of the land" expected Jehoahaz to continue the anti-Egyptian policy of his father that they chose Jehoahaz over Eliakim, his elder brother (cf. 2 Kgs 23:31 and 36; also 1 Chr 3:15 [Jehoahaz is here called by his personal name Shallum]).

1. Jehoiakim as Egyptian Vassal. Under Neco II (610–595), the Egyptians gained control of Syria and Palestine in 609. The brief reign of Jehoahaz came to an end when he was deposed by Neco at the Egyptian headquarters at Riblah on the Orontes. Neco then placed his half-brother Eliakim on the throne, giving him the Yahwistic throne-name Jehoiakim (2 Kgs 23:33–34; 2 Chr 36:3–4). Jehoahaz was deported to Egypt, where he died (2 Kgs 23:34; cf. Jer 22:10–12; Ezek 19:1–4).

Jehoiakim was installed as king of Judah following an Egyptian campaign in N Syria, where Neco was unsuccessful in his attempt to wrest Haran from the Babylonians. The Babylonian Chronicle (see the translations in TCS 5 and Wiseman 1956) informs us that this campaign lasted until the month Elul (August/September). Thus it is probable that Jehoiakim was placed on the throne late in 609. He reigned over Judah for 11 years (2 Kgs 23:36; 2 Chr 36:5). Jehoiakim's 1st regnal year was 608/607, his 11th and last 598/597. He was 25 years of age when he began his reign (2 Kgs 23:36; 2 Chr 36:5). He died shortly before the Babylonians captured the city of Jerusalem on the 2d day of the month Adar in Nebuchadrezzar's 7th year (March 15/16, 597). Jehoiakim was succeeded by his son Jehoiachin (Matthew 1 does not include Jehoiakim in the genealogy, and lists Jehoiachin (called by his personal name Jechoniah) as the son of Josiah in Matt 1:11) and by his half brother Mattaniah (renamed Zedekiah), the last two kings of Judah (2 Kgs 24:6, 17).

Judah's vassal status is clearly indicated by the fact that it was Neco who determined who would sit on the throne of Judah and who gave this king his throne name (2 Kgs 23:34). The Egyptians exacted a heavy tribute from Jehoiakim. According to the Hebrew text, Neco demanded a tribute of 100 talents of silver and a talent of gold (2 Kgs 23:33 [2 Chr 36:3]; the LXX, however, reads "a hundred talents of gold"; the Lucianic recensions of the Greek and the Peshitta read "ten talents of gold"). Jehoiakim met this demand by taxing those who had earlier anointed Jehoahaz king, the "people of the land" (2 Kgs 23:35).

Jehoiakim remained Egypt's vassal until 605. In that year the Babylonian crown prince Nebuchadrezzar led the Babylonian forces to a decisive victory over the Egyptians at Carchemish (cf. Jer 46:2–12), followed by another at Hamath (cf. TCS 5, 99; Wiseman 1956: 67, 69), thereby paving the way for Babylonian domination over Syria and Palestine. 2 Kgs 24:7 correctly notes that "the king of Egypt did not come again out of his land, for the king of Babylon had taken all that belonged to the king of Egypt from the Brook of Egypt to the river Euphrates."

2. Jehoiakim as Babylonian Vassal. The Babylonian Chronicle reports that Nebuchadrezzar interrupted his advance to the S when he learned of the death of his father Nabopolassar. He returned to Babylon immediately, and ascended the throne on the 1st day of the month Elul (September 6/7, 605). Nebuchadrezzar did, however, return to the W later in the same year (his "accession year"), following his coronation. He also campaigned in Syria-Palestine ("Hattu" ["the land of Hatti"] in the Babylonian Chronicle) during each of his first 4 regnal years (although we cannot be certain that he campaigned in the W during his second year, it is probable that he did so). It was in connection with one of these campaigns that Jehoiakim became Nebuchadrezzar's vassal. Most scholars believe that this probably occurred during the lengthy campaign conducted during Nebuchadrezzar's first regnal year (604/3). The Babylonian Chronicle states that "in the month Sivan he mustered his army and marched to Hattu. Until the month Kislev he marched about victoriously in Hattu. All the kings of Hattu came into his presence and he received their vast tribute (TCS 5, 100; cf. Wiseman 1956: 69).

The closing lines of this section of the Babylonian Chronicle focus on Nebuchadrezzar's destruction of a particular city. Although the reading here is uncertain, it is probable that the Chronicle is speaking of the city of Ashkelon, located on the Philistine Plain. This event occurred in the month Kislev (December 604). A public fast which was observed in Jerusalem in the same month (cf. Jer 36:9, which states that this fast was held in the 9th month of Jehoiakim's 5th year), may have been called in response to the Babylonian conquest of Ashkelon. It is possible that Jehoiakim submitted to the Babylonians shortly after the fall of Ashkelon.

2 Kgs 24:1 observes that "in his days, Nebuchadnezzar king of Babylon came up, and Jehoiakim became his servant three years; then he turned and rebelled against him." It is probable that Jehoiakim paid tribute to Nebuchadrezzar in the years 603, 602, and 601. Jehoiakim's decision to revolt was undoubtedly influenced by a serious military setback experienced by the Babylonians during Nebuchadrezzar's 4th year (601/600). In the month Kislev, Nebuchadrezzar led his army from Syria-Palestine to Egypt, where they were met by Neco's forces. The Chronicle reports that "they fought one another in the battlefield and both sides suffered severe losses (lit. they inflicted a major defeat upon one another). The king of Akkad and his army turned and (went back) to Babylon" (TCS 5, 101; cf. Wiseman 1956: 71). While it is very possible that the Egyptians encouraged Jehoiakim to revolt, it is unlikely that he would have rebelled before witnessing this clear demonstration of Babylonian weakness. (It would appear that Egypt was able to take Gaza at this time [cf. Jer 47:1].) Thus it is probable that Jehoiakim withheld tribute in

Nisan of the year 600, at the beginning of Nebuchadrezzar's 5th regnal year (see Katzenstein 1983).

It was some time before Nebuchadrezzar took direct punitive action against Jehoiakim. The Babylonian Chronicle notes that in his 5th year (600/599), Nebuchadrezzar "stayed home (and) refitted his numerous horses and chariotry" (TCS 5, 101; cf. Wiseman 1956: 71). And, although Nebuchadrezzar returned to the W during the following year (599/8), on this occasion he "despatched his army from Hattu and they went off to the desert. They plundered extensively the possessions, animals, and gods of the numerous Arabs" (TCS 5, 101; cf. Wiseman 1956: 71). We learn from 2 Kgs 24:2, however, that Nebuchadrezzar did respond to Jehoiakim's rebellion by dispatching Babylonian units already stationed in Syria-Palestine, together with bands of Syrians (it is unnecessary to amend the text to read "Edomites" [cf. Jer 35:11]), Moabites, and Ammonites. Nothing is known of the outcome of this attack on Judah.

In the Babylonian Chronicle, the entry for the 7th year of Nebuchadrezzar's reign (598/7) relates solely to the capture of Jerusalem: "In the month Kislev the king of Akkad mustered his army and marched to Hattu. He encamped against the city of Judah and on the second day of the month Adar he captured the city (and) seized (its) king. A king of his own choice he appointed in the city (and) taking the vast tribute he brought it into Babylon" (TCS 5, 102; cf. Wiseman 1956: 73). Thus, following a short siege, Jerusalem was taken (cf. 2 Kgs 24:10–17) on March 15/16, 597 (the Babylonian day extended from sunset to sunset, and thus overlaps 2 days of our calendar). Jehoiakim died some time before the fall of the city, either before or during the siege (but before Nebuchadrezzar himself arrived in Jerusalem [cf. 2 Kgs 24:11]). The king seized by Nebuchadrezzar was Jehoiakim's successor, his son Jehoiachin (2 Kgs 24:12, 15). The "king of his own choice" was Mattaniah, to whom Nebuchadrezzar gave the name Zedekiah (2 Kgs 24:17).

3. Jehoiakim's Death. There are conflicting traditions relating to the death of Jehoiakim (see Green 1982). 2 Kgs 24:6, which states that Jehoiakim "slept with his fathers," implies that Jehoiakim died a natural and peaceful death. The Lucianic recension of 2 Kgs 24:6 (cf. also 2 Chr 36:8 in the LXX) adds that Jehoiakim "was buried with his fathers in the Garden of Uzzah" (cf. 2 Kgs 21:18, 26, where this garden is reported to be the burial place of both Manasseh and Amon). The Chronicler says nothing of Jehoiakim's death. Instead, there is the suggestion in 2 Chr 36:6 that Jehoiakim (like Jehoiachin) was deported by Nebuchadrezzar (e.g., NEB: "put him in fetters and took him to Babylon"). However, although this reading is supported by the LXX (cf. 1 Esdr 1:38 [40]; also Dan 1:1–2), and although 2 Chr 36:7 states that treasure from the temple was taken to Babylon at this time, 2 Chr 36:6 probably states only that Nebuchadrezzar "bound him in fetters to take him to Babylon" (RSV).

Josephus reports that Jehoiakim was killed in Jerusalem at the command of Nebuchadrezzar, his body "to be thrown before the walls, without any burial" (*Ant* 10.6.3). This account probably reflects 2 oracles contained in the book of Jeremiah. In Jer 36:30 it is announced that Jehoiakim's "dead body shall be cast out to the heat by day and the frost by night." Similarly, Jer 22:13–19 closes with the prediction that Jehoiakim's death will not be lamented in the usual manner. Instead, he will receive "the burial of an ass" (that is, his body will remain unburied), and his body will be "dragged and cast forth beyond the gates of Jerusalem" (vv 18–19). Although some scholars believe that Jehoiakim may have been assassinated by members of the pro-Babylonian minority in Judah, there is no evidence that this occurred. Further, there is no evidence to support the view that upon his arrival in Jerusalem, Nebuchadrezzar disinterred Jehoiakim's body. It is most probable that Jehoiakim died a natural death (in December 598, or possibly in January 597), and that the predictions of Jer 22:18–19 and 36:30 were thus unfulfilled.

B. Prophetic Opposition to Jehoiakim

It is clear that under Jehoiakim, the reform instituted by Josiah lapsed. The prophet Jeremiah was an outspoken critic of the socioreligious conditions which prevailed in Judah during Jehoiakim's reign. His "Temple Sermon" (Jer 7:1–15) suggests that part of Jehoiakim's policy was an affirmation of the inviolability of the temple (see Wilcoxen 1977). However, although this oracle is indeed critical of blind trust placed in the temple, its focal point is a denunciation of the people for their failure to be obedient to the Torah (see Holt 1986). It is known, for example, that during Jehoiakim's reign, foreign cults again made their appearance (cf. Jer 7:9, 18, 31; 11:9–13). Further, the pro-Egyptian foreign policy pursued by Jehoiakim stood opposed to the pro-Babylonian position consistently advocated by Jeremiah. That Jeremiah was not alone in his opposition to Jehoiakim and his policies is indicated by Jer 26:20–23.

In the book of Jeremiah, Jehoiakim is depicted as a petty tyrant whose rule was characterized by social injustice. His rule is contrasted with that of his father Josiah. Whereas Josiah "did justice and righteousness," Jehoiakim is accused of having "eyes and heart only for dishonest gain, for shedding innocent blood, and for practising oppression and violence" (Jer 22:15–17 [RSV]; cf. 2 Kgs 24:4). The oracle Jer 22:13–19 provides a concrete example of Jehoiakim's avarice, arrogance, and oppressive rule (see Wessels 1984). Probably at the beginning of his reign, at a time when the country was already under a heavy financial strain, Jehoiakim either renovated the existing palace in Jerusalem, or perhaps built a new palace (very possibly to be identified with the remains of a palace discovered at Ramat Raḥel). In addition to castigating Jehoiakim for the size and opulence of this project, the king is accused of having used forced labor to carry out this work (Jer 22:13–15).

A contrast between Jehoiakim and Josiah is also intended in Jeremiah 36, a narrative which probably has been patterned after 2 Kgs 22:3–23:24 (see Isbell 1978). Jehoiakim's rejection of Yahweh's written word (Jer 36:21–26) stands in marked contrast to the obedience shown by Josiah when the book of the law was read to him. Similarly, although Jehoiakim is not mentioned in Jer 26:7–19, it is clearly the intention of the narrator to demonstrate that it is the king himself who is responsible for the rejection of Yahweh's word (note the implied contrast with the "good" king Hezekiah in verses 18–19, and the brief narrative

relating to the prophet Uriah [vv 20–23], who was executed by Jehoiakim for having preached a message similar to that of Jeremiah).

Together with the other 3 men who served as the last kings of Judah (Jehoahaz, Jehoiachin, and Zedekiah), Jehoiakim is given a negative evaluation in the Deuteronomistic History (2 Kgs 23:37 [cf. 2 Chr 36:5]). The evaluation of these 4 kings follows a similar pattern. Whereas the first element also occurs in the evaluation of earlier kings ("he did what was evil in the sight of Yahweh"), the second element is distinctive to the evaluation of these last kings of Judah. Of each it is stated that he did what was evil "according to all that his father(s) had done"; a variation occurs in 2 Kgs 24:19, where Zedekiah is said to have done evil "according to all that Jehoiakim had done" (see Weippert 1972: 333–34).

JOHN M. BERRIDGE

JEHOIARIB (PERSON) [Heb *yĕhôyārîb*]. Var. JOIARIB. A priestly family, descended from Aaron, whose name means "May Yahweh contend (for me)" (*IPN*, 28, 201; cf. Jerubbaal, "May Baal contend").

1. According to 1 Chr 24:4, 7, Jehoiarib was an eponymous head of a family and the one to whom the first lot fell in David's establishment of 24 priestly courses. In the list provided in 1 Chr 24:7–18, Jedaiah is the 2d family chosen by lot.

2. A priestly family, most likely descended from #1, which returned from exile in Babylon. 1 Chr 9:10 lists Jehoiarib, along with Jedaiah, Jachin, Azariah, Adaiah, and Maasai, as the 6 priestly heads of family who were the first to return to Jerusalem. The list in Neh 11:10–14, parallel but not identical to 1 Chr 9:10–13, identifies Joiarib (v 10) as an ancestor of Jedaiah, who was among the 5 priestly families who returned to Jerusalem following the exile. Similarly, in Neh 12:6 and 19, Joiarib, again listed alongside Jedaiah, is recorded among the 22 priestly families who returned from exile under Zerubbabel. It therefore seems certain that Joiarib in Nehemiah 11 and 12 is identical to the Jehoiarib in 1 Chr 9:10, because of (1) the similarity of the lists of the first returnees recorded in 1 Chronicles 9 and Nehemiah 11; and (2) the association of J(eh)oiarib with Jedaiah in all cases (including 1 Chr 24:7).

The significance of J(eh)oiarib in these lists has been questioned by recent commentators. The earliest tradition, reflected in Ezra 2, speaks of 4 priestly houses. The expansion to 5, 6, 22, and finally to 24 priestly courses suggests a growth process which was not fixed until at least the mid-5th century.

Part of this growth process involved the addition of certain families to earlier lists, including that of J(eh)oiarib. His appearance in the lists of Nehemiah 12, together with that of the following 5 names, appears to be secondary for 2 reasons. First, they are set off from the list syntactically by a conjunction. Second, it is precisely these 6 names which are omitted from the list of those priests who signed the covenant in Neh 10:1–8. There are also problems with the occurrence of the name in the listing of Neh 11:10.

It has often been assumed that J(eh)oiarib was added to the list of priestly families at a relatively late date because it was from this family that the Hasmoneans descended. However, the name was probably already fixed in the listing of priestly families by the early 4th century. (For further discussion, see Williamson *Ezra, Nehemiah* WBC; Braun *1 Chronicles* WBC.)

RODNEY R. HUTTON

JEHONATHAN (PERSON) [Heb *yĕhônātān*]. A name meaning "Yahu has given." This name is frequently rendered from Hebrew into English in the contracted form Jonathan. There are several instances where the name has been transliterated into English in complete form.

1. One of a group of Levites (2 Chr 17:8) who was called by Jehoshaphat to go with other princes and priests to teach the Torah in the cities of Judah. They travelled through Judah and taught among the people.

2. A priest who is listed as the head of a postexilic family of Shemaiah (Neh 12:18). Shemaiah was a contemporary of Nehemiah (Neh 10:8; 12:6). Jehonathan, as the head of this family, is identified in the list as a 2d generation priest under the high priest Eliashib.

3. A treasurer during the time of Uzziah.

GARY C. AUGUSTIN

JEHORAM (PERSON) [Heb *yĕhôrām*]. An alternate form of JORAM.

JEHOSHABEATH (PERSON) [Heb *yĕhôšabᶜat*]. An alternate form of JEHOSHEBA.

JEHOSHAPHAT (PERSON) [Heb *yĕhôšāpāṭ*]. **1.** The son of Ahilud and recorder (*mazkîr*) in the administration of David (2 Sam 8:16; 20:24; 1 Chr 18:15) and Solomon (1 Kgs 4:3). Drawing on the use of the root *zkr* in Isa 62:6, Driver (*NHT* 283) argued that the noun should be rendered "remembrancer" rather than "recorder." Thus Je-

hoshaphat's task centered not on maintaining archives, but on focusing the king's attention on important matters of state and offering advice. The office of *mazkîr* was not unlike that of secretary of state. Hertzberg (*1 and 2 Samuel* OTL, 293) considers the *mazkîr* to be the chief domestic officer in the Davidic bureaucracy: "he is the spokesman who has to keep the king continually informed and to transmit his decisions." Influenced by the research of Reventlow (1959: 161–75) and Boecker (1961: 212–16), DeVries (*1 Kings* WBC, 63, 69–70) translates the Heb noun "herald" which accords well with the assertion of Gray (*1 and 2 Kings* OTL, 132) that the *mazkîr* "makes the king's mind known to the people." De Vaux (*AncIsr,* 132) observes that a precisely equivalent title in ancient Egyptian bureaucracy was given to one who regulated palace ceremonies, prepared the pharaoh's journeys, and served as his official spokesperson.

2. The son of Paruah and one of Solomon's 12 administrative officers (*nissābîm,* 1 Kgs 4:7) who were appointed to the task of fiscally sustaining the royal household. Exercising supervision over the district of Issachar (4:17), Jehoshaphat monitored the shipment of a month's supply of food rations for the Solomonic court each year (4:7) and kept the horses of the king's chariotry supplied with barley and straw (4:28).

3. A king of Judah (ca. 873–849 B.C.E), the son and successor of Asa, and a contemporary of Ahab, Ahaziah, and perhaps Jehoram, kings of Israel. At the age of 35, Jehoshaphat mounted the throne in Jerusalem to begin a 25-year reign. His mother was Azubah, daughter of Shilhi (1 Kgs 22:42; 2 Chr 20:31). The political climate surrounding Jehoshaphat's rule, his portrayal in the Deuteronomistic history (notably 1 Kings 22), and his portrayal in the work of the Chronicler (notably 2 Chronicles 17–20) are the categories under which various particulars about his Judean rule are gathered.

a. Political Climate. Though the independent states of Israel and Judah were often locked in sectional warfare during the first half-century following the rupture of the united monarchy in ca. 922 B.C.E., when Omri seized the throne of Israel in ca. 876 B.C.E. both kingdoms were on the verge of experiencing at least 4 decades of needful resurgence. Thanks to Omri's initiative, Israel and Judah embarked on an alliance that was confirmed within a few years by the marriage of Ahab's sister (or daughter) Athaliah to Jehoram, the son and successor of Jehoshaphat (2 Kgs 8:18, 27; 2 Chr 18:1). Given the military and commercial advantages that such an alliance fostered, Ahab of Israel (ca. 869–850 B.C.E.) and Jehoshaphat of Judah governed their people under politically favorable conditions. Israel may have been the stronger of the 2 kingdoms, but the close links that now developed were beneficial to both. Morover, archaeologist Aharoni (1982: 243–49) points to restorations at Mizpah and Beer-sheba as well as to new fortresses at Arad and Ezion-geber in the Negeb that were sponsored by Jehoshaphat and/or his father Asa. In sum, Jehoshaphat governed Judah during a relatively prosperous period.

b. Jehoshaphat in the Deuteronomistic History. Presumably drawing upon the annals of the Kingdom of Judah, the Deuteronomistic historian briefly summarizes Jehoshaphat's reign in 1 Kgs 22:41–51—Eng 22:41–50. In this basically positive statement, the spotlight falls on the king's religious policy, peaceful relations with the king of Israel, influence in Edom, and unsuccessful maritime expedition on the Red Sea.

In "doing what was right in the sight of the Lord" (22:43), Jehoshaphat is favorably compared with his father (see 1 Kgs 15:11). Thus he is credited with completing the task begun by Asa (15:12) of eliminating "the male cult-prostitutes" (*qādēš,* 22:47—Eng 22:46). Even so, the approval is qualified by the notation that the king did not dismantle the country shrines ("high places" [*bāmôt*], 22:44—Eng 22:43). The statement that Edom was governed by a deputy rather than by a king (22:48—Eng 22:47) is cryptic. One is led to assume that whereas Solomon had lost control over Edom (1 Kgs 11:14–25), one of his successors regained it. Although Judah's influence in Edom may have augmented during Jehoshaphat's quarter century of rule, it may not have ranged much beyond maintaining open access to the Gulf of Aqabah where the port of Ezion-geber (22:49—Eng 22:48) was situated.

A definitive understanding of the laconic mention of Jehoshaphat's maritime operations in this summary (22:49–50—Eng 22:48–49) lies beyond our reach. At first blush, the text suggests that toward the end of his reign, Jehoshaphat sought to resume a lucrative trade program on the Red Sea that had been suspended since the period of Solomon. Jehoshaphat's use of inexperienced sailors might explain why the king's ships were wrecked while docked at Ezion-geber. When Israel's new king Ahaziah proposed that Judah and Israel might pursue a joint maritime expedition, Jehoshaphat refused. Miller and Hayes (*HAIJ,* 279–80) argue that since the allied nations of Phoenicia, Israel, and Judah surely would have taken control of the Gulf of Aqabah "earlier in the Omride period," it is unlikely that Jehoshaphat was initiating a new maritime venture. Rather, he may have been seeking to win this opportunity for Judah alone. If so, his rejection of Ahaziah's offer was an attempt to establish "Judah's claim of independence from Omride domination." On balance, this Deuteronomistic summary presents Jehoshaphat as a reasonably pious Yahwist whose deeds were less than spectacular.

Two episodes in the Deuteronomistic history depict Jehoshaphat as living in the shadow of the N kingdom. The first (1 Kgs 22:1–38) focuses on Ahab's ill-fated attempt to reclaim the Transjordanian fortress of Ramoth-gilead for Israel. Momentarily a visitor in Ahab's court, Jehoshaphat is persuaded to join forces with the king of Israel. Though Jehoshaphat's name appears 13 times in the story, Ahab's name appears but once (22:20). The prevailing designation is simply "the king of Israel." It is commonly held that when this tale originated, the kings of Israel and Judah were anonymous. Whitley (1952: 148–49) and Miller (1966: 445) submit that this campaign against Aram unfolded a generation later during the dynasty of Jehu. Though their arguments are persuasive, the Deuteronomistic history unmistakably seats the event in Ahab's reign. Indeed, the verse that immediately follows this narrative begins, "Now the rest of the acts of Ahab . . ." (22:39).

Three elements in the story invite consideration here. First, though offered a choice as the lesser partner of the

Israelite-Judean alliance rather than ordered as a vassal to comply with the command of an overlord, Jehoshaphat seems most willing to support Ahab in his move against Aram. His response to the Israelite king's invitation is: "I am as you are, my people as your people, my horses as your horses' (22:4). That the victory is only immediately crucial to the N kingdom seems not to matter. Second, manifesting an exacting piety, Jehoshaphat addresses his colleague with this imperative: "Inquire first for the word of the Lord" (22:5). Then wary about the unison voice of Ahab's 400 prophets who forecast the success of this venture, Jehoshaphat asks whether all of Ahab's prophets have been heard (22:7). Jehoshaphat is zealous in his desire to ascertain the divine will. Third, despite his disguise during the combat, Ahab is mortally wounded by a randomly shot arrow, yet Jehoshaphat, who is instructed by Ahab to wear his robes (following the LXX), remains unharmed (22:30–34). Did the complying king of Judah subscribe to the view that man proposes, but God disposes? Though the narrative is silent, with the campaign now aborted, Jehoshaphat likely withdrew to Jerusalem.

The second narrative (2 Kgs 3:4–27) reports a retaliatory campaign that Israel and its allies Judah and Edom waged against a recently rebellious Moab. Striking affinities with the preceding text detract from its historical credibility. Anonymous mention of the kings of Israel, Judah, and Edom (3:9) triggers the inference that Jehoshaphat's name may be an accretion. Jehoshaphat's willing response to the invitation to join Israel in this military expedition replicates 1 Kgs 22:4, and his scrupulous piety is again manifested in his desire to seek a prophetic disclosure of the divine will prior to actual combat (2 Kgs 3:11; cf. 1 Kgs 22:5). Once more, the victory primarily matters to Israel, not Judah. Jehoshaphat is now the regal colleague of Ahab's son Jehoram (ca. 849–842 B.C.E.), whose triumph over Moab's king Mesha is temporary (see The Moabite Stone, *ANET,* 320–21). Elisha's generous commendation of Jehoshaphat (2 Kgs 3:14) is further evidence that the Deuteronomistic history assigns this Judean king high marks.

c. Jehoshaphat in Chronicles. At the outset of his lengthy portrayal (2 Chr 17:1–20:37), the Chronicler emphasizes Jehoshaphat's uncompromising piety. Shunning the Baalim and seeking the God of his ancestral faith, Jehoshaphat "walked in the earlier ways of his father" (17:3). In the Chronicler's perspective, it naturally followed that Jehoshaphat was a richly blessed monarch around whom swarmed signs of grandeur. Respectful Philistines and Arabs honored Jehoshaphat with tribute (17:11); he constructed fortresses and store cities (17:12); and not counting those soldiers who were stationed in the fortified cities throughout Judah, his army numbered 1,160,000 men (17:14–19). As reported in 2 Chr 20:1–30, when a "great multitude" of Moabites, Ammonites, and men from Mount Seir marched on Jerusalem, fasting and prayer sufficed to ensure a Judean victory. Jehoshaphat's forces had no need to engage in combat since the deity set an ambush against the enemy coalition. These invaders so thoroughly fought among themselves that none was spared. Such disclosures obviously mask the Jehoshaphat of history.

Moreover, traditions about Jehoshaphat that were earlier reported in 1–2 Kings are appreciably refracted in the Chronicler's own work. Whereas his account of the Israelite-Judean expedition to seize Ramoth-gilead from Aram is drawn almost verbatim from 1 Kgs 22:1–35a, the Chronicler accords Jehoshaphat a more honorific status at the outset of the story (2 Chr 18:1–2) and appends a word of censure from the prophet Jehu against Jehoshaphat for having allied himself with the wicked Ahab (19:2–3). Moreover, the Chronicler's account of Jehoshaphat's abortive maritime enterprise (2 Chr 20:35–37) boldly departs from the rendering in 1 Kgs 22:49–50—Eng 22:48–49. Jehoshaphat now *permits* Ahaziah's partnership in this effort which incurs condemnation from Eliezer to the effect that the imminent destruction of the Ezion-geber fleet is Yahweh's judgment against Jehoshaphat's unseemly association with Ahaziah of Israel.

Though the Chronicler may be faulted for his enormous claims about Jehoshaphat and even for inconsistent coverage (in 2 Chr 17:6 the king is praised for having eliminated the "high places" [*bāmôt*], but in 20:33 condemned for having failed to do so!), his recognition of Jehoshaphat's commitment to military preparedness and judicial reform is entirely justified. Jehoshaphat's normalization of judicial procedures in Judah is spelled out in 2 Chr 19:5–11, a text accepted by Albright (1950: 82) as "a substantially correct account." During Jehoshaphat's tenure, local Levites, priests, and prominent laymen were called to Jerusalem as royally appointed judges. This early a date for the transformation of the judicial system is not improbable.

4. The son of Nimshi and father of Jehu, who exterminated the dynasty of Omri and established one of his own (2 Kgs 9:2, 14).

JEHOSHAPHAT, VALLEY OF (PLACE) [Heb *ʿēmeq yehošāpāṭ*]. "The Valley of the Lord will Judge"; the *place* where the Lord will gather together and judge the nations (Joel 4:2, 12—Eng 3:2, 12; cf. Joel 4:14, Valley of Decision—Eng 3:14). The exact location of the valley is uncertain, but since Joel 4:1 (—Eng 3:1) speaks of restoring the fortunes of Judah—and of Jerusalem in particular—it may be assumed that the location is somewhere near Jerusalem. The King's Valley mentioned in 2 Sam 18:18, where Absalom erected his commemorative pillar (not to be confused with the much later Absalom's Tomb), may also be another earlier name for the valley.

Traditionally, the Valley of Jehoshaphat has been associ-

ated with the last judgment and has been identified by Jews, Christians, and Muslims with that part of the Kidron Valley just E of Jerusalem, including the valley slopes. In line with these beliefs a great many tombs are to be found on the Kidron slopes, the Muslim cemetery on the W and the Jewish on the E. In Jewish tradition, *1 Enoch* 53:1 speaks of final judgment in a deep valley where all people come to be judged, a place which many equate with the Valley of Jehoshaphat. Some rabbinic scholars taught that to have a part in the resurrection it was necessary to be born in Palestine, and the bodies of those who were buried elsewhere would roll underground "like bottles" until they reached Palestine (*Ketub.* 12.3). According to Muslim belief, on the Day of Judgment the Angel Israfel will blow his trumpet as he stands on the sacred rock, es-Sakhra (housed in the present Dome of the Rock), and Mohammad will lead the believers from Jerusalem across a bridge over the gulf of Jahannum (a word, no doubt, derived from "gehenna"). Early Christian belief also places emphasis on the Valley of Jehoshaphat as a place of judgment. Although Eusebius (ca. A.D. 263–339; *Onomast.* 70) locates the Valley of Jehoshaphat in the Hinnom Valley—possibly because he remembered that in the Hinnom Valley (the scene of child sacrifice by Ahaz and Manasseh, 2 Kgs 16:2–3; 21:6)—the Lord had promised to deal out death in the "Valley of Slaughter" (Jer 7:31–32; 19:5–6). Jerome, however, in his revision of the *Onomasticon* places the Valley of Jehoshaphat in the Kidron Valley and cites the prophecy of Joel 4:2, 12 (—Eng 3:2, 12). The Bordeaux Pilgrim (A.D. 333) identifies the Valley of "Iosafath" at the Mount of Olives (*CChr Series Latina* [= CCSL].175.17); Theodosius (A.D. 530) knows of the Valley of "Iosaphat" and the Church of St. Mary the mother of the Lord (CCSL 175.119), as does Arculf (A.D. 670) who also speaks of a Church of St. Mary in the Valley of "Iosaphat" (CCSL 175.195).

This church was no doubt in existence as early as the 5th century A.D., and later was rebuilt by the Crusaders who also constructed next to it a large monastery, the Abbey of St. Mary of the Valley of Jehoshaphat (Finegan 1969: 106–7). Other features in the Valley of Jehoshaphat were also associated with the theme of judgment. The gate now known as St. Stephen's Gate, or the Lion Gate, on the E wall of the city was once known as the Gate of the Valley of Jehoshaphat (Simons 1952: 10), and in the Vulgate the translation for the Inspection Gate (Neh 3:31) is Porto Judicialis, "Gate of Judgment." According to Muslim folklore the last judgment in the Valley of Jehoshaphat is associated with the Golden Gate with its two doors: the Gate of Mercy and the Gate of Contrition (Simons 1952: 372). Some view the newly formed valley (described in Zech 14:4) at the Mount of Olives, when the Lord brings judgment, as the Valley of Jehoshaphat.

W. HAROLD MARE

JEHOSHEBA (PERSON) [Heb *yĕhôšeba*ᶜ]. Var. JEHOSHABEATH. Daughter of Joram and sister of Ahaziah, both Kings of Judah (2 Kgs 11:1–2 = 2 Chr 22:11). According to Chronicles, Jehosheba was the wife of Jehoiada the priest. If this is accurate, it indicates an unusual link by marriage between the royal house and the priesthood.

Upon hearing of Ahaziah's death, Athaliah—the Queen Mother—ordered all the king's sons killed and seized the throne for herself. Unknown to Athaliah, Jehosheba hid an infant son of Ahaziah and the child's nurse in a bedchamber. The infant, Joash, escaped the massacre. Six years later, Joash was brought forth by Jehoiada the priest and anointed king in Athaliah's place.

Jehosheba's actions against Athaliah have prompted speculation concerning her parentage. Josephus (*Ant.* 9.7.1) and Jerome (*Quest. Heb.* on 2 Chr 21:17) argue that Jehosheba was the daughter of Joram but not of Athaliah. This would explain Jehosheba's loyalty to Joash, her half-brother's son. However, if Joram had another wife, she is not mentioned in the text. Moreover, 2 Kgs 11 = 2 Chr 22 contain a number of conflicts, i.e., grandmother vs. grandchildren; priest vs. queen. In this context, a conflict between mother/daughter does not seem unusual.

The account in Chronicles preserves an alternate spelling of Jehosheba: Jehoshabeath (Heb *yĕhôšabᶜat*). See also ATHALIAH, JEHOIADA, JOASH.

LINDA S. SCHEARING

JEHOVAH. See YAHWEH.

JEHOZABAD (PERSON) [Heb *yĕhôzābād*]. Three individuals in the OT bear this name. On the form of the name which means "Yahweh has given," compare the biblical Elzabad and the Aramean *Nabû-zabad.*

1. Jehozabad the son of Shomer was a servant of Joash who participated in the assassination of the Judean king (2 Kgs 12:22—Eng 12:21). In 2 Chr 24:26, Jehozabad is said to be the son of a Moabitess named Shimrit, but it appears that the Chronicler has mistaken the name of this conspirator's father for that of his mother (Rudolph *Chronikbücher* HAT, 276, 279). Whether the Moabite connection is based on a source (*Ibid.*, 279) or is the Chronicler's own contribution (Williamson *Chronicles* NCBC, 326) cannot be determined.

2. The second son of Obed-Edom (1 Chr 26:4) in the schematization offered by a reviser of the Chronicler's organization of the gatekeepers in the temple at Jerusalem (Williamson *Chronicles* NCBC, 169; Rudolph *Chronikbücher* HAT, 173).

3. The second of 2 military "commanders of thousands" from Benjamin under Jehoshaphat named in 2 Chr 17:17–18. In the present setting, framed by vv 13b and 19, Jehozabad and the others named appear to have been officers over troops in the standing army. However, since within that framework they were mustered according to "their fathers' houses" (v 14) and organized by tribal divisions (vv 14, 17), Jehozabad may more likely have been a commander of the militia or conscript forces (Williamson *Chronicles* NCBC, 284).

J. S. ROGERS

JEHOZADAK (PERSON) [Heb *yēhôṣādāq*]. Var. JOZADAK. The father of Joshua, a priest contemporary with Zerubbabel (Hag 1:1, 12, 14; 2:2, 4; Zech 6:11), and the chief priest serving in the First Temple who was taken into exile by Nebuchadnezzar (1 Chr 6:14–15). Jehozadak, along with its shortened form Jozadak, means "Yahweh is righteous." The long form is used for this individual in the texts cited above with his son's name Joshua (*yēhôšūaʿ*). In Ezra-Nehemiah, the shortened form is used along with a shortened form for his son, Jeshua (*yēšûaʿ*). *See* JOZADAK. The textual unit of 1 Chr 6:4–15 lists the names of the chief priests from Eleazar to the fall of Jerusalem. This is clearly a stylized list which may not provide the correct hereditary order (Williamson *Chronicles* WBC, 70–71). A parallel list in Ezra 7:1–5 names Ezra as the Son of Seraiah instead of Jehozadak. However, this is not a complete list, and the intent may merely be to establish Ezra as a direct descendant of Seraiah, not necessarily excluding Jehozadak. As the last chief priest to serve in the First Temple and the father of Joshua, Jehozadak provides a direct link between the preexilic and postexilic priesthoods. This link legitimates Joshua as the proper chief priest to lead worship in the new Temple.

JEFFREY A. FAGER

JEHU (PERSON) [Heb *yēhûʾ*]. The name of 5 individuals in the OT.

1. King of Israel, son of Nimshi, who overthrew the Omride dynasty and founded one of his own. The years of his reign are variously reckoned as 845–818 B.C.E. (Begrich 1929 and Jepsen 1979), 841–814 B.C.E. (Thiele 1965), and 842–815 B.C.E. (Andersen 1969). The most important source for the history of Jehu is 1 Kings 9–10; a very brief summary of his reign is to be found in 2 Chr 22:7–9. Jehu is also mentioned in synchronistic dating lists and truncated genealogies in 2 Kgs 12:2—Eng 12:1; 13:1; 14:8 (= 2 Chr 25:17); 15:12. Quite differing estimations of the impact of Jehu, spoken at greater or lesser remove from the actual time of his reign, are offered in 1 Kgs 19:16–17 and Hos 1:4. The picture of Jehu derived from OT sources is augmented by several Assyrian inscriptions in which Jehu is mentioned by name.

In most cases Jehu is identified as "son of Nimshi" (1 Kgs 19:16; 2 Kgs 9:20; 2 Chr 22:7). In 2 Kgs 9:2 and 14, however, he is called "son of Jehoshaphat, son of Nimshi." On the basis of this latter filiation, it is sometimes suggested that "Nimshi" was the name of Jehu's grandfather, or even the name of the clan to which he belonged. It is more likely, however, that the expression "son of Jehoshaphat" is a later addition to the text, and that the more frequently attested identification of his father is the correct one: Jehu was the son of Nimshi. No other information about the ancestry of Jehu is extant. As he steps onto the stage of history, he is already a high-ranking military figure in the entourage of the Israelite King Joram, an officer or perhaps even the commander of the army.

Jehu emerges at a time when the Israelite army had assembled at Ramoth-gilead (Tell er-Ramith) in order to defend this Transjordanian border town of Israel against attacks by the Syrians. Border clashes between Israel and the Aramean state centered around Damascus had flared up anew following the collapse, in the wake of Hazael's usurpation of the throne in Damascus, of the military alliance of Syrian and Palestinian states which had earlier been established by Hadadezer of Damascus, Irḫuleni of Hamath, and Ahab of Israel in order to check Assyrian expansion. During this conflict in the vicinity of Ramoth-gilead, the Israelite king Joram had been wounded and had been forced to leave his army behind as he returned to his residence in Jezreel (Zerʿin) to recuperate from his wounds (2 Kgs 8:28–29; 9:14–15). This was the occasion for the coup staged by Jehu. The immediate stimulus for it, however, came from another quarter.

While encamped at Ramoth-gilead, Jehu was sought out by a disciple of the prophet Elisha. Acting on behalf of his master, this disciple anointed Jehu king over Israel and then confirmed the anointing by means of an oracle from Yahweh. The whole proceeding is reminiscent of Samuel's anointing of Saul (1 Sam 9:16; 10:1; 15:1) and David (1 Sam 16:1–13): what takes place occurs in response to divine initiative and confers upon the recipient of the action the status of a *nāgîd* ("designated one"), or even of a king. To be sure, in 2 Kgs 9:1–10 it is not actually the prophet Elisha himself, but only one of his disciples, who does the anointing. Despite that technicality, the other officers around Jehu nonetheless hasten to proclaim him king just as soon as they are informed of the anointing and of the prophetic oracle. However, there is no mention of a general acclamation of Jehu's kingship on the part of the whole army—unlike what apparently happens in the otherwise analogous situation in 1 Kgs 16:16. The revolt of Jehu, therefore, is probably best described as a military coup which originated at the Israelites' Transjordanian encampment. The prophetic anointing gave Jehu's coup its religious legitimation.

During these years a significant undercurrent of resistance to the Omride policies, both foreign and domestic, had obviously arisen. One factor contributing to this groundswell of resentment might well have been the growing influence of the queen mother Jezebel who, after the death of Ahab, played a role in the governing of Israel through her sons Ahaziah and Joram. Along with this the Israelite tribes were experiencing a steady deterioration in their status over against the indigenous Canaanite portion of the population. The cult of Baal, which had been accorded at least equal treatment with that of Yahweh since the beginning of the Omride dynasty, was by now actively being promoted. This development was being protested by loyal Yahwists, who found their spokesmen especially in the prophets Elijah and Elisha, and in the prophetic circles which had gathered around the latter.

It is also possible that the defense program of the Omrides was working economic hardships on the populace. To be sure, the Omride tactic of entering into foreign alliances had evidently brought to Israel a period of peace and prosperity. On the other hand, the necessity of being able to repulse attacks from the N—initially from the Arameans of Damascus and later from the Assyrians—was requiring increased expenditures on armaments. The large contingent of war chariots which Ahab had been able to deploy against the Assyrian king Shalmanezer III in the Battle of Qarqar (853 B.C.E.; cf. *ANET*, 278–79) testifies to

the magnitude of the Israelite military buildup, as do the fortresses whose construction the Omrides pushed through. Only a short time after Hazael successfully seized power in Damascus, however, the anti-Assyrian coalition fell apart. Now the former allies, Israel and Aram-Damascus, faced one another with swords drawn. This sudden change in the situation apparently led to considerable dissatisfaction with the basic principles of the Omride foreign policy and stimulated a desire for some sort of change.

All of these factors seem to have contributed, more or less strongly, to the success of Jehu's putsch. Above all else, however, he took advantage of the opportunity for surprise. Jehu commanded his officers to keep silent concerning the proceedings in the military camp at Ramoth-gilead, and he himself then hastened as quickly as possible to Jezreel in order to arrive there before news of his having been proclaimed king in Transjordan could reach the royal residence. The surprise attack was a total success. King Joram, suspecting nothing, went out to meet Jehu in expectation of receiving bad news from the military camp; he was shot by Jehu while still in his war chariot. At this point (2 Kgs 9:25–26) the narrative inserts a comment to the effect that this happened on precisely that parcel of land for the sake of whose possession Ahab had had Naboth of Jezreel and his sons slain (a tradition paralleling that found in 1 Kings 21). The death of Joram at the hand of Jehu thus appears as the fulfilling of an oracle of judgment that was once intended for Ahab. In Jezreel itself Jehu had the queen mother Jezebel thrown down from the palace's appearance-window. With this the city of Jezreel was firmly in the hand of Jehu. Since Jezreel is hardly again mentioned in later texts, one must assume that, under Jehu and his successors, the city lost the function of a secondary royal residence which it had had under the kings of the house of Omri.

As a royal possession founded by the Omride family, Israel's chief city of Samaria (Sebastiya) occupied a special status within the N Kingdom. Jehu respected this special legal position in that he did not immediately set out from Jezreel to Samaria, but rather he initiated a diplomatic exchange of letters with the chiefs of the city. In his first letter Jehu suggested to the recipients that they elevate one of the princes of the Omride family to the kingship and then carry through with this act by defending his claims in battle (2 Kgs 10:1–3). The chiefs of the city immediately recognized the threat contained in Jehu's letter and announced their submission to him (vv 4–5). Next Jehu demanded, as a sign of their obedience, the heads of the princes of the royal house who were in Samaria. Gripped by fear, the representatives of Samaria immediately carried out this command, decapitated the Omride princes, and sent their severed heads to Jehu at Jezreel (vv 6–11). Thus the way was cleared for Jehu to take over the capital city of Samaria.

Before Jehu actually entered Samaria, while he was still on the way there, he encountered Jonadab, the son of Rechab, who assured him of his support. According to Jeremiah 35, Jonadab was leader of the Rechabites, a clan which faithfully adhered to an archaic form of Yahwistic belief. Centuries after the settlement of Israel in Palestine the Rechabites still disdained to lead a sedentary, agrarian style of life. Rather, they continued to pursue a semi-nomadic type of existence, living in tents rather than in houses, subsisting on stock-farming rather than on tilling the soil, and stoutly refraining from alcoholic beverages. In all likelihood they understood this particular sort of existence in the promised land to be a style of life uniquely suited to Yahwistic faith, especially since they were thereby separated from such religious temptations of the agricultural life as Baal-worship and fertility cult. Since the Rechabites were thus a group particularly responsive to the call of faithfulness to Yahweh, Jehu's immediate course of action is easily understandable: He had Jonadab join him in his chariot in order thereby to demonstrate his own "zeal for Yahweh" (2 Kgs 10:15–16). By having the leader of the Rechabites join him, Jehu was able to demonstrate to the populace his partisanship toward the national Israelite and ancient Yahwistic traditions of Israel, in opposition to the Omride policy of accommodation to Canaanite ways. Keeping the dynamics of these maneuvers in mind, one is also led to conclude that the sequence of events as recounted in 10:15–17 and 10:18–27 does not reflect what actually happened but has somehow gotten reversed.

After his entry into Samaria, Jehu had all the remaining members of the "house of Ahab" slaughtered. In so doing he followed the example of several earlier usurpers of the royal throne in N Israel who had likewise exterminated the families of the toppled monarchs in order to solidify their own hold on the reins of government (1 Kgs 15:29; 16:11). With this bloodbath the Omride dynasty, after not even 40 years in power (from 882 to 845 B.C.E., following the chronology of Jepsen), ceased to exist. With his seizure of the throne, Jehu established yet another dynasty, one that held on to the throne of Israel for nearly a full century (from 845 to 747 B.C.E., again following Jepsen). The royal families of Omri and of Jehu were the only ones during the history of the N Kingdom that succeeded in establishing actual dynasties. In all other cases the duration of rule did not extend beyond that of a king and his son.

A considerable segment of the Judean lineage of David was also destroyed in the overthrow of the Omride dynasty. It so happened that, when the usurper Jehu entered Jezreel in order to seize power and to assassinate the reigning King Joram, the Judean king Ahaziah was also there, visiting Joram. In this way Ahaziah also became entangled in the bloody events of Jehu's putsch (2 Kgs 8:29; 9:16). In company with Joram, the unsuspecting Ahaziah departed the city in order to meet the rapidly approaching Jehu. When Jehu slew Joram with bow and arrow, Ahaziah fled S in the direction of Bethhaggan (En-Gannim), obviously with the intention of escaping toward Jerusalem. Jehu pursued him, however, and ordered that he too be slain. Those in pursuit of Ahaziah caught up with him in the vicinity of Ibleam (Khirbet Bel'ameh) and wounded him so severely that he was able to make it only as far as Megiddo (Tell el-Mutesellim), where he died (2 Kgs 9:21–24, 27–28).

In addition to Ahaziah a whole group of people belonging to the Judean royal house ("kinsmen of Ahaziah," 2 Kgs 10:12–14) fell into the hands of Jehu. Clearly having as yet received no news of the bloody events in Jezreel, they were just then journeying through the N Kingdom. Jehu encountered them on the way to Samaria, at Beth-

eked (Beit Qad, east of Jenin), and had them all killed. In this way Jehu inflicted such devastation on the Davidic dynasty that the queen mother Athaliah, of the lineage of Omri, was able to seize the throne in Jerusalem (2 Kgs 11:1–3). Just why Jehu so enlarged his circle of murderous activity to include the members of the Judean royal family remains unclear. Perhaps he was intent upon eliminating the possibility of a blood feud with the Davidic lineage, which had become related by marriage with the Omrides. Alternately, Jehu could also simply have intended to liquidate all the allies of the Israelite royal family that he could get his hands on.

Next, in Samaria, Jehu went on the offensive against the Baal cult. Under the pretext of wanting to arrange a large sacrificial feast for Baal, Jehu had the worshipers of Baal, his prophets and priests, gather in the Baal sanctuary in Samaria. He was so thorough in carrying out this deception that he himself presented the sacrifice for Baal. Suddenly, he gave his troops the command to slaughter the Baal worshipers who had gathered in the sanctuary. After this frightful bloodbath the contents of the temple were destroyed and the building itself was torn down. In order to render the site of the sanctuary perpetually unusable for cultic purposes, Jehu then had a public latrine constructed at the same place (2 Kgs 10:18–27). The detailed sources concerning Jehu, which restrict themselves to his seizure of power, end on this note. Despite their restricted focus, however, these sources nonetheless allow one to recognize the broad contours of Jehu's governmental policy.

In both domestic and foreign policy, Jehu made a radical break with the governing principles of the Omride dynasty. In the sociocultural realm, including religion, a definitive end was made of the practice of officially sanctioned equal treatment of the Israelite tribes and the traditionally Canaanite elements of the population. Indeed, through the influence of Jezebel, there had even been a promoting of the Canaanite traditions under the kings Ahaziah and Joram. Through his frightfully bloody assault on the adherents of the Baal cult and the destruction of the Baal temple in Samaria, Jehu established himself as a zealot for Yahwistic faith and as an opponent of Baalism and syncretism. Under Jehu's rule, the Israelite elements of the population doubtlessly were accorded the dominant position in the sociopolitical and religious realm; Canaanite influence was restricted.

In the domain of foreign policy, the system of treaties set up by the Omrides fully collapsed in the wake of Jehu's actions. The slaughtering of Ahaziah and the Judean princes, as well as the extermination of the Omride family from which Athaliah, the queen mother in Jerusalem, herself descended, put an end to Israel's previously good relations with Judah and replaced them with a state of tension. Israel's friendly relations with the Phoenician states likewise came to an end. Under Jehu, Israel suddenly found itself in an isolated position among neighboring states and, without support, was soon handed over to more powerful opponents, specifically Aram-Damascus and Assyria.

In the 18th year of his reign (841 B.C.E.), the Assyrian king Shalmaneser III carried out his 4th campaign against Syria. The anti-Assyrian coalition of Syrian and Palestinian states, which 3 times before had halted his advance, no longer existed. The Assyrian army directed its main assault against Hazael of Damascus. Although Shalmaneser wreaked heavy devastation upon the region of the Syrian state and trapped Hazael in his capital city, he was not able actually to capture Damascus or overthrow Hazael. However, the Assyrian army did manage to reach the highland region of Hauran and there stood on the very boundary of Israel. As Shalmaneser states in a fragmentarily preserved annalistic text (*ANET*, 280), the Phoenician cities of Tyre and Sidon both submitted to him, as did Jehu of Israel. In this Assyrian text Jehu is identified as "son of Omri" (*Iaúa mār Ḫumrî*). This formulation shows not only the ignorance of the Assyrians concerning the change of dynasty that had occurred in Israel, but also the high international esteem enjoyed by the Omrides, whose name increasingly appears in the Assyrian texts as a designator for the whole state of Israel (*Bīt-Ḫumrî*). Apparently Shalmaneser accorded such importance to Jehu's paying of tribute that he had the scene carved as an illustration on the "Black Obelisk" (*ANEP*, 355). Jehu is shown doing homage before the great Assyrian king by prostrating himself upon the ground; other panels of the obelisk depict Israel's tribute, which is described in a superscription.

Although his submission to Shalmaneser meant that Jehu was abandoning the former Israelite policy of resistance to Assyrian expansion, at the same time this was an act of political common sense. With his recognition of Assyrian supremacy, Jehu acquired for himself support against the Arameans, who of course held back for only so long as the Assyrians were able to intervene in the affairs of the Aramean states of Syria. In the 21st year of his reign (838 B.C.E.), Shalmaneser III moved against Damascus for the last time, once again without definitive success. In the ensuing years, due to internal disturbances, the Assyrian empire declined and was unable to find the strength to generate new expansionary expeditions. Hazael of Damascus, seeing himself freed from Assyrian pressure, became in the following years one of the most ruthless and successful enemies of Israel. According to 2 Kgs 10:32–33 he eventually succeeded in conquering the whole of Transjordan between Hauran and the Arnon. Given its summarizing character, it is questionable whether this brief notice is to be taken as referring only to the period of Jehu's rule. It is quite possible that the success which Hazael achieved against Jehu's son Jehoahaz has been collapsed into this report as well. On the other hand, one can probably also infer from this notice that Jehu was successful in forcing the Moabites back to the Arnon and that the region between the N tip of the Dead Sea and the Arnon reverted to Israelite rule.

Despite all the gory details included therein, the textual block encompassing 2 Kgs 9:1–10:27 reports Jehu's seizure of power in a positive light and apparently aims at legitimating his rule. The deeds of Jehu are evaluated in similarly positive fashion in 1 Kgs 19:15–18. This latter text, which one must read as presupposing that the events of the Jehu revolution already lie in the past, speaks of a divine commission laid upon Elijah to anoint, in addition to Elisha and Hazael, also Jehu. Certainly we encounter here no strictly historical statement (cf. the contrasting

2 Kgs 9:1–3). Rather we have the transmittal of a theological evaluation of the deeds of Jehu: Those deeds serve in the struggle against the cult of Baal and therefore stand in continuity with Elijah's battle on behalf of Yahwistic faith.

The prophet Hosea judges the deeds of Jehu in a totally different light (Hos 1:4). According to Hosea, those deeds amounted to a terrible blood guilt which besmirched the whole reign of the Jehu dynasty and so burdened it that God would eventually call the dynasty to account and do away with the whole institution of kingship. On the other hand, the Deuteronomistic redactors of the books of Kings rendered high praise to Jehu for his opposition to the cult of Baal and included in this context a divine promise of dynastic succession. Of course, just as with every other king of the N Kingdom, so also Jehu is reproached for having adhered to the golden calves, which is to say for having continued to support the royal sanctuaries in Bethel and Dan (2 Kgs 10:28–31).

The history of Jehu is briefly summarized in the work of the Chronicler (2 Chr 22:7–9), who paraphrases 2 Kings 9–10 in short strokes (2 Chr 22:7 = 2 Kgs 9:21; 2 Chr 22:8 = 2 Kgs 10:12–14). Only the verse at 2 Chr 22:9 fully deviates from its predecessor at 2 Kgs 9:27–28; it reports that Ahaziah of Judah hid in Samaria but was discovered there and was slain by Jehu. The sparse information concerning Jehu in the work of the Chronicler serves only as historical background for the account of Ahaziah's demise.

2. Prophet in the time of Baasha of Israel, son of Hanani. He delivered to the king a prophetic judgment oracle announcing the king's demise and the downfall of the royal house (1 Kgs 16:1–4). The fulfillment of this pronouncement is reported in 16:7 (proleptically) and in 16:12. The prophetic oracle consists of Deuteronomistic formulations. The historical background of the prophet Jehu remains dark. In the work of the Chronicler he is pictured as confronting the Judean King Jehoshaphat and faulting him for his alliance with the godless Ahab (2 Chr 19:2–3). In 2 Chr 20:34 the Chronicler refers to a collection of "words of Jehu" as one of his sources for the history of Jehoshaphat of Judah. This notice is just as open to historical question as are the other comments about Jehu in the work of the Chronicler.

3. A Judean, son of Obed and father of Azariah, in the family tree of Elishama within the genealogy of Judah (1 Chr 2:38).

4. A Simeonite, son of Joshibiah, within the genealogy of Simeon (1 Chr 4:35).

5. A Benjaminite from Anathoth who, along with other Benjaminites, gave himself over to David at Ziklag in order to serve him as one of his warriors (1 Chr 12:3).

JEHUBBAH (PERSON) [Heb *yĕḥubbâ* K; *wĕḥubbâ* Q]. The grandson of Heber listed in the genealogy of Asher (1 Chr 7:34). While the consonantal Hebrew text spells the name Jehubbah, the Masoretes have vocalized the name to be read "and Hubbah"—a reading supported by various Gk mss. The figure is listed as one of the 3 sons of Shamer, the latter perhaps to be identified with Shomer. The names Jehubbah or Hubbah appear neither in the parallel lists of the Asherite genealogy in Genesis 46 and Numbers 26 nor elsewhere in the Hebrew Bible. Possible roots of these names are *ḥbb,* "to love" (hence, "loved one") and *ḥbh,* "to hide" (hence, "hidden one"). Abel suggests that Hubbah is related to Hobab, a Kenite name (Judges 4:11).

JEHUCAL (PERSON) [Heb *yĕhûkal*]. Var. JUCAL. Son of Shelemiah and one of King Zedekiah's (597–586 B.C.E.) court officials (Jer 37:3; 38:1). His high social status is indicated both by his title, "prince" (Heb *śar*; Jer 38:4) and by his presence in a deputation sent by Zedekiah to consult the prophet Jeremiah (37:3). During the siege of Jerusalem, he was one of four (three in the LXX) officials, who, representing the pro-Egyptian faction in Judah, demanded that Zedekiah put Jeremiah to death because of the treasonable nature of his preaching (38:1–4). According to them, Jeremiah's message, which centered on the

certain fall of Jerusalem and the necessity of submitting to the Babylonians, was demoralizing the Judean troops (lit. "weakening the hands" of those defending the city of Jerusalem; cf. the use of this expression in one of the ostraca [Ostracon 6] found at Lachish [see *ANET,* 322]).

JEHUD (PLACE) [Heb *yĕhūd*]. A town allotted to the tribe of Dan (Josh 19:45), located in the coastal region which the Danites failed to inherit (Josh 19:47; Judg 1:34). The site of Jehud is identified with el-Yahudiya (modern Yehud; M.R. 139159) where sherds of the MB and Iron Age have been collected.

RAPHAEL GREENBERG

JEHUDI (PERSON) [Heb *yĕhûdî*]. An officer at the court of King Jehoiakim (Jer 36:14, 21, 23). It is probable that Jehudi was a scribe. In the prose narrative of Jeremiah 36, the royal officials (*śārîm,* translated "princes" in RSV and NAB) send Jehudi to summon Baruch to appear before them with the scroll dictated by Jeremiah (36:14). Later, Jehoiakim dispatches Jehudi to fetch the scroll from the chamber of Elishama, the state secretary (v 21). Jehudi then reads the scroll to the king and his officials (vv 21, 23).

In Jer 36:14, Jehudi is identified as son of Nethaniah, son of Shelemiah, son of Cushi. It is noteworthy that Jehudi's genealogy is traced back to the 3d generation. Many commentators believe that the text is to be emended slightly to read "then all the royal officials sent Jehudi son of Nethaniah *and* Shelemiah son of Cushi . . ." (see, e.g., the JB's translation). If Jer 36:14 is accepted as it now reads, it is difficult to provide a satisfactory explanation for the extended genealogy, although it is possible that the genealogy is to be viewed in the light of Deut 23:7–8. That text is concerned with the genealogical purity of those who participate in the Israelite cult, and speaks only of the children of the 3d generation born to Edomites and Egyptians. If Jehudi's great-grandfather was indeed a Cushite by birth (this must be questioned, even if one does not emend the text of Jer 36:14), it is very possible that the name "Jehudi" (lit. "Judahite") may indicate that Jehudi was a naturalized Judean.

JOHN M. BERRIDGE

JEIEL (PERSON) [Heb *yĕʿîʾēl*]. Name of 11 people in postexilic books of the Hebrew Bible. The form of the name sometimes alternates between Jeiel (*yĕʿîʾēl*) and Jeuel (*yĕʿûʾēl*) either as a *Qere* and *Ketib* or between the MT and some of the versions; this is similar to the variation between the names Peniel and Penuel (*BLe,* 524 h). The etymology of the name is uncertain; perhaps it should be connected to Arabic roots meaning "strong" or "to cure" (*HALAT* 2: 401) in which case the name would mean "God is strong" or "God cures." It has not yet appeared in the extrabiblical epigraphic corpus. There is no obvious reason why Jeiel is mentioned only in postexilic sources.

1. One of the families who returned from the Babylonian exile with Ezra (Ezra 8:13). This list is seen as a generally authentic record (Williamson *Ezra, Nehemiah* WBC, 109–11; Blenkinsopp *Ezra-Nehemiah* OTL, 161). The verse that mentions Jeiel/Jeuel is problematic; it reads "Of the sons of Adonikam, those who came later [*ʾaḥărōnîm*], their names being Eliphelet, Jeiel, and Shemaiah . . ." The meaning of *ʾaḥărōnîm,* which usually means "last ones," is unclear, since additional names follow in v 14. Some have suggested that the families of v 13 were the last to leave Babylon (Williamson WBC, 108; Blenkinsopp OTL, 163), but this is reading too much into the Hebrew of the text. Verse 13 is also exceptional in that no other father's name is followed by more than one child. Most likely, the list of returnees originally ended with v 13, with the list of the family of Adonikam, the "final ones" (*ʾaḥărōnîm*), and his children were listed in full to effect closure. Verse 14, then, is most likely an addition, to bring the total number of lay families to the schematic number 12. RSV's reading Jeuel here is poorly attested in the manuscripts, and Jeiel should be read instead with the vast majority of manuscripts and the LXX.

2. One of the sons of Nebo, who appears in the list of intermarried people in Ezra 10:43. This list is generally seen as authentic (Blenkinsopp OTL, 199–200), though it is unclear if it is complete, and because its concluding v 44 is difficult, it is not known if those enumerated are intermarried, or have divorced their foreign wives (Myers *Ezra Nehemiah* AB, 87–88; Blenkinsopp OTL, 197–98). Cogan (1979) has suggested that Nebo is from the tribe of Reuben, but his evidence from several overlapping names between this verse and the Reubenite genealogy in 1 Chr 5:4–8 is inconclusive (Williamson WBC, 159). The centrality of the prohibition of intermarriage in the postexilic period is seen by the literary placement of this section as the conclusion of the Ezra portion of Ezra-Nehemiah; this prohibition is based on reinterpretation of earlier biblical texts prohibiting intermarriage with the Canaanite population (Fishbane 1985: 114–26).

3. A Reubenite (1 Chr 5:7). The relation of this verse to the previous genealogy, and thus the relationship between this Jeiel and the rest of the Reubenites are unclear. 1 Chr 5:7 MT begins, "And his brothers (*wĕʾeḥāyw*) according to his families. . . ." The immediately preceding referent is Beerah (v 6), who was exiled by Tiglath-Pilesser in the 8th century; however, in v 8, these Reubenites are listed as living in areas which they no longer controlled in the 8th century. Possibly, the participle in v 8, *yôšēb,* "he dwells," describing the descendants of the Reuben, should be understood as a perfect, "who dwealt" (Williamson *Chronicles* NCBC, 64), but this is unlikely. The language of v 7 is unusual; its opening words *wĕʾeḥayw lĕmišpĕḥōtāyw* are unique in the genealogical section of 1 Chronicles and the

note that Jeiel is the *rō'š,* probably "the firstborn," is very unusual. This might suggest that the verse is a fragment of a premonarchical Reubenite genealogy (see v 10, which deals with the period of Saul), which became appended to the main genealogy in vv 1–6. The words *wĕ'ḥāyw lĕmišpĕḥōtāyw* "And his brothers according to his families," are thus a clumsy attempt to join the 2 genealogies.

4. One of the families of Judah from the clan of Zerah who settled in Jerusalem at the return from the exile (1 Chr 9:6). According to MT, his name is given as Jeuel (so RSV), while many of the important LXX manuscripts suggest Jeiel. The list in 1 Chronicles 9 is similar to that in Neh 11:3–36, but the exact relationship between the 2 lists and their time of composition remain unclear (Williamson WBC, 344–50). The list in Nehemiah 11 does not include the clan of Zerah, thus Jeiel/Jeuel is not mentioned there.

5. Early Benjaminite, an ancestor of King Saul, and the settler of the Benjaminite city of Gibeon (1 Chr 9:35). This genealogy is probably preexilic (Demsky 1971), though some see the tie of Benjamin to Gibeon rather than Gibeah and the double mention of Ner and Kish in vv 36 and 39 as an indication that this section of the genealogy is artificial (Malamat 1968: 171). Jeiel's name is missing in the parallel genealogy in 8:29, but it appears there in the Lucianic family of the LXX; Rudolph (*Chronikbücher* HAT, 78) and RSV add it to 8:29. Perhaps this Jeiel should be identified with (or emended to) Jediael, *yĕdî'ă'ēl,* the son of Benjamin according to 1 Chr 7:6, who represents one of the major clans of the Benjaminite family. According to 9:35, Jeiel's wife is named Maacah, a name that typifies residents of the Transjordan (Demsky 1971: 18, n. 10). The inclusion of a wife's name is not typical of these genealogies; perhaps this ancestor of Saul was somehow seen as the equivalent of the queen mother, who played an important role in Israelite politics (Andreason 1983).

6. One of David's warriors (Mazar 1963) (1 Chr 11:44). The list of David's warriors in 1 Chr 11:26–47 is derived from various sources: the first section (until the middle of v 41) is derived from 2 Sam 23:24–39 and the second probably reflects an additional preexilic source that was available to the Chronicler (Williamson NCBC, 103–4). If it were a fabrication, it would probably follow the previous section's style more closely. The purpose of 1 Chronicles 11 is to glorify David by showing the extent of the military power that supported him, thus reinforcing the divine legitimation of David (see 1 Chr 11:10); this ideology probably motivated the chapter's editor to go beyond his usual source and to find additional lists of David's warriors. MT gives the warrior's name as Jeuel in the *Kethib* and as Jeiel in the *Qere*; most of the versions support the *Qere.* MT breaks v 44 in half, by inserting a paragraph marker (*sĕtûmâ*) after Jeiel; this suggests that the continuation of the verse, "the sons of Hotham the Aroerite," represents additional (unnamed) warriors who are unrelated to Jeiel. If we ignore this division, then Jeiel's father is Hotham, from the Transjordan city of Aroer.

7. One of the *mĕšōrĕrîm,* "Temple singers" (1 Chr 15:18, 21; 16:5). 1 Chr 15:18 MT lists this Jeiel as one of the *šō'ărîm,* "gatekeepers," but this word should be excised as a gloss (Williamson WBC, 125). According to 1 Chr 15:16, these singers were established by David as part of his preparation for the Temple that Solomon would build; this is consistent with the Chronicler's ideology (Williamson WBC, 30). The list in 1 Chronicles 15 of singers who here are considered to be Levites reflects the realities of the Chronicler's period rather than of David's (Williamson WBC, 122). The list appears twice in chap. 15, once in general terms, and once giving the specific roles of the groups of singers. Verse 16 introduces the list, v 17 lists the three most important singers, Heman, Asaph, and Ethan, and v 18 lists the other singers, who are called *mišnîm,* "of second rank." The word *(wĕ)hamešōrĕrîm,* "(and) the Temple singers" should be moved from the beginning of v 19 to replace the incorrect *šō'ărîm,* "gatekeepers" at the end of v 18. Verses 19, 20, and 21 then list groups of singers, assigning to them specific musical roles. Jeiel is among those who play *bĕkinnōrôt 'al haššĕmînît lĕnaṣṣēaḥ,* which involves some type of lyre (*kinnōr*) music. The meaning of the remaining technical terms is notoriously difficult (Anderson *Psalms* NCBC, 43–50; Kraus 1988: 21–32). Jeiel appears twice in 1 Chr 16:5, in the list of singers accompanying the transport of the ark to Jerusalem, but the first appearance of Jeiel should probably be emended to Jaaziel, following the parallel texts in 1 Chr 15:18 and 20 (Rudolph HAT, 120); the error was caused by the graphic similarity of the names in Heb (*y'y'l* and *y'zy'l*).

8. Ancestor of Jahaziel, a prophet who encouraged the Judean king Jehoshaphat (2 Chr 20:14). It is likely that this prophet and his lineage are the Chronicler's invention. The name Jahaziel, *yaḥăzî'ēl* is composed from the element *ḥzh,* "to be a seer," and is probably a creation of the Chronicler. The symbolic names Iddo and Jeddo, from *'wd,* "to exhort," are similarly used by the Chronicler of prophets that he created. Furthermore, the genealogy of this Jahaziel is highly suspicious. He is supposedly "son of Zechariah, son of Benaiah, son of Jeiel, son of Mattaniah, a Levite of the sons of Asaph." These names are known from the list of *mĕšōrĕrîm,* "Temple singers" in 1 Chr 15:17–21 (Mattaniah = Mattithiah). The creation of a prophet by the Chronicler is in line with the importance that the Chronicler gives to prophecy (Japhet 1977: 154–66); possibly, the Chronicler creates such a long genealogy for Jahaziel to legitimate him by connecting him to the time of David (Williamson WBC, 298).

9. A *sôpēr,* "secretary" during the reign of the Judean king Uzziah (2 Chr 26:11). The exact range of meanings and etymology of *sôpēr* are unclear (Baumgartner *HALAT* 3: 724); in this context, however, he has a military role (cf. 2 Kgs 25:19 = Jer 52:25). The list of officials given here is not found in Kings. Several similar lists are found throughout Chronicles, and they do not show the patterns of fabrications seen in Jeiel #8, above; they are probably authentic preexilic lists which the Chronicler had access to (Williamson WBC, 261–63). The *Ketib* writes the name as Jeuel; but the *Qere* and most versions argue in favor of Jeiel.

10. A descendant of the Elizaphan branch of the Levites, who assisted in the purification of the Temple during the reign of Hezekiah (2 Chr 29:13). The other names in that verse are Shimri, Zechariah, and Mattaniah; these are largely identical with the ancestors of Jahaziel (see #8), who are projections of postexilic Levite clans backward to the preexilic period (see #7). The list is anachronistic, and of no historical value for reconstructing the period of

Hezekiah; it does, however, reflect the importance of the family of Jeiel in the exilic period. The *Ketib* writes the name as Jeuel; but the *Qere* and most versions support Jeiel.

11. One of the Levites who donated animals for the Josiah's Passover (2 Chr 35:9). In the 1 Esdr 1:9 parallel, this name apparently appears as Ochiel. The account of this Passover is largely the creation of the Chronicler (Williamson WBC, 403–5); it is a combination of exegesis of earlier Pentateuchal sources and retrojection of postexilic practices into the preexilic period (Fishbane 1985: 137–38). The list of Levites is therefore of little value for reconstructing preexilic Israel; it is noteworthy, however, that it does not agree with the anachronistic lists discussed in #8 and #10.

MARC Z. BRETTLER

JEKABZEEL (PLACE) [Heb *yĕqabṣe'ēl*]. An alternate form of KABZEEL.

JEKAMEAM (PERSON) [Heb *yeqam'ām*]. A Kohathite, the 4th son of Hebron (1 Chr 23:19). Jekameam appears nowhere else in the OT outside of the Levitical lists in 1 Chronicles 23 and 24. The Levitical genealogies of Exodus 6 and Numbers 3 do not include an enumeration of the immediate descendants of Hebron. The source of the Chronicler's use of the name "Jekameam" remains uncertain. Although J. Liver (1968: viii, 29–32) believes that this name, along with the other Levitical names in 1 Chronicles 23, may have originated from an authentic source composed during the reign of David or Solomon, Rudolph (*Chronikbücher* HAT, 152–59, 163–65) argued that Jekameam and the other Levites of 1 Chronicles 23 represent Levitical families after the time of the Chronicler. The style of the list, however, corresponds closely with the compositional techniques of the Chronicler. This suggests that Williamson (*Chronicles* NCBC, 160) may be correct in asserting that "the names of the heads of houses will then be current at the time of the list's composition"—the time of the Chronicler (ca. 385 B.C.E.).

JOHN W. WRIGHT

JEKAMIAH (PERSON) [Heb *yeqamyāh*]. The name held by 2 persons in the Hebrew Bible. This name is also attested in extrabiblical documents (Myers *1 Chronicles* AB, 21). It may mean "may Ya establish" (*IDB* 2: 618).

1. In 1 Chr 2:41 Jekamiah is given as the name of a descendant of Jerahmeel. Verses 34–41 are usually considered to be an addition to this chapter. The descendants of Jerahmeel are given in 1 Chr 2:25–33, which is a genealogy with both vertical and horizontal components. Verses 34–41, however, constitute a vertical genealogy which terminates in Elshama. This section of verses seems to be intended as a pedigree for him (Williamson *Chronicles* NCBC, 54).

2. Jekamiah is also listed in 1 Chr 3:18 as the 5th son of Jeconiah/Jehoiachin, the captive king of Judah.

RUSSELL FULLER

JEKUTHIEL (PERSON) [Heb *yĕqûtî'ēl*]. A descendant of Judah through Mered (1 Chr 4:18).

H. C. Lo

JEMIMAH (PERSON) [Heb *yemīmâ*]. The first of Job's daughters born to him after the restoration of his fortunes (42:14). The name may mean "turtledove" if the root has the meaning it carries in Arabic (cf. Dhorme 1967; Cant 2:14). It is noteworthy that Job gave his daughter Jemimah and her 2 sisters an inheritance along with their brothers. According to Num 21:1–8, a daughter would only inherit her father's property if there was no male heir. By including his daughters in the inheritance, Job illustrates a practice of justice that far outstripped the norm in the ancient world (cf. chap. 31). See also KEREN-HAPPUCH; KEZIAH.

JOHN C. HOLBERT

JEMMEH, TELL (M.R. 097088). An archaeological site in SW Israel. Jemmeh stands on the S bank of Nahal Besor (Wadi Ghazzeh), about 12 km due S of the city of Gaza. It is located in an Asiatic steppe environment, i.e., in a transitional zone, positioned between the wetter Mediterranean climate and the rainless desert climate of the Negeb. Because of marginal rainfall, dry farming was often unreliable, forcing people to migrate N or to Lower Egypt. The soil is loess, rich in calcium carbonate, and when well watered produces abundant harvests. The re-

gion lacks good building stone, but the soil makes fine mudbrick, and all structures are built of it.

A. Identification

During the 1920s, Jemmeh was first identified with biblical Gerar by Phythian-Adams (1923: 140) and Petrie (1928: 2). This identification was accepted until 1951, when B. Mazar (1951: 38–41) identified Jemmeh with Yurza, a town mentioned in Egyptian topographical lists and the Tell el-Amarna tablets. Recent evidence of a major Assyrian occupation of the site in the 7th century B.C. strengthens this view, because several Akkadian texts of King Esarhaddon mention the taking of "Arsa (or Arza) near the Brook of Egypt"; linguistically Arza corresponds with Eg Yurza. A Byzantine city, Orda can be identified with remains just S of the mound; Orda is probably the Greek form of Yurza. The name Yurza/Arsa/Arza does not appear in the Bible.

B. Excavations

The first archaeological investigation was undertaken by Phythian-Adams in 1922, when he dug a small step-trench. In 1926–27, Petrie moved his operations from Egypt to Jemmeh. Following a single field season at Jemmeh, he moved to Tell Sharuhen and later to Tell el-Ajjul, other sites along Nahal Besor. At Jemmeh, Petrie excavated 1 acre in the W central portion of the site, repeatedly reducing the area until he reached virgin soil in a small trench in the NW corner of the dig. No further work was undertaken until 1970, when G. Van Beek initiated excavations for the Smithsonian Institution; these continued annually through 1978, and then intermittently for a total of 12 field seasons.

C. The Site

Jemmeh originally occupied a mesa encompassing an area of 4.92 hectares (12.15 acres). It is the most-eroded major site in Israel, the N end having been destroyed by flash floods in Nahal Besor, and the S end by severe erosion. The area on the top of the mound is now reduced to 0.26 hectares (0.64 acres) from an estimated original area of 3.04 hectares (7.51 acres). The site is the highest point in the landscape, reaching a height of 22 m (71 feet) above present ground level. Its upper 15.50 m (50 feet) is occupation debris of successive towns.

D. Chalcolithic

Remains of this period are found only in a small area on the lower E slope of the site. They consist of a series of circular pit structures dug into virgin soil, which may have served as subterranean houses or storage pits. The artifacts are typical of the Beer-sheba Culture. Following this period, Jemmeh had no permanent settlement until the MB. The abandonment of Jemmeh through the EB is characteristic of the region, except for a small Egyptian outpost at En-Besor.

E. Middle Bronze Age

The entire site was resettled in MB II–III, whose remains have been found everywhere on the site to a depth of ca. 2 m. A fortification system, consisting of a rammed earth revetment more than 5 m thick, protected the Canaanite town. A foundation deposit of a small equid was found under one of the lowest walls of this period, and the skull and 2 long bones of another equid were buried in a pit where they too may have served a similar function. An unusual zoomorphic vessel in Tell el-Yehudiyeh ware in the form of a deer or bull head, was discovered on the E slope.

F. Late Bronze Age

During this Canaanite period, lasting about 350 years, 6 m of debris accumulated everywhere on the site testifying to an intensive occupation with many building phases. Below Petrie's excavation, an enormous building complex of the 13th century B.C. was discovered, consisting of (1) a large courtyard, complete with a fine cobblestone floor, mud benches along the wall, a bread oven in one corner enclosed by a low wall or bench forming a quarter circle, and a plastered bathroom, which drained through a wall into a stone built dry well, and (2) a private residence, connected to the courtyard by a series of 3 stone steps, with a private entrance flanked by mud benches, and a series of rooms with an open courtyard complete with a bread oven.

Notable finds of this period include a tankard, uniquely painted in black and red in 3 zones, featuring birds feeding on black fruit on trees; sherds of a Late Helladic III octopus vase; 3 scarabs with the same basic motif: a king, probably Rameses II, worshiping the Eg god, Ptah; and faunal remains including vertebrae of an African ostrich and the horn core of a hartebeest.

G. Iron Age

1. Philistine. This was the lowest continuous stratum excavated by Petrie. This 12th–11th centuries occupation deposited about 2.5 m of debris over the entire site, and is characterized by a new pottery tradition derived from Aegean prototypes and identified with the Philistines.

The most singular structure discovered is a large, technologically advanced ceramic kiln. The kiln, ovoid in ground plan, measuring 3.7 m long by 2 m wide, consisted of a firebox and a baking chamber with a perforated mudbrick floor. This floor was supported by 4 radial mudbrick arches. Between the springing of each arch on both firebox walls was a vertical trough leading upward to a pair of square earthen pipes to distribute heat directly to the upper part of the baking chamber, which was at least 3 m high. Many sherds painted with Philistine running spirals were found in the kiln.

2. Iron II. During the next 300 years, the W half of the site experienced continuous settlement, while the E half was no longer occupied. In the 10th century, a peculiar style of wall construction was used in all buildings excavated to date. Clayey, chocolate-colored brick were set in foundation trenches on a bed of clean, yellow sand and the trench was backfilled with the same sand. During the 10th and 9th centuries, local pottery was finished with a burnished, deep-red slip, somtimes augmented with alternating bands of black and white paint. Indeed, from the 10th century onward, local pottery differs somewhat in form, decoration, and chronological range from that of other regions in Israel, suggesting that the NW Negeb was a cultural microcosm.

The 8th century is represented by 3 building phases, and the earliest casemate fortification system was built at Jemmeh at this time. Noteworthy among the artifacts is a small, solid-bronze bull head, which served as a weight, weighing 14.60 gr.

3. Iron II: Assyrian Occupation. To this period belongs a unique building dating from about 675 B.C. It consisted of a series of 5 basement rooms, although originally there were at least 6 and probably more rooms. All 5 rooms were still partially covered with portions of mudbrick vaults, which had supported an upper floor. The plan of the building consisted of 3 long rooms side-by-side, giving entrance through arched doorways into 3 small rooms on one end, and perhaps also at the now missing other end of the building. The vaults were built using the "pitched brick" technique, but display a considerable technological advance in the use of voussoirs (wedge-shaped bricks, like keystones; Van Beek 1987: 100–2). Room A yielded a large quantity of so-called Assyrian palace ware, commonly found in the palaces and royal storerooms of the Assyrian kings. This pottery and the architecture suggest that Esarhaddon converted Jemmeh into a forward military base for his conquest of Egypt. Two ostraca from this period feature different types of personal names written in a script that varies slightly from Judean and Phoenician scripts (Naveh 1985: 8–21). It seems likely that descendants of the original Philistines continued to dominate this region, at least through the 7th century.

H. Persian Occupation

This period is represented by a massive building excavated by Petrie, which probably served as the fortified residence of an official appointed by the Persian government.

I. Hellenistic Period

With Ptolemaic control of the Levant in the late 4th–3d centuries B.C., the site again ceased to be a normal town. Instead it was occupied by a series of grain silos, making Jemmeh the best example of a grain storage depot in the ANE. The granaries, all built in deep holes cut into earlier debris layers, were round structures built of mudbrick. Petrie excavated 10 silos on the W half of the site; the Smithsonian excavated one and on the E side partially excavated another. More is known about the Smithsonian granary on the W side than the others. It had a flat roof carried by the circular wall and an inner, radially arched, cross wall. There were 2 successive mudbrick floors indicating its long use.

Among the pottery were storage jars of a new type, one of which, made of local ware, bore a painted S Arabic monogram on its shoulder, reading *ʾabum*, a name known in both Sabean and Minean inscriptions. This one, together with a sherd of probable S Arabian ware with an incised S Arabic *m*, established trade between the regions, since camel caravans transported frankincense and myrrh from S Arabia to Gaza, the major Mediterranean incense port.

By about 200 B.C., the occupation of Jemmeh ended, and subsequent settlement in the Late-Roman–Byzantine periods took place in the field S of the tell. During Crusader times, a hoard of 11 silver coins, originally tied in a piece of cloth, was apparently lost on the tell by a pilgrim or traveler. Nine of these coins were minted in the reign of Amaury II (A.D. 1163–74) and bear the inscription *Amairicus Rex De Ierusalem.*

JEMUEL (PERSON) [Heb *yĕmûʾēl*]. See NEMUEL.

JENIN (M.R. 178207). A modern Arab town located at the N end of the Wadi Belameh where it empties into the SE edge of the Plain of Jezreel, 100 km N of Jerusalem. In the center of the mouth of the Wadi Belameh lies Tell Jenin, one site among many that was occupied during the British Mandate. Tell Jenin was first identified by P. L. O. Guy in 1926 as the site of an ancient town on top of which was a modern cemetery and a threshing floor. Reports for 1932, 1933, and 1942 describe the vigilant efforts of inspector Makhouly to prevent the dislocation of the rich tell sediments for building houses, dirt for gardens, and the construction of the road to Megiddo. The site is also known as Tell el-Nawar because of annual gypsy encampments on the mount prior to 1948.

Since Kallai (1967: 358) and other historical geographers of the Bible did not seem to know the site, Tsori (1972) assumed that he was the first to locate and identify the tell with biblical En-gannim. The evidence for this judgment was not based on controlled excavation but a few Iron Age sherds gathered from the N section facing the bus station. Precise stratigraphic investigation of the archaeological history of the site and the region of Jenin began in 1977 with salvage excavations at 4 areas on the E and W sides of the remaining S half of the tell. The N half of the tell was removed in 1962 for the construction of the municipal bus station and the Latin Convent. From that work, no records, and only a few artifacts have survived (Rahmani 1980).

Jenin sits astride the junction of 2 major geomorphological features: the down faulted Jezreel Valley to the N, and Eocene chalk blocks to the S. In the N edge of the erosional basin of the Plain of Dothan, the weathered Jenin

Gap was formed creating a passage (the present Wadi Belameh) to the Jezreel. Other wadis E and W of Jenin leading from the high ground to the S are along fault lines. Until the 20th century, the water supply of Jenin was sufficient to make it famed as a garden town (Robinson 1874; *SWP,* 44–45). The average annual rainfall is about 475 mm. In modern times, increased demand on the water supply has lowered the water table so that shallow aquifers have dried up springs that formerly fed wells and perennial streams in and around Jenin. Except during heavy winter rains, today only 'Ain Jenin flows.

Surviving in the Arabic name Jenin is the Hebrew name En-gannim (Josh 19:17, 21; 21:28, 29), possibly also biblical Beth-haggan (2 Kgs 9:27 where the "ascent of Gur" is probably the Wadi Belameh) assigned to the territory of Issachar where it was designated a Gershonite Levitical city. Albright (1926) and Saarisalo (1927) attempted to locate En-gannim at Khirbet Beit Jann near Jabneel in the NE corner of the Jezreel. This identification continues to be upheld (see "En-Gannim," *EncJud* 6: col. 741). Qena, in Amarna Letter 250.17, 21 where Lab'ayu was slain and *kn* in the town lists of Thutmose III also refer to Jenin. However, "Gurra" in the early reading of Taanach Letter 2:6 by Hrozny, must now be abandoned (Glock 1983: 60, n. 27). Josephus places the Samaritan murder of Galilean pilgrim(s) en route to Jerusalem at Ginaea, usually identified with Jenin (*Ant* 20.118; *JW* 2.232; 3.48).

The town was known to the Crusaders as Gerin and was defended by a small fortress. Attacked several times by Salah el-Din in his war on the Crusaders in the late 12th century, Jenin followed Fahma (Umm el Fahm; Hartmann 1916: 489). Jenin is described by at least one Muslim geographer as a "small and beautiful town . . . (with) much water and many springs" (Yaqut, A.D. 1225). In the 17th century Evliya Tschelebi, a pious Muslim pilgrim, describes in detail the Ottoman fortress that guarded the town, which since the Late Byzantine period (6th–7th century), lay on the N slopes of Karem Jenin, ca. 500 m E of the tell.

Recent excavations and surveys of the region indicate that the area of Jenin was continuously occupied from late Neolithic until modern times, not, however, exclusively on the tell, which was periodically inundated. Thus, when the site was abandoned at the end of EB I, a new settlement was established on top of Karem Jenin, about 170 m SE of the tell. As discoveries continue in and around Jenin it is evident that the tell was perhaps only rarely the population center. Two km to the S in the Wadi Belameh is Kh. Belameh (biblical Ibleam), strategically located on an imposing mound adjacent to wadi springs and occupied from EB through the Byzantine periods. Across the wadi to the E is Kh. el-Najjar, settled in the EB, MB, and Byzantine periods. It seems probable that at least until the flowering of the Byzantine period most sites in the region were satellite to Kh. Belameh, which included Tell Jenin.

The present incomplete picture of the stratification of Tell Jenin is based on evidence from the excavation of 4 areas totalling about 250 m^2 or approximately 1.2% of the tell which measures about 200 m N–S and 150 m E–W (actual limits in any period except the last are uncertain). What little has been excavated points to terraced housing after the 13th century B.C. It would seem premature to identify Tell Jenin archaeologically with biblical En-gannim until more of the stratigraphic history of the tell above the street level has been excavated.

Stratum I is assigned to the series of clay sediments laminated with stoney layers which were sorted by repeated flooding. This level is at least 2 m deep over bedrock at the base of the tell and predates cultural activity. The process of accumulation continued after the site was settled. The edges of the tell were annually covered by new layers of eroded wadi sediment, until today in one place the road surface is 5 m above the foundations of the EB I. Stratum II contains the first evidence of cultural activity in the form of eroded plaster surfaces and walls swept clean of artifacts by repeated post-occupation flooding. In the makeup below the floors there were many Neolithic blade and flake tools.

Evidence from stratum III, dated to EB I, is confined to the W side of the tell. Three features stand out: an apsidal house, a "platform" in the SW corner of the tell, and a donkey burial. Covered by the road and a modern building, more than half of the roofed space of the apsidal house was not accessible. See Fig. JEN.01. Preserved were the slab stone doorway and paved courtyard to the E with its gated entrance. This well-built house had 2 clear construction phases. Sixty m S of the house, on what was the SW corner of the tell, a stone platform ca. 1.2 m thick spanned the 10 m E–W width of the excavation and disappeared into the N balk, but was eroded on the S where the floodwater pressure would have been greatest. This structure functioned to break the wadi's flood levels in winter and provided a stable base for domestic architecture above. Protected behind a later (stratum IV) retaining wall was the complete skeleton of a small donkey, 11 or more years old which had suffered from severe arthritis.

After abandonment at the beginning of the 3d millennium B.C., thre is no evidence of occupation in the areas excavated until the 13th–12th centuries (stratum IV). The best preserved evidence comes from a house on the E side of the tell (Glock 1979). On a *mastaba* against the N wall of the house, a typical 12th century assemblage of store jars and jugs was trapped below the collapse of the mudbrick superstructure. The exposure was limited to about 20 square meters, making it impossible to infer anything but local collapse. On the W side of the tell, a well-constructed retaining wall was banked against debris to the N.

Stratum V follows another long abandonment when the SW corner of the tell was occupied in the Late Byzantine period (6th–7th centuries A.D.). The 5 phases of this stratum were severely damaged by extensive pre-archaeological construction digging. Four of these phases represent rebuilding and elaboration of substantial elements of domestic buildings. The unexcavated section 60 m N indicated similarly dated plaster floors and the remains of heavy architecture at a higher level. In the absence of *in situ* evidence of stratum V on the E, it appears that only the W side of the site was occupied by a few well-constructed villas. Stratum VI consists of fragments of plaster floors above the Byzantine buildings on the SW and a heavy stone platform on the NE of the tell dated to Late Ottoman (19th and early 20th centuries). What has been identified as stratum VII dates from the end of Ottoman

JEN.01. Apsidal house wall (center) with courtyard (left) at Tell Jenin—EB I. *(Courtesy of A. Glock)*

rule to the present. The fuller description of these excavated strata will appear in the final report.

A. E. G.

JEPHTHAH (PERSON) [Heb *yiptāḥ*]. One of the Israelite military leaders in the era of the book of Judges, his career is recounted at considerable length (Judg 10:6–12:7). Jephthah was remembered for mobilizing the resistance, and leading the counter offensive, to defeat the Ammonites in Transjordan (10:6–11:33). He was also remembered for the tragic sequels: the sacrifice of his daughter and only child in fulfillment of a vow (11:34–40), and a slaughter of Ephraimites in inter-Israelite tribal warfare (12:1–6). Jephthah is named among the heroes of faith in the letter to the Hebrews 11:32.

Jephthah's name is the short form of a sentence name, *yiptaḥ ʾēl*, appearing as a place name, located on the boundary between Zebulun and Asher (Josh 19:14, 27). The name means "El (God) opens (the womb?)" or "El (God) frees (the captive?)." The name *yiptāḥ* also occurs as name of a town in Judah (Josh 15:43), probably situated in the Shephelah. See also the related personal name Pethahiah, "Yahweh has opened" (1 Chr 24:16; Ezra 10:23; Neh 9:5; 11:24). Also related is the personal name Japtih-Adda, in the tablets from Tell El-Amarna.

Jephthah's story is framed by brief notices about so-called minor judges (Judg 10:1–5 and 12:8–15), with

whom Jephthah is often grouped by scholars, on the theory that he appeared in the same archival source. The intertribal significance of the minor judges remains obscure. There was an older critical notion that the verb *špṭ*, "to judge," as used in these brief units, referred originally to activities of individuals who held a recognized office (local or regional, but rarely intertribal), and was only secondarily applied to the great military leaders; but this notion no longer fares well: The evidence is too scant. Alternatively it is now proposed that the "minor judge" notices do not reflect a difference in office or function but only a difference in literary purpose (Mullen 1982: 201). That is, the brief "minor judge" units have a condensing narrative effect, serving to focus attention on Jephthah, for theological evaluation. The assessment of leadership will be increasingly negative in the remainder of the book of Judges: Samson (chaps. 13–16), Micah and his Levite (chaps. 17–18), the fate of a Levite's concubine, and suppression of the tribe of Benjamin (chaps. 19–21).

The period of Jephthah's activity begins with an expansive introduction (10:6–16) which summarizes the entire preceding period. Seven alien gods have enticed Israelites to worship them, and Yahweh has subjected Israel successively to 7 alien "nations," until they cried out to Yahweh for deliverance. With special attention to Philistines and Ammonites, this is also introduction to all that follows in the book of Judges, "Phase II" (Boling *Judges* AB, 30). This beginning of the second half echoes the introduction to the entire era (2:11–23), but with ironic inversion. To the patterned appeal of Israelites in face of the new threat (10:10), Yahweh's response is, in effect, that he is tired of the pattern. Let the gods they have chosen be the ones to rescue them (10:11–14). The Israelites, however, get serious. They dispose of the gods they have turned to, and Yahweh's compassion is activated once again (10:15–16). The recall of Jephthah (10:17–11:11) would be the solution.

With the stage thus set, the curtain opens on a mustering of Israelites at the Transjordan sanctuary site of Mizpah. The location is uncertain but surely to be sought S of the Jabbok, in the vicinity of Jebel Jelʿad and Khirbet Jelʿad. The captains of Gilead need someone to start the fighting against the Ammonites. They promise that the one who does it will be "Head of all inhabitants of Gilead." That the protagonists on Israel's side are regularly called "Gileadites" indicates a period prior to the tribal reorganization which assigned the area to Manasseh (N of the Jabbok) and Gad (S of the Jabbok) (Boling 1988).

Next comes a flashback introducing Jephthah as a "knight," that is, one who is prosperous enough to provide his own armor, but in Jephthah's case lacking pedigree. He was a Gileadite driven from his home because of illegitimate birth and possibly unidentifiable parentage on his father's side, being the child of a prostitute. He could not share in the family inheritance. Thus excluded by his half-brothers, Jephthah had fled and made his home in the region of Tob. The place name is possibly reflected in present-day *et-Ṭayibeh*, E–SE of Derʿa, ca. 15 miles E of Ramoth-gilead. There he attracted to himself a band of mercenaries (11:1–3), having become a true Hebrew/Habiru, like David later in flight from Saul.

In the next scene, the Ammonites have pressed their advantage to the point where the elders of Gilead are ready to recall Jephthah and offer him the position of *qāṣîn* (field commander?), a status not mentioned in Judges outside this unit (but see Josh 10:24; Isa 1:10; 3:6, 7; 22:3; Mic 3:1–9; Prov 6:7; 25:15; Dan 11:18). An Arabic cognate means "one who decides judicially." Jephthah holds out, contingent upon his success against the Ammonites, for the more powerful and prestigious title "Head," which the elders had originally proposed for one of their own. The deal was solemnized "before Yahweh" at the Mizpah sanctuary (11:4–11).

The next scene portrays Jephthah as exemplary leader, who seeks first to resolve the crisis through diplomatic channels. There are 2 embassies from Jephthah. The first wants to know why the Ammonites are moving into Israelite territory. The Ammonite king claims that it was in fact his territory, "from the Arnon to the Jabbok and to the Jordan," that early Israel had taken by force. The second embassy, which forms the bulk of this unit, is one long speech by Jephthah, delivered by courier to the Ammonite court. A critical issue arises from the emphasis that this appeal to the *Ammonite* king places on Israel's recognition of *Moabite* sovereignty S of the Arnon. In fact Jephthah mentions Ammonites only in the introductory verses (11:12–15) and conclusion (vv 27–28). These verses form an envelope construction around negotiation which appeals to Moabite and Ammonite history. He argues that Chemosh (god of the Moabites) is the one who gave to Ammon the territory from which it was seeking to expand westward. Two long-standing critical theories are here both inadequate. According to one (Moore *Judges* ICC, 283; Eissfeldt 1925: 76), negotiations were entirely with Moab, not with Ammon. According to the second (Burney 1930: 298–305), the negotiations were in fact with Ammon, with some conflation from another account of a confrontation with Moab. The trouble with both theories is that there are no signs of reflective glossing that generally followed such redactional activity elsewhere; the unit made sense to ancient scribes. Scholars have mostly abandoned the effort to find evidence of sources here, continuous with "J" and "E" in the Hexateuch.

Israel's early involvement in the history of the disputed territory is witnessed in Numbers 21, at which time Ammon, lagging somewhat behind Moab, had only recently emerged as a small territorial state in the upper bend of the Jabbok at the desert fringe, but not extending as far W as the escarpment. Apparently Israel's dismantling of the Amorite kingdoms (Sihon and Og) had only paved the way for Ammonite expansion to the W, while Moab would make repeated incursions N of the recognized border at the Arnon (Boling 1988). Thus the king of Ammon in this later period can only make his claims and charges in the name of Moabite sovereignty, since Israelite claims would antedate his own. Under such circumstances we should not be surprised that Chemosh would be generally recognized for diplomatic purposes. Jephthah's final appeal, "Yahweh, the Judge, will decide . . ." (11:27) is the only occurrence of the noun *šōpēṭ*, "judge," in the book of Judges, a theological key to the Jephthah material, if not the whole book. The reference is to the outcome of the battle pending. As the next unit shows, Jephthah is by no means certain of

the outcome. Thus, negotiations having failed, the Gileadites would have to fight.

The warfare story moves quickly to the climax—victory for Israel and subsequent tragedy for Jephthah and his daughter. That Yahweh's spirit came upon Jephthah is offered as explanation for his successful enlistment tour of Gilead and Manasseh (cf. Yahweh's spirit on Othniel, the ideal [3:10]; on Gideon who overreacts [6:34]; and in the initial attack upon Samson's conscience [13:25]). Not at all certain of the outcome, Jephthah will make one more deal—with Yahweh. He vows that in event of victory, he will sacrifice as a burnt offering "anything coming out the doors of my house to meet me . . ." (11:31). Such a vow was not required by either Yahweh or the people. By implication it was an act of unfaithfulness (Trible 1984: 97). Had he really expected that the first to come forth would be a human being? The more or less standard plan of Iron Age houses accommodated livestock as well as family. A promise of human sacrifice would be direct violation of Deuteronomic law (Deut 12:29–31). Human sacrifice was rare, and a desperate last resort, a way of inappropriately seeking divine favor (cf. 2 Kgs 16:3; 17:17; 21:6; Jer 7:31; Mic 6:7). Jephthah could scarcely have been expecting divine intervention, as with Abraham (Genesis 22), where it was necessary *because* Abraham was faithful.

That the vow once made must be kept is the hinge of the story, where it is Jephthah's daughter and only child who shows trusting faith, despite the remarkably one-sided self-pity voiced by her father, who blames the daughter for his loss. It is therefore appropriate that the last word in the scene is about Israelite women's annual mourning for the unnamed daughter, rather than showing overabundant sympathy for the famous father (Trible 1984: 106–7). There are a number of parallels to the tragic sacrifice of the hero's daughter in comparative folklore. That there is no other trace of such practice in ancient Israel suggests that this tale is told for other than an etiological purpose. It heightens the tragic dimension in the story of Jephthah, in many ways an exemplary "Head" of Israel in his day.

Two final episodes briefly told, from the career of Jephthah, are only loosely connected to the preceding (12:1–6). Here Jephthah is represented as dealing with inter-Israelite affairs in much the same way that he had approached the Ammonite threat: diplomacy first.

In the first of these units (12:1–4), the Ephraimites are mustered and cross the Jordan at Zaphon, possibly Tell Mazar (Jordan Valley Survey Site 103; Ibrahim, Sauer, and Yassine 1976). The Ephraimites have taken offense, claiming that they were not invited to take part in the warfare against Ammon. Jephthah replies that he had first tried diplomacy and, that failing, had in fact sent an appeal to Ephraim, with no response. If the text is intact, the battle which ensues, with Gilead's defeat of Ephraim, was apparently triggered by a taunt that remains obscure. The fugitives of Ephraim said, "O Gilead, you are in the midst of Ephraim and Manasseh" (12:4). This is missing from a number of Gk mss and may have originated in a partial dittography of v 5. It is not clear whether this is a direct sequel to the victory over Ammon, or perhaps a separate and private feud between a few individuals, with proportions expanded over years of telling it.

The final unit (12:5–6) is one of the most puzzling. Jephthah is not mentioned. Gileadite sentries disable 42 village contingents (surely not 42,000) of retreating Ephraimites, at the Jordan fords. To be allowed to cross over to Cisjordan, one had to pronounce the word shibboleth to the satisfaction of the Gileadite crossing guards. Ephraimites could only say "sibboleth." There are parallels—ancient and modern—to the use of such a test to distinguish between friend and foe.

The note concerning Jephthah's death, after 6 years of leadership, and burial in "his own city in Gilead," looks like an imitation of the concluding rubrics in the "minor judge" units which follow, and where the places of burial are known and named (12:10, 12, 15). Again, the structure of the "minor judge" framework has a condensing narrative effect, propelling the reader on toward the next focus of attention: Samson.

ROBERT G. BOLING

JEPHUNNEH (PERSON) [Heb *yĕpunneh*]. Two persons mentioned in the Hebrew Bible have this name. The meaning of the name is not entirely clear, though several explanations have been proposed. The name Jephunneh can be derived from the root *pnh,* "to turn to," which results in a translation "may (God) turn to (the child)." Another possibility is that Jephunneh is related to the name Peninnah, based on a proposed root *pnn.* A third meaning, also based on the root *pnh,* has the sense of asking God to turn away the obstacles from the life of a child (*EncMiqr* 3: 745).

1. The father of Caleb, one of the spies sent by Moses to reconnoiter the land of Canaan (Num 14:6). This name occurs frequently in Numbers, Deuteronomy, and Joshua in the account of the spies who were sent out to reconnoiter the land of Canaan, but only in the form *ben-yĕpunneh* "son of Jephunneh" (see, e.g., Num 30, 38; 32:12). Therefore, this Jephunneh is only known in relation to Caleb. Jephunneh's tribal affiliation is ambiguously represented in the Pentateuch (Num 13:6; 34:19; cf. Josh 14:6, 14; see also CALEB).

2. The son of Jether, a descendant of Asher (1 Chr

7:37–38). Neither Jephunneh nor his father has a traceable lineage in this series of Israelite tribal genealogies (1 Chronicles 2–8).

RAPHAEL I. PANITZ

JERAH (PERSON) [Heb *yārah*, pausal form of **yerah*]. A son of Joktan (Gen 10:26; 1 Chr 1:20) and hence the name of a S Arabian region or of the tribe residing in it. A place named *wrḥn* occurs in the Old Sabaean inscription RES 3946,2, where it is mentioned as a place on the border of a district which was acquired for the Sabaean state by King Karibʾil Watar, probably in the 7th century B.C. Since it was hitherto impossible to localize the places which are mentioned in the context of the above-cited inscription, it is difficult to say whether the epigraphically attested *wrḥn* should be identified with the later *Warāḥ*. According to al-Hamdānī (1884: 101), *Warāḥ* belongs to the Banū Mūsā of the tribe al-Kalāʿ and lies in the *miḫlāf al-ʿAud*, that is in the region between the present-day Ibb and Qaʿṭaba. *Warāḥ* is also listed among the famous fortresses of Yemen (al-Hamdānī 1884: 125; 1979: 154). Moreover, al-Hamdānī (1979: 153) mentions another fortress named *Yurāḥ*, which was supposed to lie on an inaccessible mountain and which, following his description, was situated SW of the town of *D*amār.

Montgomery (1969: 40) explained the form of the name *Yeraḥ*, which is identical with the Heb name for "month," as meaning "moon"; inasmuch as the moon was the main deity of the S Arabian pantheon, he considered *Yeraḥ* a tribal name which had been abbreviated to the divine element, as in the case of the Heb tribes Gad and Asher (p. 40, n. 10). Since the personal name *wrḥ* is obviously not attested in epigraphic S Arabic, it occurs, however, as name of an appearance of the moon god, with its sole certain reference in the Qatabanian inscription RES 311,4.5. It should perhaps be considered whether the name *Yeraḥ* in the meaning "new moon" could be the rendering of epigraphic S Arabic *šhr*, "new moon, beginning of the month" (cf. Arabic *šahr*), a noun which likewise occurs as the name of a clan or tribe (e.g. Qatabanian *dšhr* [RES 3566,18; RES 3878,15] and *šhr* [AM 368], and Sabaean *bnw/dšhr* [YM 349,2] and *bn/šhr* [BR-M.Bayḥān 5,1.11]).

Hommel (1926: 554) assumed that just as the tribes of Israel and the sons of Ismael (Gen 25:13–15) numbered 12, so also the sons of Joktan (Gen 10:26–29) originally numbered 12; thus, *yarēaḥ* (= *yariḥ*) could probably be a gloss on the preceding *ḥăṣarmāwet* (or vice versa) (cf. already Hommel 1901: 316, n. 6). Certainly to be rejected is the proposal of E. Glaser (1890: 425) to combine *yārah* with *hierakōn kōmē*, the "falcon village" in Ptolemaios (*Geog.* 6.7.36), a place which, according to the geographical coordinates given in the text, should be located in E Arabia.

JERAHMEEL (ANGEL). See JEREMIEL.

JERAHMEEL (PERSON) [Heb *yĕraḥmĕʾēl*]. JERAHMEELITE. **1.** A Judahite, the firstborn son of Hezron the son of Perez the son of Judah by Tamar; the brother of Ram and Chelubai = Caleb ? (1 Chr 2:4–5, 9, 25; 2:18, 42). See HEZRON and CALEB. He is credited with 2 wives, 6 sons (yet cf. the LXX, esp. the Lucian recension, and also the NEB), and numerous progeny through them, including 13 descendants through his distant descendant Sheshan's daughter's marriage to the Egyptian slave Jarha (1 Chr 2:25–26, 27–33, 34–41).

The first historical mention of the Jerahmeelite clan occurs in connection with David's association with Achish, the king of Gath, after David's flight from the court of Saul. David and his men were raiding and killing the Geshurites, the Girzites, and the Amalekites, but when questioned about his military forays by King Achish, David lied, saying that his contingent had raided, as expected, "the Negeb of Judah, the Negeb of the Jerahmeelites, and the Negeb of the Kenites" (1 Sam 27:10). This report, originally intended to convince Achish of David's supposed Philistine loyalty, served to remind later Israelite generations of the great king's unswerving loyalty to his own people. The picture of David whipping the enemies of Israel while his patron envisioned him undermining his own tribe must have elicited a smile, if not outright laughter, in its later retelling. Furthermore, when David came to Ziklag, he is reported to have given the elders of Judah spoil intended for distribution in the towns of the Jerahmeelites, among others (1 Sam 30:26, 29). The probable location of these Jerahmeelite towns was in the area S of Beersheba (*MBA*, 63).

Most scholars today see the Jerahmeelite clan as originally a non-Israelite clan which early came to be absorbed within the tribe of Judah, much like the Kenites/Kenizzites associated with Caleb, who in turn shows linkage with Jerahmeel. The Chronicler, in the postexilic period, is the first to list Jerahmeel as an Israelite clan, within the tribe of Judah. Indeed the Chronicler's mention of Jerahmeel, plus Chelubai (= Caleb ?), as descended from Hezron is without parallel in the rest of the Hebrew Bible. While Williamson (*1 and 2 Chronicles* NCBC, 49) has demonstrated the centrality (2:25–33, 34–41) of the Jerahmeelite clan to the larger genealogical unit on Judah (1 Chr 2:3–4:23), with the Chronicler's prime focus falling on Ram as the progenitor of the house of Jesse and David (1 Chr 2:10–17), his reason for the mention of Jerahmeel and Chelubai (= Caleb ?) is less clear. Quite possibly, the Chronicler sought to legitimate the postexilic pedigree of such clans who had once entered the tribe of Judah by absorption and not by birth. Belonging to Judah, the tribe which had returned to postexilic prominence in the person and work of Zerubbabel, was no doubt a matter of considerable political pride and advantage.

2. A Levite, the son of Kish (1 Chr 24:29), of the clan of Merari (1 Chr 23:21). His name occurs in a list which represents an updating (except for Gershom/Gershon and his sons) of the Levitical families given in 1 Chr 23:7–23. See esp. 1 Chr 23:21–23. As the Levites are said to have been assigned their positions by lot in the presence of David and the larger assembly of priestly and Levitical heads (1 Chr 24:31), it was appropriate to append the names of their courses (1 Chr 24:20–31) to the list of the 24 priestly courses likewise assigned by lot (1 Chr 24:1–19). Because Eleazar, Kish's brother, had no sons, their cousins, "the sons (?) of Kish," married them (1 Chr 23:22; 24:28). Evidently Jerahmeel himself did so as "a son of Kish," even though he is the only son listed! The Kish cited here is obviously not Kish, the father of Saul, who was of the tribe of Benjamin (1 Sam 9:1–3; 1 Chr 8:33).

ROGER W. UITTI

3. A royal officer under King Jehoiakim (609–598 B.C.) assigned to police duties (Jer 36:26). He and two others were ordered by Jehoiakim to seize Jeremiah the prophet and Baruch the scribe after the king heard a scroll of Jeremiah's prophecies read and destroyed it in the fireplace. Jerahmeel, despite the title "the king's son," cannot be an actual son of Jehoiakim since Jehoiakim is only about 30 years old at the time (cf. 2 Kgs 23:36; Jer 36:9), too young to have a grown son. The title "the king's son" (Heb *ben-hammelek*) is therefore thought to denote an office of low rank in the royal government, most likely one associated with police duties (de Vaux *AncIsr* 1: 119–20). Joash (1 Kgs 22:26) and Malchiah (Jer 38:6) are both called "the king's son," and are police officers connected with jails. At the same time, an individual so designated could well be from a royal family (Avigad 1978: 54–55). This being so, Jerahmeel would then be the son of a king other than Jehoiakim.

A seal impression has been found which reads, "Belonging to Jerahmeel, the king's son" (Avigad 1978). It was discovered in a horde which also contained a bulla impressed with a seal from Baruch ben Neriah. A late 7th century date for the 2 bullae is therefore virtually assured, and the identification of the owners of the two seals with the individuals mentioned in Jeremiah 36 seems certain. Jerahmeel, then, in carrying out his police duties had occasion to seal legal documents and other official records.

JACK R. LUNDBOM

JERASH (PLACE). See GERASENES.

JERED (PERSON) [Heb *yered*]. Son of Eshtemoa, brother of Heber and Jekuthiel, and father of Gedor, of the tribe of Judah (1 Chr 4: 18). For the meaning of Jered, see JARED.

RICHARD S. HESS

JEREMAI (PERSON) [Heb *yĕrēmay*]. A descendant of Hashum and one of the returned exiles who was required by Ezra to divorce his foreign wife (Ezra 10:33). According to Noth, the name Jeremai probably is related to the Arabic root *warima* meaning "fat" or "stout" (*IPN* 226). This individual does not appear in the parallel text of 1 Esdr 9:33. Jeremai is a member of a family from which a group of exiles returned with Zerubbabel (Ezra 2:19; Neh 7:22). For further discussion, see BEDEIAH.

JEFFREY A. FAGER

JEREMIAH (PERSON) [Heb *yirmĕyāh; yirmĕyāhû*]. Some 10 individuals bear this name, which may mean "may Yahu raise up" (*IPN*, 201), "Yahu loosens [the womb]" (*BDB*, 941), or "Yahu founded" (*HALAT*, 420). The name *yirmĕyāhû* occurs in an ostracon found at Lachish, which dates to shortly before the destruction of the city by Nebuchadnezzar in 587/6 B.C. (Lachish 1:4; *TSSI* 1:36–37).

1. One of the warriors of the tribe of Benjamin who joined David at Ziklag (1 Chr 12:5—Eng v 4).

2. One of the Gadite warriors who joined David at Ziklag (1 Chr 12:11—Eng v 10).

3. Another Gadite warrior who joined David at Ziklag (1 Chr 12:14—Eng v 13).

4. Head of a family and renowned warrior of the half-tribe of Manasseh which settled in Transjordan (1 Chr 5:24).

5. Of Libnah, the father of Hamutal, wife of Josiah and mother of Jehoahaz (2 Kgs 23:31) and Zedekiah (24:18), kings of Judah.

6. One of Israel's major prophets who was active in 7th to 6th centuries B.C.E. See JEREMIAH (PROPHET).

7. The father of Jaazaniah, a Rechabite, contemporary of Jeremiah the prophet (Jer 35:3).

8. A priest who returned from Babylon with Zerubbabel (Neh 12:1). The name also designates a priestly family in the time of the high priest Joiakim (v 12).

9. One of the priests who signed the covenant of Ezra (Neh 10:3—Eng v 2).

10. A leading man of Judah and member of one of the two large choirs which took part in the feast celebrating the dedication of the Jerusalem wall under Nehemiah (Neh 12:34).

ROBERT ALTHANN

JEREMIAH (PROPHET). One of the major prophets in ancient Israel whose dates correspond roughly to the last half-century of Israel's nationhood, i.e., 640–587 B.C. He survived, however, the destruction of Jerusalem in 587 B.C. and lived out the final years of his old age in Egypt where he was taken by refugees who sought exile there. His life and ministry on behalf of Yahweh, God of Israel, are the subject of the OT book bearing his name. See JEREMIAH, BOOK OF.

A. The World of Jeremiah

The late 7th and early 6th centuries B.C. saw Babylon replace Assyria as the major power in Near Eastern affairs. The transition allowed Judah a brief period of independence, which it used with profit to carry out a major religious reform under King Josiah. But the realignment of world power, combined with a repudiation in Judah of the reform program after Josiah's death, resulted in a sorry state of affairs for the once-proud nation called Israel. Its demise came very quickly.

1. History of the Period. Jeremiah was born into this world of tumultuous change. The long reign of Manasseh came to an end in 642 B.C., a reign during which Judah was subservient both politically and religiously to Assyria. Under Manasseh, the reforms of Hezekiah were dismantled and pagan religious practices were allowed to flourish openly. The biblical writers express outrage at what went on during this time, and except for the Chronicler they are unforgiving of Manasseh (2 Kgs 21:1–21; 23:26; 24:3; Jer 15:4; cf. 2 Chronicles 33). Amon sought to continue his father's policies when he became king, but 2 years later he was assassinated by an anti-Assyrian party. The people of the land feared Assyrian reprisal, however, and quickly punished those responsible (2 Kgs 21:23–24). In that same year, i.e., 640 B.C., King Assurbanipal of Assyria regained a measure of control over an empire that for 15 years or more had been in rebellion—since 655 at least when Psammetichus I of Egypt declared his independence. The year 640 was in any case pivotal. In this year Josiah was placed on the Jerusalem throne at 8 years of age. The next 3 decades saw Judah gradually attain political and religious freedom. That national independence came in stages can be seen from the Chronicler's account of the Josianic Reform (2 Chr 34:1–7). We know little about Assurbanipal's activities after 640, except that his years were peaceful enough to enable him to act as a patron of literature and the arts.

At the time of Assurbanipal's death in 627 (Haran Inscription) the once-mighty empire of Assyria was quickly breaking up. Babylon was in open revolt as is known from the Babylonian Chronicle, and in October 626, Nebopolassar defeated the Assyrian army outside the city of Babylon, declaring himself king of Babylon. Assyria was now on the defensive and in less than 20 years would be no more. By 622, when the celebrated Torah of Moses was found in the Jerusalem temple and the reform of Josiah was brought to its grand climax, Judah's subservience to Assyria had ended. We know little about Josiah's latter years. During this time he may have been fortifying major cities N and W of Jerusalem, e.g., Megiddo and Lachish (Aharoni *LBHG*, 403; Rainey 1983: 17). Nineveh fell in 612 to a coalition of Babylonians, Medes, and the Umman-Manda who are perhaps the Scythians (Gadd 1923). Two years later the allies dislodged an Assyrian refugee government from Haran. Egypt went to Assyria's aid in the attempt to retake Haran, in 609, but the mission failed. The Babylonians were now in control of all of Mesopotamia.

The Egyptian-Assyrian defeat was perhaps helped along by Josiah's delay of Pharaoh Neco at Megiddo; but if so, Judah suffered the greater loss, for Josiah was killed in a battle that ensued (2 Chr 35:20–24). Josiah's motives in this adventure are not known. He may have been acting as an ally of Babylon (Malamat 1950: 219; Cross and Freedman 1953). No prophetic voice in any case was heard in Jerusalem. The Chronicler reports belatedly that a word from God came to Josiah via Neco (2 Chr 35:22). When Neco returned from his unsuccessful errand to the N, he took charge of political affairs in Judah. The young Jehoahaz, who had just been made king, was deposed and taken to Egypt. His brother Eliakim, whose regnal became Jehoiakim, was placed on the throne by Neco, and Judah was now an Egyptian vassal. The nation was put under heavy tribute and its "spring of independence" was over.

For the next 4 years, from 609 to 605, Judah was under Egyptian domination. During this time the Egyptian and Babylonian armies were fighting on the N Euphrates, though no decisive battle took place. Then in 605, Nebuchadnezzar, who had taken control of the army from his father, made a surprise attack on the Egyptians at Carchemish and roundly defeated them (Jer 46:2). The Babylonian Chronicle reveals that a second victory followed at Hamath after which Nebuchadnezzar took over the Egyptian base at Riblah (Malamat 1956: 249–50). The Babylonians were now in control of Syria (Malamat 1975: 130). The Babylonian advance was delayed by Nabopolassar's death, but only briefly; for at the end of 604, Nebuchadnezzar and his army were present in the Philistine Plain where they proceeded to destroy Ashkelon (Jeremiah 47). The fast in Jerusalem mentioned in Jer 36:9 was perhaps a response to this threat. Jehoiakim now transferred his allegiance to this new agent in Syro-Palestine affairs and became its unwilling vassal for 3 years (2 Kgs 24:1).

In 601, Nebuchadnezzar was again at war with Egypt—this time on the Egyptian frontier—but both sides suffered heavy losses; Egypt may even have been the victor. Whatever the case, the Babylonian army went home, after which the pro-Egyptian party gained the upper hand in Jerusalem and Jehoiakim declared independence from Babylon (2 Kgs 24:1). This proved to be a fatal step. Babylon responded by sending bands of Syrians, Moabites, and Ammonites, along with some of its own people to ravage Judah (2 Kgs 24:2). The full Babylonian army came shortly after December, 598, the month Jehoiakim died (Freedman 1956). The beaten king was likely assassinated (cf. Jeremiah's predictions of a violent death for him in Jer 22:18–19 and 36:30). Jehoiachin, the 18-year-old son of Jehoiakim, was put on the throne and 3 months later, in March 597, the city surrendered. Jehoiachin, the Queen Mother, high government officials, and most of Jerusalem's skilled workers were deported to Babylon.

The Babylonians put Zedekiah on the throne but little

remained over which to exercise rule. Zedekiah's 10-year reign (597–587) was marked by continual social and political unrest. The die had been cast for Judah's fall. The most capable citizens were gone, and Jehoiachin's preferential treatment in captivity made Zedekiah's position ambiguous; many still considered Jehoiachin the legitimate king (Albright *LBHG,* 102; 1942). A rebellion in Babylon in 594 raised hopes there and at home that Jehoiachin would return (Jeremiah 27–29), but the uprising was put down and the hopes proved illusory. Zedekiah's trip to Babylon in 594/3 (Jer 51:59) may have been to reaffirm his loyalty to Nebuchadnezzar (*BHI,* 329).

By 589, Judah was again rife with unrest and the Babylonian army began another westward march, this time to put down resistance for good. Archaeological evidence, particularly the important Lachish Letters (*ANET,* 321–22), corroborates the biblical account of Judah's last days. The cities of Benjamin, e.g., Ramah and Mizpah, appear to have given up first (Malamat 1950: 226–27). The siege of Jerusalem was broken only briefly when Egypt made an advance, but that came to nothing. In July 587 the wall of Jerusalem was breached and the city was taken. A month later it was burned. Nationhood for Israel had come to an end. Gedaliah, a grandson of Shaphan, was appointed governor over the population that remained, but he was soon assassinated. Jeremiah received preferential treatment by the Babylonians, and Gedaliah, until his assassination, remained with other refugees living at Mizpah. After Gedaliah's death, Jeremiah and Baruch departed with a group for Egypt, where Jeremiah is last heard from. History for a time must now be chronicled in Egypt and Babylon, not Jerusalem.

2. The Josianic Reform. According to 2 Kings 22–23 and 2 Chronicles 34–35, a major reform took place in Judah during Josiah's reign. Each account has its own emphasis in reporting the reform, but of more significance is the way each sequences key events. According to Kings, the entire reform—the purge of syncretistic worship sites, the covenant renewal ceremony, and the celebration of passover—takes place in the 18th year of Josiah, 622, and is the immediate response of the king to the finding of the lawbook in the temple. The Chronicler, however, begins with Josiah's 8th year (632) when he says the young king began to seek Yahweh. The purge of worship sites around Jerusalem and in the Assyrian provinces of Samaria, Gilead, and Galilee, is placed in Josiah's 12th year (628). Then in the king's 18th year (622) the lawbook is found after which covenant renewal ceremony is concluded and passover is celebrated. The Chronicler compresses (also supplements) the Kings account of the purge (both 2 Kgs 23:4–20 and 2 Chr 34:3–7 conclude "Then he returned to Jerusalem"), and states clearly that repair work in the temple, which led to the lawbook's discovery, was begun *after* the purge (2 Chr 34:8).

Critical scholars of an earlier generation preferred the Kings account and reconstructed the beginning of Jeremiah's career against its background. More recently, however, the Chronicler's account has been given preference, one reason being that his scheme of events correlates better with extrabiblical records documenting Assyria's decline (Cross and Freedman 1953). But the Chronicler's scheme renders less likely the widely held view that Deuteronomy 1–28 (or a portion of it) was the lost scroll of 622. If Deuteronomy 1–28 was the catalyst for the purge of idolatrous worship centers as is generally assumed, and the purge took place in 628, then this document cannot have been newly found in 622. Most likely it was not. Judging from a portion of Huldah's oracle which the lawbook seems to have inspired (2 Kgs 22:16–17), the newly found document is best identified with the Song of Moses in Deuteronomy 32 (Lundbom 1976).

The reform lasted only as long as Josiah reigned; when Jehoiakim became king in 609/8 it came to a full stop. Neither Kings nor Chronicles mentions Jeremiah in connection with the reform. The only reference in either to Jeremiah's prophetic activity is 2 Chr 35:25 where it is reported that Jeremiah gave a lament for Josiah at his death.

B. Early Life and Call to Be a Prophet

We know very little about Jeremiah's early life aside from what is mentioned in the superscription to his book (1:1). His father was very glad the day he was born (20:15), and he too was joyful earlier in life (8:18: "My joy is gone"). Jeremiah was born the son of Hilkiah, a priest at Anathoth. Anathoth was a village 2–3 miles north of Jerusalem in the old territory of Benjamin. That village is likely Ras el-Kharrubeh, a half mile or so S of the modern village of ʿAnata. Hilkiah could well be a descendant of Abiathar, a priest of David whom Solomon retired to Anathoth when he became king (1 Kgs 2:26–27). The family possessed land (32:9) and may have been one of some means.

Jeremiah was called to be a prophet in the 13th year of Josiah (1:2, 4). This was 627 B.C., the same year Assurbanipal died. In his account of the call, Jeremiah lays stress on his young age. The Heb *naʿar* (1:6–7) should be translated "boy" (Jerome: *puer*), not "young man," the common rendering of an older generation of scholars who thought Jeremiah's age had to be somewhere between 18 and 25. These scholars assumed that the prophetic ministry began at the same time the call was received. Jeremiah is more like 12 or 13, the approximate age of the "boy" Samuel when he was serving Eli at Shiloh, and the call to be Yahweh's prophet came to him (1 Sam 2:11, 18, 21, 26; 3:1, 8). Jeremiah's birth can be dated then ca. 640 B.C.

Jeremiah's boyhood experience appears to have its closest similarity to that of Samuel which was lived out at the Shiloh sanctuary not far from Anathoth. Traditions about Samuel and Shiloh were doubtless preserved at Anathoth because of the single priestly line linking the 2 sanctuaries. Jeremiah later in his Temple Sermon revives the painful memory of Shiloh's destruction (7:12–14; 26:4–6).

The priestly line extending back through Abiathar and Eli picked up added prestige when it was traced all the way to Moses. We see in Jeremiah's call clear and unmistakable appropriations of traditions about Moses. The vision Jeremiah has before a budding almond tree (1:11–12) recalls Moses' vision at the burning bush (Exod 3:2–6). Jeremiah's protestation about being unable to speak (1:6) has a parallel in the demur Moses made about not being eloquent (Exod 4:10–17). But when Jeremiah reports that Yahweh intends to put his words into Jeremiah's mouth (1:9), repeating a promise made earlier to Moses at the time he was called, we are looking at more than a simple case of

role modeling; Jeremiah has understood himself to be the "prophet like Moses" promised in Deut 18:18.

The figures of both Moses and Samuel loom large for Jeremiah (15:1; Holladay 1964; 1966a). Another person exercising an important influence on him is the prophet Hosea (Gross 1931). Traditions of all 3 prophets—in addition to the covenant document of Deuteronomy 1–28 in which Moses is the commanding figure—come out of N Israel, and Anathoth, despite its proximity to Jerusalem, is a N sanctuary. It can be expected, then, that these traditions would be the ones to make a formative impression upon Jeremiah from his earliest years.

Jeremiah gives no indication of accepting Yahweh's call when it comes, despite the impression made upon him that he was chosen for prophetic office before he was born and now on the day of visitation has heard that choice confirmed (1:5, 10). But Yahweh, too, is clear that the call must await a future fulfillment: "I am watching over my word to perform it" (1:12).

C. Prophetic Ministry

Jeremiah's call is to be a prophet to the nations. His life's work is "to pluck up and to break down . . . to build and to plant" (1:10).

1. Early Career (622–605 B.C.). Jeremiah accepts the call in 622 after the temple scroll is found. In a later confession he reflects on the importance of this event to him personally, saying,

> Your words were found, and I ate them
> and your words became to me a joy
> and the delight of my heart
> for I am called by your name
> O Yahweh, God of hosts
> (15:16)

Jeremiah in "eating" words of the temple scroll "eats" words which Yahweh promised earlier would be put into his mouth (1:9). Yahweh's promissory word has thus been fulfilled, and for Jeremiah the eating constitutes an acceptance of the call to be a prophet. If Jeremiah was thirteen, say, when the call came, he would now be 18. No prophetic preaching, in any event, should be dated before the year 622.

Sometime soon after the lawbook's discovery in 622, when the call had been accepted, Jeremiah was given the mandate to begin his career. An account of this is given in 1:13–19. Yahweh's word was conveyed in another vision, this one of a kettle of boiling water tipped away from the N, its contents almost ready to spill out. The vision spoke of a foe who was poised to attack Judah from the N. With this interpretation came also a personal message for Jeremiah to begin his ministry. The people of Jerusalem must be warned, but Jeremiah can expect a battle of his own to contend with for there will be spirited opposition to his message from just about everyone. That ought not dismay him however, for Yahweh promises to him what he will not promise to Jerusalem: protection. Those who fight against Jeremiah will not prevail for Yahweh will be with him and see that his life is spared (1:19).

Precisely what Jeremiah was about between 627 and 622 is unknown. In view of the lifelong bond that existed between him and members of the Shaphan family, it could well be that during these years he was preparing himself for the vocation that awaited him by studying letters and rhetoric at the scribal school in Jerusalem over which Shaphan presided. Judging from his earliest preaching, Jeremiah emerges fully literate and well trained in the rhetoric of his day. At some point early in life, although we do not know precisely when, a move was made from Anathoth to Jerusalem. Here in the capital city was the locus of Jeremiah's prophetic activity from the beginning, and here it continued until the city fell.

The ambiguity characterizing Jeremiah's relationship to religious and political leaders in Jerusalem appears early; in fact we find him isolated and alone when the city is caught up in the celebration of covenant renewal and passover. He says,

> I did not sit in the company of merrymakers
> nor did I rejoice;
> I sat alone, because your hand was upon me,
> for you had filled me with indignation.
> (15:17)

Perhaps Jeremiah judged the merriment going on in the city as superficial. He certainly had a different spirit from those more in tune with popular sentiment, one that had been implanted earlier at the time he was called and one akin now to the spirit of Huldah who gave the oracle after the lawbook was found (2 Kgs 22:14–20). There were others who boycotted the Jerusalem celebration, but probably for a different reason (2 Kgs 23:9).

Jeremiah's isolation, however, was never total nor was it continuous in the years after 622. During the Josianic years, he was actively pursuing the vocation of a prophet: preaching Yahweh's word, attending temple worship, and associating with many of the nation's leading citizens (e.g., 19:1). He supported to some extent the national reform program. The persecution which he experienced early from priestly kin at Anathoth (11:18–12:6) is fully understandable if Jeremiah gave support to the reform program of centralized worship at Jerusalem (cf. 3:12–14; 31:2–14), for that would have had the practical effect of closing down the Anathoth sanctuary.

With other reform goals and objectives Jeremiah appears in basic agreement. His earliest preaching against idolatry and religious harlotry in chapters 2–3 is aimed at breaking up the fallow ground of the Manasseh period. But Jeremiah is not a lone voice anticipating an entire reform as many earlier scholars imagined, nor is he acting at the beginning of his career solely on a mandate given him by Yahweh, though he acts on one to be sure. Acting in concert with a host of other people—some of them prophets such as Habakkuk and Zephaniah—he shares the broader hope that Judah will now seize the opportunity it has to renew commitment to the ancient Yahwistic faith. Jeremiah supports a reform already well along, one which has been initiated at the highest levels of state but one which still has to be brought home to the people. His words in 4:1–4 are fully in the spirit of reform. The call for a return to Yahweh and a circumcision of the heart are expressed in Deut 4:30 and 10:16. His preaching on obedience to the covenant (11:1–8) and his call for a more

rigorous sabbath observance (17:19–27) also fit well into the period after 622.

Jeremiah reflects nationalistic ideas when he wants Judah divested of its vassalage to Assyria and Egypt (2:18, 36; 13:1–11) and when he calls for a return of the exiles taken away to Assyria in 722 B.C. (3:12–14; 30:31). The same can be said for his support of political union between N and S, a reform idea tied in closely with Josiah's plan for a single sanctuary in Jerusalem.

That early in his ministry Jeremiah faced broad opposition should occasion no surprise when one considers that neither people of high or low status escaped his indictment (2:8; 5:4–5; 8:8). His frustration over a lack of preaching success is expressed in 6:16–17, a passage that also provides a focus on the early career:

> Thus says the Lord:
> "Stand by the roads, and look,
> and ask for the ancient paths,
> where the good way is; and walk in it,
> and find rest for your souls.
> But they said, 'We will not walk in it'.
> I set watchmen over you, saying,
> 'Give heed to the sound of the trumpet!'
> But they said, 'We will not give heed.' "

If the sequence here is important, Jeremiah's early career consists of an initial phase during which he called for a return to the Mosaic covenant, i.e., "the ancient paths" and "the good way," and then a later phase during which he preached primarily war and national destruction. A bipartite ministry along these lines is suggested also by the 2 major poetic collections in chapters 2–10 focusing on religious harlotry and the foe from the N. See JEREMIAH, BOOK OF.

When his reform preaching failed to move people to true repentance, Jeremiah turned his attention to the coming foe. Though the identity of Judah's foe is never given, it has to be Babylon. Many earlier scholars who built the early career on a higher chronology identified the foe with the Scythians (Herod. 1.104–6), but this view is now universally abandoned. Jeremiah was first apprised of the foe shortly after 622, at a time when he was still a relatively young man. Yahweh's command that he not marry (16:2) is already predicated on the certainty of war and national destruction.

If the foe poems are correlated with Babylon's rise in Mesopotamia, they begin then ca. 614–612 (Hyatt 1940). Habakkuk announces the rise of this same foe, and the earliest date assigned to his preaching is ca. 615. The laments which conclude the foe cycle follow in due course as prediction gives way to harsh reality. These laments show Jeremiah involved at the deepest level of his own preaching. The dialogues and trialogues contain rapid alternation between divine word, human terror, and the prophet's own expression of personal grief (e.g., 8:13–17, 18–21). Jeremiah is a true divine mediator, which is to say his own personal grief upon receiving the divine word is every bit as intense as his preaching is of that word to others.

The death of Josiah was a national tragedy, and Jeremiah's silence about the Megiddo adventure remains one of the great puzzlements associated with interpreting the early career. He laments this good king (2 Chr 35:25), although soon after he says the greater tragedy for Judah is the permanent departure of young Jehoahaz (Shallum) from the land (22:10). Jeremiah's remembrances of Josiah are positive, particularly when the comparison is made between him and his son Jehoiakim (22:13–17).

The years from 609 to 605 were difficult for the prophet as the earliest dated prose in the book makes all too clear. When Neco installed Jehoiakim, the political climate in Jerusalem changed. That the reform was now over we may conclude from the Temple Sermon which was delivered in Jehoiakim's accession year (26:1). Jeremiah here makes a scathing indictment of the people's shallow religiosity and duplicity before Yahweh (7:1–15). They seem content just to know that the temple sits on Zion and that salvific liturgies are spoken in worship; they care nothing, however, for the weightier matters of executing justice and living in accordance with covenant demands. Jeremiah says the place is rife with every imaginable evil. The real nerve is struck when Jeremiah announces that Yahweh will destroy the temple as he destroyed his first sanctuary at Shiloh. With that the sermon is over and court is called into session at the New Gate in the temple precinct. The priests and the prophets, who were the most offended, demand that Jeremiah be put to death. The princes in attendance are more allied with the defense. In the end they decide the case, acquitting Jeremiah on the strength of his testimony that Yahweh had sent him with this message. Jeremiah has passed the test of a true prophet given in Deut 13:1–5. Some elders in attendance aid the defense by recalling that Micah earlier predicted Jerusalem's destruction, and King Hezekiah did not put him to death. Jeremiah survived the trial then, having received support from both government officials and citizens within the general populace. Still he needed the special protection of Ahikam son of Shaphan (26:24). Another prophet of Yahweh, Uriah of Kiriath-jearim, delivered his judgment on the city and was not so fortunate; Jehoiakim had him killed (26:20–23).

Many of the confessions fit well into the early years of Jehoiakim's reign. These rare glimpses into a prophet's interior life show that bedrock tenets of Jeremiah's faith were being called into question. Why should acceptance of the divine call lead to an intolerable wilderness experience where God is not present (15:15–18)? Preaching the divine word has brought nothing but anguish; it has caused even Jeremiah's close friends to turn on him, which in turn leads the prophet to believe that Yahweh too has betrayed him (20:7–10). In the darkest moment of all he rejects his birth, his call, and early assurances that Yahweh would deliver him from all his enemies (20:14–18; Lundbom 1985). But once the hurt is let out, assurances are renewed (15:19–21) and Jeremiah too is renewed, enough in one case that he is able to sing about Yahweh's deliverance (20:11–13).

Jeremiah is a man of profound religious faith. But his personal piety—also impiety—is balanced by a deep involvement in the religious life of his nation. He cannot be charged with excessively privitizing religion, even though much of a personal nature comes from his lips. He prays for himself but he prays even more for others. Yahweh

even has to tell him to stop his prayers of intercession (7:16–20; 11:14–17; 14:11–12; 15:1–4). Persecution comes not because he distances himself from the cult, but because of relentless participation. The punishment received from the chief priest Pashhur comes as the result of an object lesson he gave to senior priests and others in the Valley of Ben-hinnom (19:1–20:6), and his banishment from the temple (36:5) is most likely the result of his Temple Sermon.

The year 605 was pivotal for the nation and for Jeremiah personally. The Battle of Carchemish left Egypt weakened and Babylon the new power in world affairs. Jeremiah addressed the Egyptian defeat with an oracle (46:2–12). Jeremiah also decided in this year to prepare the first written scroll of his oracles, and his doing so signaled the end of his early career. After the scroll was read publicly, Jeremiah and Baruch were forced to go into hiding, for they were now in direct conflict with the king (chap. 36).

2. Late Career (604–586 B.C.). These years are remarkably well documented thanks to the abundance of dated prose in the book from the reign of Zedekiah. Nevertheless there are 2 periods of roughly 7 years each, 604–597, and 594–588, during which we have no definite knowledge of Jeremiah's activities. When Jeremiah and Baruch disappeared from public view in 604, they had most recently been preoccupied with scroll writing. It is possible that in the years following, particularly when the two of them were out of public view, more time was spent in this pursuit. We are told that when the first scroll which had been destroyed was rewritten, it contained added material (36:32). It is unlikely that Jeremiah had any public ministry during Jehoiakim's remaining years. He certainly had nothing good to say about this king. Jehoiakim spent recklessly on luxurious new quarters for himself, and his use of slave labor in this undertaking must have offended others besides Jeremiah. Worst of all, he was violent and dishonest, and cared nothing for justice or for helping the needy (22:13–17). Jeremiah could only predict a shameful end for this king (22:18–19).

When the city surrendered to Nebuchadnezzar in 597, Jeremiah was again active speaking the divine word and articulating as well the expressions of grief which were widespread (10:17–25; 13:15–27). His message to the departing exiles was hopeful yet bittersweet (31:21–22). Jehoiachin, he said, would not return home nor would any of his offspring sit on David's throne (22:24–30).

Nebuchadnezzar put Zedekiah on the throne before departing from Jerusalem, and, with this king, Jeremiah had to endure another round of hard times. It is not that Zedekiah disliked Jeremiah particularly; the problem seems rather to have been Zedekiah's nonprincipled behavior during a time when the city lived continually on the brink of chaos. Zedekiah seems to have been powerless in the midst of this sorry state of affairs. Dated prose in the book indicates that Jeremiah was active during the first 4 years of Zedekiah's reign, 597–594/3, and then again when Jerusalem was under siege for the last time in 588–587. During Zedekiah's middle years we are not sure of Jeremiah's activities. He was perhaps addressing certain foreign nations with oracles (chapters 48–51) in addition to writing more scrolls with Baruch. In 594/3 Jeremiah gave Seraiah, the brother of Baruch, a scroll of oracles written against Babylon (51:59–64).

Jeremiah's final decade of prophetic ministry was controlled by a vision received about good and bad figs (chap. 24). The good figs were the exiles who had gone to Babylon; the bad figs were the people remaining in Jerusalem. This message put Jeremiah at odds with the nation's leaders, who, at the time were talking revolt with their allies (27:3). Certain prophets such as Hananiah lent them support by predicting a speedy return of Jehoiachin and the other exiles (28:1–4). A classic confrontation took place between Jeremiah and Hananiah which brought the question of true and false prophecy into sharp focus (chap. 28). Jeremiah was at first cautious in countering the optimistic claims of Hananiah, but at their second meeting was not and announced Hananiah's death for prophesying lies. This prediction was fulfilled in less than a year showing Jeremiah to be the true prophet according to the test set forth in Deut 18:21–22. Jeremiah sent letters to the exiles in Babylon (chap. 29) in which he gave the same message he had been preaching at home.

We are well informed about Jeremiah's activity just prior to Jerusalem's fall. He had now become the key figure in the tragic drama which was unfolding. Zedekiah continually sought him out, hoping against hope that Yahweh would save the nation as in times past (21:1–2). Jeremiah informed him, however, that Yahweh was fighting against the city. Taking words almost verbatim from Deut 30:15, but giving them a new twist, he told the king: "I set before you (the way) of life and (the way) of death" (21:18). The way of life now was to surrender; to resist was the way of death. But Zedekiah did not listen. He seemed irreversibly bent on plunging himself and the nation into ruinous defeat. Jeremiah told the king there was no way he could escape a face-to-face meeting with Nebuchadnezzar (34:1–7), which is what eventually took place.

When the city was under siege, Zedekiah made a covenant to grant liberty to all Hebrew slaves (34:8–22), something he should have done simply because the law required it (Deut 15:12). But when Egypt marched N and forced the Babylonian army to pull back from Jerusalem, the king reneged on the covenant and took the slaves back. Jeremiah was swift with a word to him and his fellow schemers: "I proclaim to you *liberty* to the sword, to pestilence, and to famine" (34:17). During the lifting of the siege, Jeremiah attempted to leave the city to take care of some personal business at Anathoth, but he was stopped at the Benjamin Gate and accused of deserting to the Babylonians (chap. 37). Jeremiah denied the charge, but to no avail. Royal officials beat him and threw him into prison, where he remained until the king summoned him to his residence—this time secretly—and asked him for another oracle from Yahweh. One came, but there was no change. Jeremiah then pleaded not to be sent back to prison, and Zedekiah granted the request. He was placed instead under house arrest in the court of the guard. There he remained until the city fell, receiving each day one loaf of bread as long as the supply held out (37:21). Jeremiah is also reported during these last days as having been abandoned in a cistern for preaching surrender (chap. 38). There he would have died had not Ebed-melech the Ethiopian res-

cued him. Zedekiah in this situation is portrayed as powerless over against those who were forcing his hand (38:5).

While Jeremiah was in the court of the guard he received from Yahweh a new word of hope. On the other side of doom would be deliverance and restoration: Exiles would return; the land would be repossessed; Yahweh would replace the broken covenant with a new one. Jeremiah accepted this word, but not without a struggle. He bought a family plot at Anathoth to symbolize Yahweh's promise, but in the long prayer which followed the purchase he admits to having serious questions about what he has just done (32:16–44). The real life ambiguities confronting a prophet—the whole process whereby the divine word is accepted, believed, and acted upon—are nowhere better seen than here. Chapter 32 is certainly an eyewitness account. Virtually no time has elapsed between the event and this report of it. Reports which are written at a much later time telescope the belief process and clarify the ambiguities common to all complex life situations.

Other words of hope—including the important "New Covenant" promise—are likely from this same period when Jeremiah was confined to the court of the guard (23:5–8; 31:23–40; 33:1–13). Despite moments of deep despair, Jeremiah seems not to have lost faith completely in Yahweh's ability to save. During these last days he promises deliverance to Ebed-melech (39:15–18) as he had done earlier to his good friend Baruch (45:5). When the city was taken and large numbers of people were either killed or taken captive, Jeremiah was given his own life "as a prize of war." This fulfilled earlier promises which Yahweh had made to him (1:8, 19; 15:20–21). Nebuzaradan, acting on a direct order from Nebuchadnezzar, freed Jeremiah and allowed him to go wherever he desired (39:11–14; 40:1–6).

With Jerusalem in ruins, the people who remained took up residence at Mizpah under Gedaliah whom Nebuchadnezzar had appointed governor. Jeremiah joined them. The reconstituted community was soon fractured, however, when Gedaliah was murdered along with others in a plot instigated by the king of Ammon (chap. 40–41). Once again the people turned to Jeremiah for a word from Yahweh (chap. 42). Ten days later it came: They should stay in the land, not go to Egypt which is what the current talk was. This word, however, like so many others spoken earlier, was disregarded. In fact the people accused Jeremiah of treasonous collaboration with Baruch (43:2–3). A group consequently left for Egypt, taking Jeremiah and Baruch along, and settled at Tahpanhes (43:7).

3. Sojourn in Egypt (after 586 B.C.). Jeremiah was about 55 when he arrived in Egypt; once there, he reiterated Yahweh's judgment upon that nation (43:8–13). His message to expatriate Jews who were continuing their worship of the Queen of Heaven was essentially what it had been back in Jerusalem some years earlier (chap. 44). These people, however, had a different view of things. They said the destruction of Jerusalem came about because worship of the Queen of Heaven was discontinued. To this Jeremiah could only say ironically: "Go ahead then and confirm your vows!" (44:25). Yahweh, Jeremiah assures, will have the last word. This remnant in Egypt will die though it came there to live.

We hear no more from Jeremiah and the Bible does not mention his death. Later sources contain conflicting reports about martyrdom and a natural death in Egypt (Lipinski *EncJud* 9: 1351).

D. Rhetoric and Preaching

While it is generally agreed that Jeremiah ranks as one of the truly great thinkers in the OT, his language and style have not always won high acclaim. This judgment appears to go back to Jerome who says in his *Prologue to Jeremiah:* "Jeremiah the prophet . . . is seen to be more rustic in language than Isaiah and Hosea and certain other prophets among the Hebrews, but equal in thought . . . Moreover, the simplicity of his speech was the result of his birthplace. For he was a native of Anathoth, which even today is a small village 3 miles distant from Jerusalem" (MPL 28 847). Since Jerome, it has been agreed that Jeremiah suffers when compared to Isaiah, but considerable debate has taken place over his alleged "rusticity in language." Lowth, for example, finds no evidence to support this (1815: 290–91). Driver, who still attributes both poetry and prose to the prophet, agrees with Jerome that Jeremiah's style is not as elevated as his thought, but he evaluates the style somewhat differently. He says Jeremiah's style is "essentially artless," the only adornment being the figures which are found in the poetry. Yet even the poetry, he thinks, sounds much like the repetitive prose of Deuteronomy (1967: 274–75).

Others who separate poetry and prose and isolate the *ipsissima verba* of Jeremiah in the poetry (see JEREMIAH, BOOK OF), come away with a higher estimate of Jeremiah's language and style; some, in fact, rank him as one of the great poets of antiquity (Duhm *Jeremiah* KAC; Skinner 1963: 51; Muilenburg *IDB* 2: 824). This view is corroborated by those who more recently have studied the diction, style, and micro- as well as macro-structures of those compositions judged to be Jeremianic (Holladay 1962; 1966b; *Jeremiah* Hermeneia; Lundbom 1975). Most of these appear in the poetry, but some are found as well in the sermonic prose.

Upon close inspection, Jeremiah is seen to be a skillful poet, someone well trained in the rhetoric of his day and surely perceived, by those who heard him, to be an engaging orator. His poetry is generally well balanced, more so than one finds among the other prophets. There is parallelism; but successive cola embellish an idea (exergasia), show up incongruities, make analogies, and build larger thoughts in yet different ways. One finds both regular (3:3) and Qine (3:2) meter, with other rhythms also being used. Whole poems in some cases contain crescendo and diminution. His syntax and ordering of terms in balanced cola follow both normal and chiastic arrangements. On occasion, whole poems will have chiastic structures made up of key words and/or alternation of speakers. Jeremiah was heir to a rhetorical tradition already ancient, one that had developed in the oldest known cultures of the Near East before it took root in Israel. As an orator, Jeremiah could hold rank with the best Greek and Roman rhetors whose stock in trade one will find in such classical rhetorical handbooks as Aristotle's *Rhetoric*, the *ad Herennium*, and Quintillian's *Institutes*. He anticipates them both in style and modes of argumentation.

1. Repetition. Jeremiah makes effective use of repeti-

tion, the most basic element of all in ancient Hebrew rhetoric (Muilenburg 1953). Repetition of words, of word cognates, and of sounds is primarily for emphasis, but it can perform other or in some cases multiple functions. Anaphora, for example, functions for Jeremiah as it does for other poets: to create pathos; when the repeated sounds simulate the sense (onomatopoeia) a bit of drama is added. The inclusio performs in some cases an argumentative function. Here are some of the most common uses of repetition by Jeremiah:

a. Repetition of a word as a paraphrasis for the superlative (GKC 133 l): "peace, peace" in 6:14 (= 8:11).

b. Repetition of a word for emphasis (geminatio): "my bowels, my bowels" in 4:19; "land, land, land" in 22:29; perhaps also "has come, has come" in 46:20. In the prose: "the temple of Yahweh, the temple of Yahweh, the temple of Yahweh" in 7:4.

c. Repetition of a word at the beginning of successive cola, lines, or poetic verses (anaphora). Jeremiah's most powerful illustration is the poem in 51:20–23 where the destroyer of Babylon is addressed. The 9-fold repetition of "with you I break in pieces" emphasizes divine power, and it also simulates the sense by creating the sound of a pounding hammer (onomatopoeia). As a counterbalance to the repetitions, key words in the predication form an expanded chiasmus *(abcded'c'b'a'):*

You are my hammer and weapon of war:

With you I break in pieces *nations* . . . and *kingdoms*
With you I break in pieces *horse* and *its rider*
With you I break in pieces *chariot* and *charioteer*
With you I break in pieces *man* and *woman*
With you I break in pieces *old* and *young*
With you I break in pieces *young man* and *maiden*
With you I break in pieces *shepherd* and *his flock*
With you I break in pieces *farmer* and *his team*
With you I break in pieces *governors* and *commanders*

In 50:35–38 judgment on Babylon is given emphasis by the 5-fold repetition of "sword," again producing onomatopoeia (here the repeated stabbing of the victim). The monotony of repetition is broken at the end with an assonantal wordplay between "sword" and "drought" (*ḥereb* and *ḥōreb*). Earlier, Jeremiah used anaphora to emphasize the might and consuming appetite of Babylon who was poised to attack Israel (5:15–17). There the 4-fold repetition of "they shall eat up" balanced the 4-fold repetition of "nation." The former was again more onomatopoeia (the enemy will eat without stopping). Key words in the predication are chiastically arranged for variation: produce appears at the extremes while in the center are people and animals. In 4:30 the 3-fold repetition of "that" *(kî)* increases the disdain for the harlot daughter of Zion; in 15:5 the 3-fold repetition of "who?" deepens the pity for Jerusalem the rejected. Jeremiah deepens pity for himself in 8:23–9:1—Eng 9:1–2 where successive verses begin "Who can make (me). . . ?" In 20:14–15, successive verses beginning "Cursed" emphasize the prophet's great despair. The repetition of *miṗnê* ("before/because") in 4:26b; 23:9c; and 25:38b (MT), in each case giving closure to a passage, leaves the audience astonished—that the entire creation could be destroyed, that Jeremiah should behave like a drunken man, or that the land could be thoroughly devastated before Yahweh or because of what Yahweh will do. In the vision of cosmic destruction the 4-fold "I looked . . . and behold!" creates unusual pathos (4:23–26). Diminution in this poem helps simulate the cessation of activity. But Jeremiah is also able to use anaphora to achieve an opposite effect. In 31:4–5 his 3-fold "again" *(ʿôd)* emphasizes the certainty of Israel's return to Zion, also simulating the renewal of activity which will take place there.

d. Repetition of a word at the end of successive cola, lines, or poetic verses (epiphora). In 4:19 "my heart" ends successive cola; in 8:22–23—Eng 9:1 "daughter of my people" ends successive verses.

e. Repetition of words or word cognates at the end of verses or larger compositions which appeared at the beginning (inclusio). The inclusio commonly functions to effect closure, as it does for example in Deuteronomy, but there it also gives emphasis to the law being preached. Jeremiah uses the inclusio both for closure and for emphasis, but it serves other functions for him as well. He may use it to be ironic, e.g., in 5:21 where he asks a people to hear who cannot hear. More often the inclusio points up some incongruity. In 4:22 "they do not know," which concludes the first and last lines of the verse, emphasizes in the first instance people's ignorance of Yahweh and what constitutes the good; but when the verse is taken as a whole, a basic incongruity is being stressed: namely, that the very same people who show ignorance of Yahweh and the good are knowledgeable when it comes to doing evil. In a similarly constructed verse in 8:4b–5 the inclusio is made with different forms of *šûb* ("return"). Emphasis is again put on a point which is part of a larger incongruity, i.e., that although people who turn away normally return, here we see a people that does not return. In 8:8–9 Jeremiah speaks of people who say they are "wise" but are without "wisdom."

A number of complete poems have inclusio, and in some the repetition gives focus to Jeremiah's argument. In 3:1–5 different forms of the interjection "Behold!" focus the argument that Yahweh does not want rapprochement with Israel, at least not for the time being and not under the present circumstances. In 5:26–28, 30–31 "my people" makes the inclusio. The argument here is ironic in tone: People who are being victimized by criminals somehow want the phenomenon to continue. Repeated key words at beginning and end give focus to other prophetic speeches, e.g., 13:21–27; 20:7–10, 14–18; 51:11–14; etc. (Lundbom 1975: 36–51). The words, "there is none like you" form an inclusio in the doxology of 10:6–7. If this originates with Jeremiah the point he stresses is the incomparability of Yahweh.

f. Inverted repetition of words, word cognates, fixed pairs, and sounds in the bicolon, the verse, and the larger composition (chiasmus). Jeremiah varies the monotony of synonymous parallelism in the bicolon with syntactic chiasmus, where the verbs are commonly placed at the extremes, e.g., 2:9, 19a; 4:5a, 7a, 9c; 5:6a, 12b; 6:21b, 25a; etc. Rarely are the verbs at the center (2:36b; 51:38), and rarely does the syntactic chiasmus form an antithesis (4:22c; and the proverbial 12:13a). In some cases a double-

duty subject appears at the center, e.g., 4:2b ("nations") and 4:30c ("lovers"). Jeremiah enjoys making key word chiasmi: "water / cisterns / cisterns / water" in 2:13; "neighbor / brother / brother / neighbor" in 9:3—Eng 9:4; and "man / succeed / succeed / man" in 22:30. Somewhat different is the chiasmus in 14:2: "Judah / gates / [gates] / Jerusalem" (Holladay 1962: 51–52). Here Jeremiah plays on verticality, while at the same time keeping constant the idea of a nation in mourning. The idea is kept constant also in 20:14 where there is another variation of chiasmus: "cursed / I was born / she bore me / blessed".

In the double bicolon we find this chiasmus of sound: *ṣĕʿāqâh / wāšeber / nišbĕrâh / zĕʿāqâh* (48:3–4). Sound and meaning are combined in the chiasmus in 2:7b: *watābōʾû* / my land / my heritage / *lĕtôʿēbâh* (Kselman 1977: 222–23). Here the terms creating the sound balance also form a wordplay.

In poetry, Jeremiah uses words and phraseology to create a variety of larger chiastic structures. In 2:27c–28a, rhetorical form and content come together as Jeremiah turns the people's own words against themselves:

But *in the time of their trouble* they say
'*Arise* and *save* us'
But where are your gods which you made for yourselves?
Let them *arise* if they can *save* you
in your time of trouble

There is a tightly knit chiastic structure in 4:19c–21 where Jeremiah is in conversation with himself. Whole poems in some cases have chiastic structures built with key words, this phenomenon having been first discovered in Lamentations 1–2 by Condamin (1905). Jeremiah will also delimit the same sub-units within the poem by alternating the speaker, and this alternation will be chiastic as well (see 6). Macro-chiastic structures aid in developing the prophetic argument the same way macro-inclusio structures do. Whole poems having key word chiastic structures are: 2:5–9; 5:1–8; 6:1–7, 8–12; 8:13–17; 9:2–5—Eng 9:3–6 (text problems); 51:20–23; 51:34–45; and on a smaller scale (aba'): 2:33–37; and 23:18, 21–22 (Lundbom 1975: 70–96).

g. Double occurrences of a root in succession (multiclinatum), often making paronomasia. In 11:18: "Yahweh made it known to me and I knew"; in 17:14: "Heal me, O Yahweh, and I shall be healed, save me and I shall be saved"; in 20:7: "O Yahweh, you have deceived me and I was deceived"; also 31:4, 18[*bis*]; and the somewhat different constructions in 15:19 and 30:16. These are signatures of Jeremiah (Driver 1967: 276; Holladay 1962: 46).

Jeremiah combines verbs and cognate nouns in succession to great effect, e.g., in 2:5: "they went after worthlessness and became worthless" (paronomasia); in 22:22: "the wind shall shepherd all your shepherds" (paronomasia); and in 51:2: "And I will send to Babylon winnowers and they shall winnow her." In prose see 16:16; 23:4; and 48:12.

h. Repetition of consonants in succession (alliteration). This is a figure of sound, not meaning. Quite often, too, there will be paronomasia (Casanowicz 1893). In 17:12–13a the consonant *k* begins two words, and immediately following are 5 successive words beginning with the *m* consonant (also paronomasia; Casanowicz #176). In 48:15 the combination *bḥ* repeats 3 times (paronomasia; Casanowicz #44); in 49:15 the *b* consonant 3 times; and in 51:44 3 *bl* combinations (paronomasia; Casanowicz #49).

2. Accumulation. The celebrated rhetorical prose which appears in Jeremiah and the Deuteronomic literature is largely accumulation (accumulatio). It is heavy and stereotyped: Nouns heap up in twos, threes, and fours, and longer phrases balance rhythmically in parallelism. The Jeremiah prose contains some of the same noun chains and balanced phrases found in Deuteronomy and 2 Kings; at the same time it has other examples of both which appear nowhere else (Driver *Deuteronomy* ICC, xcii–xciv; Bright 1951: 25–27; *Jeremiah* AB, lxxi–lxxiii). The prose is certainly not the prophet's *ipsissima verba;* nevertheless we might expect that it would approximate his prose utterances and feature also the dominant characteristics of prose spoken by priests, scribes, and others trained in the Deuteronomic school of rhetoric.

Some examples of accumulatio in the prose: "sword, famine, and pestilence" (14:12; 21:9; 24:10; 27:8; etc.); "reproach, byword, taunt, and curse" (24:9); "cities of Judah and streets of Jerusalem" (7:17, 34; 11:6; 33:10; 44:6, 17, 21); "the voice of mirth and the voice of gladness, the voice of the bridegroom and the voice of the bride" (7:34; 16:9; 25:10; 33:11); "their dead bodies shall be food for the birds of the air and for the beasts of the earth" (7:33; 16:4; 19:7; 34:20); "a fortified city, an iron pillar, and bronze walls, against the kings of Judah, its princes, its priests, and the people of the land" (1:18); etc. Some of these phrases together with others have what appear to be prototypes in the poetry (Holladay 1960).

The poetry also contains accumulatio, e.g., 12:7: "I have forsaken my house, I have abandoned my heritage, I have given the beloved of my soul into the hands of her enemies." In the call passage Jeremiah accumulates 6 verbs; the outside 4 are arranged in a chiasmus (1:10).

In both poetry and prose, rapid accumulation of verbs results in asyndeton. In the poetry: "*Blow* the trumpet through the land, *cry aloud* and *say*, '*Assemble*, and *let us go* into the fortified cities' " (4:5); "*Run to and fro* through the streets of Jerusalem, *look* now, and *take note*, and *search* her squares . . ." (5:1); see also 49:8, 30. In the prose: the 6 infinitive absolutes in rapid succession in the Temple Sermon (7:9). Like repetition, accumulatio adds strength to discourse. The classical orators used it when heaping up praise or blame. Here in 7:9 Jeremiah assesses blame. Jeremiah uses accumulatio to press home the message of divine judgment upon the nations in 25:27, and in 31:7b he emphasizes the joy of Israel's future salvation.

3. Metaphors and Related Tropes. Jeremiah, like every good orator, peppers his discourse liberally with tropes. These give added strength to the discourse and also function to kindle the imagination of his audience.

a. Metaphor. Jeremiah uses an array of vivid metaphors. Some are brief, i.e., only a word or two, while others expand into an entire verse of poetry (8:23—Eng 9:1). Jeremiah also employs the simile (see b.), which is a metaphor using "as" or "like" in its comparison (Heb *kĕ*). In poetry, metaphors and similes appear frequently in com-

bination, which can weaken the metaphor. These combinations are weakened still more when a colon before or after contains the other element in the comparison, or else a term of clarification. We find the same thing happening in the prose.

Jeremiah's metaphors describe Yahweh, the false gods, kings, the nation, the enemy, and even Jeremiah himself. They also give lucidity to the enormity of evil within the nation and the destruction which will come as a result of this evil. Yahweh is "the fountain of living waters"; the false gods by contrast are but "broken cisterns" (2:13). Mistaken foreign policies and religious adventurism come under attack when Jeremiah asks why people go to Egypt "to drink the waters of the Nile," and to Assyria "to drink the waters of the Great River?" (2:18). Jeremiah speaks of the fractured covenant relationship when he says to the people, "you broke your yoke and burst your bonds" (2:20). In 2:21 the nation which was once a "choice red vine" is now said to have degenerated into a "wild vine." The nation is also personified as a (shameful) daughter. His metaphors here are "daughter of Zion" (4:31; 6:2, 23); "(virgin) daughter of my people" (4:11; 6:26; 8:19, 21; 14:17 [MT]; etc.); "changeable daughter" (31:22); and "virgin Israel" (18:13; 31:4, 21). The metaphor of the harlot daughter almost becomes an allegory in 4:30–31. The "daughter" metaphor is also used for Egypt (46:11, 24), Ammon (49:4), and Babylon (50:42; 51:33).

The most disparaging metaphors, Jeremiah reserves for his own nation Israel. He calls the nation "a restive young camel interlacing her tracks," or a "wild ass . . . in her heat sniffing the wind" (2:23c–24a); again people are said to be "well-fed lusty stallions" (5:8). Jeremiah attacks the luxurious cedar buildings in Jerusalem, calling them a "forest" (21:14; cf. 1 Kgs 7:2), or else "Lebanon" (22:23). This latter metaphor becomes clarified in the Targums (Vermes 1958: 4). Inhabitants of these buildings are said—with a bit of irony perhaps—to be "nested among the cedars." Jeremiah seeks to evoke repentance from the people with a couple of agricultural metaphors: "Break up your fallow ground, and sow not among thorns" (4:3).

In describing the enemy, Jeremiah uses the common metaphor the "lion." Earlier foes from Assyria were roaring "lions" (2:15); now the foe from the N is another "lion" (4:7; 5:6), or else a "wolf" or a "leopard" (5:6). In 8:17 Babylon is depicted as 2 different varieties of snakes. Other metaphors in 4:11 ("desert wind") and 15:12 ("iron, iron from the north, and bronze") are weakened by clarification, which may mark them as later insertions into the text. In 25:32b the enemy is a "great tempest" (cf. 6:22 which has "great nation"). The foreign kings coming with their armies from the E are "shepherds with their flocks" (6:3). Judah's kings are also "shepherds" (2:8; 22:22; 23:1–4), this metaphor being so common it may not even have been perceived as such. King Jehoiachin, says Jeremiah, has become in defeat a "broken pot" (22:28). As for Jeremiah himself, in order that he may withstand the opposition sure to come from people in Jerusalem, Yahweh promises to make him into "a fortified city, an iron pillar, and bronze walls" (1:18). These metaphors appear in prose, and the narrator expectedly provides words of explanation in the verse following.

b. Simile. This trope is widely used not only in Hebrew but in other ancient Near Eastern languages. People of antiquity had a natural propensity to think analogically. Similes, therefore, are very old, going back all the way to the Sumerians (Kramer 1969). They appear also in Akkadian treaties and in various sapiential writings (*ANET*, 539–41; 598 lines 106–7).

Jeremiah uses the simile extensively, covering with it much of the same ground he covers with the metaphor. The wayward individual is "like a horse plunging headlong into battle" (8:6). Wayward Israel waits on the road (for lovers) "like an Arab in the wilderness" (3:2), yet she cries out rebelliously against Yahweh "like a lion in the forest" (12:8). When judgment comes, however, she will cry "like a woman in labor" (6:24; 13:21; 22:23; etc.). During the drought, wild asses wander on the bare heights where they "pant for air like jackals" (14:6). The besiegers of Jerusalem are "like keepers of a field against her round about" (4:17); their quiver is "like an open tomb" (5:16); and the roar of their coming is "like the sea" (6:23). Yahweh will scatter the people "like the east wind" (18:17), or "like chaff driven by the desert wind" (13:24). His coming will be "like the clouds, his chariots like the whirlwind" (4:13). His wrath goes forth "like fire" (4:4; 21:12). Dead bodies shall fall "like dung upon the open field, like sheaves after the reaper" (9:21—Eng 9:22). Jeremiah questions Yahweh about the grim scenario, "Why should you be like a stranger in the land, like a traveler who turns aside for the night? Why should you be like a man confused, like a mighty man who cannot save?" (14:8–9). Personal enemies treat Jeremiah "like a gentle lamb led to the slaughter" (11:19). But when Jeremiah's faith is renewed, he exclaims, "Yahweh is with me as a dread warrior" (20:11). Similes of this same general sort appear in the foreign nation oracles, e.g., 46:7–8; 51:27c, 34b; etc.

The simile is extended into a comparison (similitudo) when strengthened by the *kĕ . . . kēn* and *ʾākēn . . . kēn* constructions, e.g., in poetry: "*as* a thief is shamed when caught, *so* the house of Israel shall be shamed" (2:26; also 5:27; 6:7; cf. Deut 8:20); "*surely* as a faithless wife leaves her husband, *so* you have been faithless to me, O house of Israel" (3:20); and in prose: "*like* the clay in the potter's hand, *so* are you in my hand, O house of Israel" (18:6; also 24:5, 8).

c. Abusio. One of the harsher tropes is the abusio, which is an implied metaphor. This type of metaphor behaves somewhat extravagantly in that a word is taken from one usage and put to another. Abusios can be made from verbs, e.g., in 5:8: "each man *neighing* for his neighbor's wife"; in 7:28: "truth has *perished*, it is *cut off* from their lips"; in 4:28; 12:4; and 23:10: "the earth *mourns*"; and in 51:44: "the nations shall no longer *flow* to him." Other abusios are created by nouns, e.g., in 4:4: "remove the foreskin of your *hearts*"; and in 18:18: "come, let us smite him with the *tongue*."

d. Euphemism. On occasion Jeremiah substitutes a more mild term or one with adjunct meaning in order to avoid saying something either too harsh or too explicit. This is euphemism. In 8:14 he says, "Let us go into the fortified cities and *be silent* there, for Yahweh our God *has silenced us*." "Be silent" (Heb *dmm*) is a euphemism for "die" (RSV: "perish"). The same verb appears in 25:37: "the peaceful folds are *made silent*" (RSV: "devastated"). Other

usages of *dmm* in 48:2; 49:26; and 51:6 may also be euphemistic. In 13:22b Jeremiah says, "because of the greatness of your iniquity your *skirts* are uncovered." He really means her *pudenda*. Again in 13:26: "your *shame* will be seen" (BDB 886).

4. Argumentation. To a large extent Jeremiah's rhetoric is a rhetoric of argumentation. It differs in this important respect from the rhetoric of Deuteronomy with which it has other important affinities. Deuteronomy preaches the conditional terms of the covenant warning people what will happen if the covenant is broken. Jeremiah presupposes an entirely different reality: The covenant *has* been broken, and the people now must either repent or be punished. Jeremiah cannot preach this message without encountering argument from others, and it goes without saying that he must also argue in return. It is true, of course, that much of Jeremiah's preaching is like that of the other prophets, i.e., preaching based on authority. His indictments and judgments are stated in unequivocal terms. Jeremiah does not make appeals to ethos as the classical orators do. At the same time a surprising amount of his discourse is dialogical—indeed Jeremiah comes closer to Greek dialectic than any of the other Hebrew prophets. There is a dialectic going on between Yahweh and the people, another between Yahweh and himself, and still another between himself and the people. Certain speeches, e.g., 3:1–5 and 5:1–8, are genuinely open-ended in the sense that the audience is left at the end to draw its own conclusions. This brings the prophet and his audience into partnership; together they must discern the import of Yahweh's word.

a. Protasis—Apodosis. The protasis-apodosis form ("If . . . then . . .") is at home in legal discourse. Deuteronomy, for example, says that if the people obey Yahweh and do his commands, they will be set above the nations and blessings will come upon them; if they do not obey and fail to do Yahweh's commands, then curses will come (Deut 28:1–2, 15). Jeremiah says, however, in one of his early calls for reform, that if Israel returns to Yahweh and clears away the vestiges of false worship, then she can use the oath once again and the Abrahamic covenant will achieve its intended blessing upon the nations of the world (4:1–2; Bright *Jeremiah* AB, 21). Later on after judgment has come Jeremiah uses the form to emphasize Yahweh's ongoing commitment to the Abrahamic covenant (31:36–37).

b. Arguments *a minori ad maius*. The argument *a minori ad maius* (Heb *qal vechomer*) is from the lesser to the greater, and it appears in the OT in legal as well as other parenetic discourse, e.g., Exod 6:12; Deut 31:27. In 3:1 Jeremiah argues that *if* a divorced woman who has remarried cannot return to her former husband (so Deut 24:1–4), *how much more* can Israel—who has had many lovers—not return to Yahweh. In 12:5 Yahweh tells Jeremiah that *if* running on foot has tired him, *how much more* will he not be able to compete with horses; *if* in a safe land he falls down, *how much more* will he likely fall in the jungle of the Jordan. An argument *a minori ad maius* is used against the nations in 25:29.

c. Rhetorical Question. The rhetorical question has an evocative function in discourse, in fact it aims usually at intimidation. Rhetorical questions are posed solely for effect. They call for a response, but none can be made because the answer to the question is either obvious or else one the audience will not want to give. The rhetorical question was widely used in antiquity and appears in various literatures (e.g., *ANET*, 597 lines 36–38).

Jeremiah uses the rhetorical question, sometimes a pair of them, as a foil for some more important statement he wishes to make. Or sometimes his preferred subject is yet another question. In 18:20: "Is evil a recompense for good? Yet they have dug a pit for my life." Jeremiah accumulates rhetorical questions, though not to the extent Amos does in his classic litany in Amos 3:3–8. Jeremiah's questions also differ from those of Amos in that his foils are less mechanical; there is some linkage of thought in almost every case to his preferred subject. Often a common word unites the foil and the preferred subject.

Jeremiah puts the rhetorical question to two specialized uses. In one a single or double question lifts up some paradigmatic behavior, a common happening, or something built into the natural order; what follows is then a portrayal of Israel's behavior, which is scandalous. In 2:11: "Has a nation changed its gods even though they are no gods? But my people have changed their glory for that which does not profit"; in 2:32: "Can a maiden forget her ornaments, or a bride her attire? But my people have forgotten me days without number"; also 5:22a, 23; 18:14–15. Somewhat different is 13:23 where the question foils an ironic comment: "Can the Ethiopian change his skin, or the leopard his spots? Then also you can do good who are accustomed to do evil!"

The other specialized use is the 3-fold question in the form *hă . . . ʾim . . . maddûaʿ* ("If . . . if . . . why then. . . ?"), which appears 8 times in the book and is another signature of Jeremiah (2:14, 31; 8:4–5, 19, 22; 14:19; 22:28; and 49:1). Here the first two questions are a foil for a third which expresses a troubling vexation. This vexation is either about something incongruous which the prophet observes, or else it has to do with the weakened condition of people facing war and imminent defeat. In 2:31: "Have I been a wilderness to Israel? Have I been a land of thick darkness? Why then do my people say, 'We are free, we will come no more to you?' "; in 2:14: "Is Israel a slave? Is he a homeborn servant? Why then has he become a prey?" In 22:28 it is King Jehoiachin who is in a weakened condition. In 30:6 the form is modified to a statement and two questions: "Ask now and see, can a male bear a child? Why then do I see every soldier with his hands on his loins like a woman in labor?" In 8:19 the form works differently because Yahweh interrupts the people to ask the third more pressing question (Holladay 1962: 48–49).

Jeremiah sometimes answers his own rhetorical questions (hypophora), e.g., 6:15 [= 8:12]: "Were they ashamed when they committed abomination? No, they were not at all ashamed; they did not know how to blush." See also 6:20; 30:15; 31:20; 46:7–8. In 12:9 the two rhetorical questions containing a wordplay.

Some climactic rhetorical questions which originally expressed harsh judgment were later converted into affirmations of hope, e.g., "and would you return to me?" in 3:1 becomes "yet return to me"; also "and shall he be saved from it?" in 30:7 becomes "yet from it he shall be saved" (Holladay 1962: 53–4). Numerous rhetorical questions appear also in the prose, e.g., 7:19 (correctio); 23:23–24;

27:17; 37:19; 40:15b; 44:7–9; etc. One finds no rhetorical questions, however, in the oracles against Babylon (chaps. 50–51).

d. The Exaggerated Contrast. In ancient Hebrew as well as in Arabic and some modern languages, two antithetical statements can be juxtaposed solely to emphasize the one appearing second. This has the practical effect of making the second statement more important than the first. The idiom has been called the "exaggerated contrast" (Carleton 1892; Hommel 1899–1900), and good examples are to be found in Deut 5:3 and Amos 7:14. The first statement will negate an idea, but the speaker does not really mean to deny it for the idea is otherwise valid or true. Jeremiah, for example, says that Yahweh did not command the fathers to make burnt offerings and sacrifices when the people left Egypt; he commanded them to obey his voice (7:22–23). Following Josiah's death and the deposition of Jehoahaz, he also says, "Weep not for him who is dead, nor bemoan him, but weep bitterly for him who goes away" (22:10).

e. Surrender. In the trial which followed the Temple Sermon, Jeremiah submits himself to the will of the court. He says, "But as for me, behold, I am in your hands. Do with me as seems good and right to you" (26:14). In classical rhetoric this sort of statement was considered a veiled argument, and it was given the name "surrender" (permissio; *ad Herennium* IV xxix 39).

f. Descriptio. To continue with Jeremiah's remarks to the court, we find him describing the consequences of possible court action. He says, "Only know for certain that if you put me to death, you will bring innocent blood upon yourselves and upon this city and its inhabitants, for in truth Yahweh sent me to you to speak all these words in your ears" (26:15). This too has argumentative value, and classical rhetoricians called such a move descriptio which they said could be used both in prosecution and defense (*ad Herennium* 4.39.51). Here, of course, Jeremiah is arguing his own defense.

5. Humor and Irony. The humorous element in Jeremiah's preaching has not received the attention it deserves, despite the fact that irony in particular is well documented among the ancient Hebrews. Humor is still difficult if not impossible to define precisely, and its identification depends largely upon individual interpretation. There is, in any case, humor in many of Jeremiah's utterances, and one may imagine that the prophet was at times rather playful with his audience. He shares with them sudden flashes of insight, and with his quick wit he creates wordplays, caricatures, and verbal irony for which Hebrew discourse generally has been justly celebrated. His playfulness, however, remains serious when the message is serious (Knox 1963: 329). Wordplays emphasize and threaten; hyperbole becomes his countermeasure for audience resistance; and irony is but another way of telling the truth.

a. Paronomasia. Broadly defined, paronomasia is either a play on multiple meanings of identical or cognate words, or else a play on different words close enough in sound so as to make assonance (near-rhyme) or puns. An extensive list of paronomasia in the OT has been compiled by Casanowicz (1893).

Jeremiah is particularly fond of assonance, which is similar to alliteration (see 1.h.) in that the play is only on sound, although assonance can function to emphasize what is being said (Saydon 1955). Examples of assonance: in 1:10; 18:7; and 31:28, *lintôš wělintôṣ* ("to pluck up and to break down"); in 2:12, *šōmû šāmayim* ("Be appalled, O heavens"); in 2:20, *gibʿâ gĕbōhâ* ("high hill"); in 6:11, *mālēʾtî nilʾêtî* ("I am full, I weary myself"); in 9:9—Eng 9:10 and 31:15 (reversed), *bĕkî (wā)nehî* ("weeping and wailing"); in 49:30, *nūsû nūdû* ("flee, wander away"); in 51:44, *bēl bĕbābel* ("Bel in Babylon"); see also 6:1b; 10:25c; 12:13a; 14:6a; 16:19a. Examples of puns: in 1:11–12, *šāqēd / šōqēd* ("almond / watching"), which is similar to the pun in Amos 8:1–2; in 17:11, *ʿōśeh ʿōšer* ("he who gets riches"); in 50:37–38, *ḥereb / ḥōreb* ("sword / drought"); and 17:6 and 8 where *yirʾeh / yiraʾ*(Kt) ("see / fear") balance two verses of poetry. Jeremiah also plays on multiple meanings. In the poetry: on *mʾs* in 6:30 (cf. 1 Sam 15:23); on *ʾsp* in 8:13–14; and on *šûb* in 3:12, 14, 22 (cf. Hos 14:5—Eng 14:4); 8:4–5; and 31:21c–22a. In 6:7 the unusual use of the verb *qrr* in the second colon makes the wordplay: "as a well keeps its water cool, so she keeps cool about her wickedness." In 22:22: "The wind shall shepherd all your shepherds."

There are a number of similar wordplays in the prose. In the second vision of chapter 1 Yahweh says, "Out of the north evil shall *open up* upon all the inhabitants of the land . . . and everyone shall set his throne at the *opening* of the gates of Jerusalem" (vv 14–15). To Jeremiah personally Yahweh says, "Do not *be dismayed* by them, lest *I dismay you* before them" (v 17b). In chap. 19 Yahweh tells Jeremiah to buy a "flask" *(baqbuq)* which, when broken, will dramatize this prophetic word: "And I will make empty *(ûbāqqōtî)* the plans of Judah and Jerusalem . . ." (vv 1, 7). In addressing the false prophets, Jeremiah plays on *maśśāʾ* which can mean either "burden" or "oracle" (23:33 LXX). In 28:15–16 Jeremiah plays on "send" in his judgment upon Hananiah: "Listen, Hananiah, Yahweh has not *sent* you . . . Therefore thus says Yahweh, 'Behold *I will send you* off the face of the earth. . . .'" In 34:15–18 three wordplays appear close together in the judgment upon Zedekiah: the expression *qrʾ dĕrôr* ("proclaim liberty"), double uses of the verb *šûb* ("turn, return, repent"), and the verb *krt* ("cut"). In a couple instances a single word having multiple meanings is played upon. In 5:13 when Jeremiah says the prophets will become *rûaḥ,* he means, of course, "wind" or "hot air," not "spirit." The latter they should possess but do not. In 9:3—Eng 9:4 Jeremiah plays on "Jacob," using its disparaging meaning of "cheater" (cf. Gen 27:35–36).

Like the classical poets, Jeremiah likes to play on names, whether personal names or place names. The name proposed for the future Davidic king is "Yahweh is our righteousness" (23:6), a deliberate play—with reversal—on Zedekiah which means "righteous of Yahweh" or "righteous is Yahweh." The people likewise had fun at the expense of Jeremiah when they dubbed him "Terror on Every Side" (20:10; Bright *Jeremiah* AB, 132–33), which was a favorite expression of his. In 4:15 a play is made on Dan: *maggîd middān;* in 6:1 on Tekoa: *ûbitqôaʿ tiqʿû;* and in 48:2 on Heshbon: *bĕḥešbôn ḥošbû,* and Madmen: *madmēn tiddōmî;* cf. Amos 5:5c; Zeph 2:4a.

b. Hyperbole. Jeremiah very often uses hyperbole, which is deliberate overstatement. Hyperbole is common in impassioned discourse, particularly when there is conflict and the speaker must make his point to an audience

that will not listen. Hyperbole is used to lash out against the enormity of evil. Idolatry is Judah's most heinous crime, but another following not far behind is the nation's failure to practice justice and righteousness. Hyperbole appears also in descriptions of the approaching enemy, what destruction that enemy will bring, and the intense grief which all of this will bring to the people, Jeremiah included. But Jeremiah's earliest use of hyperbole comes in a divine affirmation. Yahweh in his call of the prophet is reported as having said, "Before I formed you in the womb I knew you, and before you were born I consecrated you; I appointed you a prophet to the nations" (1:5).

In his earliest preaching Jeremiah resorts to hyperbole in addressing the prevailing fertility worship, e.g., in 2:20: "For upon every high hill and under every green tree you bowed down as a harlot" (cf. 3:6, 13; 17:2); in 2:28 (MT): "For as many as your cities are your gods, O Judah" (cf. 11:13); and in 3:2: "Where have you not been lain with?"

Jeremiah is hyperbolic about the people's inability to listen, exhibit shame, or repent, e.g., in 6:10: "Behold, their ears are uncircumcised, they cannot listen"; in 6:15b [= 8:12b]: "they did not know how to blush"; and in 5:3: "They have made their faces harder than rock, they have refused to repent." Yahweh's command that Jeremiah and his search party run through Jerusalem to find just one righteous man (5:1) is hyperbolic; so also the statement made to King Jehoiakim about being hotly competitive in cedar acquisition for new royal buildings in Jerusalem (22:15). In 22:17 Jeremiah once again caricatures Jehoiakim in saying, "But you have eyes and heart only for your dishonest gain."

Hyperbole comes to the fore in Jeremiah's preaching when he announces the foe coming from the north. In 8:16: "The snorting of their horses is heard from Dan, at the sound of the neighing of their stallions the whole land quakes." Observing the terrified defenders of Jerusalem Jeremiah says, "Why do I see every soldier with his hands on his loins like a woman in labor? Why has every face turned pale?" (30:6). People are told by the prophet to "*roll* in ashes" (6:26). The widows, he says, will be "more in number than the sand of the seas" (15:8). With the fate of Jerusalem sealed, Jeremiah says to those who still harbor illusions of deliverance, "For even if you should defeat the whole army of Chaldeans who are fighting against you, and there remained of them only wounded men, every man in his tent, they would rise up and burn this city with fire" (37:10; cf. 2 Sam 5:6).

Jeremiah uses hyperbole also in the judgments made upon foreign nations, e.g., 25:31, 33; 49:21; 50:46; and 51:9. He is hyperbolic when speaking about his own personal grief, e.g., in 14:17: "Let my eyes run down with tears night and day, and let them not cease." There is hyperbole finally in a passage which speaks about restoration (50:21), but we cannot be certain whether this comes from Jeremiah.

c. Irony. Ancient Hebrew humor is to a large extent irony, and there are few who express irony better than the prophets (Knox 1963: 328–31). Isaiah is the grand master of verbal irony, with Jeremiah a peer certainly and possibly even his equal in certain regards. In verbal irony the underlying meaning is opposite of the surface meaning. Speakers resort to irony when straight talk fails, when they are powerless usually and numbered among the disenfranchised. Ironic language therefore is desperate and at the same time extravagant. It commonly speaks to incongruities, elucidating them with razor sharpness (Good 1965: 24–33).

Jeremiah uses irony to address a variety of incongruities. The greatest of these is Israel's reckless abandonment of Yahweh and the covenant demands, while she at the same time shows enormous devotion to idols and the worship associated with them. Jeremiah observes how adept people are at doing evil, e.g., in 2:33: "How *well* you direct your course to seek lovers"; and 4:22: "They are *skilled* in doing evil." Here and in other examples the ironic statement is followed by a non-ironic statement which gives the former clarification. In 8:5: "They *hold fast* to deceit, they refuse to return"; in 14:10: "They have *loved* to wander thus, they have not restrained their feet." People have, it seems, a commitment to evil; in fact they enjoy being victimized by it: "my people *love* to have it so" (5:31). They are never long away from other attachments (2:24c). Sexual preference as expressed in fertility worship is mocked when Jeremiah deliberately reverses the sexes in 2:27, making the tree masculine and the stone feminine. Idols are helpless, however, when crises develop and deliverance is being sought (2:27b–28; cf. Deut 32:38b). They may be beautiful in appearance, nevertheless because they are without life they can do neither good nor evil (10:2–5, 8–9—if this be from Jeremiah). Jeremiah's urging of the people to increase the number of their abominable sacrifices is an example of epitrope (7:21; see also 44:25b and Hos 4:17). The national character is ironically described in 8:5 where Israel is called a "brilliant apostate" (*měšūbâ nişşahat*), an example of oxymoron.

The personifications "virgin daughter" and "virgin Israel" are also ironic (14:17; 18:13; 31:21; cf. Amos 5:2). Jeremiah is ironic when talking about coming judgment, e.g., "How you will be *favored* when pangs come upon you" (22:23). People when they are in exile "can serve other gods day and night" (16:13). Jeremiah uses epitrope also in 15:2 when he gives the people various options after his own mediation on their behalf has been rejected by Yahweh. The expression, "Nebuchadnezzar, my servant" may be an oxymoron since "my servant," when used by Yahweh, is a term of endearment. The description of exhumed bones which will be set before the astral deities whom the people have loved and served in 8:1–2—if it derives from Jeremiah—is burlesque. Jeremiah uses irony in addressing foreign nations, e.g., 46:11; 48:36; and 51:8. And there is irony in the curses which the prophet hurls at his own birth in 20:14–15. Contrasting terms which frame both of these verses point to a deeply moving incongruity, i.e., the joy and blessedness felt by Jeremiah's parents the day he was born, and the enormous despair which Jeremiah now himself feels (Lundbom 1985).

6. Drama. In the Jeremianic preaching there is more than a little theatrics mixed in. For example, he will now and then turn to address imaginary audiences (apostrophe): the heavens in 2:12; Jerusalem in 4:14; the land in 22:29; and Yahweh's sword in 47:6. He imagines a ready scribe at his side when he says in 22:30, "Write this man down as childless. . . ," referring to the deposed King Jehoiachin. The prophet is engaging in drama also when

he alternates speakers in his prophetic speeches. This creates in the speeches an antiphonal quality which Jeremiah may have appropriated from the psalms. In 6:4–5 words spoken by the enemy frame the frightened cry of Jerusalem's besieged ("Woe to us . . ."). In 8:18–21 an entire poem builds on an elaborate speaker chiasmus:

Jeremiah: My joy is gone
grief is upon me
my heart is sick
People: Hark a cry . . .
'Is Yahweh not in Zion?
Is her King not in her?'
Yahweh: Why then have they provoked me to anger with their images
and with their foreign idols?
People: The harvest is past
the summer is ended
and we are not saved
Jeremiah: For the wound of the daughter of my people I am wounded
I mourn
dismay has taken hold of me

A similarly constructed poem is found in 17:13–16a. Other Jeremianic poems combine key word structures with alternation of speaker (Lundbom 1975: 36–51, 70–96). Jeremiah's oracles to the foreign nations may also be taken as dramatic presentations since they are spoken to audiences too far distant to hear (cf. Amos 1–2).

E. Prophetic Symbolism: Act and Being

Jeremiah's prophetic message is more than words, although words in the ancient world were believed to be invested with the power to bring about their actualization. Jeremiah like many of his predecessors went a step further and dramatized the spoken word with symbolic action (Robinson 1927). He buried a loin cloth and later recovered it ruined in order to symbolize the spoiled pride awaiting a nation which abandons its covenant with Yahweh (13:1–11). He broke an empty flask at the Potsherd Gate to symbolize Yahweh's determination to make empty the plans of an ambitious people in Judah and Jerusalem (chap. 19). Together with a fringe group of Rechabites, he went to the temple to test their resolve not to drink wine—all for the purpose of giving others an object lesson on obedience (chap. 35). When the Babylonians began asserting rule over Palestine, Jeremiah wore thongs and yoke bars around his neck to symbolize subservience which Judah must now offer to Nebuchadnezzar (chap. 27). Later in Egypt, Jeremiah buried stones in the pavement before Pharaoh's palace at Tahpanhes. These were to symbolize the future erection of Nebuchadnezzar's throne on that site (43:8–13). But when Jerusalem was about to fall, Jeremiah bought property at Anathoth from his cousin Hanamel to point people ahead to the day when Yahweh would restore them to the land (chap. 32).

These actions, like the spoken word in all its fullness, were efficacious in bringing things to pass. Symbolic action, therefore, was a natural extension of prophetic preaching. At the same time it counted for nothing, just as the prophetic word counted for nothing, if Yahweh was not behind it. Jehoiakim's destruction of Jeremiah's scroll (chap. 36) and Hananiah's breaking the yoke bars off Jeremiah's neck (chap. 28) were symbolic acts which came to nothing.

Jeremiah was himself the fullest expression of divine prophecy when his life was perceived to be the symbol (Herder 1833: 48). His celibacy had symbolic meaning (16:1–9), just as Hosea's broken marriage and Ezekiel's loss of his wife did. Jeremiah's suffering, particularly in the days just prior to Judah's collapse, took the focus almost entirely off the prophetic word and the symbolic act and put it on the prophet himself. Jeremiah's entire being had now become the message—a dual message about a suffering nation and a suffering God in whose service the prophet steadfastly remained to the very end. Messages of such a grand scope are repeated in the Suffering Servant of Isaiah 53 and in Job, but they are not seen again until we come to the NT gospels where the divine message is acted out in the life, death, and resurrection of Jesus Christ.

JACK R. LUNDBOM

JEREMIAH, ADDITIONS TO. The "Additions to Jeremiah" are those two books in the Septuagint (LXX) which have no counterpart in the canonical text of Jeremiah. These additions consist of two originally separate and independent books: (1) the book of Baruch (Bar 1:1–5:9), consisting of an introduction, prayers, and psalms; and (2) the Epistle of Jeremiah (vv 1–73 [= Baruch 6 in Jerome's Latin Vulgate]), which is a satirical and impassioned harangue against idols and idolatry. These additions are regarded by Jews and Protestants as apocryphal and by Roman Catholics as deuterocanonical.

Just as in antiquity where the book of Baruch and the Epistle of Jeremiah were regarded as separate books (in ancient Greek manuscripts they were usually separated from one another by the canonical book of Lamentations), here also the two additions will be treated separately.

A. The Book of Baruch
1. The Imputed Author
2. The Major Sections
3. The Book as a Whole
4. Canonical Status

4. Original Language
5. Literary Merit
6. Canonicity
7. Date
8. Place of Composition
9. Ancient Versions

A. The Book of Baruch

The book of Baruch, which is sometimes called 1 Baruch to distinguish it from the *Apocalypse of Baruch* in Syriac and Greek (i.e., *2* and *3 Baruch* respectively), consists of four major sections: a prose introduction (1:1–14); a prayer of confession (1:15–3:8); a poem in praise of Wisdom (3:9–4:4); and a psalm of encouragement and hope (4:5–5:9). Because each of these sections may have had a different author and date of composition, each must be treated separately.

1. The Imputed Author. The secretary and confidant of the prophet Jeremiah, Baruch son of Neriah was from a very prominent Judean family, his brother Seraiah, for example, being the chief quartermaster of Judah's last king (Jer 51:59), Zedekiah (ca. 597–587 B.C.). It was Baruch who, on two separate occasions, courageously copied and delivered Jeremiah's Oracles of Destruction to King Jehoiakim and who, later on, after being accused by Azariah son of Hoshaiah of being a Babylonian sympathizer, was taken, along with Jeremiah and others, to Egypt (Jer 43:1–7). Inasmuch as the Bible does not say where, when, or how Baruch died, it is not surprising that in this matter quite conflicting traditions abound (see Moore 1977: 268–69). See also BARUCH (PERSON) #1.

This book bearing Baruch's name is best regarded as a pseudepigraphon, its ancient author(s) trying to increase the book's authority by attributing it to the eminent and long-dead scribe. Apart from Kalt (1932), virtually no 20th-century scholar has ascribed Baruchian authorship to the entire book; however, a few scholars, mostly Roman Catholics such as Stoderl (1922: 1–23), Goettsberger (1928), Heinisch (1928), and Penna (1956), have argued for Baruchian authorship of some portion of it, usually Bar 1:1–3:8 (for an extensive survey of scholarly opinion regarding the book's authorship, see Burke 1982: 18–20).

But even though the book of Baruch does indeed contain concepts and phraseology very much reminiscent of Jeremiah (esp. in Bar 1:15–3:8), as well as references to a number of historical personages and events from 597 B.C. to shortly before 539 B.C., there are certain imprecisions and errors of fact in its introduction, certain contradictory moods and attitudes between the various sections as well as certain strikingly different theological positions between them, not to mention Baruch's dependence upon such biblical and extrabiblical books as Job, Daniel, and Sirach—all of which argue against Baruchian authorship for any of the material in Baruch (for details on all these matters, see below; cf. also Burke 1982: 20–23).

As will be argued later, the actual author was probably a Palestinian Jew who, sometime during the early 2d century B.C., compiled several originally independent psalms and then wrote an introduction for them (however, Schürer *HJP*^{2} 3/2: 734–35 would have all of 1:15–3:8 composed by one author). It was sometime after this that someone else interpolated the wisdom poem of 3:9–4:4, which Nickelsburg and Stone (1983: 216) regard as a Greek composition (but see below) dating to the 2d or 1st century B.C.

2. The Major Sections. a. Prose Introduction (1:1–14). The introduction, which serves as a covering letter to Baruch's message, is awkward and imprecise in both style and content (e.g., in the *fifth year* [v 2] of what? Where was the Sud River mentioned in v 4 [Bewer 1942]?). Moreover, the introduction contains serious historical inaccuracies

characteristic of later biblical materials; e.g., v 7 has one Jehoiakim (Gk *Ioakim*) serving as high priest (see Myers, *Ezra-Nehemiah* AB, 197–98; Moore 1977: 271); v 8 has Nebuchadnezzar returning the sacred vessels he had taken from the Temple in 597 B.C. (cf. Ezra 1:7–11); and v 11 has Belshazzar rather than Nabonidus as the son of Nebuchadnezzar, an anachronism shared with the book of Daniel (Dan 5:2, 11, 18, 22); however, Stoderl (1922: 22) argues for the correctness of such an assertion.

While Baruch's advice to the Jews to be cooperative and pray for the life of Nebuchadnezzar and his son (v 11) is reminiscent of Jeremiah's advice to the exiles (Jer 27:6–8 and 29:4–7), it nonetheless stands in sharp contrast to Bar 4:15–16, 21, 25–26, 31–35, where a much more hostile attitude prevails.

That the introduction was translated from Hebrew cannot be denied. Not only are there some Hebraisms (e.g., compare the LXX's "the hand was according to each" [v 6] with the LXX of Deut 16:10, 17), but there are two mistranslations that can only be explained from the Hebrew ("prisoners" instead of "craftsmen" in v 9 [the *Hip'il* participle *masgēr* can mean either]; and "manna" instead of "cereal offerings" [Heb *minḥâ*] in v 10).

The introduction's errors and its awkwardness and imprecision in both content and style heighten for most readers its artificiality and secondary character. Nonetheless, its author was undoubtedly the compiler of most, if not all, of Baruch.

b. Prayer of Confession (1:15–3:8). The prayer consists of two parts: (1) a confession for the Palestinian remnant (1:15–2:5); and (2) a petition for the exiled community (2:6–3:8), expressing both their repentance (2:6–35) and their innocent suffering (3:1–8). Moore (1977: 291–94) argues for there being three separate prayers here, each with a different author (but see Goldstein 1979–80: 180, n. 3 and Nickelsburg 1981: 152, n. 24).

The central theme of the prayer for the Palestinian remnant (1:15–2:5) is well represented by vv 15, 17–18a:

> Righteousness belongs to the Lord our God, but confusion of face, as at this day, to us, the men of Judah, to the inhabitants of Jerusalem . . . because we have sinned before the Lord, and have disobeyed him.

The confession is strongly Jeremianic (cf., for example, "to the men of Judah and the inhabitants of Jerusalem" in v 15 with Jer 4:4; 11:2, 9; 17:25; 32:32; 35:13; the list of the sinners in v 16 with those in Jer 32:32; also 1:21b with Jer 26:4–5). The prayer is also deuteronomistic (cf., for example, v 18 with Deut 4:8; 9:23; v 19 with Deut 9:7, 24; v 21 with Deut 4:30; 9:23; 28:1, 2, 15; and Bar 2:5 with Deut 28:13).

The prayer of the exiled community (2:6–3:8) is even more reminiscent of the book of Jeremiah: distinctive views and phraseology of the prophet are represented in almost every verse. In fact, some of the shared readings are peculiar to either the Hebrew or Greek text of Jeremiah (cf., for example, Bar 2:13, 19, 21, 23, 25, 32 with Jer 30:24; 36:7; 27:11–12; 7:34; 36:30; 43:11, respectively).

That the prayer was translated from Hebrew is suggested, a priori, by the simple fact that it is *a prayer*. But that surmise is confirmed by two mistranslations that can best be explained by presuming a Hebrew *Vorlage*, namely, in 2:23 the Greek translator read Heb *ḥws* ("outside") instead of *ḥswt* ("the streets" [Tov 1975: 23, n. i]); and *mēt* ("the dead") for *mētê* ("men") in 3:4. In any event, the prayer is appropriate for an exilic community in Babylon, Egypt, or elsewhere.

But even more striking than parallels between the prayer and the book of Jeremiah is the close relationship between the prayer in Baruch and the one in Dan 9:4–19. The two prayers share a number of identical readings (e.g., Bar 1:15b, 21a; 2:1a, 7b, 10a, 17a and Dan 9:7b, 10a, 12a, 13b, 14 [last portion], 18b, respectively) as well as number of parallels which are closer to one another than either is to an older biblical source (e.g., Bar 1:15a, 18; 2:2, 8, 9, 10, 11, 13a, 19 are parallel to Dan 9:71a, 9c–10, 12c–13a, 13c, 14b, 10, 16b, 18, respectively).

Either one prayer is based upon the other, or both are based upon some common source such as a temple or synagogal liturgy. Most scholars, including Wambacq (1959a), Battistone (1968: 48–73), Gilbert (1972), Dancy (1972a: 171, 178–79), Tov (1976a: 27), and Goldstein (1979–80: 196–99), have argued that Baruch's prayer is based on Daniel's. Stoderl (1922) is almost alone in arguing for the reverse scenario. A handful of scholars, including Marshall (*HDB* 1: 251–54), Charles (1929: 227), Hartman and Di Lella (*Daniel* AB, 248–49), Moore (1977: 291–93), and Schürer (*HJP*^{2} 3/2: 736) have maintained that both prayers are based upon a common source.

Those scholars defending the priority of Daniel's prayer rightly observe that Baruch's prayer is the longer (47%) and is more diffused and repetitious, and that in a number of parallel passages the reading in Daniel is closer to the older biblical source than is Baruch's (but proponents for the priority of Baruch's prayer point out other passages where Baruch's readings are closer than Daniel's). In any event, Daniel's prayer, which was probably not originally a part of the "final" form of Daniel but either an inclusion or a later interpolation (Pfeiffer 1949: 774; Moore 1974: 312–17; and Hartman and Di Lella 245–46; but see Jones 1968), is dated by most scholars to anywhere between the 4th century B.C. and ca. 164 B.C.

c. Poem in Praise of Wisdom (3:9–4:4). The poem differs in a variety of ways from what precedes it: it is poetry, not prose; it breathes a different spirit and has a different point of view, relying primarily on Wisdom Literature and virtually ignoring the prophetic perspective—including the book of Jeremiah. In its contents, emphases, and spirit, the sapiential poem is incongruous with the material that precedes and follows it, the only element of commonality among them being the exilic situation.

Whereas the prayer was a mosaic of biblical passages, the poem has the decided character of a logical argument, offering: (1) a statement of the problem, i.e., "Where can Wisdom be found?" (3:9–15); (2) a presentation of the evidence, first in negative terms (3:16–31) and then in positive (3:32–36); and (3) a conclusion, namely, Wisdom is the book of the commandments of God (4:2–4). In terms of both literary form and content, the poem is modeled after Job 28:12–22, 23–27. This identification of Wisdom with the Pentateuch is also found in Sir 24:8–23, esp. v 23:

> All this [i.e., Wisdom] is the book of the covenant of the Most High God, the law which Moses commanded us as an inheritance for the congregations of Jacob.

The Wisdom of Solomon, another intertestamental book, also figures prominently in the poem (cf. Bar 3:29 with Wis 9:4a; Bar 4:4 with Wis 9:18b; and, esp. Bar 3:38 with Wis 9:10, where King Solomon prays for Wisdom, saying: "Send her forth from the holy heavens, and from the throne of thy glory send her, that she may be with me and toil, and that I may learn what is pleasing to thee").

Little is said about Wisdom in 3:9–4:4 that is not also found in the sapiential literature of the biblical and extrabiblical periods. Baruch uses various synonyms for it, each with its own distinctive nuance or emphasis: "wisdom" (Gk *sophia* = Heb *ḥokmâ*); "prudence" (Gk *phronēsis* = Heb *bînâ*); "understanding" (Gk *sunesis* = Heb *tĕbûnâ*). On occasion, each word can represent all the others (e.g., *sophia* in v 23, *phronēsis* in v 28, and *sunesis* in v 23), although *sophia* seems to be the most popular and comprehensive term.

One verse *did* occasion great controversy (for all the Church Fathers involved, see Reusch 1853), especially during and after the Arian Controversy of the 4th century A.D., when Greek and Latin fathers viewed 3:37 ("Afterward she [i.e., Wisdom] appeared upon earth and lived among men") as a prediction of the Incarnation of Jesus Christ (cf. John 1:14). Regarded by 19th-century scholars like Kneucker (1879: 310–12) and Schürer (*HJP*[1] 2/3) as a Christian interpolation, which it may have been, 3:37—at least in its present context—clearly refers to Wisdom (cf. the "her" of v 36 and the "she" of v 37). Such an interpretation is also supported by Sir 24:10–12 and Wis 9:10; cf. also Prov 8:1–4, 31. On the identification of Wisdom with Torah, see G. F. Moore (1927, 1: 263–70), Ringgren (1947: 114–15, 139–41), and Battistone (1968: 189–95).

Although many scholars have maintained that Greek was the original language for Bar 3:9–4:4 (and 4:5–5:9), the majority have concluded that all of Baruch was originally in Hebrew (for a survey of scholarly opinion, see Burke 1982: 23–24). Virtually alone, Marshall (*HDB* 1: 253) argued for the poem having been originally in Aramaic, but Whitehouse (*APOT* 1: 571–72) refuted his argument point for point.

Though not as incontestable or numerous as in Bar 1:1–3:8, Hebraisms in 3:9–4:4 include "beasts of the earth" (3:16), "four-footed creatures" (3:32), and others (Burke 1982: 299–301). Then, too, in 3:18 where the Greek and Latin texts mention "silversmiths," which seems totally inappropriate, the Syriac has "who acquired silver," which suggests that the Hebrew *Vorlage* had *qōnê*, which can be translated either as "worked" or "acquired."

In his retroversion of the LXX of Baruch to Biblical Hebrew, Harwell (1915: 56–58) "found" an almost invariable 3 + 3 meter for the poem. But building upon more recent advances in biblical and intertestamental research, and especially upon our new knowledge growing out of the Dead Sea Scrolls of Qumran, Burke (1982: 65–133, 316–19) has demonstrated that the meter is by no means so rigidly uniform:

> Twenty-one of thirty-one bicola are 3 + 3, and the remainder 3 + 2, 2 + 2, or 4 + 3. There are also ten tricola of which five are 3 + 3 + 3 (other patterns represented are: 2 + 2 + 3, 2 + 2 + 2, 3 + 3 + 2, and 2 + 3 + 3) (Burke 1982: 319).

While one may quarrel with this or that reconstruction of Burke, he has clearly demonstrated that Harwell was guilty of putting Baruch in a Procrustean bed, in this case, an invariable 3 + 3.

Serious efforts to retrovert the entire LXX text of Baruch into Biblical Hebrew were undertaken by Kneucker (1879) and then by Harwell (1915) while, more recently, Bar 1:3–3:8 has been done by Tov (1975; 1976[2]) and 3:9–5:9 by Burke (1982). The Hebrew translation by Kahana (1956) represents just that, a modern translation of the LXX and not an effort to reconstruct the ancient Hebrew text.

The poem's strong affinities with concepts and phrases characteristic of such later Jewish literature as Sirach and the Wisdom of Solomon suggest as the date for its composition either the 2d or 1st century B.C., which is also a time compatible with Bar 3:10–11, where the Diaspora is depicted as being of long-standing duration. (Needless to say, Bar 3:10–11 contradicts the introduction, esp. 1:11–12, where the exile has just begun.) Where the poem was written is unknown, although a presumed Hebrew *Vorlage* argues for a Palestinian provenance. Certainly nothing in the poem's content rules that out.

d. Psalm of Encouragement and Hope (4:5–5:9). The psalm is a dramatic rehearsal of the past and a prediction of the future. Its message, which is addressed first to Jerusalem's exiled children (4:5–29) and then to Mother Jerusalem herself (4:30–5:9), is a mosaic of phrases and images from Deutero-Isaiah (cf. Bar 4:8, 12, 20, 24, 30, 35, 37; 5:1, 2, 5, 7 with Isa 54:1–6; 49:21; 52:1; 60:1–3 of LXX; 62:2, 4; 13:19–21; 43:5; 52:1; 60:10; 51:17 [kai 60:4]; 40:4–5a, respectively).

But even more striking is the similarity of Bar 4:36–5:9 to *Psalms of Solomon* 11, a pseudepigraphic work (dating to ca. 70–45 B.C.) not to be confused with the canonical book of Psalms (Wright, *OTP* 2: 640–41). Often regarded as a work of the Pharisees (so Ryle and James 1891; Schüpphaus 1977), the *Psalms of Solomon* has also been identified as Essene in origin by Eissfeldt (1965: 610–13) and Dupont-Sommer (1962: 296). But Wright (*OTP* 2: 641–42) wisely argues against adopting either label.

The universal God of the wisdom poem is now once more Yahweh, the personal God of Israel who is concerned for his chosen people of the covenant. Yet oddly enough, the psalm never uses Israel's personal name for God, Yahweh (Gk *ho kurios*). Rather, he is referred to as "God" (Gk *theos* [4:7, 12]), "the God" (*ho theos* [passim]), or "the Holy One" (Gk *ho hagios* [4:22, 37; 5:5]). The psalm does, however, have a new name for the Deity, one not used in 1:1–4:4, namely, "the Everlasting" (Gk *ho aiōnios* [4:10, 14, 20, 22, 24, 35; 5:2]). This curious absence of the name "Yahweh," plus the appearance of the new divine appellation, suggests that the Greek translator of the Hebrew poem preferred *ho aiōnios* as his stock poetic translation for the Tetragrammaton, *YHWH* (Burke 1982: 164–66).

That the psalm had a Hebrew *Vorlage* is more hotly contested than is the comparable claim for any other section of Baruch. Marshall (*HDB* 1: 251–54), Whitehouse (*APOT* 1: 569–95), Wambacq (1966: 575), and others have argued that it was originally composed in Greek. But most scholars, including Kneucker, Harwell, Pfeiffer, and Burke, have rightly maintained that all, or at least most (so

Moore 1977: 314–16), of the psalm was originally in Hebrew. Granted, blatant Hebraisms or mistranslations presupposing a Hebrew *Vorlage* are conspicuously absent from this section (for less obvious but probable ones, see Burke 1982: 302–10), thanks to the skills of its Greek translation/revisor (see below). Building upon the work of Harwell (1915: 58–59) who reconstructed a rigidly uniform series of *Qinah,* or Lament Meter (3 + 2 bicola), Burke (1982: 135–297) retroverted a more defensible pattern for the psalm, namely:

> Of a total of forty-eight bicola, approximately a third . . . are 3 + 2, another third . . . are 2 + 2, and yet another third . . . are 3 + 3. The seventeen tricola reveal an even greater variety. The most common patterns are 3 + 3 + 3 (five) and 2 + 2 + 3 (four) (p. 320).

The relative "ease" with which Burke was able to reconstruct numerous semantic, syntactic, and metrical features of biblical Hebrew while still being reasonably faithful to his Greek text also argues for the existence of a Hebrew *Vorlage.*

The number of stanzas in the psalm is much debated by scholars, some arguing for seven (Thackeray 1929: 102–3; Rost 1976: 71), eight (Fitzgerald 1968: 618), or by counting instances of the Isaianic feature of an imperative plus a vocative for beginning a stanza, eleven (Burke 1982: 5).

The striking similarity between Bar 4:36–5:9 and the pseudepigraphical *Ps. Sol.* 11:3–8 cannot be coincidental inasmuch as their parallels even preserve their relative verse sequence (i.e., Bar 5:5, 7, 8 closely correspond to *Ps. Sol.* 11:3, 5, 6–7, respectively). Either Bar 4:36–5:9 is dependent upon *Psalms of Solomon* 11 (so Ryle and James 1891: lxxii–lxxvii, 100–3 and most subsequent scholars, including Goldstein 1979–80: 191–92 and Wright, *OTP* 2: 647–48); or the reverse is true (Pesch 1955; Burke 1982: 30); or the two psalms are dependent upon an unpreserved common source, possibly a synagogal liturgy (Kneucker 1879: 43–44; Charles, *APOT* 1: 573–74 [Editor's Note]; Pfeiffer 1949: 422; Gelin 1959: 286). Schürer (*HJP*^{2} 3/2: 736–37) finds the question of who influenced whom as unclear.

The relationship of Bar 4:36–59 to *Psalms of Solomon* 11 is of crucial importance for establishing not only the upper and lower dates for the composition of the psalm itself (i.e., if the psalm is based on *Psalms of Solomon* 11, then it cannot be older than the *Psalms of Solomon*) but also for the entire book, since many scholars regard Bar 4:5–5:9, along with the introduction (1:1–14), as the most recent section of the entire book.

Unfortunately, little in Bar 4:36–5:9 can be identified with a specific historical event or time. For instance, Kneucker's view that "fire from the Everlasting" (4:35) was an allusion to the eruption of Mount Vesuvius in A.D. 79, in which Pompeii was destroyed, exceeds both the evidence and credibility. And Bar 4:15–16, which ostensibly describes the Babylonians (cf. Deut 28:49–50; Jer 5:15), probably, refers to either the Romans or, more likely, the Seleucids (see below).

3. The Book as a Whole. a. Original Language. Apart from an ancient and puzzling allusion to the use of Baruch in synagogal services (Thackeray 1923: 107–11), there is no external evidence of the book ever having existed in Hebrew. No trace of it has been found yet at Qumran (cf. Tov 1976b: 131, n. 1), albeit the Greek version of the Epistle of Jeremiah has been found there (see below). Neither Origen (185?–?254) nor Jerome (340?–420) knew of an extant Hebrew copy.

Thus, in spite of internal evidence of a Semitic *Vorlage* in each of the four major sections of Baruch, many scholars, past and present, have maintained that at least part, and probably even half, of the book (notably 3:9–5:9) was originally composed in Greek (Schürer, *HJP*^{2} 3/2: 735 would leave open the possibility of a Greek *Vorlage* for 3:9–5:9). Their principal rationale is that: (1) no Hebrew text is extant; (2) there are more Hebraisms in Bar 1:1–3:8 than in 3:9–5:9; and (3) there are some striking differences in translation between the two major parts (Pfeiffer 1949: 412–13).

As for the last point, since 1903 many students of Baruch have subscribed to the views of Thackeray (1903: 245–66), to wit, just as the LXX of Jeremiah had two different Greek translators (Jer *alpha,* who was responsible for translating Jeremiah 1–28; and Jer *beta,* who did Jeremiah 29–51 [Jer *gamma* rendered Jeremiah 52]), so also did Baruch. Moreover, it was Jer *beta* who also translated Bar 1:1–3:8.

Thackeray's theory inevitably raised other questions about Bar 3:9–5:9, namely: Are the pronounced differences in content and style in the two halves of Baruch just a matter of the different skills of their respective translators? Did, perhaps, the second half of Baruch not exist at the time? Or worse, maybe there never was a Semitic text to translate, i.e., maybe Bar 3:9–5:9 had originally been composed in Greek.

Recently, Tov (1976b) has challenged Thackeray's thesis, arguing that both the similarities *and* the differences in the Greek between Jeremiah 1–28 and 29–52 can best be explained by postulating that the Old Greek of Jeremiah and Baruch has survived only in Jeremiah 1–28; and that Jeremiah 29–52 and Bar 1:1–3:8 represent a *revision* (not a translation) of the Old Greek. Uncertain as to exactly why this odd mixture of texts came about (but see pp. 162–63), Tov (1975: 7; 1976b: 126) is even more uncertain whether 3:9–5:9 was composed originally in Hebrew or Greek.

Unconvinced by Tov's findings, Goldstein (1979–80: 188–89) rightly maintains that no test can be devised that can prove whether the Greek translator of Bar 1:1–3:8 was identical to the translator of Jeremiah 29–52 or, rather, skillfully imitated him. Unfortunately, Goldstein's own solution to the differences between the Greek of the two halves of Baruch (1979–80: 188–89) is less persuasive, namely:

> The Greek translator of Baruch noticed how the Hebrew author changed style and content and followed scriptural models, Jeremiah for 1:1–3:8 and Job and Isaiah for 3:9–5:9. In rendering the respective sections, the translator of Baruch then would naturally imitate the existing translations of Jeremiah or of Job and Isaiah.

In sum, while differences in style and content between the major halves of Baruch do indeed pose problems that

admit no easy solution, it is probable that all (or nearly all; Moore 1977: 314–15 would omit 5:5–9) of Baruch was originally in Hebrew.

b. Purpose. A composite of the works of several authors, the book consists of originally independent works of uneven quality, bound together only by their having the same assumed historical background, i.e., the exile. Not only does the book have little progression or thread of argument, but several of its sections actually contradict one another (cf. 1:11–12 with 4:15, 21, 33–35; and 1:13c with 4:36–54). Evidently the book's author was not at all concerned with presenting a consistent and accurate chronicle of historical events in the modern sense of the word (after all, his Jewish readers knew full well that the expectations of Jeremiah and Deutero-Isaiah concerning the Ingathering of the Diaspora had not yet taken place). Rather, he was interested in edifying and interpreting past events for the present generation (Burke 1982: 3–4).

Two scholars have constructed very detailed arguments for the book's purpose. Taking as his clue the assertion in the *Constitutions of the Holy Apostles* 5:20 (ca. 380) that the Jews "even now on the tenth day of the month Gorpiaeus, when they assemble together, read the Lamentations of Jeremiah . . . and Baruch in whom it is written, 'This is our God; no other can compare with him . . . appeared on earth and lived among man' " [Bar 3:38, 38], Thackeray (1923: 107–111) constructed an elaborate argument for Baruch's being part of the prescribed synagogal liturgy for the Jewish New Year still observed among 6th-century A.D. Jews in the area of Edessa, Turkey. (For a critical evaluation of Thackeray's argument, see Sundberg 1958: 77).

According to Goldstein (1979–80), the text of Bar 1:1–14, in spite of "minor gaps and corruptions" (pp. 180–81), reflects the situation of Judean Jews under Seleucid rule in the winter or early spring of 163 B.C. More specifically, "Nebuchadnezzar" of vv 9, 11–12 represents the infamous Antiochus IV Epiphanes (175–164 B.C.), who sacked Jerusalem and committed the Abomination of Desolation in 167 B.C.; "Belshazzar" of vv 11–12 stand for Epiphanes' son and successor, Antiochus V (164–162 B.C.); and the high priest "Jehoiakim" of v 7 is really Alcimus. The "fifth year" alluded to in v 2 refers to the 5th year after Antiochus IV had burned and sacked Jerusalem. But now that the Temple of Jerusalem had been purified by Judas Maccabaeus, the author of Baruch was appealing to Judean Jews to acknowledge their past sins (1:15–3:8) and to accept the authority of Antiochus V (1:11–12), meanwhile obeying God's Wisdom, the Law (3:9–4:4), and trusting God in his own good time and way to judge the Seleucids and to bring about the Ingathering (4:5–5:9). Thus, the book of Baruch was propaganda for those pious Jews who were opposed to the continuing military struggles of Judas Maccabaeus.

Goldstein's hypothesis certainly has merit, for it does answer a number of questions. There are problems, however. Difficult though life may have been for Judean Jews ca. 164–163 B.C., they were *not* in exile, although the one unifying thread running throughout the book of Baruch is the exilic experience. Then, too, while the real Nebuchadnezzar (605–562 B.C.) was alive five years after the destruction of Jerusalem, Antiochus IV was not (Nickelsburg 1981: 153, n. 44).

c. Theology of the Book. A mosaic of older biblical passages, Baruch has virtually no new or original religious ideas. Even worse, because of its composite authorship, the book contains almost antithetical attitudes toward the Deity, the poem (3:9–4:4) emphasizing God's transcendence and omnipotence, the other sections his personal and anthropomorphic character. Then, too, there is the striking contrast between the sapiential stance of 3:9–4:4 versus the prophetic one everywhere else. Even as sympathetic a critic as Burke (1982: 33–35) is content simply to describe the book's theology without offering a single word of praise about its doctrine of God, its doctrine of sin and retribution, or its themes of devotion to the Law and hope for national salvation. The simple fact is that the book's religious ideas had already been better expressed elsewhere in the Bible.

d. Date and Place of Composition. The date of the book's final composition, as well as that of each of its four sections (for a survey of scholarly opinion, see Burke 1982: 26–28), is more debated by scholars than is either its authorship or original language, although the latter two items are obviously related to the former.

Dates proposed by scholars for the book's completion range from the period of the exile down until after A.D. 70, with such Baruch scholars as Kneucker, Marshall, Thackeray, and Whitehouse opting for the latest date, in part, because of the relationship between Bar 4:36–5:9 and *Psalms of Solomon* 11.

Nonetheless, the majority of experts have assigned all (or nearly all) of the book to ca. 200–60 B.C. Reasons for this include the following: the book's dependency upon such later biblical works as (Deutero-)Isaiah, Daniel (esp. chap. 9), Job, and Sirach (esp. chap. 24); the close relationship of Bar 4:36–5:9 to *Psalms of Solomon* 11; the "datelessness" of the various sections; the Diaspora is depicted as a situation of long standing (3:10); and the onetime "canonicity" of Bar 1:1–3:8 among Jews (i.e., the translator-recensionist Jer *beta* treated it as being on a par with Jeremiah 29–50). Finally, the docile and conciliatory attitude recommended toward "Nebuchadnezzar" and "Belshazzar" suggests a date between the early Maccabean period and precludes a date after A.D. 70 (for additional reasons in support of the range from 180–100 B.C., see Burke 1982: 28–32).

Albeit an argument from silence, certain "omissions" or absences in the book also argue for the same time span. For example, the concept of Sheol (2:17; 3:11, 19) has yet to be replaced by the concept of resurrection (so Charles 1910: 454, although Oesterley 1914: 499–502 viewed 2:17 as a Sadducee correction of a Pharisee interpolation!). Then, too, messianism, angelology, and eschatology, which are doctrines more common in the later apocryphal and pseudepigraphic works, are also missing.

The *terminus ad quem* for the entire book is A.D. 177, that being when Athenagoras quoted Bar 3:34 in his *Supplications for the Christians* 9. Actually, however, the probability that the translator/recensionist responsible for doing Jeremiah 29–50 also did Bar 1:11–3:8 fixes the date of the latter to that of the former, namely, ca. the 2d century B.C. (Bright, *Jeremiah* AB, cxxii–xxiv).

If the book was composed originally in Hebrew rather than in Greek or Aramaic, then neither the western nor eastern Diaspora, but Palestine was its place of composition (see Schürer *HJP*² 3/2: 735).

e. Literary Character. Judging the literary quality of a book known only in translation is admittedly risky. But such judgments are inevitably made. Keerl, as quoted by Gifford (1888a: 248), was perhaps too harsh:

> In comparing the contents of [Baruch's book with those of older prophets], there comes over one a feeling as if some incompetent scribbler had wished to do an exercise in the language and style of the prophets; it reminds one of the rhetorical practice of a feeble schoolboy, who composes an opusculum out of all sorts of passages.

While by no means effusive in his praise, Burke (1982: 7) was probably closer to the truth when he said of the presumed Hebrew *Vorlage* which he had tried to reconstruct:

> It is still not without its own measure of originality and skill. . . . The poetry, while equally derivative, is nonetheless from a technical and stylistic point of view well-conceived and constructed. . . . And, although each poem represents a genre entirely different from the other, the result is in each case a composition that is technically competent.

4. Canonical Status. Well-written or not, Baruch never gained canonical status among the Jews. It was not part of the Palestinian canon as fixed by the Council of Jamnia, ca. A.D. 90. (The decisions of the Pharisaic schools there were "unofficial" and only gradually did their decisions become the accepted positions throughout Judaism.) Perhaps Baruch was denied canonical status by the Jamnian Jews because they recognized its pseudepigraphic character, although some other pseudepigraphic works were ultimately accepted into the Jewish canon after long, hard debate, notably, Esther and Ecclesiastes. More likely, the Jews at Jamnia recognized Baruch's literary and theological inadequacies.

As for the Christians, apart from the so-called "Incarnation" passage (3:36–38), the book was generally ignored. Usually viewed by Church Fathers as simply an adjunct or supplement to Jeremiah rather than a separate book, Baruch was expressly mentioned as being canonical by Athanasius (295–373), Cyril of Jerusalem (d. 386), Epiphanius (315–403), and Nicephorous (758?–829). For details and titles, see Schürer, *HJP*² 3/2: 740–41.

In enumerating the canonical books *by name,* none of the Latin fathers mention Baruch, but that may only mean that they thought of it as part of Jeremiah. In any case, the book ultimately found its way into the Vulgate (see below), and at the Council of Trent in 1546 was recognized by the Roman Catholic Church as part of its deuterocanon. Meanwhile, Luther and other Protestants either relegated it, along with the rest of the Apocrypha, to a lesser place (i.e., between or after the OT and NT) or omitted it altogether.

5. Ancient Versions. a. The LXX. The most recent scientific text of Baruch is the one in the Göttingen Septuagint (Ziegler 1976), an eclectic Greek text based upon four uncials (LXX^{ABQV}; unfortunately *Sinaiticus* ends before coming to Baruch) and thirty-four minuscules, plus relevant readings from other ancient versions (see below). Ziegler's reconstructed text most resembles *Vaticanus.* A brief description in English of all the manuscripts used by Ziegler may be found in Burke 1982: 7–17.

b. Syriac Translations. Like other biblical and apocryphal books, Baruch is extant in two Syriac translations: the Syriac Version (or Peshitta) and the Syro-Hexaplar, the latter being a Syriac translation of the fifth column of Origen's Hexaplar made by Paul of Tella in A.D. 616–17. See HEXAPLA OF ORIGEN; SYRO-HEXAPLA; VERSIONS, ANCIENT (SYRIAC).

Whether the Syriac version of Baruch is to be identified with the Peshitta (i.e., a 1st-century Syriac version ordinarily based upon the Hebrew Bible) has been much debated by scholars. Kneucker (1879: 163–73) and Harwell (1915: 10–28), for instance, maintained that the Syriac Baruch was based upon the Greek while Whitehouse (*APOT* 1: 577–79), Pfeiffer (1949: 423), and Burke (1982: 12–14) argued for a Semitic text, albeit one "corrected" by the Greek. In his reconstruction of Baruch, Burke (1982: 13–14, 308–10) depends upon a number of Syriac passages that depart from the LXX tradition and reflect a Hebrew *Vorlage.*

c. Latin Translations. Even though scholars have much debated the origins and relative merits of the Old Latin texts/versions of Baruch, there is little doubt that the *Vetus Latina* (the Old Latin) and the Vulgate are both based upon the Greek (so Harwell 1915: 29–51; Ziegler 1957: 20; and Burke 1982: 14–15). Jerome did not even bother to make a fresh translation of Baruch. In fact, *Amiatinus,* the oldest known manuscript of the Vulgate, contains neither Baruch nor the Epistle of Jeremiah. The most recent scientific edition of the Latin is by Weber (1969).

d. Other Ancient Versions. The other ancient versions of Baruch are all based upon the Greek. According to Ziegler (1957: 41–93), the Coptic and the Ethiopic most resemble LXX^{BS}, while the Arabic is more like LXX^{A}; and the Armenian is part of the Hexaplaric family. Because all of these versions are based upon texts which are either very late, mixed, fragmentary, or unscientific, their readings must be used with great care.

B. The Epistle of Jeremiah

The title is totally misleading, for this short book of seventy-three verses is neither a letter nor was it written by the prophet Jeremiah. On these two points virtually all modern scholars agree. The "epistle" is actually a satire, or harangue, against idols and idolatry. Apart from its "salutation" in vv 2–7, it has none of the features of a letter, not even a closing. (English translations frequently differ in their versification, depending on whether or not they include the superscription.)

1. Contents. The book consists of ten strophes, or stanzas, of unequal length, each one (with the exception of the first and the last) ending with a slight variation of essentially the same refrain, namely:

> Therefore they evidently are not gods; so do not fear them (v 16).

There is no perceptible progression of thought or argument in the poem, all of which creates for the reader the impression of "sameness," along with its lamentable corollary, boredom.

2. Author. To be sure, a number of phrases and images in the epistle do bear a strong resemblance to certain ones in the book of Jeremiah, notably, Jer 10:2–15. Moreover, since the prophet Jeremiah did, in fact, write at least one letter to the Jewish exiles once they were in Babylon (cf. Jer 29:1–23), there is no reason why he could not have written one *before* they left (cf. v 1).

But in its ideas, imagery, and phraseology the epistle depends primarily upon biblical passages which originated long after the prophet Jeremiah, namely, Isa 44:9–20, 46:5–7; Pss 115:3–8; 135:6–7, 15–17; and Deut 4:27–28. Then, too, in terms of literary quality, as well as religious depth and sensitivity, the epistle is, by common consent, decidedly inferior to genuine Jeremianic materials.

3. Purpose and Genre. Ostensibly the epistle was designed to prevent Jews from worshiping false gods in Babylon and, by implication, anywhere else as well (cf. vv 29–30, where the idea of priestesses is especially abhorrent). Pfeiffer's suggestion (1949: 432) that it was also written to reassure Gentiles that Jews were not a godless or god-despising people seems unlikely, even though later on Jews would be so accused by such anti-Semitic writers as Posidonius (130?–50 B.C.) and Apollonius Molon (fl. ca. 70 B.C.).

Given the predominance of Babylonian elements (e.g., the mention of the god Bel [i.e., Marduk] in v 41; the rite of sacred prostitution in v 43; the care and feeding of the idols in vv 11–13, 26–29, 33, 58, 72), the epistle may have been a veiled attack on a Tammuz-type cult (cf. v 32) such as flourished in Jeremiah's day (cf. Ezek 8:14), and presumably, later as well. Used as a *Haftorah* (i.e., a prescribed synagogal reading from the prophets) for the Jewish fast on the 17th of Tammuz (Thackeray 1927: 57–60), the epistle may also have been part of a synagogal pericope for the 9th of Ab and following (Thackeray 1923: 107–11).

In all likelihood, the epistle was inspired by one of the more puzzling phenomena in the book of Jeremiah, namely, its sole Aramaic verse:

> Thus shall you say to them: "The gods who did not make the heavens and the earth shall perish from the earth and from under the heavens" (Jer 10:11).

This Aramaic verse, supported and illuminated by the Hebrew of Jer 10:2–15, inspired the author of the epistle to expand upon it (so Torrey 1945: 64–65). In sum, the epistle is best understood for what it obviously is: an idol parody (on this particular literary genre, see Roth 1975).

4. Original Language. A comparison of the Greek texts of the epistle and the relevant OT passages shows that the author of the epistle was primarily dependent upon the Hebrew Bible rather than upon its Greek translation. For example, v 70 says that idols are "like a scarecrow in a cucumber bed," which is clearly based on Jer 10:5 ("Their idols are like scarecrows in a cucumber field"), a clause not found in the LXX of Jeremiah.

A Hebrew *Vorlage* best explains three egregious mistranslations in the epistle. As Ball long ago noted (*APOT* 1: 601), "food" in v 12 (i.e., idols "cannot save themselves from rust and food") makes no sense; obviously the unpointed Hebrew *Vorlage* had *m'kl,* which can mean either "food" (so Gen 6:21) or "moth/devourer" (Mal 3:11; Job 13:28). Verse 27 says that "purple and marble rot" upon the idols, which also makes no sense. Obviously the translator had before him the Hebrew word, *šēš,* which can be translated as either "marble" (Esth 1:6; Cant 5:15) or "fine linen" (Exod 25:4): the Greek translator simply chose the wrong meaning. Verse 54 ("for [the idols] have no power; they are like crows between heaven and earth") probably represents a misreading of the Hebrew, inasmuch as the wily crow is anything but helpless. Thus, Ball (APOT 1: 607), taking his clue from the Syriac's "ravens," suggested that the Greek translator erroneously read the Heb *kʿbym* ("like the clouds") as *kʿrbym,* "like the ravens."

That the epistle had an Aramaic *Vorlage* was argued by Torrey (1945: 64–65), who viewed the book as inspired by Jer 10:11, which is in Aramaic. (Jer 10:11 did later inspire the translator of the Targum on Jeremiah to add an Aramaic epistle to it [Thackeray 1927: 591]). Torrey (1945: 66) saw indisputable proof that the epistle was composed in Aramaic by the fact that Aram *ʿl ʾgrʾ* can be read either as "on the roof" (so v 11 of the KJV ["and even give some of it to the harlots on the roof"]) or "for hire." Torrey may be correct, although this was the only "Aramaic" reading he offered in support of his thesis); but the epistle's "on the roof" certainly makes good sense (cf. Herodotus, *Hist.* 1: 181), especially since the Greek word here, *stegos,* means "brothel" in late Greek (LSG, 1636).

5. Literary Merit. Unfortunately, the epistle's literary merit must be judged only on the basis of its Greek translation which, as we have already seen, contains some egregiously bad translation errors. In its general structure, the epistle is not unlike Psalms 42–43 and 107, with their recurring refrains and strophes of varying lengths. Evidently the ordering principle of the epistle's stanzas is that of catchwords (e.g., women in 27/29; deceit 44/47; king 51/53; to deliver 54/57; reproach 72/73) and "catchthoughts" (e.g., to blacken/to wipe off 21/24; blind/dumb 37/41; to do good/to bless 64/66 [Roth 1975:40]). The most persistent argument in the book is a negative one, i.e., what the gods cannot do (Nickelsburg 1981: 36–37).

Apart from a not infrequent uncertainty as to the antecedents of its pronouns, the text is intelligible enough; but its images, analogies, and comparison are rarely new and never memorable. After the first three or four stanzas there is no further development or progression of thought; rather, the same old observations and arguments are rehashed. Nickelsburg (1981: 36) offered a left-handed compliment when he wrote:

> The uniqueness of the Epistle of Jeremiah lies not in the types of arguments presented . . . but in the presistence with which the author pursues his point by means of repetition and rhetorical devices which make that point in a variety of ways.

Dancy (1972b: 199) was perhaps more charitable than accurate when he said:

> But it does not follow that the Letter is haphazard in composition. There is visible in most of it a continuous thread, but it is a thread of images, not of arguments. . . . But this Letter is not so much an argument as a satire, and satire has always relied less on logical structure than on vivid reporting.

Both form and substance contribute to a book's literary stature, and sometimes a weakness in one can be compensated by the greater strength of the other. But in the case of the epistle, both form and substance are lacking. Torrey (1945: 65) may have been a bit harsh when he wrote: "it is a formless composition, rambling and repetitious," but the simple fact is that the epistle was little appreciated by the early church, or at least, it was rarely alluded to by the Church Fathers.

6. Canonicity. Though not a part of the Jewish canon as established by the Council of Jamnia (ca. A.D. 90), the epistle was read earlier by the Dead Sea Community at Qumran; for a tiny fragment of it, consisting of twenty-two Greek letters of v 44, was found there in Cave VII (Baillet, Milik, and de Vaux 1962: 27–30, 43; pl. 13). Its reading appears to agree with that of the LXX^{L} and Syriac, namely, "consider them to be gods or call them gods." More importantly, it attests to the epistle's existence in the 1st century B.C.

Among early Christians, the book was rarely alluded to, although it was used by Aristides of Athens (fl. ca. 130) and was quoted by Tertullian (160?–220), Cyprian of Carthage (d. 258), and Firmicus Maternus (4th cent.). Its canonicity was expressly affirmed by such Eastern fathers as Origen (135?–?254), Athanasius (295–373), Cyril of Jerusalem (d. 386), and Epiphanius (315–403), as well as by the Laodicene Canons (343–381). For details, see Moore 1977: 324–25.

As for Western fathers, while only Hilary (315–367) expressly said the epistle was canonical, other fathers certainly treated it as such, notably, Irenaeus of Lyons (140–?202). So far as we know, Jerome (340?–420) was the first to question the book's canonicity by name, calling it a pseudepigraphon (preface to his *Commentary on Jeremiah*). Jerome, of course, regarded as noncanonical every LXX book which had no parallel in the then-current Hebrew canon.

7. Date. The original version of the epistle must date to sometime between 540 B.C. (i.e., the earliest date for such Deutero-Isaianic passages as Isa 44:9–20 and 46:5–7) and the 1st century B.C., when 2 Macc 2:1–2, 4 alludes to it (see Marshall, *HDB* 2: 579; Goldstein, *1 Maccabees* AB, 36; Schürer, *HJP*^{2} 3/2: 744) and a Greek copy of it dating to that same time existed at Qumran. Albeit an argument from silence, the epistle's failure to utilize the very effective satire and invective against idolatry in Wis 13:10–15:17 suggests that the aforementioned probably antedated the latter.

But even a date in the first third of the 2d century B.C. (which is the period most frequently suggested by scholars) is probably too late; otherwise, how can we explain v 3, where the author of the book predicts that the exiles in Babylon will remain there "up to seven generations" (i.e., ca. 317 B.C. [Moore 1977: 334–35]), after which God will bring them back in peace? Why would the author have given this "future" date if he was already writing at a time long after the predicted events should have occurred *and had not?* (But see *HJP*^{2} 3/2: 744.) Moreover, nothing in the epistle precludes a date as early as the end of the 4th century B.C., a time when its message was especially relevant to the needs of both the eastern and western Diaspora, as well as Palestine itself, where the Hellenization process was making inroads into Judaism.

8. Place of Composition. Confusing the evidence for where the epistle was translated with where it was originally composed, 19th-century scholars like Fritzsche, Schürer (*HJP*^{1} 2/3), and Marshall claimed an Egyptian provenance for it. But apart from a very cryptic mention of cats in v 22 (Lee 1968), there is no distinctive Egyptian religious element or practice mentioned in the epistle, not even animal worship, which had becomme so commonplace by the Ptolemaic period (323–30 B.C.). Nor is there any reference to specifically Greek rituals (Dancy 1972b: 198).

On the one hand, virtually everything the epistle says about idols, their priesthood, and their cult is completely compatible with Mesopotamian religion, in general, and with Babylonian in particular (Nauman 1913: 3–31). On the other hand, quintessential Babylonian practices such as divination, astrology, and extispicy go unmentioned, all of which suggests that the author of the epistle was criticizing Mesopotamian religion and its gods *from afar* (but see Artom 1935, who would place its composition in Babylonia ca. 400 B.C.). In sum, there is no reason to reject the claim of v 1 (i.e., that the epistle had a Palestinian provenance), although admittedly much later than the 597 B.C. implied in vv 1–2 (Moore 1977: 334).

9. Ancient Versions. Marshall's statement that "The slightly inflated style of the epistle is thoroughly Alexandrian. The fondness for assonance and for long compound words . . ." (*HDB* 1: 579) is an accurate yet too glowing a characterization. Rightly maintaining that neither the epistle's style nor logic would have appealed to members of the Alexandrine school of Egypt, Nauman (1913: 31–44, 49) has nonetheless established the epistle's *koine* character. A distinction must be made here between the now-lost Hebrew original and its extant Greek translation, the latter rightly characterized by Ball (*APOT* 1: 597) as "a piece so formless, so confused, so utterly destitute of the graces of style."

An excellent scientific edition of the text has been published by Ziegler (1976) in the Göttingen Septuagint, using 134 printed lines for his eclectic text (which is essentially LXX^{B}) and 352 lines for his *apparatus criticus,* where the readings of the various families of Greek manuscripts and the relevant variants of the ancient versions are presented.

The Old Latin, Vulgate, and Syro-Hexaplar are all very literal translations of the LXX, an additional phrase or clause being exceedingly rare (but see v 49 of the OL and Syr; v 52 of the Vg; and v 53 of the Syr). Omissions are also infrequent. The Arabic version is also quite faithful to the LXX, especially to *Alexandrinus.* Only the Syriac is somewhat free, being a bit more expansive and sometimes unintelligible.

CAREY A. MOORE

JEREMIAH, BOOK OF. The book of Jeremiah contains the legacy (Heb *dibrê* in 1:1 and 51:64 covers both "words" and "acts") of Jeremiah the prophet. The earliest

record contained is of Jeremiah's boyhood call to be a prophet in the 13th year of King Josiah, i.e., 627 B.C. Jeremiah is last heard from in Egypt following the destruction of Jerusalem, i.e., sometime after 586 B.C. The collection of prophetic utterances, personal dialogues, autobiographical reports, and liturgical compositions, supplemented by a rich corpus of biographical and sermonic material written in another hand, combine to give us the most complete profile of any Hebrew prophet, also one of the best portraits of any known figure out of the ancient world. See JEREMIAH (PROPHET).

A. Canon

Jeremiah is the largest of the three so-called Major Prophets in the Hebrew Scriptures. In our present canon the book is placed second—after Isaiah and before Ezekiel. The Talmud, however, preserves an older (pre-Masoretic) order in which Jeremiah is first immediately following Kings (*B. Bat.* 14b–15a). In the Talmud, notice is made of the duplicate accounts at the end of Kings and Jeremiah, and it assumes that both books derive from the same author, who is Jeremiah the prophet.

B. MT and LXX

The book has survived in two main versions from antiquity: the Hebrew Masoretic Text (MT) and the older Greek Septuagint (LXX). The two differ widely, more so than with any other Old Testament book. The Greek is one-eighth shorter than the Hebrew and after 25:13a the order of materials differs.

Because of the uncommonly large number of divergencies there has been considerable discussion over the years with regard to the transmission of the text, the basis of the Greek translation, and the question of which text is earlier and/or superior. This discussion has only intensified with the discovery of three partial Jeremiah manuscripts among the Dead Sea Scrolls of Cave 4. One is a short text and two are long. The long 4Q Jer^{a} is dated ca. 200 B.C. and is proto-Masoretic. The short 4Q Jer^{b} is dated in the 2d century B.C. and closely resembles the LXX, which, along with its *Vorlage* cannot be much older. (The LXX translation of the Prophets was done sometime between 250 and 150 B.C.; see SEPTUAGINT). The other long 4Q Jer^{c} is no earlier than the 1st century B.C. (Cross).

The existence of a short Hebrew text of Jeremiah in the 2d century B.C. has given rise to the theory—now widely held—that the LXX translator or translators did not produce an abridgement but rather translated a Hebrew text of comparable length localized in Egypt where the translation was made. This Hebrew text is believed to have survived in comparative isolation from the proto-Masoretic text which originated in Babylon (Cross 1964). The high incidence of haplography in the Egyptian text results from an inactive history of transmission during which time omissions went undetected and uncorrected (Janzen 1967: 446–47). The proto-Masoretic text had a more active history of transmission and is therefore more developed, i.e., it contains more glosses and expansions. So on the whole it is more appropriate to speak about "additions" in the MT than about "omissions" in the LXX, even though, of course, important exceptions to the general rule do exist. One can be found in chap. 29 (LXX 36) where a rhetorical structure in the larger of two letters to the exiles argues for the originality of vv 16–20, which the LXX lacks (Lundbom 1975: 104–5).

Some MT additions are merely single words or phrases which provide embellishment but do not materially affect the sense, e.g., "thus says Yahweh" or "saith Yahweh"; "the prophet" attached to "Jeremiah" or "Hananiah" (28:5, 6, 10 [LXX 35:5, 6, 10]; etc.); "Nebuchadrezzar" (alt. "Nebuchadnezzar") where the LXX either does not mention the king or has only "King of Babylon" (21:2, 7; 22:25; 27:8, 20 [LXX 34:8, 20]; etc.); "Yahweh God of Israel" or "Yahweh of Hosts" where the LXX has only "Yahweh." Again there are exceptions, e.g., the LXX does name "Nebuchadnezzar" (24:1; 34:6 [MT 27:6]).

Certain additions in the MT do alter the message. In chap. 11, with its (exilic) addition of vv 7–8a,, the passage says that because previous generations were disobedient, Yahweh had no choice but to bring upon them the "words" (i.e., "curses") of the Deuteronomic covenant. In the LXX, where vv 7–8a are lacking, the passage says simply that the people did not heed Jeremiah's call for covenant obedience.

There are also passages which in the MT are duplicated but in the LXX are not, e.g., 6:13–15 = 8:10b–12 (Gk adds 8:10b–12); 30:10–11 = 46:27–28 (Gk adds the former in 37:10–11). Yet in some instances both duplicate in the same contexts: 10:12–16 = 51:15–19 [LXX 28:15–19]; 23:19–20 = 30:23–24 [LXX 37:23–24 with variations].

Occasionally one will find minor additions in the LXX, e.g., 2:28; 3:18; 9:13 [MT 9:14]; etc. Of a more substantive nature is the introduction of the term *pseudoprophētēs*, "false prophet," into the LXX, where it occurs a total of nine times (6:13; 33:7, 6, 11, 16 [MT 26:7, 8, 11, 16]; 34:9 [MT 27:9]; 35:1 [MT 28:1]; 36:1, 8 [MT 29:1, 8]). This term never appears in the MT.

Other variant LXX readings can be found in 10:5–10, where the shorter text with a different verse order is corroborated by 4Q Jer^{b}; and in 45:9 where Ebed-melech faults King Zedekiah for leaving Jeremiah to die in the cistern, not "other men" as the MT has it (38:9).

The divergence after 25:13a results from different placements of the Oracles to Foreign Nations. In the Greek these come immediately after the words, "all that is written

in this book" (13a), and fill up chaps. 25:14–31:44. This is roughly the center of the book. The location here has long been thought to be the earlier of the two (Eichhorn 1790: 120; deWette 1858). In the MT the foreign nation oracles are relocated to the end of the book, where they appear in chaps. 46–51. The original subscription to the collection remains in 25:13b [LXX 32:13]. The MT adds v 14 (not in the LXX) which makes a bridge to what follows. But it should be noted that the MT keeps the rest of the book intact. Baruch's expanded colophon—which closes the LXX book at 51:31:35—is chap. 45.

The foreign nation oracles are also in different sequences in the MT and LXX. The sequence in the LXX is Elam, Egypt, Babylon, Philistines, Edom, Ammon, Kedar, Damascus, and Moab. There is no apparent significance to this arrangement, except that Babylon is roughly in the center. The MT sequence is Egypt, Philistines, Moab, Ammon, Edom, Damascus, Kedar, Elam, and Babylon. Here we have geographical movement westward, beginning with Egypt and ending with Babylon. Babylon also occupies the climactic position at the end. Whether Babylon's position near the center in the LXX sequence is also meant to be climactic, one cannot say for certain.

The correspondence between the chaps. of the MT and those of the LXX are indicated in Table 1.

Table 1: Chapter Sequences of the Book of Jeremiah in the MT and LXX

The LXX translation of Jeremiah in its present state is not a unified piece. It has been observed, for example, that the same Hebrew words have different Greek equivalents in chaps. 1–28 and 29–51 (following the LXX numeration). This points to two different translators, and a third, perhaps, for chap. 52 (Thackeray 1902–3). The same data, however, have been used more recently to support a theory of one translator and a later reviser (Tov 1976; *IDBSup*, 807–11).

The quality and specific character of the LXX translation are variously assessed. S. R. Driver (1889: 333–36) concluded from a study of chaps. 2 and 7 that the translators rendered the Hebrew freely because they misread or misunderstood it. Therefore he took the LXX readings to be inferior to the Hebrew and judged the variations not to be recensional in character. Henry P. Smith (1887: 199) came to an opposite conclusion. He judged the LXX to be the superior text, and his sentiments have been echoed more recently by Cross and Janzen. Everyone, of course, recognizes that one's overall judgment must admit qualification when specific passages are analyzed. In poetry, for example, the LXX paraphrases when the Hebrew has a difficult expression, an archaic word form, or a syntactic structure that is not understood (8:18a; 9:2a—Eng 9:3a). But on the whole the LXX translation of Jeremiah is less "free" than, say, Job or Isaiah. Tov (1979: 75) believes the Jeremiah translator (he reckons only one) was generally faithful to his Hebrew *Vorlage,* and so far as the prose sections are concerned, his translation may even be considered literal.

The Greek contains scribal errors of the same sort as those found in the Hebrew text, e.g., homoioteleuton (34:5 [MT 27:5]; 46:4–13 [MT 39:4–13]) and homoioarcton (28:44b–49a [MT 51:44b–49a]). But in some cases it exposes MT errors, e.g., a wrong division of consonants in 23:33 (LXX presupposes *ʾtn hmśʾ* instead of MT's *ʾt mh mśʾ*). Here the LXX is supported by the Vulgate, and a reconstructed Hebrew reading was proposed already by J. D. Michaelis (1793: 200).

The LXX translates literally the Hebrew terms for God; it does not avoid anthropomorphisms as might be expected (Zlotowitz 1981: 183).

The relationship between the MT and the LXX is complex; therefore in textual criticism one must be cautious not to overgeneralize the tendentious qualities of each version.

C. Qumran Scrolls

Portions of at least four Jeremiah scrolls were among the finds in Caves 2 and 4 at Khirbet Qumran. In Cave 2 was one scroll (2QJer) consisting of fragments from chapters 42–44, 46–49 (Baillet 1962). These fragments consisted of 42:7–11, 14; 43:8–11; 44:1–3, 12–14; 46:27–47:7; 48:7, 25–39, 43–45; and 49:10 (?). On the basis of orthnography, 2QJer is dated from "about the beginning of the Christian era, . . . from the last period of the occupation of the Qumran community" (Baillet 1962: 62). In the judgment of Tov this scroll was likely "copied by the Qumran covenanters, probably in Qumran itself" (Tov fc.a.). The scroll contains a number of small deviations from the MT, but it follows the MT order (where the foreign nation oracles come at the end of the book) and is

judged on the whole to reflect the textual tradition of the MT.

The other Jeremiah scrolls come from Cave 4. 4QJer[a] is among the earliest of all the Qumran scrolls, dated on the basis of its orthography from 225–175 B.C., or roughly 200 B.C. (Cross *QBHT* 168, 202, 308; Freedman and Mathews 1985: 55). It is proto-Masoretic. 4QJer[a] first appeared in Janzen's 1963 Harvard dissertation on the text of Jeremiah, the results of which were published four years later (Janzen 1967). In 1973 most but not all of the fragments were published (without photos) when Janzen's dissertation was published (Janzen 1973: 173–181). The entire 4QJer[a] with photos is being prepared for publication by E. Tov. The fragments consist of 7:1–2, 15–19; 7:28–9:2 (>7:30–8:8); 9:7–15; 10:9–23; 11:3–20; 12:3–16; 12:17–13:7; 13:27–14:8; 15:1–2; 17:8–26; 18:15–19:1; 20:15–18; 22:3–16; and 26:10. Remnants of 15 columns have been preserved. The complete scroll is estimated at 54–58 columns where the average width of each column is 13.34 cm. The whole scroll would therefore have measured more than 8 m in length, longer than the great Isaiah scroll which was 7.3 meters. This scroll has an inordinate number of corrections, most all of which are in the direction of the MT. Corrections in some instances are made by supralinear additions; in other instances erasures have been made with a sharp instrument; in one case cancellation dots are used (Tov f.c.a.).

A partial scroll designated 4QJer[b] was also published without photos by Janzen (1973: 181–84). Cross (*QBHT* 308 and personal communication) dates this scroll in the mid-2d century B.C. It consists of three fragments: 9:22–10:18; 43:3–9; and 50:4–6. Of great importance are the fragments 9:22–10:18 and 43:3–9, which compare closely to the LXX. In 9:22–10:18 the short LXX text and LXX verse order are reflected. These fragments with photos will be published by Tov (f.c.c.). Tov does not believe, however, that the three fragments come from a single scroll but are rather from three separate scrolls. He therefore assigns different designations. The fragment 9:22–10:18 (Tov 9:21–10:22?) continues to have the designation 4QJer[b], while the fragment 43:3–9 (Tov 43:2–10) becomes 4QJer[d], and 50:4–6 becomes 4QJer[e].

The final scroll from Cave 4, 4QJer[c], is another long proto-Masoretic text in early Herodian script which dates from 30–1 B.C. (*QBHT* 308 and personal communication). The editio princeps will be published by Tov. From what originally was 25 columns of 18 lines per column the following fragments survive: 4:5, 13–16; 8:1–3; 8:20–9:5; 10:12–13; 19:8–9; 20:2–5, 7–8, 14–15; 21:6–10; 22:4–6, 10–28; 25:7–8, 15–17, 24–26; 26:10–13; 27:1–3, 14–15; 30:6–31:14; 31:16–26; 33:16–20. The writing on this scroll is less economical than on 4QJer[a], i.e., the margins are larger and the space between the lines is greater, which adds up to an estimated length for this scroll of twice the length of 4QJer[a].

The Qumran scrolls contain two types of paragraph divisions, open sections and closed ones. The sections in 4QJer[a] conform closely to Codex L; 4QJer[c] has more paragraph divisions than Codex L and also open sections where Codex L has closed sections (Tov f.c.a.).

D. Poetry and Prose

The book of Jeremiah contains a significant amount of poetry, that discovery having been made by Robert Lowth, who, in 1753, published his famous *Lectures on the Sacred Poetry of the Hebrews* (1815). Poetry was found also in other prophetic books (Lecture 18), and its dominant characteristic was said to be "parallelism" (Lecture 19). Lowth found poetry at the beginning and at the end of Jeremiah, and he judged the book to be about evenly divided between poetry and prose. The poetic sections were first delineated in Benjamin Blayney's Jeremiah commentary of 1784.

Poetry and prose were distinguished as separate sources by critics of the 19th and early 20th centuries, but no one contrasted the two forms of discourse as sharply as Bernhard Duhm in his commentary of 1901 (*Jeremia* KAC). Duhm believed that the poetry put us in direct contact with the prophet's *ipsissima verba*; however, because of a radical appropriation of the metrical theories of Julius Ley, Duhm concluded that Jeremiah wrote only in pentameter (or *kinah*) verse, which was the elegaic 3:2. This amounted to 280 verses of Masoretic text. Of the two prose sources in the book, one was Baruch's life of Jeremiah, which consisted of 220 verses, and the other derived from postexilic Deuteronomistic redactors, whose contribution totaled a grand 850 verses. This gradually emerging three-source theory adopted by Duhm reached classical formulation in the work of Mowinckel (1914). Source A was poetry which preserved the *ipsissima verba* of Jeremiah. Source B was biographical prose written by an admirer of the prophet. Mowinckel later (1946: 61–62) identified this admirer as Baruch. Source C was sermonic prose similar to that which is found in Deuteronomy and the Deuteronomistic History.

The strongest argument for two separate prose sources came from the double account of the Temple Sermon: chap. 26 was in biographical prose and chap. 7 in sermonic prose. Today, however, there is little inclination to distinguish between B and C prose. The stereotyped phrases characterizing C are found just as often in the speeches of B (Holladay 1960: 354). Also, the great bulk of C material, which includes the call passage in chap. 1, the Temple Sermon in chap. 7, and the New Covenant passage in chap. 31, is no longer believed by many scholars to be a retrojection of postexilic theology, but considered rather as a genuine reflection of Jeremiah's own preaching (Robinson 1924; Bright 1951; *Jeremiah* AB; Weippert 1973). In fact, the diction of C contains many striking affinities to the Jeremianic poetry (Bright 1951: 21; Holladay 1960; *Jeremiah* Hermenia). According to this view there is exilic prose in the book, but it is a relatively small amount which in most cases develops themes from Jeremiah's earliest preaching. Not all share this view, however. Some still believe that there is a considerable amount of exilic or postexilic prose in the book which comes from the hands of Deuteronomistic redactors (Thiel 1973; 1981; McKane *Jeremiah* vol. 1 ICC; Carroll 1981; *Jeremiah* OTL).

Holladay's work on poetic style and structure (1962; 1966a) enhances the earlier estimates of those who said that this discourse represents an advanced state of the art. One finds in the Jeremianic poetry an assortment of balancing techniques other than the common types of parallelism, varied rhythms of crescendo and diminution, word-plays on both sound and meaning, and a generous quantity of irony. Holladay also finds poetry hidden beneath some of the prose (1966b). While the book does appear to contain some poetry from other prophets or

which is of unknown provenance, the vast majority is *sui generis* and a legacy of the Jeremianic preaching. Its diction shows influence from the poetry of Hosea, the Song of Moses (Deuteronomy 32), and certain psalms (e.g., 22; 31; 35; 69; 79). Though most scholars today do not credit the Lamentations to Jeremiah, one will find also in this poetry vocabulary and phraseology similar to that found in the Jeremianic poetry.

It was in Kittel's 1906 edition of *Biblia Hebraica* that the MT first appeared with poetry printed as poetry. Kittel himself edited the text of Jeremiah and is largely responsible for the way the poetry is read today. The larger reading public was first presented with Jeremiah's poetry—along with all the rest of the Old Testament poetry—when the complete RSV was published in 1952. Virtually all subsequent translations have translated poetry as poetry. They have also printed it as such. This has provided great assistance in the early work of delimiting Jeremiah's literary units, for in this book poetry and prose are interspersed. Some scholars have recently challenged the basis for making a prose-poetry distinction, one calling the idea of poetry a "Hellenistic imposition" on the Hebrew text (Kugel 1981: 85). But this is wide of the mark. Prose, of course, also has balance, rhythm, and distinct structural features—including parallelism—which suggests, at the very least, a common rhetorical base for poetry and prose. But poetic discourse in Jeremiah—and in the rest of the Old Testament—is well established, and further refinements of prose discourse will not alter that fact. The assumption that the book of Jeremiah contains an early substratum of poetry has been made by all critical methodologies of the past two centuries.

E. Literary Forms

Ancient discourse gives indications of having assumed conventionalized dress in the same way modern discourse does; in fact, some have maintained that ancient discourse is more conventionalized (Norden; Gunkel; see FORM CRITICISM [OT]. Yet when the Jeremiah material is compared to known literary genres of antiquity—both within the Bible and without—no "pure" genres emerge. Prose and poetry take a variety of forms, and although the forms in Jeremiah in some instances resemble forms appearing elsewhere, structures and stylistic features in both discourses owe their origin not to fixed genres but to canons established in ancient Hebrew rhetoric. Except for exilic and postexilic accretions, poetry and prose both bear the stamp of a particular rhetorical school, one existing most likely in Jerusalem during the 8th–6th centuries B.C. Speech forms have their own distinct character, and for this reason they do a better job of defining themselves than by having external genre criteria applied to them.

Divine oracles in the poetry may consist of a single verse (6:21; 14:10), but more commonly one finds speeches and reflective utterances of greater length which address Yahweh, kings, prophets, priests, the general population, and foreign nations of the world. The bulk of the speeches are those of a divine messenger who has been sent to announce Yahweh's judgment upon Judah. Some adopt legal language from the courtroom (2:5–9, 10–13), some are a watchman's warning of the approaching "foe from the north" (4:5–8), and some simply give vent to the divine and human pathos which disaster evokes (4:29–31; 15:5–9). But there are also speeches announcing a future salvation for Yahweh's people, including a return to Zion (chaps. 30–31). Speeches employ dialogue and trialogue with Yahweh, Jeremiah, the people, and even the enemy speaking in turn (4:19–22; 5:1–8; 6:1–7; 8:18–21). Now and then Jeremiah carries on a conversation with himself (4:19; 5:4–5). One speech is a devastating vision of cosmic destruction (4:23–26).

A significant amount of poetry in the book resembles the Psalms. Those passages of a more personal nature have been called Jeremiah's 'confessions." These are individual laments, basically (Baumgartner 1987), some of which include a corrective answer from Yahweh (e.g., 15:15–21) or a joyful song of deliverance (e.g., 20:7–13). The brief personal lament in 10:23–25 requests divine correction. Whether these laments—which are unique in the prophetic corpus—found expression in public worship during Jeremiah's time is a much-debated question. They are so similar to individual laments of the Psalms for which a cultic setting is taken for granted. Communal laments, e.g., the drought liturgy of 14:1–9, would seem to be very much at home in preexilic temple worship. So also the laments made on behalf of exiled kings (22:10; 22:28–30), the slain of Judah (8:22–9:1—Eng 9:2), and all of creation (9:9–10—Eng 9:10–11). The wisdom psalm in 17:5–8 has a striking similarity to Psalm 1. Other liturgies in the book may well come from a source other than Jeremiah, e.g., 10:1–10 (MT only), which contrasts Yahweh to the false gods of the nations, or 10:12–16 (= 51:15–19), which praises Yahweh as both the creator of the world and the special portion of Jacob. In late prose, poetry is imported from the Psalms, e.g., 33:11b from Ps 106:1.

There is also wisdom material, e.g., the proverb in 31:29, the climactic rhetorical question which concludes prophetic speeches in 5:9, 29 and 9:8—Eng 9:9, and miscellaneous pieces such as those appearing in 17:9–10 and 11. The single Aramaic verse in the book (10:11) is a wisdom saying about the false gods of the nations.

Prose in the book divides into two basic styles which correspond more or less to the descriptions given for sources B and C. There is prose of a lighter sort, written in the third person, which basically narrates events in Jeremiah's life (e.g., chap. 26) and records the prophet's personal suffering (chaps. 37–44). This prose is "biographical" only in the sense that it is not "sermonic" prose (source C) and not "legendary" prose like the Elijah/Elisha stories. As remarkable as this prose is in the ancient world, it is not "biography" in the modern sense; we should call it rather "proto-biography." Yet it is the account of an eyewitness, and the supposition that Baruch stands behind it is well supported by evidence contained in the book.

The rest of the book's prose is an amorphous collection of prophetic preaching, moralizing about sin and judgment, and homiletical talk about future restoration and renewed covenants (chaps. 31–33). All is in heavy rhetorical style with accumulation of vocabulary and phraseology similar to what we find in Deuteronomy and the Deuteronomistic History. Some is written in the third person, but some is "autobiographical," being introduced by such first-person formulas as "And the word of Yahweh came to me (saying)" (1:4, 11, 13; 13:8; 16:1; 18:5; 24:4; 32:6), or

"And Yahweh said to me" (3:6; 11:6, 9; 14:11, 14; 15:1; 24:3), or "Thus Yahweh said to me" (13:1; 17:19; 27:2). There is also heavy prose which postdates the Jeremiah era, e.g., 3:15–18; 5:18–19; 9:11–15(—Eng 9:12–16); 9:22–23—Eng 9:23–24; etc.

In the heavy prose are a variety of literary forms. There are reports of visions (1; 24; 38:21–23), prayers to Yahweh which include also Yahweh's answers (32:16–44), and direct messages from Yahweh to Jeremiah (7:16–20; 11:14–17; 14:11–16; 15:1–4; etc.). The famous Temple Sermon (7:1–15) is heavy prose as are the sermons found in 11:1–8 and 34:12–22.

Prose of both types reports parables and object lessons (13:1–11; 18:1–12; 19; 27–28; 35). Chapter 29 is a letter (vv 4–23) to which the fragment of another letter (vv 24–28) has been attached. Expanded colophons are found in 36:1–8; 45; and 51:59–64 (Lundbom 1986), and perhaps also in 32:6–15 (Gevaryahu 1970: 370–72; 1973: 211–13).

F. Composition

The book of Jeremiah bears ample witness to the claim that people in antiquity compiled spoken and written discourse differently than we do today. The remark is frequently made that the book of Jeremiah is in great disarray (Bright 1951: 21; *Jeremiah* AB, lvi–lxiii). Materials are out of chronological sequence and in their compiled form seem to be without a coherent plan, something in modern compositions we come to take for granted. In order to understand not only the completed form of the book of Jeremiah, but also the process whereby the book was brought to its completion, the most important thing, perhaps, to realize at the outset is that chronology is but one criterion among a host of others which ancient scribes and other literary people used to order their materials. Second, ancient compositions do have coherence, but that coherence follows an inner logic which is still quite alien to the modern Western mind.

In the book of Jeremiah, as is true in other biblical books, we are confronted with a document that has undergone change. This introduces an element of complexity into the analysis that would not exist if our document had been composed at one point in time or had been preserved unaltered after leaving some author's hand. The turbulent effects of oral transmission have, of course, been greatly exaggerated. Some poetry in the book may have been subject to laws of oral transmission, but on the whole we have to do in Jeremiah with a written composition. Alterations, where they exist, are largely the work of scribes in charge of the compilation process—beginning in Jeremiah's lifetime and continuing for an unspecified number of years afterward.

The book has a certain chronological order. Jeremiah's call comes in chap. 1 (unlike that of Isaiah which comes in chap. 6 of his book), and the prophet's last recorded activities in Egypt are placed either near the end of the book (MT 44) or at the very end (LXX 51:1–30). Chapter 2 contains Jeremiah's earliest preaching, which precedes in time the confessions closing out the First Edition (20:7–18). All of chaps. 1–20, with only a few exceptions, are earlier than all the prose narratives of 24–29 and 34–44. Also, the account of Jeremiah's final suffering in 37–44 follows a chronological sequence with only a couple possible exceptions: chaps. 37 and 38 may be duplicate accounts of Jeremiah's imprisonment, and chaps. 39 and 40 duplicates of his release by the Babylonians. Attention then is paid to chronology, but the composition of the book consists of much, much more.

Material is brought together in some cases because of a common literary form, e.g., the substratum of confessions in 11–20. Literary form together with a common theme dictate the grouping in chaps. 2–3. Speeches here focus on the nation's religious harlotry, thus the designation "harlotry cycle." The group of speeches beginning at 4:5 is likewise the "foe cycle" because of a common theme running through about the foe from the north. Some conclude this cycle at 6:30 before the Temple Sermon and the added prose in 7:1–8:3; others extend the cycle into the poetry of chap. 8. Actually the cycle extends to the end of chap. 10 in order that the preaching about destruction by the foe might have along with it the necessary weeping and lamentation (see especially 8:18–9:10—Eng 9:11; 9:16–21—Eng 9:17–22). The theme of hope controls, though it does not exclusively dominate, the speeches in the so-called "Book of Comfort," both in its early (30–31) and in its late (30–33) editions.

Material in some cases is grouped on the basis of audience. We see this in chaps. 21–23 where varied utterances of Jeremiah have been brought together because they are directed toward kings (21:1–23:8) or prophets (23:9–40). The audience is also the controlling element in the Foreign Nation Oracles (chaps. 46–51).

Association techniques—a common possession, most likely, of the oral poet and the scribe—perform compositional functions. In the poetry are "catchwords," which may easily be identified once the literary units are delimited. The word "sons" links 3:14 with 3:19, thus setting off the prose in vv 15–18. The word "gather" (*ʾsp*) links 9:21—Eng 9:22 with 10:17, which suggests that the prose of 9:22–25—Eng 9:23–26 and the liturgical poetry of 10:1–16 are late additions. The word "know" (*ydʿ*) links 10:25 with 11:18, again showing that prose seems to have been inserted into what was originally a chain of poetic speeches. Three passages of poetry, 6:27–30; 7:29; and 8:4–9, were at one time another chain held together by the catchword "reject" (*mʾs*), which appears at the end of each poem:

6:30 *Reject* silver they are called
for Yahweh has *rejected* them.

7:29 For Yahweh has *rejected* and forsaken
the generation of his wrath.

8:9 Behold they have *rejected* the word of Yahweh
and what wisdom is in them?

This chain shows that the prose of 7:1–8:3 is a later insertion, perhaps made in order to embody 7:29 into sermonic material (Mowinckel 1946: 64). The foe cycle, therefore, does not conclude at 6:30.

The two poems in 22:20–23 and 23:9–11 were linked in an early chain by the catchword "broken" (*šbr*), which appears at the beginning of each poem:

22:20 Go up to Lebanon and cry out
and lift up your voice in Bashan
Cry from Abarim
for all your lovers are *broken*.

23:9 My heart is *broken* within me
all my bones shake

The Jehoiachin oracle and lament of 22:24–30—also the messianic prophecy of 23:1–8—are therefore later additions. Catchwords also link prose passages to adjacent poetry, e.g., "Terror on every side" in 20:3 and 10 (Bright *Jeremiah* AB, 134).

Material is compiled in some cases by means of rhetorical structures. Chapter 1, for example, is a chiasmus (abb'a') with two visions placed at the center and their respective articulations at the extremes:

a Articulation of the call vision (4–10)
b Vision of the call (11–12)
b' Vision of the foe (13–14)
a' Articulation of the foe vision (15–19)

Near the end of the foe cycle four originally separate utterances have been combined thematically into a chiasmus:

a Jeremiah *weeping* for the slain of Judah (8:22–9:1—Eng 9:2)
b Jeremiah warning about evil *tongues* (9:2–5—Eng 9:3–5)
b' Jeremiah warning about evil *tongues* (9:6–8—Eng 9:7–9)
a' Jeremiah *weeping* for all creation (9:9–10—Eng 9:10–11)

In chap. 29 a letter to the exiles and the fragment of another are combined in such a way that the opening words of one and the closing words of the other—which are the same—form an inclusion for the whole (vv 5, 28).

Some material in the book appears to have been structured for purposes of cultic recitation. In 14:1–15:4 two successive liturgies are sequenced form-critically in the same manner (Gerstenberger 1963):

a Lament over widespread destruction (14:2–6, 17–18)
b Communal complaint and supplication (14:7–9, 19–22)
c Judgment oracle from Yahweh and—in prose—the rejection of Jeremiah as mediator (14:10–16; 15:1–4)

Liturgical requirements may also offer an explanation for various lament and deliverance combinations, e.g., 20:7–13, and judgment and salvation combinations, e.g., chaps. 30–31 (see below).

Later material has been interspersed with earlier material at various points in the book. In chaps. 1–20 the inserted material is mostly prose, e.g., 7:1–8:3, although it can be poetry, e.g., 10:1–16. Prose comment on passages of poetry in some cases follows it (3:15–18, 24–25; 9:11–15—Eng 9:12–16; 22:11–12). In the King Collection (21:1–23:8) and in the early Book of Comfort (30–31), prose passages frame an earlier core of poetry (see below).

Finally, those compiling the book of Jeremiah had definite ideas about what made a suitable beginning and a suitable end. Visions were put at the beginning (chaps. 1; 24) and colophons at the end (45; 51:59–64; and originally 36:1–8) (Lundbom 1986).

G. Early Collections

The present book of Jeremiah was preceded by earlier compilations, some of which are still discernible within the larger collection. Recent studies done on rhetoric and composition indicate that these compilations were written documents from the very first, also that the bulk of the writing was done during Jeremiah's own lifetime.

1. The Scroll of 605. In chap. 36 we have an extraordinary account telling us how the first written collection came about. In the 4th year of Jehoiakim, i.e., 605, Yahweh told Jeremiah to prepare a scroll on which was to be written all that he had spoken concerning Israel, Judah, and the nations—from the time Yahweh's word first came to him until the present day. Jeremiah summoned for this task a certain Baruch ben Neriah, who was a scribe (v 32). A seal impression has been found with Baruch's name on it, followed by the title "scribe" (Avigad 1978). Baruch in all probability was the holder of some royal office in Jerusalem. After Baruch had written the scroll, he was to read it in the temple; Jeremiah could not do this because he was currently under a temple ban. Baruch did as he was told, probably the year following (MT 36:9), although there is some uncertainty about date because the LXX says it was four years later. In any case, the scroll was read three times, the third being before King Jehoiakim, who repaid the favor by casting it into the fire. The scroll was later rewritten and more material was added to it (v 32).

There has been much speculation about the contents of this 1st scroll. Most scholars have concluded that the scroll must lie within 1–25:13a, even if not all of the present material was included. According to this view, the words of 25:13a, "all that is written in this book," mark the scroll's conclusion (Muilenburg *IDB* 2: 823–35; Bright *Jeremiah* AB). But these same words make better sense when they are taken as a pointer to what originally lay ahead—and what in the LXX still does lie ahead—viz., the oracles against Babylon (cf. vv 12–13a).

The suggestion of Rietzschel (1966: 136) that the early scroll consisted of chaps. 1–6 must be rejected because the foe cycle does not end at 6:30. The only early material in the book which shows itself to be a self-contained collection is chaps. 1–20 (Lundbom 1975: 28–30). Whether 1–20 constitutes the scroll of 605 we cannot say for certain, but any discussion regarding the contents of this scroll ought to be focused on these chaps., not on 1–25:13a.

2. The First Edition of the Book of Jeremiah. The earliest book discernible within the present book consists of chaps. 1–20. These chaps. are held together by an inclusio made up of the final words from Jeremiah's last confession and the opening words of his call:

Jeremiah: Why *from the womb did I come forth*
to see trouble and sorrow
and end in shame my days?
(20:18)

Yahweh: Before I formed you in the belly I knew you
and before *you came forth from the womb*
I consecrated you
(1:5)

With the 1st scroll no longer extant, we can take chaps. 1–20 as the first edition of the book of Jeremiah. Rietzschel (1966) has suggested that chap. 45, which contains Jeremiah's personal word to Baruch at the time the scroll of 605 was written, originally stood at the end of chap. 20 being linked to it by the catchword "sorrow" (*yâgôn*; 20:18; 45:3). Chap. 45 is a scribal colophon written by Baruch (Lundbom 1986: 107), which provides some basis then for saying that Baruch is the one who wrote up the First Edition. It is not known who supplied the superscription in 1:1–3. Some have said that it was Baruch (Hyatt *IB* 5: 797–98), but others—those who believe the superscription is a composite (Budde 1921), as well as those who believe it is all one piece (Zalevski 1975)—say it dates from the exilic or postexilic periods.

The First Edition is introduced by the two visions in chap. 1. These credential Jeremiah for the preaching which follows, with the second vision on the foe from the north explaining why it is that Jeremiah composes laments for the nation and for himself. The first vision of the almond rod is associated with the prophet's call in 627 B.C. (1:4–12). The second vision of the boiling pot tipped away from the north carries with it the summons to begin his career (1:13–19), which dates not from 627 but rather 5 years later or so around 622. See JEREMIAH (PROPHET).

There are two major groupings following chap. 1, each containing its own type of material and having its own independent chronology. The division comes at the end of chap. 10. The 1st grouping ends with a psalm pleading for personal correction and for vengeance upon the enemy (10:23–25). The verb *klh* ("finish, consume") in 10:25 reinforces closure just as it does in 20:18 where the second grouping concludes.

The grouping of chaps. 2–10 is built upon a substratum of poetry, which comprise two cycles on "religious harlotry" and the "foe from the north." The fragment in 2:2–3 serves as an introductory foil for the two cycles, bringing to remembrance the time when Israel was faithful to Yahweh and in no danger of attack from external enemies (Holladay *Jeremiah* Hermeneia, 30–34). The cycle on harlotry consists of 2:4–3:5; 3:12–14, 19–23, the concluding verses of the latter being a liturgy of confession which is expanded in 3:24–25. The foe cycle consists of 4:5–5:17; 5:20–6:30; 8:4–9:10—Eng 9:11; 9:16–21—Eng 9:17–22; and 10:17–25. The laments of chaps. 8–9 belong to this cycle, so also 10:17–22, which is a word preparing people for the exile of 597. The mention of "the north" at the end of this lament (10:22) makes an inclusio with "the north" beginning the cycle (4:6). Here, too, we see that at the very end stands a confession (10:23–25).

The poetry in 4:1–4 is transitional: vv 1–2 conclude the preaching of chap. 3 directed at "faithless Israel"; vv 3–4 introduce judgment upon Judah, which begins in 4:5.

Two passages of prose in chaps. 2–10 preserve early traditions of Jeremianic preaching: 3:6–11, which is a 1st-person homily comparing Israel and Judah, and 7:1–8:3, which, except for 7:16–20, is a 3d-person account of sermons delivered in the temple. Included in the latter is the famous Temple Sermon of 609 (7:1–15). In 7:16–20 we have a personal word from Yahweh to Jeremiah. Other prose in 3:15–18; 5:18–19; 9:11–15—Eng 9:12–16; 9:22–23—Eng 9:23–24; and 9:24–25—Eng 9:25–26 is exilic. As for the poetic liturgies in 10:1–16, about all we can say is that they are later additions; we know neither their dates nor their provenance.

The substratum of poetry within chaps. 11–20 consists of Jeremiah's confessions in the main, but included also are speeches against Judah and Jerusalem, liturgies used in national emergencies, laments over the departure of Jehoiachin and the Queen Mother, and a handful of miscellaneous wisdom sayings. Interspersed are passages in prose which contain preaching, dialogues between Yahweh and Jeremiah, and reports about Jeremiah's prophetic activity.

It is not clear to what extent the poetry follows in chronological sequence. The confessions in 11:18–12:6 are thought by some to come from the beginning of Jeremiah's career when priestly kin at Anathoth turned against him for supporting Josiah's program of one sanctuary in Jerusalem. The confessions in 20:7–18 most likely come from ca. 605–604 B.C. when Jeremiah was being hunted by Jehoiakim. About the rest of the poetry there is uncertainty regarding date, except in the case of 13:15–27, which comes from just before the deportation of 597 and must be some of the "added words" on the rewritten scroll (36:32).

The prose at both ends of chaps. 11–20 gives evidence of at least some concern on the part of the compiler for establishing chronological sequence. The covenant preaching in 11:1–8 is best dated soon after 622, while the events recorded in 19:1–20:6 fit into the period between 609 and 605 (Bright *Jeremiah* AB, 174–75). Little more can be said about the dating of the prose, except that a few brief verses (11:7–8a; 16:14–15 [= 23:7–8]) come either from the end of Zedekiah's reign or else are exilic.

3. The Appendix on Kings and Prophets. Immediately following the First Edition is an appendix in chaps. 21–23 which contains preaching, laments, and narrative focusing on two groups: (a) Judah's royal house; and (b) Jerusalem's ministerium. Earlier there appears to have been two separate collections, for the text has retained introductory captions which read, "Concerning the house of the King of Judah" (21:11), and "Concerning the prophets" (23:9). Each collection has a core of poetry. At an earlier time the two compilations of poetry were linked together by the catchword "broken" (*šbr*) which begins the last "king poem" (22:20) and the first "prophet poem" (23:9).

The King Collection has expanded from the center out. At the core are three poems against Jehoiakim and his royal household (22:6–7, 13–17, 20–23) into which are interspersed a lament for Shallum (i.e., Jehoahaz; v 10)

and a non-lament for Jehoiakim (vv 18–19). A rhetorical structure built on the key words "Lebanon" and "cedars" holds the Jehoiakim poems together (Lundbom 1975: 101–2). These key words highlight Jeremiah's basic criticism of Jehoiakim, i.e., that he was generous when it came to erecting cedar buildings in Jerusalem, but he cared nothing for the weightier matters of justice and righteousness.

After 597 this core was expanded to include the oracle and lament for young King Jehoiachin (22:24–30). Up front was placed more preaching against Jehoiakim (21:11–22:5) and the title in 21:11 was added. The prose of 22:8–9 and 11–12 may also be part of this expansion.

A second expansion occurred when the dated Zedekiah prose of 21:1–10 was added at the beginning, and the messianic prophecies of 23:1–8 were placed at the end. The Zedekiah prose belongs with chaps. 37–38, but here it functions to set up a contrast between Zedekiah, who is misnamed "Righteous of Yahweh" or "Righteous is Yahweh," and the future Davidic king whose name—and entire being—will be "Yahweh is our righteousness" (23:6). This second expansion dates from the very end of Zedekiah's reign or shortly after.

The core of poetry focused on the prophets consists of a lament over prophets—also priests—who are unfit for holy office (23:9–11), an oracle of judgment against the prophets of Jerusalem (vv 13–15), and a dialogue between Jeremiah and Yahweh about prophets who run but are not sent (23:18, 21–22). Into this dialogue has been inserted at a later time an independent judgment oracle (vv 19–20; it appears also in 30:23–24). The material in 23:12, 16–17, and 23–40—most of it prose—is also later expansion. Unlike the King Collection, there are no internal aids here which can help us with dating the core and its expansions. Probably what we have is preaching during the reigns of Jehoiakim and Zedekiah. We know that at the beginning of each king's reign Jeremiah sustained harsh attacks from other prophets (26:7–11; 28).

4. The Baruch Prose Collections. Within chaps. 24–45 are the prose passages said by many to come from the hand of Baruch, Jeremiah's close friend and colleague in the years subsequent to 605. They contain reports of divine revelations and record some of Jeremiah's late preaching, but for the most part are narratives describing the prophet's activities at the end of his early career and during the public years of his late career. The years covered are the first five of Jehoiakim's reign, i.e., 609–604, the first four of Zedekiah's reign, i.e., 597–594/3, and those immediately before and after Jerusalem's fall. Between 605 and 597, and between 594 and 588, Jeremiah is out of public view and not heard from.

One collection is particularly well intact. It is the so-called "Via Dolorosa" prose of chaps. 37–44. These chaps. describe Jeremiah's final sufferings from the point of view of one who observed them at close range. The collection is introduced by a superscription similar to those appearing in the Deuteronomistic History (37:1–2). From this collection may originally have come the prose accounts in 21:1–10; 32; and 34, for they, too, are about Judah's last days when Jerusalem was under siege.

The remaining chaps., viz., 24–29, 35–36, and 45, are not intact, lending support to the claim that the book of Jeremiah is in mass disarray. All contain dated superscriptions from which we can see that chronology has manifestly not been kept, at least not in the arrangement which now appears before us. Chapters 25–26, 35–36, and 45 are from the reign of Jehoiakim. Chapters 24 and 27–29 are from Zedekiah's reign. Chapter 45 is the easiest to account for. It is Baruch's colophon to the final book which comes from his hand (now only in the LXX at 51:31–35). However, when the two larger clusters of four chapters each from the respective reigns of Jehoiakim and Zedekiah are examined more closely, it will be seen that both have identical rhetorical (a b b′ a′) structures (Lundbom 1975: 107–11). This seems to indicate that originally they were two separate collections.

The present disarray is due to the breakup of these Jehoiakim and Zedekiah collections, although we do note that some passages, viz., 25–26, 27–29, and 35–36, did manage to stay together. The most plausible explanation for the breakup is that 24 was chosen to begin a larger composition being formed because it contained a revelatory vision. The present book now begins with two revelatory visions. Chapter 36 (originally only vv 1–8) was chosen to conclude this larger composition because it was Baruch's colophon (Lundbom 1986: 104–6). The present book also ends with a colophon.

Two interpolations were made into this larger composition between chaps. 29 and 35. One was the Book of Comfort (30–33), which is a separate collection (see section 5). It was inserted because its passages of hope were attracted by the hope expressed in Jeremiah's larger letter to the exiles (29). Chapter 34, which has two parts, vv 1–7 and 8–22, and which belongs with chap. 37, was the second interpolation. It was placed next to chap. 35 in order to set up a contrast between the obedient Rechabites and the disobedient Zedekiah.

5. The Book of Comfort. The present Book of Comfort comprises all of chaps. 30–33. At an earlier time, however, it consisted only of chaps. 30–31. The controlling theme of both editions is hope for national restoration through new and ongoing covenants.

The earlier edition of just 30–31 was built around a core of poetry. The prose frame is made up of sayings which begin with the words, "Behold the days are coming" (30:3; 31:27, 31, 38). Originally this collection was written up on a separate scroll (30:2).

The poetic passages comprising the core speak of hope and restoration in part, but actually the controlling theme is a more somber one about judgment and imminent exile. The whole is given a rhetorical structure in which judgment and hope oracles are combined, also laments with words of divine promise. Catchwords link up some of the paired passages. What we have here is a moving dialogue well suited for liturgical use:

a	Judgment (30:5–7) Hope (30:10–11)	*catchwords:* Jacob / save (*yš*ʿ)
b	Judgment (30:12–15) Hope (30:16–17)	*catchwords:* wound (*mkh*) / heal (*rp*ʾ)
c	Hope (30:18–21) Covenant Formula (30:22) Judgment (30:23–23) Covenant Formula (31:1) Hope (31:2–14)	

b′	Lament (31:15) Promise (31:16–17)	*catchwords:* weeping (*bky*) / children
a′	Lament (31:18–19) Promise (31:20–22)	*catchwords:* Ephraim / return (*šwb*)

The keystone of the arch is the judgment oracle of 30:23–24, which appears also in 23:19–20 where it has been editorially inserted. One will note how the covenant vows on either side of this judgment oracle are formulated in reverse order.

The concluding promise in 31:20–22 is bittersweet. Exile is ahead and Jeremiah expresses wonderment about how long this "changeable daughter" will change direction, also why now the females must give protection to the soldiers. With this final irony an inclusio is formed with another irony expressed at the beginning of the core: males there are said to be behaving like women in labor (30:6). Assuming exile to be imminent, the terminus a quo for the core would have to be 597 B.C. But those oracles which announce deliverance and a return to Zion are some of Jeremiah's earliest, coming from the beginning of his career when he anticipated the return of northern exiles who had been taken away to Assyria in 722.

The somber mood controlling the core gave way to a mood of joyful anticipation when the first Book of Comfort was compiled. One passage of the prose expansion announces a "new covenant" which will replace the Mosaic covenant now defunct. Another added fragment of poetry in 31:35–37 provides yet more assurance, stating that the unconditional covenant given to Abraham continues to be valid. We do not know when the first Book of Comfort was completed. It could have been at the time when the second expansion was made to the King Collection, for in 23:5–6 and 7–8 are two more "Behold the days are coming" promises. This would be at the very end of Zedekiah's reign, or shortly after.

Sometime later the Book of Comfort was enlarged by the addition of chaps. 32–33. This collection was tied together with an inclusio made up from the closing words of 33:26, "For I will restore their fortunes," and the opening words of 30:3, "And I will restore the fortunes of my people." The superscription to chap. 32 indicates that this passage belongs with the Zedekiah prose of 37–38; the same may apply to 33:1–13. The final material in 33:14–26 is lacking in the LXX and most likely represents an exilic addition. Its purpose is to reaffirm the covenants given to David and his royal line (2 Samuel 7) and to Levi's priestly line through Phinehas (Num 25:10–13). The prose insertion of 30:8–9 mentioning David is also late, though it does appear in the LXX.

6. The Foreign Nation Oracles. The book contains a separate collection of oracles which were spoken against nine foreign nations. In the LXX this collection follows 25:13a, while in the MT its placement is in chaps. 46–51 (see above). The location in the LXX is the earlier of the two, wherein one finds both superscription (25:13a) and subscription (LXX 32:13) supplied. In the MT these have been combined in 25:13. The MT has its own superscription to the collection in 46:1. Similar collections of foreign nation oracles are found in the books of Amos (1:3–2:3), Isaiah (chaps. 13–23) and Ezekiel (chaps. 25–32).

The inclusion of material in this collection has been determined by audience in the main, as is the case also in the King and Prophet Collections of chaps. 21–23. However, among the Babylon oracles is a liturgy which appears also earlier in the book (51:15–19; cf. 10:12–16). And at the end of the Egypt oracles the MT (only) duplicates an oracle addressed to Israel (46:27–28; cf. 30:10–11). The function here is to call home exiles who have gone away to Egypt.

The foreign nation collection has a complex history, one which may, for some oracles at least, include an early period of oral tradition. The different sequences within the LXX and MT suggest this, so also the time span over which these oracles were delivered. The first oracle against Egypt is dated in 605 (46:2), whereas the earliest date for the oracles against Edom, Ammon, and Moab is 590. This totals 15 years, and the time frame may be longer.

Jeremiah himself is said to have written a scroll of Babylon oracles (51:60). In 594/3 this scroll was given to Seraiah ben Neriah, the brother of Baruch, and he was instructed to take it with him on a trip he was making to Babylon. On arrival the prophecies were to be read aloud, after which Seraiah was to throw the scroll into the Euphrates, dramatizing Yahweh's curse on Babylon. This is related to us in Seraiah's colophon appended to the Babylon oracles (51:59–64 [LXX 28:59–64]; Lundbom 1986: 101–9). If Seraiah followed these instructions, then another early scroll has perished (cf. chap. 36). But a duplicate was made, to which Seraiah appended his colophon. A seal impression with Seraiah's name on it has been found (Avigad 1978), though it lacks the title "scribe." The biblical tradition says he held the office of "quartermaster" (51:59). We can assume, however, that like his brother, Seraiah had professional scribal training and was competent to perform a range of scribal functions.

There has been much discussion about whether the foreign nation oracles are genuinely Jeremianic. Most of the oracles are in poetry, but opinions about quality and style vary. Bright says the quality is high, with some oracles showing the same vividness as oracles addressed to Israel whose genuineness is not questioned (*Jeremiah* AB, 307–8). Also one finds in these oracles some of Jeremiah's most characteristic phrases, e.g., "terror on every side" (46:5; 49:29; cf. 6:25; 20:10); "faithless daughter" (49:4; cf. 31:22); "like a woman in labor" (49:24; 50:43; cf. 6:24; 22:23; 30:6); "haunt of jackals" (49:33; 51:37; cf. 9:10—Eng 9:11; 10:22); etc. So far as rhetorical structures are concerned, the speeches in 51:20–23 and 51:34–45 rank with the best of Jeremiah's speeches to Israel and Judah. In one instance a speech written for the "daughter of Zion" (6:22–24) is adapted for delivery to the "daughter of Babylon" (50:41–43).

Certain of the oracles do, however, contain portions which appear to be anonymous or from some other prophet. The Edom oracle has verses found also in Obadiah (49:7–16; cf. Obad 1–5), and verses in the Moab oracles (48:33–39) echo Isaiah 15–16. Other duplications or similar sounding verses: 48:43–44 (cf. Isa 24:17–18); 49:27 (cf. Amos 1:4, 14); 49:31 (cf. Ezek 38:11); 50:16b (cf. Isa 13:14b). The same oracle was also used in one case against two different nations, viz., the prose saying against Edom and Babylon (49:19–21; 50:44–46). The super-

scription to the Babylon oracles suggests that the tradition about Jeremiah's authorship of those oracles may be late, and may also be in some doubt. The Greek (27:1) makes no reference to Jeremiah, while in the Hebrew (50:1) "through Jeremiah the prophet" is tacked on at the end. The Foreign Nation Oracles, in any case, appear to be a mix of genuine and nongenuine sayings, and a blanket judgment either for or against Jeremianic authorship of the collection does not seem possible. Finally, as with the other poetic collections, so also here one finds prose insertions at various points.

H. The Book of Books

The present book of Jeremiah is really a "book of books." Though we may speak about oral composition and oral transmission for poetry within 1–20, 21–23, 30–31, and 46–51, the various collections and the completed book are written documents behind which stand Baruch, Seraiah, and other scribes who shared in the work. Jeremiah himself had a hand in the writing process (51:60). In Judah, as well as in the neighboring countries, it was a "scribal age" (Muilenburg 1970: 219). Asshurbanipal's huge library at Nineveh (650–630 B.C.) and the cache of 51 seal impressions from the early 6th century Jerusalem (Shiloh 1984: 19–20)—one of which has the name of Gemariah, son of Shaphan, on it (cf. 36:10–12, 25)—are just two of the more spectacular finds documenting this age.

The first book corresponding roughly to chaps. 1–51 was Baruch's compilation. In it the Foreign Nation Oracles followed 25:13a, and at the end was placed Baruch's colophon (LXX 51:31–35), which formerly concluded the First Edition. This book survives in the LXX version and in 4Q Jer^{b} (though the latter is but a small fragment of it). Its provenance is Egypt where Baruch and Jeremiah were taken after 586 B.C. (43:5–7).

Another book corresponding roughly to chaps. 1–51 was completed in Babylon, though somewhat differently. In this version the Foreign Nation Oracles were relocated to the end, with those against Babylon appropriately being placed last. Seraiah's colophon concluded the book at 51:59–64. This book survives in the fragments 4Q Jer^{a} and 4Q Jer^{c} and in the MT. Seraiah, who went to Babylon in 594/3 and could have been exiled there ultimately, is possibly the compiler. In this version the final words of chap. 51, "thus far the words of Jeremiah"—which significantly are absent from the LXX—make an inclusion with "The words of Jeremiah . . ." beginning the book (1:1; 51:64). Two books then were completed in Egypt and Babylon respectively after the fall of Jerusalem, at roughly the same time the Deuteronomistic work was completed (Freedman 1963; 1983: 171–72).

Chapter 52 is a historical appendix derived for the most part from the Deuteronomistic History (2 Kgs 24:18–25:30). A historical appendix appears similarly at the end of 1 Isaiah (chaps. 36–39). The report of Gedaliah's governorship from 2 Kgs 25:22–26 is omitted, perhaps because it is covered extensively in Jeremiah 40–43. In its place is added—but only in the MT (52:28–30)—a summary of the various deportations to Babylon including the numbers of people taken. This fragment occurs nowhere else in the Bible. The final verses 31–34 recast slightly 2 Kgs 25:27–30, which is the concluding postscript to the Primary History (Genesis to 2 Kings). The date for this postscript is ca. 560 B.C. (Freedman 1983). By the middle of the 6th century, then, the tie was made between the completed book of Jeremiah and the completed Primary History. Verse 34 mentions Jehoiachin's death, which is not noted in 2 Kgs 25:30; however, from 2 Kings—in the MT only—is added "all the days of his life," which allows the book to conclude on a more positive note.

I. Theology

The theology in the book of Jeremiah is part subjective and part objective reflection. Ancient as well as current beliefs about Yahweh and his covenant people are refracted through the man Jeremiah, to which are added numerous witnesses to the life of faith which grow out of Jeremiah's own prophetic experience. The book also contains reflections by others who look at Jeremiah's life and preaching from a distance, and these form a second theological component no less important than the component of theology which derives from the prophet.

1. The Theology of the Prophet. We do not get from Jeremiah anything approaching a systematic theology. His preaching has a certain consistency to be sure, and thoughts of his are developed beyond the point of receiving merely passing mention. Nevertheless, ideas about Yahweh, Yahweh's word, the covenant, judgment, and salvation, etc., have their embodiment in rhetoric, i.e., in metaphors, argument, and ironic comment, in lyric poetry, and in impassioned preaching, not exactly the stuff of which systematic theology is made.

a. Sources for the Prophet's Theology. Traditions from the north, particularly those associated with Moses, predominate in the call and in the earliest preaching. Jeremiah reflects upon the Exodus, Wilderness Wanderings, and Settlement in 2:2–9, where his indebtedness to the Song of Moses is clear. From this song, which Cornill judged to be "a compendium of prophetic theology" (1891: 71), Jeremiah learned that Yahweh's grace toward Israel frames the entire sweep of world history. Within this frame, however, lie Israel's ingratitude, her corrupting ways with other gods, which result from settled and agrarian living, and Yahweh's punishment of Israel for what in his eyes is wrongdoing. Yahweh stays the hand of the enemy only as Israel is about to be completely destroyed. Then with a remnant Yahweh begins a new work of salvation, at which time the enemy is defeated. Jeremiah follows the Song of Moses in depicting the Mosaic Age as the idyllic period of national history, a time of purity when Israel was Yahweh's "devoted bride" or "first fruits" (2:2–3; cf. Deut 32:10–12). He also views Israel's settlement in the land as the time when things began to go bad (2:7; cf. 2:21; 8:13; Deut 32:13–18).

From Deuteronomy 1–28, which was originally a northern document, Jeremiah learned that the Mosaic covenant was conditional in nature, and that obedience to this covenant was the basis on which land tenure rested. The Mosaic covenant could be broken—as it repeatedly was by Israel—at the same time it could also be reconstituted. Jeremiah preached both messages—the brokenness of the covenant and Yahweh's decision to remake it—more clearly than any other prophet (2:20; 5:5; 7:5–10; 31:31–34; 32:37–41).

Jeremiah's preaching betrays indebtedness to the northern prophet Hosea. From Hosea, Jeremiah learned that the covenant is like a familial bond—between husband and wife or between father and son; that sin is rooted in a lack of the knowledge of Yahweh; and that a breach of covenant amounts to religious harlotry or adultery. Jeremiah follows Hosea in representing Yahweh as a deeply compassionate God, one who experiences personal hurt by having to vent his wrath, and one who wants, after the punishment is over, to receive his wayward child home again (31:16–20; cf. Hos 11:8–9).

During his long ministry in Jerusalem, Jeremiah appropriated theology from southern traditions associated with Abraham and David. One event associated with Abraham loomed very large for Jeremiah, as it did also for Isaiah and certain other prophets, and that was Sodom and Gomorrah's destruction (Genesis 18–19). From this, Jeremiah realized that Yahweh punishes entire cities for unrighteous living (5:1–8), and that a point can be reached where mediation for such cities is no longer possible (7:16–20; 11:14–17; 14:11–12; 15:1–2). Not only immoral prophets, but also seemingly innocent people, such as the man who brought the news of Jeremiah's birth to his father, are likened by Jeremiah to the inhabitants of these proverbial cities (23:14; 20:15–16) and must suffer a like fate when Jerusalem is destroyed. In his early preaching, Jeremiah stated that the blessings of the Abrahamic covenant were contingent upon Israel's repentance (4:1–2). But later he affirmed that Yahweh's covenants to Abraham and David were eternal and remained intact. Yahweh in future days would make good his promise to bless the nations through Israel, and Israel could count on David's royal line surviving, despite the nation's demise. This is fully in keeping with the basic tenets of southern theology.

It was perhaps from earlier prophetic preaching, most likely that of Micah, Isaiah, and also Amos—whose home was in the south—that Jeremiah learned of Yahweh's anger over urban injustice. In Jerusalem he discovered the rich exploiting the poor and wrongdoing going unpunished.

Wisdom materials too, collected at the Jerusalem court since the time of Solomon, had their impact upon the prophet. Jeremiah quotes proverbs and makes liberal use of wisdom themes, e.g., regularity and stability within the natural order (5:22, 24; 8:7). Jeremiah was much concerned with creation, but more over the threat of approaching chaos. Both creation accounts in Genesis 1–2 supply him with imagery in predicting the coming destruction (4:23–26; 18:1–11). Yahweh, for Jeremiah, is not simply God of the Exodus but God of the entire creation (10:12–16 [= 51:15–19]; 27:5; 32:17; 33:2), and at this point he anticipates the grand universalism of Second Isaiah. In the confessions, where Jeremiah's suffering finds such eloquent expression, indebtedness is to the Psalms and perhaps to an early edition of Job (Lundbom 1985: 600). About the only thing lacking in Jeremiah is priestly theology (33:17–22 is later), a fact which poses some interesting questions in that Jeremiah came from priestly stock.

On one occasion, northern and southern theologies came into direct conflict. This happened when Jeremiah gave his famous Temple Sermon and stated that land tenure and the temple's continued existence were contingent upon covenant obedience; further, that the nation was likely to lose both (7:1–15; 26:1–6). The people of Jerusalem, however, among whom were numbered not a few prophets and priests, had expanded the theology of Zion to the point where the eternal and unconditional covenant to David (2 Samuel 7) extended also to Jerusalem and the temple (Ps 132:11–18; Isa 31:4–5; 37:33–35). This precluded the destruction of either. Preaching northern theology on this occasion nearly cost Jeremiah his life, but in the end that is the theology which prevailed.

b. Theology and Time. The temple conflict of 609 shows that theology is time- and situation-bound. A century earlier, Isaiah preached that Zion was inviolable. Now Jeremiah considers this a false theology on which people are resting vain hopes. Von Rad has said, therefore, that the prophetic message is not timeless truth but a "particular word relevant to a particular hour in history" (*ROTT* 2: 129). At the same time, Jeremiah speaks also to the future—the immediate as well as the indefinite future—and here the prophetic word follows an uncertain course of fulfillment. Even within the prophet's own lifetime, early preaching about the future glory of Zion and the return of dispersed exiles was reappropriated from the exilic situation in Assyria to the newer situation which had developed in Babylon (3:12–14; 30:5–31:22). Thus, while theology in some instances may be time-bound, its life may also extend well beyond the hour of utterance and the particular situation at hand. The community of faith may even give a prophetic word its greatest prominence and its ultimate fulfillment at some later date. It could, for example, be argued that Jeremiah's vision of cosmic destruction (4:23–26) has more theological import for people in the nuclear age than for people in the late 7th and early 6th centuries B.C., who first heard it from his lips.

c. Yahweh. For Jeremiah, Yahweh most importantly is a living God, comparable to a natural supply of water (2:13; 17:7–8, 13). In a despondent mood he questions whether this can in fact be true, at least for him personally (15:18), but in better moments he knows that idols are the false resource; they cannot bring rain (14:22) nor have they power to save (2:27b–28; 11:12). Yahweh fills the creation (23:24); sends rain (5:24; 14:22b); controls the sea waters (5:22); and gives both lands and peoples into the hands of whomever he pleases (27:5–6). Yahweh is a God who "knows" (12:3; 15:15; 18:23; 29:23). He knows people and he knows events, not only those events which are current but also those planned for the future (1:5; 29:11; 33:3). Yahweh "remembers," too, both the good and the bad (2:2; 14:10), though in forgiveness he ceases to remember wrongdoing (31:34). He also has the capacity to "see" (12:3; 16:17; 32:24), even in the temple darkness or in secret places where evildoers imagine God cannot see (7:11; 23:24). More important, Yahweh is a God who acts. Many do not believe this (5:12), perhaps because Jeremiah has announced him to be the people's enemy. But to faithful individuals, such as Jeremiah, Baruch, and Ebed-melech the Ethiopian, protection and salvation are both promised and delivered (1:17–19; 45:5; 39:15–18; cf. 17:7–8). Yahweh is a righteous judge (11:20), although Jeremiah cannot understand why he allows the wicked to prosper (12:1–2). Yahweh will avenge himself eventually (5:9, 29; 9:8—Eng 9:9), and the humble can expect to

receive mercy (3:12–13). Jeremiah discovers more than once that Yahweh can be overpowering, in some cases when he is suffering (1:6–8; 20:7; 32:25–26), but he is filled with rejoicing when his salvation comes (20:13).

d. Yahweh's Word. As a royal messenger, Jeremiah's job is to deliver the King's word—to Judah primarily, but also to foreign nations of the world. The divine word is central to Jeremiah's preaching; in fact, it is his preaching. In the capacity of royal messenger, Jeremiah also brings back messages to Yahweh and waits for him to respond. Yahweh's answer may take some time in coming; in one case, for example, it does not come for a full ten days (42:7). Jeremiah's dual role as spokesman for Yahweh and spokesman for the people makes him a mediator, and an active mediator he was, to judge from the many oracles and prayers surviving in his book.

Yahweh's word has enormous power—both creative as well as destructive power—and each is self-fulfilling (1:12, 4:28). Jeremiah stands in awe of its destructive power, comparing Yahweh's word to a consuming fire or a pounding hammer (23:29). No one can control it, least of all Jeremiah, who was overcome by it in his call, and later when he tried to hold it inside rather than proclaim it, he found he could not do so (20:8–9).

The divine word gives Jeremiah very serious problems. People will not listen when he speaks it (6:10, 19; 8:9); in fact they reproach him (17:15; 20:8; 38:4). This is particularly troubling when prophets opposing Jeremiah, who are also speaking in Yahweh's name, do not experience such difficulty. Jeremiah is thus led to reflect on true and false prophecy. The chief problem seems to be that he is delivering a word of judgment, and people do not want to hear that. They cannot believe judgment will come. Other prophets who are preaching peace and deliverance do not like hearing judgment either, particularly when Jeremiah preaches it "in Yahweh's name" (11:21; 26:9). And yet the trial of 609 showed that certain individuals did accept judgment preached in Yahweh's name, for it was on this basis that he was vindicated (26:16).

From Jeremiah's point of view, those prophets delivering a peaceful message had not stood in the divine council; they were running as messengers without having been sent (23:18, 21–22; 29:31). The word of Yahweh was not in them (5:13); in fact, their easy message was nothing but a vision of their own minds (23:16–17). These prophets were incapable of interceding for the people (27:18). A more serious charge made against them—also against certain priests—was that they were speaking lies (5:31; 14:14; 20:6; etc.). The lies multiplied and tended to become self-reinforcing because prophets were "stealing" oracles from one another (23:30). Prophets become false when they bear a false message from Yahweh (Overholt 1970). Time must pass before it becomes clear what truly is the word of Yahweh, who in fact has preached it, and which of two opposing words will stand (28:8–9; 44:28–30; cf. Deut 18:21–22). Jeremiah himself admits to having believed what the optimistic prophets, priests, and close friends of his were saying (4:10; 14:13; 20:7–10), which shows that this great man could at times be quite naive (cf. 11:18–19). Yet he is also very human. Yahweh notes his naiveté and calls it to the prophet's attention (12:6; 14:13–16).

e. Sin and Judgment. Behind all of Jeremiah's talk about sin and judgment lies a broken covenant. Jeremiah prayed that Yahweh on his part would not break the covenant (14:21); nevertheless it was broken and Israel bore the responsibility (2:20; 5:5; 11:10; etc.). Yahweh was innocent of any wrongdoing (2:5, 31). It is the people and the nation's leaders who no longer "know" Yahweh (2:8; 4:22; 9:2—Eng 9:3; 9:5—Eng 9:6; cf. Hos 4:1), where knowing Yahweh means "knowing his way" (5:4–5), "knowing his ordinances" (8:7), and doing justice to the poor and needy (22:16).

When Jeremiah talks then about the knowledge of Yahweh, he is talking about compliance with covenant stipulations. In the Temple Sermon five of the ten stipulations at the core of the Mosaic covenant are said to have been broken: stealing, murder, adultery, false oaths (lying), and going after Baal or other gods, which is the most serious infraction of all (7:9; cf. 2:8; 5:2; 9:1–5—Eng 9:2–6; 16:11; 18:15; Deut 32:16–17; Hos 4:2). Other broken commands are those pertaining to idols (8:19; cf. 10:14 [= 51:17]), the sabbath (17:19–27), and coveting the wife of one's neighbor (5:8). Jeremiah also echoes Deuteronomy's concern for justice and benevolence to the poor (2:34; 5:28; 7:5–7; etc.). These latter charges of inhumanity are leveled against Judah's kings, Jehoiakim in particular (21:12; 22:15–17). Prophets, meanwhile, are guilty of adultery and lying (23:14; 29:23).

Jeremiah has all these things in mind when he says the people have "forsaken Yahweh" (2:13; 16:11; 17:13; 19:4; cf. 2 Kgs 22:17), though "forsaking Yahweh" can also mean reliance upon foreign nations (2:14–19). Jeremiah says the people have "forgotten Yahweh" (2:32; 3:21; 13:25; 18:15; cf. Deut 32:18), which, in concrete terms, means they do not know the true source of their abundant crops. Having become overly sated, they lavish affection on "no gods" and indulge in fertility rites associated with them (5:7; cf. 22:20–21; Deut 32:13–15; Hos 2:10—Eng 2:8).

Jeremiah is sufficiently grounded in wisdom thought to realize that next to godlessness is foolishness, and the latter malady has contributed not a little to the nation's precarious condition (4:22; 5:21). He singles out foolish leaders for special mention (10:21; 14:18). If people have any skill, it is in doing evil (4:22).

Jeremiah emphasizes the human side of divine activity to an extent not found in other prophets (*ROTT* 2: 216–17). He is particularly reflective about the nature of sin and what impact it has both on the human condition and on the nation as a whole. The depths to which sin goes, also its range, taxes Jeremiah's understanding to the limits. Israel's abandonment of their God is something other nations would not think of (2:11); her rebellion is greater than chaotic sea waters (5:22–23). People are like instinct-driven animals (2:23–25; 5:7–8), teaching the most evil of women new things (2:33). Prophets keep pace by strengthening the hand of evildoers (23:14). Sin, however, is old, and extends back to Israel's earliest generations (2:20; 7:22–26; 22:21; 32:30; etc.). Yet if past generations were bad—and they were (2:5; 16:19)—sin's buildup over the years makes the present generation worse (16:12). A return to national health and well-being is now impossible (8:15, 22; 14:19; 30:12–15). Everyone is evil (5:4–5; 6:13 [= 8:10]; 9:3–4—Eng 9:4–5). Sin goes very deep (2:22; 17:1). "The heart," says Jeremiah, "is deceitful above all

things" (17:9). Sinful people become hardened, intractable people; punishment has no effect on them; they are without shame, and he calls for their repentance to go unheeded (2:30; 3:3; 5:3; 6:15 [= 8:12]). Refining or winnowing the population as a whole proves to be impossible (6:27–30; 15:5–9; cf. Amos 4:6–11). Jeremiah says that people are unable to change their evil behavior (8:4–7; 13:23), which is to say that sin has an irreversible quality about it. Lustful urges cannot be given up (2:25), and people sink deeper into their sorry state of affairs; they keep going backward (15:6; cf. 7:24). In one of his confessions, Jeremiah says that people cannot direct themselves in the right way; correction, therefore, must come from Yahweh (10:23–24).

Those who are caught up in wrongdoing tend to be superficial and unknowing, both with respect to the intentions of others—including Yahweh—and about what they themselves are doing. They can be short-sighted too, not knowing what their end will be (5:31). Jeremiah notes how cavalier the wicked are, how they vacillate and wander about aimlessly (2:36; 4:1; 31:22; cf. Hos 7:11). They do not lay things to heart—not even their land which is ravaged by war (12:11). Women are superfluous in their dress, realizing not that the "lovers" they attract care nothing for them and would willingly kill them as not (4:30; 30:14). Prophets give a superficial message of "peace, peace, when there is no peace" (6:14 [= 8:11]). Kings spend lavishly on buildings while at the same time neglecting the weightier matters of justice and righteousness—a complete misunderstanding of their office and what it requires of them (22:13–17).

The people fail to perceive that their disregard of covenant obligations renders useless all the salvific liturgies recited in worship (7:8–10), and that Yahweh will not hear prayers when sacrifices are made to the Queen of Heaven (7:16–18) or other things are done to offend him (11:14–17). Even confessions of sin have no efficacy when real change does not occur (14:7–9, 20–22). The people know the ordinances of Yahweh but continue to break them (5:5); they talk of Yahweh even though he is distant from their hearts (12:2). Duplicity extends also to dealings with other people. All of this betrays on the part of the people acute unawareness or lack of understanding. The God of Israel has been reduced into another idol (Eichrodt 1950–51: 18). And the sin of Jerusalem's people contributes to Jeremiah's suffering, e.g., when he intercedes for the people they thank him with a curse (15:10–11; 18:20).

Fortunately evil cannot go on forever. Yahweh's anger is finally kindled to the point where he must avenge his name. Judgment is the result. The people have brought it upon themselves (2:17, 19; 4:18); it is "the fruit of (their) doings" (17:10). Jeremiah affirms in his early preaching the old theology that the father's sins are meted out upon the children and grandchildren (2:5–9). But later he states along with his younger contemporary Ezekiel that each person must die for his own sin (31:29–30; cf. Ezekiel 18; Deut 24:16). Yahweh's judgment in either case carries with it a reason, and that reason is sin (1:16; 4:17; 5:6; 8:14; 13:22; 30:14–15; etc.). This is in contrast to the reckless and arbitrary judgments of other ancient Near Eastern deities. It is also in contrast to the mindless judgments of evil people. Yahweh remains moral, however, even when his people are not.

Divine judgment affects the entire creation. The withholding of rain and its ruinous impact on the land (3:3; 5:24–25; 14:2–6) are portents of worse things to come. The final strike came when the Babylonian army brought down the nation in 587. Countless people died or were taken into exile, and the land was devastated.

Yahweh is the one who raised the question of pardon for Jerusalem (5:1–8), but his answer was negative because the city could not produce one righteous soul. Repentance would have made a difference (4:1–4), but the people refused. Pardon had to wait therefore until after the punishment was completed (31:34). Jeremiah was himself told on one occasion that he must repent for some worthless words he had uttered (15:19). This may have been when he called Yahweh a "dried-up brook" (v 18). Heschel, however, argues that the so-called worthless words are Jeremiah's call for Yahweh's vengeance upon those persecuting him (v 15). According to this view, Jeremiah has a case of "hypertrophic sympathy," i.e., an excessive amount of sympathy for the divine wrath (Heschel 1962: 126–27). Assuming Jeremiah did repent, he accomplished what the rest of the people could not. His pardon then would have consisted of being restored to the divine council and receiving once again from Yahweh a promise of salvation (15:20–21).

Because Yahweh is God over the whole earth, other nations cannot escape his punishment. Yahweh has no covenant with any of them; still, he must avenge himself for the evil done to his people and to Jerusalem (46:10; 51:35; cf. 10:25; Deut 32:34–43). But he also moves against them because they are wicked (25:31), proud (50:31–32), and trusting in their own gods (50:38; 51:47, 52).

f. Grace and Salvation. While sin and judgment form the bulk of Jeremiah's preaching, interwoven throughout are messages of grace and salvation. Even before he began preaching, Jeremiah was himself promised salvation (1:8), and that pledge was repeated (1:19; 15:20–21). Jeremiah prayed for his salvation, and when doubts gave way to belief and the crisis had passed, he expressed profound gratitude to Yahweh (17:14–18; 20:11–13).

Jeremiah's earliest preaching recalls Yahweh's prior grace to Israel (2:6–7). Most recently, Yahweh's grace was shown to the exiles who had survived the Assyrian wilderness (31:2), and these are now called to return to Zion (3:12–14; 31:4–6, 7–9; etc.). Salvation was even available to Jerusalem in the early days of the reform if the people had obeyed the covenant and repented of their wrongdoing.

During the dark days of 605 a salvific word was given to Baruch, and in 597 when Jerusalem surrendered, salvation was presented as an eschatological hope to exiles leaving for Babylon (30:5–31:22). Health would return (30:17; 33:6), but the exiles would have to settle down in Babylon, pray for that nation, and wait for Zion's restoration (29; cf. 24:4–7).

During Jehoiakim's and Zedekiah's reigns, Jeremiah announced Nebuchadnezzar as Yahweh's "servant," and proclaimed further that all nations—including Judah—must serve him (25:9; 27:6–7). Salvation would be realized

through the exiles living in Babylon. In Jerusalem one person, however, did manage to get a salvific word from Jeremiah and that was Ebed-melech, who acted to save Jeremiah's life. The word came while Jeremiah was confined to the court of the guard. The nation, too, at this time, received some of its grandest eschatological promises, including the promise of a new covenant (31:23–33:13). Unlike judgment, divine grace and salvation do not require from Yahweh a reason; in fact, they most often come without a reason. It is entirely due to Yahweh's initiative that Israel can hope for national restoration, and also that a new covenant will be made where Yahweh's law will be written on people's hearts. See NEW COVENANT. This new act of grace will render unnecessary admonitions of one person to another to "know Yahweh" or "fear Yahweh" (31:31–34; 32:37–41; *ROTT* 2: 212–15). Yahweh at this future time will also forgive the people's sins.

The salvific word for the present, however, is a more modest one: Zedekiah, his house, and the city can be spared, but Zedekiah has to obey Yahweh's word and surrender (38:17–23). Even later people of the city are offered salvation, but they must desert to the enemy and surrender because the fate of Jerusalem is sealed (21:8–10). After Jerusalem is destroyed, Jeremiah speaks yet more words of hope and salvation to those allowed to remain in the land. They are to stay where they are, not go to Egypt as they plan to do (42:7–12).

Jeremiah then fulfills that part of his calling which was "to build and to plant" (1:10). And so far as the activity of Yahweh is concerned, he does not decide at any point to completely withhold his salvation. Salvation is continually in his mind; it is given simultaneously with judgment (e.g., 1:13–19; 21:8–10; etc.). Salvation is ever present as an option if only people will obey God's voice and repent of their evil (18:7–8).

2. The Theology of the Book. The theology of the book of Jeremiah supplements and expands the theology of Jeremiah by placing the latter in a wider context. This theology appears primarily in the prose material and in foreign nation poems of unknown provenance, but it is present as well in the book's compositional structures.

a. Theology in the Prose. The majority of the book's prose says little or nothing about causation or interconnections, as, for example, one finds in the Deuteronomistic History or in 2 Maccabees. The coming destruction is connected with the sins of Manasseh in 15:4, but this appears to be a late addition building on 2 Kgs 23:26 and 24:3. The summary notice in 37:1–2 also looks to be Deuteronomistic, though v 2 does codify an important theme of the Baruch prose, i.e., that people refused to listen to Jeremiah's word (11:6, 8b LXX; 13:11; 19:15; 36:31; 44:5, 16; etc.). In 25:3 the people are said not to have heeded Jeremiah for 23 years; this reflects more or less Jeremiah's own complaint in 6:16, 19. Theology in the book is on a continuum: There is a core of dynamic ideas which is Jeremianic; theological statements more or less explicit in nature come in the Baruch prose; and the most transparent theology giving causations or interconnections are to be found only in the latest additions to the book.

The Baruch prose has little explicit theology about the guiding hand of Yahweh. In 36:26, for example, it does say that "Yahweh hid them" (i.e., Jeremiah and Baruch). But most of the theology in this prose is subtle, indirect, and less than transparent. When it says in 36:24 that Jehoiakim and his servants did not "rend their garments" at the reading of Jeremiah's scroll, the unstated message is that Jehoiakim did not repent the way Josiah did when a scroll was read to him some years earlier (2 Kgs 22:11). In the notation of 28:17 that Hananiah died "in that same year, in the seventh month," what is implied is that Jeremiah's prophecy to Hananiah (v 16) was fulfilled, and thus Jeremiah was a true prophet according to the formula of Deut 18:21–22. A further theological conclusion which might also be drawn, given the conflict between the two prophets, is that Hananiah was a false prophet. This judgment is in fact made in the LXX in 35:1 [MT 28:1].

When Baruch records the release of Jeremiah by Nebuzaradan, he bears silent witness to Yahweh's fulfillment of earlier promises that Jeremiah would be saved. Therefore it should not be concluded that no good comes out of Jeremiah's final sufferings, nor should we say with von Rad (*ROTT* 2: 207) that "Jeremiah's path disappears in misery." The guiding hand of Yahweh is recognized throughout Jeremiah's *via dolorosa;* it is simply that this theology is not explicitly stated. Von Rad is correct, however, in saying that the Baruch prose does not make Jeremiah out to be a hero (*ROTT* 2: 207–8), i.e., the prophet is not glorified in his sufferings. It is generally thought that Baruch's explanation for Jeremiah's sufferings is that the sufferings were a consequence of his preaching about Jerusalem's capture and his call to surrender (*ROTT* 2: 207). But more broadly, the reason for his sufferings is that the people refused to listen to Yahweh's word, and this rejection manifested itself in anger toward the one who brought that word (1:18–19; cf. 20:15–16).

Prose of uncertain and exilic origin expands earlier theology. Exilic passages of hope and restoration, e.g., 3:15–18, develop Jeremiah's earliest preaching to northern Israel. The passage in 12:14–17 about the conversion of the nations to Yahweh expands upon Jeremiah's expressed universalism. Other passages repeat themes originating with Jeremiah and Baruch, only more transparently. One of the most common concerns Yahweh's reason for punishing the nations (5:19; 9:11–15—Eng 9:12–16; 11:7–8 MT; etc.).

b. Theology in the Foreign Nation Oracles. Although it is difficult in the foreign nation oracles to distinguish what comes from Jeremiah, what is imported from other prophets, and what is late theological expansionism, certain ideas seem not to emanate from Jeremiah. For example, Babylon is said to have "sinned" and "incurred guilt" against Yahweh (50:14 MT; 51:5). Also, Yahweh's vengeance on Babylon is to repay her for the destruction of the temple (50:28 MT; 51:11b). Yahweh is also said to reserve compassion and favor for the foreign nations (except Babylon) after their punishment is complete. The nations will be reinhabited (46:26), and their fortunes will be restored (48:47; 49:6, 39).

c. Theology in Compositional Structures. Compositional structures in the book are created with a liturgical purpose in mind, and frequently these structures embody a statement of implied theology. The two successive liturgies of lament, communal supplication, and rejection by Yahweh of Jeremiah's prayers in 14:1–15:4 explain why

Jeremiah was unsuccessful in his mediation on behalf of Jerusalem. The liturgical composition of 30:5–31:22 embodies a message which says that hope and divine promise will follow judgment and lamentation. This text also affirms that Yahweh will remake his covenant with Israel. The inclusion framing the two letters to the exiles in chap. 29 (vv 5, 28) emphasizes the need for people to settle down in Babylon so they may live and multiply. And the juxtaposition of narratives in 34–35 is a quiet homily on obedience and disobedience.

The inclusion which binds the First Edition (chaps. 1–20) together puts Jeremiah's cry of despair—which by itself says Jeremiah deserves to live no more than anyone else—into a larger context where Yahweh's call can affirm his birth and also his life (Lundbom 1975: 28–29; 1985: 600). This rhetorical structure also conveys the message that Yahweh's understanding exceeds Jeremiah's, which is another way of saying that Jeremiah does not really understand his own suffering (*ROTT* 2: 206). Finally, the inclusio framing the King Collection in 21:1–23:8, which repeats the play on names in 23:6 between Zedekiah and the future Davidic king, contrasts the righteousness of the future king with the unrighteousness of him who last sat on Jerusalem's throne. This is but a subtler version of that Deuteronomistic theology which sets up David as the model of the good king and Jeroboam as the model of the bad (2 Kgs 14:3, 24; etc.).

JEREMIAH, EPISTLE OF. The Epistle of Jeremiah is neither a letter nor was it written by Jeremiah the

prophet. It has more the form of a homily against idolatry and idols. It is extant only in Greek and in several dependent versions. The placement of this epistle differs in various biblical mss. In codex Vaticanus as well as in Alexandrinus (and others), it stands after the book of Lamentations. In other Greek and Syriac mss, it comes after Baruch. This little book consists of 10 stanzas, each ending with a refrain. The same motif recurs throughout the book. In vv 1–7 the author says that the Jews whom Nebuchadnezzar will exile to Babylon will remain there for seven generations. In exile they must refrain from idolatry and worship God whose angel will be with them. Throughout vv 8–73 the author elaborates upon the folly of idolatry. In vv 8–16 he says that the Babylonian gods cannot speak and cannot dress. They can protect themselves neither from insults nor from rust and moths. Verses 17–23 deal with the insensate nature of the idols. Their eyes are filled with dust, they are locked in the temples for fear of robbers, and they are illuminated through lamps which they cannot see. They are incapable of recognizing that they are defiled by unclean animals. Verses 24–29 refer to the idols as being outwardly impressive (because they are expensively made), but they have no breath and cannot move or walk. The priests exploit them and impure women defile their offerings. Verses 30–40a elaborate even further on the worthlessness of the idols. Although they are defiled by priestesses, and priests take the idols' garments for their families, they cannot protect themselves. They can neither crown nor depose a king; they can neither give riches nor help those in need. Verses 40b–44 state that Bel and other idols are treated with disrespect by the Chaldeans themselves, a matter emphasized by the sacred prostitution enacted in the temples. Verses 45–52 add only the idea that idols are but the creation of men who will themselves perish at some point. Also, in times of war the idols are hidden because they are helpless. In vv 53–56 the author stresses once again that the idols are so helpless they cannot judge or redress a wrong; they cannot escape fire or war. Verses 57–65 propound the idea that idols are useless, because in contradistinction to a vessel or a door, which are useful, the idols are not. Moreover, the forces of nature fulfill divinely ordained functions, whereas idols can do nothing. In conclusion, vv 66–73 compare idols to a scarecrow, a thornbush, and a corpse. Thus, the righteous man who is free of idols will be far above reproach.

The author of the epistle was certainly not Jeremiah, but the text is dependent on both Jer 10:2–15 for the contents of the epistle and on Jeremiah 29 for its form (chap. 29 mentions a letter of Jeremiah to the exiles in Babylon). The epistle is dependent on the familiar *topoi* found in the Bible to describe the idols (cf. Jer 10:2–5, 8–11, 13b–15; Isa 44:9–20; 46:5–7; Ps 115:3–8; Deut 4:27–28). The epistle was most probably composed in Hebrew or Aramaic, and is very repetitive in its themes and phraseology. Two arguments for a Hebrew original are: (1) certain variant readings are best explained by positing a Hebrew original (vv 21, 54, 68); and (2) certain corrupt Greek readings seem to presuppose a Hebrew word (cf. vv 12, 72) or other Hebraism. The extant versions are the LXX and those based on it, such as the OL, Vulgate, and Syro-Hexaplar. There are no major differences between the various versions. The Arabic version is faithful to the LXX, while the Syriac is somewhat free.

The purpose of the epistle seems quite obvious. It is a vehement attack on idolatry, in particular on Babylonian idols, and is designed to protect Jews from idolatry in the Babylonian Diaspora and elsewhere. The exilic setting and the attack on Bel and other Babylonian idols is probably a literary fiction, for the author may have composed this document at the end of the 4th century B.C. This becomes clear from an allusion in the document itself (v 3) where it is said: "Once you have reached Babylon you will stay there for many years, for a long while, up to seven generations; but afterwards I will bring you away from there in peace." If we reckon from 587 (or 597), seven generations reaches 307 (or 317) B.C. Also, the epistle is probably mentioned in 2 Macc 2:1–4 (datable to the 1st century B.C.), and the earliest Greek translation derives from Qumran cave VII (which is dated ca. 100 B.C.). This gives us a *terminus ad quem* of the 1st century B.C., although it may have been composed as early as the end of the 4th century B.C. It may have been used by the author of the Wisdom of Solomon (cf. 13:10–15; 19) in the 1st century B.C. As evidenced by that text, idolatry was a central issue in the fight against Hellenism in Palestine from the time of the Diadochi through Roman times. It is therefore not altogether impossible that this document was used in Hellenistic Palestine (cf. *1 En.* 99:7, 9). There exists no reason to claim that the epistle was written outside Palestine, as some have suggested (Egypt, Babylonia, etc.), in particular when we take into consideration that our author most probably did not use the LXX, but a Hebrew recension.

The book was excluded from the Hebrew canon, but was accepted by Christians in Egypt. Christian writers do not mention the letter often; it was rejected by Protestants during the Reformation, but received by the Roman Catholics at the Council of Trent in 1546. In the Eastern church the epistle was accepted as canonical by some of the Church Fathers (Origen, Epiphanius, and others); in the West it appeared in the list of Hilary. See also JEREMIAH, ADDITIONS TO.

DORON MENDELS

JEREMIEL (ANGEL) [Lat *Hieremihel*]. The angelic name that appears in the Latin mss of 2 Esdr 4:36. The variant *remihel* is also attested, corresponding to *rmʾyl* in Syriac mss. The Latin transliteration *Hieremihel* is thought to correspond to Gk *yeremeēl* or *yeremiēl*, forms which appear in many mss of the LXX where the corresponding name in MT is *yĕraḥmēʾēl* (RSV Jerahmeel: 1 Chr 2:25, 26, 27, 42; Jer 36:26 [—LXX 43:26]).

An apocalyptic tradition is cited in 2 Esdr 4:33–37 (cf. Rev 6:9–11) according to which this angel promised vindication to the souls of the righteous dead who asked, "How long?" The angel's name as reconstructed would interpret that vindication as an expression of God's compassion.

An alternative derivation is from a putative Hebrew **yārîmʾēl* involving the causative of the Hebrew or Aramaic verb *rwm* "to be high" and meaning "May El lift up/exalt" (cf. Isa 52:13; on the derivation, see *TPNAH*, 113–14. The verb *rwm* is not normally used to suggest resurrection.)

Other references to the angel occur, evidently, in the Greek version of *1 En.* 20:8, where the angel *Remeiēl* is "in charge of those who rise," and in *Apoc. Zeph.* 6:11–17, where *Eremiēl* (the text is Coptic) is set over the abyss and Hades. In *2 Baruch* the angel *rm'yl* (Syr) interprets the vision in chaps. 53–74 (note 55:3; see Bogaert 1969: 1.428–37) and identifies himself as the destroyer of Sennacherib's army (63:6). In one Greek ms family of *Sib. Or.* 2:215, *eromiēl* is one of the four archangels.

GEORGE W. E. NICKELSBURG

JEREMOTH (PERSON) [Heb *yĕrêmôt*]. An alternate form of JERIMOTH.

JERIAH (PERSON) [Heb *yĕrîyāhû*]. A Kohathite, the first son of Hebron, whom, according to the 1 Chronicles, David appointed to service in the Temple and its cult (1 Chr 23:19). Jeriah appears nowhere else in the OT outside of 1 Chronicles. The Levitical genealogies of Exodus 6 and Numbers 3 do not include enumeration of the immediate descendants of Hebron. The source of the Chronicler's use of the name "Jeriah" remains uncertain. See JEKAMEAM. The style of the list, however, corresponds closely with the compositional techniques of the Chronicler. This suggests that Williamson (*1 and 2 Chronicles NCBC,* 161) may be correct in asserting that "the names of the heads of houses will then be current at the time of the list's composition." Jeriah's oversight of the Ruebenites, the Gadites, and the half-tribe of Manasseh in the "affairs of God and the affairs of the king" may represent either an ideal or real situation of a Hebronite family at the time of the composition of Chronicles (1 Chr 26:31–32).

JOHN W. WRIGHT

JERIBAI (PERSON) [Heb *yĕrîbay*]. A son of Elnaam and brother of Joshaviah (1 Chr 11:46), one of the Mighty Men of David's armies. These names appear in a list occasionally described as the "Additional" Mighty Men—sixteen in number (1 Chr 11:41b–47), since they are not included in the parallel list in 2 Sam 23:24–39 (= 1 Chr 11:26–41a). The origin of this additional list has been disputed: some have considered it a postexilic fabrication, yet the E Jordanian locale suggested by the names (e.g. all the known sites are E of the Jordan: Reuben, v 42; Ashteroth . . . Aroer, v 44; Moab, v 46) appears to be an unlikely invention, considering the suspicion regarded this area after the Exile. That David would have support from Moab is not surprising, considering (1) his Moabite ancestry (Ruth 4:18–22) and (2) the sequestering of his parents there (1 Sam 22:3–4). This list probably was an additional fragment available to the Chronicler (Williamson *1 and 2 Chronicles* NCBC, 104), so we may suggest that Jeribai was a Transjordanian war hero who joined David's forces.

JOHN C. ENDRES

JERICHO (PLACE) [Heb *yĕrîḥô*]. A town just NW of the Dead Sea which is best known as the site that Israel first conquered in their entrance into the land of Canaan. The Israelites encamped across the Jordan from Jericho (Num 22:1; 26:3), and from this camp, Joshua sent two spies to reconnoiter the city (Joshua 2), before undertaking a bizarre strategy of conquest (Josh 5:13–6:23). The city was later allotted to Benjamin (Josh 16:1, 7; 18:12, 21), but during the time of the Judges, became an outpost of Eglon of Moab ("the city of palm trees;" Judg 3:13). During the time of Elijah and Elisha, there was a school of prophets at Jericho (2 Kgs 2:4–5, 15). After the Babylonians had breached the wall of Jerusalem, Zedekiah attempted to escape the city under cover of darkness, but was captured near Jericho, from which he was delivered to Nebuchadnezzar, who forced him to witness the execution of his sons. Afterward Zedekiah was blinded (Jer 39:5–7). Most of the references to Jericho in the Apocryphal writings and the NT refer to the area of Jericho as it surrounded the Hasmonean/Herodian palace complex to the SW of the OT site (see E below).

A. Modern and Ancient Names of the Sites

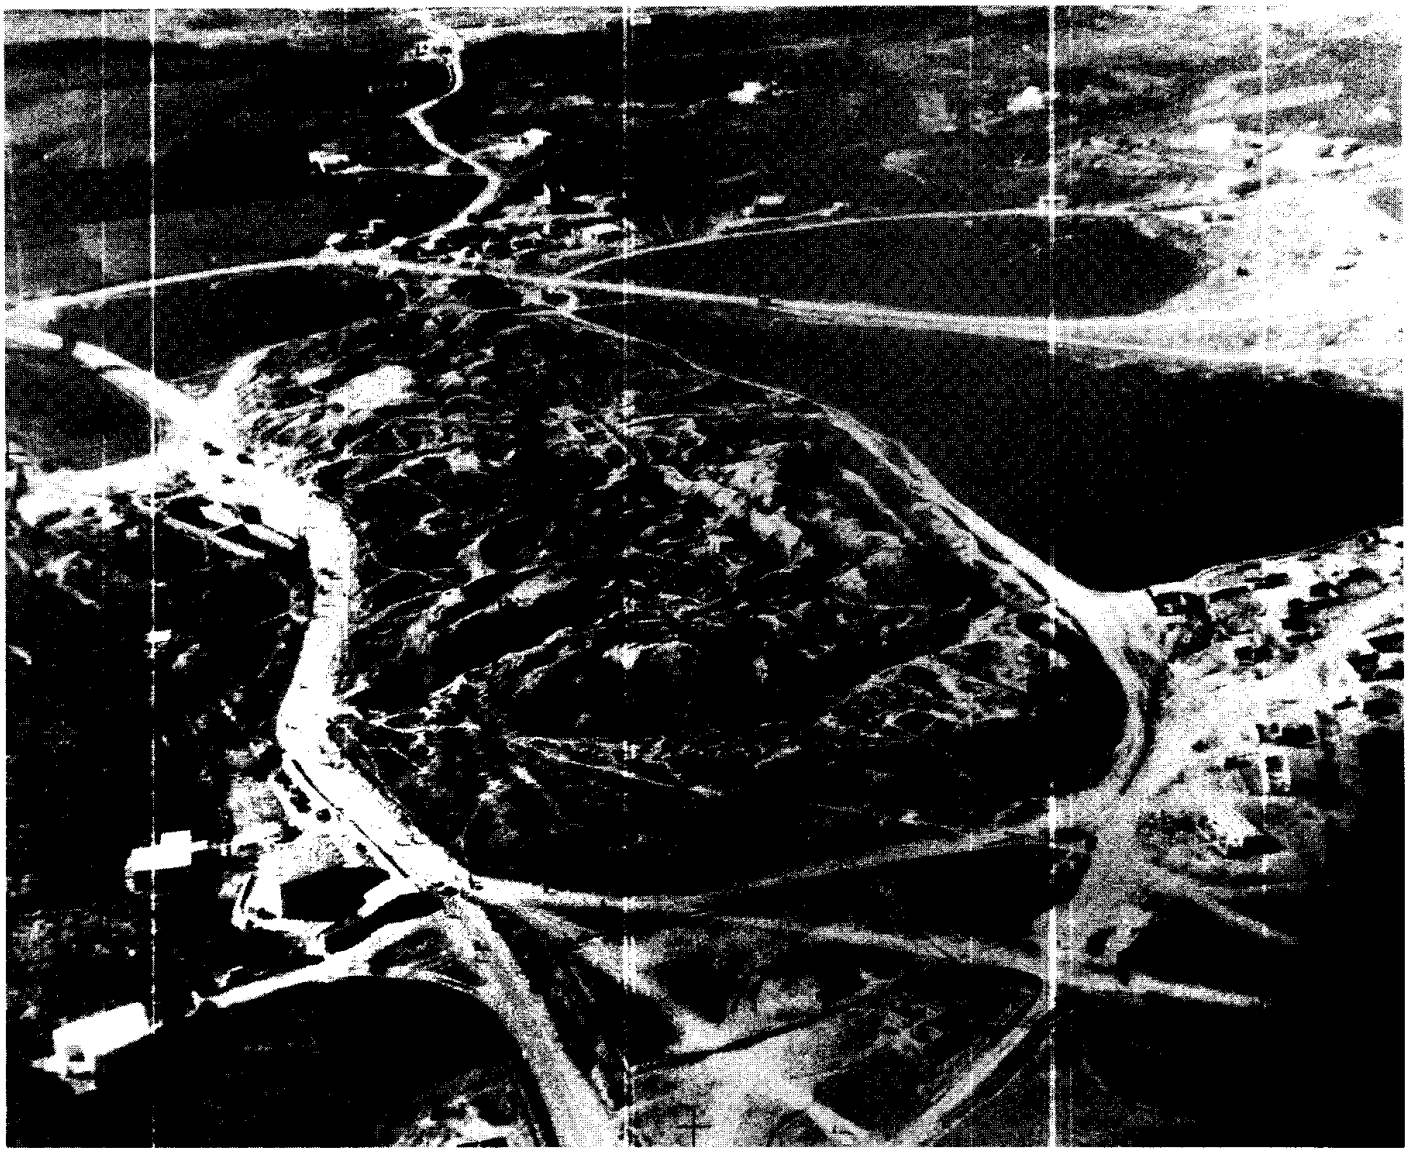
The site of OT Jericho is situated on the mound of Tell es-Sultan (M.R. 192142), ca. 2 km NW of the modern oasis of Jericho known as er-Riḥa. The spring around which the ancient site grew is known as ʿAin es-Sultan or Elisha's Fountain, a name applied to the spring during the Middle Ages (Garstang and Garstang 1940: 30; cf. 2 Kgs 2:19–22). Occupational remains dated to the Hellenistic, Roman, and Islamic periods were found on the mounds of Tulul Abu el-ʿAlayiq (i.e., Roman Jericho, N.R. 191139; see E below), 2 km W of modern er-Riḥa (Kelso and Baramki 1955: 1–19; Pritchard 1958: 56–58).

B. Location and Topographical Description

Jericho (Tell es-Sultan) is located in the wide plain of the Jordan valley about 16 km NW of the N shore of the Dead



Sea and just to the E of the mountains of Judea. At its maximum height on the NW side, the mound rises 24 m, and its area is approximately 4 hectares. See Fig. JER.01. The fertile plain in which the site is situated is artificially irrigated by the spring of ʿAin es-Sultan, which is located on the E side of the ancient mound, and also by the spring of ʿAin Duq, located 3 km NW of Jericho. Since the site lies 825 ft. below sea level, the town has the distinction of being situated at the lowest spot in the world.

The topographical features which make Jericho a very fertile and ideal place for settlement have been discussed extensively by numerous authors. The first serious topographical survey was undertaken by Conder and Kitchner (*SWP* 3: 222–29). More recent discussions appear in Kenyon (1981: 1), Bartlett (1982b: 11–26), and Bienkowski (1986: 1).

C. History of Explorations and Excavations

The earliest known account of exploration pertaining to ancient Jericho dates to A.D. 333 and comes from the "pilgrim of Bordeaux" (Wilkinson, Hill, and Ryan 1988: 4). Although many other pilgrims and travelers visited the site thereafter, it was not until 1868 that the first preliminary excavation of Tell es-Sultan was undertaken by Charles Warren (Warren 1869: 14–16, Bliss 1894: 175–83). Warren cut E-W trenches across the mound with some 8 ft. square shafts sunk 20 ft. to bedrock. He cut through the EB town wall and just missed the famous Neolithic stone tower by less than 1 m. He concluded that

> Very little was found except pottery jars and stone mortars for grinding corn. The general impression given by the result of the excavations is that these

JER.01. Aerial view of Jericho from NE. *(Courtesy of T. A. Holland)*

mounds are formed by the gradual crumbling away of great towers or castles of sunburnt brick (1883: 225).

The first scientific excavations (1907–9 and 1911) were under the direction of Ernst Sellin and Carl Watzinger (1913). They excavated at Tell es-Sultan and also at the sites of Tulul and Abu el-ʿAlayiq SW of Jericho.

Sellin and Watzinger excavated a considerable area of the tell (as is shown by the shaded area in Fig. JER.02). They found a large portion of the MB revetment glacis on the N, W, and E sides of the tell and also portions of the EB town walls. Their original interpretation of the revetment glacis was that it dated to the 9th century B.C. and that the EB walls belonged to the first half of the 2d millennium B.C., which appeared to confirm the biblical account of the capture of Jericho by Joshua (see below). However, Watzinger (1926: 131–36) rightly revised his dating and showed that the outer revetment was destroyed ca. 1600 B.C. and that the EB walls dated in fact to the 3d millennium B.C.

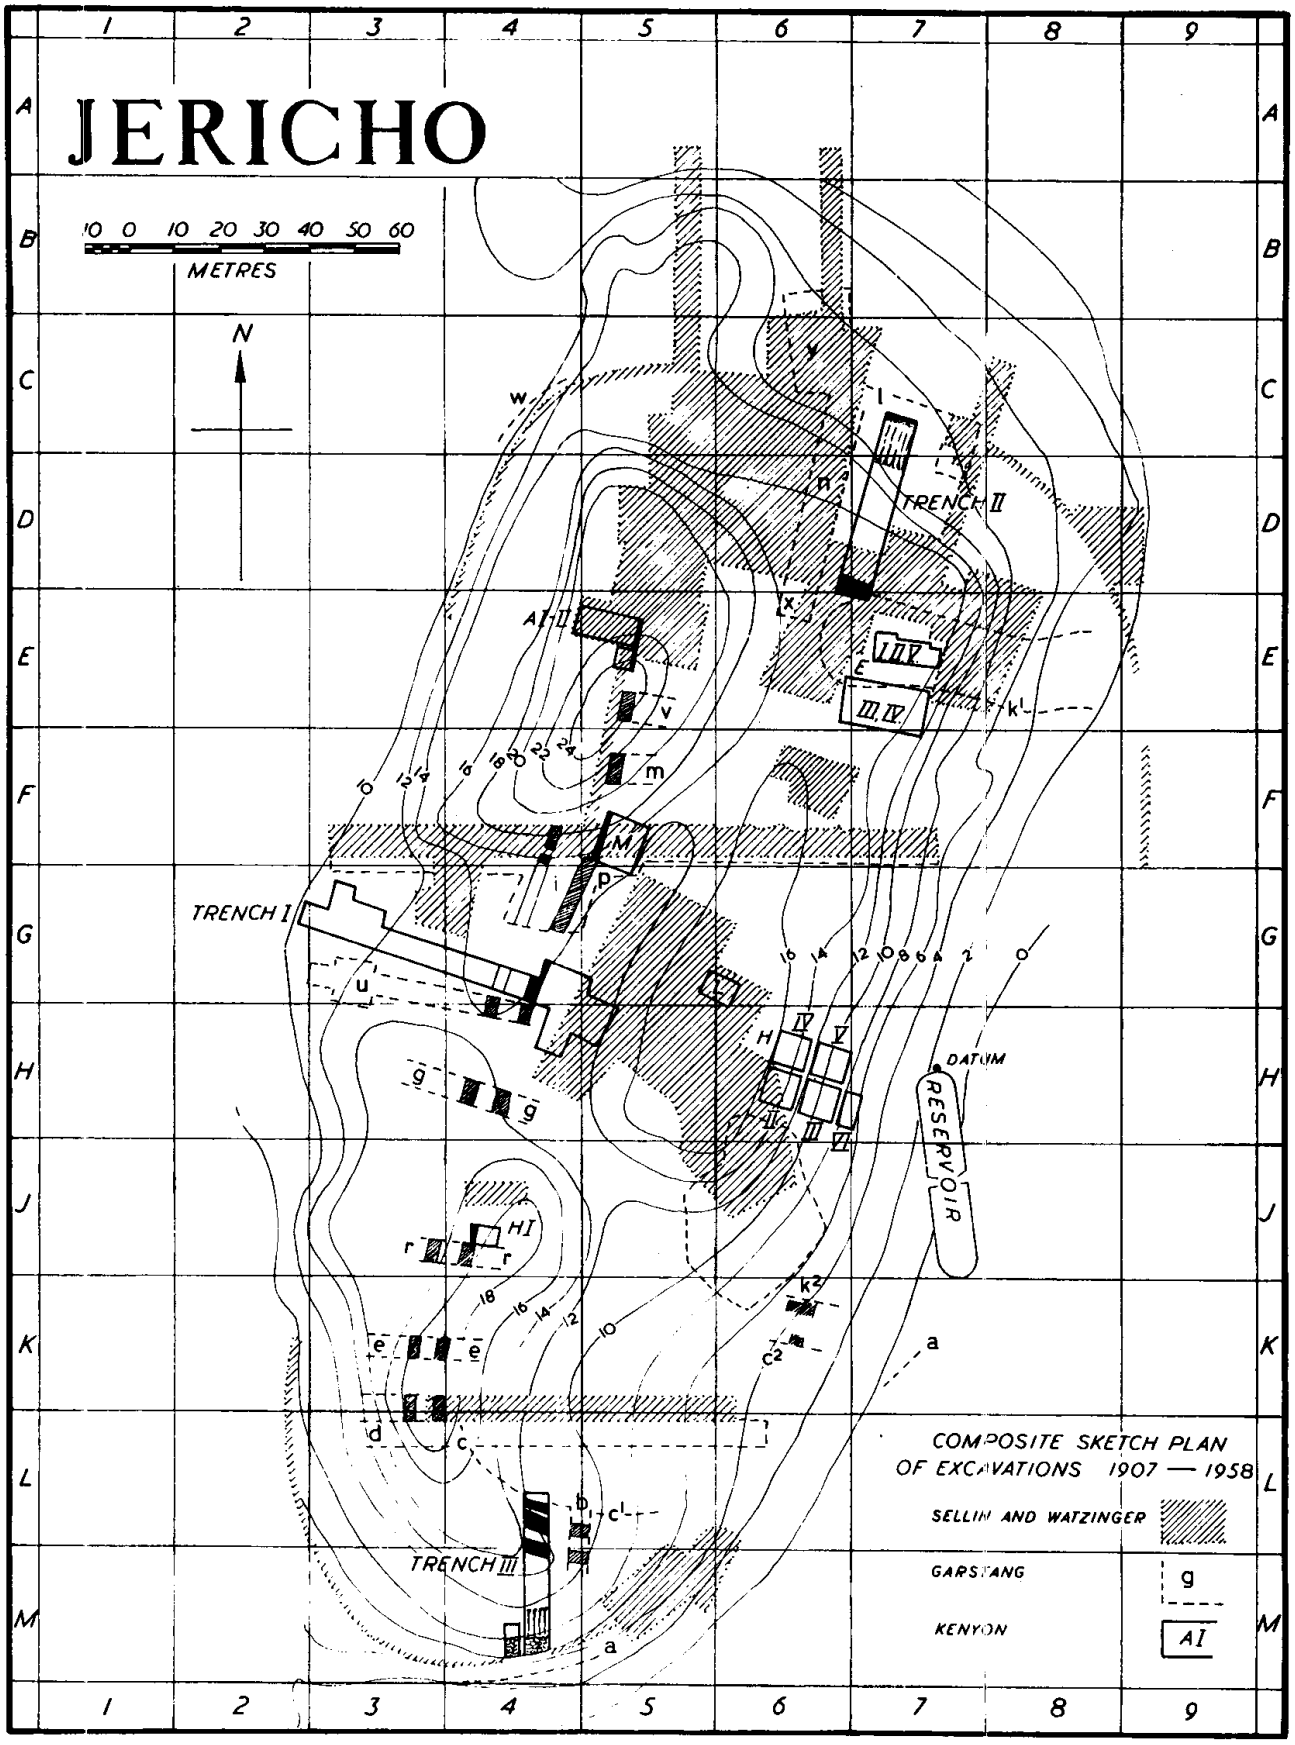
Above the spring, located on the SE side of the tell, the German excavators discovered houses belonging to the Israelite settlement which were dated fairly accurately from the 11th to the early 6th centuries B.C. They concluded that the town was destroyed by the Assyrians in 721 B.C. and 701 B.C., as well as by the Babylonians in 587 B.C., with a postexilic settlement which began in 539 B.C. upon the return of the Jews from Babylon (cf. Weippert and Weippert 1976: 145–47).

Since he disagreed with the results of the German excavations, John Garstang (1932–36) decided to undertake a new expedition to Jericho which lasted from 1930 to 1936 (for areas excavated on the tell see the composite sketch plan, Fig. JER.02). Garstang also excavated a number of MB and LB tombs (Garstang 1932: 18: 22, 41–54; 1933: 4–42; and Bienkowski 1986: 32–102). Owing to poor excavation techniques at the time, Garstang's stratigraphy and dating is partially unreliable, but he did break new ground in his discoveries relating to the Mesolithic and Neolithic periods at Jericho. Bienkowski (1986: 2–4) gives a good summary of Garstang's major finds in the publication based upon his doctoral dissertation (Holland 1988: 189–90).

With the advent of the greatly improved stratigraphical digging methods developed by Sir Mortimer Wheeler and Kathleen Kenyon (Kenyon/Wheeler Method) during the late 1940s and early 1950s, Kenyon embarked upon a fresh examination of Jericho in an effort to clarify her predecessor's results on the site. The excavations were conducted from 1952 to 1958 (Kenyon 1960; 1965; and 1981; Kenyon and Holland 1982 and 1983).

As Garstang did before her, Kenyon explored around the ancient tell and excavated numerous tombs ranging in date from the EB I (Kenyon's "Proto-Urban period") to the Roman period. The material from these tombs was extensively published in the first two volumes of the final Jericho reports (Kenyon 1960 and 1965). On the tell, Kenyon excavated three main trenches: Trench I, located in the middle of the W side of the mound; Trench II, situated on the NE end of the mound (note the misnumbering of Trenches I and II on the plan in Kenyon *EAEHL* 2:551); and Trench III, laid out on the S end of the mound. Various squares identified by letters also were sited on the tell and either partially or totally excavated to bedrock.

D. History of Jericho (Tell es-Sultan)



1. Mesolithic (ca. 9000–8700 B.C.). The earliest occupational remains discovered by Kenyon (table 1) come from the bottom of Squares EI, II, and V, which were excavated to bedrock, and are dated to the Mesolithic period, about 9000 B.C. (Kenyon 1981: pl. 144b). At the base of Square EI lay a natural oblong platform of clay over the bedrock which contained a group of three sockets for uprights, tentatively identified as supports for "totem poles" by Kenyon. The flint and bone tools associated with the structure are typologically akin to the Lower Natufian of Mount Carmel. The excavator suggests that the structure was some kind of shrine or sanctuary, probably set up by hunters who were camping around the original spring, probably located in the vicinity of Area H in ancient times. The finds associated with the Mesolithic levels consisted of a fairly large Natufian flint industry, bone tools, and stone vessels and tools.

The Natufian II (or Middle Natufian), microlithic, and other tools were found only in Squares EI, II, and V (Crowfoot Payne 1983: 624–29). However, on the evidence of a bone harpoon, also from Square EI, the earlier Natufian I period appears to be represented on the site. Other bone tools include an awl, a smoothing tool, and an unidentified object cut square at both ends and polished all over (Marshall 1982: fig. 230:1–2). Only four stone objects and one fragment are recorded from the Mesolithic levels in Squares EI, II, and V. The "socket" stones identified above as "totem poles" by Kenyon have been reclassified by Dorrell (1983: 489) as limestone mortars. Two polishing stones were also found.

2. Proto-Neolithic (ca. 8700–8500 B.C.). The Proto-Neolithic deposits excavated by Kenyon were encountered in three areas of the tell just above the natural huwwar bedrock in Squares FI, DI, and DII adjacent to Trench I, in Squares EI, II, V, and in Square MI. See Table 1.

The deepest Proto-Neolithic deposit was in Square MI with an accumulation of 4 m of occupation levels above bedrock (Kenyon 1981: pls. 129 and 295). Associated with these levels were one or more slight clayey humps which formed the boundary between a marked surface overlain by silty occupation levels. The humps, some of which were composed of defined "balls" of clay, forming elementary bricks, represented the bases of walls of slight shelters which probably had superstructures of branches and skins.

In Squares EI, II, and V, the Proto-Neolithic is represented by a very small deposit on the turf line which separates the lower Mesolithic level from the Proto-Neolithic level (Kenyon 1981: pls. 311 and 312). A series of post holes were found associated with the remains of huts and sandy floors. The two phases of occupation levels probably represent the very end of the period as they are immediately succeeded by the first Pre-Pottery Neolithic A house level, which suggests that the Proto-Neolithic settlement expanded from the nucleus tell, most probably the area around Square MI, just before the appearance of the

JER.02. Composite site plan of the Jericho excavations, 1907–58. *(Courtesy of T. A. Holland)*

round houses constructed during the Pre-Pottery Neolithic A period.

Very shallow deposits belonging to the Proto-Neolithic period were found in Squares FI, DI, and DII, an area 25 m S of Square MI and outside of the nucleus tell. The main characteristics of the deposit were black sticky layers, humps made of brick balls, and a few post holes.

The Proto-Neolithic flint industry from Jericho has been defined as Sultanian (meaning from Tell es-Sultan) by Crowfoot Payne (1983: 623, 629–30). The material discovered by Kenyon comes from Trench II and Squares DI, DII, EI, II, V, and MI. The flint was so fine-grained that it could be regarded as agate. A probable source of the flint was recently discovered by Noy in the Jordan Valley near Gilgal N of Jericho (Crowfoot Payne 1983: 629). One very interesting aspect of the flint industry of this period is the presence of pale gray obsidian tools. The analysis of a specimen from the lowest level on the site shows the source at Çiftlik in Anatolia, which confirms extensive trade relations at this period in the development of Jericho as an early center of civilization (Crowfoot Payne 1983: 638, n. 2).

Most of the Proto-Neolithic bone tools were found in Square MI, but a few fragments also came from Squares E and F (Marshall 1982: 584–86 and fig. 230).

Of the twenty-three Proto-Neolithic stones artifacts found, twenty were from Square MI, two from Square F, and one from Trench III (Dorrell 1983: 490 and fig. 218, pl. 1). The one limestone quern found is of special interest since the inside of the hollow used for grinding was stained red and may have been used to grind pigment rather than food grain.

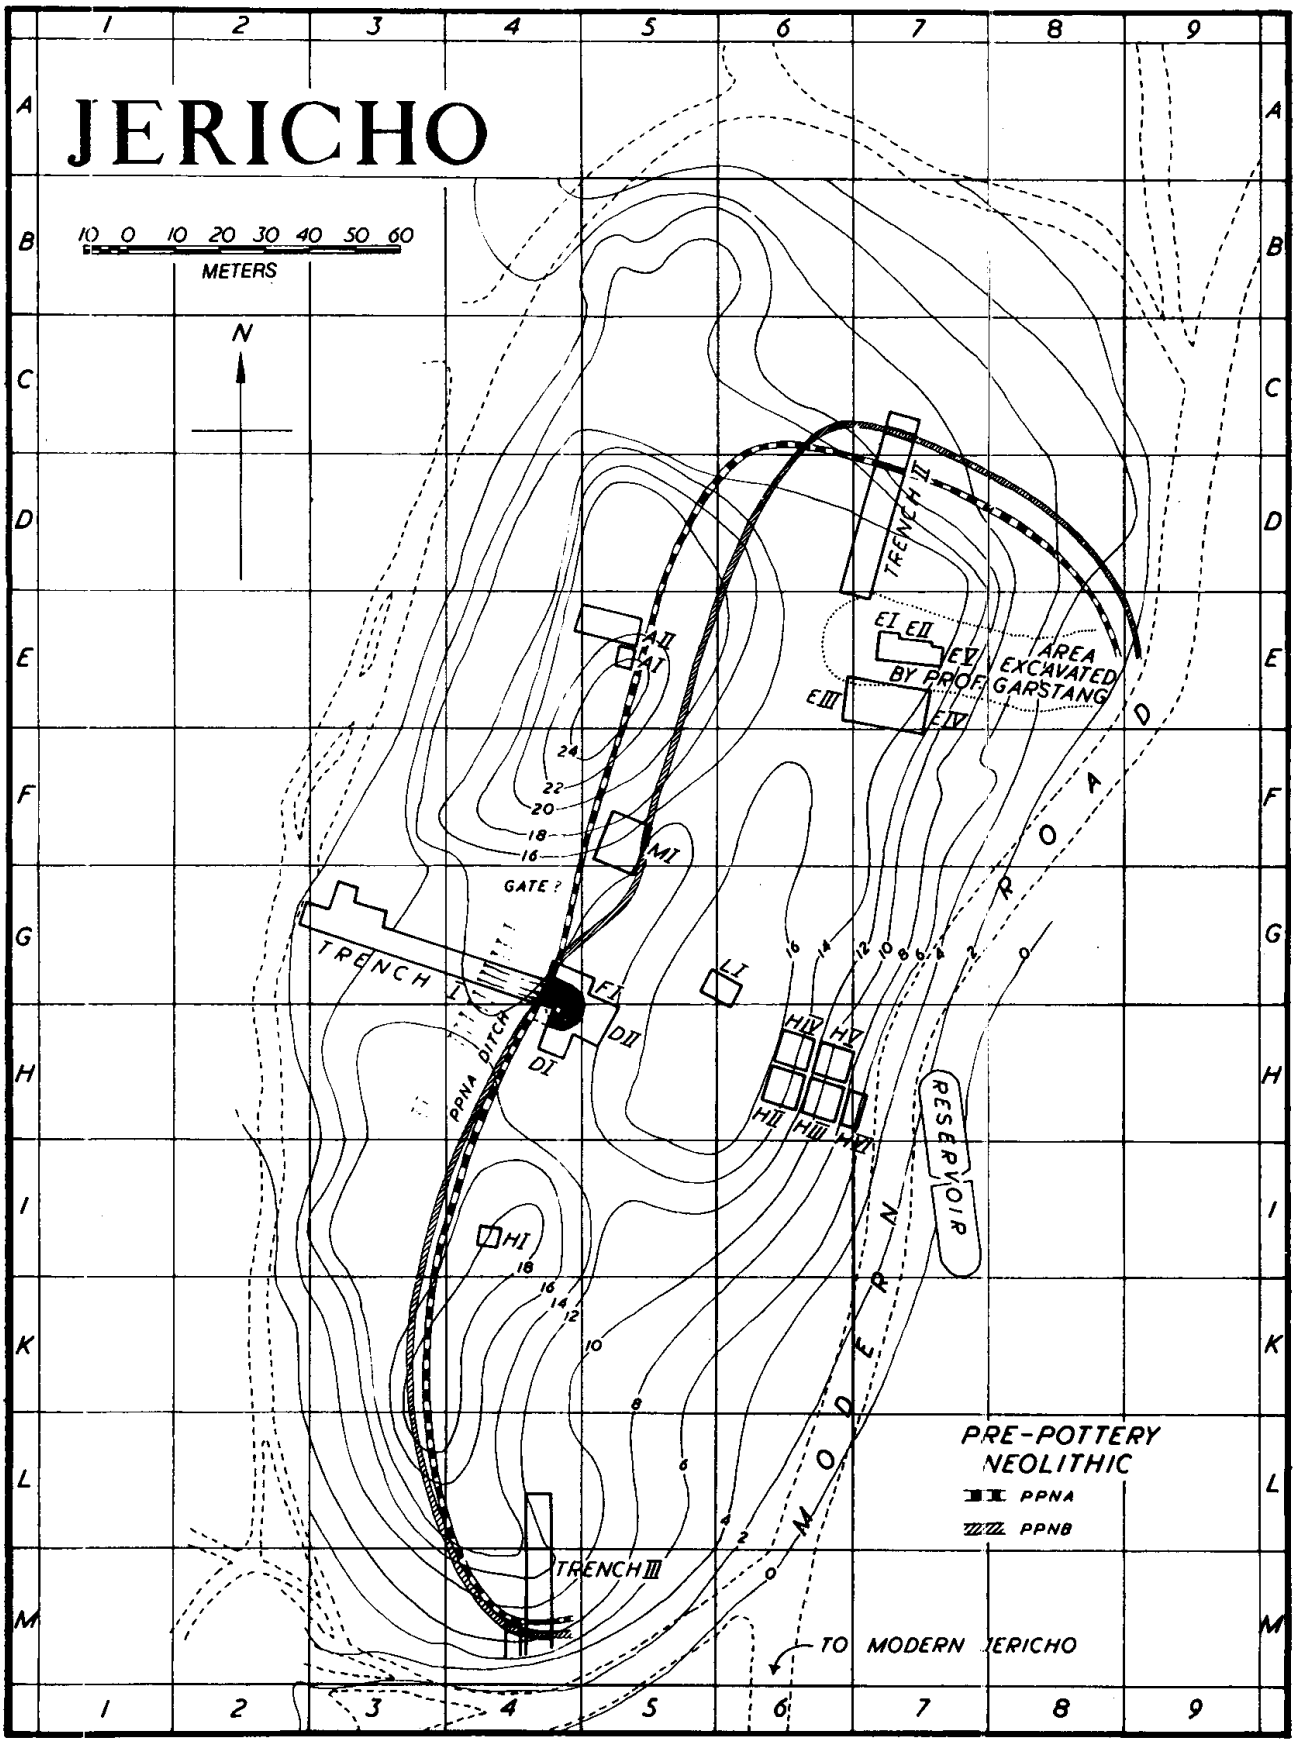
3. Pre-Pottery Neolithic (ca. 8500–5200 B.C.). The Pre-Pottery Neolithic A (ca. 8500–700 B.C.) stages of occupation (table 1) and the areas of their discovery are further detailed in Kenyon (1981).

There was obviously an occupational gap between the Proto-Neolithic and the PPNA since in all the areas investigated, fully developed round houses, usually single-roomed, were found in contrast to the primitive huts constructed in previous periods. The houses were built with solid walls constructed with planoconvex mudbricks which, in many instances, had a hog-backed shape (Kenyon 1981: pls. 44a, 146a). The inward incline of the preserved portions of the walls and a considerable amount of brick debris in the collapse suggest that the roofs were domed, possibly similar to the so-called "beehive" houses still built in Syria and used for both storage and housing. The construction of these houses at Jericho indicates that the occupation had become sedentary. The areas covered by the houses was greater than the later Bronze Age town.

Whether for defense, protection from wild animals, or a natural rising of the level of the ground surrounding the settlement (Bar-Yosef 1986: 159–61), the PPN inhabitants soon found it necessary to construct a major, stone-built town wall (Fig. JER.03) of which Kenyon (1981: pls. 4, 6) found traces in all three of her main trenches. On the W side of the town in Trench I, the first town wall was associated with a large stone-built tower situated against its inner side, 8.5 m in diameter at the base with a surviving height of 7.75 m. The construction of the tower was solid except in the center, which had a staircase providing access to the top from the interior of the town. There were three further stages of the town wall which also made use of the tower. A rock-cut ditch which measured 9.5 m wide and 2.25 m deep (Kenyon 1981: pls. 4, 244) was cut on the W outer face of the wall during the second stage of its use.

The PPNA flint industry was so similar to that of the preceding Proto-Neolithic period that Crowfoot Payne (1983: 663–65) retained the name "Sultanian," which she coined to commemorate the importance of Jericho during these periods.

The large collection of PPNA stone vessels and tools included 171 vessels (bowls, platters, mortars, querns, etc.); 252 pestles; 174 polishing stones, 28 axes; 14 grooved stones (possibly used to straighten and smooth arrow-shafts); 21 flint hammerstones or nodules; 7 chisels or wedges; 2 hoe-shaped tools; and 15 miscellaneous objects, the purposes of which are unknown (Dorrell 1983: figs. 219–23 and pls. 1–11).



A total of 343 bone tool objects or fragments were found in the PPNA levels during Kenyon's excavations. There were many pins, awls, and pointed tools, probably used for skin working, as well as a shuttle for weaving (Marshall 1982: figs. 231–48 and pls. VIII–IX).

The PPNB (ca. 7000–5200 B.C.) stages of occupation and their areas of discovery (see table 1) are detailed in Kenyon (1981).

Architecturally, the houses of this period show a complete break in style from the round houses of the PPNA, and with no transitional structures. In all areas excavated, the house plans are rectilinear (a characteristic example is House B in Trench III, Phase xviii [see photograph and plan in Kenyon 1981: pls. 115 and 263c]). Wall NAD of House B is a typical example since it shows the characteristic bricks used in house construction. They are elongated with herringbone thumb impressions, usually laid as stretchers, but sometimes there is an occasional header, and they are all laid in a thick mudmortar (Kenyon 1981: pl. 116a and cf. pl. 138c). The mudmortar also was applied to the faces of walls and overlaid with a surface of burnished plaster which extended from the walls to form the floors.

Although constructed in the same manner as other PPNB houses found at Jericho, one partially excavated building in Trench I (Square XVIA, Phase xx) differs markedly in plan (Kenyon 1981: pls. 46b and 221). It consists of a rectangular room 6 m from E–W, and more than 5.50 m from N–S. A basin, carefully lined with plaster, is centrally situated on the E–W axis of the room, and associated with it are a series of pits. Adjoining the main room on both its E and W sides are enclosures with rounded walls. The inward curve of the eleven courses preserved of the E enclosure wall suggests that these rooms were domed. As this plan is unique among the houses excavated at Jericho, and the well-built and plastered basin plus the pits suggest ceremonial usage, Kenyon postulated that the building probably was a cult center or temple. However, the presence of bone tools may suggest an alternate hypothesis; the enclosures could have served as a skin working area or served as drying kilns, particularly since they were domed.

Further evidence for some kind of PPNB cult practice or possibly ancestor worship was the discovery of a number

JER.03. Plan of Pre-Pottery Neolithic town walls at Jericho. *(Courtesy of T. A. Holland)*

of human skulls which had been molded over with plaster so that they resembled living heads (Kenyon 1981: pls. 50–59). Similar cult practices apparently existed at other sites during this period as similar plastered skulls have been found at ʿAin Ghazal, NE of Amman (Rollefson 1983: 35, and pl. 4:1–2; 1985: 54–56, and fig. 6), at Beisamoun in N Israel (Ferembach and Lechevallier 1973: pls. 1, 2), and at Tell Ramad, near Damascus in Syria (Contenson and van Liere 1966: pls. 3c, 4c). Shells were inserted to represent eyes and traces of paint revealed that skin and hair also were portrayed in a lifelike image. The largest group found together consisted of nine examples buried in the fill below the plastered floor of a house in the SE corner of Square DI, belonging to Square XVII, Phase xliii (Kenyon 1981: 77 and pl. 220).

The latest PPNB level on the E side of Square DII (Stage XXVA-XXVI, Phase xxxviii–xxxix) above wall 140 contained a very simple clay stylized human bust which was part of a life-sized figure (Kenyon 1981: 531 and pls. 72, 242a), which also may indicate some cult practice as well as a development away from the practice of using human skulls for ritual purposes. The head of a more sophisticated life-sized clay stylized human figure, with inlaid shell eyes and painted features, was found by Garstang (1935: pl. 53) in Area 195, which he identified as coming from the "Upper Neolithic" (almost certainly PPNB according to Kenyon 1979: 36). The best and most recent examples of this early art form were discovered at the Neolithic site of ʿAin Ghazal in Jordan (Rollefson 1983: 30–35). It is possible that the full-figure, stylized human statuettes may represent a transition between the practice of plastering human skulls and the making of a representation of a life-sized human figure which is almost totally stylized.

Kenyon's further excavations on the NE end of the tell, in the area previously excavated by Garstang, revealed a total of fifteen main PPNB building periods in Squares EI, II, and V, apart from at least two building periods removed by Garstang. All of the plans (Kenyon 1981: pls. 158–70 and 303–9) reveal that the houses were built around a courtyard which contained fireplaces. The equipment found is characteristic of all PPNB areas of the tell; it consists of many flint implements, fine stone bowls, bone tools, polishing stones, and querns (Kenyon 1957: pl. 16a and 1979: pl. 19). Also, many excellent examples of rush mats were found within the buildings (E. Crowfoot 1982: 546–50 and pls. 4–5).

4. Pottery Neolithic A and B (ca. 5200–4000 B.C.). The destruction of PPNB Jericho was followed by a considerable period of erosion, the exact time span of which has not been determined (table 1). The new settlers on the site had already developed the art of pottery making, although primitive, before their arrival; therefore this stage in the history of the tell is known as the Pottery Neolithic (PN). There were two groups of PN settlers: the first possessed fairly primitive pottery vessels made of coarse, straw-tempered wares as well as finely decorated wares with burnished, red-on-cream decoration; the second had more sophisticated pottery with more intricate shapes (i.e., vessels with inturned concave rims termed "bow rim" jars), many of which are decorated with a deep red slip, sometimes burnished, and bands of herringbone incisions (for PNA and PNB pottery shapes, see the Type Series in Kenyon and Holland 1982: figs. 1–19 and 21–33).

The Pottery Neolithic A people lived in pit dwellings which were cut into the PPNB ruins of the earlier town. The pits revealed a fairly long period of use since they contained a series of successively used floors. The edges of the pits always undercut the preceding levels (Kenyon 1981: pl. 118b) and sometimes are reveted by crude wall-like edges made of pisé and stones (see the oven and fire-pit in Trench II; Kenyon 1981: pl. 99). The stone and flint implements used by the PNA population were cruder than those found in the PPNB levels. The fine PPNB grinding querns, pestles, and stone bowls were succeeded by only crudely worked stone vessels and implements (Kenyon and Holland 1983: figs. 228: 11–26 and 229: 1–7). The most notable change in the flint industry was the appearance of coarsely denticulated sickle blades, which replaced the finely serrated edges of the PPNB blades (Crowfoot Payne 1983: figs. 313–15 and 335–37). That the coarser PNA-type sickle blade continued in use throughout the EB Age occupation of the tell suggests that a major portion of the EB Jerichoans were direct descendants of both the PNA and PNB populations.

On present evidence, the PNA people built no free-standing structures. Their PNB successors, although they initially built huts in the debris of the PNA pits, eventually began to construct free-standing houses having round and rectilinear walls, with stone foundations and a superstructure of handmade planoconvex ("bun-shaped") mudbricks (see Trench I building foundations in Kenyon 1981: pls. 74b, 75, and 228b). In Squares FI and DI, during the final Square XXXII of the PNB occupation, there is a large wall of bun bricks with stone foundations (Wall EO) which may represent a town wall (Kenyon 1981: pls. 77, 78, and 229).

The best evidence for the succession of the pottery Neolithic pits comes from Kenyon's Trench II, Stages X–XI (PNA) and Stage XII (PNB). The sequence of pits is illustrated in chart form (Kenyon 1981: pl. 257). On this evidence, Kenyon postulated that only PNA pottery occurred in the earlier pits of Stages X–XI and PNB pottery can be shown to have first appeared during Stage XII. However, PNA pottery does not entirely disappear during Stage XII. The continuing use of PNA vessels in Stage XII suggests that there was an intermingling of PNB newcomers with the PNA population.

The main flint assemblage during the PNA period has been identified as Yarmukian by Crowfoot Payne (1983: 706–16 and figs. 332–41). It includes axe/adze heads partly flaked and polished, bifacially flaked arrowheads, coarsely denticulated sickle blades, knives and scrapers of tabular flint, and flake knives with fine scale-flaking. The main deposit of PNB flints, identified as Ghassulian by Crowfoot Payne, were found in Garstang's layer VIII (J. Crowfoot 1937: 40–41 and pls. 7B:1 and 8A: 14–17). On the basis of the Garstang material and the sickle blades and derived adze heads excavated by Kenyon, Crowfoot Payne concluded there was a complete change in the flint industry from the PNA to PNB periods and that the new PNB people were part of the whole Ghassul-Beer-sheba civilization (Crowfoot Payne 1983: 718 and figs. 243–44). The small number of plant remains and the complete absence of charcoal retrieved from Kenyon's Pottery Neo-

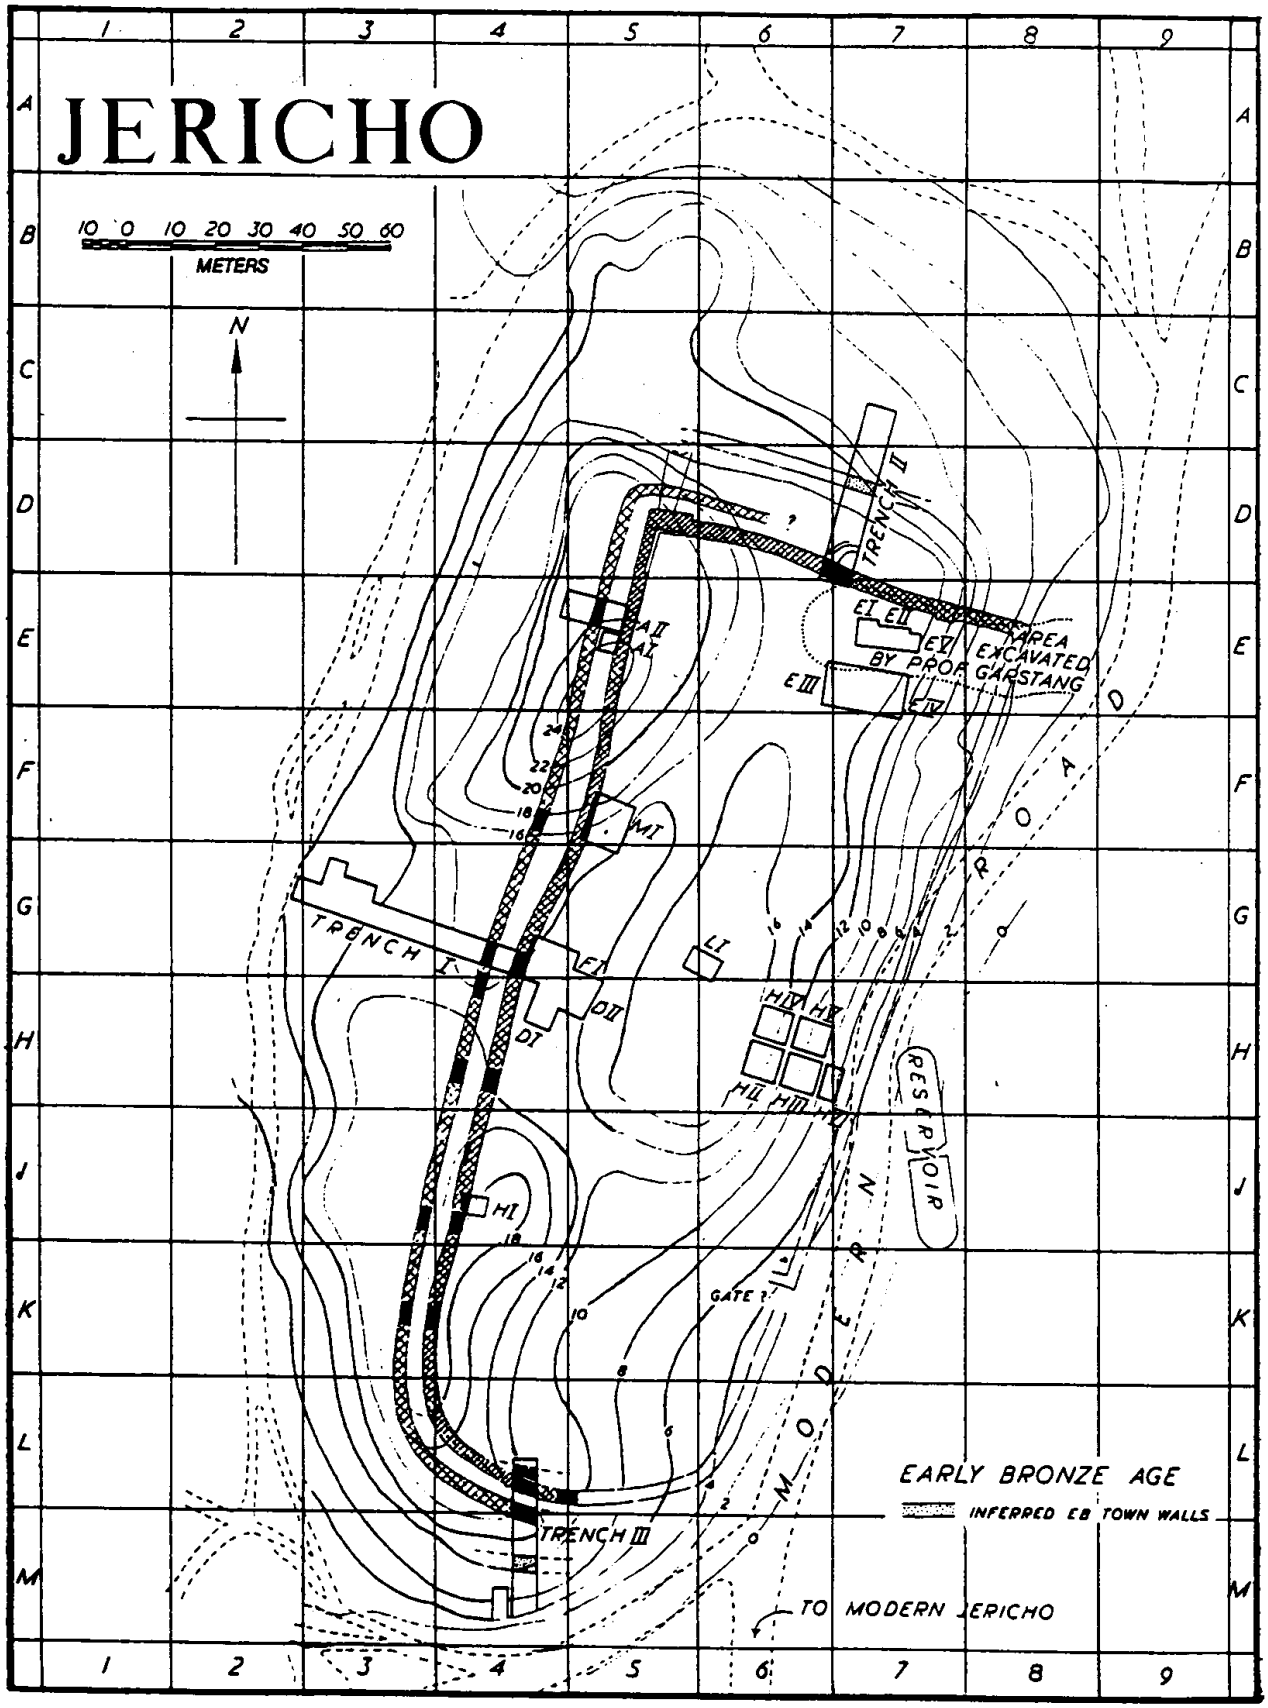
lithic levels supports Hopf's conclusion that the Jerichoans were herdsmen and hunters during this period (Hopf 1983: 578).

5. Early Bronze I (ca. 3300–3150 B.C.). On the evidence of a "turf" layer found in Trench I (Stage XXXIII) and in period MI (Stage XVIII), Kenyon concluded that Jericho was completely abandoned for approximately 300(?) years after the PNB period (table 1). The major evidence for the arrival of a new group of nomadic or seminomadic dwellers comes from a group of shaft tombs discovered by Kenyon which are numbered A94, A114, A13, K2, K1, A124, and A130 + A61. All these tombs contained multiple burials deposited during a long period of time (for pottery types, see Kenyon and Holland 1982: figs. 34–48). Most scholars have identified this period in Palestine as EB Age I and have divided the pottery into three main ware groups termed EB Ia (red-burnished), EB Ib (painted), and EB Ic (gray-burnished). At present, only the red-burnished and painted groups have been found on the ground and in the tombs at Jericho, which Kenyon designated Proto-Urban A and B on the basis of the tomb pottery.

Architecturally, the main evidence for the EB occupation of the tell comes from both Garstang's and Kenyon's excavations in Squares EIII–IV, located on the NE sector of the mound (grid E7, Fig. JER.04). The earliest excavated EB Ia house plans occur in Phases Q and P (Kenyon 1981: pls. 174 and 313b). The foundations of an apsidal-ended building are preserved along with the remains of a structure having three straight-sided walls, which also may be apsidal-ended, in the unexcavated NE portion of the area. The same type of house plan continues in Phase O, which ushers in the appearance of the distinctive EB Ib (Proto-Urban B) pottery decorated with painted red bands of grouped lines. EB Ib Phase N was completely destroyed and the succeeding rebuilt Phase M marked the end of the EB I occupation in Squares EIII–IV.

There is some evidence in Trench I to show that the EB occupants may have fortified their settlement. During Stage XXXIV, a town wall (A), associated with a semicircular tower, was built directly on the remains of the preceding Pottery Neolithic period Pit M (Kenyon 1981: pls. 79b and 240d). The pottery from Stage XXXIV (in the occupation and destruction Phases xxxviiia and xxxix–xl) is more closely aligned to EB forms than to the later fully developed EB pottery associated with the succeeding EB walls (C, D, E, and G) and the occupation layers above Wall A and its tower.

The main evidence concerning EB I religious customs and architecture at Jericho comes from Garstang's excavations in Area E, Level VII (= Kenyon's Squares EIII–IV, Phases M-L to DD), where he excavated a broad-roomed sanctuary, with its entrance facing E, designated Shrine 420 (Garstang 1936: 73–74 and pl. 41a). Several stone cult objects were found in the vicinity of the shrine and were thought to be associated with it. They included a small libation altar and a smoothed stone, oval-shaped in section, which was regarded as possibly a prototype of the *maṣṣebah* (Garstang 1936: 74 and pl. 41b).



The six EB I maceheads found in Kenyon's excavations (Trench II, Square M, and Squares EIII–IV; Holland 1983: 808–10 and fig. 365:2, 6) and the two found in Garstang's Level VII (Garstang 1936: pl. 36:24–25) may indicate either that they were employed for a ceremonial use or as weapons. No figures of a cult nature were found. Concerning the flint industry, Crowfoot Payne concluded that no distinction could be drawn between flints of the EB I period and those of the later EB periods, which are all classified as Cananean. However, the Cananean industry was certainly introduced at Jericho during the beginning of the EB I period and continued into the later EB periods as is illustrated in table 23 of the final report on the flint assemblage (Crowfoot Payne 1983: 750–51).

6. Early Bronze II–III (ca. 3050–2300 B.C.). Early Bronze II dates ca. 3100–2700 B.C. (called by Kenyon EB I–II, ca. 3050–2950 B.C., 2950–2700/2650 B.C. respectively [= 1st Egyptian Dyn. and into the 2d]) and EB III spans ca. 2700/2650–2300 B.C. (links with the 2d Egyptian Dyn.) and lasts until the beginning of the EB IV (Kenyon's "Intermediate Early Bronze-Middle Bronze Age" [EB-MB]).

EB II Jericho (table 1) appears to have evolved gradually from the EB I population, probably with an influx of new immigrants arriving from the N. However, the need for defensive walls was still of paramount concern throughout the EB and the settlement was completely surrounded by the large mudbrick Wall C during EB III, which had been constructed on top of the earlier town Wall B of the EB I period. For plan of the two inferred EB town walls, see Fig. JER.04. Kenyon's excavations also revealed that the later stages of the EB town wall had been protected by an external ditch enlarged at least four times; the recutting of the ditch may have removed artifactual evidence showing that the first wall also was associated with a ditch. The remains of a gateway were found in Trench II (Kenyon 1981: 148–49 and pls. 101b and 249c) as well as a probable gate by Garstang (described as a large oblong tower and assigned to Garstang's MBi period) in grid K6 on the E side of the mound, which probably enclosed the source of the spring (Garstang 1934: pl. 15). The town walls were built of unbaked rectangular mudbrick slabs, mold-made, measuring approximately 2 × 14 × 10 inches.

The earliest EB II houses contain rooms which are either oblong with one curved end or are completely circular (i.e., Trench III, Stage XV houses; Kenyon 1981: pl. 265c). The houses are irregularly positioned and reveal little evidence of town planning. The later EB II and III houses, on the other hand, in Squares EIII–IV for example, are rectangularly laid out and consistently orientated on a N-S axis (Kenyon 1981: pls. 317–20). A large number of brick-built silos were associated with these later houses. They were used for grain storage and testify to a flourishing agricultural community. Hopf (1983: 579) inferred that artificial irrigation was practiced from the presence of large quantities of carbonized naked, hexaploid bread-wheat remains found in the EB silos.

The EB cemetery in use during most of this period of occupation at Jericho testifies to some belief in a later life after death. Both Garstang and Kenyon excavated EB rock-cut chamber tombs containing multiple burials, about twenty in the earlier tombs and between fifty to one hundred in the later ones (Garstang 1932: 18–22, 38–41 and fig. 8, pls. 1–8; 1935: 155, 162–63 and pl. 34:1–40; Kenyon's EB Tomb Type Series [Kenyon and Holland 1982:

217–43 and figs. 81–93]). That most of the bones were found completely disarticulated probably indicates that earlier burials were discarded, except for the skulls, to make room for further internments. The burial goods consisted of pottery vessels for holding food and drink as well as small juglets for oil or scent. The only personal ornaments were heads of carnelian, bone, shell, stone, and frit (for general bead types, see Talbot 1983: 796–98).

The EB was a period of international contacts. The pottery and other finds from Jericho reveal cultural contacts to the N with both Syria and NE Anatolia, and to the S with Egypt. The presence of KHIRBET KERAK WARE (originating in Anatolia), indicates either trade or the arrival of new immigrants at Jericho (Holland 1983: xxxiv–xxxv and xxxvii–xxxviii). Egyptian imports include both "Abydos" ware and a slate palette (Holland 1983: xxxiv; 1982a: 559 and fig. 226:16).

The violent destruction which brought about the end of EB Jericho was partially a result of the almost total deforestation of the area for building and fuel purposes. This certainly led to erosion during the end of the 3d millennium B.C., resulting in a weakening of the economy that left the inhabitants vulnerable to attack as well as to disease. The political events accompanying the fall of the EB population are unknown, but the archaeological finds show an absolute break in the occupation of Jericho for several hundred years until the tell was partially resettled by a group of Amorites around 2300 B.C.

7. Early Bronze IV (ca. 2300–1950 B.C.). Kenyon identified this period at Jericho as the "Intermediate Early Bronze–Middle Bronze Age," lasting about 350 years between 2300 and 1950 B.C. Albright and others dated this period to about 2400–2100 B.C. and labeled it either EB IV or EB IIIb. Whatever final dates and terminology may be assigned to this occupation, the one thing that is clear is that Jericho was frequented by newcomers who introduced a characteristic type of pottery related to N Syrian types (Kenyon 1981: fig. 12) and built individual rock-cut tombs entered by vertical shafts.

Kenyon found remains of EB IV houses, only in her Trenches I, II, and III, which were terraced into the underlying deposits on the W, N, and S slopes of the tell. In Trench I (Stage XLII, Phase liv), remains of two complexes of rooms were found. In the W complex were two solid clay blocks in adjacent rectangular rooms which were possibly altars (Kenyon 1981: 105–8 and pls. 86a and 231a). The discovery of an infant foundation burial below the dividing wall between the adjacent rooms and a bin containing a four-spouted lamp, which could have been used for offerings, may support Kenyon's suggestion that this might have been a cult center (Kenyon 1981: pls. 86b, 87a, b, and fig. 12:25).

The remains and contents of the three rooms found in Trench II, Stage XXI, Phase lxviii, indicate they were for domestic use since they contained mortars, a bin, and a number of crushed vessels (Kenyon 1981: 166–67 and fig. 12:2–5 and pl. 255a).

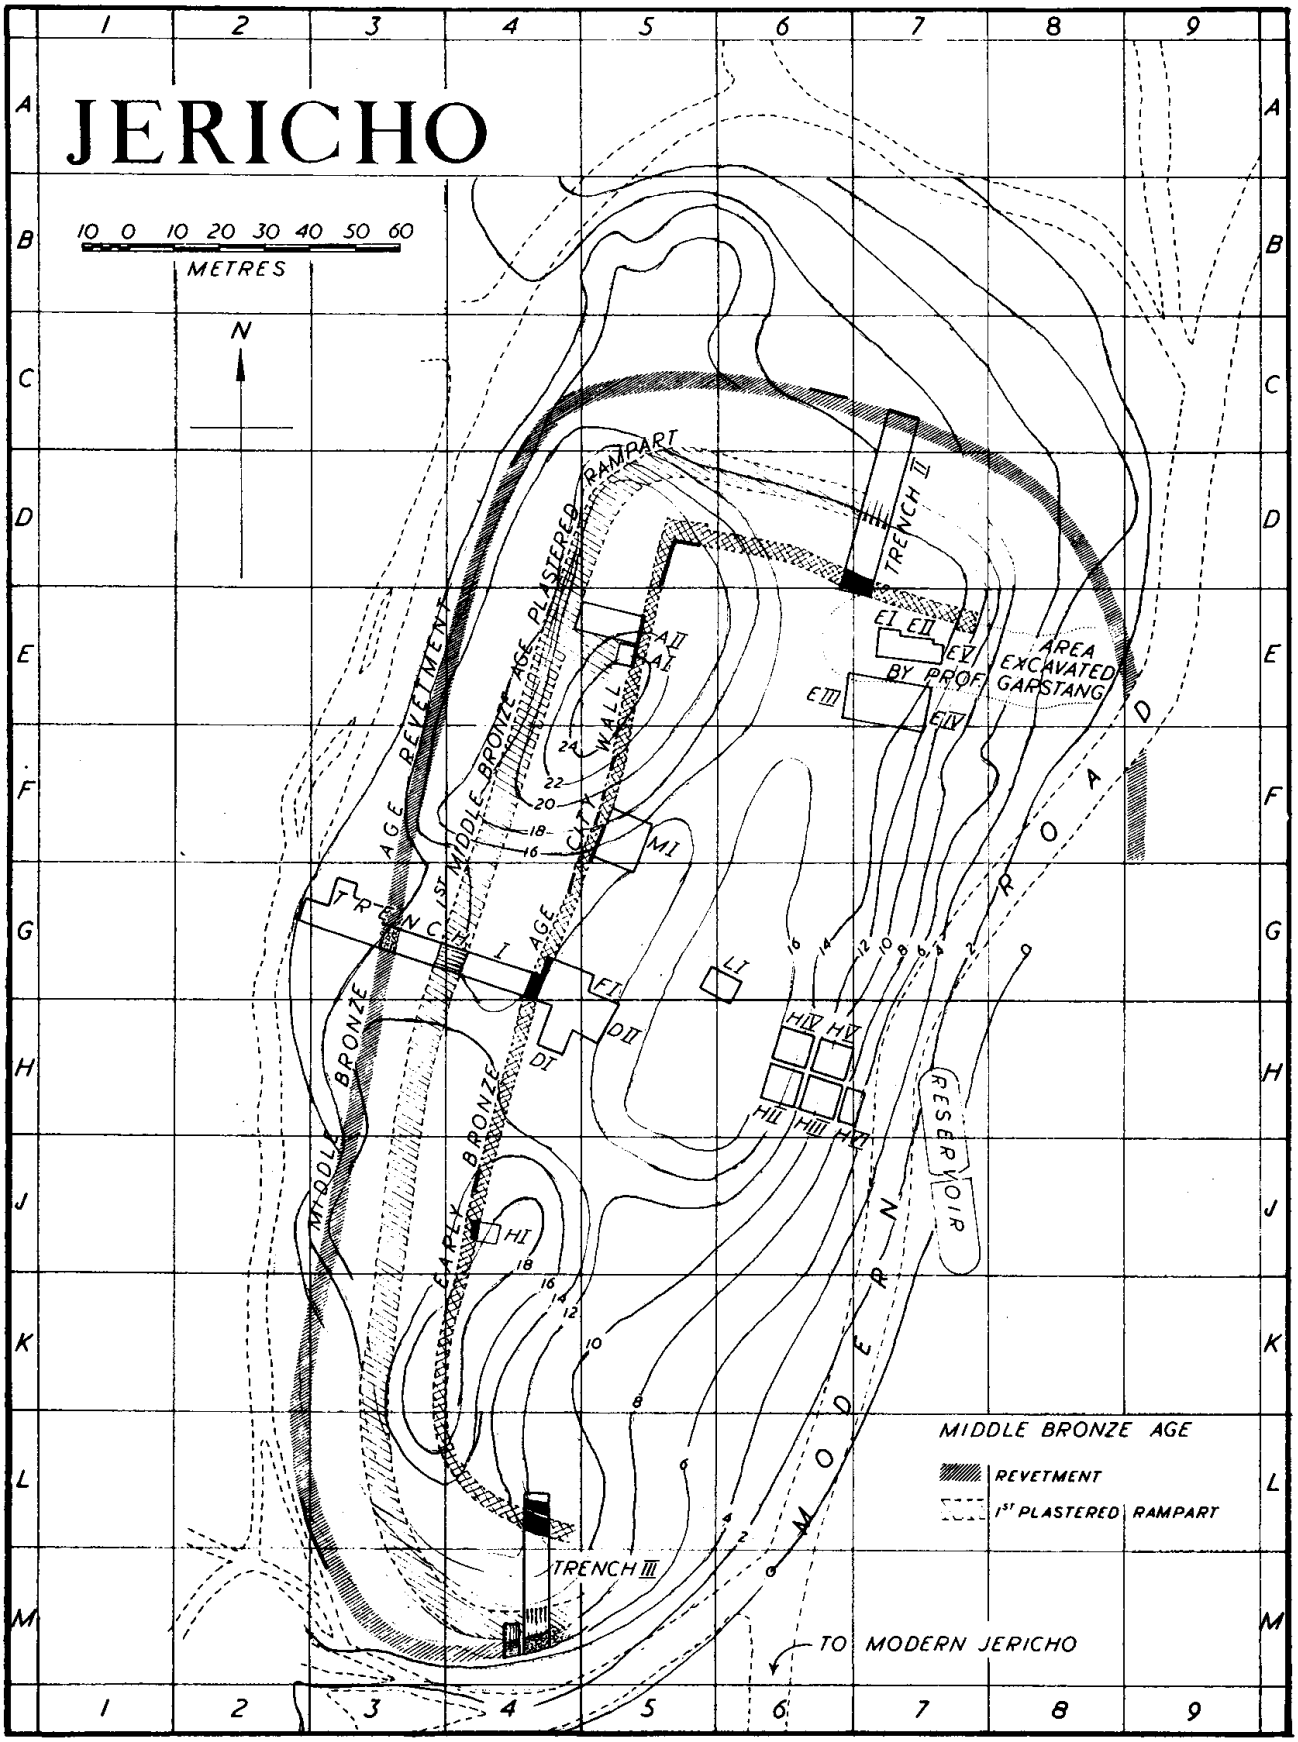
The house remains in Trench III (Stage XX, Phase lxxx) were so scanty that no plan was published, but a good assemblage of characteristic pottery was excavated (Kenyon and Holland 1983: 214 and figs. 104–5).

The evidence from the burial traditions of the EB IV people (Amorites?) indicates a tribal organization with each group maintaining its own burial customs since seven different classes of tombs were discovered by Kenyon. They were identified as the following types: Dagger, Pottery, Dagger/Pottery ("Square-Shaft"), Outsize, Bead, Composite, and Multiple Burial.

The Dagger type (e.g., Tomb A129; Kenyon 1965: fig. 23, plan and 1979: pl. 46, photograph) is usually small and, owing to its size, contains an intact skeleton in a crouched position on its side. If the burial is of a man, he is buried with a dagger, and if that of a woman, she is buried with a pin or beads. The prominence given to weapons in this type of tomb suggests a warrior class.

The Pottery-type tomb (e.g., Tomb G28, Kenyon 1960: fig. 96, plan and pl. 10:2, photograph) always contains only pottery and no weapons.

The Dagger/Pottery-type tomb (e.g., Tomb D1; Kenyon 1965: fig. 42, plan and pl. 4:1, photograph) shows a combination of features associated with the preceding two tomb types. A new feature associated with this type is that the weapons also may include a javelin. The main constructional difference of the shaft for this type is that it is square, rather than roughly and roundly cut, and is therefore also known as a "square-shaft" type.



The fourth type is termed "Outsize" (e.g., Tomb O4; Kenyon 1965; fig. 59, plan and pl. 5:1, photograph) since both the shafts and the chambers are considerably larger than those of the other tomb types and the funerary offerings are greater both in their numbers and size of the vessels (for example, compare Tomb O4 pottery with Pottery-type tomb vessels; Kenyon 1965: figs. 28 and 60–61). They are similar to the "square-shaft" tombs in that they also contain both pottery and weapons, and the skeleton is usually intact.

The fifth type, Bead tombs (e.g. Tomb K9; Kenyon 1965: fig. 40), has dismembered skeletons and few grave offerings apart from some beads, a pin, and sometimes fragments of bronze studs, possibly belonging to clothing items.

The sixth type, known as Composite tombs (e.g., Tomb L2; Kenyon 1965: fig. 79, plan) appears to combine some of the characteristics of the Dagger, Pottery, Dagger/Pottery, and Outsize types of tombs.

One seventh type of EB IV tomb, M17, is in a class by itself and is designated a Multiple-Burial type (Kenyon 1965: fig. 88, plan and pl. 10:1, photograph). It is distinguished from all the other tomb types in that it has three intact burials, whereas only two intact burials occasionally are found in the Dagger-type tombs.

8. Middle Bronze Age (ca. 1950–1550 B.C.). Kenyon found MB occupational remains (Table 1) in Trenches I, II, III (MB I/early MB II), and in Squares HII to VI (MB III). Owing to erosion, no domestic structures were found in Trenches I and II, but the extensive exposures extending W in Trench I and N in Trench II revealed MB remains of three successive and massive plastered ramparts which surrounded the MB town (see JER.05; also Kenyon 1981: Trench I, pls. 89b–92b, photographs, pl. 236, section; Trench II, pls. 108–10, photograph and pl. 259, section). The ramparts also were found in Trench III on the S of the mound (see Kenyon 1981: pls. 125b, 126a, and 127, photographs and pl. 273, section) as well as some house

JER.05. Plan of MB plastered ramparts at Jericho. *(Courtesy of T. A. Holland)*

remains on the berm at the foot of the MB bank (Kenyon 1981: pls. 126b and 128a, photographs and pl. 272a, b, plans).

Although the few rooms excavated in Trench III (Stage XXI) were small and mostly irregular, a number of typical MB II vessels were found associated with the floor levels (Kenyon and Holland 1983: figs. 106: 1–30 and 108: 32–39).

The most complete MB II houses were excavated by Kenyon (1981: pl. 336a) in Area H (Stage XII) on the E side of the mound in grid squares H6–7 (Fig. JER.02) just NE of Garstang's so-called MB "palace storerooms" in grid squares H6, J5–6, and K5–6 (Garstang 1934: 118–30 and pls. 13–16). The combined Garstang/Kenyon sketch plan of this portion of the MB II city plan reveals an orderly layout of houses and two streets with drains oriented W–E, sloping down the mound to the water supply. A number of ground-floor rooms, particularly Garstang's room nos. 40–45 (1934: pls. 15, 16, and 41–42), and Kenyon's B and F (1981: 369, fig. 6 and pls. 198 and 336a), contained many large storage jars with carbonized grains, and also loomweights and saddle querns, which indicate that the street-level rooms served as working areas and possibly shops, while the second-story rooms were for living and bedrooms.

A 1988 revised radiocarbon determination of a charcoal sample (BM-1790R, 3300 ± 110 B.P.) from Kenyon's Area H rooms in Stage XII, Phase li, places this occupation within a calibrated date ranging from 1880–1390 B.C. (based on Stuiver and Reimer 1986). The carbonized plant remains from the storage jars in storerooms B and F, Stage XII, Phase lii–liii (Kenyon and Holland 1983: figs. 199: 4–6, 201: 1–4, and 202: 1–4), were analyzed by Hopf, who identified emmer, bread wheat, and barley in room F, and bread wheat, barley, lentil, field peas, vines, onions, oats, as well as grass and weed species in room B.

Some of the pottery found in the Area H rooms illustrates a high degree of artistic achievement—compare, for instance, the almost identical bird-shaped vases on pedestal stands from Garstang's room 73 (1934: pls. 26:8 and 44 top) and Kenyon's room A (Kenyon and Holland 1983: fig. 188: 5 and Kenyon 1957: pl. 48 top). Other fine vessels include Garstang's "snake" vase from room 68 and a rhyton from room 40 (Garstang 1934: pls. 25: 20; 43: 4; and 22: 21, 44).

The bulk of the evidence for everyday life at Jericho during the time of the MB comes, not from the sparse occupational remains, but from the large MB II multiple-burial tombs excavated by both Garstang and Kenyon in the necropolis N and NW of the tell (Garstang 1932: 41–54, 1933: 3–37; Kenyon 1960: 263–515, 1965: 167–478, particularly pottery Groups I–V as illustrated by the vessels in Tombs B48, B51, J45, and A136). Because of the excellent preservation of objects in the tombs, it is possible to reconstruct a typical living room at Jericho during this period with some degree of certainty.

All the MB buildings were violently destroyed by fire and their walls were covered with a thick layer of debris during the subsequent period of abandonment and erosion. On the basis of finding entire families buried together in some of the MB II tombs, Kenyon (1960: 267) postulated that disease was partially responsible for the demise of the population at this time. The heavy tilting of the Area H walls to the E (Kenyon 1981: pl 339, section) may indicate earthquake activity which may have resulted in sulfurous gases, fire, and possibly even some form of early plague, thus causing the total abandonment of the site at the end of the MB.

9. Late Bronze Age (ca. 1550–1200 B.C.). As already noted by Kenyon (1973: 527), the dating of the Late Bronze Age in Palestine is almost entirely dependent upon a study of the pottery from the key Palestinian sites of this period, those being Tell Beit Mirsim, Jericho, Megiddo, Hazor, Lachish, and Tell el-ʿAjjūl.

On the evidence of the Jericho pottery dated to the LB from the reused Tombs 4, 5, and 13 (Garstang 1933: 15–40 and pls. 4–26; Bienkowski 1986: 32–102 and figs. 27–51), it would appear that Jericho was reoccupied on a small scale in Area H on the E side of the tell during the second half of the 15th century B.C. (Table 1). Bienkowski suggests for Tomb 5 a late LB I/first half of LB IIa date (ca. 1425–1350 B.C. or slightly later) and for Tombs 4 and 13 a mid-LB IIa/early LB IIb date, ca. 1350–1275 B.C. (1986: 71, 90, and 102).

On the tell, the only building remains to survive erosion were Garstang's so-called "palace" and the Middle Building (1934: 105–8 and pl. 12), and the ruins of a house floor in Kenyon's Square Hill (Stage XIV, Phase liva) upon which were situated an oven and a LB IIb juglet (Kenyon 1981: 371 and fig. 14:6, pl. 199a, b) dated to the end of the 14th century B.C.

With regard to an LB fortification system at Jericho, there is no archaeological data to support the presence of a walled town. The so-called LB walls in Garstang's City D, which he associated with Joshua's destruction of Jericho (Josh 6:24), were misdated (Garstang and Garstang 1940: 129–40 and pls. 17–18) and later shown by Kenyon to be two successive phases of an EB town wall (Kenyon 1952: 64–72).

The meager material remains of LB Jericho, therefore, suggest that the settlement was relatively small and fairly poor (however, for a recent reevaluation of these remains, see Wood 1990). As Bienkowski (1986: 124) has shown, a study of the settlement patterns of the LB sites in Canaan shows that only eight of the seventy-six known settlements were fortified. This decline in the fortunes of Jericho and other sites in Canaan is the direct result of the establishment of the Egyptian 18th Dyn. and the expulsion of the Hyksos into Palestine (Kenyon 1973: 555–56).

10. Iron Age (ca. 1200–587 B.C.). After Jericho was abandoned during the early part of LB IIb, it was not thought to be reoccupied to any great extent until the 7th century B.C. However, a recent study of the pottery from the German excavations by the Weipperts (1976: 105–48) has revealed the presence of both Iron Age I and II forms. Garstang's "Cremation Pit" (Tomb 11) also may be dated to Iron Age I (1933: 36 and fig. 11) and the late 10th century B.C. Tomb A85 excavated by Kenyon (1965: 482–89 and figs. 252–53) was possibly in use until the early 9th century B.C. (Tushingham 1965: 487). The biblical account in 1 Kgs 16:34 suggests that the site was first reoccupied and fortified by Hiel the Bethelite during the time of Ahab (early 9th century B.C.).

The extensive 7th-century Iron Age occupation was

found by all three major expeditions to Jericho (Table 1). The German excavators Sellin and Watzinger (1913) uncovered the largest area in the uppermost strata of Jericho. See Fig. JER.02. Garstang recovered only one portion of an Iron Age II building in grid H6 and very few finds (1934: 102–4 and pls. 13, 15, and 24:2). Kenyon's Iron Age material from Jericho is now well documented both from the tell (Kenyon 1981: 111–13, 171–73, 219, and pls. 92b, 94, 232, and 255–56; Kenyon and Holland 1982: 455–536 and figs. 195–219; 1983: 58–84, 176 and figs. 23–31; Franken 1974) and tombs A85, WH.1, and WH.2 (Tushingham 1965: 479–515 and figs. 252–63).

The largest and most complete Iron Age II building excavated by Kenyon (in Stage XLVI, Phase lxix) was situated at the foot of Trench I on the W side of the tell, and was constructed in a tripartite plan typical of this period (Kenyon 1981: 111–12 and pls. 94, 232). Apart from the pottery, the most important find, slightly postdated to the aforementioned building, is that of a stamped storage jar handle from Trench I (Reg. YBT/42; Stage L, Phase lxxv) impressed with a two-winged "royal stamp" and two incised concentric circles around a deeply impressed central hole (Bartlett 1982a: 537 and fig. 220:1, pl. 3a). The presence of this handle probably indicates that Jericho was under the administration of Judah during this period. The pottery from even later phases on the mound strongly suggests that the site remained inhabited until the period of the Babylonian exile in 587 B.C.

11. Babylonian/Persian to Byzantine (587 B.C.–A.D. 636). Although there are no ancient building remains on the tell after the time of the Iron Age remains, ancient Jericho and the area in the immediate vicinity of modern Jericho was occupied during some, if not all, of the time between the Babylonian/Persian and Byzantine periods, particularly at the nearby site known today as Tulul Abu El-ʿAlayiq (Kelso and Baramki 1955: 1–19; and Pritchard 1958: 1–58).

The presence of an unstratified, barbed bronze arrowhead (Reg. 179; Kenyon and Holland 1982: 569 and fig. 229:18) from the W slope of the mound attests to the presence of Persian warriors or to their surrogates in the neighborhood.

Even later periods of encampment or temporary occupation on the mound are attested by epigraphic evidence in the form of another stamped jar handle. The upper arm of a Rhodian amphora (Reg. 199) bears a rectangular stamp which reads "In the term of Agestratos, in the month Agrianias" (May–June), dated to ca. 220–150 B.C. in the Hellenistic Period (Bartlett 1982a: 542 and fig. 220: 6).

During the course of Kenyon's excavations in the necropolis, Roman remains were found in seven tombs (table 1) and fourteen graves (Bennett 1965: 516–45 and figs. 264–81).

The sparce remains from the Byzantine period come from Kenyon's sites M and H on the tell. A pit dug into Square MI (Stage XXIV, Phase cxii) to a depth of over 14 m, probably to obtain brick material for building elsewhere, contained only one fragment of a fine Byzantine bowl (Kenyon 1981: 266; Kenyon and Holland 1983: 280 and fig. 119:14). An unstratified iron nail (Reg. 1907), possibly Byzantine, came from Site H (Holland 1982b: 569 and fig. 229:19).

Historically, Jericho was of great economic and military importance during the time of the Hellenistic and Roman periods. A perpetual source of fresh water from the spring of ʿAin es-Sultan and during later periods from the springs of ʿAin Dug, ʿAin Nureimah (Na'aran), and the Wadi Qelt brought to Jericho by aqueducts, gave Jericho its very existence from the time of trhe original settlement during the Mesolithic period until the present day. It served as an oasis providing food and more particularly the medicinal plants that were so prized by all powers who held sway over the site. Since Jericho was situated on the E flank of Judea, it remained militarily of great strategic importance. The continued settlement of the area until the present day and the existence of the modern town of Jericho testifies to its endurance and its unrivaled status as being the oldest continually inhabited oasis in the world.

T. A. HOLLAND

E. Roman Jericho (Tulul Abu el-ʿAlayiq)

Jericho of the Roman period is referred to in the Apocryphal writings and is where Bacchides is said to have built one of his fortresses (1 Macc 9:50). Later Ptolemy was made governor of the plain and the area was the scene of the massacre of Simon and his sons (1 Macc 16:11–17). The roses grown in Jericho must have been proverbial, since in Sirach 24:14 they are used as a metaphor for wisdom. In the NT, the most notable references to the city are as the site of the healing of two blind men (Matt 20:29–34) and as the home of Zacchaeus (Luke 19:1–10).

The most widespread remains from the Hasmonean and the Herodian periods were exposed in the W plain of Jericho, close to Wadi Qelt (the biblical Nahal Perat) at the site named Tulul Abu el-ʿAlayiq (M.R. 191139). The site, previously labeled by scholars as "Herodian" or "New Testament" Jericho (versus the older town mentioned in the OT, situated at Tell el-Sultan; see above) has proved to be a huge palace complex first built by the Hasmoneans and later rebuilt and expanded by Herod the Great. The palace was in close proximity to Jerusalem (only 20 km), and enjoyed an abundance of water, a pastoral landscape, and above all, mild winters in contrast to the cold winters of Jerusalem.

The first developments at Jericho, probably in the days of John Hyrcanus I (134–104 B.C.) included the construction of: (1) a long well-built water channel to carry water from the Wadi Qelt springs to the plain; (2) a royal estate; and (3) the first phase of a winter palace.

C. Warren (1869) was the first scholar to excavate at the site. He dug sections on top of the two tells which characterize this site, one to the S and the other to the N of the wadi. E Sellin and C. Watzinger followed Warren, and did additional minor work at the site. Larger excavations were conducted in 1950 (Kelso and Baramki) and 1951 (Pritchard). The most extensive excavations of the site have been directed by E. Netzer from 1973 to 1987.

1. The Hasmonean Period. The first palace built by Hyrcanus I, N of Wadi Qelt included a two story building, about 60 × 50 m, built on three sides of an inner courtyard. This building (only part of which has been exposed) included bath installations, a large ritual bath (*miqve*, two

pools, one with and the other without steps), decorated rooms (with fresco and stucco), and at least one tower. This tower (13 × 13 m) at the SW corner, was built with ashlar stones in contrast to the rest of the walls which were of mudbrick.

Two swimming pools, one beside the other, were built W of the palace (each 8 × 9 m); perhaps they were separated to reserve one each for men and women. To the N of the palace was the large royal estate, at least 45 hectares of irrigated land, which was surrounded by a wall. Various agricultural installations (including many winepresses) were exposed close to this estate. The estate probably housed palm date trees (which were exploited mainly to produce date wine) and *opobalsamum* bushes (to produce perfumes and medicines). These remains accurately reflect Jericho's descriptions by Pliny, Strabo, Josephus, and others.

The first expansion of the palace was probably by Alexander Jannaeus (103–76 B.C.), who built a second long range water channel to carry water from Na'aran springs to the W plain of Jericho. Simultaneously, he added to the palace (to its E) a large luxurious complex with two large adjacent swimming pools in its center (each 18 × 13 m). The pools were surrounded by wide, paved platforms and gardens. This complex, built along one straight architectural axis also included a pavilion (21 × 17 m, surrounded by colonnades in the Doric style) at one edge and a large garden at the other edge (ca. 60 × 70 m, and probably also surrounded by colonnades).

The next massive addition to the palace complex was added by Jannaeus' widow, Queen Alexandra (76–67 B.C.). She constructed a pair of unique villas (the "twin palaces"), built one attached to the other in a *spiegel bilt* plan. Each of the houses (ca. 25 × 25 m) had a square courtyard in its center, a triclinium (open towards the courtyard through a *Distilos in antis*), bath installations, and various ritual baths. Each of these villas also had a neighboring garden with a small swimming pool in its center. Each of the villas and their gardens were terraced into the terrain's slope in order not to disturb the panoramic view from the above-mentioned "Doric" pavilion.

The twin palaces were probably built to house the two rival sons of the queen, of whom the oldest had served as the high priest since his father's death.

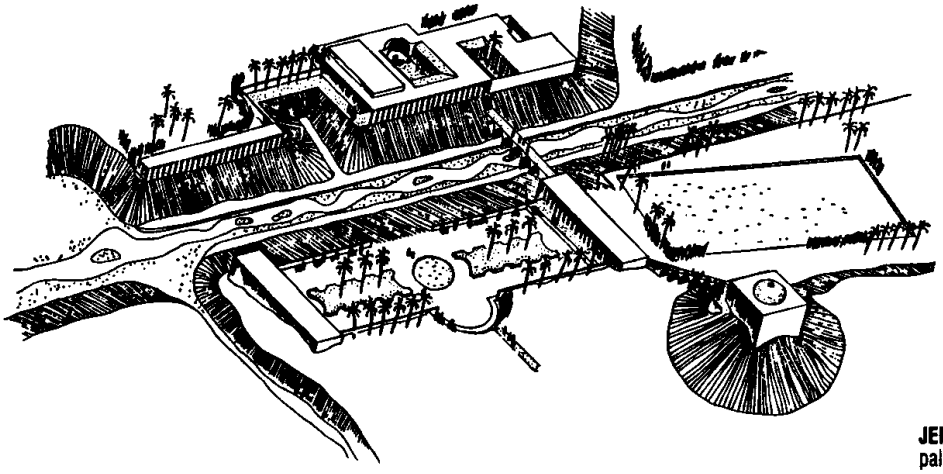
Only minor changes and additions were introduced into the palace during the 30 years between Alexandra and Herod the Great. They mainly included the introduction of more bath installations (both secular and ritual) and a large swimming pool (ca. 20 × 12.5 m).

2. The Herodian Period. During Herod's long reign (37–4 B.C.), he managed to build three independent palaces at the same site, which ultimately functioned as one. It seems that in Herod's early years (37–31 B.C.), the Hasmonean family continued to use its palace in Jericho. The dramatic murder of Aristobulus III in a swimming pool at Jericho, as told by Josephus, took place during a banquet organized by Herod's Hasmonean mother-in-law.

Herod built his first independent palace at Jericho (probably around 35 B.C.) not far from the Hasmonean one, S of Wadi Qelt. It was a large rectangular building (84 × 45 m), built on three sides of a peristyled courtyard. It included a large triclinium, various palatial and service rooms, a bathhouse in the Roman style, and a ritual bath. Although free-standing, it resembles an introverted city house similar to those at Pompeii. This design may reflect Herod's political insecurities (ca. 35–30 B.C.), when Jericho was officially taken from him and given to Egypt's queen, Cleopatra.

Herod's second palace at the site (built around 25 B.C.), was built as an open complex, exposed to the landscape around. It was built on top of the ruined Hasmonean complex, following the latter's destruction by the earthquake of 31 B.C. This palace's major wing (the E wing) was built NE of the ruined twin palaces. It comprised two levels: the upper one with various palatial and service rooms was built around a large peristyled courtyard; the lower one included the Hasmonean (20 × 12.5 m) swimming pool, a bathhouse in the Roman style, and various service rooms.

To the W, the two large Hasmonean swimming pools were combined into one large pool (32 × 18 m), surrounded by newly planted gardens. Perhaps another wing (perhaps a villa) was built on top of the Hasmonean artificial mound, but no evidence of this has been found.



The largest and most sophisticated palace built by Herod in Jericho, the Third Palace, was built around 15 B.C. on both sides of Wadi Qelt, N of the first palace and SE of the second one. Covering about 3 hectares, it was built following a grid system parallel to the wadi. Roman builders and artisans cooperated with the local artisans to use Roman concrete work, which was covered by small stones in the *opus reticulatum* and *opus quadratum* styles, side by side with the local mudbrick work.

The main wing of the palace was the N one. It included various palatial rooms, two small gardened peristyled courtyards, a relatively large bathhouse in the Roman style, and a huge triclinium. This outstanding triclinium (29 × 19 m) had rows of columns on three of its sides, similar in plan to the one in the first palace. Most of its floor was covered by an elaborate *opus sectile* floor (its tiles were looted in antiquity). The walls, like practically all the other walls in this wing, were covered with frescoes. The wing also included two long colonnades, built along the wadi, opposite the sunken garden. The ceilings of these colonnades, as well as those in other rooms, were decorated with elaborate stucco work.

The other three large wings of the third palace were built S of Wadi Qelt: the sunken garden, a huge pool, and an elaborate building. See Fig. JER.06.

The sunken garden, an elaborate formal garden (140 × 40 m), was flanked by two elevated colonnades on its short ends. The long S facade (Kelso and Baramki's "Grand Facade") was decorated with 48 niches, having a reflection water channel in front of them. The center of this facade was designed with a small semicircular garden, in the shape of a theater. The huge pool (90 × 42 m), probably served for swimming, boating, and water games.

Only foundations, a circle bounded by a square, have survived from the building which once stood on top of the artificial mound. There are good reasons to infer that above these foundations stood a round reception hall, 16 m in diameter, with four semicircular niches around it (a similar hall, 8 m in diameter, was integrated into the Roman-style bathhouse of the N wing). Following this

JER.06. Reconstruction of Herod's winter palace at Jericho. *(Courtesy of E. Netzer)*

reconstruction, this hall was similar in shape to the contemporanous *Tempio di Merkuri* in *Baia*. This elevated hall was reached by a stair-bridge constructed upon a series of arches. A second bridge, of which we have no evidence, was probably built across Wadi Qelt, connecting the two parts of the palace.

The winter palace complex included also a series of structures built E of the Hasmonean palace. These structures (only partially excavated), were built along the fringe of the royal estate, perhaps to house the administrative staff. At their E edge, a small "industrial area" was exposed, probably to process some of the royal estate products (perhaps the *opobalsamum*).

Another important building project of Herod was revealed and excavated by Netzer (1975–76) at Tell el Samarat, S of Tell el-Sultan. This consists of the remains of a complex unique in the whole Greco-Roman world, which integrated a horse- and chariot-racing course, a theater's *cavea* 70 m wide, and an elaborate building (70 × 70 m) elevated on top of an artificial mound. Little more than the foundations have survived of this latter elevated building, which may have served as a reception area or a gymnasium.

This combined building project (which accommodated horse races, athletics, boxing, theater, and musical shows like the ones performed in the quinquennial games in honor of Augustus, which Herod established and maintained in Jerusalem and Caesarea) probably is that to which Josephus referred when he mentioned at Jericho a hippodrome, a theater, and an amphitheater.

Very few other Hasmonean or Herodian ruins are known in Jericho; however, there are a few independent dwellings. It can be assumed that Second Temple Jericho was spread over the plain's irrigated areas, probably in the character of a garden city, side by side with the royal estates.

Jericho as a whole functioned not only as an agricultural center and as a crossroad, but as a winter resort for Jerusalem's aristocracy. Indirect evidence of the extensive Jewish population in this period was found in the survey and excavations (Hachlili 1976–77) of a huge contemporary cemetery W of the plain and near the bottom of the mountains' slopes.

EHUD NETZER

JERIEL (PERSON) [Heb *yĕrîʾēl*]. A descendant, perhaps grandson, of Issachar according to the genealogy of 1 Chr 7:1–5. For a discussion of the list of Issachar's sons, see IBSAM.

M. STEPHEN DAVIS

JERIMOTH (PERSON) [Heb *yerîmôt*]. Var. JEREMOTH. Jerimoth appears as a proper name only in late biblical writings. Within Chronicles "Jerimoth" represents several different individuals contemporaneous with David, as well as several different Benjaminites. Those presented as David's peers seem retrojected anachronistically into preexilic Israel by the Chronicler. The name may have originated as the familial name of a Benjaminite clan in postexilic Jerusalem (see #3). The name also arises in an authentic source in Ezra 10:26–29, where it represents three different individuals. Jerimoth was most likely a common Judean name in the late 5th, early 4th century B.C.E. Its etymology, "exalted," reflects a theological tendency found in other names from this era (Silverman 1985: 283–85). The equivalence of the names "Jerimoth" and "Jeremoth" is best observed in 1 Chr 24:30 (= 1 Chr 23:23) and 1 Chr 25:4 (= 1 Chr 25:22) where the names are used for the one person in the same context.

1. The son of Bela and, according to 1 Chronicles, a military leader from the tribe of Benjamin during the reign of David (1 Chr 7:7). While it is possible that the Chronicler inserted Jerimoth into this passage from postexilic source material (Williamson *1 and 2 Chronicles* NCBC, 77–78), the stylistic characteristics of 1 Chr 7:6–12 suggest that the unit was composed by the Chronicler himself. Jerimoth here may represent a postexilic Benjaminite familial name (see #3) that the Chronicler retrojected into the time of David in order to establish impressive military support for David's rule.

2. The son of Becher, and according to 1 Chronicles, a military leader from the tribe of Benjamin during the reign of David (1 Chr 7:8). See #1.

3. A Benjaminite, the son of Shimei and inhabitant of Jerusalem (1 Chr 8:14). Geography seems to provide the organizing principle of the genealogical list in which Jerimoth appears. The name thereby provides important demographic evidence for the population of Jerusalem at some point in her history. Rudolph (*Chronikbücher* HAT, 77) has argued that either Josiah's reign or Nehemiah's governorship provides a suitable background for the appearance of Benjaminites in Jerusalem. The commonality of the names of the nine sons of Shimei with names recorded in elsewhere in Chronicles or in Ezra and Nehemiah (Curtis and Masden *The Books of Chronicles* ICC, 162), however, suggests that Jerimoth represents a segment of the postexilic, rather than the preexilic, population of Jerusalem.

4. A warrior, who, according to 1 Chronicles, joined David's revolt against Saul at Ziklag (1 Chr 12:5). 1 Chronicles 12 extends the list of David's warriors from the Chronicler's Deuteronomistic source (1 Samuel 31

[= 1 Chr 11:11–47]). The source of these warriors' names remains contested. Rudolph (*Chronikbücher* HAT, 103–7) argued that the names were later appended to the Chronicler's work in the 2d century B.C.E. Zeron (1974) has argued that Jerimoth and others in 1 Chronicles 12 represent an authentic preexilic source—a fragment of an otherwise lost genealogy of Absalom. Stylistic and structural indications, however, imply that this section was composed by the Chronicler (Williamson 1981). Jeremoth therefore represents the retrojection of a common name from the time of the Chronicler into David's military force to bolster further David's support in Israel.

5. The son of Azriel and the tribal leader of Naphtali at the close of the reign of David (1 Chr 27:19). Embedded within a list of the leaders of the twelve tribes of Israel (1 Chr 27:16–24), the reference to the "Chronicles of King David" (1 Chr 27:24) has spurred speculation concerning a source that the Chronicler used in his reworking of Samuel and Kings (Williamson *1 and 2 Chronicles* NCBC, 175–76). The passage's Chronistic style and the presence of Aaronides as an independent tribe, however, suggest that the Chronicler composed the passage. Jerimoth's presence most likely represents the retrojection of a name that was common in the early 4th century B.C.E. back into the time of the united monarchy.

6. A Merarite, the son of Mushi, whom, according to the 1 Chronicles, David appointed to service in the Temple and its cult (1 Chr 23:23). Jeremoth appears nowhere else as a Levite in the OT outside of 1 and 2 Chronicles. The Levitical genealogies of Exodus 6 and Numbers 3 do not extend this branch of the Levitical family beyond Jeremoth's father, Mushi. Although J. Liver (1968: 8.29–32) believes that Jeremoth and the other Levites in 1 Chronicles 23 may represent authentic persons contemporaneous with David or Solomon, Rudolph (*Chronikbücher* HAT, 154–55) argued that Jeremoth and the other Levites of 1 Chronicles 23 represent Levitical families after the time of the Chronicler. The style of the list, however, corresponds closely with the compositional techniques of the Chronicler. This suggests that Williamson (*1 and 2 Chronicles* NCBC, 160) may be correct in asserting that "the names of the heads of houses will then be current at the time of the list's composition"—the time of the composition of Chronicles (ca. 460 B.C.E.).

7. A son of Heman whom, according to the Chronicler, David and the Judean military leaders appointed as one of the leaders of the Levitical Temple instrumentalists (1 Chr 25:4). While the exact compositional history of the Levitical musicians in 1 Chronicles 25 remains contested, it is generally conceded that Jeremoth appears in a list of names that has been artificially constructed from a postexilic hymn (Williamson *1 and 2 Chronicles* NCBC, 167–68). The Chronicler anachronistically retrojected a common name that expressed the piety of his age into the founding establishment of Temple personnel during the reign of David.

8. A son of David, the father of Mahalath who, according to the Chronicler, married Rehoboam (2 Chr 11:18). The name "Jerimoth" is not attested elsewhere as a name for a son of David. Curtis and Madsen (369) raise the possibility that Jerimoth was therefore the son of one of David's concubines. Yet the late appearance of the name elsewhere and the Chronistic style of 2 Chr 11:18–23 suggest that the Chronicler borrowed the name from his day to produce artificially a son of David with an identical Levitical name, thereby relating two of his chief interests.

9. According to the Chronicler, a Levitical overseer of surplus Temple offerings gathered during Hezekiah's Temple reforms (2 Chr 31:13). The Chronistic style of the chapter clearly demarcates it as the Chronicler's own invention. Having already equated the name with a Levitical family (1 Chr 24:30), the Chronicler reuses "Jerimoth" to illustrate the propriety of Hezekiah's reforms.

10. A member of the family of Elam who lived in the Persian province of Judah during the mission of Ezra (Ezra 10:26). Jeremoth, a member of a family that had returned from exile with Zerubbabel, married a non-Judean wife. He consented to divorce her during the reforms of Ezra under the threat of complete ostracism from the Jerusalem temple-state. Through the list of Jeremoth's peers may be abbreviated (Rudolph *Esra und Nehemiah samt 3. Esra* HAT, 97–99), it is generally agreed that the names in the list of Ezra 10:18–43 authentically represent individuals from the Persian province of Judah during the mission of Ezra.

11. A member of the family of Zattu who lived in the Persian province of Judah during the mission of Ezra (Ezra 10:27). See #10.

12. A member of the family of Bani who lived in the Persian province of Judah during the mission of Ezra (Ezra 10:29).

JOHN W. WRIGHT

JERIOTH (PERSON) [Heb *yĕrî'ôt*]. The daughter of Caleb and Azubah and the mother of Jesher, Shobab, and Ardon (1 Chr 2:18). This identification is admittedly merely the most probable among several alternatives (Braun *Chronicles* WBC, 39). The Vatican manuscript of the LXX represents not only Jerioth but also Azubah as the daughter of Caleb. However v 19 implies that Azubah was his wife. It is possible that the name "Jerioth" and the name "Azubah" both indicate the same person. In such a case the conjunction *waw* would be explicative and should be rendered something like "even." This suggestion actually fits Jerioth's being either Caleb's daughter or his wife. The latter proposal is precisely the understanding of the LXX's Alexandrian manuscript, though it keeps Jerioth and Azubah apart as two separate individuals—each a wife of Caleb. Textual emendation could make Jerioth the father of Azubah (Curtis and Madsen *Chronicles* ICC, 92)

or a former husband of Azubah (Richter 1914: 110). On the absolute use thus required of the *Hipʿil* of *yld*, note Isa 66:9 where it has the force of "to cause to bear." The idea that Jerioth might have been a son of Caleb and Azubah hardly seems likely. Stamm (1967: 325) thinks the translation "(tent-)curtains" for Jerioth as a plural of *yĕrîʿâ* is unsatisfactory, and he assumes a connection with the verb *yrʿ*—"to tremble, to be faint-hearted" (cf. Ar *yariʿa*—"to be a coward"). Potentially either feminine or masculine in form, this short name lengthened by the hypocoristic element *-ôt* would then mean "(the) anxious or timid or fearful (one)." Neither Akkadian nor Egyptian appears to supply a parallel.

EDWIN C. HOSTETTER

JEROBOAM (PERSON) [Heb *yārobʿam*]. Two kings of N Israel bore this name, which means "may the people be great."

1. The son of Nebat, and the first king of the N kingdom of Israel (ca. 922–901 B.C.E.). Prior to his elevation to the N Israelite kingship, Jeroboam had served in Solomon's royal administration. He eventually opposed Solomon's policies and rebelled against the king. He fled to Egypt to escape Solomon's wrath and remained there until Solomon's death. Jeroboam subsequently returned home and was elevated to the kingship by the N Israelite tribes. He proceeded to develop a religiopolitical system for the new nation to establish its independence from the Davidic kingdom of Judah in the S. For this, Jeroboam is remembered in biblical tradition as the king who led Israel to sin, setting the new nation on its fateful course of decline and fall.

a. Sources. The main account of Jeroboam's rise to power and reign in 1 Kgs 11:26–14:20 is a compilation of several sources, but Cohn (1985) has called attention to the literary techniques by means of which the Deuteronomistic historian created a "unified story" out of his disparate sources. Even though this account of Jeroboam's career has been shaped to conform to the later perspectives of its author, most scholars believe that critical investigation of this complex—evidently drawn from archival texts, historical reports, prophetic oracles, and legends, etc.—can yield reliable information about the 10th-century situation.

As for other sources, the Chronicler presents with only slight variations parallel accounts of 1 Kgs 12:1–19 (cf. 2 Chr 10:1–19) and 1 Kgs 12:21–24 (cf. 2 Chr 11:1–4). In an account unparalleled in Kings, and of uncertain historical value, the Chronicler gives an account of the conflict between Jeroboam and the Judean king Abijah/Abijam (2 Chr 13:2–20). In addition, the LXX (Codex Vaticanus) preserves, as a supplement to its translation of the Hebrew account in Kings, an alternate version of Jeroboam's career (3 Kgdms 12:24a–z), but scholars are divided on the historical reliability of the additional details about Jeroboam that it provides (for a review and assessment of the various views, see Gordon 1975).

b. Rise to Power. Few details are known about Jeroboam's life before his rise to kingship. He is described in 1 Kgs 11:26 as an Ephraimite from the village of Zeredah, son of Nebat and the widowed Zeruah; the LXX supplement, however, fails to mention his father and identifies his mother as Sarira, a harlot—a note which is often dismissed as tendentious (for a contrary view, see Aberbach and Smolar 1969: 69–70).

Additional details provided by the LXX supplement claim that Jeroboam had 300 chariots prior to this escape to Egypt (v 24b) and that Pharaoh Shishak gave him an Egyptian princess in marriage (v 24e). This latter detail, however, may derive from confusion between Jeroboam and Hadad, an Edomite rebel against Solomon who, according to 1 Kgs 11:19, married Pharaoh's daughter.

According to 1 Kgs 11:26–28, Jeroboam was an official in Solomon's administration. His duties under Solomon included the oversight of the *sēbel* (v 28) in the district known as the "house of Joseph"—the tribal territory of Ephraim/Manasseh. The term *sēbel* is believed to refer to the temporary work forces drawn from the N Israelite tribes, not the *mas-ʿōbēd* "forced levy of slaves" (cf. 1 Kgs 9:21–22) which was the permanent, institutionalized force of corvée workers drawn from the Canaanite population (Mettinger 1971: 138).

While in this position of leadership, Jeroboam witnessed the oppressiveness of Solomon's administration and eventually revolted in an expression of solidarity with his N Israelite compatriots. It is generally agreed that Solomon's policies which alienated the northerners included heavy and inequitable taxation and the system of the *sēbel*. In addition, it has been suggested that Solomon's cession of N Israelite towns (1 Kgs 9:10–13) to the Phoenician king Hiram was the "last straw" which precipitated Jeroboam's revolt (Halpern 1974: 528). Miller has suggested further that cultic installations and personnel in the N may have been co-opted to support the "cultic primacy of Jerusalem" in the Davidic state (*HAIJ*, 230–31).

The account in 1 Kgs 11:29–39 claims that the Shilonite prophet Ahijah designated Jeroboam as the divinely chosen king of the N Israelite tribes, but the passage (especially vv 32–39) is so thoroughly laced with Deuteronomistic language and motifs that its historical value is suspect. Many scholars maintain, however, that vv 29–31(32) preserve a portion of an early tradition about the incident (Plein 1966: 18–20; Debus 1967: 80–87; Seebass 1967: 323–33; Gray, *1–2 Kings* OTL, 288; Weippert 1983: 346–50). Inasmuch as prophets frequently instigated political revolts in the N kingdom, there is good reason to suppose that Ahijah did encourage the rebellion. Caquot (1961: 25) has suggested that Ahijah was motivated by the hope that Jeroboam would select Shiloh for the religious center of his new kingdom.

Solomon responded to the rebellion by seeking to kill Jeroboam. Jeroboam fled to Egypt, where Shishak, king of Egypt, gave him asylum. Halpern (1974: 523–34) has suggested that Jeroboam hoped to win Egyptian support in his move against Solomon on the assumption that relations between Solomon and Egypt had shifted from cooperation to antagonism under the 22d Dyn. founded by

Shishak (Shoshenq I). Jeroboam remained in Egypt until Solomon died.

The sources do not agree on whether Jeroboam participated in the subsequent assembly at Shechem, the gathering at which the N Israelite leaders negotiated with Solomon's son Rehoboam to determine the future of their relationship to the house of David. According to 1 Kgs 12:1–19 and the parallel account in 2 Chr 10:1–19, Jeroboam was summoned from Egypt to the Shechemite assembly and participated in the proceedings (vv 3 and 12 of both accounts). 1 Kgs 12:20 suggests, however, that Jeroboam was summoned to Shechem and made king over Israel only after the discussions with Rehoboam had broken down and the decision had been made to break away from Davidic rule. Attempts to explain the inconsistencies, using the evidence of the LXX, have been vigorously debated (Gooding 1967; 1972; Klein 1970; 1973; McKenzie 1987).

c. Jeroboam and Rehoboam. The reasons for Rehoboam's involvement in the proceedings at Shechem are not specifically stated. Some have speculated that the N Israelites had a charismatic conception of kingship which gave them a natural reluctance to accept the regular dynastic succession when Solomon died, so Rehoboam went to Shechem to attempt to renew a personal union between N and S which supposedly had existed under his predecessors (Alt 1951: 4–9; Donner, *IJH,* 383–84); it has also been proposed that democratic tendencies existed in the N to which Rehoboam responded (Soggin 1984: 193). The uncertainties of a charismatic ideal of kingship or supposed democratic tendencies in the N aside, Miller justifiably suggests that urgent political realities prompted Rehoboam to go to Shechem to negotiate the matter of his kingship (*HAIJ,* 229–30).

1 Kgs 14:30 refers to continual conflict between Rehoboam and Jeroboam. This evidently refers to the skirmishes to determine the border which would separate the two kingdoms—essentially whether the territory of Benjamin would belong to Israel or Judah. In these struggles, Rehoboam succeeded in retaining control of most of the Benjaminite territory (cf. 1 Kgs 12:21), but he seems to have refrained from attempting to regain control of the rest of the N. According to 1 Kgs 12:22–24, the Judean prophet Shemaiah uttered an oracle against any such attempts on the grounds that what had happened was the will of Yahweh. This obviously reflects the Deuteronomistic historian's view of the course of events (cf. 1 Kgs 12:15), but the account may accurately recall a sentiment against exacerbating the difficult circumstances that had led to the schism.

d. Political Establishment. After Jeroboam was elevated to the kingship by the N Israelite tribes, he began the task of establishing a political and religious system for the new nation. According to 1 Kgs 12:25, he rebuilt Shechem and stayed there and then "went out" (*wayyēṣē'* often has the connotation of a military maneuver) and fortified Penuel. Whether this means that Jeroboam established Shechem as the first political capital of the new kingdom, followed by Penuel in Transjordan, is debated. Those who argue that this was the case attribute Jeroboam's supposed retreat from Shechem either to (1) Pharaoh Shishak's invasion in the fifth year of Jeroboam's reign (Mazar 1957; Ahlström 1982: 56–57) or (2) to religious opposition from within Shechem (Danelius 1967–68; Allan 1974). By the end of Jeroboam's reign, the capital was located at Tirzah (1 Kgs 14:17); Tirzah remained the N Israelite capital (cf. 1 Kgs 15:33; 16:8, 15, and 23) until Omri moved to Samaria. Miller (*HAIJ,* 244) suggests that Tirzah may have been the capital from the very beginning; according to this view, 1 Kgs 12:25 may only indicate that Jeroboam resided in Shechem and Penuel while state-sponsored construction work was underway in those cities.

The biblical texts provide no information about Jeroboam's administrative system. Given the urgent task of establishing a viable nation, however, it is reasonable to suppose that Jeroboam utilized Solomon's administrative apparatus with "perhaps some necessary adjustments" (Ahlström 1982: 63). No doubt the system of the *sēbel* was discontinued, and one must naturally suppose that officials who were loyalists of the Davidic state were removed from office. But the basic apparatus of the previous administration was no doubt kept in place. The Samaria ostraca of the 8th century B.C.E. provide evidence that the district system established by Solomon continued intact in the N kingdom with perhaps only slight modifications (Soggin 1984: 197).

e. Religious Establishment. Jeroboam's efforts to establish an independent religious system for the N Israelite kingdom are detailed in 1 Kgs 12:26–33. The account clearly serves the Deuteronomistic historian's polemical purposes against Jeroboam and the N kingdom. Its anachronistic and propagandistic elements suggest to Hoffmann (1980: 59–73) and Van Seters (1983: 313–14) that the entire account is a late invention without any historical basis. Others maintain that the account reliably reports the essential cultic measures undertaken by Jeroboam, despite the polemical judgments about them (Evans 1983: 120; Zevit 1985: 60–61). Donner (*IJH,* 383) and Zevit (1985: 61) identify the source from which the historical information was drawn as the annals of the kings of Israel mentioned in 1 Kgs 14:19.

According to 1 Kgs 12:26–33, Jeroboam's cultic measures included: (1) construction of two golden calves; (2) placement of the calves at cult centers in Bethel and Dan; (3) establishment of other sanctuaries; (4) appointment of non-Levitic priests; and (5) observance of the fall festival, the Feast of Ingathering, on the fifteenth day of the eighth month, at which time the king offered a sacrifice on the altar in Bethel. The Deuteronomistic historian viewed each of these measures as a violation of Deuteronomic law, explaining his negative judgments on Jeroboam and the N cultic establishment. But Jeroboam and his N Israelite contemporaries no doubt viewed these measures as a return to old traditions and practices, a departure from the alien Jerusalemite religion which had been imposed upon them by the Davidic state (Talmon 1958: 53–57; Ahlström 1982: 57–58; *HAIJ,* 242–43).

The reference to Jeroboam's choice of golden calf or bull images for the religious iconography of his new kingdom associates these images with Yahweh, the god of the exodus ("Behold your god, Israel, who brought you up from the land of Egypt"—1 Kgs 12:28) and recalls the golden calf episode in Exodus 32. These associations suggest that Jeroboam sought to revive an ancient cultic sym-

bol of the divine presence of the Israelite deity Yahweh (Talmon 1958: 50; *CMHE,* 74–75; Ahlström 1982: 62, n. 91; *HAIJ,* 242). The calf images thus served as the N Israelite counterpart to the cherubim and Ark iconography in Solomon's Temple.

The installation of the golden calf images in Bethel and Dan further indicates the archaizing nature of Jeroboam's state religion. Bethel's Israelite associations are firmly anchored in the ancestral stories of Genesis (12:8; 13:3; 28:19; 31:13; 35:1–16) and Dan's priesthood claimed to have descended from Moses (Judg 18:30). Jeroboam chose Dan and Bethel for national sanctuaries to revive ancient Israelite traditions (*HAIJ,* 242), not to establish royal temples at strategic N and S border locations as Aharoni (1968: 28) has suggested.

Jeroboam's priesthood, according to 1 Kgs 12:31b, was non-Levitic. Cross (*CMHE,* 199) dismisses this claim because he thinks it belongs to the "Deuteronomistic polemic" against Jeroboam, and he argues that Jeroboam appointed two rival priesthoods of Levitic ancestry to serve at his two national sanctuaries—Aaronites at Bethel and Mushites at Dan. A modification of this view maintains that Jeroboam replaced the Aaronite priests at Bethel with Levites of Mushite ancestry (Halpern 1976: 38). Other scholars, however, think that 1 Kgs 12:31b and 2 Chr 11:13–17 accurately recall that Jeroboam dismissed Levites from priestly service, a move that Jeroboam would have found necessary because the Levites at the time, it is maintained, were priests and government employees of the Davidic state (Ahlström 1982: 57; *HAIJ,* 242). Given this understanding of Levites, Jeroboam naturally would have replaced the Davidic loyalists with his own cultic personnel.

The statement in 1 Kgs 12:31a that Jeroboam built holy shrines or sanctuaries can be taken as reliable, even though the expression used *(bêt [?] bāmôth)* reflects the Deuteronomistic historian's pejorative term *bāmôth* for these structures. But there is no reason to doubt that Jeroboam did engage in some such activity, inasmuch as kings in the ancient world typically built cities, fortresses, temples, etc., as "a political tool" in establishing a state administration (Ahlström 1982: 10–26).

As 1 Kgs 12:32–33 indicates, Jeroboam observed the Feast of Ingathering on the fifteenth day of the eighth month. The Deuteronomistic historian, who believed that the proper time to observe this festival was the fifteenth day of the *seventh* month (as was done in Jerusalem), says that Jeroboam set the date "in a month of his own choosing." This, again, reflects the pejorative judgment of the writer. Jeroboam's action is better understood as a reversion to an old agrarian calendar followed in the N which had been altered when a "full-scale synchronization" of divergent calendars was instituted by David or Solomon (Talmon 1958: 56–57). Jeroboam's choice of date for this festival was thus an integral part of his overall plan to restore traditional practices in the N.

f. Evaluation in Prophetic and Literary Tradition. The prophetic legend about the Judean man of God who denounced Jeroboam (1 Kgs 13:1–32) has been shaped by the Deuteronomistic historian into a prediction of Josiah's destruction of the altar in Bethel (cf. 13:1–3 and 2 Kgs 23:15). The legend, however, draws upon older prophetic traditions (Lemke 1976), indicating that the prophetic critique of the Bethelite cult preceded the work of the Deuteronomist.

Perhaps the earliest prophet to denounce Jeroboam was Ahijah. Ahijah had good reason to withdraw his support from Jeroboam, especially if he entertained hopes that Jeroboam would establish Shiloh as the religious center of the N Israelite nation. This loss of confidence in the new king underlies the account of Ahijah's condemnation of Jeroboam in 1 Kgs 14:1–18. The account in its present form, however, has been reworked and expanded by the Deuteronomistic historian, who uses the prophet's denunciation as the occasion to introduce the notion that because of Jeroboam's great sins which he "led Israel to commit" Yahweh would bring an end to the nation and scatter its people "beyond the Euphrates" (14:15–16; Evans 1983: 118–19).

The Deuteronomistic polemic against Jeroboam derives from Jeroboam's establishment of a state religion in the N—complete with iconography, priesthood, royal temples, and cultic calendar—which clashed with the Deuteronomistic historian's ideology. Measured by 10th-century N Israelite standards, Jeroboam's actions sought to restore N traditions and practices. But measured by the later standards of the Deuteronomist, Jeroboam's religious system represented a departure from true Yahwism. The Deuteronomist's literary framework, which is placed around the account of each king's reign, offers a grand redactional scheme by means of which nearly all N kings are charged with the perpetuation of Jeroboam's sins until all Israel had been seduced from allegiance to Yahweh (Mullen 1987). The end result was that Yahweh sent the nation into exile when it fell to the Assyrians (2 Kgs 17:21–23).

The portrayal of Jeroboam as the villain who set the N Israelite kingdom on its fateful course follows a typology of the *Unheilsherrscher,* which can be traced in the historiographic traditions about other ANE rulers—Naram-Sin most notably, but also Ibbi-Sin, Shulgi, and Nabonidus (Evans 1983). Manasseh, similarly, is presented by the Deuteronomist as the fateful ruler responsible for the fall of the S kingdom of Judah (2 Kgs 21:16; 23:26–27).

The tradition focusing on Jeroboam spanned a long history (Evans 1983: 114–18). Reflexes of a favorable assessment of Jeroboam can be found in the pre-Deuteronomistic traditions underlying 1 Kings 11 and 12, beginning with the oracle of his contemporary, Ahijah, and a related report of Jeroboam's rebellion against Solomon and rise to the kingship over N Israel. The annals of the kings of Israel recorded the information which underlies the account of Jeroboam's activity in establishing the N kingdom in 1 Kgs 12:25–33. These early traditions were subsequently reworked by the Deuteronomistic historian, who transformed Jeroboam into the arch-villain of the N kingdom. The positive portrait was not completely forgotten, however, as reflexes of it survive in the LXX's supplemental account. The interest in Jeroboam continued in the tradition of rabbinic interpretation, which has been studied by Aberbach and Smolar (1968).

CARL D. EVANS

2. A king of Israel, the son and successor of Joash (2 Kgs 14:23–29). He was the grandson of Jehu and a contemporary of Amaziah and Uzziah, kings of Judah (2 Kgs 14:23; 15:1). Jeroboam is said to have enjoyed a lengthy reign of forty-one years (ca. 786–746 B.C.E.). Gray (*I and II Kings* OTL, 72–73, 615) believes that 2 Kgs 14:23 confuses the date of Jeroboam's sole accession to the throne and the period of his coregency with his father, Joash.

The presentation of Jeroboam's reign in the Deuteronomistic history is illustrative of its selective and tendentious nature. Commentators and historians assess Jeroboam's reign as a marked political success and a period of prosperity for the N kingdom in the 8th century B.C.E. However the Deuteronomistic history dismisses the reign in a few verses (2 Kgs 14:23–29). The theological assessment of Jeroboam II is introduced and concluded in standard negative terms as continuing the apostasy of his namesake Jeroboam I (2 Kgs 14:23–24, 28–29). However, the report that he was able to extend the boundaries of the N kingdom and was successful in war is suprising. The most striking aspect is that Jeroboam is said to have been successful owing to Yahweh's compassion for Israel (2 Kgs 14:25–27). His expansionist policy is said to have been in accordance with the word of Yahweh delivered by the prophet Jonah. This oracle is not preserved elsewhere in the Hebrew Bible, although its nationalistic sentiments are in accord with the presentation of the figure Jonah in the book by that name. Clearly the Deuteronomistic history presents all aspects of the history of the N kingdom as part of divine providence. The scheme of affliction-compassion-restoration which is surprisingly applied to a N king is reminiscent of the major themes of the book of Judges.

The historical interpretation of these verses is particularly difficult. The extent of the expansion of the border is described as "from the entrance of Hamath as far as the Sea of Arabah" (2 Kgs 14:25). This is an expression that often refers to the ideal boundaries of Israel (Num 13:21; 34:8; Josh 13:5; Judg 3:3; 1 Kgs 8:65; Amos 6:14). The phrase "the entrance of Hamath" is often understood as a reference to a specific location, Lebo-Hamath, 70 k N of Damascus (*LBHG,* 65) or the S entrance to the Beqah valley, while "the Sea of Arabah" was the Dead Sea (Miller and Hayes *HAIJ,* 307–8). Most historians and commentators believe that Amos 6:13 provides confirmatory evidence for Jeroboam's territorial expansion into Transjordan (Wolff *Joel and Amos* Hermeneia, 288; *HAIJ,* 308). However, the pun based on the Hebrew place names Lodebar ("nothing") and Karnaim ("two horns" or "power") is a condemnation of the self-satisfaction of those who place their trust in human power or useless idols. It is doubtful then if this verse can be used as evidence for the expansionist policy of Jeroboam ben Joash, particularly since it is dependent upon the assumption that it is to be dated to the reign of Jeroboam II (Coote 1981: 88). The obscure reference in 1 Chr 5:17 to some kind of census in Transjordan during the reign of Jeroboam II is also cited as evidence of territorial gains in this area. 2 Kgs 14:28 adds further information on the expansionist policy of Jeroboam with the statement that "he recovered for Israel Damascus and Hamath, which had belonged to Judah." The MT is difficult to understand, particularly the prepositions before the names "Israel" and "Judah"; it reads

literally "and how he restored Damascus and Hamath to Judah in Israel." The Syriac omits "to Judah" and emends "in Israel" to "to Israel." Gray (616–17) believes that the MT is indefensible and adopts an emendation proposed by Burney (1903: 320–21) "and his might in war with Damascus, and how he turned away the wrath of Yahweh from Israel." Apart from the textual problems, the verse is difficult to assess historically. Miller and Hayes (*HAIJ*, 308–9) are suspicious of the claim that Jeroboam captured Hamath and Damascus. They argue that it probably refers to the two cities either paying nominal tribute to the N kingdom or allowing Jeroboam commercial concessions. Haran (1967: 296), however, has argued that the verse indicates that Israel and Judah were allies and powerful enough to subdue Hamath and Damascus.

Although the historical details are extremely meager, most commentators present the reign of Jeroboam as a period of peace and prosperity for the N kingdom. It is assumed that he took advantage of the relative weakness of Assyria in implementing his expansionist policy. However, the precise timing of his expansion northward is debated. Haran (1967), who assumes the reliability of 2 Kgs 14:28, argues that Jeroboam's expansion was confined to the final years of his reign when Assur-nirari V was on the Assyrian throne (755–745 B.C.E.). Gray (617), who doubts the claim that Jeroboam actually captured Damascus and Hamath, thinks that the successful campaign against Damascus took place shortly after the campaign by Assurdan III (772) into Syria and before the decline of Assyrian power under Assur-nirari V when Damascus might have recovered.

Evidence for the prosperity of the N kingdom under Jeroboam II is based principally on material in the books of Amos and Hosea which is believed to provide background information on the economic and religious affairs of the N kingdom. Both prophets, according to the superscriptions of their books, were active in Israel during his reign (Amos 1:1; Hosea 1:1). They present a picture of a prosperous urban elite living in comparative luxury based on the social inequalities of the monarchic system through widespread exploitation. The standard view couples this rise in prosperity with a decline in ethical standards and widespread apostasy (*BHI*, 257–66). The oracles of these prophets also attack the religious apostasy of the N kingdom. Amos 7:10–14 provides a direct condemnation of Jeroboam pronounced at the royal shrine of Bethel in which Amos predicts the violent death of Jeroboam, the destruction of the dynasty, and the exile of the N kingdom. The passage is extremely complex and involves manifold literary and interpretative problems. It is usually seen as the culmination of Amos' rejection of the state religion of Jeroboam's reign, a cult which maintained the status quo of social and religious inequality (Wolff 308–10). De Geus (1982), however, has produced a different assessment of the nature of Jeroboam's reign with a study of archaeological data from the 10th century onward. He argues that the royal building programs of the 10th and 9th centuries imposed an increasing financial strain on the agrarian economy, which led to recession and stagnation in the 8th century. The architectural and pottery evidence, he argues, points to a period of decline following the 9th century. This economic analysis conflicts with the standard presentation of the reign of Jeroboam as a period of stability and economic prosperity.

KEITH W. WHITELAM

JEROHAM (PERSON) [Heb *yĕrōḥām*]. Name of seven individuals in the Hebrew Bible.

1. The grandfather of Samuel the prophet (1 Sam 1:1; 1 Chr 6:12, 19—Eng 6:27, 34). The two verses from Chronicles occur within variant genealogies for Kohath. They represent Jeroham as a Levite in the line of Korah because, in the Chronicler's view, Samuel's known priestly activities require that he be a Levite. The Chronicler may also have associated Samuel with the Korahites because "Elkanah" occurred both as the name of Samuel's father and as a descendant of Korah.

2. Father of Joelah and Zebadiah, two men who joined David at Ziklag, according to 1 Chr 12:8—Eng 12:7. This Jeroham is listed as "from Gedor," which is probably a dittography from the beginning of the next verse. There is no Gedar known in Benjaminite territory, and the introduction of the place name with the preposition *min*, "from," runs counter to the practice in the rest of the list. The name "Jeroham" occurs several times in Chronicles for Benjaminites. These occurrences of the name may be related, although their contexts are very different.

3. Father or ancestor of Ibneiah, who is listed among the Benjaminite residents of postexilic Jerusalem in 1 Chr 9:8. A parallel list of Benjaminite is given in Neh 11:7–9, but it does not mention either Ibneiah or Jeroham.

4. Ancestor of the Benjaminites mentioned in 1 Chr 8:27. The list of brothers in 8:12–14, which is expanded in vv 15–27, has Jeremoth (8:14) instead of Jeroham. Obviously, one of the two names is incorrect, but it is uncertain which one it is.

5. Father of Azarel, a chief officer (Heb *nāgîd*) over the tribe of Dan during David's reign according to 1 Chr 27:22.

6. Father of Azariah, one of the "commanders of hundreds" listed in 2 Chr 23:1 who conspired with Jehoiada to depose Athaliah.

7. A priest in postexilic Jerusalem who is listed as the father of Adaiah in 1 Chr 9:12 (= Neh 11:12).

STEVEN L. MCKENZIE

JERUBBAAL (PERSON) [Heb *yĕrūbbā'al*]. Var. JERUBBESHETH. Jerubbaal was the name given to Gideon after he destroyed his father's Baal altar (Judg 6:32). Some understand the references to this name in Judges 9 to be a different person from Gideon, two traditions being conflated (*NHI*, 152; *EHI*, 800–1). This makes Abimelech the

son of Jerubbaal, not Gideon. The name has been variously translated as "Baal makes (himself) great" (deriving *yĕrūb* from the root *rbh; IPN,* 206; *ARI,* 112, 206; cf. *HALAT,* 414) or "Let Baal sue (his enemies)" (from the root *ryb;* Boling *Judges* AB, 144). There is also a possible word play on the assonance of the two roots (Soggin *Judges* OTL, 125). The name is changed significantly in 2 Sam 11:21, where the noun "shame" (Heb *bōšet*) is substituted for "Baal," Jerubbesheth. This change belongs to a class of similar names such as Ish-bosheth (2 Sam 2:8; = Eshbaal, 1 Chr 8:33; 9:39) and Mephibosheth (2 Sam 21:7, 8; = Meribaal, 1 Chr 8:34; 9:40). For later Israelites, the name "Baal" had become distasteful to pronounce and had lost its original meaning of "Lord," which earlier had been applied even to Yahweh (cf. Boling *Judges* AB, 135; Caspari 1915: 173–74; Moore *Judges* ICC, 195).

KIRK E. LOWERY

JERUBBESHETH (PERSON) [Heb *yĕrubbešet*]. Var. JERUBBAAL. The father of Abimelech (2 Sam 11:21). A variant form, Jerubbaal, is mentioned in Judg 9:1. This variant form of the name replaces the reference to Baal, the Canaanite deity, found within the name, with Besheth, a form of the Hebrew word for "shame." In such a way the writer suggests that Baal worship was never seen as legitimate in Israel, which would appear to be the case by having Israelites hold names which would include references to this deity. This is similar to the name change found in 2 Sam 2:8 (MT "Ishbosheth"/LXX "Ishbaal"). Though Tsevat (1975) has argued against seeing this change as a "euphemistic substitution" by appealing to an Akkadian cognate, McCarter (*2 Samuel* AB) convincingly refutes such reinterpretation. This change in the form of the name from one which uses "baal" to one which uses "bosheth" is significant for two reasons. First, from the wording of the remainder of the verse it appears that the writer in 2 Sam 11:21 is not only making direct reference to the events described in Judg 9:50–55, but also copying from this early tradition. Second, however, this change of the name gives evidence that the David-Bathsheba-Uriah tale has been edited by a later, probably Deuteronomistic, editor, who would be likely to make such a substitution for theological reasons.

RANDALL C. BAILEY

JERUEL (PLACE) [Heb *yĕrû'ēl*]. A portion of the Wilderness of Judah which can be located probably to the SE of the Wilderness of Tekoa (2 Chr 20:20) and to the NW of the ascent of Ziz and En-gedi. The E side of this wilderness became the scene of Yahweh's defeat of the allied forces of Ammonites, Moabites, and Meunites (2 Chr 20:16; cf. vs. 1, 2, 20; 26:7). The meaning of Jeruel is probably either "City of God" from **Uru-'el,* like Jerusalem for *Uru-salim,* or "Founded by God." See also *MBA,* map no. 133.

YOSHITAKA KOBAYASHI

JERUSALEM (PLACE) [Heb *yĕrûšālayim*]. Pliny the Elder described Jerusalem as "by far the most renowned city of the ancient East" (*HN* V:14). Jerusalem is best known as the "holy city" (Isa 52:1), sacred to the three great monotheistic religions. Few subjects have generated so large a body of literature; the most recent comprehensive, but not exhaustive, bibliography on Jerusalem contains almost 6,000 titles (Purvis 1988).

A. Introduction

1. State of Question. There is much uncertainty about Jerusalem; many historical, archaeological, and topographical problems are unresolved. Jerusalem has played a prominent role in history, but the historical record is scant, and descriptions from literary sources are often imprecise. Despite Jerusalem's antiquity, archaeological remains are not so plentiful as in the case of other biblical sites such as Megiddo, Hazor, Dan, and Samaria. The archaeological data are frequently problematic, unassimilated, and unpublished. New questions continue to arise concerning earlier archaeological interpretations.

The fact that Jerusalem has been continuously and often densely inhabited for almost 6,000 years makes it difficult to excavate systematically. The accumulation of rubble from periodic destructions makes it hard to untangle Jerusalem's complex defense systems. Each time Jerusalem was rebuilt, stone robbers utilized masonry from previous occupations, thereby complicating the stratigraphy of the site.

Jerusalem's location on a mountain ridge is the source of severe topographical problems. Also, Jerusalem's contours have changed over the centuries; the Tyropoeon valley, for example, has now been practically filled in. On the other hand, the names of architectural features such as Jerusalem's gates have changed from time to time, just as the names of geographical areas such as Mount Zion have shifted location. All these problems give rise to controversy, making it almost impossible to advance conclusive answers about the history, archaeology, and topography of Jerusalem.

2. Sources. a. Written. The principal source for Jerusalem is the Bible, although it is quite imprecise about the topographical features of the city; nor is Jerusalem presented systematically. Jerusalem is the most prominent city in biblical literature; often, however, it is the eschatological, not the historical, Jerusalem that is being described.

The second major literary source for Jerusalem is Flavius Josephus' *The Antiquities of the Jews* and *The Jewish War*, the latter intended for Roman readers. Born in Jerusalem in C.E. 37, Josephus was an eyewitness for the period of the first Jewish revolt. Although he wrote from the Roman point of view, and despite some exaggerations (e.g., population figures) and inaccuracies, archaeology confirms in general his history and geography. Josephus is especially helpful in his detailed descriptions of Herodian monuments. He is the only source for the "three walls" of Jerusalem; unfortunately, his description of their alignment refers to several places unknown today.

b. Cartography. The traditional anti-iconographic attitude of Jews and Muslims accounts for the paucity of maps, portraits, and illustrations of Jerusalem. Maps of Jerusalem by Jewish cartographers did not exist before the 19th century. The earliest and most valuable nonliterary source for Jerusalem is the Madeba mosaic map of the 6th century C.E., portraying Byzantine Jerusalem. Indicative of Jerusalem's importance, it is the centerpiece of this map, and is depicted disproportionately large as an oval-shaped city surrounded by walls with six gates and twenty-one towers. Every feature of the Madeba map points to Jerusalem as the center of the world. Also, the Madeba map delineates Jerusalem's main colonnaded street, known as the *cardo maximus*. The caption on the map reads in Greek "Holy City of Jerusalem."

F. Sieber, an Austrian physician, produced the first modern, albeit primitive, map of Jerusalem in 1818. The outstanding cartographer in the first half of the 19th century was the British architect F. Catherwood. With a camera lucida he copied the outlines of the important buildings in Jerusalem, and also produced a panorama and map of the city.

Artistic records are also an important source of information about Jerusalem. D. Roberts and W. Bartlett, two well-known artists of 19th-century Jerusalem, not only reproduced the ancient sites but also generated a lively interest among Westerners in the Bible lands.

B. Rediscovery of Jerusalem

1. In the 19th Century. Despite Jerusalem's centrality in biblical history, the city was little known in modern times until the 19th century. As a consequence of Ibrahim Pasha's conquest of Jerusalem, Western travelers found it easier to visit Jerusalem with safety. Much of the credit for the rediscovery of Palestine, especially Jerusalem, in the 19th century belongs to the American biblical scholar, E. Robinson (1856). As the first scientific explorer of Palestine, he inaugurated a new era in the geographical study of the Holy Land. Robinson is associated especially with three monuments in Jerusalem: he was the first person in modern times to explore Hezekiah's tunnel; he discovered the remains of Jerusalem's reputed third wall, built but not completed by Herod Agrippa I; and he found the spring of an arch, bearing his name today, near the SW corner of the Temple platform. See Fig. JER.07.

One of the most significant steps in the rediscovery of Jerusalem was the establishment of the Palestine Exploration Fund (PEF) in 1865. Inspired by the achievements of Robinson, the PEF was formally organized in London to explore Palestine systematically, and specifically to promote the historical and archaeological research of Jerusalem. In the second half of the 19th century a contaminated water supply made Jerusalem an unsanitary city. As a preliminary step toward correcting the situation, the Royal Engineers under surveyor C. Wilson (Wilson and Warren 1871: 3–32) made, between 1864 and 1865, a historic ordnance survey, including a cartographic survey of Jerusalem, which produced the first modern scientific map of Palestine. Wilson's map of Jerusalem with its contour lines has been an indispensable tool for all later archaeologists. This ordnance survey also helped to launch the PEF.

From 1867 to 1870, C. Warren (1876) clarified the historical topography of Jerusalem by following the lines of the city walls and of the Temple Mount. He had set out to resolve two topographical problems: the exact location of the Temple, and the course of the three N walls of ancient Jerusalem. Around the four sides of the Temple enclosure he made soundings by an intricate series of shafts and tunnels, so as not to disturb existing structures or arouse the suspicions of the Turkish authorities in Jerusalem, who had forbidden him to excavate within 12 m of the walls. Despite the primitive methods imposed on him, Warren made accurate plans and measurements. He discovered in the SE corner of the Temple Mount a portion of the ancient city wall, still known as Warren's Ophel wall. He also investigated one of the ancient water systems, consisting of a vertical shaft and connecting tunnels, still known as Warren's shaft, near the Gihon spring. See Fig. DAV.03 and DAV.04. Warren's work marked the beginning of scientific archaeological research in Jerusalem.

From 1894 to 1897, an experienced American archaeologist, F. Bliss, and a British architect, A. Dickie (Bliss and Dickie 1898), continued Warren's work in Jerusalem, using the same system of shafts and tunnels. They excavated on both the W and the SE hill. Tracing the lines of the southernmost walls of ancient Jerusalem in successive periods was a vast project. Bliss and Dickie also explored the

Gihon channel. Although their dating of architectural features was unsatisfactory, Bliss and Dickie provided useful descriptions of architecture and masonry. It is disappointing that Bliss did not apply his knowledge of pottery to determine more accurately the chronology of ancient Jerusalem.

In the last quarter of the 19th century C. Clermont-Ganneau (1896) conducted additional investigations in the City of David, especially the course of the wall on the top of the E slope. Clermont-Ganneau also examined the area of the Antonia and the Ecce Homo arch.

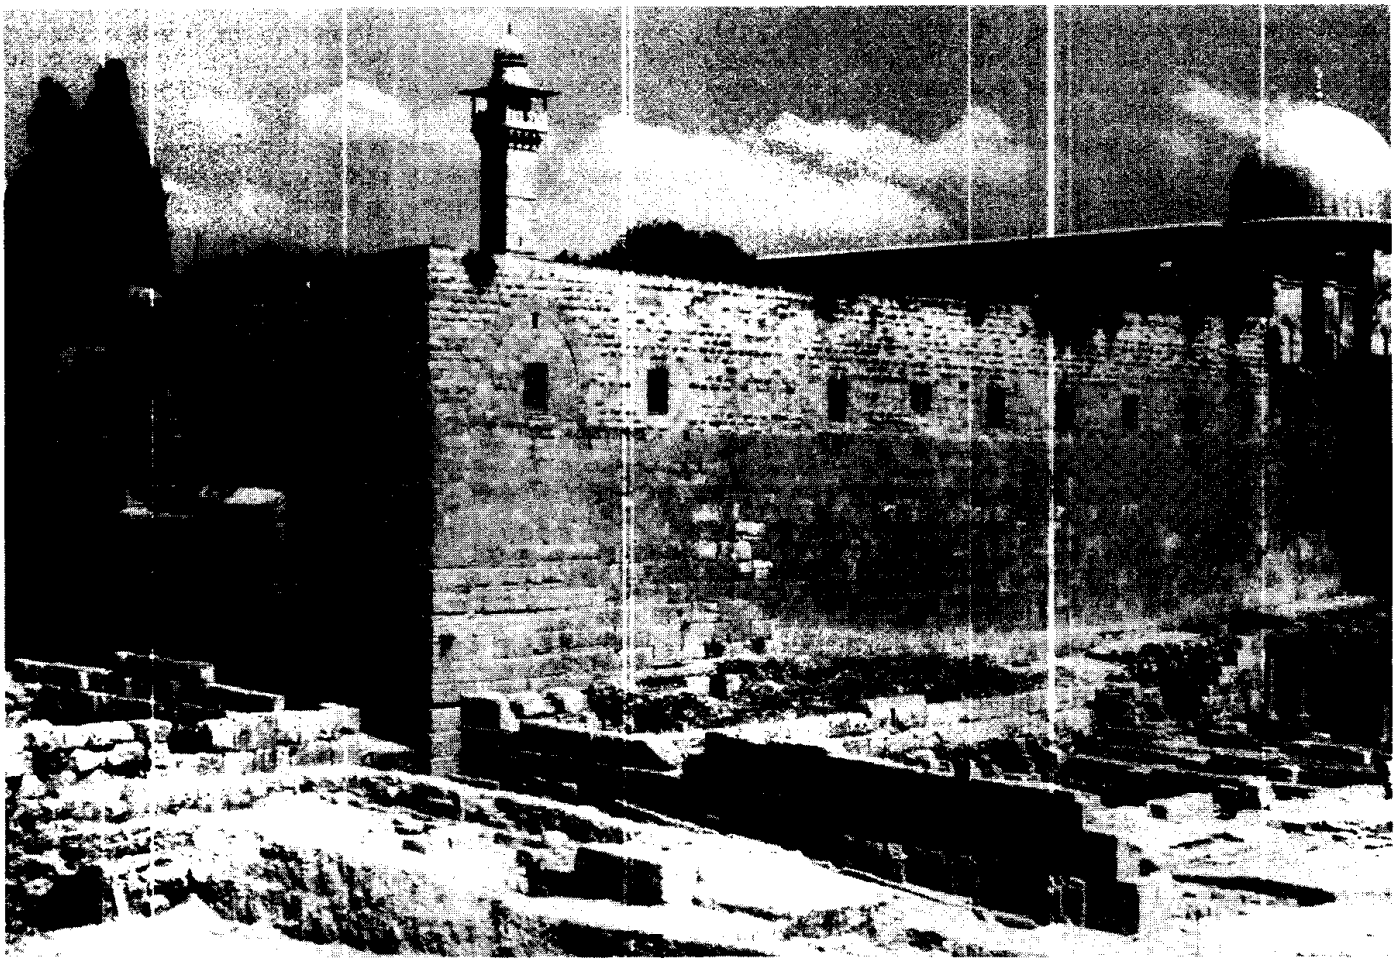
2. In the 20th Century. Between 1909 and 1911 an Englishman, M. Parker, concentrating on the area of the Gihon spring and the slope above it, tried by furtive means to locate the treasury of Solomon's Temple, allegedly buried beneath the Temple Mount. In the course of his treasure hunt he cleared the subterranean tunnels and shafts of the Warren expedition, including Hezekiah's tunnel, with the hope they would lead to the Temple treasure. The only redeeming feature of this ill-conceived project was that Parker had enlisted L.-H. Vincent (1911), leading authority on the history and topography of Jerusalem, who recorded the expedition, mapping Jerusalem's ancient water system and replanning the accesses to the Gihon spring. Vincent determined on the basis of the water supply from the Gihon spring that ancient Jerusalem had been situated on the E, not the W, ridge.

As time passed, archaeological method slowly improved, although stratigraphy was still ignored. In 1913–1914 and 1923–1925 R. Weill (1920; 1947), French Egyptologist and historian, conducted the first Jewish expedition in Jerusalem. He concentrated on the S end of Jerusalem's E ridge where he cleared a large area in search of the tombs of David and the kings of Judah, uncovering sections of the City of David's E fortifications. During his excavation he was able to demonstrate that the SE hill of ancient Jerusalem was the site of the City of David, as well as of the pre-Israelite occupants, by finding indications of the early W fortifications to match chronologically those on the E side of the hill. Bliss and others had searched for this evidence, but were unable to find it.

Before World War I, archaeologists gave scant attention to ceramics as chronological indicators; their reliance on architectural features for dating was not decisive. From 1923 to 1925 R. A. S. Macalister and J. G. Duncan (1926) concentrated on the crest of the City of David's E slope, tracing the line of the fortification, which was the continuation of Warren's Ophel wall. They also excavated to bedrock a large area in the N section of the SE hill. Although Macalister, the excavator of Gezer, was an experienced archaeologist, he neglected stratigraphy. With the excavation of Macalister and Duncan on Ophel hill, it became certain that the City of David was situated on the E, not the W, hill.

When J. Crowfoot and G. FitzGerald (1929) continued in 1927 and 1928 the work of Macalister and Duncan on the SE ridge, instead of using the shaft-and-tunnel method of the pioneer excavators, they dug a trench from the summit of the W side of the E ridge down into the Tyropoeon valley. With their new method they discovered the City of David's W gate, known as the Valley Gate.

While rebuilding Jerusalem about 132 C.E., Hadrian erected a triple-arched entryway on the N side of the city (Magen 1988: 50). In 1931 and again in 1937–38, R. W. Hamilton (1940), trained in classical archaeology, excavated adjacent to the present N wall of the Old City, including the foundations of the Damascus gate. There, he found the facade of Hadrian's gate; but as a result of incomplete excavation, he misdated an earlier Herodian wall to the 2d century C.E.



From 1964 to 1966, J. B. Hennessy (1970) extended Hamilton's excavation beneath the Damascus gate, where he exposed the facade of the Crusader gate. He also redated to the Herodian period (pre-70 C.E.) the wall that Hamilton had misdated (Shanks 1987: 54); this wall was, in Hennessy's opinion, the third wall built by Herod Agrippa I.

For a decade beginning in 1934, C. N. Johns (1950), also a trained classical archaeologist, cleared the court of the Citadel, adjacent to the Jaffa gate on the W ridge, uncovering pottery from the late-Israelite period, but not prior to the 7th century B.C.E. When R. Amiran and A. Eitan (1970) continued work in the Citadel after 1967, they confirmed the conclusions of Johns.

Signaling a new era in the archaeology of Jerusalem, K. Kenyon (1974), a distinguished British archaeologist, excavated from 1961 to 1967 on Ophel hill. To reconstruct the history of Jerusalem, she was eager to date monumental structures, an objective that the inferior techniques of earlier excavators could not accomplish. She cut a deep trench down the entire E slope of the City of David, and then proceeded to carry out ceramic, stratigraphic, and architectural analyses. Among her significant contributions to the archaeology of Jerusalem, in addition to methodology, was her location of the Jebusite wall on the E ridge. She established that in the Canaanite and Israelite periods the wall line of the City of David was lower down the E slope, closer to the Gihon spring than previously thought. Situated 48 m down from the top of the ridge, the earliest fortification of Jerusalem dates to about 1800 B.C.E.; this MB II wall continued in use to the 8th century B.C.E.

Reviewing in detail the numerous independent excavations of Jerusalem's SE hill prior to Kenyon's dig, Simons (1952: 70) lamented the lack of methodological excavations. He concluded it would have been better had earlier excavators waited until more sophisticated methods had been developed, and more experience had been gained in digging Palestinian sites. For the earlier excavators, literary evidence alone was the basis of their investigations because they lacked Kenyon's expertise in stratigraphic digging and pottery analysis.

3. Since 1967. More digging has taken place in Jerusalem since 1967 than in all previous excavations combined. The reunification of the city as a result of the 1967 war has given Israeli archaeologists the opportunity to excavate the city intensively. There have been three major excavations and several limited ones. B. Mazar (1978), assisted by M. Ben-Dov (1985), directed the first of the major excavations between 1968 and 1978. He concentrated on the SW corner of the Temple Mount, and along the W and S walls of the Temple enclosure. See Fig. JER.07. Working adjacent to the retaining walls of the Temple Mount, Mazar recovered remains ranging from Iron Age II to Ottoman

JER.07. Excavations at SW Corner of Temple Mount in Jerusalem (El-Aqsa Mosque in upper right corner). Remains of "Robinson's Arch" can still be seen (left). In the foreground are the remains of Umayyad structures beneath which were found remains of the Herodian plaza leading up to the temple. See Fig. TEM.03. *(Photograph by Z. Radovan, by permission, Biblical Archaeology Society Jerusalem Archaeology Slide Set)*

times. (He found hardly any artifacts from the First-Temple period adjacent to the S wall of the Temple enclosure, which would have been the royal quarters.) The greatest concentration of finds belonged to the Herodian period. Mazar's dig confirmed Josephus' statement that, in preparation for the rebuilding the Temple, Herod doubled the size of the Temple Mount.

While Mazar was excavating adjacent to the Temple Mount, N. Avigad (1983) was digging in the center of the Jewish Quarter of the Old City, which is the E section of the W hill. Avigad's was the first dig ever to take place in the Jewish Quarter. Simultaneous with the reconstruction of the Jewish Quarter by the Jerusalem municipality, Avigad conducted his archaeological investigations, staying a few steps ahead of the construction crews. Avigad discovered remnants from the Hasmonean and Herodian periods, especially the latter. On the basis of the remains, it is clear that in the Herodian era some of the residents of Jerusalem lived in luxury.

In addition, Avigad's investigation of the Byzantine occupation of Jerusalem confirms the existence of the *cardo maximus* as portrayed in detail on the Madeba map. See Fig. JER.12. Laid out on a N–S axis, the *cardo* would have extended the entire length of the city, from the Damascus gate in the N almost to the Zion gate in the S.

Equally important, Avigad established that as early as the 8th century B.C.E. Jerusalem's W ridge—the "Second Quarter" (Heb *mišneh*) of 2 Kgs 22:14—had been first settled and later enclosed by a wall. In the 8th–7th centuries B.C.E. Jerusalem expanded to four times its previous size. Evidence for the foregoing hinges on Avigad's discovery of an Israelite wall, situated on the upper portion of the E slope of the W hill. See Fig. JER.10. The course of this broad defense is still uncertain, but it confirms Josephus' maximalist view about the size of the Jerusalem settlement in the preexilic period.

Between 1978 and 1984 Y. Shiloh (1981; 1984) continued the work of Kenyon and her predecessors in the City of David, on the SE hill above the Gihon spring, where settlement dates as early as the 4th millennium. Shiloh succeeded in identifying 25 occupational strata, extending from the Chalcolithic period to medieval times. He also reinvestigated Jerusalem's three complex water systems connected with the Gihon spring, including Warren's shaft (the earliest), the Siloam channel, and Hezekiah's tunnel (the latest) (Shiloh 1987). Shiloh also uncovered an impressive stepped stone structure, 18 m high and 16 m wide. Earlier excavators (Macalister, Kenyon) had exposed the upper courses of this monumental structure which, according to Shiloh, was erected in the 10th century B.C.E.

See Fig. DAV.01. He suggested that it may have served as a supporting rampart or podium for buildings on the royal acropolis. Shiloh's conclusions about the City of David may never be published completely because of his untimely death in 1987. See also DAVID, CITY OF.

Other important but limited projects conducted by Israeli archaeologists include that of D. Bahat and M. Broshi (1975), who continued A. D. Tushingham's (1968; 1985) excavations on Mount Zion and in the Armenian Quarter in an attempt to determine the extent and construction of Herod's palace. Also, S. Ben-Arieh and E. Netzer (1974) excavated N of the Old City.

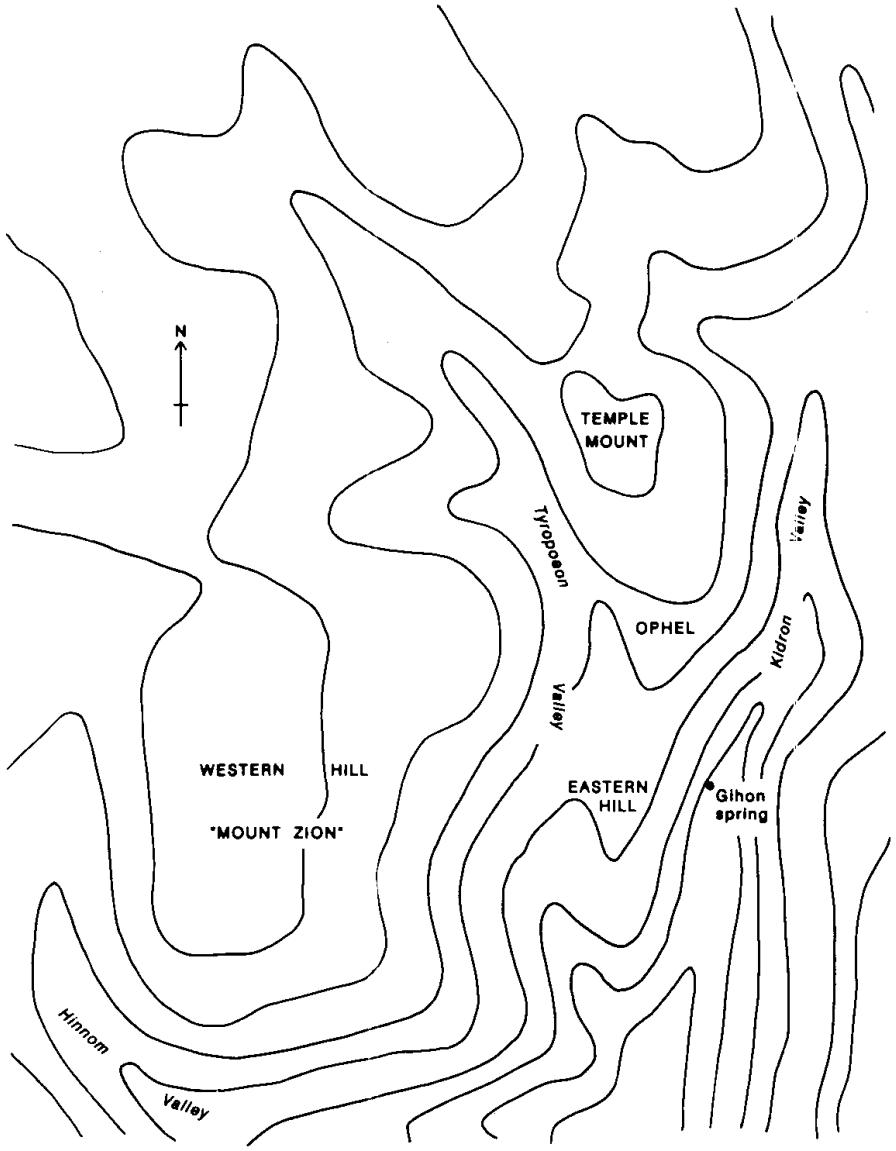
C. Background

1. Names Associated with Jerusalem. A long history lies behind "Jerusalem"; it was the name of the city from early times. Jerusalem is mentioned for the first time in the Egyptian Execration Texts (19th–18th centuries B.C.E.), where the form of the name is probably to be read as Rušalimum. The name appears again in diplomatic correspondence: this time as Urušalim (Akk) in the Amarna letters (14th century B.C.E.). Abdi-Ḥiba, a vassal of Egypt who was reigning in Jerusalem at the time, sent letters to the Egyptian pharaoh Amenophis IV (Akhenaten), affirming his loyalty. Later Assyrian texts also refer to Jerusalem; for example, in the records of Sennacherib's siege of Jerusalem in 701 B.C.E. the form Ursalimmu (or variants) appears (*ANET*, 288).

The name "Jerusalem" (Heb *yĕrûšālayim*) is of uncertain etymology, although it is apparently of W Semitic (Canaanite) origin. It appears to be composed of the two elements: *yrw* "to establish" and *šlm*, the name of the W Semitic god Shalem, patron of the city. The meaning may be "foundation of (the god) Shalem," mentioned in a mythological text from Ugarit. Gen 14:18 refers to Melchizedek as king of Salem (Heb *śālēm*), likely Jerusalem. If so, this shortened form is the first biblical allusion to Jerusalem. In Psalm 76:3 (—Eng 76:2) Salem is used in synonymous parallelism to Zion, referring to the divine dwelling.

Josh 10:1–4 contains the first specific biblical reference to Jerusalem, whose inhabitants were Canaanites. There, it relates to Adoni-zedek, king of Jerusalem, formed a coalition with neighboring kings and attacked Gibeon. Joshua defeated them, but Jerusalem was not taken. According to Judg 1:8, the Judahites captured Jerusalem and destroyed it by fire. The text is historically unreliable; Jerusalem was not conquered until the time of David (2 Sam 5:6–7).

Some OT texts (Josh 15:8; 18:28; Judg 19:10; 1 Chr 11:4–5) equate "Jebus" (the name derived from the pre-Israelite inhabitants of Jerusalem) with Jerusalem, conveying the impression that Jebus (Heb *yĕbus*) was the pre-Davidic name for ancient Jerusalem. The city was never actually called Jebus, although it had been a Jebusite settlement. The Amarna Tablets attest that "Jerusalem," not "Jebus," was the name of the city; nor does "Jebus" appear in other ANE texts. Despite the lack of extrabiblical evidence, some would argue that Jebus and Jerusalem designate the same city. Others suggest that Jebus may be identified with Shaʿfāṭ (M.R. 172136), situated slightly N of Jerusalem (Miller 1974: 126).



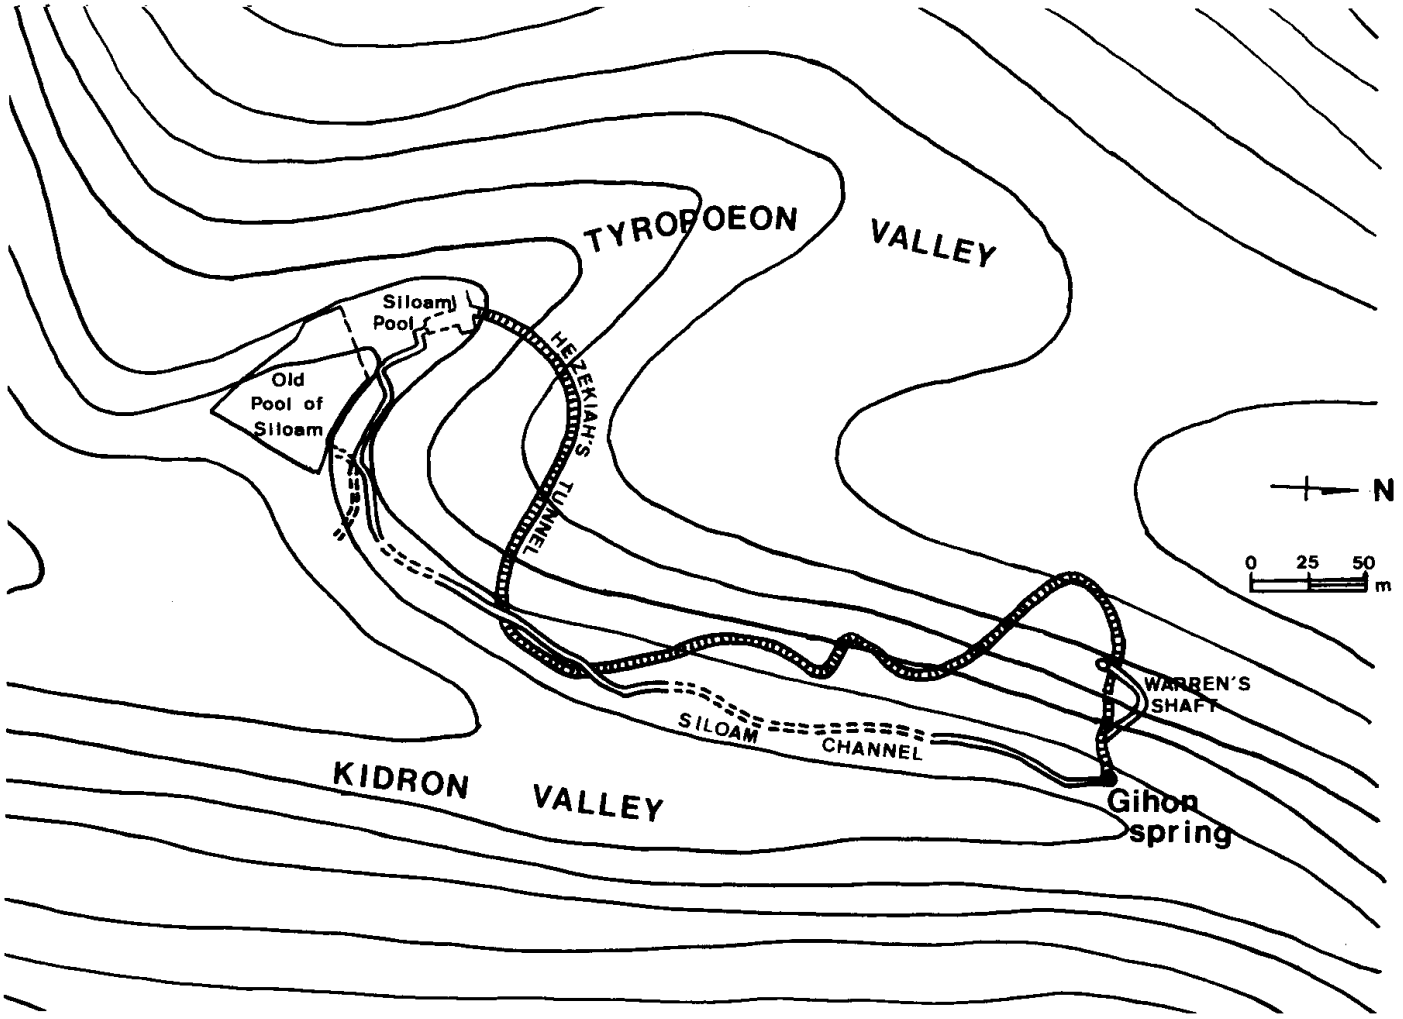
Zion (Heb *ṣiyôn*), another name for Jerusalem, is used more than 150 times in the OT. Its etymology is unclear, and its precise meaning is unknown. Zion is sometimes used metaphorically, at other times topographically, although the designation has changed across time. Originally, Zion was equated with the City of David, signifying the SE hill of Jerusalem (2 Sam 5:7). The Temple Mount to its N was also known as Zion. From the Byzantine period, Zion has been applied to the hill S of the SW corner of the present Old City. Zion may also designate Jerusalem as a religious capital.

2. Geography and Topography. Jerusalem, consisting of two ridges, is situated on a limestone plateau 800 m above sea level in the central hill country, bordering on the Judean desert, and removed from the major trade routes. To the W are the slopes of the Judean mountains; to the E the Judean desert, descending to the Dead Sea. Jerusalem's rugged terrain was a military advantage, making it easy to defend because it was hard to reach. At the same time, its location and natural features were a commercial disadvantage, since the commercial centers of Palestine were located on the coastal plain, not on the mountain ridge (Hopkins 1970: 11–12).

Jebusite Jerusalem and the later City of David were small settlements situated on the E hill of Jerusalem; they encompassed an area of only 10 to 15 acres at the SE corner of present-day Jerusalem, below the Temple Mount. This spur, completely outside the city walls since the 11th century C.E., is the smaller of two ridges lying below the present Old City. The topographic term for the crest of the SE hill is Ophel ("bulge," "projection"; Isa 32:14; Mic 4:8; 2 Kgs 5:24, and elsewhere), which may have designated the royal administrative area, or the higher part of a city enclosed with a wall. Ophel is also found at other royal centers of the Iron Age, such as Samaria and Dibon. For a long time the entire E spur of Jerusalem has been called Ophel.

Both eastern and western ridges are surrounded by precipitous valleys on three sides. See Fig. JER.08. It is bounded on the E and part of the N by the Kidron valley, and on the S and W by the Hinnom valley. The Tyropoeon, Josephus' term of uncertain origin which may be a corruption of a Heb name, translated "valley of the cheesemakers" (*JW* 5.4.1 §140), is the small N–S valley in the center, only a slight depression today. Also known as the central valley (in the Bible, simply "the valley"), the Tyropoeon divided the Ophel hill from the W ridge. The W ridge, lying between the Hinnom and Tyropoeon valleys, was broader than the E hill, and was the biblical equivalent of the suburbs. These two hills have been known by a variety of names in the history of Jerusalem; they have also expanded and contracted. The Ophel hill, together with the Temple Mount, composed the Lower City; the SW hill, named by Josephus the Upper City, covers the area of the present Jewish Quarter, the Armenian Quarter, the Citadel, and the traditional Mount Zion. The NE section of the Upper City has been designated as the Jewish Quarter since the 12th century C.E. Eventually, the Lower City was densely populated and became the area where the poor resided, whereas the more prosperous dwelt in the Upper City.

The decisive factor in the settlement of pre-Israelite Jerusalem, later the City of David, was access to a vital



JER.08. Topographic map of Jerusalem.

water supply. The Gihon spring, situated at the foot of the SE ridge and flowing in the Kidron bed, was the perennial source of water. The minimum annual yield was 73,000 cubic meters (Wilkinson 1974: 33). Gihon, related to Heb *giḥa* ("a gushing forth") is so called because its water gushes intermittently. There was only a small yield from en-Rogel, the second source of water to the S of Gihon.

In the Iron II period the Gihon spring fed three interconnected water systems. The earliest water system, consisting of a shaft and connecting tunnels, is known as Warren's shaft. See Figs. DAV.03 and DAV.04. In time of siege it supplied water from the Gihon spring to the Jerusalem residents without the risk of their going outside the wall. The second of the water systems is the Siloam channel, 400 m long, a kind of aqueduct carrying water from the Gihon along the Kidron valley to a reservoir at the tip of the city. This water irrigated the fields through apertures in the channel wall. The third water system is Hezekiah's tunnel, an enclosed aqueduct diverting water from the Gihon spring to the Siloam pool at the SW corner of the city. See Fig. JER.09.

3. Settlement. Jerusalem was first settled on the Ophel, above the Gihon spring, where pottery, dating to the Chalcolithic period (3500 B.C.E.), and the remains of structures, dating to EB I and II (3000–2800 B.C.E.), were found. Kenyon's discovery of the Jebusite wall and adjacent tower halfway down the E slope indicated that the pre-Israelite city was larger than expected. Even though this fortification was low down, the Gihon spring still remained outside the city wall. Had it been located low enough to enclose the spring, the wall would have been vulnerable to attack. Apparently, the city wall was close enough to the Gihon spring to deter enemy access to the water supply.

JER.09. Jerusalem's ancient water system. Cf. also Figs. DAV.03 and DAV.04.

4. Population, Size, Economy. M. Broshi's (1974; 1978) study of Jerusalem's population density and of the expansion and contraction of the city is valuable in reconstructing Jerusalem's history. Estimates are as follows. The Jebusite city extended over roughly 12 acres, with a population of 1,000. The city of David was slightly larger, about 15 acres, with a population of 2,000. The inclusion of the Temple Mount enlarged Solomon's city to 32 acres or more, with a population of 4,500–5,000. In Hezekiah's reign Jerusalem expanded considerably, extending to the W hill (Upper City); it may have been as large as 125 acres, with a population of 25,000, although some think that figure is inflated. Beginning in the latter part of the 8th century B.C.E., numbers were swelled by immigration from the N kingdom (after 721 B.C.E.) and from the provinces of Judah (after 701 B.C.E.), as Broshi points out. In Nehemiah's time Jerusalem shrank to about 30 acres, with a population of 4,500, although some would double that estimate. In the prosperous Hasmonean era Jerusalem expanded to 165 acres, with a population of 30–35,000. In Herod's reign 40,000 people occupied 230 acres. Jerusalem doubled in size during the Roman period, expanding considerably to the N and NW: it comprised about 450 acres, with a population of 80,000 or more. In the Late Byzantine and Early Arab periods 55–60,000 people lived in Jerusalem.

As the religious, political, and cultural center of the kingdom, the economy of Jerusalem would have been sound. It depended in part upon sheep rearing, olive oil, and fruit, not cereal crops. "Tyropoeon" (valley of the cheesemakers) suggests Jerusalem had a dairy industry. The quarrying of building stone was also an important industry. Pilgrims who came to Jerusalem three times a year would have generated income, but the main source of revenue was the Temple tax levied on every Jew living in Jerusalem and in the Diaspora. Also, the Temple supported a wide variety of craftsmen (Avi-Yonah 1966: 188–211).

D. United Kingdom

1. Reign of David. Jerusalem, the political, religious, and administrative center of David's kingdom, was so closely identified with him it was called the City of David. Jerusalem was his own city because he and his mercenaries

had captured it. David was a diplomatic genius in establishing Jerusalem as the royal capital of the twelve-tribe federation. The city was both centrally-located and extraterritorial, ideal for consolidating the N and S tribes. It was also shrewd of David to transfer the ark, the symbol of the Mosaic tradition, to Jerusalem, thus making Jerusalem the national sanctuary in place of Shiloh. The priests and traditionalists were well-disposed by David's action. The presence of the ark in Jerusalem signified continuity between the Mosaic tradition and the Davidic dynasty.

Details about David's strategy for capturing the Jebusite stronghold are not clear, either textually or archaeologically. The pertinent biblical verses (2 Sam 5:6–8; 1 Chr 11:4–7) are difficult (McCarter, *2 Samuel* AB, 135–43). In reconstructing David's strategy, some suggest that Warren's shaft provided his warriors with access to the city. The Heb word *ṣinnor* (2 Sam 5:8) is thought to refer to Warren's shaft which the Jebusites had used as a safe access to the Gihon spring. Walking the length of the stepped tunnel, residents of Jerusalem could lower a container from the top of the vertical shaft (16 m deep and 2 m wide) and draw water conducted by the horizontal channel from the Gihon spring to a pool at the base of the vertical shaft. Mazar identifies *ṣinnor* with the conduit between the Gihon spring and the pool; several Israeli archaeologists (Mazar, Yadin, Aharoni, Shiloh) do not agree that *ṣinnor* refers to Warren's shaft. When Warren climbed the vertical shaft in 1867, some stated that he was repeating the feat of Joab, who scaled the water shaft to gain entrance into Jerusalem. However, on the basis of Warren's description of the difficulties associated with his own ascent, and inasmuch as Shiloh had to enlist professional mountain climbers to assist in investigating the shaft, it is questionable. Also, Shiloh (1987) found no evidence to support a pre-Davidic date for the shaft and tunnel. On the analogy of other hydraulic systems in ancient Israel, a 10th century B.C.E. date for the construction of the shaft is the earliest possibility, according to Shiloh, although the evidence is inconclusive. See also DAVID, CITY OF.

After capturing Jerusalem, David took up residence, fortified the city, and undertook a building program, extending the City of David in a N direction toward the present Temple Mount. According to 2 Sam 5:9, "David built the city round about from the Millo inward." This text is anachronistic with respect to the Millo: the Millo was built by Solomon and restored by Hezekiah. The Heb word *hamillo* is enigmatic and comes from a root meaning "fill"; it appears elsewhere in the OT (1 Kgs 9:15, 24; 11:27; 1 Chr 11:8; 2 Chr 32:5). It is subject to a variety of translations and interpretations: (a) a series of architectural terraces built by the Jebusites on the E slope of the E ridge, supporting houses and other structures (Kenyon); (b) an earth-fill S of the Temple Mount (Ben Dov); (c) the monumental stepped-stone structure near the crest of the hill, that may have been part of the defense system in the time of David and Solomon (Shiloh); and (d) the "fill" or land bridge joining the City of David with the royal acropolis to the N. known from the Solomonic era as the Temple Mount (Stager 1982: 121).

David's kingdom extended from Egypt to the Euphrates, with Jerusalem as its center. The list of administrators under David (2 Sam 8:15–18; 1 Chr 18:14–17) attests that he oversaw a well-organized administration in Jerusalem. Despite the economic prosperity realized from his military victories and other achievements, inevitable social changes brought resentment, alienation, and rebellion. His subjects resented taxes, conscription, and foreign influence; the tribes were alienated by their loss of traditional independence; ambitious and jealous members of the palace rebelled. Concern for succession to the throne led to palace intrigue throughout the history of the Davidic dynasty. Typical was Absalom's revolt which had the support of some of David's subjects (2 Samuel 13–20). After Absalom's death Adonijah became heir to the throne. When he apparently pressed his claim during the reign of Solomon he was executed.

2. Reign of Solomon. Under Solomon, Jerusalem enjoyed the status of an international capital. As the center of the empire, Jerusalem was a properous and cosmopolitan city. Solomon is best known for his extensive building projects, especially the Jerusalem Temple and the adjoining palace complex immediately S of the Temple, which incorporated residences, throne room, hall of justice, and arsenal (1 Kgs 7:1–12). His first undertaking was the Temple, which took seven years to build; the palace required 13 years to complete. Solomon accomplished his building program by the imposition of forced labor and heavy taxes, with the N tribes bearing the brunt. As well as alienating the N, his overly ambitious programs of building and expansion caused serious economic problems throughout the kingdom.

In preparation for the building of the Temple, Solomon extended the borders of the City of David northward to include the present-day Temple Mount—or Haram esh-Sharif ("the noble Sanctuary") as it is known in Islam. He undertook the actual construction in the fourth year of his reign. Although no archaeological evidence of the Temple remains, it is possible to reconstruct its plan from the biblical description (1 Kings 6), brief and ambiguous, as well as from comparison with extant temples of neighboring peoples. The actual edifice was relatively modest in size, measuring approximately 30 m long, 10 m wide, and 15 m high (Parrot 1957: 15–60).

A good parallel is an 8th century B.C.E. temple excavated in the 1930s at Tell Tainat in the Amuq valley of Syria; it was a long-room temple with a tripartite plan like the Solomonic Temple. All ancient temples in Syria were tripartite in structure. Although the number of rooms in Solomon's Temple may be open to question, more important is the fact that it was built on a long-room plan, with the entrance on the short side, and the shrine at the opposite end of the building.

The Temple, which was both a royal chapel and a national shrine, reflected foreign (especially Phoenician) influence, not only architecturally but also theologically. Without its own architectural tradition, Israel had to appeal to Hiram, king of Tyre, who supplied workers and materials to build the Temple (1 Kings 5; 2 Chronicles 2). Thirty thousand forced laborers, conscripted in Israel, assisted the Phoenician artisans. Sanctuaries to foreign gods of other nations were also located in Jerusalem.

The Temple, it had been assumed, stood where the Dome of the Rock stands today, an assumption that cannot be verified by archaeological excavation. On the basis of

modern aerial maps, Jewish literature, and other sources, A. S. Kaufman (1983: 42) has suggested a slightly different location for the First and Second Temples: about 100 m to the NW of the Dome of the Rock. The site of the Temple is associated in popular tradition with the location of Araunah's threshing floor on Mount Moriah, where Abraham earlier had built an altar to sacrifice Isaac (Gen 22:1–19). Zerubbabel and Herod, in turn, built Temples on the same location. See also TEMPLE, JERUSALEM. The Dome of the Rock has marked the spot on the Temple Mount since the 7th century C.E.

The close physical association of the Temple and the palace in Jerusalem emphasized the religious, political, and cultural importance of Jerusalem as the capital. Together the Temple and the palace constituted the administrative center of the kingdom. In addition, the complex of Temple and palace underscored the connection between the religious and political life of the nation. Although the Temple was primarily a religious center, it also had a major role in the economic and political affairs of the kingdom. Ancient temples, it is said, were the first banks, conducting financial transactions and changing money.

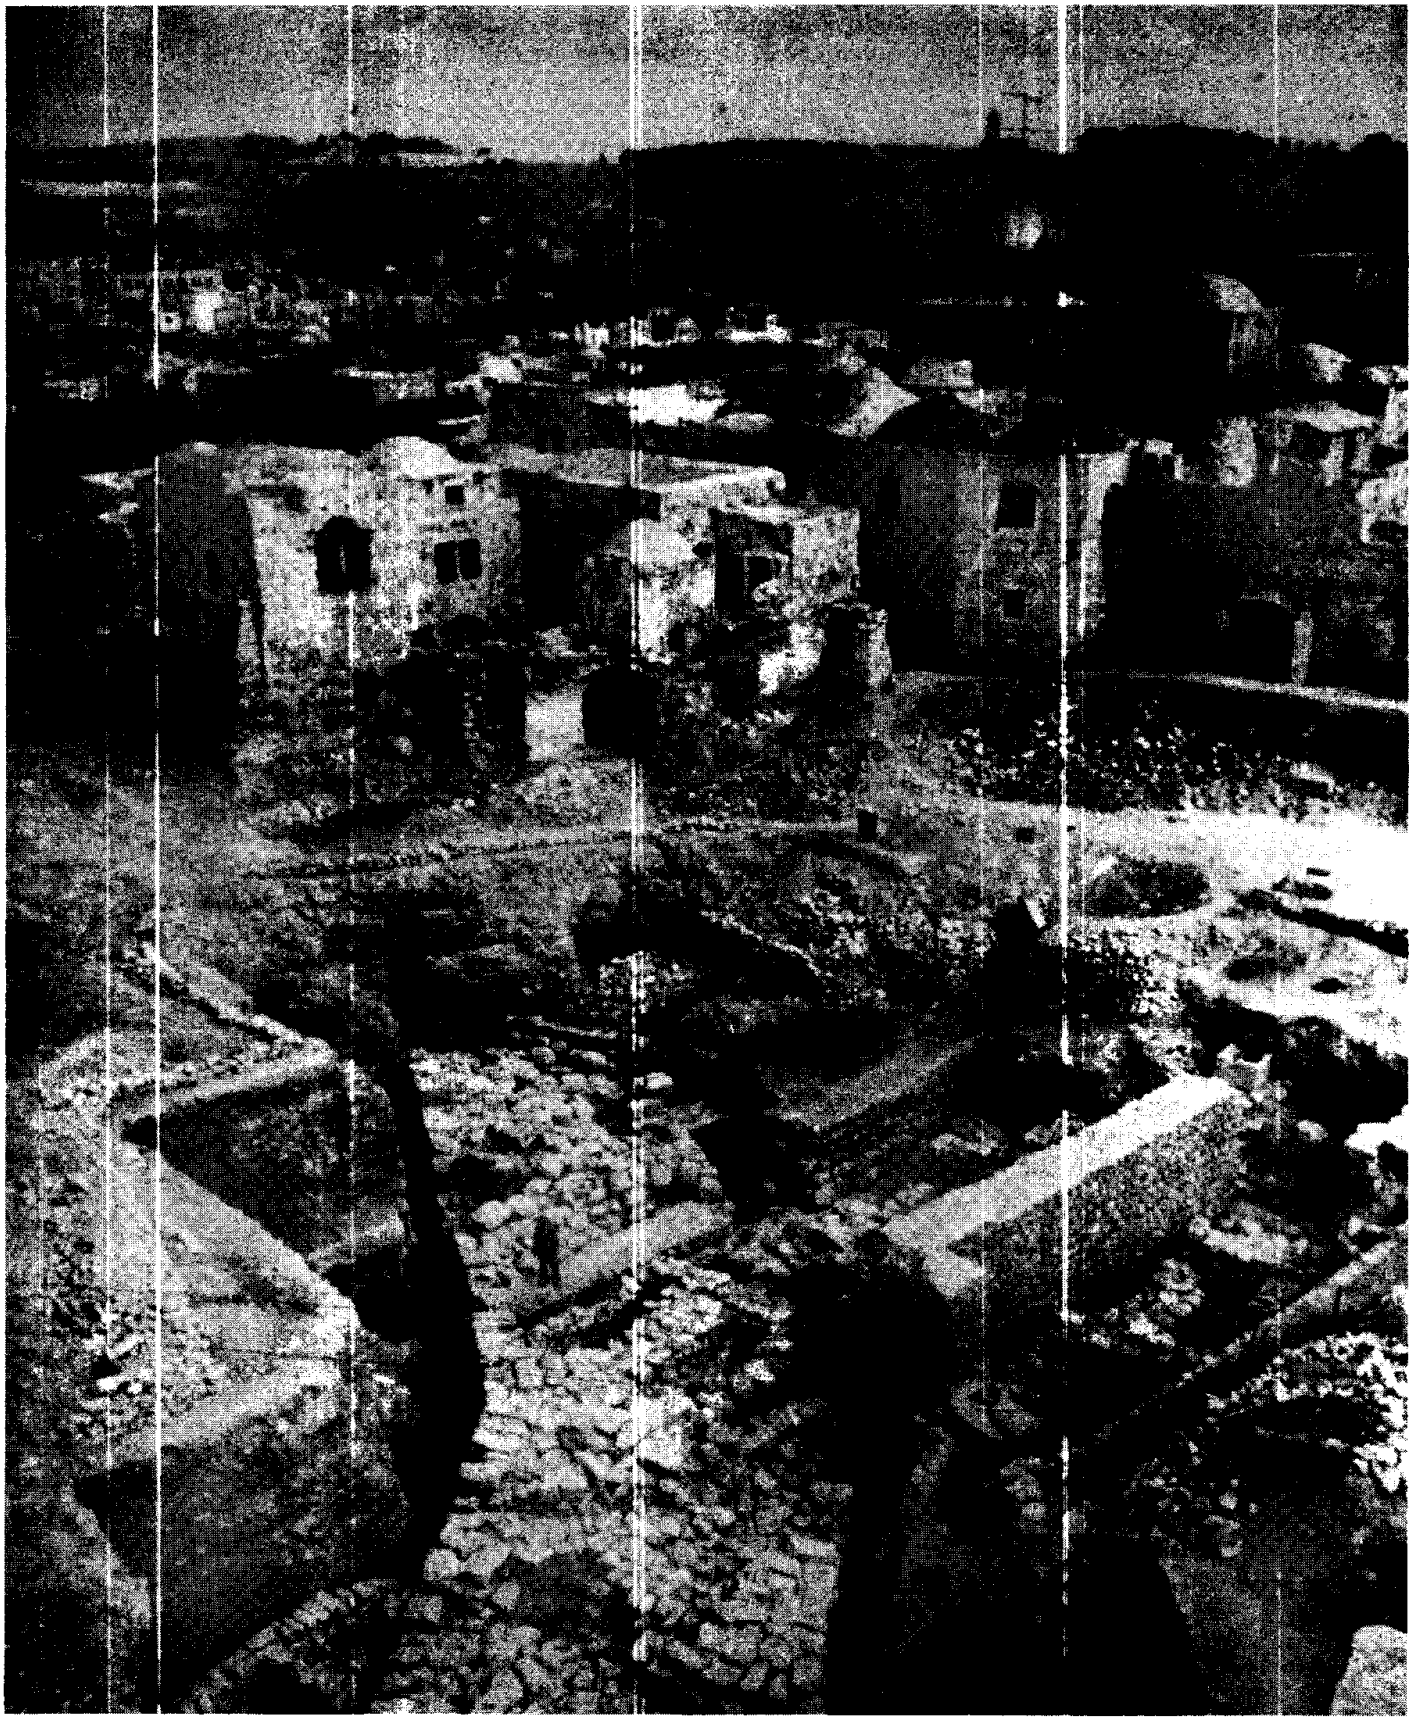
As a financial center, the Temple had a significant treasury which the kings tapped when forced to pay tribute to foreign victors. During Rehoboam's reign, for example, Shishak (Shoshenq) attacked Jerusalem, but refrained from conquering the city, choosing instead to plunder the treasury of the Temple and the royal palace (1 Kgs 14:25–26). When Joash, king of Israel, defeated Amaziah of Judah, he also looted the Temple treasury, plundering the Temple and the palace (2 Kgs 14:8–14). The galleries or storerooms, standing three stories high and surrounding the Temple on three sides (1 Kgs 6:5–6), were used for storing weapons, cult objects, gifts, and booty.

The palace complex, immediately to the S of the Temple, was architecturally more impressive than the Temple. The palace enclosure consisted of the House of the Forest of Lebanon, so called from its adornment of columns in cedar resembling a forest, the Hall of Pillars, the Hall of the Throne (where Solomon rendered judgments), and the House of Pharaoh's Daughter.

E. Divided Kingdom

Generally speaking, Jerusalem declined in importance in this period. During his long reign Uzziah fortified Jerusalem, strengthening its walls with towers (2 Chr 26:9, 15). Jotham is credited with building the upper gate of the Temple (2 Chr 27:3) Uzziah and Jotham confined their building activities to Jerusalem proper, and did not undertake any expansion of the city to the W. Ahaz was judged harshly for having erected in the Temple an altar modeled on a pagan altar from Damascus.

In his excavation of the City of David, Shiloh recovered remains of anthropomorphic vessels and fertility figurines in the fill of an 8th century B.C.E. building, as well as zoomorphic figurines, all indicative of the diversity of religious practice in that period. The historians of Judah commended Hezekiah for his cultic reforms, which included purifying the Temple and centralizing worship in Jerusalem. His reform was religiously motivated (Cogan and Tadmor, *2 Kings* AB, 218–20); at the same time by centralizing the cult in Jerusalem, Hezekiah strengthened the Davidic dynasty, especially in its relations with other cities in the empire. When Samaria fell in 721 B.C.E., Jerusalem became the principal city of worship in Israel.



Hezekiah reinforced the Millo and the city wall with towers; he also built a new wall (2 Chr 32:5). The section of a massive fortification wall, 65 m long and 7 m thick, which Avigad (1983: 46–54) cleared in the middle of the Jewish Quarter, is associated with 8th and 7th century B.C.E. pottery, and may well be the fortification wall erected by Hezekiah. See Fig. JER.10. This was the first city wall ever built on the W hill. Running on a line almost identical with the later Hasmonean wall, this broad wall enclosed the Siloam pool located outside the MB II wall of the City of David. Avigad believes this wall surrounded the entire plateau of the W hill (perhaps the Mishnah and the Machtesh of Zeph 1:10–11) in the late monarchy. This wall was built over the ruins of Israelite houses, which date from the beginning of the 8th century B.C.E. The expansion to the unfortified W hill began, it appears, in the early 8th century B.C.E.; by the late 8th century B.C.E., this wall protected the W side of Jerusalem from Assyrian attack.

Hezekiah took additional steps to counter the imperialistic threats of Sennacherib. In preparation for the siege of 701 B.C.E., he constructed a new underground channel (2 Kgs 20:20; 2 Chr 32:2–4, 30; Isa 22:11) beneath the city to bring water from the Gihon spring outside the walls to the Siloam pool, which served as a large reservoir. According to the inscription found on the tunnel wall in 1880, two teams working from opposite directions performed an extraordinary engineering feat by cutting the tunnel through 533 m of bedrock beneath Ophel hill. Although the inscription does not mention Hezekiah's name, Hezekiah undoubtedly built this tunnel.

The kings of the late monarchy also had their roles to play in Jerusalem. Manasseh refortified Jerusalem, building a new outer wall (2 Chr 33:14). Jerusalem reached its zenith under Josiah. In addition to his religious reform which conferred special status on Jerusalem, making it the exclusive place of sacrifice, Josiah took advantage of Assyria's weakness to expand the territory of Judah.

Jerusalem was invaded when Jehoiakim rebelled against Babylon. When Jeremiah predicted the imminent Babylonian destruction of Jerusalem and Judah, Jehoiakim burned the prophet's scroll (Jer 36:20–26). This same chapter mentions a scribe, Gemariah, son of Shaphan (vv 10–12, 25), a supporter of Jeremiah who was in the court of Jehoiakim in his fifth year (604 B.C.E.). During the excavation of the City of David, Shiloh found on a plastered floor of a house (Area G, Stratum 10) more than 50 clay bullae bearing Heb seal impressions. Designating the find-spot the "bullae house," Shiloh speculated it may have been an official administrative archive. These bullae, yielding a corpus of more than 80 Heb names, were well preserved by the flames of the Babylonian destruction of Jerusalem. The name impressed on one of the bullae is "Gemariah ben-Shaphan," who may be the same scribe mentioned in Jeremiah 36.

Shiloh uncovered several other houses on the S area of the hill within the city walls. They were simple structures, square in shape, and built into the lower part of the stepped-stone structure. The Babylonians captured Jerusalem in 597 B.C.E., and then destroyed the city in 586

JER.10. Israelite city wall (8th century) uncovered in the Jewish Quarter on the hill W of the Tyropoeon Valley in Jerusalem. *(Photograph by N. Avigad, by permission, Biblical Archaeology Society Jerusalem Archaeology Slide Set)*

B.C.E. after a siege of 18 months (Lam 1:4; 2:2). Shiloh found evidence of the Babylonian destruction everywhere: thick layers of dark ash, scattered iron and bronze arrowheads, and collapsed structures.

After the destruction of Jerusalem in 586 B.C.E., Judah became part of the Neo-Babylonian Empire. There are many unanswered questions about what took place in Jerusalem between 586 and 538 B.C.E. Both Jerusalem and Judah, it appears, continued to be inhabited (2 Kgs 25:22–26; Jer 40:10; Ezek 33:21–27). Sacrificial worship apparently continued in Jerusalem during the exilic period since there is no reference to the destruction of the altar. Also, the fact that the Persians returned the Temple vessels to Jerusalem suggests a continuation of cult in the city (*HAIJ,* 426). Pilgrims continued to arrive in Jerusalem and to offer sacrifice at the Temple site (Jer 41:5).

F. Second Temple Period

1. Persian. After conquering Babylonia in 539 B.C.E., Cyrus II allowed the Jews to return to their homeland; he also authorized the rebuilding of the Temple. Judah became a Persian province with the name Yehud *(yhd).* After the return from exile, Jerusalem ceased to be politically significant; emphasis was placed on the religious role, with the priesthood assuming prominence. The Persian period was a time of peace and prosperity, when Judah was allowed a great deal of administrative independence. However, Israelite society was badly divided, with deep antagonisms between the returning exiles and those who had remained in Judah during the exile. The rift was reflected, for example, in the rebuilding of the Temple: those engaged in the rebuilding, considering themselves the true Israelites, did not allow those who had remained in Jerusalem to participate in the religious life of the postexilic community.

With the encouragement of Haggai and Zechariah, and under the leadership of the governor Zerubbabel (a Davidic descendant) and the high priest Joshua, work began on the Temple in 520 B.C.E. Despite opposition from the Samaritans, who built their own temple on Mount Gerizim, the Second Temple was reconstructed, and then rededicated in 515 B.C.E. in the reign of Darius (Ezra 6:15–18). This more modest Temple did not compare in splendor with its predecessor, but it had the same basic architectural structure (Hag 2:3; Ezra 3:12).

In the time of Nehemiah Jerusalem once again became the administrative and religious capital of Judea. Appointed governor of Judea by Artaxerxes, Nehemiah arrived in Jerusalem in 445 B.C.E., and undertook the rebuilding of the city walls to provide security. Nehemiah was resented by Sanballat of Samaria, Tobiah of Ammon, and Geshem the Arab. Opposed to the refortification of Jerusalem, they harassed Nehemiah (Neh 2:19; 4:7). In rebuilding the walls Nehemiah divided the workers into groups, each responsible for a section of the wall (Nehemiah 3). According to Neh 6:15, the wall (perhaps a temporary filling of breeches) was restored in 52 days. Josephus, however, reports that it took two years and four months to complete the project (*Ant* 11.5.8 §179). The task of rebuilding the walls was an economic hardship on the people, preventing them from gainful employment elsewhere.

During this period the Upper City was not resettled; occupation was constricted to the area of the City of David and the Temple Mount. No archaeological remains from the Persian period have been found on the W hill: Avigad unearthed none in the Jewish Quarter, nor did Broshi recover any on Mount Zion (the W ridge below the present SW corner of the Old City). Kenyon discovered Nehemiah's E wall higher up on the E ridge than the Jebusite and Davidic wall, confirming that the city was more constricted in size during the Persian period than earlier (Williamson 1984). The E hill was adequate for the small number of people, mostly Israelites, in Jerusalem in Nehemiah's time. According to Neh 11:1–2, Nehemiah repopulated Jerusalem by requiring the nobility and a tenth of the rural residents to settle in the city.

In addition to Jerusalem's defense, Nehemiah was concerned with political and social reforms among the people. In trying to improve the economic condition of the needy, some of whom had been exploited by their own people, Nehemiah remitted taxes. The people had also grown careless about their religious obligations with regard to Sabbath observance (Neh 13:15–22) and mixed marriage (Neh 13:23–27), so Nehemiah addressed these issues. It was Ezra who reestablished the authority of the Mosaic Torah in this era.

2. Hellenistic. Persian rule came to an end in Judea when Alexander the Great captured Jerusalem in 332 B.C.E. Despite Josephus's statement (*Ant* 11.8.5 §336–39), it seems unlikely that Alexander entered Jerusalem, nor did he interfere with the administrative structures in Jerusalem. Alexander's victory marked the beginning of the Hellenistic period which was to last until 63 B.C.E. At this time, Jerusalem was confined to the Lower City, including the Temple Mount and the City of David. Shiloh's dig revealed evidence of dense settlement in the City of David. It is noteworthy that despite this dense settlement, the Jews of Jerusalem throughout the Hellenistic period were seriously at odds among themselves over religious matters (see below).

With the division of Alexander's vast empire among his generals at his death in 323 B.C.E., Judea, the frontier between the Ptolemies of Egypt and the Seleucids of Syria, came under the successive control of the Ptolemies and the Seleucids. Ptolemy I captured Jerusalem in 320 B.C.E., and by 301 B.C.E. Ptolemaic rule was stabilized. For roughly a century Palestine enjoyed a peaceful and prosperous era under the Ptolemies. Jerusalem's political role in this era was minor, although the city was the administrative center of Judea. The Jerusalem Temple and the priesthood played a prominent role in the Hellenistic period, with the Temple serving as the center of both religious and social life. The high priest oversaw both religious and administrative affairs. Otherwise, archaeological and literary sources provide little information concerning the Ptolemaic rule.

When Antiochus III (the Great) defeated the forces of Ptolemy V Epiphanes and annexed Palestine ca. 201–198 B.C.E., Seleucid rule over Judea began, lasting until 135 B.C.E. The Jews welcomed the Seleucids who showed them consideration. Among other things, the Seleucids provided financial assistance for the rebuilding of Jerusalem and for the repair of the damage to the Temple. The high

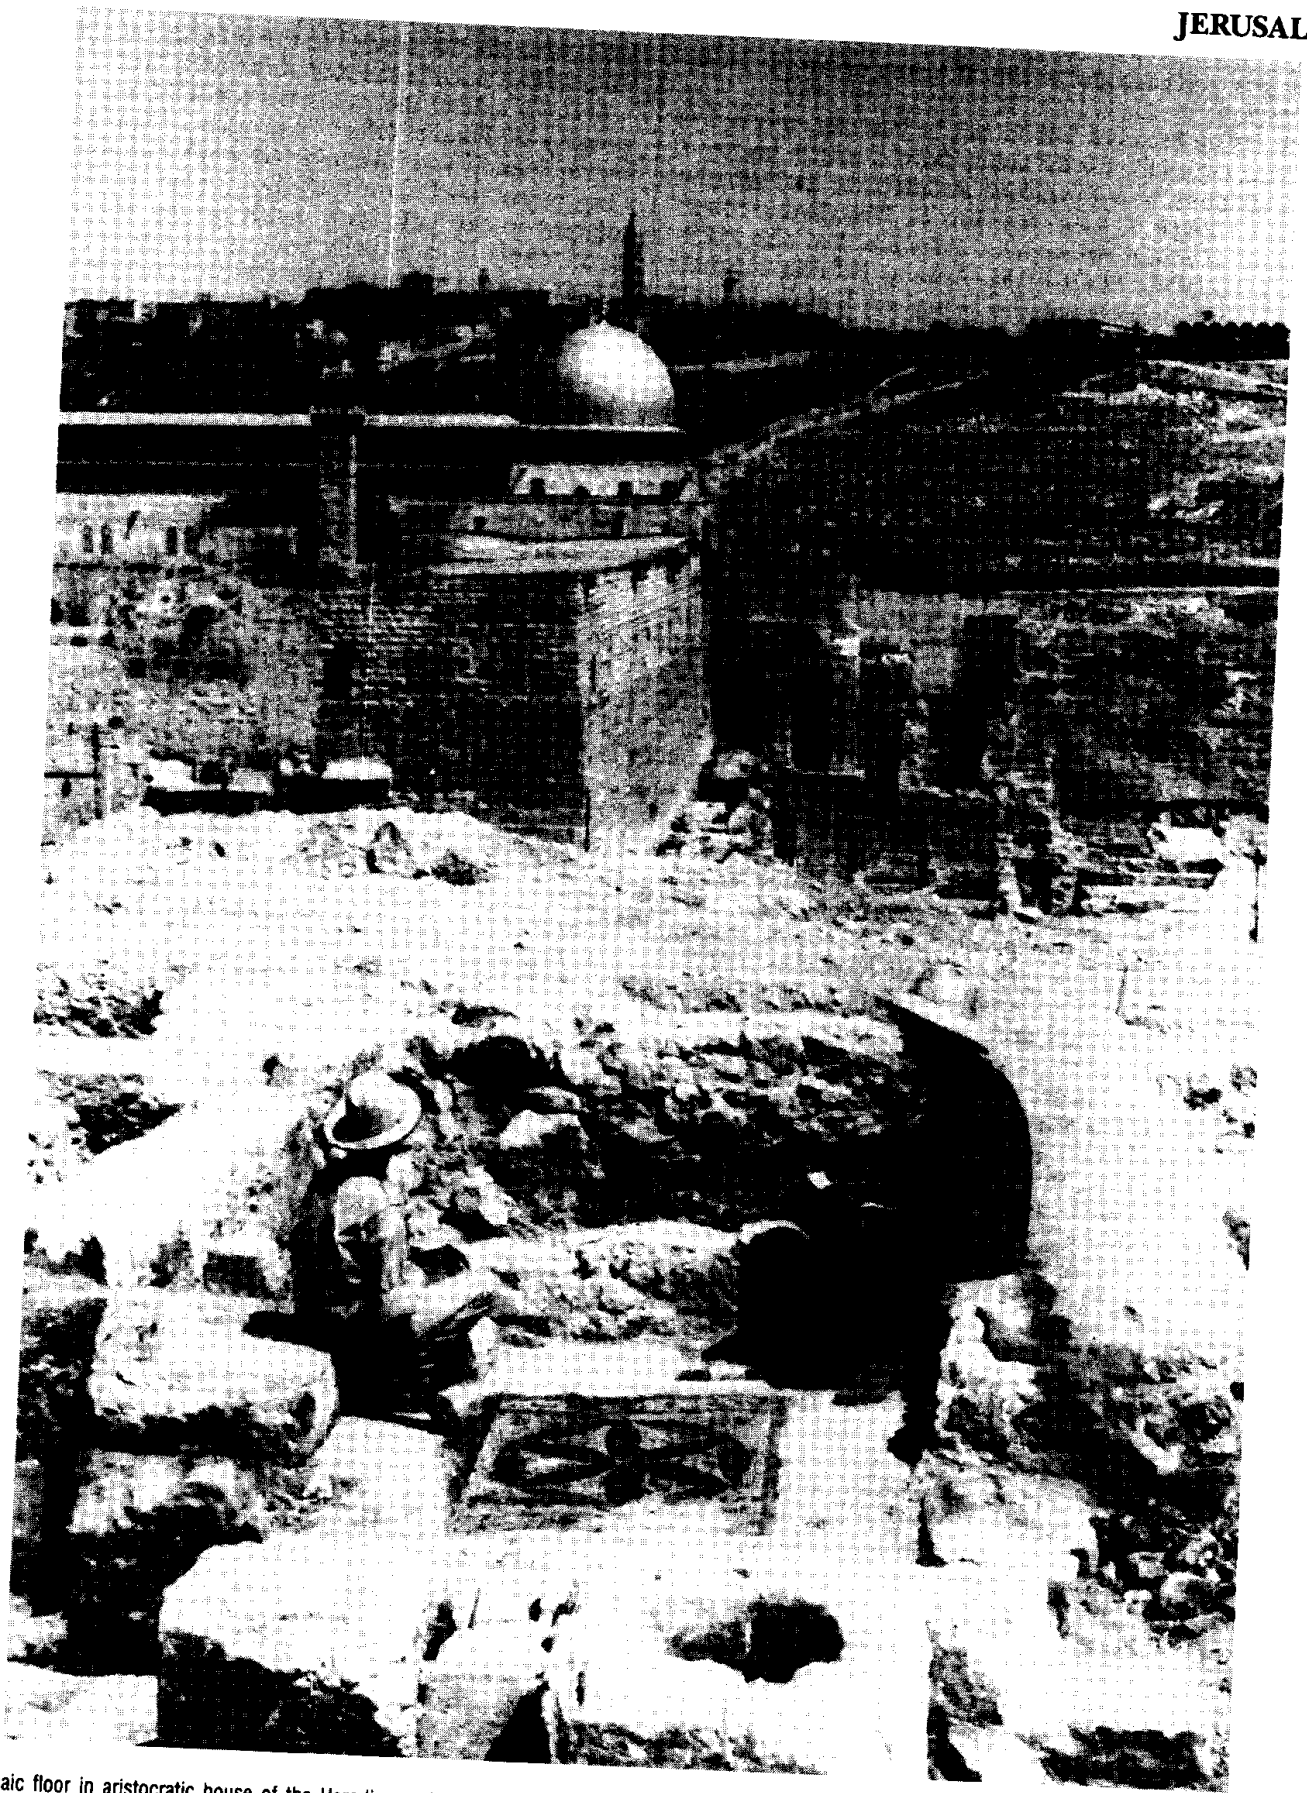
priest continued to govern Jerusalem and Judea, and the people were subject to the Mosaic law. Among the privileges accorded to the Jews, taxes were remitted for a period of three years. Neither the Ptolemies nor the Seleucids forced the Jews to adopt the Greek way of life.

The Jews themselves were divided among Hellenists and anti-Hellenists, the former represented especially among the upper classes. The high priest Jason favored the Hellenizers, fostered Hellenization (1 Macc 1:11–15; 2 Macc 4:10–15), and transformed the Jewish city of Jerusalem into a Hellenistic *polis,* a Greek city-state, known as Antiochia, after Antiochus IV (2 Macc 4:9). It was situated on the E half of the W hill (Upper City), unsettled in the time of Nehemiah. This new Greek city-state signified a change in Jerusalem's juridical status rather than the construction of a new city (Tcherikover 1966: 165). As part of establishing Jerusalem as a Hellenistic *polis,* Jason built a *gymnasion* in the city under the patronage of Hermes and Hercules; the members of the *gymnasion* were called Antiochenes (2 Macc 4:9). The function of the *gymnasion* went beyond sporting events; pagan customs were introduced (1 Macc 1:11–15; 2 Macc 4:9–17), and it became a social center in competition with the Temple.

The Hellenistic reform enjoyed strong Jewish support, especially among the members of the Temple priesthood and the affluent upper class. Disdaining their own tradition these Hellenizing Jews, without outside coercion, fostered the introduction of Greek customs (Tcherikover 1966: 118, 140). The majority of Jews who were economically poor did not support Jason and the Hellenizers.

This Hellenistic reform took place in the reign of Antiochus IV, who had earlier been bribed to name Jason high priest in place of his brother Onias III. Antiochus IV (Epiphanes) was a strong patron of Hellenization, but the initiative to Hellenize Jerusalem came from the Jews themselves. His persecution of the Jews was not for the purpose of Hellenization, but was a response to the Maccabean revolt (Tcherikover 1966: 190–91). In his attempt to destroy Judaism, Antiochus IV desecrated the Temple, erecting an altar to Zeus, and dedicating the Temple to Olympian Zeus (1 Macc 1:41–63; 2 Macc 6:2–5).

In addition, Antiochus IV destroyed the walls of Jerusalem (1 Macc 1:31), and erected in 168 B.C.E. a Citadel for his garrison, called "Akra" by Josephus (*Ant* 12.5.4 §252; see also 1 Macc 1:29–36). The precise location of this Syrian fortress is uncertain because it has left no archaeological traces. Josephus located it in the Lower City, on the SE hill. Mazar would situate the Akra directly S of the Temple enclosure, adjacent to the Hulda gates. Others (Robinson, Warren, Vincent, Avi-Yonah) proposed locating it on the W hill, across the Tyropoeon valley, but Avigad found no significant artifacts from the early Hellenistic period in the Jewish Quarter. Housing Syrian troops as well as Jewish Hellenizers, the Akra was the symbol of foreign rule. Architecturally higher than the Temple, the Akra served the purpose of controlling the Temple, while keeping the Jews under surveillance.



Aided by his five sons, the Jewish priest Mattathias led a revolt against the Seleucid rule to curb the spread of Hellenistic culture and to gain Jewish independence. Judas Maccabee, one of Mattathias' sons, liberated Jerusalem from Antiochus IV in 164 B.C.E., with the exception of the Akra; thereupon the Temple was purified and rededicated (1 Macc 4:36–55). About 141 B.C.E. Simon, another son of Mattathias, captured the Akra and razed it. From the Maccabean defeat of the Seleucids until the Roman conquest under Pompey in 63 B.C.E., when Judea became part of the province of Syria, the Jews enjoyed a century of political independence, with Jerusalem serving as the capital of Judea, including Transjordan.

3. Hasmonean. When the Hasmoneans, a dynasty of Jewish high priests and kings descended from the family of Mattathias, ruled from 142 to 63 B.C.E., Jerusalem was their capital, the center of religious, political, and economic life until 63 B.C.E. Jerusalem enjoyed prosperity and was enclosed by new walls. It was a period of erecting monuments and tombs, and a time of expansion, as far as Transjordan. Hasmonean Jerusalem incorporated the Upper City and the City of David. The Upper City, in which was located the seat of Hasmonean government, was joined to the Temple Mount by a bridge spanning the Tyropoeon valley. Archaeologists discovered the remains of this bridge along the W wall of the Temple Mount in the form of an intact arch, which had served as a support for the bridge across the Tyropoeon valley. It was named "Wilson's arch" after Charles Wilson who investigated it in the 1860s. The city wall surrounded the W hill in its entirety. The Hasmoneans also built a fortress called Baris (not the same as the Akra) to defend the N side of the Temple. Baris was the forerunner of the fortress Antonia (Avi-Yonah *WHJP* 7: 228–31).

With Jerusalem as the capital of the kingdom, the Hasmoneans reached the height of their power under John Hyrcanus and his son Alexander Jannaeus, both serving successively as high priest and king of Judea. In 63 B.C.E. Pompey, putting an end to Hasmonean rule but retaining Hyrcanus as high priest, occupied the Upper City, attacked the Temple Mount, entered the Holy of Holies, and destroyed the walls of Jerusalem. From that time until the advent of Herod the Great in 37 B.C.E. the Hasmoneans ruled under the protection of Rome.

4. Herodian. When Jesus was born toward the end of Herod's reign, Jerusalem was the capital of Judea, which was part of the Roman province of Syria. Herod was a Hellenist, who ruled as a Roman vassal. The thirty-three years of Herod's rule (37–4 B.C.E.) constituted an era of economic prosperity, and the time when the Upper City attained the zenith of its development, with archaeology providing striking evidence of Jerusalem's splendor. Prosperity divided Jerusalem society, separating the rich from the poor. The economically deprived were relegated to the Lower City, where commerce was conducted; the affluent, including the king and the high priest, resided in the Upper City. Jerusalem's wealth was derived from Herod's building projects, as well as the half-shekel tax levied on Jewish communities around the world.

Avigad's excavations in the Upper City revealed a well-planned city whose residents lived an aristocratic lifestyle. There were remains of magnificent houses, some two or more stories high, built around a central court. Mosaic flooring, frescoes, and painted plaster adorned the homes of many Jerusalem residents. See Fig. JER.11. Painted pottery of superior quality, well-crafted furnishings, and beautiful stone objects, including tables, bowls, and purifi-

JER.11. Mosaic floor in aristocratic house of the Herodian period, excavated on hill W of the Temple Mount. *(Photograph by N. Avigad, by permission, Biblical Archaeology Society Jerusalem Archaeology Slide Set)*

cation jars, reflected the wealth of Jerusalem in the Herodian period.

a. Building Projects. Herod may be best remembered as a builder, especially for his military architecture; his name is synonymous with distinctive architecture and massive masonry (*WHJP* 7: 215). Remains of Herodian architecture can be found throughout Palestine. See also HEROD'S BUILDING PROGRAM. Among Herod's magnificent building projects was the Jerusalem Temple, entirely rebuilt to win the favor of the Jews who hated him. The Temple building was begun in 20 B.C.E. and dedicated 10 years later, although it was not completed until 63 C.E. This colossal Temple occupied an area 446 m N–S, and 296 m E–W. In preparation for the reconstruction of the Second Temple, Herod doubled the size of the Temple platform by filling in the surrounding valleys, especially to the S. The SE corner of the podium stood 45 m above the floor of the Kidron valley. The expanded area of the Temple esplanade measured 144,000 square meters; it was supported by massive retaining walls, still visible today. The best-known section of the remaining walls is called the *kotel* or "western wall" (formerly the "wailing wall"), the focus of Jewish prayer since the destruction of the Temple in 70 C.E. The Herodian walls were built "dry," that is, without cement or mortar between the ashlar stones which were quarried in Jerusalem. Today, the Muslim Haram esh-Sharif ("the noble Sanctuary") occupies the Herodian Temple Mount, easily identifiable by the Dome of the Rock.

Practically nothing remains of the Herodian Temple, but the ruins uncovered along the W and S walls of the Temple Mount, as well as details provided by Josephus, give some idea of the splendid architecture of Herodian Jerusalem. In addition to "Wilson's arch" along the W retaining wall, there was "Robinson's arch," assumed (wrongly) to have been an element of another bridge connecting the Temple Mount with the Upper City. Mazar established that this arch functioned as a span supporting a staircase descending from the Temple Mount to the Tyropoeon valley. On the S section of the Temple's outer court was the royal stoa or sheltered promenade; it was a rectangular hall, with four rows of columns, resembling a Roman basilica (*Ant* 15.11.5 §411–16). Along the S wall Mazar uncovered three gates for access to the Temple Mount. The single gate to the E dates to Crusader times; the double gate and triple gates which form the Hulda gates (possibly named after the 7th century B.C.E. prophet, or perhaps derived from the Heb word for "mole") date to the Herodian era, although the triple gate in its present form is Umayyad. In front of the Hulda gates was a monumental Herodian stairway, 61 m wide with 30 steps, leading up from the Ophel to the two main pilgrim entrances on the S side of the Temple Mount. See also TEMPLE, JERUSALEM.

In the NW corner of the Upper City near the present Jaffa Gate, Herod built a splendid, fortified palace to provide protection for the Upper City. Unfortunately, nothing remains of its superstructure. Like the Temple, the palace was constructed on a platform, 300–350 m N–S, and 60 m E–W. The palace was bounded on the N by the Citadel, on the W and S by the present Turkish city walls; the boundary on the E is unknown. The foundations of the palace have been uncovered in the court of the Citadel, and in the Armenian garden (Bahat and Broshi 1975) near the SW corner of the present city wall, and on Mount Zion, outside the wall of the Old City.

At the N side of the palace were three towers, named in memory of Phasael (Herod's brother), Hippicus (an unknown friend), and Miriamne (Herod's Hasmonean wife). The present-day Citadel (popularly called "David's Tower") adjacent to the Jaffa gate stands on the site of Herod's three towers; it is actually built on Phasael's tower. This fortress on the W side of the Old City guarded the royal palace and the W entrance of Jerusalem. Titus destroyed most of Jerusalem in 70 C.E., but he spared the Herodian fortress. The Crusaders built a fortress over Herod's, but the present architectural form of the Citadel was the work of Suleiman the Magnificent in the 16th century C.E. (Johns 1950; Amiran and Eitan 1970).

In 37–35 B.C.E. Herod rebuilt the Baris, situated at the NW corner of the Temple enclosure, enlarging it with towers. He named it Antonia in honor of his patron Mark Antony. The purpose of this huge fortress was to protect the Temple Mount; it also functioned as a palace and barracks. Titus destroyed the Antonia in 70 C.E. Although nothing remains of the Antonia fortress, it was a conjectured location of the Roman praetorium where Pontius Pilate judged Jesus (John 18:28–19:16). That the Via Dolorosa (Way of the Cross) begins at the Antonia is not compelling with respect to the location of the praetorium; the specific location of events in the life of Jesus was often determined by popular tradition. Some identified the broad stone pavement in the basement of the Sisters of Zion convent as the *lithostrothon* mentioned in John's account of the trial of Jesus before Pilate (19:13). However, P. Benoit (1952) demonstrated stratigraphically that this stone pavement and the contiguous "Ecce Homo" arch (John 19:5) were unrelated to the Antonia and to Jesus. Instead, they formed part of a small, E forum dating to Hadrian in 135 C.E. The praetorium of Jesus' trial was located at Herod's palace which served as the official residence of the Roman procurators when they came to Jerusalem during the major Jewish feasts (Benoit 1952: 550).

b. Josephus' Three Walls. In Herod's time the city walls surrounded Zion and Ophel hill, in addition to the S sector of the present-day Old City. The topography of Jerusalem's walls is controversial; Josephus refers to three successive walls which defended Jerusalem on the N (*JW* 5.4.1 §136). The first wall, the innermost, surrounding the entire city is least disputed; its date is uncertain, but it was the oldest of the walls. It is usually dated to the Hasmonean period, about 100 B.C.E. If Josephus' description of its 60 towers is to be accepted (*JW* 5.4.3 §158), the first wall must have been strong. Defending the NW edge of Jerusalem, it ran roughly S from the present-day Citadel (Jaffa Gate), around Mount Zion, along the Hinnom valley, to the Kidron valley; from the crest of the E hill, to the SE corner of the Temple Mount; then from Wilson's arch on the W wall of the Temple Mount back to the Phasael Tower (present-day Citadel). Johns discovered the NW corner of the first wall in the courtyard of the Citadel.

The exact course of the second wall is uncertain and controversial; related to this issue is the authenticity of the Church of the Holy Sepulchre (if it truly marks the place of Jesus' death and resurrection, it should be situated

outside this second wall). Archaeological remains are sparse, and literary sources imprecise. The date of this wall is also in contention, having been ascribed to the Hasmonean and the Herodian periods, the latter being more probable. The second wall ran from the present-day Citadel, by way of the present-day Damascus gate, to the Antonia at the NW corner of the Temple. According to Josephus, this relatively short wall had 14 towers (*JW* 5.4.3 §158). It was also fortified by a quarry located in front of it which functioned as a defensive moat. Parts of this quarry have been uncovered in the recent excavation beneath the Lutheran Church of the Redeemer (Lux 1972). Because traces of this quarry were found here, 40 m *south* of the Church of the Holy Sepulchre, it is now fairly certain that this Church indeed marks a spot that was outside the second wall. The second wall as it appears on most maps is the alignment proposed by Vincent, who has now been proven wrong by the Lux excavations. The second wall of Vincent has been identified subsequently as a terrace wall of the Roman or Byzantine period. No part of the second wall itself, however, has yet been unearthed (Schein 1981: 23).

The alignment of the third, the outermost wall, remains a problem (Shanks 1987). Built to protect the N side of Jerusalem, it had 90 towers (*JW* 5.4.3 §158). The foundations of this wall, according to Josephus (*JW* 2.11.6 §218), date to the time of Herod Agrippa (41–44 C.E.), but it was completed only during the first revolt (66–70 C.E.). Some maintain that the third wall of Josephus followed the same course as the present-day N wall of the Old City (Vincent, Benoit, Simons, Kenyon, Hennessy, Hamrick); others, following Robinson, identify the third wall with an E–W wall 450 m further N (Sukenik, Mayer, Avi-Yonah, Ben-Arieh, Netzer, Broshi, Bahat). Kenyon considered the more northerly wall to be Titus' circumvallation rampart, intended to prevent Jews from leaving the city to obtain food, but it is too far N to have served that purpose. Hamrick (1977: 22) maintained that this northernmost wall was a defensive line built by Jewish insurgents about 68 C.E. to serve as a "barrier wall" against the attacking Roman army.

In their excavations between 1925 and 1927, E. L. Sukenik and L. A. Mayer (1930) concentrated on this northernmost wall, and they concurred with Robinson that it was the third wall referred to by Josephus. In their excavations of the same wall between 1972 and 1974, Ben-Arieh and Netzer (1974: 98–100) unearthed a continuous stretch of wall consisting of ashlars and fieldstones (measuring 45 m long and the width varying between 4.2 and 4.3 m), with towers, dating to the 1st century C.E. When J. B. Hennessy (1970) dug at the Damascus gate between 1964 and 1966, he was convinced he had uncovered the third wall of Agrippa I, maintaining that it followed the present line of the Old City's N wall. Archaeology cannot offer yet a conclusive answer because the evidence is ambiguous.

5. Roman. After Herod the Great, Jerusalem became a province of the Roman Empire, ruled by Roman prefects who resided in Caesarea. About 6 C.E. Caesarea became the capital, replacing Jerusalem. The high priest and Sanhedrin oversaw the government of Jerusalem, but their power was significantly reduced. The Jews in Jerusalem at that time were a disparate group of people, often at odds with themselves. Pontius Pilate, prefect of Judea (26–36 C.E.), is well-known to readers of the NT, but less known for having improved Jerusalem's water supply by constructing the first aqueduct, leading from "Solomon's pool" situated between Bethlehem and Hebron.

Gessius Florus, the last of the Roman prefects for Judea, provoked a Jewish rebellion against Rome in 66 C.E. by stealing funds from the Temple treasury. The Jews withstood the Romans temporarily; at that time the Christian community abandoned Jerusalem and fled to Pella. In 70 C.E. Titus attacked Jerusalem on the N side, always the most vulnerable, and built a siege wall around the city. Starvation prevented the defenders from resisting for long. The Temple area and the Lower City fell first; a month later, the Upper City met the same fate. The Temple platform remained standing, as did the three Herodian towers (Hippicus, Phasael, and Miriamne), and part of Jerusalem's western wall (*JW* 7.1.1 §1–2).

Evidence for Jewish presence in Jerusalem between 70 and 132 C.E. is only indirect; the archaeological and literary sources are scarce. The city was not entirely abandoned: the Tenth Legion was present, some Christians had returned from Pella, and Jews were still not forbidden to live in Jerusalem (Avi-Yonah 1973: 16; Peters 1985: 124–26). According to K. W. Clarke (1960: 273–74), a large Jewish population remained in Jerusalem after 70 C.E., and they continued to worship on the Temple Mount.

G. Postbiblical Period

1. Aelia Capitolina. Jewish Jerusalem was effectively finished when Hadrian established the Roman city of Jerusalem, limited to the W hill in the area of the modern Jewish Quarter. Hadrian visited Jerusalem in 129–30 C.E.; then he rebuilt the city, renaming it Aelia Capitolina. "Aelia" was derived from the emperor's second name; "Capitolina" recalled Jupiter, Juno, and Minerva, the deities of the Capitoline Triad in Rome, who became the patrons of Hadrian's new city. He also erected a Temple honoring Jupiter Capitolinus on the Temple Mount; on the present site of the Church of the Holy Sepulchre he built a temple to the Roman goddess Aphrodite.

This new, unwalled city of Hadrian was really a Roman colony, modeled on a Roman camp. Square in shape, as it remains today, it would have been divided into quarters by two streets. The main N–S street, the *cardo,* would have run from the Damascus gate to Zion gate. The main E–W street, the *decumanus,* would have extended from St. Stephen's gate (also called Lions' gate) to the Jaffa gate. A ceremonial tetrapylon, with remains still visible, was erected at the intersection of the streets. Hadrian also constructed a three-arched entryway (with towers on either side) into Aelia Capitolina, which Israeli archaeologists have recovered under the present Damascus gate (Magen 1988).

Hadrian's rebuilding and renaming of Jerusalem probably sparked the Second Jewish revolt under Bar Kokhba (Simeon Bar Koziba), which had begun in 132 and was crushed in 135 after the Jews had reoccupied Jerusalem (Avi-Yonah 1973: 16). Others attribute the revolt to Hadrian's failure to rebuild the Temple, and the fact that circumcision was forbidden. Nevertheless, after 135 C.E.,

Jews were forbidden by Hadrian's decree to live in Jerusalem, or even to visit the city under pain of death.

2. Byzantine. In 324, Constantine became the first Christian emperor to rule Palestine; shortly thereafter, the name Aelia Capitolina imposed by Hadrian was changed back to Jerusalem. The Byzantine period was a prosperous age, marked by intensive construction. Constantine is associated with three major building projects, each related to an aspect of Jesus' life: one in Bethlehem, another at Golgotha (the Church of the Holy Sepulchre), and the third on the Mount of Olives.

Consecrated in 335, the Church of the Holy Sepulchre (Anastasis) was razed in 614. Destroyed and rebuilt several times since, the most recent major restoration was undertaken in 1959. Although the present church stands on the original site in the NW quarter of Jerusalem, most of the structure visible today dates to the Crusader period in the 12th century. The Church of the Holy Sepulchre is divided basically into three parts: the basilica, the rock of Golgotha, and the tomb. The upper chapel adjacent to the principal entrance of the Church commemorates the location of Golgotha. Golgotha, translated "the place of a skull" (Matt 27:33 = Mark 15:22; Luke 23:33; John 19:17), is a name of uncertain origin; it is the traditional site of the crucifixion and the tomb of Jesus (John 19:41–42). See GOLGOTHA.

The tradition in the Jerusalem community regarding the Holy Sepulchre as the place of Jesus' burial goes back to the 4th century. In his 1838 visit to Jerusalem, Robinson questioned the authenticity of the Holy Sepulchre, which hinges on the location of Josephus' second wall (see above). Robinson assumed the sepulchre had also been inside the city wall in Jesus' time, whereas the crucifixion took place outside the city (Heb 13:12). The Garden Tomb, an alternative site, is situated outside the walled city, just N of the Damascus gate. Advanced by C. Gordon in 1883 as the true location of Golgotha on the basis of a fanciful rock formation, this site is unconvincing because of lack of evidence (Wilkinson 1978: 146, 198–200).

Avigad's excavations in the Jewish Quarter uncovered the Byzantine *cardo* measuring 12.5 m wide, paved with flagstones, and flanked on each side by colonnaded porticoes. See Fig. JER.12. Avigad, excavating only the S part of the street, found pottery sealed beneath the pavement as stratigraphic evidence for its Byzantine date. The Roman *cardo* has not been found, but it is assumed that the same street plan existed in Roman times. One day, there may be archaeological evidence that the N part of the street was constructed in the Roman period.

The numerous architectural remains uncovered by Avigad have been reconstructed and incorporated into the newly-rebuilt Jewish Quarter, destroyed between 1948 and 1967. The pattern of Byzantine Jerusalem as reconstructed by archaeology conforms well to the 6th century C.E. Madeba mosaic map depicting the arcaded *cardo* running from the Damascus gate S to the area of the Zion gate. The map also portrays several Byzantine churches, including the Church of the Holy Sepulchre and the Nea.

In the 5th century, Jerusalem expanded both to the N and S. The present-day St. Stephen's convent (Ecole Biblique et Archéologique Française), just N of the Damascus gate, marks the site of a church erected by the empress Eudocia in 460 as a repository for the relics of Stephen, the first Christian martyr. In 438, Empress Eudocia permitted Jews to live in Jerusalem.

In the 6th century the emperor Justinian, a great builder, erected the Nea (New Church). Dedicated in 543 to the Virgin Mary, it was destroyed by earthquake in 746, and never rebuilt. In 1970, Avigad uncovered the foundations of this church in the Jewish Quarter; he also discovered a Greek inscription mentioning Justinian and indicating the date of the church's consecration. In 614, the Persian army conquered Jerusalem, destroyed most of the churches, and expelled the Jews (Avi-Yonah 1976: 269).

3. Early Arab. From 638, when Byzantine Jerusalem surrendered to Caliph Omar, until the beginning of the Crusader period in 1099, Jerusalem was ruled by the Muslims. Jews were readmitted to Jerusalem and received favorable treatment, being permitted to build synagogues and religious schools (Peters 1985: 186). Jerusalem, known among Muslims as el-Quds, "the Holy" (Isa 52:1), ranks third, after Mecca and Medina, among the holiest cities in Islam. Jerusalem has never been the political or administrative capital of the Muslims; its importance for Islam is completely religious.

Although the Umayyad caliphs resided in Damascus, they supported an impressive building program in Jerusalem. Mazar uncovered the remains of a magnificent Umayyad palace S of the Temple enclosure. The complex consisted of six impressive buildings reflecting superior planning and architecture. The Umayyads established Jerusalem as a Muslim religious center. The Dome of the Rock (Qubbet es-Sahra), the octagonal shrine (not a mosque) on the Temple Mount, was completed in 691. Intended to instill pride in Muslims, it was built to protect the holy rock beneath, whence its name (Rosen-Ayalon 1975: 92). According to tradition, it is the rock where Abraham was prepared to sacrifice Isaac (Gen 22:1–19), the site of the threshing floor of Araunah where David built an altar (2 Sam 24:15–25), and the place from which Muhammad ascended to heaven on the steed Buraq. The silver-domed prayer mosque at the S edge of the Temple platform is the el-Aksa Mosque. Meaning "the furthermost," this mosque may have been intended to commemorate the farthest point of Muhammad's mystic "Night Journey" whence he ascended into heaven.

During the rule of the Abbasids, who were tolerant toward non-Muslims, Jerusalem declined. The Fatimid period, too, was a time of decline for Jerusalem. The eccentric Fatimid Caliph al-Hakim persecuted Jews and Christians, and ordered the destruction of Christian shrines, including the Church of the Holy Sepulchre.

4. Crusader. Jerusalem experienced a century of Crusader rule. After a five-week siege, including the massacre of Jews and Muslims, the Christians under Godfrey de Bouillon conquered Jerusalem in 1099. Jerusalem became the capital of the Crusader kingdom, called the Latin Kingdom of Jerusalem, until 1191 when it was replaced by Acco (Acre). The population was about 30,000, the vast majority Christian. Because most of the population was of French descent, the language of Jerusalem was French. Jews and Muslims were not permitted to reside in Jerusalem. The Crusader period was a time of intense building. The architectural style was Romanesque with some early

JER.12. Byzantine *cardo* in the Old City of Jerusalem. The man at the top of the photograph provides a useful scale. Column bases along the main N–S thoroughfare were found *in situ*. To the right can be seen doorways into the small shops along the street's edge. *(Photograph by Z. Radovan, by permission, Biblical Archaeology Society Jerusalem Archaeology Slide Set)*

Gothic elements. An excellent example of Crusader architecture is St. Anne's Church, inside St. Stephen's gate. The present white-stone church in Romanesque style was built in 1140. The Crusaders also refurbished the Church of the Holy Sepulchre, completing it in 1149. The present-day facade of this church is much the same as it was in the 12th century. The Crusaders, renaming the Dome of the Rock "Templum Domini," converted it into a Christian church, and affixed a cross on its dome.

The Citadel ("Tower of David") on the W side of the Old City near the Jaffa gate was Jerusalem's principal fortification in this period, and also served as the headquarters for government and military officials. The Crusader city wall followed for the most part the line of the present wall. Excavations at the Damascus gate uncovered foundations of a Crusader gate beneath the present Turkish structure.

5. Later Arab. In 1187, the Crusaders surrendered Jerusalem to the formidable Kurdish general Saladin (Salah ed-Din), founder of the Ayyubid dynasty. He impressed a distinctive Islamic character on Jerusalem, restoring the Dome of the Rock and the el-Aksa Mosque. Under Saladin, who was a cultured and humane ruler, Jews and Eastern Christians were allowed to reside in Jerusalem. In 1212, Saladin's nephew, al-Malik al-Mu'azzam, rebuilt the walls of Jerusalem, only to dismantle them seven years later, fearing the Crusaders were about to regain a well-fortified city.

The Mameluke sultans defeated the Ayyubids and ruled Jerusalem from 1244 to 1517. Great builders and skilled craftsmen, the Mamelukes left their mark on the architectural design of Jerusalem; the Muslim character of present-day Jerusalem is directly traceable to them. Their principal concern was the religious meaning of Jerusalem for Islam; for this reason they gave special attention to mosques and madrasas (Muslim theological schools). The Mamelukes made Jerusalem the center of Islamic studies; at the same time Jerusalem deteriorated economically, and the population dwindled to about 10,000.

6. Ottoman. From 1517, when the Ottoman Turks began to rule Jerusalem from Istanbul after a peaceful takeover, Jerusalem was on the decline, with the residents of Jerusalem living in acute poverty. Between 1537 and 1541 Suleiman I (the Magnificent) rewalled Jerusalem, unwalled since 1219, to protect it from bedouin incursion. The present Ottoman walls of the city follow the course of the Hasmonean walls, founded on bedrock, and utilize parts of them. Suleiman I also rebuilt the "Tower of David" and the aqueduct which brought water from "Solomon's pools." The Ottoman Turks constructed the present-day seven gates of Jerusalem, built for the most part over the gates

of Roman times. The names of these gates have changed from time to time, and continue to do so. In 1542, Suleiman built the Damascus gate, a superb example of Ottoman architecture; known in Arabic as Bab el-Amud (gate of the column), it covered Hadrian's entryway of 135 C.E. After this flourish of building activity, Jerusalem underwent little development in the second half of the Ottoman Turkish era.

H. Theology

Jerusalem plays an important theological role in the OT and NT. The name Jerusalem occurs more than 650 times in the OT, especially in the historiographies (Samuel, Kings, Ezra-Nehemiah, Chronicles). With the exception of two possible references, it is absent from the Pentateuch, not having yet gained historical prominence in that period. Jerusalem appears frequently in the Psalms; also in the Prophets where there are some forty-nine occurrences in Isaiah, 102 in Jeremiah, twenty-six in Ezekiel, and eight in Micah. In the NT, Jerusalem appears more than 140 times, sixty-seven of which are in the Gospels, but never in the Catholic epistles.

1. Old Testament. The theological significance of Jerusalem in the OT is based on the divine presence symbolized in the ark of the covenant and the Temple. The holiness of the Temple and of Jerusalem rests on the presence of the ark; David's transfer of the ark inaugurated the cult of Yahweh in Jerusalem. By laying the foundation for the Temple, David made Jerusalem "the cornerstone of the religious and cultic unification of Israel" (Talmon 1974: 195).

The prophets, especially Isaiah, apply the name Zion to signify Jerusalem as the "City of Yahweh" (de Vaux 1969: 286). The uniqueness of Jerusalem can be summarized under the heading "Zion tradition," which comprises the following motifs: Yahweh, the great king, chooses Jerusalem as a permanent abode; Zion (not Sinai) as Yahweh's chosen mountain, located at the center of the world; the Gihon spring (Isa 41:17–18) as the miraculous stream flowing from the cosmic mountain; the pilgrimages of other nations to Jerusalem to acknowledge the sovereignty of Yahweh; and the inviolability of Jerusalem (Roberts 1973: 329). Jerusalem's deliverance from the siege of Sennacherib in 701 B.C.E. created the impression of the city's inviolability under all circumstances, thus reinforcing the Zion tradition.

Isaiah, vacillating between threat (1:7–9) and hope (2:2–4), believed that Jerusalem was inviolable because Yahweh dwelt in the city (de Vaux 1969: 292), but he modified this tradition by laying down conditions (1:19–20), requiring faith in Yahweh as a special condition for divine protection and salvation (7:9b). Nor did Isaiah hesitate to point out the sins of Jerusalem (3:8; 22:1–14; 28:14).

Micah and Jeremiah, convinced that Jerusalem would not be spared as a consequence of its sinfulness, denounced Judah's confidence in the inviolability of Zion. Micah's (3:12) shattering prediction that Jerusalem and the Temple would be reduced to rubble was repeated in substance a century later by Jeremiah, at the risk of his life (26:18–19), who opposed the belief that Jerusalem was invincible. Jeremiah also inveighed against the Judahites for considering the Temple an automatic assurance of divine protection, oblivious that such protection was contingent upon their own moral conduct (Jer 7:1–15).

Having indicted Jerusalem for apostasy, the prophets predicted that its inhabitants would be called to account. However, inasmuch as Yahweh's purpose is not to annihilate, Jerusalem was to be rebuilt on the faithful remnant. In contrast to the words of doom, the prophets of the exile proclaimed hope of restoration. Jeremiah described the rebuilding of Jerusalem and its walls (30:18–19; 31:38–39). Ezekiel, who considered Jerusalem the center of the nations (5:5; 38:12), saw the glory of Yahweh returning to the Jerusalem Temple. Deutero-Isaiah describes the "new Jerusalem" (40:1–2; 52:1, 7–8) in words of consolation and hope, reflecting belief in the future greatness of Jerusalem as the center of the nations (chaps. 60–62). For Haggai (2:6–8) and Zechariah (8:3–8), the rebuilding of the Temple was the fulfillment of this hope.

2. New Testament. Among the Synoptic Gospels, Luke gives far more prominence to Jerusalem than Matthew or Mark. The fact that geography plays an important role in Luke's theology may account for the gospel's preoccupation with Jerusalem (Fitzmyer, *Luke I–9* AB, 163–69). Jerusalem is "the city of destiny for Jesus and the pivot for the salvation of mankind" (Fitzmyer, *Luke I–9* AB, 164). Jesus has a special relationship to Jerusalem, which is the goal toward which he moves throughout the gospel.

Luke's gospel begins (1:9) and ends in the Temple of Jerusalem (24:53). Between these two Temple events, according to Luke, Jesus makes but one journey to Jerusalem, described in the so-called travel account (9:51–19:27). Within this account, there are several references to Jerusalem as the objective of the journey (9:51–53; 13:22; 17:11; 19:11). In the course of the journey, Jesus addresses an apostrophe to Jerusalem (Luke 13:34–35 = Matt 23:37–39), the place of the prophets' martyrdom, and where he, too, must suffer and die (Luke 13:33; Matt 16:21). Mark, too, describes only one journey to Jerusalem, whereas John mentions three. In Luke, the journey to Jerusalem assumes great importance by serving as the geographical framework for much of the material found only in this gospel; Luke alone, for example, recounts the story of the Good Samaritan (10:29–37). Appearing after the travel account, Jesus' prophecy concerning the destruction of Jerusalem (19:43–44), couched in the language of the prophets (Isa 29:3; Jer 6:6; Ezek 4:2), is exclusive to Luke.

The Jerusalem Temple, too, is prominent in Luke. Jesus is presented in the Temple (2:22–23), he makes his first pilgrimage to Jerusalem and the Temple at the age of twelve (2:41–50); Jesus cleanses the Temple (19:45–46), an event reported in the four Gospels (= Matt 21:12–13; Mark 11:15–17; John 2:14–16), whose purpose may have been to emphasize that the Temple was principally a place of prayer, and not a financial or economic institution (Wilkinson 1978: 117).

Jesus' mission, including the passion, resurrection and ascension, is brought to completion in Jerusalem (24:50). In contrast to Matthew, Luke locates all the appearances of the risen Christ to the disciples in the vicinity of Jerusalem (24:13–53); they are also instructed to remain in Jerusalem (Luke 24:49).

Mark's gospel can be divided into three geographical

sections: Galilee, the journey to Jerusalem, and Jerusalem itself. It is called the "Galilean gospel" because of Galilee's theological significance as the place of the imminent parousia. In Mark, Jerusalem is mentioned only a few times, outside the passion narrative. This gospel, often called the gospel of the passion, records several of Jesus' predictions of his death in Jerusalem (8:31; 9:31; 10:32–34).

Matthew's gospel, beginning with the infancy narrative, contains several references to Jerusalem. Jerusalem is called the "holy city" (4:5; 27:53); Jerusalem is also described as the "city of the great King" (5:35), given as the reason for not swearing by Jerusalem. Matthew (27:51 = Mark 15:38; Luke 23:45) refers to the curtain of the Jerusalem Temple being torn at the crucifixion, an indication of the new source of salvation in Jesus.

In John, the centers of Jesus' ministry are Galilee and especially Jerusalem, although Jerusalem is not mentioned in the passion narrative. John states explicitly that Jesus taught in the Temple (7:14). Jesus told the woman of Samaria, according to John, that the proper place of worship would be neither on Mount Gerizim nor in Jerusalem (4:21). In this gospel the glorified body of Jesus ultimately replaces the Temple.

John refers explicitly to two places in Jerusalem connected with Jesus' miraculous cures. One is a "pool, in Hebrew called Beth-zatha, which has five porticoes" (5:2), where Jesus cured a man who had been lame for thirty-eight years. Beth-zatha was a suburb immediately to the N of the Temple area, near the present-day Crusader church of St. Anne; there, a pool was discovered and excavated, and the five porticoes verified. Successive structures had been built over the ancient pool, including a pagan sanctuary after 135 C.E., a Byzantine church of the 5th century, as well as the Crusader church of the 12th century. On the combined basis of the NT, the ancient tradition, and the excavation, archaeologists attach a high degree of probability to the identity of the twin pool of St. Anne as the sheep pool of John 5:2 (Jeremias 1966: 38).

The second specific place in Jerusalem cited by John is the pool of Siloam (a later, Gk form of *šiloaḥ*), where Jesus instructed the blind man to wash (9:7). Mentioned also in Isa 8:6, *šiloaḥ* refers to a reservoir supplied with water from the Gihon spring by means of a canal. The pool of Siloam is located at the S end of the E hill, near where the Kidron and Tyropoeon valleys converge. In Isa 8:6, *šiloaḥ* refers to the aqueduct in use during Ahaz's reign, prior to the construction of Hezekiah's tunnel.

The geographical link between Luke and Acts is Jerusalem (Luke 24:47; Acts 1:8; 5:28; 6:7), whence the preachers of the gospel set out. Jerusalem is also the element unifying Jesus and the primitive community (Acts 10:39; 13:27, 31). According to Acts, the disciples remained in Jerusalem, as Jesus commanded (1:4, 12); there, they received the Spirit at Pentecost (2:1–47), and the preaching of the gospel begun in Jerusalem spread "to the end of the earth" (Acts 1:8). The church in Jerusalem assumed the leading role (8:14–16; 11:1–18) in the activities of the early church, and decisions were made in Jerusalem for the church at large (Acts 15:1–35; Gal 2:1–10).

Stephen's discourse on the differences between Judaism and Christianity, delivered in Jerusalem before the supreme council of the Jews (Acts 7), is the most negative passage in the NT on the religious practices associated with the Jerusalem Temple (6:11–15; 7:48). Christianity emerged only gradually from the matrix of Judaism; Stephen's speech, making him Christianity's first martyr, marked the emergence of Christianity as a distinctive sect.

In the context of Stephen's speech Paul, still named Saul, appears for the first time. Before his conversion he had persecuted the church in Jerusalem (Acts 9:13, 21). Afterwards, he acknowledged Jerusalem as the origin of the gospel (Rom 15:19). However, according to Gal 1:18–20, Paul went up to Jerusalem only three years after his conversion, and according to Acts (22:17–21), it was there, in the temple, that he received his commission to preach to the gentiles.

The eschatological expectations of Judaism and Christianity regarding Jerusalem and the Temple are quite different.

Both Jewish and Christian literature describe Jerusalem in metaphorical and eschatological terms. Some Jewish writers envisioned a new, restored, earthly Jerusalem in the end times (Tob 13:9–18; *2 Bar.* 32:2–4; *Test. Dan.* 5:12). Some Jewish and Christian apocalyptic texts looked forward to a new, perfect Jerusalem that would descend from heaven to earth (*4 Ezra* 7:26; 10:25–54; 13:36; Rev 3:12, 21:2–22:5). In Rev 3:12 "the new [transformed] Jerusalem which comes down from my God out of heaven," a metaphor for the Christian community, anticipates the more lengthy description in Rev 21:1–22:5.

Other Jewish and Christian literature utilize apocalyptic imagery to describe a perfect Jerusalem in heaven to which the just ascend (*2 Bar.* 4:1–7; *4 Ezra* 8:52; *4 Bar.* 5:35; Heb 12:22). In Heb 12:22–24 "the heavenly Jerusalem" is the place of the new covenant sealed through the blood of Jesus.

Allegorizing on the two sons of Abraham, Ishmael by the slave woman Hagar and Isaac (a type of the Christian) by the free woman Sarah (Gal 4:24–26), Paul contrasts sharply "the present Jerusalem" and "the Jerusalem above." He does not make the contrast between "the present Jerusalem" and "the future Jerusalem." In the allegory, the existing Jerusalem is equated with earthly Sinai, but then the earthly Jerusalem is transformed to the heavenly Jerusalem. Hagar symbolizes "the present Jerusalem," and Sarah symbolizes "the Jerusalem above." For the Christian, God's dwelling is no longer "the present Jerusalem," nor is "the present Jerusalem" the real mother; "but the Jerusalem above is free, and she is our mother" (Gal 4:26).

PHILIP J. KING

JERUSALEM, COUNCIL OF. This conference (also called "the Apostolic Council") designates the meeting at Jerusalem of leaders of the early Church to discuss the implications of preaching a gospel of grace among the gentiles.

A. Historical Considerations

The historical questions surrounding the meeting are formidable. In Gal 2:1–10 Paul gives an account of the conference, which occurred on his second visit to Jerusalem following his "conversion." He, together with Barnabas and Titus, went "by revelation" to discuss the message he had been preaching among the gentiles. James, Peter, and John are the Jerusalem apostles specifically mentioned as present and in a private meeting "added nothing" to Paul's gospel. The Jerusalem apostles asked only that Paul

and his colleagues "remember the poor," probably a reference to the offering Paul solicited for the Jerusalem saints. Another result of the meeting was an agreed-upon division of labor, which gave the Jerusalem leaders responsibility for the circumcised and Paul and his colleagues responsibility for the gentiles. Apparently, there was a third group present at Jerusalem (called by Paul "false brothers"), who tried unsuccessfully to force the circumcision of Titus.

The historical problems arise in the effort to connect Paul's account to the information found in Acts. Acts mentions five visits of Paul to Jerusalem (9:26–30; 11:27–30 and 12:25; 15:1–30; 18:22; 21:17–23:31). The question is: Which account (or accounts, if any) parallels Gal 2:1–10? A number of solutions have been proposed.

1. Acts 11:27–30; 12:25 Parallels Gal 2:1–10. Paul and Barnabas are commissioned by the Church at Antioch to carry the funds for famine relief, and while in Jerusalem, it is argued, they reach a private agreement with the leadership regarding the admission of gentiles to the church (Lake 1933: 445–74). Sometime after this meeting, the dispute between Peter and Paul over table-fellowship occurs at Antioch (Gal 2:11–14), precipitating a second, more public conference at Jerusalem (Acts 15:1–30). The major difficulties with this proposal are the silence of Acts regarding a private meeting at the time when the funds for famine relief are brought and the silence of Galatians regarding a third visit of Paul to Jerusalem.

2. Acts 15:1–30 Parallels Gal 2:1–10. This represents the most widely held proposal and rests on the fact that the persons, the locations, and the issues are the same in both accounts (Lightfoot 1914: 123–28; Hengel 1986: 111–26). The problem with this solution is the insistence on the so-called apostolic decree in the Acts account ("that you abstain from what has been sacrificed to idols and from blood and from what is strangled and from unchastity," 15:29), which, if actually agreed to by Paul, would invalidate his argument in Galatians. The decree may have come later, after the conference, as a compromise achieved without Paul to restore the broken fellowship between Jewish and gentile Christians.

3. Acts 15:1–4, 12 Parallels Gal 2:1–10. This proposal argues that Acts 15:1–30 actually reflects two conferences, which have been confusingly merged by the author into one. Acts 15:1–4, 12 reports a first conference to answer whether gentiles had to be circumcised to unite with the Church. Paul was present at this meeting and provided his account in Gal 2:1–10. A second conference was held at Jerusalem (Acts 15:5–11, 13–33) to deal with the issue of table-fellowship between Jewish and gentile Christians. Paul was absent from this second conference and thus was not a party to the "apostolic decree" (Weiss 1959: 259–73). The primary difficulty with this third proposal is that Acts 15 does not read like the confluence of two accounts of separate meetings.

4. Acts 18:22 Parallels Gal 2:1–10. The proposal is made that the meeting recorded in Acts 15:1–30 actually takes place later (at 18:22), when a brief note is made of Paul's greeting the church at Jerusalem. At this visit Paul is asked to "remember the poor," a request which he responds to not long after by soliciting gifts from Christians in Corinth and in Rome. The council must have immediately preceded the writing of 1 and 2 Corinthians and Romans (Knox 1950: 61–73; Lüdemann 1984: 149–57, 195–200). This explanation depends heavily on a Pauline chronology derived exclusively from his letters.

5. Acts 11:1–18 Parallels Gal 2:1–10. A recent proposal postulates the presence of Paul at the discussion recorded in Acts 11:1–18 when Peter silences the criticisms of "those of the circumcision." The writer of Acts is unaware that Paul and the Jerusalem leaders had a private meeting on this occasion, but the Pauline account is found in Gal 2:1–10. After Peter and Paul have left Jerusalem to engage in further missionary activity, James is pressured by the more conservative Jewish forces in the Church into a second conference at which time the "apostolic decree" is issued, representing a dramatic compromise. Acts 15:1–30 mistakenly records Peter and Paul as present at this second conference (Achtemeier 1987: 44–55). The obvious difficulty with this proposal lies in the speculative suggestion that Paul was present at the occasion of Peter's speech in Acts 11:1–18.

What can be said about the complexity of the historical problems surrounding the council and the variety of proposed solutions? Since Gal 2:1–10 represents the firsthand recollections of a participant at the conference and the Acts material is secondhand, historical priority must be given to Gal 2:1–10 as the normative account. Of the five visits to Jerusalem in Acts, the one mentioned in 15:1–30 seems to resemble most closely Gal 2:1–10 in personnel, structure, issues, and the basic agreement that circumcision is unnecessary for the admission of gentiles to the Church. Whether the visit should come later in the Acts chronology, perhaps at the time of the visit of 18:22, is beyond the scope of this study.

How then is one to explain the difficulties with the Acts 15:1–30 account, which represents sharp differences from the report in Gal 2:1–10? The Acts account is woven carefully into a larger narrative through which the writer addresses a prophetic word to the readers. The writer's intention (as revealed in the narrative) is not to chronicle historical events but to trace the activity of the divine Spirit in the life of the Church and the movement of the Church as a predominantly gentile group "to the end of the earth." Historicity is not the primary criterion by which the narrative is to be judged. Acts 15:1–30 seems to represent a critical reshaping of sources in order to support the theological purposes of the larger narrative, with its concern for the unity and mission of the Church.

B. Literary and Theological Considerations

Both Gal 2:1–10 and Acts 15:1–30 play crucial roles, respectively, in their literary contexts.

1. Gal 2:1–10. Paul argues at the beginning of Galatians that there is but one gospel, which exercises supreme authority in the life of the Church (1:6–9). The power of this gospel is evidenced in the remarkable transformation which it precipitated in Paul's own experience, a transformation confirmed by the testimony of the Judean Christians (1:22–24). Then comes the report of the Jerusalem Council (2:1–10) through which the Galatian readers discover that the gospel is not idiosyncratically Paul's, but is agreed to by the pillar apostles at Jerusalem. The mission to the gentiles in which the Christian message is offered

free of the legal demands of circumcision is not to be seen as a sectarian movement. At the heart of the council's decisions is the mutual recognition of a mission to the gentiles and a mission to the Jews, both empowered by the one gospel of grace. The ensuing report of the conflict between Peter and Paul at Antioch (2:11–14), given of course from Paul's perspective, merely reiterates that the gospel alone can provide the bond for Christian unity. Readers in the Galatian communities learn that Peter's action in withdrawing from table-fellowship with gentiles *de facto* establishes something other than grace as the basis for unity. Later chapters elaborate the character of the gospel in terms of the righteousness of God manifested in the faithful death of Jesus Christ.

2. Acts 15:1–30. The Jerusalem Council is presented as a response to a dispute at Antioch, which takes place when visiting Judeans insist on circumcision as essential for salvation. Paul and Barnabas, as commissioners from Antioch, report on their mission among the gentiles and are opposed by believers from among the Pharisees. Two speeches are recorded. Peter's speech (15:5–11) serves to link the council to his previous vision at Joppa and his baptism of Cornelius (10:1–11:18) and to make him rather than Paul the precedent-setter for the mission to the gentiles. James' speech (15:13–21), citing Scripture, represents a compromise: no demand that gentiles be circumcised but adherence to the "apostolic decree." A letter embodying the compromise is then drafted for the church at Antioch, which in turn receives it with joy.

The council represents a critical turning point in the Acts narrative since the focus shifts from Peter to Paul, from Jerusalem to Ephesus, the Grecian cities, and Rome. The shift is a smooth, not an abrupt one. Continuity is maintained, and the compromise signals that the law continues to have significance for the lives of both Jewish and gentile Christians.

CHARLES B. COUSAR

JERUSHA (PERSON) [Heb *yĕrûšā*ʾ]. Var. JERUSHAH. Mother of Jotham, King of Judah (2 Kgs 15:33 = 2 Chr 27:1). Her name means "the inherited one" (Stamm 1967: 327). According to Jotham's regnal formula, Jerusha was the daughter of Zadok. Although the Lucianic text adds that she was "from Jerusalem," the Masoretic Text gives no place of origin for her father. This silence may indicate Zadok was well known to the readers (i.e., from the priestly line in Jerusalem). However, not all Judean regnal formulas identify the father's home (cf. Maacah, Azubah, and Abi). The absence of Zadok's home in the MT may simply reflect the writer's faulty source materials. The account in Chronicles preserves a variant spelling of Jerusha's name (Heb *yĕrûšâ*). See also JOTHAM; QUEEN; ZADOK.

LINDA S. SCHEARING

JESHAIAH (PERSON) [Heb *yĕšaʿyāh*]. Six individuals in the OT bear this name which may also be rendered "Isaiah" and means "Yahweh has saved." This name also appears in a Hebrew inscription from Palestine (Diringer 1934: 209), and it should be compared with *Ia-še-*ʾ*-ia-a-ma* (Tallqvist 1905: 68) from Babylon in the time of Cyrus (see Coogan 1976: 52–53 on *ia-a-ma* as the Babylonian equivalent of final *yhw* in Hebrew personal names). It is rendered variously in Gk: in 1 Esdr 8:33 (see #4 below) *Iesias* (LXX^{A} *Iessias*) and in 1 Esdr 8:47 (see #5 below) *Osaias.*

1. The second son of Hananiah the son of Zerubbabel named in 1 Chr 3:21 in a list of the descendants of David.

2. The third of six musicians of the family of Jeduthun named in 1 Chr 25:3 in the context of the Chronicler's presentation of the twenty-four divisions of the singers (1 Chr 25:1–8). In the subsequent list of the divisions by lot (1 Chr 25:9–31), Jeshaiah and his family are accorded the status of eighth among the twenty-four.

3. The son of Rehabiah (1 Chr 26:25) and a member of the levitical family responsible for the care of the "dedicated gifts"—here the spoils of war (see esp. vv 26–27)—in the temple treasuries.

4. Jeshaiah the son of Athaliah is named in Ezra 8:7 (= 1 Esdr 8:33) as the head of the lay family of Elam who returned from Babylon with Ezra. A considerably larger contingent of this family had returned earlier with Zerubbabel (cf. Ezra 2:7; Neh 7:12).

5. A Levite recruited from Casiphia to join Ezra in his return to Jerusalem (Ezra 8:19 = 1 Esdr 8:47). The designation "of the sons of Merari" is curious, since the Levites mentioned in the previous verse would also have been Merarites, as Mahli was a son of Merari (e.g., 1 Chr 6:4—Eng 6:19). Thus there is no evident distinction between these two groups in the text as it stands. 1 Esdr 8:47, however, reads *ʾek tōn uiōn Xanounaiou* which might represent Heb *kĕnānî,* Chenani of Neh 9:4 (Rudolph *Esra und Nehemia* HAT, 81).

6. An ancestor of Sallu, the head of a Benjaminite clan who lived in Jerusalem at the time of Nehemiah (Neh 11:7; he is not named in the parallel genealogy in 1 Chr 9:7–9, which is set in the time immediately following Zerubbabel's return). It may be that this genealogy derives from the time of Nehemiah (Clines *Ezra, Nehemiah, Esther* NCBC, 212, following Rudolph *Esra und Nehemia* HAT, 185), though it has also been proposed that it is preexilic (Kellermann 1966).

J. S. ROGERS

JESHANAH (PLACE) [Heb *yĕšānâ*]. A town named in the Chronicler's account of the defeat of the N Israelite king Jeroboam I by the S Judean king Abijah. Jeshanah is mentioned with Bethel and Ephron as cities which Abijah captured (2 Chr 13:19). Albright (1922: 125–26) identified the site as modern Burj el-Isāneh (M.R. 174156), near Bethel and 17 miles N of Jerusalem (McCarter *1 Samuel* AB, 146); that is, on the border between Israel and Judah following the division of the kingdom. The RSV emends the place called "Shen" (Heb "the Crag") in the MT of 1 Sam 7:12 to read "Jeshanah" on the basis of the Targum, which has *yšn,* and the LXX, which has *tēs palaias* (like the Heb *yĕšānâ,* a name meaning "the old [place]"). The story in 1 Samuel concerns the defeat of the Philistines at Mizpah and Ebenezer, both in this same area. Josephus (*Ant* 14.15.12) also mentions an "Isanas" as the headquarters of the general Pappas who was defeated there by Herod the Great.

JEFFRIES M. HAMILTON

JESHARELAH (PERSON) [Heb *yĕśar'ēlâ*]. See ASHARELAH (PERSON).

JESHEBEAB (PERSON) [Heb *yešebĕ'āb*]. A priest who received the fourteenth position in the priestly order of the Temple during David's reign (1 Chr 24:13). 1 Chronicles 24 is the only place where Jeshebeab appears in the OT. Therefore, an evaluation of the historical reliability of his appearance depends upon the literary context of 1 Chr 24:1–19. See GAMUL. However, the stylistic characteristics seem to link the list to the time of the composition of Chronicles. Jeshebeab may represent a Judean individual or priestly family in the late Persian period that the Chronicler has retrojected into the reign of David.

JOHN W. WRIGHT

JESHER (PERSON) [Heb *yēšer*]. A son of Caleb listed in the genealogy of Judah (1 Chr 2:18).

H. C. Lo

JESHIMON (PLACE) [Heb *yĕšîmôn*]. A "desert" or "wasteland"; used in the OT for both desert areas in general (Deut 32:10; Isa 43:19, 20; Psalms 68:7; 78:40; 106:14; 107:4) and specific locations (Num 21:20; 23:28; 1 Sam 23:19, 24; 26:1, 3).

1. The rugged barren band of land parallel to the Dead Sea in the E Judean hill country, also referred to as the Judean Wilderness (Baly and Tushingham 1971: 12, 112; Maps 20:E3, XIII:C6; *MABL:* 20, Map 3), though it has also been identified more specifically with the area NW of the Dead Sea (*IDB* 2: 245). OT sites near Jeshimon included the hill of Hachilah (1 Sam 23:19; 26:1, 3) and the wilderness of Maon (1 Sam 23:24). Because of the rapid descent to the Dead Sea and the extremely limited annual rainfall, Jeshimon was "a desolate and dangerous region" (Baly 1987: 52). This combination of characteristics also made it a place of refuge for those who sought protection: Jeshimon provided sanctuary for David as he attempted to evade Saul (1 Sam 23:19, 24; 26:1, 3).

2. A wasteland located N and E of the Dead Sea (*IDB* 2: 245) that could be seen from the top of Mt. Pisgah (Num 21:20) and Mt. Peor (Num 23:28). Beth-jeshimoth (Num 33:49), meaning "house of waste lands," was probably located in this region, since the name is descriptive of the type of soil in the area around the site (*LBHG,* 109). Jeshimon was perhaps traversed by "the way of Beth-jeshimoth" (Josh 12:3), one of three major roads that ascended out of the Jordan valley to the highlands of the Transjordan (*LBHG,* 61–62).

LAMOINE F. DEVRIES

JESHISHAI (PERSON) [Heb *yĕšîšay*]. A Gadite mentioned only in 1 Chr 5:14. His name probably is cognate with the Hebrew adjective *yāšîš* ("aged, decrepit") and may have meant "venerable." Neither Jeshishai nor the others named in the Chronicler's genealogy for Gad (1 Chr 5:11–17) appear in other lists of Gadites (Gen 46:16; Num 26:15–18; 1 Chr 12:9–16—Eng 12:8–15).

M. PATRICK GRAHAM

JESHOHAIAH (PERSON) [Heb *yešôḥāyāh*]. A descendant of Simeon (1 Chr 4:36), described as one of the "princes in their families" (1 Chr 4:38). The name may mean "humbled by Yahweh." In the LXX the name appears as *Iasouia* (*Isuaia* in the Vg). The name Jeshohaiah, along with the names of the other Simeonite princes, is not found in any of the genealogies assigned to this patriarch. Nevertheless, in view of 1 Chr 4:42, Jeshohaiah and the others were probably part of the tribe of Simeon (Williamson *Chronicles* NCBC, 62).

CRAIG A. EVANS

JESHUA (PERSON) [Heb *yēšûa'*]. Var. JOSHUA. A common personal name associated with several figures, especially in the postexilic period.

1. A priest allotted the ninth priestly course at the time

of David (1 Chr 24:11); possibly the ancestor of the house of Jeshua in Ezra 2:36 (= Neh 7:39 = 1 Esdr 5:24).

2. A priest or a Levite assisting a leading Levite with distributing temple offerings to priests in their towns in the aftermath of Hezekiah's Passover and reforms (2 Chr 31:15).

3. An alternate spelling for Joshua son of Nun in Neh 8:17. Neh 8:17 recalls this successor of Moses during the celebration of the Feast of Booths by the returning Judeans in Ezra-Nehemiah, possibly in order to link this occasion with the covenant renewal ceremony in Joshua 24 (Blenkinsopp *Ezra-Nehemiah* OTL, 292).

4. A name designating a family ("children of Jeshua") who returned from exile in the wave led by Zerubbabel and Jeshua son of Jehozadak (Ezra 2:6 = Neh 7:11 = 1 Esdr 5:11). Ezra-Nehemiah implies that this return followed directly Cyrus' declaration. Historical reconstruction indicates that the return occurred later, during Darius' reign (ca. 522 B.C.E.). This family is connected with another clan, Pahath-moab. Syntactical ambiguity in the text prevents one from ascertaining the precise nature of this connection. The RSV resolves the ambiguity by translating: "The sons of Pahath-moab, namely the sons of Jeshua and Joab" (Ezra 2:6). Jeshua is also related to Joab (Ezra 2:6 = Neh 7:11 = 1 Esdr 5:11). Together these families comprise the largest unit among the returning exiles (2812 according to Ezra 2:6 and 1 Esdr 5:11; 2818 according to Neh 7:11).

5. Head of a Levite family mentioned first among the few Levites (seventy-four) in the list of returned exiles (Ezra 2:40 = Neh 7:43 = 1 Esdr 5:26). He may be the Jeshua supervising the construction of the Temple (Ezra 3:9 = 1 Esdr 5:56—Eng 5:58). Presuming that the same individual is intended in a number of references, we can surmise that this Jeshua must have been prominent in the postexilic era. He appears in several significant events in Ezra-Nehemiah: as one of the Levites who help Ezra explicate the Torah during the great assembly (Neh 8:7 = 1 Esdr 9:48), as one of the leaders of community prayer (Neh 9:4–5), and as one of the signatories to the pledge (Neh 10:9, where he is identified as son of Azaniah). The name recurs also in the recapitulation of the names of leading Levites (Neh 12:8, 24).

Jeshua appears often with Kadmiel, Bani, and Hodaviah, although the nature of their relation remains unclear. A slight emendation of Neh 9:4 opens the possibility that the latter three were Jeshua's sons (see Williamson *Ezra, Nehemiah* WBC, 26). Possibly he was also the father of Ezer, a ruler of Mizpah, who helped build the wall (Neh 3:19).

6. Jeshua son of Jehozadak. The leading priest in the early Second Temple Period (especially 520–515 B.C.E.), who supervised the building of the temple and the reestablishment of religious and political life in Judah after the exile. Father of Joiakim (Neh 12:10).

Jeshua son of Jehozadak is named "Joshua" in Haggai and Zechariah (e.g., Hag 1:1) and "Jeshua" in Ezra-Nehemiah (e.g., Ezra 2:1). According to Haggai, he was instrumental in building the Second Temple (516 B.C.E.). Zechariah's visions describe ceremonies that purify Jeshua and empower him with certain emblems of authority and prerogatives previously reserved for kings. Ezra-Nehemiah and the parallels in 1 Esdras portray Jeshua as one of the leaders of the return from exile and attribute to him an important role in building the altar, restoring cultic practices, and initiating the building of the temple. Sir 49:12 also connects him with the restoration of the temple.

Surprisingly, given his outstanding priestly role, Jeshua never appears in any of Chronicles' genealogies. His father Jehozadak's genealogy (1 Chr 5:27–41—Eng 6:1–15), however, traces the prominent priestly line which includes Seriah (who was slaughtered by the Babylonians; see 2 Kgs 25:18–21), through Eleazar to Aaron. Jehozadak himself was exiled to Babylon by Nebuchadnezzar. Jeshua was presumably born in Babylon and came to Judah with Zerubbabel and a large contingent of Judeans (Ezra 2 = Neh 7 = 1 Esdr 5) shortly after Darius 1 ascended to the Persian throne (522 B.C.E.). The similarities between Jehozadak's genealogy (1 Chr 5:27–41—Eng 6:1–15) and Ezra's pedigree (Ezra 7:1–5) suggest that Jeshua and Ezra were close kinsmen, but extant biblical sources do not link their names (an omission especially striking in Ezra-Nehemiah).

a. Jeshua's Role. Haggai and Zechariah refer eight times to Jeshua son of Jehozadak the high priest (literally "the great priest")—a title relatively rare in the Hebrew Bible. References to (anonymous) high priests appear in Numbers and Joshua in connection with future cities of refuge. Only two individuals are so designated in preexilic Judah: Jehoiada (2 Kgs 12:11—Eng 12:10) and Hilkiah (2 Kings 22 and 2 Chronicles 34). Although Hilkiah was important and the one responsible for the discovery of the book of the Torah (621 B.C.E.), he nevertheless was subordinate to his king, Josiah.

Jeshua clearly exemplifies a new role for high priests. No preexilic high priest possesses his power and prominence. Biblical sources attach to Jeshua unprecedented religious and civil authority and signal a redefinition of spheres of control. With Jeshua, a diarchic structure of a (high) priest and (Davidic) governor replaces a preexilic subordination of priesthood to royalty. Jeshua's elevation initiates a theocratic authority that will continue to dominate much of the Second Temple period until 70 C.E.

Reasons for the extended powers of Jeshua as high priest can be sought in the radically changed conditions under Persian control. The Judean community urgently needed to restructure religious and political life. The trauma of captivity and the new circumstances of semi-autonomy without a local, indigenous monarchy called for new measures. It became necessary, for example, to reestablish a ritually proper cult after defilement by destruction and exile. Jeshua figures prominently in the resolution of these problems.

Jeshua, together with Zerubbabel, provided the necessary leadership for building the Temple in Jerusalem and restoring the cult (e.g., Ezra 3). The Temple in Jerusalem, no longer overshadowed by a local palace, became the economic—not merely cultic—center. It has been postulated therefore that Jeshua, as high priest, controlled internal fiscal matters for the province of Judah, whereas the governor Zerubbabel's role was more clearly defined by obligations to Persia (Meyers *Haggai, Zechariah* AB, 220–21).

b. Jeshua According to Haggai. Haggai presumes a pattern of diarchic leadership and addresses Jeshua and

Zerubbabel almost always together, each with his full title ("Joshua son of Jehozadak the high priest" Hag 1:1). He urges them (and the rest of the people) to build the Temple and have courage and notes their responsiveness. The address to Zerubbabel alone at the end of Haggai (Hag 2:21) could imply, however, that Haggai considered him relatively more important than Jeshua.

c. Jeshua According to Zechariah. Whereas Haggai presumes a diarchic structure, Zechariah articulates and grounds this new pattern theologically and pragmatically. Zechariah uses symbolism, visions, and oracles, some of which depict the purification and crowning of Jeshua. Zechariah 3 envisions Jeshua in a divine assembly where his filthy garments are replaced through divine command. Yahweh removes his transgression and a purified headgear is placed upon his head. This ceremony expresses a divine mechanism that permits the priesthood in general and Jeshua as high priest in particular to resume the functions of their holy office after the contamination of the exile (cf. a different process in Ezek 44:15, where some priests have remained faithful and hence ritually pure). Oracles develop the vision by bestowing upon the newly purified Jeshua further responsibilities, some of which had hitherto been royal prerogatives (e.g., an expanded role in administering justice, Zech 3:7). Jeshua and his fellow priests are also promised access to the heavenly court, a privilege normally associated with prophets (Meyers *Haggai-Zechariah* AB, 190–99). The Davidic ruler is not eliminated, but the power spheres have been redefined. Unprecedented authority is bestowed upon the priest and a theocratic form of government receives its imprimatur.

Another vision depicts two anointed (Zech 4:1–14, esp. 14), one of whom is presumably Jeshua and the other Zerubbabel, reiterating the diarchic pattern of Haggai.

Jeshua's investiture with royal emblems are proclaimed in an oracle. Zechariah is instructed by God to crown Jeshua (Zech 6:9–15) and to announce that the priest will have a seat besides that of a Davidic descendant. Royal imagery bestowed on Jeshua is so startling that many scholars have concluded that Zerubbabel, not Jeshua, had originally been named in the text to be replaced by Jeshua at a later point because of controversies concerning Zerubbabel. The received text, however, explicitly names Jeshua. Diarchic understanding of Judahite rule characterizes Zechariah. The fact that Jeshua is vested with great authority throughout this book eliminates the need to emend the text (Meyers *Haggai-Zechariah* AB, 351–52).

d. Jeshua According to Ezra-Nehemiah. Ezra-Nehemiah provides the most detailed narrative concerning actual (in contrast with Zechariah's symbolic) activities attributed to Jeshua. In Ezra-Nehemiah, Jeshua son of Jehozadak is a priest (not called high priest) who works in close partnership with Zerubbabel. Both men (together with nine others in Ezra 2:1 and ten in Neh 7:7) head the list of returnees. Together with members of the community they build the altar and establish the cult (Ezra 3). In the seventh month after their arrival (Ezra-Nehemiah does not specify the year), Jeshua and his brothers the priests and Zerubbabel and his brothers (presumably all nonpriestly returned exiles) build the altar and reestablish sacrifices and cultic procedures. This one occasion when Jeshua's name precedes Zerubbabel's in Ezra-Nehemiah suggests that Jeshua had the greater role in restoring the cult. In the second year after their arrival, Zerubbabel, Jeshua, and the rest of the community establish the foundations of the temple itself and celebrate the occasion (Ezra 3:8–13). Ezra-Nehemiah portrays Zerubbabel and Jeshua as co-workers, jointly involved in all subsequent activities, including the rejection of the adversaries' offer to help (Ezra 4:3). At a later point, both Zerubbabel and Jeshua respond to the exhortations of Haggai and Zechariah and resume building activities (Ezra 5:2). Neither is named in the subsequent dedication of the Temple.

e. Jeshua According to 1 Esdras. Although 1 Esdras does not differ markedly from Ezra-Nehemiah in its depiction of Jeshua, the great prominence accorded Zerubbabel in 1 Esdras serves to eclipse Jeshua's role in the events. By adding to Zerubbabel's role, 1 Esdras in fact diminishes Jeshua's importance in the restoration.

f. Conclusion. The biblical texts largely suggest parity in terms of significance between Jeshua the priest (or high priest) and Zerubbabel. A creative adaptation in the postexilic era has resulted in placing unprecedented power in the hands of the priests (or high priests). Jeshua seems to be the key figure in this transformation, having become an equal or perhaps even the superior partner in the actual leadership of the postexilic community.

TAMARA C. ESKENAZI

JESHUA (PLACE) [Heb *yēšûaʿ*]. A settlement in S Judah listed among the villages occupied by those returning from exile in Babylon (Neh 11:26). Its name appears to be related to the noun *yēšûʿāh* ("help," "salvation," "prosperity"), perhaps meaning "prosperous" town. There is general agreement that the list in Neh 11:25–36 is derived from an official document of the postexilic period (see Myers *Ezra, Nehemiah* AB, 187). If this list follows geographical order, Jeshua should be found in the vicinity of Ziklag and En-rimmon, both of which are located in the Negeb district of the tribal territory of Judah (Josh 15:31–32). This geographical hint and a similarity between the ancient and modern names has led to a tentative identification with Tell es-Saweh (Aharoni *LBHG,* 379), located approximately 19 km E and slightly N of Beer-sheba (M.R. 149076). However, it is not yet known whether this site was occupied during the postexilic period.

WADE R. KOTTER

JESHURUN [Heb *yešurûn*]. A poetic reference to Israel, either as people or place. In Deut 32:15, Jeshurun is the complacent people who provoke God to jealousy, in Deut 33:5 it is the place where the Lord becomes king before all the assembled tribes, and in Deut 33:26, it is used as a vocative to call the people of Israel to notice their God who "rides through the heavens" to their help. In

Isaiah 44:2 it is found in *parallelismus membrorum* to Jacob; both terms are used to refer to the servant chosen by God. Coming from the root *yšr* (be straight, right), the term is an ideal reference to Israel meaning "the upright one," although its form as either a diminutive or a denominative is uncertain. The relationship between the words Jeshurun and Israel is debated. Wächter (1971: 58–64) suggests that Jeshurun is a reminiscence of the name *yišar'ēl*, which he posits as the original form of *yiśrā'ēl* (Israel). With the domination of the Ephraimite tribes in the central-Palestinian highlands, the pronunciation of *yišar'ēl* was changed to *yiśrā'ēl* because the Ephraimites confused *šin* with *śin*. Seebass (1977: 161) argues that Jeshurun originally indicated a non-Israelite neighbor associated with Judah. Jeshurun was then incorporated into the tribal league as a substitute for the tribe of Simeon, a tribal name that does not appear in the Blessing of Moses in Deuteronomy 33. Mendenhall (*IDB* 2: 868) understands Jeshurun to be a hypocorism from the word Israel, a thesis supported by the LXX rendering *ēgapēmenos*. The MT references indicate that Jeshurun was acceptable as an alternative name for Jacob and Israel, but its infrequency, as well as the LXX translation with the participle instead of by transliteration, indicate that it was rare in popular usage.

SHARON PACE JEANSONNE

JESIMIEL (PERSON) [Heb *yĕsîmi'ēl*]. Descendant of Simon (1 Chr 4:36), described as one of the "princes in their families" (1 Chr 4:38). The name may mean "God sets." In the LXX, the name appears as *Ismael* (not to be confused with Ishmael). See Williamson *Chronicles* NCBC, 62.

CRAIG A. EVANS

JESSE (PERSON) [Heb *yišay*]. The father of David, a Bethlehemite from the tribe of Judah (1 Sam 16:1). The name is normally written as *yišay* except in 1 Chr 2:13 where it is inexplicably found in the form *'îšay*. Jesse was the son of Obed and grandson of Boaz (Ruth 4:17, 22; 1 Chr 2:12; Matt 1:5–6; Luke 3:32). In 1 Sam 16:1–23, Jesse is said to have had eight sons with David the youngest. 1 Sam 17:12 also explicitly states that there were eight sons of David. However, 1 Chr 2:13–16 only records seven sons and two daughters, Zeruiah and Abigail. The Syriac version of 1 Chr 2:14 inserts Elihu as the seventh son with David as the eighth. Elihu is not mentioned in the list of sons in 1 Sam 16:1–23, but is mentioned as a brother of David in 1 Chr 27:18 (LXX *Eliab*). There is also some confusion over the paternity of Abigail, who is described as the daughter of Nahash in 2 Sam 17:25. The position of David as the seventh son in Chronicles probably reflects the significance of David in the Chronicler's theology.

Jesse is portrayed mainly in a passive role as the father of the future king of Israel. He appears when Samuel visited Bethlehem to secretly anoint David as king in place of Saul but remains in the background except to send for David, who was among the sheep, after the other sons had been rejected (1 Sam 16:1–13). Immediately after this, Saul sent messengers to Jesse requesting that David be sent to the court to help control his fits of depression with music. Jesse then dispatched bread, wine, and a kid along with David to the king (1 Sam 16:14–23). It is again striking that Jesse does not directly reply in speech to Saul's request for David to remain permanently at the court. David's second introduction to the court of Saul comes when Jesse sent him to his three elder brothers who were serving with Saul's army in the valley of Elah against the Philistines (1 Sam 17:12–18). This second introduction of David to the court of Saul which appears to ignore the previous passage poses numerous difficulties. Furthermore, 1 Sam 17:12–31 is missing from LXXB but is found in LXXA. McCarter (*1 Samuel* AB) and Klein (*1 Samuel* WBC) believe that the shorter version of LXXB is original and has been expanded in the MT. Jesse is described in the MT with the peculiar expression *zāqēn bā' ba' ănāšîm* "old and advanced in years" (RSV, 17:12). LXXL and Syriac presuppose *zāqēn bašānîm*, "old in years," which McCarter (*1 Samuel* AB, 301) prefers. Jesse is further described in MT as "this Ephrathite of Bethlehem in Judah" (RSV "an Ephrathite"). Ephrathah and Bethlehem are listed in the genealogy of Caleb (1 Chr 2:50–51). However, the phrase "an Ephrathite of Bethlehem in Judah" draws an important allusion to the book of Ruth and its Moabite connections (Ruth 1:2; 4:11). The Moabite ancestry of David is made explicit in Ruth 4:17–22 and 1 Chr 2:11–12. Interestingly, David is said to have taken his father and mother to Moab for safety while he is being pursued by Saul, although Jesse is not explicitly named (1 Sam 22:3–6).

The phrase "the son of Jesse" is used pejoratively on a number of occasions, particularly when Saul contemptuously refuses to name David explicitly as being disloyal (1 Sam 20:27, 30–31; 22:7–8), when Doeg the Edomite accuses Ahimelech of Nob of inquiring of Yahweh for him (1 Sam 22:9), when Nabal rejects the thinly veiled threat for protection money (1 Sam 25:10), or when the N tribes break from the S (1 Kgs 12:16). However, the theological centrality of David in the work of the Chronicler means that the phrase "David the son of Jesse" is used in a positive sense in 1 Chr 10:14 and 29:26 (cf. Acts 13:22).

The phrase "there shall come forth a shoot from the stump of Jesse" (Isa 11:1) is usually interpreted as a sign of hope that the Davidic dynasty will be restored. "The stump of Jesse" is taken to refer to the loss of the Davidic kingship in 587 B.C.E. rather than some previous military defeat (Clements 1980: 122; Kaiser 1983: 254). Although it is probable that the passage originally refers to the hope for a restitution of kingship, albeit in ideal terms, the phrase later is interpreted in a Messianic sense. The imagery may well derive from royal ideology in which the king was portrayed as the symbol of fertility (cf. Psalm 72). A similar image is contained in Isa 11:10 which offers "the root of Jesse" as a sign of universal hope (cf. Rom 15:12). Clements (1980: 125) interprets this verse as a postexilic addition which offers a new and different interpretation of 11:1. He also sees it as an attempt to link the promises

of 11:1 and 11:12. Kaiser (1983: 262–63) leaves open the question of whether or not the phrase is a messianic designation or a reference to a new dynasty. Barth (1977: 59) argues that it is a collective term referring to the postexilic community.

KEITH W. WHITELAM

JESUS (PERSON) [Gk *Iēsous*]. Several persons mentioned in the Bible bear this name, which is a Greek form of Joshua (Heb *yĕhôšûaʿ*; cf. the Gk of Luke 3:29; Acts 7:45; Heb 4:8). One of these is the son of Sirach, who wrote the deuterocanonical book of Ecclesiasticus; see WISDOM OF BEN-SIRA. The name "Jesus" also occurs as a surname of JUSTUS, a co-worker of Paul mentioned in Col 4:11. But, of course, by far the most frequent occurrence of the name is used in conjunction with Jesus of Nazareth, also known as Jesus Christ, who appears throughout the NT and is venerated as the central figure within Christianity. This entry discusses various aspects of this important biblical figure. It is comprised of five separate articles. The first is a broad overview of the figure of Jesus Christ, particularly assessing him as a historical figure who lived 2,000 years ago. The second explores an important issue within NT scholarship over the past two centuries: namely, the proper methodology to be used in attempting to recover this actual historical figure from the NT sources, whose interests were not entirely—or perhaps even primarily—historical. Related to this, the third article surveys scholarly attempts to cull from the NT the actual words (or *ipsissima verba*) spoken by the historical Jesus. The fourth article surveys broadly the teaching of Jesus of Nazareth, i.e. the message he proclaimed to his contemporaries. The fifth article focuses more on Jesus Christ as a religious figure, particularly on how he became the object of worship in the early Christian Church.

JESUS CHRIST

"Jesus Christ" is a composite name made up of the personal name "Jesus" (from Gk *Iēsous*, which transliterates Heb/Aram *yēšû(a)ʿ*, a late form of Hebrew *yĕhôšûaʿ*, the meaning of which is "YHWH is salvation" or "YHWH saves/has saved") and the title, assimilated in early Christianity to Jesus as a name, "Christ" (from Gk *Christos*, which translates Heb *māšîaḥ* and Aram *mĕšîḥā'*, signifying "anointed" and referring in the context of eschatological expectation to the royal "son of David"). The name "Jesus Christ" thus binds together the historic figure Jesus with the messianic role and status that early Christian faith attributed to him. In Jesus' own lifetime, his name, since it was common in Israel, called for a specifier: "Jesus the Galilean" (Matt 26:69; cf. 21:11), or, more often, "Jesus of Nazareth" or "Jesus the Nazarean."

This article treats Jesus of Nazareth as a figure of history, asking what can be known of his career, its purposes and outcome, by historical investigation. The question breaks down into parts. First, what are the available data on Jesus and what resources do we have for construing the data in an informed and reasonable way? Second, in what sociohistorical context did Jesus live and act? Third, what was the character of his encounter with the Israel of his time? What was the point of his proclamation of the reign of God, his preaching, and his symbolic actions? What provoked the conflicts that led to his arrest and execution? How did he himself understand and react to these conflicts? How and why did Jesus die? Fourth, what influence did Jesus have on the rise of the earliest Christian community and its life? These questions are the basis of the following outline:

A. Data on Jesus
 1. Canonical Gospels
 2. The Rest of the New Testament
 3. Data from Noncanonical Sources
 4. Indices to Historicity and to Nonhistoricity
B. Sociohistorical Context
C. The History of Jesus
 1. Beginnings
 2. The Proclamation and Its Meaning
 3. Jesus' Public Behavior
 4. The Teaching of Jesus
 5. The Identity and Destiny of Jesus
 6. Why and How Jesus Died
 7. The Easter Experience of the Disciples

A. Data on Jesus

1. Canonical Gospels. Jesus died *ca.* A.D. 30; the gospels of Matthew, Mark, Luke, and John came into being from 30 to 60 odd years later (i.e., from the '60s to the '90s of the 1st century). In the period before the finished composition of complete gospel narratives there certainly were oral traditions that were to provide the substance of the gospel literature, and perhaps some of these traditions circulated in written form as well. (See FORM CRITICISM; SOURCE CRITICISM.) Early practitioners of form criticism tended to attribute a direct and decisive relevance of their discipline to the historical appreciation of the data of oral tradition. More recently, sober critique has been brought to bear on classical NT form criticism, dismantling its ideological biases and salvaging its real analytic potential. Gradually the limited contribution of form criticism to judgments of historicity has found wide recognition.

The most basic and far-reaching issue connected with form criticism had been substantially acknowledged and clarified early in the 20th century; it came to be called the "kerygmatic" conditioning of both oral traditions and written gospels. *Kerygma* means "proclamation" and in the NT refers especially to the act of proclaiming salvation or to the content of the proclamation of salvation or to both. The context evoked by "kerygma" is accordingly the appeal for faith. The adjective "kerygmatic" has long been used in a wide sense to allude to the faith dimension that pervades the gospel literature. Born of faith, these writings solicited or supported faith and offered instruction in faith.

There is probably no non-kerygmatic writing in the gospels. In all probability, that is, nothing or virtually

nothing in the gospel narratives was narrated merely because it happened, for the sole purpose of preserving the historical record. It is sometimes overlooked, however, that this negative ascertainment (gospel texts are not purely historical) by no means justifies the notion that a historical component is foreign to and excluded from the intentions of the originators, transmitters, and editors of the gospel literature. For example, the motive for recounting such symbolic actions of Jesus as the cures and exorcisms, the sending of the twelve, the dining with sinners, the solemn entry into Jerusalem, and the cleansing of the temple is irreducible to "community concerns" of a didactic and paraenetic sort. Other components in narrative intention are certainly discoverable, but these historic symbolic acts were all narrated also because they were acts that belonged in some significant way to the drama of Jesus' career (Trautmann 1980: 404–6). A like point must be made respecting conflict stories (Hultgren 1979: 72–75), Sabbath conflicts (Roloff 1970: 85), and other texts (Riesner 1981: 35–37).

It has often been urged that in earliest Christianity (apart from the composition of the passion story for cultic use) Jesus' career as a whole did not figure in Christian consciousness. The idea of a connected narrative about Jesus was thought to have come into being only with the project of composing the first gospel redaction, usually thought to be that of Mark. This supposition, however, proved liable to critique at three points. First, the memory of Jesus' career could not plausibly be limited to isolated anecdotes. Second, the passion story could not be reduced to an explanatory account of cultic practices (cultic etiology); stylistic analysis related the passion story, rather, to OT historical narratives. Finally, the supposed role of the Markan secrecy motif in bringing the gospel genre into being was entirely conjectural.

As for the story line finally to be found in the Synoptic Gospels, literary criticism (Jeremias 1966: 89–96) suggests that its main development took the form of pushing the beginning of the passion story further and further back. The story first began with the arrest of Jesus in Gethsemane; then, with the solemn entry into Jerusalem; then, with the confession of Jesus as Messiah in the region of Caesarea Philippi (Pesch *Markusevangelium 2* HTKNT, 1–27). This, to be sure, does not mean that the tradition of Jesus' baptism, for example, did not come into being until "the beginning of the story" had been pushed back to that point. What it does mean is that, though individual pericopes presented the whole gospel *in nuce*, the story of Jesus is unlikely ever to have been understood as isolated kerygmatic snapshots entirely unrelated to any story line.

Traditions relaying at least words of Jesus and perhaps also stories of Jesus may well go back to the pre-Easter days of Jesus' public career (Schürmann 1960). The concrete social situation and context *(Sitz im Leben)* for such a formation of tradition would have been the disciples' share in the public functions of Jesus as proclaimer of the reign of God. What was the corresponding social situation and context for the shaping and transmitting of traditions in the post-Easter Jerusalem community? The pioneers of NT form criticism answered by positing various distinct and independent social settings, e.g. baptismal liturgy, eucharistic worship, community instruction, community debates, etc. But the determination of a nexus between particular settings and the crystallization of particular speech forms rarely surpassed educated guesswork. On the other hand, definition of a single setting or *Sitz im Leben* for the Jesus tradition as a whole, though plausible, has proven thus far to be unverifiable.

To many scholars in the first half of the 20th century the systematic transmission of tradition in the earliest church appeared to be precluded by the expectation of an imminent end of history. But in fact there are solid indices in the earliest NT writings that the church was consciously engaged in the transmission of traditions (1 Cor 11:23—cf. 1 Thess 4:1; 1 Cor 11:3; 15:1–11). The tradition of Jesus' words, acts, and destiny appears to have constituted a distinct branch of teaching *(didachē)* parallel to but distinct from and supposed by the moral instruction *(paraenesis)* dispensed in the NT letters. Whether, like that moral instruction, it was authoritatively sponsored by leading figures in the earliest church remains an open question.

The only element of Synoptic criticism supposed here is the acknowledgment of four relatively independent lines of transmission: Markan tradition, logia tradition (Matthew and Luke), special Matthean tradition, and special Lukan tradition. Though the relative independence of Markan tradition and of the logia tradition is sometimes disputed, both appear to be probable (see Pesch *Markusevangelium 1* HTKNT, 63–67; Jeremias 1930 and Dupont 1954 on the Logia tradition).

Even if the relative antiquity of the several gospel redactions were known with certainty, this knowledge would leave still unanswered the question, "in what sequence did such-and-such parallel traditions come into being?" Again, even should literary-historical criticism establish the genetic sequence of parallel texts, this would still leave undecided the issue of historicity respecting the particular words and acts depicted in those texts. On the other hand, the question of the historicity of words and acts can sometimes be settled without a satisfactory prior settlement of any of the questions about the genetic order of the texts.

The origin and development of the Gospel of John poses special problems. This gospel concentrates its claim to authority in the witness of the "beloved disciple" (John 21:20–24; cf. 13:23; 19:26–27; 20:2–9), who is probably to be identified with the anonymous disciple of 1:35–42; 18:15–16. This anonymous disciple, in turn, is perhaps to be identified with John, the son of Zebedee. Beyond these variously probable though uncertain identifications, the origins of the Fourth Gospel remain historically mysterious.

Moreover, though the Johannine gospel tells the story of Jesus in distinctive fashion and affirms this story to be charged with historic truth, the key to the discourses of Jesus, to individual narrative units, and to the total sequence of events is not memory but sustained religious reflection of a high order. What the gospel affirms is not so much the actuality of remembered words and acts as it is the historic truth of Johannine theological themes. When applied to a work of this character, the standard indices to historicity turn out to yield relatively little. Nevertheless, on numerous matters (see below, C.1, 6, 7), the Fourth Gospel clearly seems to have retained significant historical data unavailable in the Synoptic tradition.

2. The Rest of the New Testament. The Acts of the Apostles, the NT letters, and the Johannine apocalypse all contain sayings of the risen Lord, and all these sources presuppose and allude to the story of the earthly Jesus. They nevertheless offer relatively few independent data on him. One saying (probably a Greco-Roman proverb) is attributed to Jesus in Acts 20:35. The other sayings attributed to him are known to us from parallels in the Synoptic Gospels (1 Cor 7:10 = Mark 10:9–12 = Matt 19:6–9; 1 Cor 9:14 = Matt 10:10; 1 Cor 11:24–25 = Luke 22:19–20; Rom 14:14 = Mark 7:15; somewhat less clearly and certainly, 1 Thess 4:16–17 = Matt 24:30–31).

The missionary speeches in Acts include a so-called "historical section" (Acts 2:22; 10:37–39; 13:23–25) in the kerygma. This correlates both with Peter's claim, "we are witnesses of everything he did in the country of the Jews and in Jerusalem" (Acts 10:39), and with the requisite qualification of a candidate to take the place of Judas among the twelve, namely, that he be "one of the men who have accompanied us during all the time that the Lord Jesus went in and out among us" (Acts 1:21). Salvation was seen to issue from the history of Jesus as attested both by the scriptures and by the testimony of eyewitnesses to that history. This view of salvation as coming from the history of Jesus is common also to the pre-Pauline faith formulas conserved in the letters of Paul (Phil 2:6–11; 1 Cor 11:23–25; 15:3–5; Gal 1:4; Rom 1:3–4; 3:25–26; 4:25; 8:34; 10:9).

Though the recounting of Jesus' words and acts is not to be expected in the diverse paraenetic genre of the NT letters, it is nonetheless worth noting that many letters abound with echoes of the gospel tradition.

Paul explicitly affirmed his inheriting of commands from the Lord (1 Cor 7:10); that this signifies his dependence on the Jesus tradition is confirmed by the fact that we find the command in question in Synoptic texts (Mark 10:9–12 = Matt 19:6–9). The attitude toward enemies and persecutors expressed in 1 Thess 5:15; 1 Cor 4:12–13; and Rom 12:14 should be related to Matt 5:10–12 = Luke 6:22–23 and to Matt 5:38–40 = Luke 6:29; for, apart from Jesus, Paul had no predecessor, source, or tradition to draw on for this theme (see, however, Exod 23:4–5 and Prov 25:21–22). Paul's claim to apostolic status (Gal 1:16–17) echoes the words of Jesus to Simon, the "rock" (Matt 16:17–19). Again, the Abba motif in Paul's references to community and personal prayer (Gal 4:6; Rom 8:15) reflects Jesus' distinctive address of God as *'abbā'* (Mark 14:36 = Matt 26:39, 42 = Luke 22:42; cf. Matt 6:9 = Luke 11:2; Matt 11:25–26 = Luke 10:21; Luke 23:34, 46; John 11:41; 12:27–28, etc.). The historicity of Jesus, born of woman (Gal 4:4), belonging to the race of Abraham (Gal 3:16; Rom 9:5) and the lineage of David (Rom 1:3), living under the Law (Gal 4:4), exercising a ministry to Israel in fulfillment of the promises to the patriarchs (Rom 15:8), and dying on a cross (*passim* in Paul) was as substantial to Pauline as it was to Markan or Lukan theology.

The Letter to the Hebrews repeatedly refers to the earthly Jesus, especially to his willing self-oblation as expiatory offering (Heb 2:15–18; 7:27; 9:14, 25–28). The resurrection was God's answer to Jesus' prayer in Gethsemane (5:7). Psalm 8 found fulfillment in Jesus' having been "for a short time"—i.e., between his coming into the world (10:5–7) and his exaltation (1:3, 13; 9:12)—"lower than the angels" (2:7, 9). The letter also alludes to the detail that Jesus' death took place "outside the gate" of the city (13:12).

In 1 Peter (Maier 1985) there are more than a dozen verbal and motif convergences not only with Synoptic tradition (e.g., the nexus between "seed" and "the word" in 1 Pet 1:23, as in the Synoptic interpretation of the parable of the Sower, Mark 4:14–20 = Matt 13:18–23 = Luke 8:11–15), but also with Johannine tradition (e.g., "believing" despite "not seeing" in 1 Pet 1:2 and John 20:29).

In the Letter of James (Davids 1985) there are roughly 20 probable allusions to sayings of Jesus. A dozen of them derive from the Sermon on the Mount (thus Jas 2:5, 13 reflect the beatitudes of Matt 5:3, 7). Though verbal and motif convergences are usually more suggestive than probative of literary dependence, the high incidence of convergence between the text of James and motifs gathered together in the Sermon on the Mount boosts the probability of the dependence of James on the Jesus tradition to the point of moral certainty.

It should be added that the First Letter of John presupposes the story of Jesus as we find it presented in the Gospel of John. Thus the writer urges without elaboration that his addressees are to live "just as he lived" (1 John 2:6). "Eternal life" is the heart of "what he promised us" (2:25). We know what love is from his laying down his life for us (3:16). He came "in water and in blood" (5:6; see John 19:34–35).

The positive yield of the non-gospel texts of the NT, then, is not a mass of independent data on Jesus, but an assurance that the Jesus tradition, so far from being alien to the other NT writers, was both congenial in principle and integral in fact to their faith. As sequel and support of the controlling proclamation of the kerygma, two branches of teaching took shape in early Christianity: the Jesus tradition and community paraenesis. From the NT letters it appears that from the outset the second of these found its ethos and nourishment in the first.

3. Data from Noncanonical Sources. The fallout in noncanonical tradition from the historic career of Jesus was enormous: gospels (mainly Jewish-Christian and gnostic), homilies, testimonies, liturgies, acts, apocalypses, rabbinic and Islamic traditions, texts in Hebrew, Aramaic, Syriac, Greek, Latin, Coptic, and other languages. Though this tradition is voluminous even in the fragmentary state in which it has survived, only a few short narratives and perhaps a dozen sayings have a serious claim to historical value. They include words such as the following (*Gos. Thom.* 82):

> He that is near me is near the fire;
> he that is far from me is far from the kingdom.

Study of the noncanonical traditions, which began in the late 19th century, gained momentum with the discovery at Nag Hammadi, Egypt, of a complete text of the *Gospel of Thomas,* 114 sayings in a 4th-century Coptic translation probably from Greek. But the hope of having found a mine of independent traditions as old and informative

as those of the Synoptic Gospels proved on further analysis to be false.

Plausibly authentic anecdotes and sayings from the noncanonical tradition confirm and supplement historical data from the canonical gospels, but do not furnish good evidence for a different general view of Jesus. The Talmud (*b. Šabb.* 116b) offers a variant in Aramaic of the saying in Matt 5:17, which suggests that behind the Greek words *katalysai* ("to destroy") and *plērōsai* ("to fulfill") of the gospel saying stood the Aramaic words *pēḥat* ("to diminish" or "take away") and *ʾôsîp* ("to add to"—i.e., "to bring to completion"). Otherwise Talmudic traditions on Jesus are probably late, some even as late as the early Middle Ages (Maier 1978: 127–28) and have no independent historical value.

4. Indices to Historicity and to Nonhistoricity. In forming historical judgments on the data of the gospels there are three possible verdicts: historical, nonhistorical, and suspended judgment. All these verdicts should turn not on general assumptions but on specific evidence. This means that the historian cannot do without concrete indices both to historicity and to nonhistoricity; it also means that the critic should acknowledge that in some instances the issue of historicity remains unresolved.

The indices to historicity are: discontinuity with early Christianity; originality vis-à-vis Palestinian Judaism; multiple attestation (i.e., attestation in relatively independent strands of tradition); multiform attestation (e.g., in narrative material and in sayings material); and correlation with modes of speech characteristic of Jesus (Jeremias 1971: 8–37). Such modes include the use of the divine passive (a circumlocution which for reverential reasons avoids naming God as the subject of an active verb; e.g., the second clause of the macarism "Happy the mourners, for they shall be comforted" is the equivalent of "for God is about to comfort them"); antithetical parallelism (Burney 1925: 83–85); rhythmic patterns in two-beat, three-beat, four-beat, and *qinâ* (dirge) meter (in Aramaic); alliteration, assonance, and play on words (in Aramaic); use of hyperbole and paradox; riddles and parables, especially as exhibiting stylistic and thematic features otherwise known to be characteristic of Jesus; new coinages in connection with "the reign of God"; a distinctive use of "amen" to introduce an emphatic statement; the use of *ʾabbā* in addressing God.

All these indices operate independently of the recovery of historical intentions on the part of the narrator. On occasion, however, it may be possible to ascertain that a given writer means to affirm something precisely as having happened. If in addition it can be shown that the writer is knowledgeable on the matter and free of the intention to mislead, historicity may be inferred. An example is Paul's presentation of the eucharistic words of Jesus in 1 Cor 11:23–25.

Of the indices mentioned above, discontinuity with the transmitting church is regularly the most cogent. It was a clear tendency of the transmitting church to present Jesus as independent of John the Baptizer; therefore, it is highly probable that the tradition of Jesus' seeking the baptism of John is historical. Again, the index of originality vis-à-vis Palestinian Judaism is often cogent of itself, for we have far more extensive and persuasive evidence of Jesus' originality than we do of the originality of the post-Easter Christian community, especially that of the earliest and, in this context, most important community, Jerusalem. The other indices, though not independently cogent, are indispensable in marshaling cumulative and convergent evidence in favor of historicity. Increase in the probability of historicity accrues to data that are coherent with what has already been established as historical by appeal to discontinuity and originality. Here especially multiple attestation, multiform attestation, and stylistic indices are relevant confirmatory factors.

Before leaving the issue of historicity, we should distinguish two kinds of relations of accounts to events—namely, the one-to-one relation and what might be called the generic relation. In gospel reports of responses to Jesus, a solid case can occasionally be made for a one-to-one relation of text to event. In most cases, however, it is neither possible nor necessary to build a case for historicity. The widely varied responses to Jesus depicted in the gospel literature doubtless corresponded in general to the historical reality. It was to be expected in advance that responses to him would vary widely, and it must be assumed in retrospect that they did. The literature supports such expectations and assumptions.

The form critics were the first to recognize clearly that many Synoptic pericopes—especially those that failed to exhibit the inner coherence that would have typified a remembered event, but many other, quite coherent pericopes as well—were not, indeed, simply recorded memories and did not intend a one-to-one relation to a particular event. The gospel literature had been composed, and in this composition Jesus' career had been, in Bultmann's metaphor, "precipitated"—i.e., condensed and presented anew, in the pericopes (Bultmann 1963: 40). But the form critics failed, on the whole, to spell out clearly what this meant for historicity. Instead of fashioning a positive and supple conception of historicity adjusted to this literary insight, they left the impression that historicity itself, and not merely an excessively rigid conception of it, had thereby been put in doubt. A more apt and exact conclusion would be that besides the specific patterns of inference that followed on the indices to historicity, there were generic judgments supported by the typical character of numerous pericopes. The form-critical insight allowed the exegete to recognize that in a few strokes an individual pericope might present the gospel in a nutshell. It should also allow the historian to differentiate between the details, on the one hand, and generic or substantial historicity, on the other.

An example is the story of Zacchaeus the tax collector (Luke 19:1–10). Did there really exist a rich tax collector named Zacchaeus, who, being short, climbed a sycamore tree to catch a glimpse of the charismatic figure Jesus, as he walked along accompanied by a crowd? Did Jesus look up and address Zacchaeus by name and invite himself to table with him? The indices to historicity yield virtually nothing in response to these questions. Nevertheless we have solid evidence elsewhere (e.g., Mark 2:14–16 = Matt 9:9–10 = Luke 5:27–29) of Jesus' appeal to the ostracized tax collectors and publicans of the time. What the Zacchaeus episode adds to this is a further set of indications showing the early Christian community's understanding

of how Jesus mounted his initiative toward sinners and of how the sinners reacted to it.

The commonest error respecting nonhistoricity turns on a false analogy. It is the assumption that since discontinuity with the transmitting church establishes historicity, continuity with the transmitting church establishes nonhistoricity. In fact, no conclusion can be legitimately drawn from the mere presence of such continuity. A true index to nonhistoricity is the incompatibility of data under examination either with data established as historical or with solidly grounded historical conclusions. If, for example, the historian were to succeed in recovering the eschatological scheme supposed by words of Jesus on the future, and if according to this scheme there was to be no interval between the vindication/glorification of Jesus and the consummation of history, then gospel tests positing such an interim would be nonhistorical.

Second, a positive index to nonhistoricity is attestation both as a post-Jesus development and as gospel datum. The Christian mission to gentile lands, for example, is attested as a post-Jesus development in Acts 13, but also as foretold by words of Jesus (Mark 13:10 = Matt 24:14; Mark 14:9 = Matt 26:13), foreshadowed by his travels (seemingly but not actually) outside lands inhabited by Jews (Mark 7:24, 31), and grounded on the explicitly universalist prophecy (Luke 24:47) or on the explicitly (Matt 28:19; cf. Acts 1:8; Mark 16:15) or implicitly (John 20:21–22) universalist mandate of the risen Christ. Why was the idea of the gentile mission converted into a gospel datum? It was a tendency of the early Christians to overlook what they did not have the resources to understand (namely, development and its legitimacy) and so to retroject developments to their origins.

Third, linguistic indices to nonhistoricity include the use of words having no Aramaic equivalents, or the use of a vocabulary attested for the early church but not otherwise attested for Jesus (e.g., in Jesus' "explanations" of his parables). This index, to be sure, is not cogent of itself.

If the hypothesis could actually be established, rather than merely posited, that early Christian prophets speaking in the name of the exalted Christ supplied the church with sayings that were finally assimilated to the Synoptic tradition, this might be made to generate concrete indices to nonhistoricity. Thus far, however, the case for this creative role on the part of Christian prophets has not been successfully made; hence, no conclusion along these lines appears to be justified (Hill 1979: 160–85; Aune 1983: 142–45).

B. Sociohistorical Context

Jesus of Nazareth entered upon his public career in the last quarter of a long period of decline in Jewish fortunes—i.e., from the triumph of the Maccabees when public plebiscite endorsed the pretentions to the high priesthood on the part of Simon and his sons (141 B.C.) to the fall of Jerusalem and destruction of the temple under Titus (A.D. 70). That from the Jewish standpoint this was a period of almost unrelieved decline is hardly open to doubt. Its halfway point was marked by the accession to power of Herod, a half-Jew and puppet of Rome, whose long and heartily detested reign was followed by the administrative division of Israel, and ten years thereafter by the imposition of direct Roman administration on Judea. Though initially welcomed, this last change eventually soured. Jerusalem had relapsed into the pre-Maccabean situation of rule by gentiles.

The administrative record of the Roman provincial governors of Judea varied from mediocre to atrocious. The heaviest burden on the Jews, however, was not inept or corrupt administration, but economic hardship and instability. Given a glaring inequality in the distribution of goods and a lack of agricultural land proportionate to a population of half a million, the combination of natural catastrophes (drought, earthquake, epidemic, famine—e.g., the great famine of A.D. 46–47) and oppressive taxation under competing tax systems, secular (Roman) and sacred (Jewish), was ruinous for the class of small landholders who constituted society's center of gravity, the marginal middle class. From this came periodic surges in the number of new poor, emigrants, revolutionaries, bandits, and beggars.

Socioeconomic instability characterized Palestine before, during, and after the time of Jesus. To lower the pressure of social unrest, the powers-that-be periodically lightened the tax burden (*Ant* 15.10.4 §365; 16.2.5 §64; 17.8.4 §205; 17.11.4 §319; 18.4.3 §90; 19.6.3 §299). Herod and his sons created work for the down-and-out by building new cities (*Ant* 18.2.3 §36–38). The basic socioeconomic structures, however, remained. Instability culminated in collapse—i.e., in the brief ascendancy of the socially rootless and the simultaneous outbreak of a disastrous revolt against Rome (A.D. 66–70).

The state of social crisis implicit in the data provided by Josephus is often mirrored in the gospel literature as well. Depressed classes figure prominently in the story. They include the socially insignificant, the poor and hungry, the physically or mentally disabled, and the socioreligious outcasts. Representatives of these groups hover on the edges or stand in the center of scene after scene. Jesus singled out as particularly favored beneficiaries of salvation the poor, the insignificant (including women and children), the heavily burdened, the possessed, the outcast, the blind, deaf, and dumb, the cripples and lepers.

Oppressive economic practices often figured in Jesus' parables, not as objects of reformist critique, but simply as matters of common knowledge, and so illustratively useful (Mark 12:1–11 = Matt 20:1–16 = Luke 16:1–8). Jesus' words and actions bore dramatically on the social scene, but inasmuch as they corresponded to none of the positions on the social order taken in the Israel of his time, they may well have seemed baffling or inadequate or offensive. On the religious parties and sects in the time of Jesus, see JUDAISM (GRECO-ROMAN PERIOD); PHARISEES; SADDUCEES; ESSENES.

C. The History of Jesus

1. Beginnings. Historically the most accessible data on Jesus' beginnings are not the infancy narratives (see MATTHEW, GOSPEL OF; LUKE, GOSPEL OF), but the ties between Jesus and the movement of John the Baptist (or "Baptizer"). John appeared in the wilderness north of the Dead Sea "in the fifteenth year of the reign of Tiberius Caesar" (Luke 3:1); i.e., not earlier than autumn, A.D. 27, nor later than midsummer, 29. His apparel (Mark 1:6 =

Matt 3:4), his manner of life (Matt 3:4b; Matt 11:18 = Luke 7:33), and his message to Israel all evoked the prophets of old (Mark 6:15 = Luke 9:8). John warned his contemporaries that definitive judgment was imminent (Matt 3:10 = Luke 3:9) and, in the face of imminent judgment, summoned them to repentance (Mark 1:4; Matt 3:7–10 = Luke 3:7–9), to the confession of sins (Mark 1:5 = Matt 3:6), and to a ritual act of washing meant to seal the repentance and mark the repentant for acquittal at the judgment about to break out (Mark 1:5 = Matt 3:6; Mark 1:8 = Matt 3:11–12 = Luke 3:16–17).

The mere phenomenon of the return of prophecy in the figure of John pointed, according to Judaic tradition, to the consummation of history. John's message, moreover, radicalized this eschatology, for it made clear that for John the standing religious resources of Israel, such as cultic means of expiation, were inadequate in the face of imminent judgment. God called for something beyond these standard means. He called, namely, for the repentance and the washing which were the main themes of John's prophetic summons to Israel.

In the face of judgment the election of Israel was itself at stake (Luke 3:8 = Matt 3:9). John's mission accordingly had an election-historical dimension to be construed from the field of meaning out of which he spoke and acted. Elements that define that field of meaning are the imminence of judgment and the deliberately chosen symbols of wilderness and water rite. If imminent judgment be taken as the matrix of John's field of meaning, the probable nexus binding all the motifs together was the well-established conception of Israel in the wilderness (Exodus to Deuteronomy) as the type of eschatological Israel. If the generation of the wilderness was made ready for salvation at Sinai by a bath of immersion (inferred from Exod 24:8 on the premise, *b. Yebam. 46b*, that there is no sprinkling without previous bath of immersion; cf. *Mek. Exod.* 13.21; 14:26; 1 Cor 10:1–2), it followed that Israel on the brink of judgment was similarly to be made ready for the judgment by being bathed and purified (Jeremias 1971: 42–49). The alternative was liability to the coming wrath (Matt 3:7 = Luke 3:7). "The coming one" (not God himself, but an apocalyptic figure not easily identifiable from biblical tradition) would wash "in the holy Spirit and in fire" precisely those whom John had washed in preparation for judgment (Matt 3:11 = Luke 3:16; cf. Mark 1:8). Refusal would mean exclusion from restored and saved Israel. Repentant Israel would be gathered like wheat into the barn, whereas unrepentant Israel would be burnt like chaff (Matt 3:12 = Luke 3:17). This grounds the inference that John conceived his prophetic task as that of assembling the remnant of Israel in the face of judgment. In and through this open, eschatological remnant of those destined for acquittal at the judgment, God would bring his holy people to restoration in the age to come (Meyer 1979: 115–28).

Among those who responded positively to John's call to baptism was Jesus of Nazareth. The Synoptic tradition is at one in affirming Jesus' participation in "the baptism of John" (Mark 1:9–11; Matt 3:13–17; Luke 3:21–22; John 1:32–33). The Synoptic Gospels date the start of Jesus' public career from the arrest of John (Mark 1:14 = Matt 4:12; Luke 3:19), leaving unexplained why Jesus had remained in Judea until John's arrest and why the arrest had had decisive personal meaning for Jesus (*paradothēnai* in Mark 1:14; Matt 4:12 probably signifies that in the arrest of John, Jesus saw a divine signal for himself; Luke 4:14). The Fourth Gospel fills this lacuna by representing Jesus as surrounded by his own disciples and sharing in the baptism movement apparently in alliance with but not alongside John (John 3:26, 4:1). In view of its discontinuity with the tendency of the tradition to accent the independence of Jesus, this Johannine tradition may well reflect the historic beginnings of Jesus' career.

Against the grain of competition between the movements inaugurated respectively by John and by Jesus, the gospel traditions are unanimous that Jesus all through his career maintained a positive attitude toward John and his mission. A saying of Jesus compares his generation to quarrelsome children, complaining,

> "We piped to you and you did not dance,
> we wailed and you mourned not"
> (Matt 11:17 = Luke 7:32).

A generation of sour critics piped and John did not dance; it wailed and Jesus did not mourn (Matt 11:18–19 = Luke 7:33–34). Both John and Jesus violated the sacred custom of fasting and feasting in accord with tradition, for both were signs of a break in the routines of ordinary history. For all the difference in style of life between John and himself, Jesus understood John to be allied with him in proclaiming the consummation of history and in being fatefully repudiated by those deaf to their proclamations.

In Jesus' view the baptism of John had been "from heaven" (Mark 11:30 = Matt 21:25 = Luke 20:4), i.e., authorized by God. John himself "came to you in [i.e., brought you] the way of righteousness" (Matt 21:32). In Jesus' phrase, John had been "more than a prophet" (Matt 11:9 = Luke 7:26). To define himself, John had invoked the Isaian cry to prepare "the way of the Lord" (Isa 40:3; Mark 1:3; Matt 3:3; Luke 3:4; John 1:23). This Isaian motif of preparation was the background of the later lines of Mal 3:23 (—Eng 4:5–6) on the sending of Elijah in advance of judgment to purify the priesthood (Mal 3:1–3) and to reconcile fathers and sons. In Sir 48:10 the task of Elijah included reestablishing "the tribes of Jacob" (cf. Isa 49:6). According to the Fourth Gospel, the Baptizer refused the title "Elijah" (John 1:21); according to the Synoptics, Jesus applied it to John (Matt 11:14; Mark 9:13 = Matt 17:12; Matt 11:10 = Luke 7:27). Hence, in the context of preparation for the reign of God, "no one greater has arisen among men than John"; when compared, however, with those who would see the arrival of what had been prepared: "the least in the reign of God [shall be] greater than he" (Matt 11:11 = Luke 7:28).

Jesus' unambiguous support for the mission of John throws light on how Jesus understood his own mission. John's task had been to alert Israel to the imminence of judgment and to assemble by baptism the remnant of Israel destined for cleansing, acquittal, and restoration. Jesus entered into and unreservedly affirmed this prophetic field of meaning. He not only endorsed John's mission as authentic, he aligned himself with that mission in the closest possible way. In the particulars of John's

career he read divine signs bearing on himself. Jesus' acute awareness of how different the style of John's career was from his own only underscores his alliance with John's purposes. Like John, Jesus understood his own role as "preparationist." Other parties and sects had their own eschatological hopes and expectations, but only in the movements inaugurated by John and by Jesus was preparation for the eschaton the very *raison d'être* of the movement. Hence the closest analogy of John's movement was that of Jesus and vice versa. Jesus' role bore on the preparation of Israel for the definitive triumph of God. There remains the task of defining his understanding of how, concretely, this triumph was to be realized.

2. The Proclamation and Its Meaning. "Proclamation" in the sense of "the act of proclaiming" is a mode of speech; "proclamation" in the sense of "what is proclaimed" is a message. The Synoptic literature presents Jesus as adopting the proclamatory mode of speech (Mark 1:14–15 = Matt 4:17; cf. Luke 4:16–30); moreover, it repeatedly generalizes this datum (Mark 1:38 = Luke 4:43; Mark 1:39 = Matt 4:23 = Luke 4:44; Mark 1:45; the texts include redactional generalizations such as Matt 4:23; 9:15), depicting Jesus as proclaiming, especially in synagogues, the fulfillment of God's promises and Israel's hopes (Luke 4:16–30; Mark 1:39 = Matt 4:23; cf. Luke 4:44; see also Mark 1:21 = Luke 4:31; Mark 6:2; Matt 13:53).

As message, the proclamation of Jesus announced "the reign of God." This was not an unfamiliar theme. It was central, for example, to the *Qaddiš*, the synagogue prayer that regularly followed the Sabbath sermon:

> May he allow his great name to be glorified and hallowed in the world that he has created according to his will!
> May he allow his reign to reign in your lifetime and in your days and in the lifetime of all the house of Israel, speedily and soon!

In Jesus' message, as in the *Qaddiš*, the reign of God signified the triumph of God. In accord with the hope of Israel, it would be realized first of all in the climactic and definitive restoration of Israel, the primary object both of the promises of God and of the hopes of his people. Thus, Jesus proclaimed, not a reform, not a revolution, but a fulfillment—the imminent fulfillment of all God's promises to Israel.

These last words anticipate the survey of Jesus' teaching on the reign of God to be presented below. Jesus' proclamation presupposed God's effective governance of all creation and of all human history. The teaching of Jesus clarified the diverse meanings and referents of "the reign of God," namely: as a divine order or economy, as the triumph of God, as the vindication of his agents, as the condemnation of the hard-hearted, as the restoration of Israel, as the salvation of the nations, as still to come, and as disclosed in advance by present events intrinsically ordered to its coming. For all this richness of connotation and denotation, the reign of God (*hē basileia tou theou* in Gk; *malkûtā' dĕ'lāhā'* in Aramaic) primarily referred to the divine economy to be established by God's coming triumph. The most striking aspect of Jesus' usage, however, for in the whole tradition of ancient Judaism this was unique to him, was the affirmation that in his own mission the reign of God, God's climactic and definitive act of saving, had already begun. This message found repeated expression, for example, in parables responding to critics of Jesus' public career (see C.4 below).

The proclamation of Jesus kindled a blaze of new speech, much of it his own, but continuing far beyond him. He himself became a living font of *mĕšālîm:* aphorisms, parables, riddles, freshly minted and memorable. They presented new images from nature or from village life in the service of old themes such as imminent judgment or the challenge of present decision. Ancient Near Eastern symbols—reign, enthronement, wedding, harvest, vine and wine, the world-cloak, etc.—were honed and burnished in the service of Jesus' mission. He drew on the major resources of biblical rhetoric (parallelism, rhythm, rhyme, alliteration, assonance, word play), on its repertory of figurative forms (macarisms, proverbs, riddles, parables), and on its most powerful themes (election, judgment, and salvation) which he treated both in the mode of celebration and in that of lament.

The reign-of-God theme was vitalized by a profusion of new coinages. Well over half the words Jesus used of the reign of God had not previously been attested in connection with that theme. The reign "comes," "draws near," "overtakes you," "is among you"; one is "in" it or "not far from it," "enters into" it or is "cast out of" it. The language, moreover, discloses a consciousness of God's last and climactic intervention as already underway. Now is the time of the new wine and the new cloak (Mark 2:21–22 = Matt 9:16–17 = Luke 5:36–39). The fields are "white" (John 4:35), the harvest "great" (Matt 9:37 = Luke 10:2). The young man dead through sin "is alive again" (Luke 15:24, 32). The blind see, cripples walk, lepers are cleansed, the deaf hear, the dead are raised, good news is broken to the poor (Matt 11:5 = Luke 7:22). The function of these last phrases is twofold. The cascade of miracles is the sure sign of salvation; but, further, salvation itself is imaged in the miracles. That is, for Jesus and his hearers the reign of God was sight to the blind, mobility to cripples, life to the dead. The proper inference from Jesus' exorcisms was that the reign of God "has [already] overtaken you!" (Matt 12:28 = Luke 11:20); the annihilation of Satan and his power had already begun (see C.3 in this article). This was without precedent in biblical or postbiblical (e.g., Qumran) tradition.

In biblical precedent the reign of God connoted the long-awaited restoration of Israel: see Isa 24:23 on God's reign and Mount Zion; Isa 33:22 on Yahweh's reign and "our" salvation; Isa 52:7–10 on God's reign and the redemption of Israel; Zeph 3:14–20 on the reign of God and the rescue and restoration of the remnant of Israel. Intertestamental (e.g. *Ps. Sol.* 11:2; 17:3) and NT literature prolonged these ties. The reign of God evoked the banquet with Abraham, Isaac, and Jacob (Matt 8:11 = Luke 13:28), the twelve tribes gathered anew (Matt 19:28 = Luke 22:30), the new sanctuary to be built in three days (Mark 14:58 = Matt 26:61; John 2:19). The stubborn tendency of scholarship to dissociate the reign of God from the fortunes of Israel must accordingly be discounted as nonbiblical and ahistorical (Meyer 1979: 132–35).

Apposite here is J. L. Austin's (1962) analysis of speech as locutionary (the act of saying such-and-such), illocutionary (what one does in saying such-and-such), and perlocutionary (what one effects by saying such-and-such).

As a locutionary act, Jesus' proclamation evoked sharp and evocative images. The life of the age to come was riches for the poor, comfort for the mourners, a banquet for the hungry. This language echoed the prophets and the Psalms, but it designedly highlighted a particular perspective on fulfillment. It did not, for example, call to mind the countless biblical texts on the righteous (Heb *ṣaddîqîm*) and the upright (*yĕšārîm*), the holy (*qĕdôšîm*) and the pious (*ḥasîdîm*). Rather, it called to mind God's predilection for the poor or lowly (*ʿănāwîm*), for those brought low and afflicted (*ʿăniyyîm*). These were the favorites of God in the Psalms and in prophetic tradition from the time of Jeremiah and Zephaniah. Now, at last, the day would dawn for the poor and afflicted, the contrite and brokenhearted, the unimportant and unpretentious. They would not earn salvation. By counting on its promise, they would simply accept it.

In making his proclamation, then, Jesus was making promises. As an illocutionary act, the proclamation was accordingly not a threat but a pledge: its central term was not judgment but the reign of God. When proclamation and macarism were dramatized by symbolic acts such as dining with publicans and sinners (see below, C.3), this powerful dimension of promise, together with partial fulfillment in the present, was still more heavily underscored.

As a perlocutionary act, the proclamation was designed to elicit a believing acceptance of the promise and a corresponding celebration of God's goodness. When intended response and actual response are differentiated, however, diversity inevitably comes to light. The wise *(sophoi)* and intelligent *(synetoi)* were blind to the truth of the proclamation (Matt 11:25 = Luke 10:21). "This generation" of critics found fault equally with the severe style of John and the celebrative style of Jesus (Matt 11:18–19 = Luke 7:33–34). The correlation between Jesus' proclamation, his macarisms, and his initiative toward sinners was matched by his contemporaries' parallel responses to all three. Whereas few from the religious elite of scholars and the pious accepted him, the "simple" rejoiced in his proclamation as a revelation of divine goodness (Matt 11:25 = Luke 10:21). Like "the poor, the maimed, the blind, and the lame" who poured into the banquet hall in the parable (Luke 14:21), so the poor, the afflicted, the outcast accepted Jesus' invitation. The irreligious, in particular, responded to his initiative toward them with sheer delight (Luke 5:29; 19:9).

It is not easy to single out the particular scriptural sources of the central term in Jesus' proclamation, "the reign of God." The parallel between the *Qaddiš* and the Our Father (the "hallowing" of God's "name," as in Ezek 36:23, followed by the theme of God's eschatological "reign") seems not to provide helpful clues. The Psalms, to be sure, are a particularly rich, though by no means the sole, resource for the theme.

Gustaf Dalman (1902: 134) pointed out that in the NT, as in the whole of ancient Jewish literature, the Messiah may be enthroned and given "royal dignity" or "dominion," but "the reign of God" is never simply transferred to him. In two passages (Luke 12:32; 22:29) Jesus reveals God's intention to include Jesus' closest disciples in this royal dominion. In both texts the Gk word *basileia* reflects the Aramaic word *malkût(ā')* of Dan 7:18, 27. But given the distinction between the *malkût* (reign) of God and the *malkût* (royal dominion) that God would confer on the Messiah or on the Danielic "one like a son of man" and "the people of the saints of the Most High" and, in the gospel literature, on Jesus and his disciples, it is illegitimate to infer from Luke 12:32; 22:29 that the reign of God in Jesus' proclamation derived from Daniel 7. (On *basileia* made to refer to royal rank or dominion, see also Matt 16:28; 20:21; Luke 19:12; 22:30; 23:42).

In Luke's presentation of Jesus' own words (Luke 4:43; 16:16) and in other Synoptic texts (e.g. Matt 4:23; 9:35; cf. 11:5 = Luke 7:22), the proclamation of the reign of God is brought into relation with the proclamation of the herald (Heb *mĕbaśśēr*/Gk *euaggelizomenos*) of Isa 52:7–10; 61:1–2. In view of the burden of the herald's message to Israel, namely, "your God reigns!" (Isa 52: 7), this passage presents itself as a plausible source of Jesus' own proclamation. The fact that Isa 52:7–10 combines the motifs of the herald of good news, the reign of God, eschatological peace, and the restoration of Israel tends to fill out and confirm this hypothesis.

Again, Isa 61:1–3 takes up and carries forward themes from Isa 52:7–10 (the texts are associated in 11QMelch) and from the Isaian Servant songs. Now, Isa 61:1–3 resonates in several gospel passages (e.g., Luke 4:17–21; Matt 11:5 = Luke 7:22; Matt 5:3–4 = Luke 6:20–21). Three motifs—the reign of God (Isa 52:7), news of salvation (Isa 52:7, 61:1), the poor and the mourners as its destinataries (Isa 61:1–3)—are joined together in Jesus' proclamation (Luke 4:17–21; cf. Mark 1:15 = Matt 4:17), in his macarisms (Matt 5:3–4; Luke 6:20–21), and in the account that he gave of himself and his career (Matt 11:5 = Luke 7:22; Luke 16:16). This points to the combination of Isa 52:7–10 and 61:1–3 as not only a plausible but a probable source of his proclamation. The nexus between the two passages is the act of bringing news of salvation *(baśśēr)*.

From childhood on, Jesus had heard the targumic renderings of the Law and the Prophets in the synagogue. They naturally impinged on his thought and speech. There are a few instances in which targumic texts (despite the lateness of their redaction, long after the time of Jesus) are shown to have been ancient, for they are reflected in Jesus' words (e.g., Mark 4:11–12; Matt 26:52; possibly the parable in Mark 12:1–11 = Matt 21:33–44 = Luke 20:9–18; Chilton 1984: 98–101, 111–14). In the targums "the reign of God" was a frequent periphrasis designed to sidestep the idea that God should himself appear on earth. Hence, in place of "behold your God" (Isa 40:9) and in place of "your God reigns" (Isa 52:7), the targum has "the reign *(malkûtā')* of your God has been made manifest" (*Tg. Isa.* 24:23; 31:4; *Tg. Neb.* Mic 4:7; Zech 14:9). On the one hand, there is very little reason to think that Jesus drew his distinctive thematization of the reign of God from some already fashioned "reign-of-God theology" in the targums; on the other hand, the frequency of *malkût* language in the synagogue may well have influenced his choice of the central term of his proclamation.

3. Jesus' Public Behavior. The principal public actions

of Jesus were symbolic and these symbolic acts were correlative to his proclamation. Proof of the latter point lies in the explicit or implicit reference of his public symbolic acts to the reign of God, a reference verifiable in each of three sets of texts considered in this section.

a. The Twelve. The discipleship that surrounded Jesus came into being through his personal call. The call was peremptory, admitting no delay in response (Mark 1:17, 20 = Matt 4:19, 22; Mark 2:15 = Matt 9:9 = Luke 5:28; Mark 10:21 = Matt 19:21 = Luke 18:22) and no competing claim, whether of Torah and custom (Matt 8:22 = Luke 9:60) or of family love (Luke 9:61–62; cf. Matt 10:37 = Luke 14:26). The key to this extreme rigor was the imminence—indeed, the advance presence—of the reign of God in the mission of Jesus and the priority of its demands over all other claims, even those of the Torah.

The historicity of the act of choosing twelve from among his disciples to participate most intimately in his mission (Mark 3:13–14 = Luke 6:13; Mark 6:7–13 = Matt 10:1, 9–14 = Luke 9:1–6; cf. Matt 19:28 = Luke 22:30) is beyond reasonable doubt. Historicity is assured, first of all, by two elements that go against the grain of post-Easter church tendencies: Judas Iscariot's membership in the twelve, and the passing over without mention of the status of the twelve in the interim between the career of Jesus and the last judgment; second, by multiple attestation (triple tradition, logia tradition, special traditions such as Luke 8:1–3; John 6:67–71; and the post-Easter pre-Pauline tradition transmitted by Paul in 1 Cor 15:5); third, by multiform attestation in story, logion, and faith formula.

The number twelve was symbolic; hence, the twelve were themselves a living symbol. The symbolic reference was to the twelve tribes of Israel. But inasmuch as the loss of the northern kingdom of Israel to the Assyrians in ages past had left only two and a half tribes (1QM 1:2; *2 Apoc. Bar.* 62:5; 77:19; 78:1; *Mart. Is.* 3:2), "twelve" in the eschatological context established by Jesus' proclamation could only signify "Israel restored." Jesus' appointment of the twelve accordingly signified that his mission and theirs bore on the restoration of Israel. Made up of notably disparate elements, the twelve were a reconciliatory sign. This intimates that the coming restoration itself would have an equally reconciliatory character.

Jesus, moreover, gave the twelve a role in the coming to be of this reconciliation and restoration by sending them (Mark 6:7 = Matt 10:5 = Luke 9:2) in groups of two (Mark 6:7; cf. Luke 10:1) to enlist Israel's welcome of the reign of God (Mark 3:14; Matt 10:7; Luke 9:2). They thereby participated in Jesus' own role as eschatological herald *(mĕbaśśēr/euaggelizomenos)*. This had been presaged by the word, "Come, follow me, and I will make you fishers of men" (Mark 1:17 = Matt 4:19), an image that, alluding to but modifying the sense of Jer 16:16, signified the task of "gathering" Israel in the sense of winning from Israel a common act of faith. The stakes were high, for acceptance would bring eschatological blessing, and refusal would bring eschatological condemnation (Mark 6:11 = Matt 10:12–15; cf. Luke 10:10–12).

b. Cures and Exorcisms. Jesus' equipping of the twelve for a mission that included the driving out of demons (Mark 6:7 = Matt 10:1 = Luke 9:1) presupposed his own career as an exorcist. At one point he even summed up his whole mission in these terms (Luke 13:32). Five texts with solid claims to historicity include reference to Jesus' career as exorcist and healer.

The double saying on Beelzebul and the advent of the reign of God (Matt 12:27–28 [= Luke 11:18–20]) reads:

> If I drive out demons by the power of Beelzebul,
> by whose power do your sons drive them out? . . .
> But if by the Spirit [Luke has "finger"] of God I drive out demons,
> then the reign of God has overtaken you.

The connecting of exorcisms with apocalyptic or absolute eschatology gives an entirely distinctive profile to this side of Jesus' career (Theissen 1983: 277–86). The accent on the correlation of Jesus' exorcisms with his proclamation is at once the main thrust of the text and an index (originality) to historicity. But the case for historicity is further supported by the sheer offensiveness to early Christian sensibility of the charge of sorcery; by the seeming or surface risk of relativizing the exorcisms of Jesus through reference to the exorcisms of others; and by the antithetical parallelism of question and statement—a trait distributed through all lines of Synoptic tradition and typical of the speech of Jesus (Mark 3:33–34 = Matt 12:48–49; Mark 8:12; 10:18 = Matt 19:17 = Luke 18:19; Mark 11:17; Matt 7:3–5 = Luke 6:41–42; Luke 12:51; 22:25).

The saying on the dynasty and the household divided against themselves (Mark 3:24–26 = Matt 12:25–26 = Luke 11:17) supposes the continuum of all evil and its solidarity with Satan (not a universal supposition in ancient Judaism) and affirms the decisiveness of his own attack on it (eschatology inaugurated and in process of realization). Indices to historicity are discontinuity (the offensiveness of the charge of sorcery) and originality (realized eschatology).

The saying on the binding of the strong man (Mark 3:27 = Matt 12:29 = Luke 11:21–22) is strikingly original, for the claim to have "bound" Satan in advance of the exorcisms is unparalleled. Jesus' giving the disciples a share in his power over the demons (Mark 3:14–15; 6:7; Matt 10:7–8; Luke 9:1–2) derives historical probability from other data, especially from the disciples' failure as exorcists (Mark 9:18, 28 = Matt 17:16, 19 = Luke 9:40). The historicity of Jesus' answer to the question of the Baptist (Matt 11:5 = Luke 7:22) is probable on the basis of the claim to absolute eschatology already underway. The text is a cry of joy at the launching of God's climactic and definitive saving act.

Finally, the solidly grounded historicity of Jesus' refusal of a demand for a "sign from heaven" (Mark 8:11–12 = Matt 16:1, 4; Matt 12:38–40 = Luke 11:29–30; Luke 11:16; John 4:48; 6:30–40) is by no means a counterindication putting the historicity of his exorcisms and cures in doubt. The demand was for a circus prodigy such as the parting of waters in imitation of the Moses tradition (*Ant* 20.5.1 §97) or the feat of floating down from "the pinnacle of the temple" sustained by angels (Matt 4:5–6 = Luke 4:9–10). Jesus' refusal to provide a flamboyant made-to-order "sign" of this kind, while it does not rule out exorcisms and cures, does sharply differentiate his intentions

from those of the prophetic and messianic pretenders of whom we learn from Josephus.

The most distinctive feature of Jesus' cures and exorcisms derived from the context in which they were performed and which he himself repeatedly underscored: they pointed to the dawning reign of God. By his eschatological proclamation the exorcist had generated an all-commanding context for his encounter with the demons. Thanks to this context the exorcisms were sublated, promoted to the status of signs of the eschaton. Jesus' combat with Satan did not signal one moment among others in the endless seesaw of good and evil, but the decisive apocalyptic turning point. Furthermore, his cures and exorcisms went beyond symbolizing the restoration of Israel to the act of bringing it about. In the face of this momentous event, to which all Israel ought to have responded with faith, unbelieving Chorazin and Bethsaida and Capernaum were doomed (Matt 11:21–24 = Luke 10:13–15).

c. Fellowship with Sinners. If the cures and exorcisms of Jesus, besides eliciting faith, also provoked skepticism and malicious misconstrual, his initiative toward social outcasts, besides eliciting the joyous response of the outcasts, also provoked shock and resentment on the part of the learned and the pious. To his contemporaries it was a staggering phenomenon that Jesus did not shrink from dining with the irreligious (Mark 2:16–17 = Matt 9:11 = Luke 5:30; Matt 11:19 = Luke 7:34; Luke 15:1, 19:8). The intensity of the opposed reactions to this policy becomes intelligible in the light of two aspects of the social context. First, dining in common established among its participants a bond of fellowship, violation of which was rank betrayal. Second, it was through table fellowship that the ritual distinction between "the clean" and "the unclean" and the moral distinction between "the righteous" and "the sinners" found concrete social expression. Since gentiles were unclean (Deut 14:21) and uncleanness was contagious, Jews were not to eat with them (*Jub.* 22:16). But the rule applied by Jews to gentiles was also applied by religious Jews to irreligious Jews, especially to notorious "sinners" including heretics (Böcher 1972: 16–17), but often enough to the merely unobservant, who could not be counted on in matters of ritual purity. For at least some associations of the religious elite, probably including the Pharisees, this meant that table fellowship was virtually limited to their own membership.

To grasp the issue of Jesus' initiative toward and fellowship with "sinners," the first requisite is to define the term "sinners." The classic treatment of the issue is that of Joachim Jeremias. From 1931 (Jeremias 1931: 294) through publications over the following forty years (1969: 303–12; 1971: 108–21), he rightly maintained that "the sinners" in the gospels did not refer to the unobservant (the so-called "people of the land," *ʿam hāʾāreṣ*) but (a) to those who notoriously violated the commandments of God, and (b) to those engaged in universally despised trades (especially usurers, tax collectors, publicans, etc., *b. Sanh.* 25b), practitioners of which were deprived of civil and political rights. In attempting to recover the socioreligious situation in Palestine of the time of Jesus, one should neither identify these notorious sinners and outcasts (the *hamartōloi* of Mark 2:15–17 = Matt 9:10–13 = Luke 5:29–32, etc.) with the ordinary run of men, nor, on the other hand, disregard the continuity that the religious elite considered to exist between these diverse classes (see the reference to "other men"—literally, "the rest of men"—deprecated by the Pharisee of Luke 18:11; cf. John 7:49).

Repentance and conversion were cardinal themes in Judaism, richly represented in postexilic literature, regularly brought to mind by the synagogue, regularly finding cultic expression in the temple. The new element in the preaching of the Baptist had been his presupposition that at the threshold of judgment the ordinary Mosaic economy did not suffice. God called all the children of Israel to repent, to confess their sins, to seal their confession by a rite of washing as in the days of Sinai. The Baptist, to be sure, maintained the classic biblical structure of repentance: conversion first, communion second (Luke 3:7–14 = Matt 3:7–10; Josephus, *Ant* 18.5.2 §117). The daring of Jesus' initiative lay in its reversal of this structure: communion first, conversion second. In ancient Judaism "sinners" stood publicly and for the most part permanently condemned. Tax collectors and publicans, for example, had no way of knowing all whom they had robbed nor of how much, and so had no clear way to make the required "complete restitution plus a fifth." In this seemingly hopeless situation, Jesus' approach to the sinners proved to be irresistible. Contact prompted repentance; conversion flowered from communion.

In retrospect, Jesus' policy can nevertheless be seen to have had a profoundly traditional rationale, for the policy both envisaged and achieved traditional purposes: the conversion and forgiveness of sinners, their reconciliation with God and with Israel. That Jesus did in fact conceive his initiative toward sinners in terms of conversion and forgiveness is crystal clear from analysis of the many parables by which he defended his policy from its critics, e.g. the parable of the Laborers in the Vineyard (Matt 20:1–16), the parable of the Two Sons (Matt 21:28–32), the parable of the Two Debtors (Luke 7:41–43), the twin parables of the Lost Sheep and the Lost Coin (Luke 15:4–10), and the parable of the Prodigal Son (Luke 15:11–32).

The second aspect of Jesus' policy was the intent to win the sinner back not only to God but to his rightful family, Israel. Salvation belonged to Zacchaeus, said Jesus, "for he, too, is a son of Abraham" (Luke 19:9). Nothing could have been more fundamental to the eschatological restoration of Israel than the seemingly impossible feat of healing the division between the good and the wicked without forfeiting the claims of the moral order.

But the "Israel" to which the converted sinner was won back, was this the Israel of history prior to John the Baptist and to Jesus? Or was it the eschatological Israel coming into being through their work? The matter is clarified by consideration of the problem that followed upon Jesus' remarkable success in winning over sinners. This was the problem of winning over the righteous, as well. The parables listed above were without exception addressed to them. Collectively, these parables are the relics of a radical and poignant appeal. The appeal was radical, for it transcended the conventional grounds for the deep division between the righteous and the sinners. John the Baptist had relativized this division by calling the righteous, too, to repentance. Jesus fully agreed with and followed in this line. In and through a series of parables, he mounted an

appeal to the righteous to enter with their brothers, the sinners, into a new fellowship of forgiveness, an eschatological covenant, a new and eschatological Israel. The story of the Prodigal Son ends on this note of poignant appeal, with the words of the father to the elder son: "But we had to celebrate and be glad, because your brother was dead and has come back to life; he was lost and is found" (Luke 15:32). The response of the elder son is left open and undecided. It would be settled only by the response that the hearer himself would make to Jesus' parable.

The three great symbolic acts reviewed here—the choice and sending of the twelve, the stream of exorcisms and cures, and the unprecedented initiative toward notorious sinners—perfectly translated Jesus' proclamation into action. The proclamation of the reign of God signified the long-promised and long-awaited restoration of Israel. Jesus' symbolic acts were bent on bringing it into being. His proclamation was to be no isolated word. It would be given mass and momentum in dramatic acts designed to signify and to realize a new Israel. The themes correlative to "the reign of God"—new people, new covenant, new code—began to emerge in the encounter between Jesus and his fellow Jews.

4. The Teaching of Jesus. The teaching of Jesus was less an initiative than the follow-through on an initiative. The initiative had been his proclamation and symbolic acts. These elicited responses were positive and negative. An important part of Jesus' teaching consisted in his response to the responses.

a. Jesus' Response to the Responses. A first response to him was puzzlement expressed as critique. Jesus' proclamation inescapably carried the claim that here at last God was speaking his climactic word to Israel. But how could that be? If the word of Jesus was the word of God, how could it have won so cool a reception in Israel? Was not the word of God like fire, like a hammer that shatters rock (Jer 23:29)? But the word spoken by Jesus was apparently returning to him empty. To this Jesus responded in a set of images as natural as they were compelling: Look at the sower. Some of the seed he sows falls on the path and is trampled; some is eaten by the birds; some falls on shallow ground, springs up early, and withers; some falls among thorns and is choked. Yet—harvest comes, the sheaves sway in the field, rich beyond measure (Mark 4:3–8 = Matt 13:3–8 = Luke 8:5–8). The listeners, in short, are told: do not judge so quickly or be misled by appearances. Harvest will come and it will be rich. Here "teaching" has become a renewed appeal for faith and confidence.

A second response to him was to hear his proclamation, perhaps with interest, but finally to dismiss it with a shrug. To this Jesus responded with vigor. The warnings and danger signals, the reproaches and rebukes that Jesus addressed to the dense (Luke 12:54–56), the deluded (Luke 23:31), and the perverse (Mark 3:6 = Matt 12:14 = Luke 6:11) drew on a wide variety of images and motifs and ranged over the scale of feeling from cool appeal for insight (Luke 13:6–9) through pathos and lament (Matt 23:37–39 = Luke 13:34–35) to angry indignation (Mark 3:5). The illusory supposition of life as usual, maintained in the teeth of the urgent proclamation, was like the calm before the deluge that wiped out mankind (Luke 17:26–27 = Matt 24:37–39). A crass and heedless Israel stood in imminent danger, like a bird about to be snared (Luke 21:34).

In the face of warning, what would happen to the fatuously unconcerned? Like salt that had lost its savor, they would be "thrown out" (Matt 5:13 = Luke 14:34; cf. Mark 9:50). Sometimes the warning was cool and dry: Israel was living on borrowed time, like a long-barren fig tree about to be cut down, for which the gardener has pleaded with the owner for a last chance (Luke 13:6–9). Sometimes, as in texts cast in dirge rhythm (Mark 4:24 = Matt 7:2 = Luke 6:38; Luke 13:24–27; Mark 9:50; Matt 20:16), warning was solemn. Elsewhere it was doleful and poignant (Matt 23:37–39 = Luke 13:34–35). At times Jesus' response was amazement (Mark 6:6), or anger (Mark 1:41) yielding to sorrow (Mark 3:5), or savagely bitter humor (Luke 13:33).

Exactly what was at stake in this set of texts on warnings to Israel? At stake were the status and destiny of individuals, of groups, of the entire nation. The alternatives were restoration and ruin, acquittal and condemnation, life and death. The danger was that of definitive condemnation at the judgment, which would come suddenly and soon. Suddenly: for it would come like lightning flashing from one end of the sky to the other (Luke 17:24). Soon: for the sign of its coming was "this present moment" (Luke 12:56). In a context of impending ruin (Luke 12:16–21, 58; 13:6–9; 21:34), the most urgent and immediate need was for awareness, alertness, insight. But the source of insight was the good, the generous heart; just so, Jesus warned the crowds, the source of blindness was the hardened heart: "See to it then that your [inner] light is not darkness!" (Luke 11:35 = Matt 6:23b).

The interactive sequence "prophecy/indifference/warning" was an age-old pattern, and this pattern is the clue to the depth-dimension of the texts. The seemingly impenetrable self-assurance that grounded Israel's indifference to prophetic warning appears as a radically continuous phenomenon throughout the history of the prophetic movement. It was the besetting temptation to take refuge in election. But election, said the prophets from Amos through Isaiah and Jeremiah and Zechariah down to the Baptist and Jesus, was two-edged. God's transactions with Israel, so far from guaranteeing unconditional protection, put his people in peril:

> Only for you have I cared
> out of all the earth's tribes;
> therefore will I punish you
> for all of your crimes (Amos 3:2).

It was pure illusion to affirm Yahweh's presence and infer from it that all was secure: "Is not Yahweh in our midst? No evil can come upon us!" (Mic 3:11). Because Israel clung to such illusions, Yahweh would "make this people wood"; his word would become fire in its mouth "and devour them" (Jer 5:14). It was utterly futile to call on "lying words" like the self-hypnotizing chant "the temple of Yahweh, the temple of Yahweh, the temple of Yahweh!" and to conclude "we are delivered!" (Jer 7:4, 10). If Israel regularly installed itself in this false consciousness, the prophets just as regularly made it their task to unmask

and overturn it. The truth of election degenerated again and again into the dogma of unconditional blessings, but the Baptist resumed the whole prophetic tradition in his word:

> Do not begin to say to yourselves
> "We have Abraham for our father."
> I tell you: God can raise up sons to Abraham
> out of these stones (Luke 3:8 = Matt 3:9).

The election-historical aspect of Jesus' summons to Israel (maintenance of election in the sight of God hinged on response to the emissary of God) and its eschatological aspect (salvation at the judgment hinged on response to the selfsame emissary of God) both emerged directly from his proclamation insofar as it envisaged the definitive restoration of Israel. These aspects of his mission also emerged from the tone of his warnings to whoever ignored or rejected the proclamation. The election-historical and eschatological factors together offer the most adequate explanation of three hyperbolic features of Jesus' teaching: first, the distance between the terms in which questioners posed questions to him and the terms in which he cast his answers; second, the repeated warning that in the present situation the righteous were positioning themselves in greater danger of perdition than were the sinners; third, the Torah-transcendent character of Jesus' moral teachings in general.

Questions, whether prompted by shocked amazement (e.g., at Jesus' dining with sinners) or disappointment (e.g., at his reception by Israel), regularly bore on Jesus himself, his policies, and the way in which his career was unfolding. But often Jesus' answers to these questions took the form of descriptive figures imaging the way the reign of God comes (see the parables of the Sower, the Leaven, the Great Supper, the Good Employer, etc.). By correlating questions about himself with answers on the reign of God, Jesus repeatedly invited his interlocutors to find in him and in his mission an omega point: God's climactic and definitive revelation to Israel. This revelation said something new about the destiny of Israel. God meant his people to find their fulfillment through the mission of Jesus. Concrete acts—the breaking of news of salvation to the poor (Matt 11:4 = Luke 7:22; cf. Matt 5:3 = Luke 6:20), the bringing of sight to the blind, health to the lepers, life to the dead (Matt 11:5 = Luke 7:22), the seemingly scandalous initiatives toward notorious sinners (Mark 2:16–17 = Matt 9:11 = Luke 5:30; Matt 11:19 = Luke 7:34)—were mediating the advent of the reign of God. The clear implication was that a "reign of God" not correlative to the mission of Jesus was pure abstraction and illusion. Equally illusory and positively ruinous according to Jesus was the dismissal of his mission as irrelevant to Israel's status and destiny. On the contrary, his correlating of his own mission with the reign of God implied that everything hinged on response to him.

The sanction of this claim would be the coming judgment, a recurrent theme copiously attested by every line of transmission in the gospel literature. Entry into the reign of God was not guaranteed by election. Election itself was correlated with response to Jesus' summons. Election and entry into the reign of God made up a single issue to be resolved by human decision and divine judgment. For his hearers, then, the central issue at the judgment would be their response to Jesus and his proclamation (Mark 6:11 = Matt 10:14 = Luke 9:5; 10:10–11; Mark 8:38 = Matt 10:33; 16:27 = Luke 9:26; Matt 7:22–23 = Luke 13:26–27; Matt 7:24–27 = Luke 6:47–49; Matt 10:32–33 = Luke 12:8–9; Matt 12:41–42 = Luke 11:31–32). One should doubtless apply careful historical critique to all these texts; still, there is no plausibility in the view that they are *en bloc* unhistorical.

If the self-sufficiency of the righteous thwarted the response to Jesus, the self-effacement of the simple positively conditioned it; i.e., the response to Jesus was the act of one who humbled himself like a child (Matt 18:4). The full meaning of this act came to light in a judgment theme: the precise reference of the reversal imaged in "Whoever exalts himself will be humbled, whoever humbles himself will be exalted" (Matt 23:12; Luke 14:11; 18:14) was to the last judgment. ("Will be humbled/exalted" are divine passives; if parallels are consulted, the futures must be eschatological: see the many other generalizing conclusions of parables, such as Mark 4:25; 13:37; Matt 20:16; 21:44 = Luke 20:18; Matt 22:14; Luke 12:21; 13:30. The scriptural resource of this text, Ezek 21:31, also referred to reversal by God's judgment.)

The most disconcerting aspect of Jesus' teaching on the judgment was that, in view of their respective responses to John and to himself (Matt 11:18 = Luke 7:33–34), "sinners" were headed for salvation and the "righteous" for perdition. To say that "publicans and prostitutes will enter the reign of God ahead of you" (= the righteous) (Matt 21:31) might well be thought to have irritated the righteous; but the actual meaning of Jesus' words was much harsher: "they will enter and you will not!" The Aramaic substratum of "will enter . . . ahead" (Gk *proagousin*) is the *Hapʿel* or *Paʿel* participle of *qĕdam*, e.g. *mĕqaddĕmîn*; the reference of this atemporal participle was future; its sense was exclusive preference, not temporal precedence. Analogies include Luke 18:14, which in its originally intended sense reads: "this man, not the other, went down to his house having found God's favor." The motif of exclusion was also evoked by the image of exclusion from the banquet, referring to those who had refused the appeal of Jesus (Luke 14:24). To say that publicans and prostitutes would enter God's reign and that they, the righteous, would not, might have infuriated the righteous, but it meshed perfectly with the election-historical and eschatological claim of Jesus and with the divergent responses to it of many "sinners," on the one hand, and many righteous, on the other. Jesus' proclamation was divinely sanctioned; response was not optional but requisite; even the righteous risked ruin by turning it down.

Finally, these two distinct but inseparable aspects of Jesus' mission—its election-historical and its eschatological dimension—make intelligible the Torah-transcendent character of Jesus' moral teaching. The definitive restoration of Israel was coming to realization in those who accepted and rejoiced in his mission. The old order was obsolete; new wine called for new bottles (Mark 2:22 = Matt 9:17 = Luke 5:37).

b. Torah-Transcendent Teaching. Jesus declared the Deuteronomic legislation regulating divorce (Deut 24:1–

Deuteronomic legislation regulating divorce (Deut 24:1–4) to be henceforward irrelevant. Moses had allowed divorce as an accommodation to human frailty. The prescription of Genesis ("they shall be one flesh," Gen 2:24) specified the authentic will of God. Phrases such as "the Creator at the beginning" (Matt 19:4) or "from the beginning of the creation" (Mark 10:5) evoke the eschatological schema "as in the beginning, so in the end" (cf. *Barn* 6:13, *ta eschata hōs ta prōta,* "the last things [I shall make] like the first"). Following Ezekiel and Deutero-Isaiah, Jesus here and the NT writers elsewhere (Mark 1:13; Rom 5:17–19; 1 Cor 15:45) correlated the time of salvation with the restoration of Eden. As Israel's eschatological restoration came gradually to fulfillment, makeshift and provisional arrangements devised "in view of your hardness of heart" (Mark 10:5 = Matt 10:8) were rendered obsolete. The originality of Jesus' teaching on divorce, which may have provoked the later rabbinic ruling according to which anyone who said that this or that verse of the Torah was not from heaven but from Moses "by his own mouth" has "despised the word of the Lord" and should be "cut off" from among the people (*b. Sanh.* 99a Bar.), creates a strong presumption in favor of historicity.

Restoration of the norm of Paradise presupposed the advent of salvation, the time of eschatological espousals (Mark 2:19) when "good things" (Matt 7:11; cf. LXX Isa 52:7) were to be lavished on Israel. The disciple learned from experience that discipleship was transforming: the fruit was good because the tree was good (Matt 7:17–18 = Luke 6:43). Jesus' moral teaching was meant for and largely addressed to the graced and restored Israel that was coming into being in response to his word.

The transcending of the Torah might take the form of extreme radicalization of Torah prescriptions (Matt 5:22, 28, 34–37, 39, 44 [= Luke 6:27]). Given its remarkable originality, this profound transvaluation surely derived in substance from Jesus; its high point, the attitude toward enemies, is further supported by multiple attestation of nonresistance to injury and oppression (Matt 5:39b–41 = Luke 6:29), of rejoicing in persecution (Matt 5:10–12 = Luke 6:22–23), of love for enemies (Matt 5:46–47 = Luke 6:32, 35).

Jesus discriminated, in terms of relative weight, between the moral law and the ritual law. If he radicalized the first, he relativized the second. Moreover, he took every occasion to repudiate or relativize the scribal tradition *(hălākâ),* whether it bore on the moral or the ritual law. Thus the gospels contain not so much as a single word urging Sabbath observance, which had become the touchstone of Torah piety. Jesus attacked the *hălākâ* not only on divorce but on the magnification of Sabbath observances (Mark 2:27–28; cf. Matt 12:8 = Luke 6:5), food laws (Mark 7:15 = Matt 15:11), and fasting (Mark 2:18–19 = Matt 9:14–15 = Luke 5:33–34) and the relaxation of graver obligations such as to honor one's parents (Mark 7:10–13 = Matt 15:3–6) or to fulfill one's pledges (Matt 23:16–22). The logion in Mark 7:15–Matt 15:11 epitomized his perspectives:

> Nothing that goes into a man from outside can defile him,
> but only what comes out of a man defiles him.

The deepest and most authentic sense of the word "defile" belonged, not to the sphere of food laws, but to that of human speech. Tongue revealed heart, for "from the overflow of the heart the mouth speaks" (Matt 12:34 = Luke 6:45). In sins of speech, then, lay the real danger of defilement. Scribal tradition on food laws would not figure at all in God's judgment; by contrast,

> in accord with your words you will be acquitted
> and in accord with your words you will be condemned (Matt 12:37).

Jesus' commandments were essentially a code of discipleship. Was wealth what everyone wanted and could never get enough of? Then "sell what you have and give it to the poor" (Mark 10:21 = Matt 19:21 = Luke 18:22). But this summons to poverty, as the story of the rich man (Mark 10:17–22 = Matt 19:16–22 = Luke 18:18–23) shows, is ordered to discipleship. The sequence of Jesus' commands (Mark 10:21 = Matt 19:21 = Luke 18:22) is "(Go,) sell, give, and come follow." Detachment is for the sake of attachment.

Does everyone hanker to be first? Then be last. "If anyone would be first, he must be the last of all and the servant of all" (Mark 9:35; cf. Mark 10:43–44 = Matt 20:26–27; also Luke 22:26). Jesus applied this repudiation of the drive to prestige to the sphere of piety, above all. Piety should be secret, seen by God alone (Matt 6:3–4, 6, 17–18).

Even from so swift a survey as the above, it is evident that Jesus brought a new and independent vision of things and scale of values onto the scene of Palestinian Judaism. Without aspiring to comprehend all its aspects or to trace all its roots, scholarship should still be able to locate its principal perspectives and clarify them by contrast with those of Jesus' competitors for the allegiance of Israel.

c. Clarification by Contrast. The Jewish religious elite in the time of Jesus was reformist; it found the key to reform in the scriptures, especially in Exod 19:5–6 and numerous holiness texts of Leviticus (e.g. 20:26). In the first text, Judaic piety found the normative definition of the nation: Israel was called to "keep the covenant" by observing the Torah; it was called to be God's "own possession among all nations"; it was called to live a priestly life of holiness, for it was to be "a kingdom of priests and a holy people." In the second text (Lev 20:26) election, expressed in the idiom of separation, is offered, together with the holiness/separateness of the Lord himself, as the ground of a divine imperative: "you shall be holy."

Priestly theology lay at the foundations of Judaism. In accord with preexilic ideals accented now more heavily than ever, the exiles returning from Babylon made holiness—i.e. consecration, set-apartness—the central condition and sign of election. They defined themselves as the remnant of Israel and elect of God. "I have separated you from the nations" was the watchword of Ezra 9. Those who failed to separate themselves from (i.e., avoid intermarriage with) "the peoples of the land(s)" were outside the covenant (Ezra 9:1–2, 7–8, 11–15).

The ideology that bound up election with consecration and separation found full expression in the literature of the Essenes, which was obsessed with priestly ideals and

concerns; CD 4:3–4 even defined "the elect of Israel," i.e., the whole sect, as priestly "sons of Zadok." Qumran was separatist in the maximal sense of claiming that the sect alone constituted the true Israel; it accordingly condemned all Jewish nonmembers as "sons of darkness," the great mass of whom were destined for ruin.

Probably the name "Pharisees" (Heb *pĕrûšîm*/Aram *pĕrîšîn*) signified "separated" and connoted "holy." It does not necessarily follow from this that the Pharisees equated "Israel" with their own fellowship. To be sure, they set themselves off from unobservant Jews as from "people(s) of the land" (*ʿammê hāʾāreṣ*); but Pharisaism was transformist, seeking to extend its own ideals and practices to all Jews. As the monastic movement was a leaven within early medieval Christianity, the Pharisees were a leaven within Second Temple Judaism. But unlike the monastic movement, the Pharisees claimed to be more than a leaven: the true vocation of all Israel without remainder lay, they claimed, precisely in Pharisaism. Under the rubric of "righteousness" they ranged through the moral heritage of the scriptures, interpreted and complemented by the specific differences of Pharisaic *hălākâ*, which focused on tithing and ritual purity. Their insistence on the latter ideal made them a table-fellowship party within Israel.

Individually and in the aggregate, Jesus' teachings suggest and, indeed, attest horizons altogether distinct from those of Torah piety. He himself was fully conscious of this; more, by his table fellowship with sinners, his Sabbath healings, and such parables as the Good Samaritan (Luke 10:29–37) and the Pharisee and the Publican (Luke 18:10–14), he mounted an attack on Judaism's reigning holiness-paradigm (Borg 1984: 102–9). On the positive side, his moral stance, though free-spirited and opposed to the punctilious attention to detail typical of scribal *hălākâ*, was in substance far more demanding and uncompromising than any scribal *hălākâ*. A prospective disciple learned—doubtless, with a shock—that he was to "let the dead bury the dead" (Matt 8:22 = Luke 9:60). Even Jesus' close disciples blanched at the seemingly utopian rigor of his exclusion of divorce (Matt 19:10; Mark 10:10 = Matt 19:9). The rich man, who had observed all the commandments from his youth, recoiled from the challenge of life without possessions (Mark 10:22 = Matt 19:22 = Luke 18:23). Jesus radicalizations of the Torah (Matt 5:21–22, 27–28, 33–34, 38–39, 43–44) must have stunned and baffled as well as fascinated and inspired his first hearers just as they have had this effect on readers of the Sermon on the Mount across the centuries. Jesus overturned the whole mass of halakic accommodations to human frailty (e.g., Mark 10:2–12 = Matt 19:2–9; cf. Luke 16:18; Mark 7:6–7 = Matt 15:4–6). In what explanatory perspective could these views be seen to make sense?

The relevant considerations appear to be four. There was the election-historical factor: his teachings were meant for, and in the last analysis could only be meant for, restored Israel—followers summoned to be a community of the transformed. There was the eschatological factor: first, the reign of God took priority over every other consideration, even those of familial piety sanctified by the Torah; second, the time of fulfillment had arrived, bringing the reversals promised in the scriptures (Matt 5:3–6 = Luke 6:20–21) and the filling of all measures to the full (Matt 5:17; Luke 16:16). There was the prophetic factor: the code of the teacher and the taught was designed to accord with the tradition (Zeph 2:3; 3:11–13; Isa 57:15; 61:1–2) of the remnant of the poor (Matt 8:20 = Luke 9:58; Matt 11:28–30). Finally, there was a mystagogical factor: Jesus' followers were invited to enter into the mystery of his personal mission and destiny. Increasingly, this focused on the slowly crystallizing reality of rejection (Gk *apodokimasthēnai*, "to be rejected": Mark 8:31 = Luke 9:22; 17:25). After he had revealed this coming destiny to his appalled disciples (Mark 8:32 = Matt 16:22), he issued what amounted to a new call to discipleship: "If anyone wishes to follow me, let him deny himself and take up his cross[-bar] and *so* follow me" (Mark 8:34 = Matt 16:24 = Luke 9:23; cf. Matt 10:38 = Luke 14:27). In a word his teachings were unique because his mission and destiny were unique; so was the discipleship to which he summoned his followers.

5. The Identity and Destiny of Jesus: Traditions Public and Private. Interpretation of the words of Jesus has always taken some account of the factor of "audience," but T. W. Manson was the first to correlate diversity in Jesus' themes and vocabulary with his diverse audiences (Manson 1931: 320–29). The most important result was to draw attention to the existence of an esoteric tradition in the Synoptic Gospels, i.e., scenes depicting Jesus and his disciples alone and especially presenting instructions of Jesus reserved for them alone. Private or esoteric tradition, a many-sided phenomenon in the history of ancient philosophy and religion (Jeremias 1966: 125–32) and indisputably reflected in Synoptic texts, had as its principal themes in the gospel literature the identity and destiny of Jesus and the events of the eschatological crisis or "ordeal" and its resolution.

The public activity of Jesus as proclaimer and teacher, exorcist, wonderworker, and reconciler of notorious sinners inevitably prompted the question, "who is he?" (as in Mark 4:41 = Luke 8:25), i.e., "what kind of man is this?" (Matt 8:27) or, as in the questions posed to the Baptist (John 1:19–22), what role does this man play, or claim to play, in the scripturally attested scheme of the fulfillment to come?

a. The Messianic Connection. Though scholars addressing this issue have not reached consensus, there is one point at which agreement is all but unanimous: the post-Easter Christian community from virtually the outset of its existence confessed Jesus as the Messiah. Disagreement begins with the effort to say when the earliest followers of Jesus first predicated messiahship of him.

William Wrede (1901), followed by Rudolf Bultmann and his school, answered: "after the Easter experience of the disciples." N. A. Dahl (1974) modified this view by tracing the immediate roots of the Easter confession to the passion story. First, in response to the question of whether he was "the Messiah" (or "a king"), Jesus acknowledged, either by a word "extorted" from him, or at least by silence, that the answer was yes. Second, the *titulus* on the cross ("the king of the Jews") showed that this had figured in the accusations of which he had been found guilty and for which he was accordingly executed.

The views of Wrede and Bultmann, together with Dahl's minimal, if significant, modification of them, have had a

wide following. It nevertheless remains a datum of the gospel story that Jesus' disciples through their spokesman Peter confessed him as Messiah during his public career (Mark 8:29 = Matt 16:16 = Luke 9:20; cf. John 1:40–42; 6:69). Why have scholars not accepted this gospel datum as historical? A major reason has been exegetical. Taking the Markan text to be the primitive account of the confession near Caesarea Philippi, many have interpreted the Markan Jesus to have rejected Peter's confession ("You are the Christ!" Mark 8:29) as "inadequate" or "wrong."

Several shortcomings of this reading, however, immediately present themselves. First, with reference to this particular pericope, the supposition of Markan priority is open to form-critical objection (Bultmann 1963: 258–59). Second, this reading of Mark contradicts the starting point of Mark's gospel (i.e., Jesus is indeed the Christ, Mark 1:1); moreover, it psychologizes the scene in a way congenial to modern but alien to Markan writing; finally, it mistakenly conceives the use of "Son of man" in the following pericope as an alternative to "Messiah." (The same error is not infrequently made respecting Mark 14:61–62.) Even if the question of historicity remains, recent critical literature has begun to change the state of the question.

The examination of popular messianic movements (Horsley and Hanson 1985) has shown the plausibility of a text like that of John 6:15, according to which a Galilean crowd "meant . . . to make him king." Again, a reconsideration of Markan materials and structure and of the use of "anointed" in contemporary Jewish sources has shown how the activity recounted in Mark 1–8 could very well have grounded the conclusion and confession of Peter (de Jonge 1986). If, moreover, the following words of Jesus and the exchange between Peter and Jesus (Mark 8:31–33 = Matt 16:21–23; cf. Luke 9:22) suppose the previous confession of Peter, as both the content of the text and its firm location in the Synoptic tradition suggest, historicity accrues to the confession from the historicity of the harsh rebuke addressed to Peter (discontinuity with the post-Easter status of Peter; coherence with evidence of Jesus' readiness to enter into "the ordeal" and the disciples' contrary dispositions of dismay and fear, Mark 10:32; their preferred concentration on glory and triumph, e.g., Mark 10:35–45 = Matt 20:20–28; their verbal readiness to suffer with Jesus, e.g., Mark 10:39 = Matt 20:22; Mark 14:29 = Matt 26:33 = Luke 22:33, but real unreadiness to do so, Mark 14:50 = Matt 26:56; Mark 14:71 = Matt 26:74 = Luke 22:60).

Factors relevant to the judgment of historicity respecting both Peter's confession and Jesus' self-understanding include the following. There was, first and foremost, the career structure based on Jesus' act of proclaiming the coming of the reign of God. This proclamation, since it bore on God's imminent and definitive saving act, presented itself as the climactic word of God to Israel. The role of eschatological proclaimer (Isa 52:7–10; cf. 61:1–3) had already been interpreted messianically in Qumran (11QMelch 18). It was certainly a role implying maximum authority, the authority not of the learned exegete but of the plenipotentiary envoy of God. Indices to just this consciousness on the part of Jesus are his distinctive use of "amen" to introduce authoritative statements and his use of the emphatic "I" in place of scriptural reference (Jeremias 1971: 35–36, 251–55). As accepters of the proclamation were destined for restoration, so its refusers were destined for ruin (Mark 6:10–11 = Matt 10:11–15 = Luke 9:4–5; cf. 10:4–12). Both in content and in style Jesus' teaching took full account of and repeatedly underscored the life-and-death character of the issue placed before Israel and the correlative fullness of authority on the part of the proclaimer and his word. Furthermore, this teaching presented the proclaimer of salvation as himself the author of its nascent realization in the present (e.g., Matt 12:28 = Luke 11:10; Mark 4:30–32 = Matt 13:31–32 = Luke 13:18–21).

Specific discrete data similarly relevant to the issue of messiahship include the following. First, in several probably authentic sayings, Jesus associated others with himself in scripturally grounded functions and dignity (Luke 12:32; 22:28–30 = Matt 19:28; cf. Mark 3:14–15 = Matt 10:1 = Luke 6:13; Mark 6:10–11 = Matt 10:11–15 = Luke 9:4–5; cf. 10:4–12). Second, in the historically authentic riddle on destroying the sanctuary and building another in (or after) three days (Mark 14:58 = Matt 26:61; John 2:19; cf. Mark 15:29 = Matt 27:40; Acts 6:14), Jesus attributed to himself a specifically royal (= messianic) task, namely, to build the house of God (Meyer 1981); this, in turn, heightens the probable historicity of the *kêpā'* (rock) word responding to Simon's confession of Jesus as Messiah (Matt 16:17–19; Meyer 1979: 185–97). Third, the symbolic acts of Jesus' entry into Jerusalem (Mark 11:1–10 = Matt 21:1–9 = Luke 19:29–38; John 2:13–18) and cleansing of the temple (Mark 11:15–17 = Matt 21:12–13 = Luke 19:45–46) were royal. Fourth, similarly indicative in their own way were the symbolic mockeries in the passion story such as the purple cloak and the crown of thorns (Mark 15:17–20 = Matt 27:28–31 = John 19:2–5; cf. Luke 23:11). These were complemented, fifth, by the explicit *titulus* on the cross (Mark 15:26 = Matt 27:37 = Luke 23:28 = John 19:19–22).

Whereas he accepted the messianic title in private, Jesus did not use "Messiah" of himself during his public career. This policy on self-disclosure apparently reflected a certain realism about the response of faith. Faith would not win out over unfaith if only the appeal to it were explicit and spectacular (cf. Luke 16:30–31). Jesus' policy was to set before Israel a proclamation and a sequence of acts charged with symbolic meaning; his teaching guided and encouraged a maximal interpretation of these events but refrained from spelling out this interpretation in determinate (e.g., titular) terms. Hence Jesus' refusal of the demand for a sign (Mark 8:11–12 = Matt 16:1–4 = Luke 11:16, 29; cf. Matt 12:38–39; John 6:30–36), the lack of public titles for himself or his following (e.g., Mark 3:33–34 = Matt 12:48–49 = Luke 8:21), the indirection of the response to the Baptist ("Tell John what you hear and see," Matt 11:4 = Luke 7:22), and the thanksgiving for revelation to the unlikely, "the simple" (Matt 11:25 = Luke 10:21), which exalted the divine over the human factor in positive responses to Jesus; compare the macarism on Peter (not "flesh and blood but my heavenly Father" has revealed [this] to you," Matt 16:17). If Jesus refused to set an explicit messianic claim before Israel, this reserve, which supposed that God's grace of "revelation" was ever operative (Matt 16:17; 11:25 = Luke 10:21), allowed the public to draw its

own conclusion. Jesus' reserve did not in any case signify that the conclusion drawn by Peter was mistaken.

Even to recognize him as Messiah was only a first step in coming to know who he was, for the secret of his identity was bound up with the secret of his destiny. Jesus' messiahship was not simply definable in advance by messianic tradition. His identity would be defined by his destiny—a prophetic theme reserved for his disciples. The coming ordeal was, to be sure, a theme of public warning; that the ordeal would be launched by the repudiation, suffering, and death of Jesus, however, belonged to esoteric tradition. Hence, however public the imminence of eschatological crisis, the full scheme of Jesus' vision of the future was private.

b. Jesus' Scenario of the Future. Amid the chaos of scholarly opinion on Jesus' view of the future, the hypothesis of C. H. Dodd (1961: 21–84) offers an analysis having certain advantages, negative and positive. Among the negative advantages: the hypothesis did not attempt to transpose the time dimension of Jesus' scheme of the future into nontemporal categories (both this procedure and its product or result would have been alien to ancient Judaism); nor did the hypothesis attempt to retain the time dimension but to remove from it the pervasive note of imminence (for fear that Jesus' prophecy might otherwise be thought to have been mistaken). Among the positive advantages, Dodd's hypothesis took account not just of some "key data" but of all the data; better yet, it managed to make sense of all the data. Concretely, the main points of Jesus' view of the future included, first, an eschatology of woe bearing on the ordeal soon to break out. This would be fierce but brief. It would bring disaster to the Jewish people, capital, and temple. It would engulf Jesus and his disciples; indeed, it would be launched by Jesus' suffering and death. Second, the resolution of the ordeal was Jesus' eschatology of weal or bliss. It would be inaugurated by "the day of the Son of man." As the suffering of Jesus would launch the ordeal, so his vindication would bring it to an end. Jesus would be installed at the right hand of God for all to see. Images belonging to this resolution of the ordeal included the resurrection of the dead, the pilgrimage of the nations, the judgment, the banqueting of the saved with the patriarchs in the reign of God.

Dodd took "the day of the Son of man" to have originally signified both resurrection and second coming as a single event (Dodd 1961: 74–77). In fact, however, the Easter experience of the disciples had proved to comprehend only the resurrection of Jesus, not the consummation of history. Thus the differentiation of resurrection and parousia was effected *ex eventu* by the fact that Jesus' resurrection proved to be an isolated event. Once given this account of how the actual unfolding of events had separated elements originally conceived as a single event, it became possible for the critic to recover the original sense of parables (e.g., the Faithful and Unfaithful Servant, Matt 24:45–51 = Luke 12:42–46) that in their present state supposed an interim between resurrection and parousia.

c. The Son of Man. An important aspect of this reconstruction is the contextual and structural contribution that it makes to the much debated question of Jesus' use of the expression "the Son of man." Behind this phrase, so often found on the lips of Jesus in the gospels, there doubtless stood the Aramaic expression *bar ʾĕnāš(ā)*. This phrase could signify "man" (generic sense), "(some)one, a man" (indefinite sense), or "the man" (determinate sense). A translator into Greek had no idiomatic verbal resource capable of rendering the determinate sense to the exclusion of the generic sense. Both would be rendered by *ho anthrōpos* or (keeping the genetival locution) by *ho huios anthrōpou*. If (despite the limits of Greek idiom) the translator was bent on specifying the determinate to the exclusion of the generic sense, he might have recourse to the artificial strategem of doubling the Greek article; this would yield *ho huios tou anthrōpou*.

This appears to be just what the translators of the gospel tradition did. Their reason for wishing to specify the determinate sense is transparently theological: they intended it as a title, "the Son of man." This determinate, eschatological, titular sense was, no doubt, derivative from Dan 7:13–14, despite the fact that the Danielic phrase *kĕbar ʾenāš*, "one like a (son of) man," was in no sense titular. The translators and transmitters of the gospel tradition obviously rejoiced in the title, for even when *bar ʾĕnāš(ā)* bore a sense that was neither titular nor even determinate but generic or indefinite (especially if Jesus himself was the indirectly intended referent of the phrase), the early translators preferred to render it by "the Son of man." Their tendency was to maximize use of the title, preferring it to other renderings as often as possible, despite the inconcinnities that this practice entailed. So potent a bias in favor of the title on the part of the transmitters of the tradition is a factor to be kept in mind in dealing with the Son-of-man riddle in the gospels.

There is at present no sure evidence of the use of this eschatological title prior to the time of Jesus. True, the title occurs in the Similitudes of *1 Enoch* (37–71), but the attestation of this particular part of Enoch is late. In the Latin version of *4 Ezra* 13 (a work dating originally from A.D. 100) *ille homo* (that man), *ipse homo* (the same man, the man himself), and *vir* (a man, the man) is a supernatural figure derived from Daniel 7 and correlative to the Messiah found elsewhere in *4 Ezra*. God calls him "my Son" (13:32, 37, 52) and speaks of his "day" (13:52). The task of the Man is the judgment of the nations and the restoration of Israel. Christian influence on the text of *4 Ezra* 13 is improbable. Among the rabbis a messianic reading of Daniel 7 is attested for the 3d century (*b. Sanh.* 98a). It is possible, though at present uncertain, that prior to Jesus the "one like a man" in Daniel 7 had already been interpreted as it in fact came to be interpreted in *4 Ezra* 13, in the Similitudes of *Enoch*, and among the rabbis—namely, as an eschatological figure correlative to or coincidental with that of the Messiah. But, though this is a live possibility, it is still unattested for the pre-Jesus period.

On the supposition that the title had not been used prior to Jesus, the question is whether it was Jesus himself or the early Christian community that took the interpretative step of objectifying the "one like a man" as the bearer of a specific role to be played out in the eschatological scenario. The index of originality would heavily favor the first option. So striking a christological initiative on the part of the early post-Easter community would have no parallel in the gospel literature; as the creative adaptation of Jesus

himself, it is paralleled by his transformation of messianic tradition. But is it possible to reconstruct Jesus' use of the title?

We begin by addressing the well-attested but anomalous phenomenon of texts paralleled except in their use of the Son-of-man title. It is a remarkable fact that such texts easily outnumber parallel texts in which all parallels exhibit the title (Jeremias 1967). Does the solution lie in positing an idiomatic usage in Aramaic according to which *bar (ʾĕ)nāš(ā)* is a straightforward periphrasis for the first-person personal pronoun (I/me) (Vermes 1967; 1978)? Possibly. The hypothesis is attractive in that it presents itself as a single complete solution of the problem it was designed to address. Its drawback is that the core of the solution, the idiomatic periphrasis in question, is untattested for middle Aramaic, 200 B.C. to A.D. 200 (Fitzmyer 1979: 58–60).

An alternative solution is to appeal to the bias in favor of the title on the part of the transmitters of the tradition. Inept use of the title to translate *bar ʾĕnāš(ā)* in the generic or indefinite sense with indirect self-reference may well have generated an entirely secondary imposition of the Greek title on texts that originally offered only the personal pronoun referring to Jesus. Son-of-man texts paralleled by texts without the title would accordingly drop from consideration as words of the historical Jesus (Jeremias 1967). There remain eleven Synoptic Son-of-man texts: two from the triple tradition (Mark 13:26 = Matt 24:30 = Luke 21:27; Mark 14:62 = Matt 26:64 = Luke 22:69), three from the logia tradition (Matt 8:20 = Luke 9:58; Matt 24:27, 37 = Luke 17:24, 26), two from the special Matthean tradition (Matt 10:23; 25:31), and four from the special Lukan tradition (Luke 17:22, 30; 18:8; 21:36). All but one of these texts (Matt 8:20 = Luke 9:58) bear on the parousiac Son of man. All but two of them belong to the esoteric tradition. The two exceptions are the anomalous text from the logia tradition (Matt 8:20 = Luke 9:58) and the response of Jesus to the high priest in the hearing before the Sanhedrin (Mark 14:62 = Matt 26:64 = Luke 22:69).

In the Synoptic gospels as they stand, texts on the Son of man break down into three main categories: those that directly apply the title to Jesus during his public career; those that use the title with reference to his suffering and/or glorification; and those that use the title with reference to the parousia/judgment. In terms of the present analysis, what is the status of these three sets of texts, and how did they come into being?

The Son-of-man title in the first set is in all probability entirely secondary, although this use has a perfectly intelligible point of departure. Jesus, no doubt, often used *bar ʾĕnāš(ā)* in a generic sense (e.g., Mark 2:27; Matt 4:4 = Luke 4:4); but when he did this with himself as indirectly signified referent, the translators into Greek converted *bar ʾĕnāš(ā)* into a title (Mark 2:20 = Matt 9:6 = Luke 5:24; cf. Matt 9:8). Similarly, Jesus, no doubt, often used *bar ʾĕnāš(ā)* in an indefinite sense (e.g., Matt 7:9; 8:9 = Luke 7:8); but when he did this with himself as an indirectly signified referent, the tradition again converted the expression into a title (Matt 11:19 = Luke 7:34). This predilection on the part of the translators obviously reflected the clear Easter equation of Jesus with the Son of man. This tendency of the tradition paved the way for an entirely secondary pre-redactional and even redactional imposition of the title on traditions, in Greek, that originally offered only the personal pronoun referring to Jesus. The result was a widespread, anomalous phenomenon: the use of the title in texts whose parallels lack it. That *both* of the parallel texts on Jesus' having nowhere to lay his head are outfitted with the title (Matt 8:20 = Luke 9:58) is perhaps attributable to sheer chance.

Use of the title in the second set of texts is either entirely secondary and explained in essentially the same way (Fitzmyer *Luke* AB, 210–11) or, more likely, it had a point of departure in a consciously ambiguous aphorism *(māšāl)* of Jesus, Mark 9:31 = Matt 17:22 = Luke 9:44, which in Aramaic retroversion would read:

> *mitmĕsar bar ʾĕnāšā / lîdê bĕnê ʾĕnāšā.*
> Man/the Man is [about to be] delivered [by God] into the hands of men.

"Man" is generic, the equivalent of mankind; "the Man" is determinate and titular. The hypothesis (Jeremias 1971: 281–86) is that Jesus intended the ambiguity. The ostensible sense was generic, a prophecy of human disaster at the hands of human beings; the subsurface sense was titular, a prophecy incorporating the coming suffering of Jesus into a divinely willed plan and identifying the Jesus about to suffer with the Son-of-man soon to be revealed in glory (Daniel 7). Such was the historical basis on which tradition (not Jesus) generated the second set of texts.

The third set of texts has a surer historical basis and a substantial historical development. Quite apart from the Son-of-man title, Daniel 7 figures in the words of Jesus (Matt 19:28 = Luke 22:28, 30b; Luke 12:32). Again, in the Son-of-man texts themselves the third-person use of the title, "the Son of man," since it maintains the duality of Jesus and the Son of man, is an index to pre-Easter tradition. The same is true of the fact that among the Son-of-man texts there is never any differentiation between resurrection and parousia.

It is not certain, as noted above, whether the Son of man was already an eschatological theme current in Judaism. If it was, Jesus could have evoked this theme in public preaching (Matt 12:40 = Luke 11:30; Luke 12:8). If it was not, Jesus' use of the Son-of-man title with reference to the consummation of history would in all probability have been limited to esoteric tradition—until the hearing before the Sanhedrin (Mark 14:62 = Matt 26:64 = Luke 22:69). The second possibility is highly probable, since nearly all the texts as they stand have the disciples alone for their audience.

The ultimate secret of Jesus' identity—his identity as the Son of man—was unambiguously revealed only with his resurrection from the dead. Prior to that it remained veiled, whether the veiled form functioned as promise (Matt 10:23) or as threat (Mart 14:62 = Matt 27:64 = Luke 22:69).

In the present prior to this revelation Jesus understood himself as the still hidden Messiah whose task was to win the heart of Israel. But the scenario of a prince sent to his people in the guise of a commoner to fire their allegiance in preparation for the day when he would be revealed as

their king went dramatically awry. To depict aspects of his mission Jesus had drawn on the images of the physician (Mark 2:17 = Matt 9:13 = Luke 5:31) and of the messenger sent to announce that the banquet was ready (Mark 2:17 = Matt 9:13 = Luke 5:32; cf. Luke 14:16–17). But the physician was told to heal himself (Luke 4:23) and the messenger was sent back to his master with a set of refusals (cf. Luke 14:21). In dirge (mainly 3/2 beat) rhythm Jesus lamented the refusal:

> O Jerusalem, Jerusalem, killer of prophets,
> stoner of those sent to you,
> how many times have I longed
> to gather your children,
> as a mother bird gathers her brood
> under her wings—
> but you would not have it!
> (Matt 23:37 = Luke 13:34).

6. Why and How Jesus Died. The narrative scheme in the Synoptic gospels, insofar as it allows for only a single journey of Jesus to Jerusalem, was symbolic: he went to Jerusalem to die (Luke 13:33). The length of Jesus' public career according to the Fourth Gospel (ca. three years) probably approximated the historical reality. He must, then, have traveled to Jerusalem several times and stayed there at least for a few days at the yearly Passover and perhaps for other feasts as well.

Jesus experienced both success and failure in his mission. Two kinds of charisma were operative in bringing him a certain public success: "prophetic" charisma in his proclamation and "magic" charisma in his wonderworking. (These modern terms do not signify that Jesus was a prophet or a magician, though in point of fact he was the first and not the second.) The kind of popular success that was sometimes expressly noted in the tradition and more often was implicit in public scenes finds confirmation in the fact that, when planning to arrest him, his adversaries felt the need of stealth "lest there be a riot among the people" (Mark 14:2 = Matt 26:5).

Though Jesus addressed his proclamation to all Israel, there was a kind of popular success that he neither sought nor accepted, but repudiated. It is illustrated by his rejection of and flight from the attempt of a Galilean crowd "to make him king" (John 6:15). The success he rejected was the excitement of people at having found a champion of the depressed, a potential political and economic liberator who would free the nation and feed the hungry. The success that he sought was a positive response to his proclamation, to the teachings that explained it, and to the moral commands that accorded with it, as well as a positive response to his personal invitations to discipleship. This was, indeed, a response to a champion of the depressed, but one who offered neither a program for political independence nor any banquet in the present life. His following was not meant to look for revolution in the here and now. It was meant to look rather for the supreme revolution, the transcendent fulfillment that would be the consummation of history and the reign of God. Whatever the enthusiasm that his cures generated and however great the crowds that listened to him, Israel as a whole had not yet crystallized its response to his mission. Now he came to Jerusalem for Passover, determined to force the issue. He would place a public act dramatically epitomizing his mission and compelling the attention of Jerusalem. The way Jerusalem went the nation would go.

a. The Royal Entry and the Cleansing of the Temple. That Jesus did in fact place the act of cleansing the temple (i.e., driving money changers and merchants of sacrificial birds and animals from the temple court) is solidly probable in the light of the indices of discontinuity and originality. Respecting discontinuity with the early Church: even the most primitive account, that of Mark, has toned down a dangerous memory, probably for fear of otherwise allowing hearers to misconstrue Jesus' act as that of a revolutionary. Hence Jesus is depicted as acting alone, although the detail of Mark 11:16 implies the collaboration of his disciples in controlling the temple gates. (Whether the temple police intervened is unknown.) Matthew and Luke have carried the Markan tendency still further, offering jejune, gingerly accounts that reduce the dimensions of the event and obscure its causal relation to the conspiracy against and arrest of Jesus (contrast Mark 11:18). Finally, John has altogether removed the cleansing of the temple from the prologue to the passion story. Respecting originality vis-à-vis Judaism: in the history of the Herodian temple there is no real parallel to Jesus' act, although the story of Jesus, son of Ananias (*JW* 6.5.3 §300–9), illustrates how perilous it was for anyone to assume a public stance toward the temple that might be interpreted as negative. Thus what is distinctive about Jesus' act is first of all its sheer boldness.

What did the act mean? The answer depends especially on how its context is defined. The immediate context was Jesus' deliberately contrived solemn entry into the city and temple. Form-critically the entry narrative is a legend; stylistically it is overlaid with folkloric (Mark 11:1–6 = Matt 21:1–6 = Luke 19:28–34) and midrashic (Mark 11:9a = Matt 21:9a; John 12:13) motifs. Nevertheless historicity accrues to the substance of the entry account from the semantic bond uniting the entry with the cleansing. This bond could be severed, as the Gospel of John shows; but it is clear from the Synoptic tradition that the two events derive from one matrix and were originally elements of a single symbolic structure.

According to a fixed, age-old, Near Eastern structure of symbols, royal acclamation is followed by the new king's establishment or restoration of cult. In the gospel accounts the entry motifs were inescapably royal, for certain aspects of the procession from the Mount of Olives to the temple deliberately evoked the image of the king celebrated in Zech 9:9, "lowly and riding upon an ass." (Cited by Matthew and John, this text is implicitly referred to in the other accounts.) Though the cleansing scene offers no specifically messianic motif, there are reasons for relating it to messianism. Just as the task of temple building was specifically royal, so in classical biblical tradition, as in Mesopotamia, the tasks of establishing, maintaining, and restoring the cult were reserved to the king. As symbolic act, then, the cleansing belonged to the same royal or messianic thematic as the entry. Entry and cleansing together signaled the arrival of the time of fulfillment. The epiphany of the Son of David meant that "this age" had been overtaken by "the age to come." His visitation of the temple signified the end of the historic cult and the inau-

guration of eschatological cult. (This symbolism, to be sure, exhibits an open, unfinished structure, for it merely signifies an eschatological cult without specifying its character or content.)

It would be a mistake to infer from the symbolic character of the cleansing that Jesus did not intend a real critique of temple practice. Prophetic passion (John 2:17) powered the whole event and rightly gave it the name of a "cleansing." What provoked this passion is indicated both by Jesus' explanatory words (Mark 11:17 = Matt 21:13 = Luke 19:46; John 2:16), which, striking an eschatological note in the words "for all peoples" (Mark 11:17), contrasted the temple in God's holy intention with the temple in man's sinful history, and by the detail that Jesus "would not allow anyone to carry anything through the temple court" (Mark 11:16; cf. *m. Ber.* 9:5 on not using the temple court as a shortcut). What provoked this indignation was routine irreverence pragmatically sanctioned by authority. The record of his teaching shows that, so far from acquiescing in life's routine disorders, Jesus censured them and called for their reform. Thus he rigorously forbade the routine use of oaths (Matt 5:34–37), routine verbal abuse (Matt 5:22), routine concupiscence (Matt 5:28). He fiercely protested against the use of Torah and *hălākâ* to protect hardness of heart: the taken-for-granted practice of divorce (Mark 10:1–12 = Matt 19:1–12) and the spuriously pious refusal to help one's parents in need (Mark 7:10–12 = Matt 15:3–6). He warned that the heedlessly slanderous word would be remembered at the judgment (Matt 12:36–37) and he made sins of speech the epitome of uncleanness (Mark 7:15 = Matt 15:11). In short, he condemned all the shifts and dodges of "average carnal man" that Israel, like the world at large, simply assumed and accepted as part of the human condition. In full accord with this complex of views and commands, the cleansing of the temple was the fallout from a collision. Passion for the honor of God and the restoration of Israel collided with toleration of routine irreverence toward the temple, i.e., toleration of tables of money-changers (*m. Šeqal.* 1:3) and stalls of merchants (Zech 14:21) on the temple court, and the use of the court by water-carriers and others as a shortcut between Ophel and the eastern suburbs (*m. Ber.* 9:5).

In the Synoptic tradition the entry into Jerusalem and the cleansing of the temple are followed by the question about Jesus' authority (Mark 11:27–33 = Matt 21:23–27 = Luke 20:1–8; John 2:18–20), though none of the Synoptic Gospels connects it immediately with the cleansing. In the Gospel of John, on the other hand, the cleansing is immediately followed by the demand of "the Jews" for a sign justifying Jesus' pretention to superior authority. Though not provable, neither is it improbable that the original placement of the temple riddle (Mark 14:58 [= Matt 26:61]) was just where it is found now in John's gospel, namely, in an epilogue to the cleansing of the temple (John 2:18–20).

If such was the immediate demand of the authorities, it would clearly indicate that they had rightly interpreted Jesus' act as "prophetic" and perhaps as symbolic in intent. Jesus, however, refused to meet the demand except by the indirection of a riddle. To the Sanhedrists this response was pretentious and odious; probably caution in the face of Jesus' popular following and that alone (Mark 14:2 = Matt 26:5) postponed his arrest.

The original wording of the riddle is irrecoverable, but the subtraction of Markan redactional touches (Mark 14:58) would yield:

> I will destroy this sanctuary
> and in three days I will build another.

Behind such words stood the oracle of Nathan, the classic source of royal messianism (2 Sam 7:13–14), making the building of the sanctuary the task of David's son. A Qumran text (4QFlor 1–13) offers a messianic reading of the oracle (though without specifically referring this to the verses on the building of the sanctuary). The destruction of the sanctuary belonged, as we have seen (see C.5), to the eschatological ordeal. The three-days motif (cf. Luke 13:32–33) locates the building of the new sanctuary in the eschaton; it is the equivalent of the advent of the reign of God bringing the ordeal to an end.

In this reconstruction, the whole event takes on a peculiarly Zecharian allure: Jesus came to the temple "lowly and riding upon an ass" (Zech 9:9); he drove the buyers and sellers and money-changers from the courtyard, for "on that day there shall no longer be any merchant in the house of the LORD of hosts" (Zech 14:21); and, challenged to establish his authority by a "sign," he answered as "the man whose name is 'the Branch' " who would "build the temple of the LORD" (Zech 6:12).

The whole event triggered the conspiracy that led to Jesus' death (Mark 11:18 = Luke 19:47b–48). Judas Iscariot would become a linchpin of the conspiracy's success (Mark 14:10–11, 17–21 = Matt 26:14–16, 20–25 = Luke 22:3–6, 21–23; cf. John 13:21–30). But before it issued in his arrest (Mark 14:43–46 = Matt 26:47–50 = Luke 22:47–48; John 18:2–3), Jesus gathered with his disciples for the celebration of Passover.

b. Last Supper, Arrest, Trial, Execution. The Johannine account of the farewells of Jesus offers a chronology different from that of the Synoptic Gospels. All agree that Jesus died on a Friday. According to John, this was Nisan 14, whereas in the Synoptic Gospels it was Nisan 15. In John, then, there was no Passover meal on Jesus' last evening with his disciples; in the Synoptic Gospels the last supper was a Passover meal. Certainty about which of these chronologies is correct is beyond our reach, but probability on the basis of a mass of minute, circumstantial detail especially in the Synoptic accounts of the Last Supper favors their chronology.

Dominating the memory of what Jesus did and said at that meal were two sets of acts and words. First, there was Jesus' act of blessing, breaking, and distributing the unleavened bread; corresponding to the blessing customarily spoken over the bread, Jesus said: "This is my body" (Mark 14:22 [= Matt 26:26]; cf. Luke 22:19 [= 1 Cor 11:24]). Second, after the meal proper, Jesus distributed a single cup (the third cup or "cup of blessing" according to the Passover ritual) and, in accord with the blessing, bade his disciples to drink from it, saying: "This is my blood, covenant blood, (to be) poured out for many" (Mark 14:24 [= Matt 26:28]; cf. Luke 22:20 [= 1 Cor 11:25]). This scripturally charged language, by its allusions to Exod

24:8, Jer 31:31, and Isa 53:11–12, interpreted Jesus' imminent death as both an expiatory offering and a sacrifice sealing God's covenant with all who would enter the new Israel. If immediately following his words on the bread and, again, immediately following his words on the wine, Jesus gave the same bread and the same wine to his disciples to be eaten and drunk, this act of giving signified that by their eating and drinking they shared in the atoning power of his death and in the new covenant that his death would seal. The combination of these motifs thus defined his disciples as the nucleus of eschatological Israel. As the event of the cleansing of the temple brought into prominence a correlate of the reign of God (namely, the new people symbolized by the motif of the new sanctuary), so this complementary event, centered on the coming death of Jesus, highlighted another correlate of God's reign: the new covenant.

The historicity of the eucharistic acts and words of Jesus is commended by their distinctiveness and originality. Detailed linguistic analysis grounds an important conclusion on the genre of the Markan account: it is a historical report (Pesch 1978: 76–81). Also relevant to historicity is the fact that Paul by the phrase "from the Lord" (*apo tou Kuriou,* 1 Cor 11:23) designated the eucharistic words as a tradition that had originated with Jesus himself. See LAST SUPPER.

With the help of Judas, Jesus was arrested later on the same night in a garden on the Mount of Olives. In a trial before the hastily convened Sanhedrin, the riddle of the sanctuary was cited against him. The decisive moment, however, was his response, affirmative in content, to the high priest's question: "Are you the Messiah, the Son of the Blessed One?" (Mark 14:61 [= Matt 26:63]; cf. Luke 22:67, 70). Jesus was found guilty of blasphemy, which apparently lay in dishonoring the name of God by falsely claiming to be his "Son" (Blinzler 1969: 155–57). The condemnation for blasphemy was to death; since the Sanhedrin did not have jurisdiction in capital cases (the Romans reserved that to themselves), the case would be referred to the Roman Prefect temporarily in Jerusalem for the feast.

The following morning Jesus was tried before the Roman prefect, Pontius Pilate, on charges of sedition, the core element of which was the charge that he claimed to be a king (Luke 23:2). Found guilty by Pilate despite the political innocence implied in Jesus' answers and his silence, he was scourged and led to Golgotha, just outside the city gates, where Roman soldiers crucified him together with two brigands. If Mark 15:25 is an interpolation in the text (Blinzler 1969: 420–21), Jesus was crucified about noon and died some three hours later. By order of the prefect, the body of Jesus was taken down from the cross and buried in a nearby tomb provided by a disciple, Joseph of Arimathea (John 19:38–42).

Contributing to the irony and pathos of the passion story were the betrayal by Judas, the denials of Peter, the flight of the disciples, the presence (probably on the city wall) of the women, including the mother of Jesus, who had cared for him during his public career, the *titulus* on the cross ("the king of the Jews"), and the taunts of his enemies. The exact date of Jesus' death cannot be computed with certainty, but of the concrete possibilities the most likely is April 7 of the year 30.

c. The Why and the How of Jesus' Death. To sum up the why and the how of Jesus' death: What was it in him that provoked hostility on the part of the Jerusalem establishment? The answer probably lies in the extraordinary pretention to authority inherent in all that Jesus said and did throughout his public career. The supreme expression of this grandiose if implicit claim was his royal entry into Jerusalem, the cleansing of the temple, and the riddle imaging the destruction of the sanctuary and the building of a new one in, or after, three days. Had he not spoken words against and laid violent hands upon the untouchable? He had never taken care to reserve a place for the elite of scribes, elders, and priests in his scheme of the future. They repaid him in the same coin. In the tension-laden little world of Roman-dominated Israel there was not room enough for both this aristocracy and that incalculable popular figure and possible messianic pretender. The leaders of the Sanhedrin took the initiative and, with the help of a disaffected disciple of Jesus, they brought him down.

Was Jesus' will to specify his death as an expiatory offering coherent with his proclamation of God's gratuitous salvation even for notorious sinners? Some have thought not; they have accordingly dismissed as unhistorical the entire line of esoteric tradition bearing on Jesus' approaching destiny: his prophecy of rejection, death, and vindication; his word on giving his life as a ransom; the eucharistic words, especially on "covenant" and "for many."

This view, however, overlooks the context in which this esoteric tradition was not only intelligible but inevitable, namely, the dilemma which the prospect of Israel's rejection of his mission posed for Jesus. His offer of salvation was indeed free, but positive response to it was requisite, not optional. The prospect of rejection created an anomaly. The good news of the reign of God risked turning into a condemnation. Was the herald of Israel's restoration to become the instrument of its ruin? What could be done for the refuser in this situation of refusal?

Jesus found the solution in his own expiatory death. So far from responding to some unintelligible demand incompatible with grace, his expiatory death was an initiative of pure grace, meant above all for Israel (Pesch 1978: 105–9). Having willed his death for the forgiveness of the sins of Israel and the sins of the world, he took the decisive step toward this destiny when, in response to the authoritative question of the high priest, he explicitly affirmed in public, for the first and only time, his claim to be the messianic Son of God.

7. The Easter Experience of the Disciples. In the faith of Israel "resurrection" signified far more than the resuscitation of the dead. According to Dan 12:3 the risen shall shine "like the stars for ever and ever" (cf. the use of "stars" for angels in Dan 8:10). A like conclusion is attested by the words of Jesus to the Sadducees: "for when they rise from the dead, they neither marry nor are given in marriage, but are like angels in heaven" (Mark 12:25 [= Matt 22:30 = Luke 20:35]); the Lukan text continues: "for they cannot die any more . . ." (Luke 26:36).

Paul has furnished detailed and decisive evidence on

what "resurrection" meant to ancient Jews and Christians. In 1 Cor 15:50 he cited what was probably a pre-Pauline distich to the effect that neither the living nor the dead can enter the reign of God as they are (Jeremias 1955: 151–55); his resolution of this dilemma was that, just as the dead would be wholly transformed by resurrection (1 Cor 15:42–44), so the living would be simultaneously transformed at the parousia (1 Cor 15:51–52). The point is clear: the life of the age to come would differ radically from the conditions of present life. Though "resurrection" signified bodily life, the bodily life in question would be sublated, transformed, "pneumatic" (1 Cor 15:44). The leading theme of Paul's treatment of the nature of resurrection (1 Cor 15:35–58) was precisely the transformed corporeity of the resurrected dead (1 Cor 15:35–49), in accord with rabbinic conceptions and argumentation (Morissette 1972: 210–16), as well as of the living, once they were "changed" at the parousia (1 Cor 15:50–52).

Respecting the tradition of Easter texts in the NT, a few points may be noted from the start. The resurrection of Jesus is not depicted. Moreover, the original story of the discovery of the empty tomb has been nearly lost in an overlay of kerygmatic motifs. Again, what the tradition accounted as the first appearance of the risen Jesus, which was to "Simon" (Luke 24:34) or "Cephas" (1 Cor 15:5), has left no narrative depicting it. Further, the prehistory of the gospel texts can be penetrated only in part and that partial reconstruction is necessarily tentative. Finally, the accounts are unharmonizable among themselves. (On the resurrection texts in the gospels, see the *ABD* articles on each gospel.) However pertinent these observations, it nevertheless remains that testimony to the risen Jesus is early, firm, various but coherent, and acknowledged in all known currents of early Christian tradition as the foundation of the life of the church.

The following are seven positive ascertainments respecting the earliest stage of the tradition on "the Easter experience of the disciples." First, the Easter experience proper was not the discovery of an empty tomb; rather, it was the experience of appearances of Jesus.

Second, the sources depict the disciples' interpretation of these appearances as the realization, in the singular destiny of Jesus, of the eschatological resurrection of the dead. Simply put, the disciples explained their experience in the following terms: God had raised Jesus from the dead (1 Thess 1:10; 1 Cor 6:14; Rom 4:24; 8:11; 10:9; etc.).

Third, in this resurrection they saw the divine vindication of Jesus; hence they understood his exaltation as Messiah and Lord (1 Cor 8:6; 12:3; Rom 1:3–4; 8:34b; 10:9; Acts 2:36; 3:20–21; etc.) to be integral to his resurrection. The immediate consequence was an Easter explosion of christological speech.

Fourth, they understood themselves, correlatively, as the messianic community in which Israel had come to eschatological restoration.

Fifth, the Easter experience was an experience of forgiveness, for it effected reconciliation (Stuhlmacher 1986: 54)—the reconciliation to God through the communion offered by his glorified Son, of men who had earlier rejected this same Son (James), or abandoned him (the disciples in general), or "denied" him (Peter), or "persecuted" him (Paul).

Sixth, an integral element of the Easter experience was the missionary mandate of the risen Christ.

Seventh, Easter created a new situation with respect to the scheme of the future that Jesus had presented to his disciples (see above, C.5). If it had not been clear before, it was now clear that the Lord Jesus would himself come on clouds to signal the consummation of history (1 Thess 4:16–17 = Matt 24:30–31, etc.). A segment of time had now been inserted between the vindication of Jesus by resurrection and his parousia, which would mark the advent of the reign of God.

Each of these points calls for at least brief elaboration. We begin with the empty tomb. The primitive tradition on the empty tomb affirmed that early on the Sunday following the crucifixion some of the women associated with Jesus during his public career discovered that the tomb in which he had been buried was empty. They reported this to the disciples, who found that the story of the women was true.

Reduced to these terms, the tradition was a sober account of significant fact. It was not the ground of faith in the risen Jesus. Much less was it taken to be a proof that he had risen. It involved no angels and no proclamations. The unkerygmatic nature of the primitive tradition is indicated especially by Luke 24:24, "some of those who were with us went to the tomb and found it just as the women had said, but him they did not see." The account in John 20:1–2 (Benoit 1960) is comparable. Here Mary Magdalene discovered that the rock had been moved from the mouth of the tomb; she went to Simon Peter and "the other disciple, the one whom Jesus loved" with this perplexing piece of news. There was no angel on the scene. Mary acted on her own initiative. Her report was simply, "They have taken the Lord out of the tomb and we do not know where they have laid him" (John 20:2). (In this last line the plural "we" is possibly indicative of the tradition according to which Mary was accompanied by other women.) Such is the recovery of an originally pre-kerygmatic, pre-apologetic tradition on the tomb.

It follows that the Easter experience proper did not begin with the tomb but with the appearances of Jesus. The earliest text on the appearances is the pre-Pauline formula cited in 1 Cor 15:3–5.

> Christ died for our sins in accordance with the scriptures,
> and he was buried,
> and he was raised on the third day in accordance with the scriptures,
> and he appeared to Cephas, then to the twelve.

The formula moves from Jesus' death and burial (lines 1 and 2) to his resurrection and appearances (lines 3 and 4). The central affirmations are in the parallel lines 1 and 3; lines 2 and 4 functioned each as the warrant of the preceding statement. The result is that, as Harnack put it, "the burial authenticates the really occurring death and the vision authenticates the really occurring resurrection" (*SPAW*, 64). The whole formula therefore asserts: he really died and he really rose. As in all such formulas the accent

falls on the resurrection. "He was buried" immediately attests the death, but it does so precisely in order to set up the climactic theme of resurrection. From this consciously fashioned transition it follows that the expression in line 3, "he was raised," is meant to comprehend the specifically corporeal dimension of "resurrection." The repeated motif of the advance testimony of the scriptures is a qualifier: Christ died for our sins, as the scriptures have prophetically attested that he would; and God raised him on the third day (cf. *Tg. Neb.* Hos 6:2), as the scriptures have prophetically attested that he would. Though the testimony of Cephas and "the twelve" is a most distinctive motif, it remains subordinate to the basic confession. (Inattention to the structure of the formula has repeatedly led to the mistaken supposition that the phrase "he was buried" attests the tradition of the empty tomb. It does not; the formula does, however, present a view of resurrection that coheres with and even entails the empty tomb.)

Second point: the disciples interpreted the appearances as evidence of Jesus' "resurrection"; that is, they understood an eschatological event, the resurrection of the dead, to have found unique advance realization in Jesus. This, of course, is inescapably implied in the formula we have already considered (1 Cor 15:3–5). In the career of Paul it is underscored as the revelation that reversed the direction of his life:

> You have heard of my former life in Judaism, how I persecuted the church of God violently and tried to destroy it . . . But [God] . . . was pleased to reveal his Son to me . . . (Gal 1:13, 15–16).

Furthermore, Paul clearly set this event apart from such ecstatic experiences as he recounted in 2 Cor 12:2–9, which, "whether in the body or out of it," comprehended being "caught up" into Paradise (2 Cor 12:2–3). It is not possible to specify what concrete experiential index led Paul to differentiate these experiences; in any case, he did differentiate them.

Third point: in the resurrection the disciples found the vindication of Jesus. Easter was the revelation that his historic claims, implicit and finally explicit, had been true and that they had now been stunningly established as true. Hence Jesus' exaltation as messianic Son and Lord was seen first of all as rooted in his history. Indeed, the resurrection brought the messianic history of Jesus to completion. Whether the text on the Messiah as both Son and Lord of David (Mark 12:35–37 = Matt 22:41–46 = Luke 20:41–44) derived from Jesus or from the early community, it makes this precise point. David (Ps 110:1) had himself called his son "Lord," for by the power of the Spirit (Mark 12:36 = Matt 22:43) he had heard God bid his (David's) son to sit at God's right hand, a newly anointed cosmic victor.

Jesus's exaltation, as the completion and vindication of this career, released an outpouring of christological speech that continued through the lifetime of the next two generations. Among the immediate sources of this phenomenon was the conviction that in Jesus the scriptures had come to plenary and convergent fulfillment. Soon the gentile world would come into view as a mission field and Jesus would be proclaimed as "Lord of all" (Rom 10:12; Acts 10:36; cf. 1 Cor 8:6), of Jew and Greek (Rom 10:12; Acts 20:21; cf. 11:20), the living and the dead (Rom 14:7–9; 2 Cor 5:15), the human and the spirit world (Phil 2:10–11). Henceforward the glorification of Jesus would prompt a gathering up of the hope motifs from the covenants, sagas, prophecies, and psalms of Israel and the poetry, philosophy, and mystery cults of Greece, to affirm that all human aspiration had come to realization in him.

Fourth point: the self-understanding of the disciples underwent a change correlative to the christology of Easter. The men and women who had been followers of Jesus now understood themselves as the messianic community of the new covenant. The promise of a new covenant (Jer 31:31–34) had been a key theme in nonrabbinic Judaism (Bar 2:35; CD 6:19; 8:21; 19:33–34; 20:12; 1QpHab 2:3); it arose among the disciples of Jesus as the Easter experience confirmed the Last Supper and the death of Jesus as covenant sacrifice. The community thus became the first fruits of messianic Israel, just a step ahead of its brethren. As the first fruits sanctify the whole harvest to come, so this new community on Zion sanctified all Israel on the point of entry into its true inheritance. Meantime, the community was the remnant of Israel (Rom 11:1–10; cf. remnant passages implicitly cited in Acts 2:21, 47, etc.), but, in accord with the scriptures on the remnant, it was destined to "strike root downward and bear fruit upward" (Isa 37:31), for the remnant on Mount Zion (Isa 37:32), made up of the *sōzomenoi* (Acts 2:47)—a remnant term (cf. LXX Isa 37:32) designating in Acts "those who would be saved," i.e., those destined for acquittal at the judgment—was the seed of national restoration.

Fifth point: Easter as reconciliation. It is a remarkable fact that Paul, addressing and arguing with Cephas, testified to the nonoriginality of the great Pauline theme of justification: "we [i.e., you as much as I] have come to know [by our encounter with the risen Christ] that man is made righteous not by works of the law but through faith in Christ" (Gal 2:15–16). Paul's main point was that the Easter experience had bypassed the Torah, neither comprehending nor entailing it; but in making this point he showed that he understood and counted on Cephas' having understood this normative experience as one of forgiveness and reconciliation. This corresponds to the plentifully attested Easter consciousness of the death of Jesus as expiatory offering (see the pre-Pauline formulas in 1 Cor 15:3–5; Rom 3:25–26; 4:25).

Sixth point: Easter as missionary mandate. Again, Paul was a privileged early witness to this dimension of the Easter experience. God "was pleased to reveal his Son to me, that I might proclaim him among the gentiles" (Gal 1:16). Paul supposes the same of the Easter experience of Cephas (Gal 2:7–9). Moreover, he inserted the Easter experience of the Apostles as a hinge moment in the three-step sequence that runs through the whole of his soteriology: (1) God's expiatory and redemptive act in Christ enacted in the world a universal economy of reconciliation (2) through the Easter appointment of ministers of the Spirit to proclaim "the gospel" and (3) through the acceptance of this gospel in "faith," making God's saving economy operative. If the third step in this sequence is a Pauline commonplace, it should be noted that the first two steps dominate the celebrated text of 2 Cor 5:18–21. As

Sinai "founded" the Law in Israel (LXX Ps 77:5), so the Easter revelation to those chosen as Apostles "founded" the gospel or "message of reconciliation" in the world (Hofius 1980: 11–16). Easter as missionary mandate would be retained and transformed in the later gospel tradition.

Seventh point: Easter inaugurated a new eschatological scenario. The variations among the NT writers on this theme are all held within the basic framework that emerged from the differentiation *ex eventu* of the Day of the Son of man. The resurrection of Jesus was not revealed to the whole world, so signaling its consummation. It was neither imposed on Jesus' judges (Mark 14:62 = Matt 26:64 = Luke 22:69) nor bestowed on "all the people" (Acts 10:41). Rather, it was reserved "to us who were chosen by God as witnesses" (Acts 10:41). In Jesus' original scheme of the future, the revelation of the Son of man would mark the end of the eschatological ordeal. In the actuality of events, Jesus' glorification, taking place long before the end of the ordeal and so of all history, apparently led the *hebraioi* (Cephas, the twelve, the Aramaic-speaking community of Jesus' followers in Jerusalem) to reduce to provisional status Jesus' eschatology of woe (the ruin of Israel, its capital, and temple). At the same time, it led the Greek-speaking Jewish converts of the Easter kerygma, the *hellēnistai* (Stephen and his followers) to conclude that Jesus' glorification vindicated and guaranteed his eschatology of woe—a view that made them pariahs in Jerusalem and led to their expulsion from the city. What all Christian parties held in common, however, was an interim between resurrection and parousia to be defined and dominated by the mission of the church.

From the foregoing account of the career of Jesus and of the Easter experience of his disciples, it follows that Jesus, as a historic figure and as an object of the Easter experience, was indeed the founder of Christianity. It further follows that Christianity had assumed its distinctive identity (though without yet arriving at thematic knowledge of that identity) in independence of gentile influence and prior to the mission to the gentile world.

BEN F. MEYER

QUEST FOR THE HISTORICAL JESUS

The phrase "quest for the historical Jesus" normally refers to a movement of scholarship that emerged with Reimarus in the 18th century and continues in various forms into the late 20th century. It is sometimes used in a broad sense to denote all historical research into the life and times of Jesus; sometimes it is used in a more narrow sense to denote only one branch of this, namely, revisionist theories linked to particular theological or political agendas. In this connection the term "the historical Jesus" is sometimes used to refer to Jesus as he actually was (whether or not we can know about him thus), and sometimes to refer to Jesus as he can be reconstructed by historians working within a particular frame of reference (whether or not this does justice to how Jesus actually was). The latter sense will be referred to below as "the historical Jesus."

 7. Unfinished Agendas
F. Conclusion

A. Problems

There are six commonly held but erroneous views about the quest. (1) Reimarus began it. In fact, Reimarus drew on the work of earlier writers, particularly English Deists (Brown 1985: 1–55). (2) All writers about Jesus have been trying to do the same thing, namely, to reconstruct his actual life and teaching. In fact, there have been several very different agendas informing writers, even within the same period. (3) Research into Jesus aims at an "objective" account. In fact, objectivity is now perceived to be a positivist myth, and historians need to take into account both the reality of external events and the point of view of all perceivers, themselves included (Meyer 1979: 76–110). (4) Twentieth century methods of gospel study—source, form, and redaction criticism—are part of the quest. They are not, or not particularly: They focus on the gospels and the communities behind them, and only tangentially on Jesus. (5) The quest has produced no useful results and should now be abandoned. Section E demonstrates the contrary. (6) The quest can be divided into discrete chronological sections. Though we follow this traditional outline, it is potentially misleading, since there is far more overlap and interplay between sections than can thus be indicated (e.g., the close links between Strauss and Bultmann, or between Schweitzer and Sanders).

B. Reimarus to Schweitzer

Schweitzer himself is responsible for the usual perception of the quest to that date and for drawing attention to it as a major theological phenomenon. His outline and angle of vision need to be supplemented by others (e.g., Meyer 1979: 25–59, Brown 1985) if a fair picture is to result. The first phase of the quest fell historically within a wider movement in which orthodox Christianity came under attack from rationalism, and he attempted to respond in various ways; the writers listed below belong on both sides of this divide and in various mediating positions. The rationale often given for the quest at this stage was that, since the Gospels disagreed about so many things, the historian had to enquire as to what exactly happened; in fact this was only one of many motivations, including the desire to discredit orthodox Christianity as a whole. A feature of this stage of the quest was the gradual concentration on the Synoptic Gospels, as the Gospel of John

came to be seen as a secondary theological and nonhistorical account.

1. Reimarus. H.S. Reimarus (1694–1768) wrote a long criticism of Christianity which was published after his death by the philosopher G. Lessing. One section dealt with the aims of Jesus, arguing that he was a Jewish revolutionary whose disciples, after his failure and death, conceived the idea that he was divine. They stole his body and rewrote the story of his life in the light of an alternative Jewish expectation, not utilized by Jesus himself, according to which a divine being would appear on the clouds to end the world. The failure of this to happen discredits them, as Jesus' failure to bring about successful revolution had discredited him; Christianity as known subsequently is based therefore on a series of mistakes. Schweitzer praises Reimarus too much, but deserves credit for the bold and clear outlines of a historical hypothesis which continues to have successors (Brandon 1967: and see Bammel and Moule 1984).

2. Strauss. Reimarus' emphasis on the non-miraculous nature of Jesus' life was picked up by David Friedrich Strauss (1808–74), but whereas, for Reimarus, Jesus could be described thus in order to be dismissed, for Strauss the required rereading of the gospels meant that the truth of Jesus could be rescued in an ahistorical fashion. His massive book focused attention on the nature of the gospels (a question that has dominated much of 20th century research), arguing that they were mythical rather than historical. Neither the older orthodoxy nor the newer rationalism would do: On the one hand, supernatural and miraculous events do not and did not occur, while on the other hand, what seemed to be accounts of such happenings were in reality nonhistorical projections of early faith. Strauss' manifest unorthodoxy cost him his career, but arguably his questions still remain outstanding.

3. Renan. E. Renan (1823–92) typified a certain style of Jesus-research (see Schweitzer 1954: 180–92; Brown 1985: 233–38). Like Strauss, he achieved great notoriety from his book (1863), though his passage to skepticism had a different origin (French Roman Catholicism). With his treatment there came to prominence a theme that still dominates some accounts: the distinction between the early period of the ministry, in which Jesus won the hearts of all, and the later, when the high demands he made caused most to reject him. It is essentially a work of romantic fantasy, charming but cloying, and the great influence it has had on popular impressions of Jesus is in inverse proportion to its true worth as history.

4. Holtzmann. The second half of the 19th century saw the production, particularly in Germany, of a steady stream of lives of Jesus, of which probably the best known is that of H. J. Holtzmann (1832–1910). His book (1863) focused attention on the Synoptic Gospels, working on the assumption that to solve the problems they posed—their order of composition and mutual dependence—was to solve in principle the problem of Jesus. The earliest sources would give genuine access to history. The priority of Mark was a hypothesis designed to provide a straightforward (and essentially liberal) portrait of Jesus as the teacher of timeless ethical truths, whose ministry developed in clear-cut and comprehensible stages, with the decisive turning point at Caesarea Philippi (Mark 8:27–9:1). The two main aspects of Holtzmann's work—his portrait of the ministry, and his belief in source criticism as a means to historiography—have continued to exercise considerable influence.

5. Weiss. A decisive step towards a more accurate historical picture, and at the same time towards a continuing theological problem, was taken by Johannes Weiss (1863–1914). In focusing on the meaning of the "kingdom of God" in the teaching of Jesus, his book (1892; ET 1971) set its face against the liberalism of Ritschl (Weiss' father-in-law), and proposed instead a meaning based on a new awareness of Jewish apocalyptic: Jesus announced the imminent end of the world. Weiss still drew a psychologizing portrait of Jesus, but the emphasis now lay elsewhere, on a historical reconstruction which posed the same question as Reimarus, with the difference that it concerned Jesus and not merely his followers: The predicted end of the world did not materialize. Weiss was answered by various writers (Schweitzer 1954: 241–68), but he had set the question in the terms that would dominate Schweitzer's own work and, as a result, haunt the 20th century quest.

6. Schweitzer. The work of Albert Schweitzer (1875–1965) stands at the head of the present century like a colossus. To him belongs the credit for seeing the quite disparate "lives of Jesus" as, in a sense, a single movement, which in his own work he drew together and attempted to round off. In his thorough survey he built particularly on the work of Weiss; answering the thoroughgoing skepticism of William Wrede (whose work on Mark aimed to show that the apparently straightforward account of Jesus' ministry in that gospel was in fact a theological construct), he summarized the work of his predecessors in pithy prose, weighed them in the balance of his own rigorous analysis, found most of them sadly wanting, and offered his own fresh synthesis. In his "Sketch" (1901), and in the conclusion to the larger work (1954: 328–401), he argued that Jesus deliberately kept his Messiahship a secret, revealing it to the disciples in the Transfiguration and then commanding them to tell nobody, and that Judas betrayed this secret to the chief priests. He then goes on to argue that Jesus, who had begun by expecting the Son of man to appear during the course of his ministry, was disappointed, and went to his death in order to bring down the "Messianic woes" upon himself, so that his people might be delivered (1954: 368–69, 385–95; 1925: 234–36). The result is in one way purely negative: "The Jesus of Nazareth who . . . preached the ethic of the Kingdom of God, who founded the Kingdom of Heaven upon earth"—that is, "the historical Jesus" of most 19th century liberal "lives"—"never had any existence" (1954: 396). However, all is not lost for subsequent hermeneutics and theology: "Jesus means something to our world because a mighty spiritual force streams forth from Him and flows through our time also"; "not the historical Jesus, but the spirit which goes forth from Him and in the spirits of men strives for new influence and rule, is that which overcomes the world." The eschatological sayings, in their very oddity for modern humans, "raise the man who dares to meet their challenge . . . above his world and his time, making him inwardly free" (1954: 397, 399, 400). Schweitzer thus stands as the bridge between the centuries: summing up the 19th cen-

tury, and pronouncing it a failure, he anticipates some of the major emphases of the 20th.

7. The "Old Quest": Conclusion. If there is a theme which unites the highly disparate writers between Reimarus and Schweitzer, it is their conviction that when a truly historical account of Jesus is arrived at it will be of vital importance for the Christian faith. For some, the importance was positive and immediate. Jesus, reconstructed in pious historiography, became the wise and gentle teacher of 19th century liberalism; Mark became the earliest gospel, a simple record of the Master's ministry. For others, the importance was largely negative. Reimarus, Strauss, and Schweitzer himself, in their different ways, undertook historical description in order to show that the traditional picture of Jesus could not be trusted. Reimarus went on to argue that Christianity as a whole was mistaken; Strauss, that its reality lay in the realm of timeless truth divorced from history; Schweitzer, that the new historical picture carried with it its own timeless imperatives ("He . . . sets us to the tasks which He has to fulfill for our time"; 1954: 401). The quest for "the historical Jesus", which had marginalized Jesus' eschatology in particular, had had its bluff called, and could not reply. There could be no doubt which of the two roads subsequent scholarship would have to take, and the subsequent story of the quest is not least the story of how the consequent hermeneutical challenge—how such a strange and remote Jesus could be relevant in a different culture and time—was variously met.

C. Schweitzer to Käsemann

Between Schweitzer's demolition of the 19th century quest in 1906 and Ernst Käsemann's lecture in 1953, new theological movements dominated European theology, most of which had only a small place for Jesus. This may be partly attributed to a failure of nerve after Schweitzer (How could a Jewish apocalyptic prophet be of use to theology today? How could one be sure of avoiding anachronism if one found an answer to the question?) and partly to the protest he himself mounted against the historical Jesus—though actually he was not the first to do so. One of the oddities of Schweitzer's book is his failure to mention M. Kähler, whose work gained in importance in the hands of Barth and Bultmann; and partly to the new agendas set for the Church by the convulsions through which the world passed during the period, to which the task of reconstructing the biography of Jesus seemed of comparatively little relevance. One of the significant trends during this period came in the reversal of an argument implicit in much of 19th century work: Instead of conceiving of Jesus as relevant, and therefore not particularly Jewish, scholarship after Schweitzer saw him as Jewish, and therefore not particularly relevant. The main reason for the new move, however, was profoundly theological, and found initial expression in Barth.

1. Barth. The second and subsequent editions of Karl Barth's *Commentary on Romans* includes a good deal of explicit criticism of the liberal "historical Jesus." The earthly Jesus, and all he represents in the way of religiousness and piety, ends on the cross, which thus stands as the judgment of God against all human piety. The meaning of Jesus, including the meaning of his life, is found in his death and there alone (Barth 1933: 160). His earthly life is necessarily irrelevant, and must for theological reasons be a stumbling block and not an open mirror to his theological significance (280). The early Barth thus anticipates a good deal of what subsequently came to be associated with Bultmann. Theology positively called for the collapse of the quest (Meyer 1979: 49).

2. Bultmann. Rudolf Bultmann (1884–1976), whose work dominates 20th century NT studies, is perhaps best known for two emphases (in some ways they go back to Strauss), both of which played an important negative role in Jesus-research. (a) He provided a detailed analysis of the literary forms of Synoptic material, arguing that in most cases these indicate an origin, not in the life of Jesus, but in the life of the early Church. (b) He argued that the gospels as they stand are mythical in various senses (not fully distinguished by Bultmann: see Thiselton 1980: 252–63), in particular in that they presuppose a prescientific worldview with which they clothe—and with which Jesus himself clothed—his essentially timeless message. The significance of Jesus could therefore be recaptured by translating-out the mythical language into that of existential decision (Bultmann 1958). Form criticism and demythologization were thus joint means towards a reading of the gospels which aimed *not* to find Jesus—lest, as has often been said within the Bultmann school, one should base one's faith on history and so turn it into a "work." Bultmann's own book on Jesus (1934) focuses principally on his teaching, interpreted as existentialist challenge to contemporary decision; the savings are all that is left, and then only certain ones; it is both impossible and undesirable to try and discover the personality of Jesus himself. All that is needed is the bare fact that he died on a cross. In Bultmann's history-of-religious program, the main features of early Christianity were derived not from Jewish sources but from Hellenistic ones. The life and ministry of Jesus, firmly anchored in Judaism, were therefore only of tangential interest for Christian theology.

3. Gospel Study. Throughout this period the attention of Synoptic studies was focused more on the gospels themselves than on Jesus. Source criticism reached its peak in the work of Streeter (1924), with many still believing (like Holtzmann) that they would thus find secure historical grounding in the earliest sources, Mark and Q; this belief is still held by some who are trying to revive the Q hypothesis today (see Kloppenborg 1987). Some attempted to use form criticism in a similar fashion, not realizing that it was a tool designed to find the early Church, not Jesus. By the end of the period there had begun the serious study (sometimes called redaction criticism) of the gospels as wholes; again, this method was neither designed, nor particularly appropriate, for the task of discovering Jesus within his historical context. Some writers, including some Anglo-Saxons (e.g. Manson 1931, 1949) defied the moratorium, but in general attention was focused away from Jesus.

D. The "New Quest"

On 20 October 1953, Ernst Käsemann, then a professor in Göttingen and subsequently in Tübingen, delivered a lecture arguing that, though it is true that a "life of Jesus" cannot be written, one must be careful not to divorce

Christian faith altogether from its historical roots, lest it turn into a sort of docetism in which "Jesus" is simply a cipher, and the cross is robbed of its significance. If the earthly Jesus can only be understood in terms of Easter, Easter can only be understood in relation to Jesus (Käsemann 1964: 25). A "new quest," complete with careful theological rationale and motivation, was thus launched, which in certain respects still continues (see Robinson 1959; Meyer 1979: 51–54; Sanders 1985: 29–47). Within this movement there have developed certain criteria for assessing the probable historicity of individual sayings of Jesus: dissimilarity (if a saying is unlike both the Jewish background and the early Church; see Sanders 1985: 16–17; Hooker 1972); consistency (with other material known to be authentic); multiple attestation (if a saying appears in different layers of tradition); and linguistic or cultural tests (if the saying appears to fit with Palestinian Judaism of the time, not least in allowing a possible Aramaic basis). Mutual tension between these tests is quickly apparent, and it is not surprising that the results achieved on such a basis have not been particularly solid (see Barbour 1972).

1. Bornkamm. The first work to appear under this new look was that of G. Bornkamm. In many ways Bornkamm kept to the Bultmannian agenda: the miraculous was kept out of the picture, Jesus had no special foreknowledge of events to come, and he used no Messianic titles of himself. Nevertheless, some important changes were made. Bornkamm's Jesus speaks of an eschatological fulfillment in the present, as opposed to one located in the future. In several respects the gospels provide us with access to genuine historical happenings; the call of the twelve, for instance, need not (as with Bultmann) be attributed to the retrojecting tendency of the early Church. But still it is the message of Jesus, not the events in which he participated, that remains the focus of attention, and that, in the end, results in a summons to faith in the present as much as in the past (Bornkamm 1960: 188–91; see also Kümmel 1957, 1974, and Goppelt 1981).

2. Jeremias. The work of J. Jeremias, though recognizably Lutheran and thus falling within the post-Bultmannian mainstream, stands a little outside "new quest" research, looking from one point of view more like the pre-Schweitzer quest (in that Jeremias is clearly committed to finding in the gospels the Jesus who can be the basis for the Church's faith) and from another like the Third Quest (in that he insists on understanding Jesus within the matrix of his native Judaism, emphasizing especially the Aramaic base of several sayings). In various monographs (1958, 1963, and others), and above all in the first volume of his uncompleted *New Testament Theology* (1971), he presented a sustained account of Jesus' ministry and mission. Believing that the concrete historical setting of Jesus' work was vital for genuine Christian theology, and that the Jesus one discovered in that setting offered himself as the incarnation of the call of God to every generation, Jeremias painstakingly reconstructed an impressive collection of *ipsissima verba* (words most likely to be attributed to the historical Jesus) by means of linguistic and form-critical analysis. He argued in particular for a middle way between the imminent eschatology of Schweitzer (the end is near, but not yet) and the realized eschatology of C. H. Dodd (the kingdom is actually present in the ministry of Jesus: see, e.g., Dodd 1961), suggesting the cumbersome but more historically likely "eschatology in the process of being realized," or, as in the work of Ladd (1966), "inaugurated eschatology." There is a sense in which the kingdom is present, and another in which it is yet to come. Though in some ways this merely restates the problem, it avoids the false clarity of the alternatives.

3. Schillebeeckx. The Dutch Dominican Edward Schillebeeckx has produced one of the longest books (1979) on Jesus in this century, though the length owes a good deal to the protracted employment of detailed tradition criticism, resulting in portraits of various groups within early Christianity; through the gaps between them Jesus himself eventually appears. Schillebeeckx takes a position which is the mirror image of Bultmann in that he regards the resurrection appearances as stories from Jesus' lifetime read forward into the post-Easter appearances. His eventual leap from a purely historical Jesus to the incarnate Son of God is based on little or nothing within the body of the book. At the same time he has a wealth of insights into the philosophical context of scholarship on Jesus, and many of his sections—not least his discussion of Jesus' awareness of his own approaching death—are pregnant and fruitfully suggestive.

4. The "Jesus Seminar." In the last decade the post-Bultmannian movement has had a new focal point: the so-called "Jesus Seminar," an American group with its own journal *(Foundations and Facets Forum)* and regular meetings at which individual sayings are discussed, debated, and voted on according to a scale of probability. At one level these scholars (who include some of the best-known names in North American NT scholarship) are attempting to perform for their generation what Bultmann did for his: They hope to produce a more-thoroughgoing history of the Synoptic tradition, including extracanonical material. At another level, they are clearly convinced that such study, particularly if it demolishes the heroic Jesus beloved of some modern American Christianity, will be of great benefit to the world; so the seminar's results are announced in press conferences, and there is talk of a movie. At the same time, the seminar includes several scholars whose thought is running in a different direction, i.e., the Third Quest. This represents one of the major tensions within Jesus-research today.

5. Jesus the Cynic? It has commonly been assumed, at least since Schweitzer, that the more we put Jesus into his historical context the more he will turn out to be Jewish. This has been sharply challenged by two recent writers, who have suggested that the Jewish strands in the gospels are the accretions, and that the earlier we look the more we find Jesus to be much like the wandering Cynic preachers who were a familiar sight in the ancient Mediterranean world. First, there is B. H. Mack (1988), who argues that Jesus was not an apocalyptic prophet, but a popular sage, a wordsmith purveying aphoristic wisdom, one who shocked people into fresh thought for themselves about their social and personal situations, rather than teaching any particular doctrine. This bold line is backed up by a new history of gospel traditions in which what used to be thought the older layers—the more Jewish and apocalyptic strands—are argued to be later accretions, which culminated in a myth of Mark's making, a myth which has had

(Mack suggests) devastating effects on Western, particularly American, self-consciousness. Neither Mark's fiction of the first appearance of the man of power, nor his fantasy of the final appearance of the man of glory, fit the wisdom now required (Mack 1988: 376). In thus reversing what has been normal practice (going back behind the Hellenistic layers to find the original Jewish stratum), Mack is nevertheless very close to Bultmann and Wrede in his basic historical hypothesis and to many 19th century writers in his hermeneutical program: The original Jesus—Jesus as he really was, which turns out to be fairly un-Jewish—is what contemporary culture needs. The other writer is F. Gerald Downing, who has undertaken (1988) a large-scale collection of parallel sayings from the gospels and the Cynics. Despite the initial impression of parallelism, however, and the bracing hermeneutic wherein Downing challenges comfortable Western Christianity (1987), the case for a close link is weakened by the lack of evidence for any Cynic presence in Palestine, and by the fact that the sayings adduced as parallels come from a very wide geographical and chronological range. This movement of scholarship has, however, alerted Jesus-research to the dangers of assuming that Jesus' Jewishness—or anyone else's in the 1st century, for that matter—can be isolated from wider cultural influences and resonances.

6. Conclusion. The closer we get to our own day, the harder it is to plot patterns and movements. Yet it is undeniable that the so-called "new quest" has continued in various forms, without producing any solid results that have won wide scholarly approval (see Bowden 1988; and, for a recent exploration within the paradigm, Fredriksen 1988). In several ways it has been overtaken by a different movement, owing no allegiance to Bultmann, and producing quite different results. Although the debate between these two contemporary movements is often conducted in terms of method and historical analysis, it should be clear that differing implicit hermeneutical analyses and agendas are also playing a not-inconsiderable part.

E. The "Third Quest"

The current wave of books about Jesus offers a bewildering range of competing hypotheses. There is no unifying theological agenda; no final agreement about method; certainly no common set of results. But there are certain features which justify a unifying label. (On the distinction between this "third quest" and the previous "new quest," see Meyer 1979: 16–20; Charlesworth 1988: 26–28; and Neill and Wright 1988: 397–98.)

1. Introduction. The most obvious feature is that the massive recent researches into second Temple Judaism have forced scholars to rethink what might be involved in understanding Jesus within this background (as it is agreed, in this movement, that one must do: i.e., agreeing to that extent with Reimarus and Schweitzer against much of 19th century scholarship and the Bultmann school). First-century sources, particularly Josephus, are being studied seriously after generations of neglect by NT scholars. Serious, and in principle answerable, questions are being formulated, as for instance by Sanders (1985: 1): What was Jesus' intention, what was his relationship to his Jewish contemporaries, why did he die, and why did Christianity begin? The methods employed owe less to theological a prioris and more to the normal canons of historiography: hypothesis and verification, and testing of sources as part of that process (see Meyer 1979: 76–110; Sanders 1985: 3–22). The problem of the nature of the sources, particularly the Synoptic Gospels, has not been ignored, but neither is it now regarded as so difficult, even when modern literary approaches are taken seriously, as to forbid all serious historical research (see Freyne 1988; Sanders and Davies 1989: 335–44). Early "third quest" works include Brandon (1967) and Vermes (1973), portraying Jesus as revolutionary and a Galilean holy man respectively. The first option is now normally rejected (see Bammel and Moule 1984; though see Buchanan 1984 for a variant of the revolutionary theme). The second is taken up by Borg (1984: 229–63), though set in a different context. There are four outstanding works in the current literature.

2. Meyer. B. F. Meyer's book (1979) is the most learned and methodologically rigorous of the modern works. Basing his historical method on Lonergan's epistemology, he analyzes Jesus' aims, highlighting the restoration of Israel as the theme underlying the proclamation of the kingdom. He argues for the accuracy of the gospels' distinction between the public and private message of Jesus, such that the public actions (particularly table-fellowship with sinners) gained a depth of meaning through allowing the question of his identity to emerge. Jesus envisaged a new, reborn community, in which the covenant would be renewed and whose sins would be forgiven. The tradition generated by his life gives powerful clues to understanding why he did what he did (this, in opposition to some schemes [Vermes 1973, and most of the Bultmann school] which postulate a radical disjunction between Jesus and subsequent tradition).

3. Harvey. A. E. Harvey's Bampton Lectures (1982) are similarly adventurous in terms of method. Employing the notion of "historical constraint," Harvey argues that Jesus can and must be understood in terms of the constraints operating on anyone within the particular culture of the time. He begins with the crucifixion: What we know of Roman and Jewish practice indicates that the gospels are substantially correct in tracing the basic outline of events that led to Jesus' death. The constraint of Law enables us to plot Jesus' insistence that the urgency of the moment should override some legal provisions; that of Time, to understand the eschatological nature of his proclamation. What we know of Miracle in the ANE suggests that Jesus refused to work within normal categories. He was known as Messiah (though without "divine" overtones) during his lifetime: and, since the constraint of monotheism meant that no Jew could have thought of himself (or anyone else) as God Incarnate, we must think instead in terms of unique *agency* (on all this, see Neill and Wright 1988: 385–87, and Wright 1986).

4. Borg. M. J. Borg (1984) argues cogently that Jesus is to be seen as political, not in the sense that he was a revolutionary, but because he was actually perceived as a traitor to the nationalist cause. Into a situation of intense conflict, Jesus brought a summons to costly mercy and love, which cut across Israel's current expectations and badges of national identity. He warned Israel that resistance would lead to social and military disaster, which

would have to be seen as divine judgment. The eschatological passages thus refer, not to a coming supernatural event, but to imminent national catastrophe (Borg 1987b). In this ministry, Jesus functioned as a sage or holy man, announcing the breaking in of the numinous into everyday reality (Borg 1987a). Many otherwise puzzling passages in the gospels come into fresh light within this context.

5. Sanders. E. P. Sanders (1985) gives a clear account of a Jesus seen without the spectacles of contemporary piety. He refuses to begin with the sayings, and starts instead his action against the Temple, understood within the framework of Jewish restoration eschatology, the hope that a new Temple would be built in the coming new age. Passages which speak of his conflict with Pharisees are mostly retrojections of later church-and-synagogue controversies; Jesus did challenge received wisdom in some ways, when his vision of a new age overrode Jewish custom ("leave the dead to bury their dead"; see Sanders 1985: 252–55). His attack on the Temple provoked reaction from the Jewish hierarchy, who handed him over to the Romans. He was not political in the sense of revolutionary, as witnessed by the fact that after his death his disciples were not also arrested. Sanders is arguably the clearest of the current writers on Jesus, and is candid about the issues (e.g., the "Son of man" question) which he leaves unsettled.

6. Others. Other works have appeared in the same vein, notably those of Caird (1965), Dodd (1971), France (1971), Yoder (1972), Riches (1980), Farmer (1982), Buchanan (1984), Lohfink (1984), Rivkin (1984), Segundo (1985), Lievestad (1987), Theissen (1987), Horsley (1987) and Freyne (1988). (See the survey in Charlesworth 1988: 9–29, 223–43.) Related studies include Derrett (1973), Bowker (1973), Chilton (1979; 1984), Lievestad (1987), Charlesworth (1988) and de Jonge (1988). All are exploring more or less the same issues, though with the same diversity of background and point of view.

7. Unfinished Agendas. Perhaps the most-striking feature of the third quest is its current open-endedness. There is some convergence on the question of appropriate method (see Meyer, Sanders), but further work needs to be done, not least in integrating the newer literary approaches to the gospels into the historical task (see now particularly Freyne 1988). The exact interrelation between Jesus and Judaism is extremely difficult to plot, and continual readjustments are to be expected for some time. So, too, the question of continuity and discontinuity between Jesus and the early Church is raised in new and acute forms by the current study, which so far has not taken on board the difficult, though clearly closely related, question of the resurrection. Theological questions, although quite properly bracketed off in many third quest writings, are never in fact far away, and the questions of the meaning of the cross, and the identity of Jesus (atonement and christology), are only two of many that could be explored. Many writers (not least those in the Third World., e.g., Segundo) imply a hermeneutic in which the Jesus (or the entire historical scenario) they rediscover can somehow be translated into contemporary relevance, but none so far has addressed the question head on, or in the necessary depth (though see Yoder 1972, and Hebblethwaite 1989).

F. Conclusion

The quest as normally conceived was born in an atmosphere of anti-Christian polemic (Reimarus) and has often continued to be seen in that light, whether by those who rejected the idea of "the historical Jesus" (Kähler etc.) or by those suspicious of the third quest for its sitting loose to theology. But any critique based on a theological a priori must take account of the fact that among orthodox theology's regular assertions is that of the full humanness of Jesus. Granted the contemporary puzzles over the meaning of the word "God" itself, it may seem on reflection quite proper for theology to give historical research its head. Not that historical research will wait for such permission. It deals, ultimately, with issues that lie in the public domain, not with matters that can only be discussed within the household of faith. The contemporary movements offer plenty of evidence that the quest for the historical Jesus is both as alive and as important now as it has ever been.

N. T. WRIGHT

THE ACTUAL WORDS OF JESUS

The actual words of Jesus—or *ipsissima verba*—refers to the words which Jesus actually spoke. This should be distinguished from the *ipsissima vox* (the very voice), a term which can be applied to sayings which give the sense but not the exact linguistic form of his actual utterances. In this sense, with a very few exceptions (words like *abba, ephphatha*) we simply do not have such *ipsissima verba* of Jesus. He spoke, in all probability, in Aramaic and the NT is written in Greek. Even if he understood and spoke some Greek he would scarcely have used it for his public utterances in the Galilean countryside. Greek was more at home in the towns and cities. Thus the Greek sayings attributed to Jesus in the gospels can at best give the sense of what he said, not the actual form of words. It is therefore convenient, as scholars more-frequently do, to speak of the authentic sayings of Jesus, referring to sayings which we have good reason to believe are "as close to something that Jesus said as we can reasonably hope for" (Sanders 1985: 357, n. 30). Discussion about what constitutes good reason for such belief usually focuses on two main areas: (a) how much trust we can place in the general accuracy of the relevant historical material; and (b) the means available for distinguishing within that material authentic from inauthentic sayings. Such means are often referred to as criteria, which might suggest objective tests which can be applied rigorously to individual sayings. If so, this is misleading.

A. Sources

While there are sayings of Jesus recorded in the Gospel of John and in the noncanonical gospels, as well as possible echoes of such sayings in the Pauline correspondence, it is clear that the main source of authentic sayings of Jesus is the Synoptic tradition which underlies the Synoptic Gospels. Little of the extracanonical material is likely to go back to Jesus, and where it does, it is frequently dependent on the Synoptic Gospels; the utterances of Jesus in the Gospel of John are so different from those of the Synoptic Gospels, both as to form and content, that they must be adjusted to be, largely the work of the early Church.

B. The Trustworthiness of the Synoptic Tradition

There is some confusion among scholars about who should bear the burden of proof: those who affirm the general trustworthiness of the synoptic tradition or those who adopt a more-sceptical attitude. This is misleading; scholars of either persuasion need to give an account of their *reasons* for their views.

The main grounds for caution about the trustworthiness

of the Synoptic tradition have been provided by form critics who have argued (a) that the forms in which the Synoptic sayings have come down to us are largely the work of the early Christian communities and relate to the typical situations in which they were communicated; (b) that in the process of communication the individual units of tradition have undergone a process of change. Others, notably Gerhardsson and, more recently, Riesner, have argued that contemporary techniques of memorizing and preserving sacred stories and sayings were essentially trustworthy and that at least some of the gospel material will have been passed on from an early date in this way. However, the variation between the Synoptic Gospels themselves shows the extent to which subsequent Christian writers felt at liberty to change their inherited texts. Moreover it is crucial to Gerhardsson's argument that he should be able confidently to distinguish the material which was thus passed on from the work of the evangelists, and this he does not do. Thus on either view scholars have to reckon with the possibility of accretions and alterations to the tradition and have therefore to distinguish carefully the work of the evangelists and of the Christian community from that which can be reasonably attributed to Jesus. Nevertheless, decisions about authenticity will be influenced by the extent to which the Synoptic tradition is seen either as "a folk tradition growing without constraints or as a consciously cultivated teaching tradition" (Riesner 1981: 502, whose confidence about the latter view is not altogether shared by Gerhardsson).

C. The Quest for Authentic Sayings

In their attempts to discern the authentic sayings of Jesus, scholars have appealed partly to general considerations of how formed units of tradition may develop: by additions, by fusing with other units, by being put into a particular framework, etc.; partly to certain tests of particular sayings. General formal considerations can suggest what the earliest forms of certain material were and also indicate in some cases relative dates for material contained within a particular complex (e.g., Jeremias' work on the parables). This is useful, but it does not prove whether the earliest form of early material in fact goes back to Jesus.

Thus certain tests have been proposed, principal among which is the dissimilarity test: A saying which is sufficiently distinct from known contemporary Jewish material and also from the later creations of the early Church may with certainty be attributed to Jesus. But what is meant by "sufficiently distinct"? If we mean, e.g., that it is quite unlike anything that we could conceive a Jew of the 1st century uttering, then clearly we should not attribute it to Jesus. Further, if we applied the test rigorously we would end up with very little material to consider, if any. And even if we had a small body of material which could thus with confidence be attributed to Jesus, it is likely that it would distort his teaching because we would have abandoned so much that united him with his fellow Jews. It is reasonable to assume however that Jesus did have a distinctive message, though not so distinctive as to be unintelligible to his contemporaries nor indeed wholly unrelated to their major concerns. What we therefore need to do is to identify a significant core of sayings within the tradition which is coherent within itself and at the same time constitutes a body of material that can be perceived as representing a significant development of contemporary Jewish thought.

While the dissimilarity test has attracted most attention, there are others: linguistic and stylistic tests, which falter on the simple fact that we have at best translations of Jesus' sayings, and tests of multiple attestation and of coherence, which at most represent pointers to or additional confirmation of a general hypothesis about where the central core of Jesus' proclamation lies.

By way of example we may consider Mark 7:15. A tradition historical analysis of Mark 7: 1–23 (Bultmann 1963: 74; Riches 1981: 136 and 217 n. 70) suggests that this was an independent logion around which other material in the section has subsequently clustered. This, while not providing proof of authenticity, nevertheless indicates an early date for the saying. Advocates of the dissimilarity test (Perrin 1976) have moreover claimed that it is a saying which meets all its requirements. It is certainly not a saying, with its apparent rejection of Levitical purity laws, which one could easily expect on the lips of a 1st century Jew. Nor indeed did such beliefs come easily to many early Christians. But here we encounter difficulties. If we take Mark 7:15 as an outright rejection of Levitical purity regulations, then we may want to question whether even Jesus, as a 1st century Jew, could have said and believed it. Equally, if it had been accepted as a saying of Jesus in the early Church, would the debates about table-fellowship with gentiles have raged as they did (Räisänen 1982)? Paul could have produced the saying and the debate would have been closed. However against this it can be argued that Paul did indeed know such a saying (Rom 14:14) but that it does not appear to have saved him trouble and anguish. So the debate remains inconclusive. If on the other hand one could make a link between the removal of cultic boundaries which seems to be advocated in Mark 7:15 and the advocacy of the removal of group boundaries in Matt 5:44, it would greatly strengthen the case for the authenticity of *both* sayings.

Lastly it has to be borne in mind that in applying a test like the dissimilarity test or indeed in searching for a central core of Jesus' sayings we are inevitably involved in making judgments about the *sense* of the Greek *sentences* the gospels attribute to Jesus. There is moreover an unavoidable element of circularity here. If we knew of a particular sentence that it conveyed adequately the sense of one of *Jesus'* sayings then we would be in a better position to conjecture what its sense was. However, to be in a position to attribute any sentence to Jesus we need first to be reasonably confident about its sense! This is merely to underline the point that we do not have hard and fast tests to enable us to establish what Jesus said. Rather we have to make reasonable conjectures on the basis of a Greek tradition of sayings of Jesus. In such conjectures we shall of course be guided by what we take to be the standard, contemporary sense of sayings attributed to Jesus, while being open to the possibilities of interesting shifts away from the standard, conventional sense (Riches and Millar 1985). We shall certainly learn what we can from his actions which, while by no means unproblematic as to their sense (Riches 1986) may still afford important clues about Jesus' intentions and beliefs. We shall, above all, be looking for

those sayings which, taken together, can be seen to have a coherent sense and to offer an explanation both of Jesus' relationship to his contemporary world and its beliefs and to the subsequent history of the early Church and its beliefs.

A. Introduction

1. Modern Study. The teaching of Jesus has been an object of study throughout Christian history, but especially so since the birth of modern biblical scholarship and the quest for the historical Jesus, beginning in the 18th century and burgeoning in the 19th century. Indeed, the modern study of Jesus' message is a central element in the quest for the historical Jesus.

Two factors accounted for the proliferation of studies of the teaching of Jesus in the 19th century. First, the new perception of the nature of the gospels that accompanied the birth of modern biblical scholarship meant that they were no longer seen as straightforward historical reports of what Jesus said and did. Rather, as documents written some 40 to 70 years after the life of Jesus, they came to be seen as the developing tradition of the early Church, containing (minimally) two levels of material: the convictions and perspectives of early Christian communities and the authors who wrote for them, plus material which may go back to Jesus himself. Thus the teaching of Jesus could

no longer be seen as the sum total of all the words attributed to him by the evangelists, but had to be reconstructed through a historical-critical reading of the gospels, which distinguished between what goes back to Jesus and what must be viewed as the product of the early Church.

A second factor fueled the 19th century's focus on the teaching of Jesus: the Enlightenment suspicion of anything "supernatural" or "miraculous" or "doctrinal" in the gospels. With these elements set aside, what remained of the gospel portraits of Jesus was his teaching. Moreover, it was to his teaching that primary theological significance was assigned.

The legacy of the 19th century (perhaps best represented by the popular lectures given by Adolf von Harnack in Berlin in 1900, published as the best-seller *What is Christianity?*) stands in a relationship of continuity and discontinuity with 20th century scholarship. For the most part, this century's scholarship has been more skeptical about being able to recover the teaching of Jesus, and reluctant to ascribe much theological significance to historical reconstructions of Jesus' message. Nevertheless, major treatments of Jesus' teaching continued to appear: in English-language scholarship, especially Manson, Dodd, and Perrin; and in German-language scholarship, especially Bultmann, Bornkamm, and Jeremias. In the last 20 years, there has been a remarkable resurgence of studies of Jesus' teaching, including especially a refined awareness of the importance of the forms and functions of Jesus' message and of its relationship to his social world. What follows seeks to represent (except when otherwise noted) the consensus or near-consensus of mainstream Jesus scholarship as the 20th century nears its end.

2. Sources. Though a few early non-Christian documents mention Jesus, they say nothing about his message. All of the documentary evidence for reconstructing the message of Jesus is thus Christian, canonical and non-canonical. The meticulous study of these documents over the last two centuries has led to a number of widely shared conclusions about our sources for the teaching of Jesus.

First, within the NT the Synoptic Gospels (Matthew, Mark, and Luke) are the primary sources. John's gospel is not seen as a historical account of Jesus' message. Rather, John portrays what Jesus had become in the lives of post-Easter Christians; Jesus as a figure of history did not speak as he does in John's gospel. Second, within the Synoptic Gospels, the earliest layer of written tradition is known as "Q," defined as material found in both Matthew and Luke but not in Mark. Consisting of about 200 verses, Q is considered by most scholars to be the earliest collection of Jesus' teaching (50 C.E.?).

Third, Mark is the earliest of the canonical gospels (about 70 C.E.), and, along with Q, was used by the authors of both Matthew and Luke when they wrote their gospels some two decades later (for a minority position which argues against both Q and the priority of Mark, see Farmer 1982). Fourth, Matthew and Luke, in addition to containing much of Mark and Q, also contain material peculiar to each gospel (special Matthew and special Luke), some of which may go back to Jesus. Fifth and finally, the recently discovered (1945) *Gospel of Thomas* is the most important non-canonical source for the message of Jesus, containing some material which may be as old as anything found in the Synoptics. See THOMAS, GOSPEL OF. Though other early Christian documents both within the NT canon and outside of the canon contain echoes of Jesus' message, the primary sources are thus the Synoptic Gospels and Thomas.

3. Using the Sources: Method. Because even these primary sources are a mixture of traditions going back to Jesus and traditions which developed in the early Church, scholars have devised methods for sorting out this material in order to decide what is "historically authentic," i.e., what goes back to Jesus (Stein, Polkow, Boring, Crossan 1988, Evans). The methods are numerous and interrelated; rarely can a single one be used in isolation.

Six methods are commonly cited. First is multiple attestation: it counts in favor of the historical authenticity of a saying if it is found in more than one layer of early tradition. Second is the need to discount traditions which demonstrably reflect the developing tendencies of the early Church. Third is the environmental criterion: A saying must be "at home" in a Palestinian setting of the first third of the 1st century if it is to be regarded as authentic. Fourth is the criterion of distinctive "form" and "voice," especially as disclosed in the parables and aphorisms of Jesus. Fifth (and most controversial and thus disputed, at least in its strong form) is the criterion of "dissimilarity": if a saying is to be regarded as authentic, it must be dissimilar from both Jewish and early Christian material. Sixth is the criterion of coherence; namely, a saying, even if found in only one source (and even if that source is relatively late), may be regarded as authentic if it is consistent with an already well-established core of material.

Treating the teaching of the historical Jesus thus involves two steps: (1) the question of historical authenticity: deciding what parts of the material attributed to Jesus actually go back to him; and (2) the question of interpretation: deciding what those portions deemed to be authentic meant in the setting of 1st-century Jewish Palestine. In practice, the two steps are not always neatly sequential; sometimes a decision about the meaning of a saying affects the decision about whether it may be regarded as authentic.

B. Important Preliminary Considerations

Three general statements—two negative, and one positive—are important as prologue to an exposition of the teachings of Jesus.

1. Jesus' Message Not about Himself. The careful scholarly work on sources and methods in the last two centuries has led to a conclusion of the first importance: Jesus' message was not about himself. This conclusion is very different from the widespread popular image of Jesus' message, which sees it as largely about his own identity, his saving significance, and the importance of believing in him. But this image, based largely on John's gospel, is not an accurate image of Jesus' own message. Moreover, the relatively few sayings in the Synoptic Gospels where Jesus seems to speak of himself and his saving purpose reflect one of the tendencies of the developing tradition of the early Church: to ascribe to Jesus a set of convictions about his identity and purpose that emerged only after Easter. This conclusion engenders the question

of Jesus' teaching afresh: If Jesus' message did not center on himself and his role in salvation, what was it about? It was, as we shall see, about God, the world of the everyday, and a way of transformation for both individual and social existence.

2. Eschatological Consensus in Question. Nor is it any longer taken for granted by scholars that his teaching was decisively shaped by the expectation of the end of the world. This represents a significant change from the consensus which dominated much of 20th century scholarship, which affirmed that Jesus' message centered on the imminent coming of the kingdom of God, understood as involving such eschatological (end-time) events as the resurrection of the dead, the last judgment, and the dawning of the everlasting kingdom, whether on this earth or in a "new" world. This eschatological understanding of the teaching of Jesus emerged near the beginning of the century in the work of J. Weiss and A. Schweitzer and became dominant by mid-century.

However, in the 1980's, it became clear that this was no longer a consensus, with perhaps a slight to substantial majority of scholars no longer holding it (see Borg 1986). A major paradigm shift away from an eschatological understanding of Jesus' teaching may be occurring, even though no replacement consensus has emerged. Thus, in what follows, neither an eschatological nor a non-eschatological framework for Jesus' message will be assumed, and we will return to the topic later (see E.1.).

3. Relationship to Judaism. Because of the mostly tragic history of Jewish-Christian relations, in which Jesus and "the Jews" have often been portrayed as bitter enemies, it is necessary at the outset to speak of the Jewishness of Jesus. This refers, first, to the obvious fact that Jesus' origins were Jewish: He was born a Jew, socialized as a Jew, and remained Jewish all his life. To be sure, he was not unaffected by other traditions. He lived in a cosmopolitan time and place. Hellenistic culture was present throughout Palestine (perhaps especially in Galilee), and Jesus almost certainly knew Greek as well as Aramaic.

Thus, second, it is important to add that to speak of Jesus' Jewishness is more than simply a reference to his origins: namely, the roots and focus of his message and mission were Jewish. There are strong continuities between his teachings and central elements of Jewish scripture and tradition. He restricted his teaching and activity to Jews (see Matt 10:5, 15:24). His concern was for the "shape" of his people's life. He did not seek to establish a new religion, but spoke about and sought the renewal of Judaism.

Yet there was tension and conflict between Jesus and some of his Jewish contemporaries, and it will be necessary to speak of that tension as we turn to an exposition of his teaching. As we do so, it is important to realize that the teaching of Jesus was initially part an intra-Jewish dialogue. The tension and conflict between Jesus and some of his Jewish contemporaries was an intra-Jewish dispute, analogous to (even though not exactly the same as) the tension between Jeremiah and his contemporaries in the 6th century B.C.E., or the tension between Israel's conventional wisdom and unconventional voices such as the authors of Ecclesiastes and Job. Jesus' voice is a Jewish voice, and what we shall call the alternative wisdom of Jesus is grounded in Judaism, in the "alternative consciousness of Moses" (Brueggemann) which resonates throughout the Jewish tradition.

C. Jesus as Teacher of "Wisdom"

The strongest consensus element of contemporary Jesus scholarship sees Jesus as a teacher of wisdom. "Wisdom," as a cross-cultural phenomenon and within the tradition of Israel, teaches a way of life. Grounded in a notion of "how things are" (an understanding of what is real, what is possible, what is important), it speaks of how one should live. Composed of a "worldview," a basic image of reality, and an "ethos," a way of life which is also a path through life, wisdom thus inculcates a way of seeing which is integrated with a way of living. Its "way" is most often contrasted to another way, so that teachers of wisdom ("sages") typically speak of two ways: the wise way and the foolish way, the righteous way and the wicked way, the way of life and the way of death.

The consensus that "teacher of wisdom" is a central category for understanding the teaching of Jesus is the result of two closely related developments in the last two decades. First, studies of Q (the earliest layer of the Synoptic tradition) have shown that it is dominated by wisdom forms of speech: beatitudes, parables, proverbs/aphorisms, and nature sayings. Thus the earliest stratum of the Jesus tradition is predominantly sapiential. Second, there has been intensive research on the forms themselves (especially parables and aphorisms) and their particular function in the message of Jesus.

1. Conventional Wisdom. In the history of religions, there are two main types of sages: teachers of "conventional wisdom" and teachers of "another way." The vast majority of sages are the former; Jesus was one of the latter, teaching an alternative wisdom. To understand this central claim, it is important to begin with the notion of conventional wisdom.

Conventional wisdom is the common or collective wisdom of a culture: It is "what everybody knows," the taken-for-granted understandings of "the way things are" and "how to live." Like wisdom itself, it is a cross-cultural phenomenon. Though its specific content varies from culture to culture, there are structural elements that are constant. First, it is practical; its very purpose is to provide guidance for the "wise" or "right" way of life, ranging from matters of etiquette to the central values of a culture. Second, its picture of the way to live is sanctioned by the notion of rewards and punishments. Its common theme is "Follow this way, and you will do well, or "You reap what you sow." Blessings and rewards, whether in this life or another, will follow its pursuit. This is true of both religious and secular forms of conventional wisdom: in Western religions, the notion of a last judgment; in Eastern religions, the notion of karma; in modern secular culture, the notion of success and prosperity as reward for hard work.

Third, conventional wisdom establishes boundaries and hierarchies: There are those who measure up to conventional wisdom's standards (achievement, propriety, gender, birth, etc.), and those who do not. The latter are the marginalized or even outcasts. Fourth, and cumulatively, conventional wisdom thus creates a world in which one

lives, an ordering of reality which shapes perception, behavior, identity, and society.

These general features of conventional wisdom were found in particular form in the social world of 1st-century Jewish Palestine. It specific content was grounded in sacred tradition, especially the Torah, in which were found the stories of God's relationship to Israel and the laws by which Israel was to live. Thus it contained both Israel's image of reality, its picture of the way things were, and Israel's ethos, its way of life. Together with Israel's folk wisdom (found in part in the book of Proverbs), it defined the right way to live. Those who followed it were righteous and respectable and would be blessed, whether in this life or the life to come. Those who did not were regarded as on the margin or beyond the margin of the world created by conventional wisdom.

The "core value" (Neyrey 1986; 1988) or "paradigm" (Borg 1984; 1987) which gave shape to its conventional wisdom was purity. This was the product of a cultural dynamic expressed in the postexilic holiness code, "Say to all the people of Israel: 'You shall be holy; for I the Lord your God am holy' " (Lev 19:2; see also Lev 11:44, 20:26). Image of reality and ethos were linked together: God was holy, and Israel was to be holy. Holiness was understood as purity, which meant separation from all that was impure. Purity (and impurity) applied to people, places, and things. Though persons and groups within Israel argued about the precise meaning of holiness and purity, the concern for purity was not peculiar to a particular group, but was central to the dominant religious consciousness of the culture.

2. The Forms of Jesus' Wisdom Teaching. The last 20 years have seen major advances in our understanding of the forms of Jesus' wisdom teaching. Studies of the parables (Wilder, Funk, Via, Crossan 1973, Perrin 1976, McFague, Tolbert, Boucher, Scott) and aphorisms (Tannehill, Carlston, Williams, Crossan 1983, Perdue) have highlighted their function as forms of oral speech.

a. Parables. Though the word "parable" is used in the gospels to refer to many different forms of Jesus' sayings, it is most commonly used both in ordinary speech and by scholars to refer to a particular form, namely to the "short stories" which Jesus told. With their exact number dependent on definition and classification, there are about 30 parables attributed to Jesus in the Synoptic Gospels, and another 3 in the *Gospel of Thomas*. This is a remarkably large number, given the relatively small compass of Jesus' teaching. Though it is clear that the parables have undergone modifications in their transmission and application, a large majority are regarded by scholars as authentic; they are the bedrock of the Jesus tradition.

An understanding of Jesus' parables as metaphors has superceded the "single point" interpretation, with which Jülicher replaced their allegorical reading about 100 years ago and which dominated parable interpretation through the first two-thirds of this century. Under the "single point" interpretation, the parables were understood as stories illustrating a point or moral truth which could also be expressed in non-parabolic language: sacrifice everything for something of greater value; make the most use of what you have been given; small beginnings lead to great endings.

The metaphoric understanding of the parables sees their function in a very different light. The essence of metaphoric language is comparison: It understands one thing in terms of another. Metaphoric language thus does not make a point; rather, as comparison, metaphor invites the hearers to see something in the light of something else. Metaphor does not illustrate; it illuminates. When language functions metaphorically, it does not provide examples of something already known, but is an invitation to see something new or differently. Such are the parables of Jesus: They are short stories which invite a particular way of seeing.

b. Aphorisms. "Aphorisms" is here used comprehensively to refer to the short metaphorical sayings of Jesus, including beatitudes, nature sayings, and what are sometimes called proverbs. Compact, memorable, and evocative, they are crystallizations of insight. Even more numerous than the parables, there are over 100 of them, with the exact number again dependent on definition and classification. They are the most common form of Jesus' speech.

Aphorisms are both like and unlike proverbs. As literary forms, both are short pithy (and therefore) memorable sayings which crystallize insight. They differ, however, on the basis of "collective wisdom" versus "individual voice" (Williams, Crossan 1983). Proverbs are the former; generally anonymous, they are the voice of a culture's tradition, what everybody knows: "A stitch in time saves nine;" "Spare the rod and spoil the child." Proverbs are the folk wisdom of a culture made memorable. Aphorisms, on the other hand, are the product of an "individual voice," fresh creations which express the particular way of seeing of the speaker. As such, by their arresting or provocative quality, they invite the hearer to participate in that same way of seeing. Aphorisms not only crystallize insight, but invite further insight.

Some of Jesus' aphorisms are truisms, and their persuasive power depends upon their obvious truthfulness, which draws the hearers into agreement: "Figs are not gathered from thorns nor are grapes picked from a bramble bush" (Luke 6:44 = Matt 7:16); "No one can be a slave to two masters" (Matt 6:24 = Luke 16:13), "If a blind man leads a blind man, both will fall into a pit" (Matt 15:14 = Luke 6:39). Here the freshness of perception is not in the statement itself, but in the explicit or implicit application: the hearers are invited to see that something else is like that. Other aphorisms say something unexpected, reversing the normal understanding of things: "Blessed are the poor" (Luke 6:20 = Matt 5:3), or "The first shall be last" (Mark 10:31 par). Here they provoke a different way of seeing by jarring conventional perceptions.

Like the parables, Jesus' aphorisms are an invitational form of speech. They do not appeal directly to the will or intellect, as do statements of divine law or "doctrine"; rather, they appeal to the perception and imagination, inviting a particular way of seeing.

3. The Subversive Wisdom of Jesus. As a storyteller and an aphorist, Jesus used the traditional forms of wisdom to subvert and undermine the world of conventional wisdom.

As metaphoric narratives, Jesus' parables serve this purpose in different ways. Some are brief, arresting the imagination with compact and often surprising juxtapositions:

The kingdom of God is like leaven which a woman put into three measures of flour (Luke 13:20b–21 = Matt 13:33b = *Gos. Thom.* 96); the kingdom of God is like a grain of mustard seed which a man planted in a field (Mark 4:31–32 = Matt 13:31b–32 = Luke 13:19 = *Gos. Thom.* 20). In both instances, the kingdom of God (usually associated with greatness) is compared to something small and insignificant.

Most of the parables, however, are more extended narratives, and what we have in the gospels may be viewed as skeletal outlines or plot structures of an oral story which Jesus "performed" many times, and which he may have elaborated at length. In this case, the parables work differently: As extended stories, they create a world which the hearers are invited to enter. Entering the world of the story, the hearers are then invited to see something else in the light of the story.

Many of the most famous parables of Jesus work in this way. In "A Man Had Two Sons" (Luke 15:11–32, traditionally known as the Prodigal Son, though the climactic focus is really on the older son), the hearers are drawn into the story of a runaway son who had become as an outcast, the joy of his father upon his return, and the complaint of the older son about the father's generous treatment of the returned runaway. The voice of the older son is in fact the voice of conventional wisdom: The father's behavior violated the ordering of life on the basis of rewards and punishments, and the hearers are invited to see the tension between conventional wisdom and the father's gracious behavior. So also in the story of the vineyard owner hiring laborers to work in his vineyard (Matt 20:1–15): Those hired at the last hour are paid the same as those who labored all day. Not surprisingly, those hired first complain; like the older son, they are the voice of conventional wisdom, and their voice is contravened by the parable.

The subversion of conventional wisdom continues in other parables. Given the attitude toward Samaritans in 1st-century Jewish Palestine, the story of the Good Samaritan (Luke 10:30–35) puts together an impossible combination of words: good + Samaritan. Rather than it being an example story of neighborly behavior, the parable shatters the world of conventional wisdom. So also in the story of the Pharisee and tax collector (Luke 18:10–14): By reversing that culture's perception of Pharisees and tax collectors it thereby upsets the ordering of reality which pronounces the one righteous and the other an outcast.

The aphorisms work similarly. Some of them explicitly use the language of paradoxical polarity and reversal: first/last (Mark 10:31 par); humble/exalt (Luke 14:11, 18:14; Matt 18:4, 23:12); losing/finding (Mark 8:35 par, Matt 10:39 = Luke 17:33); relinquishing/receiving (Mark 10:21–30). Purity (and righteousness) is not a matter of conformity to the standards of a purity system; it is internal, a function of what is inside (Mark 7:15; Luke 6:43–45 = Matt 7:16–20, 12:33–35; Matt 5:8). There is a way of seeing which is not seeing, and a blindness which is metaphorical (Luke 6:39 = Matt 15:14; Luke 6:41–42 = Matt 7:3–5; Matt 6:22–23 = Luke 11:34–36).

Much of Jesus' wisdom teaching undermines the central focal points of the life of conventional wisdom: family, honor, wealth, and religion. These provided the primary basis for identity and security in his culture. Some of his most radical sayings called for leaving family or familial obligations (Luke 14:26 = Matt 10:37; Matt 10:34–36 = Luke 12:51–53; Luke 9:59–60; see also Mark 3:33–35). He spoke of wealth as a snare (Mark 10:23–25; Matt 6:19–21 = Luke 12:33–34; Matt 6:24 = Luke 16:13; see also Luke 6:24–26; 12:13–21; 16:19–31). He ridiculed the pursuit of honor (Luke 14:7–10; Mark 12:38–39; Luke 11:43 = Matt 23:6–7). Those who trusted in their own religious status or practice became object lessons of how not to live (Matt 6:1–6, 16–18; Luke 18:10–14; Luke 11:39–44 = Matt 23:23–27).

Like most teachers of wisdom, Jesus spoke of two ways. There is the wise way and the foolish way (Matt 7:24–27 = Luke 6:47–49), the narrow way and the broad way (Matt 7:13–14; see Luke 13:23–24). Strikingly, in the perception of Jesus, the broad way which leads to destruction is not the way of gross wickedness, but the way of conventional wisdom itself. As a sage, Jesus did not confirm the world of conventional wisdom, but challenged it.

4. The Alternative Wisdom of Jesus. The narrow way which leads to life is the alternative wisdom of Jesus. At its heart is an alternative image of reality, an alternative path, and an alternative paradigm for behavior.

Jesus imaged reality as gracious and generous rather than seeing it as ordered on the basis of rewards and punishments. In his nature sayings, he invited his hearers to see life as marked by a cosmic generosity: Consider the birds of the air, and the lilies of the field; they neither sow nor reap, nor toil nor spin, and yet God lavishes them with care (Matt 6:26–30 = Luke 12:24–28). So also the sun rises on the evil and the good, and rain falls on the just and the unjust (Matt 5:45). In these obvious facts, the hearers are invited to see pointers to the nature of God.

Similarly, the parables which subvert conventional wisdom's image of reality point to an alternative image of reality. The story of the overjoyed and gracious father in the parable of the Prodigal Son invites Jesus' hearers to image God as being like that. The story of the vineyard owner who paid all of his workers equally invites the same perception: God is like that. Reality—God—is not to be imaged as a judge who dispenses rewards in return for achievement, but as life-giving and nourishing. Consistent with the invitation to image God in this way is the term with which Jesus addressed God and which he apparently invited his hearers to use as well: *Abba* is the intimate and familiar term used by a very young child to address his or her father, much like the English "papa."

The alternative way or path of Jesus involves moving from a life centered in the standards, boundaries, and securities of conventional wisdom to a life centered in God. Jesus used a number of images to speak of this movement. What is needed is a new heart or a pure heart, that is, a transformation of the self at its deepest level, and not simply observance of the standards of conventional wisdom (Luke 6:43–45; Mark 7:6, 14–15; Matt 23:25–26 = Luke 11:37–41; Matt 5:8). What is called for is a radical centering in God, and not in the world: "No one can be a slave of two masters; you cannot be a slave of God and mammon" ("mammon" literally means "wealth," but metaphorically "worldly security"; Matt 6:24 = Luke 16:13; see Matt 6:19–21 = Luke 12:33–34). The way to this radical centering in God involves a metaphorical dying:

following the way or path of Jesus means taking up one's cross, a vivid image for death in Roman-occupied Palestine (Matt 10:38 = Luke 14:27; Mark 8:34). It is the same movement captured in Jesus' paradoxical aphorisms: Humbling leads to exalting, losing to finding, relinquishing to receiving (see C.3.). In quite traditional language, the alternative path of Jesus is thus a dying to the world of conventional wisdom as the basis of security and identity and a rebirth to a life centered in God.

The way of Jesus also led to a new paradigm for behavior. Whereas the conventional wisdom of his day spoke of purity or holiness as the dominant paradigm for behavior, Jesus consistently spoke of compassion: The father in the parable of the Prodigal "had compassion" (Luke 15:20), as did the good Samaritan (Luke 10:33); the unmerciful servant was the one who did not show compassion (Matt 18:23–35). Its centrality in his teaching is most compactly expressed in the climactic saying, "Be compassionate, even as God is compassionate" (Luke 6:36 = Matt 5:48; Matthew's "perfect" is redactional). The saying is an *imitatio dei,* connecting Jesus' image of reality with the alternative paradigm for behavior: Just as God is compassionate, so those who are followers of God are to be compassionate. Thus the fruit of the alternative way of Jesus, of a life centered in God and not in the world of conventional wisdom, is compassion. It is also captured in the familiar words of the "great commandment" (Mark 12:28–31 = Matt 22:34–40; see Luke 10:25–28): radical centering in God and love of neighbor go together, and are the summary of the way.

D. The Teaching of Jesus and Politics/Society

Though there is considerable scholarly agreement about Jesus as a teacher of subversive and alternative wisdom, there is less agreement about the extent to which his teaching directly concerned sociopolitical issues of his day, due largely to two factors. First is the legacy of the eschatological understanding of Jesus' message: If Jesus believed the world was soon to end, then he would hardly have been concerned about the sociopolitical structures and direction of an ongoing historical community. Second, there has been a tendency to understand Jesus' teaching in an individualistic mode, both in Christian piety throughout the centuries and in 20th century scholarly understandings of Jesus within an existentialist or (most recently) cynic framework.

There has consistently been a minority voice within scholarship challenging the apolitical understanding of Jesus. Sometimes this has taken the form of seeing Jesus as a political revolutionary over against Rome, a view that has never generated much assent (with some differences, Brandon and Buchanan). Recently, however, a number of studies have argued in various ways that Jesus was political in a different sense: not as a leader of a movement against Roman rule, but as one who sought a transformation of his own people's sociopolitical life (Gaston, Yoder, Stegemann, Lohfink, Borg, Herzog, Goergen, Oakman, Horsley).

Central to the question is how politics is defined. If politics is defined as "what political leaders do," then it is difficult to see a political thrust to Jesus' message and mission. But if "politics" is understood as concern for the shape of the city *(polis),* and by extension as concern for the shape of any historical community, there is considerable evidence of a strong sociopolitical component in Jesus' teaching.

1. Prophetic and Conflict Forms of Jesus' Teaching. First, in addition to wisdom forms of speech, there are prophetic forms of speech attributed to Jesus which link him to the classical prophets of Israel and their concern with justice, oppression, and the historical direction of their nation's life. These include "woes" (Luke 6:24–26; Luke 11:42–52, with parallels in Matthew 23), "threat oracles" (Luke 13:34–35 = Matt 23:37–39; Luke 19:41–44, Mark 13:2), and "indictments" too numerous to list. He also performed actions which recalled the symbolic acts of the prophets (Mark 11:1–10, 15–17). Moreover, the tradition refers to Jesus as a prophet, as he reportedly did himself (Mark 6:4; Luke 13:33). Second, there also is a very pronounced element of conflict in the teaching of Jesus. Controversy stories abound (all with various kinds of authorities), and many of the parables and aphorisms of Jesus reflect conflict settings. Some of his contemporaries seem to have found his message and activity to be threatening to the established ordering of life.

2. Criticism of Ruling Elites. The traditions about Jesus report harsh criticisms directed against the ruling elites of wealth, power, and righteousness. He spoke "woes" against the rich (Luke 6:24–26) and against the scribes who used the law for monetary gain (Mark 12:38–40). Stories which begin with "Once there was a rich man" consistently turn out badly (Luke 12:15–21; 16:19–31; see also Mark 10:17–25). He called Herod Antipas "that fox," a term of contempt (Luke 13:32), and criticized "the rulers of the gentiles" as models of how *not* to behave (Mark 10:42–43). According to Mark, he charged the wealthy religious elite who controlled the temple with having made it into a "den of robbers" (Mark 11:17), and accused them of being unfaithful murderous tenants of the vineyard of Israel (Mark 12:1–9).

3. Challenge to the Core Value of Purity. Purity (holiness) as the core value of Jewish conventional wisdom had produced a society ordered in accord with a "purity system" (Neyrey 1986, 1988). Among Jews, there were varying degrees of purity, determined not only by observance or non-observance of the law, but also by ancestry, gender, occupation, and physical wholeness. Genealogies were kept which determined what classes of Jews could intermarry. Though not intrinsically impure, women tended to be identified with the impure side of the spectrum; in a patriarchal and androcentric society, they were second-class citizens in the sense of being denied many of the prerogatives of men and were radically separated from men in public life. Certain occupations, notably those that involved suspicion of gross immorality or frequent contact with gentiles or women, rendered one impure and even "outcast" (beyond the purity system).

The poor were also associated with impurity, in part because their circumstances made following the life of conventional wisdom difficult, and in part because of the notion that prosperity was the reward for righteousness (poverty therefore was a sign that something was wrong). Persons with certain diseases or physical abnormalities were impure. Gentiles were by definition impure. Like

outcasts, they were beyond the purity map, and therefore had no place in the "holy land," the boundaries of which were the outer limits of purity. Their very presence was polluting, yet they controlled the land of Israel. Not surprisingly, anti-Roman feelings were intense.

Thus the purity system generated a world with sharp social boundaries: between observant and nonobservant, men and women, prosperous and impoverished, whole and "impaired," Jew and gentile. As the core value, embedded within the conventional wisdom of Jesus' social world, the ethos of purity was thus also a politics of purity.

Within this background, Jesus' teaching about purity does not simply concern a matter of personal piety, but can be seen as a radical challenge to the politics of purity. His teaching that purity was not external but internal denied that purity was a product of observing external boundaries: "There is nothing outside a person which by going in can defile; but the things which come out of a person are what defile" (Mark 7:15; see also Luke 11:39–41 = Matt 23:25–26; Matt 5:8; Luke 6:43–45). He was often in conflict with the Pharisees (the group most committed to the extension of purity in public life), accusing them of being a source of defilement rather than purity (Luke 11:44 = Matt 23:27). He criticized the preoccupation with tithing and the sabbath, both central concerns of the purity system (Luke 11:42 = Matt 23:23; Mark 2:23–28, 3:1–6; Luke 13:10–17; 14:1–6). See UNCLEAN AND CLEAN (NT).

His behavior regularly transgressed the boundaries of the purity system. He was known for eating with "tax collectors and sinners," who were regarded as impure and outcasts. His entourage included women (Luke 8:1–3; Mark 14:40–41; see also Luke 23:55), and associations with women are reported in several stories shocking in their social context (Luke 7:36–50; 10:38–42; Mark 14:3–9). He touched and accepted persons whose physical condition (lepers, lame, maimed) made them unclean. He sided with the poor and marginalized. Luke's version of Jesus' inaugural address, whether it goes back to Jesus or is Luke's summary, catches this dimension very well: Jesus' message was good news to the poor, release to the captives, recovery of sight to the blind, liberty for those who are oppressed (Luke 4:18–19). He pronounced the poor "blessed" (Luke 6:20 = Matt 5:3), and many of the common people heard him gladly. Though his focus was on Israel, he was open to gentiles, and spoke of loving the gentile enemy (Matt 5:43–44 = Luke 6:27; see also Matt 5:38–41).

These traditions suggest that Jesus' message and activity had a boundary-shattering quality, radically calling into question the politics of purity which structured his own people's life. Moreover, seen in the context of the sociopolitical significance of purity, Jesus' alternative paradigm also has a sociopolitical meaning. As the "core value" involved in following the way of Jesus (see C.4 above), compassion leads to a vision of life very different from that generated by purity. Often contrasted to purity in the Jesus tradition, and etymologically related to "womb" (Trible), compassion is an inclusive image. Rather than establishing boundaries, compassion negates them; rather than dividing, it includes.

4. A Renewal Movement within Israel? One of the unresolved questions of contemporary scholarship is whether Jesus founded a movement whose purpose was the renewal of Israel. There are two issues: Did Jesus found a "movement"? If so, what was its purpose? Some have argued that a "movement" (as distinct from an "entourage" or "retinue" of followers) came into existence only after his death, and that all traces of "community formation" must be seen as a post-Easter development. Of those who think he did create a movement, some have seen it as an eschatological group preparing for the end (e.g., Schweitzer and Sanders), and thus unconcerned with the social world. Others have argued that Jesus founded a movement whose purpose was the renewal or revitalization of Israel (Dodd 1970, Stegemann, Schüssler Fiorenza, Lohfink, Borg, Horsley), citing as evidence the traditions that Jesus chose 12 disciples (symbolizing Israel), restricted his mission to Israel, and the analogies of other renewal movements within 1st-century Judaism (Theissen).

If Jesus did found a renewal movement, then it follows that his way was intended as a way for Israel. His emphasis upon compassion would then be seen not simply as an individual virtue, but as intended also as the core value for Israel. Just as the core value of purity generated a politics of purity, so also the core value of compassion generated a politics of compassion. Within this framework, the inclusiveness of the Jesus movement becomes an image of what Israel was to be. Both his message and movement disclose a concern for the historical "shape" and direction of Israel (see also E.3).

E. Jesus and the Future

A strong sense of crisis and urgency pervades the Jesus tradition, and this seems to have something to do with the future. Indeed, the future has played a large role in 20th century studies of the teaching of Jesus.

1. Eschatology. As noted earlier (see B.2.), the eschatological understanding of Jesus' message which dominated much of this century's scholarship is no longer a consensus. The collapse of the consensus is due to several factors: (1) A growing realization that the eschatological understanding of Jesus was based largely on the "coming Son of man" sayings, which the majority of scholars no longer see as authentic. (2) A refined understanding of Jewish apocalyptic material, including the realization that though some apocalyptic literature does speak of a coming end of the world, much does not (see, for example, Collins). (3) A reassessment of both the meaning and centrality of "kingdom of God." See KINGDOM OF GOD/HEAVEN.

At issue is not whether Jesus had an eschatology. He apparently spoke of a last judgment, though almost certainly not of his own second coming, or of his own return as judge or advocate. (For last judgment texts, see Luke 10:12 = Matt 10:15; Luke 10:13–14 = Matt 11:21–22; Luke 11:31 = Matt 12:42; Luke 11:32 = Matt 12:41. It is interesting that none of these speak of it as imminent; what they do have in common is a reversal of contemporary expectation, in keeping with the subversive wisdom of Jesus: In the judgment, when it comes, many of those who expected to be judged favorably will not be, and vice versa). He apparently affirmed an afterlife, though it was not a major theme of his teaching (see Mark 12:18–27, where he speaks about it in response to a challenge). He

spoke of banqueting in the kingdom of God with Abraham, Isaac, and Jacob (Matt 8:11–12 = Luke 13:28–29).

These traditions indicate that there is a "cosmic" strain in Jesus' eschatology: Like many of his contemporaries, he apparently believed in the resurrection of the dead and saw history as having a final judgment at its boundary. The issue, however, is whether he thought all of this (judgment, resurrection, the messianic banquet) was to happen soon, and, if so, whether his message was pervaded by this expectation.

2. Kingdom of God. According to Mark's advance summary, the heart of Jesus' message concerned the kingdom of God: "The time is fulfilled, and the kingdom of God is at hand" (Mark 1:15). Twentieth century scholarship has generally accepted Mark's summary as historically accurate, and has spent considerable energy seeking the meaning of the phrase (for a dissenting view, which argues that Mark 1:15 is not only redactional but also misleading, see Mack). It has produced no consensus.

Since Weiss and Schweitzer, the understanding of the kingdom of God and the question of eschatology have been closely related, and the erosion of the eschatological consensus has been accompanied by a reassessment of the meaning of the phrase "kingdom of God." The key question is whether Jesus saw the kingdom as a future apocalyptic event or as a present mysterious reality. A majority of contemporary scholars hold a primarily or exclusively "present" view, emphasizing those traditions in the Synoptics (Matt 12:28 = Luke 11:20; Luke 17:20–21) and Thomas (*Gos. Thom.* 3, 113) which speak of a present kingdom, understood in either or both of the compatible senses of a mysterious presence pervading reality or as a power presently active in the world. A few hold a wholly or primarily future understanding, and the remainder maintain a "both/and" understanding. For those holding a partially or wholly future view, an important question is whether Jesus saw the future kingdom as coming in a dramatically objective and visible manner.

3. Sociohistorical Crisis. Yet another way of understanding the urgency associated with the future in the message of Jesus is to see the future crisis not as the imminent eschatological (final) judgment, but as a sociohistorical crisis flowing out of the historical direction of Jesus' social world (Gaston; Borg 1984, 1987; Goergen). The broad way leading to destruction then refers to the historical consequences of the path of conventional wisdom and its politics of purity; the crisis refers to the present as a time for radical change; and the threat includes the warnings of Jerusalem's and the temple's destruction, understood not as the vindicative act of an angry deity, but as the historical outcome of the present direction. This understanding is coherent with the understanding of Jesus' message as having a strong connection to politics and society (see D.). Jesus' message about the future would then be seen as a warning of contingent destruction, analogous to the prophets of Israel who were active before the destruction of the N and S kingdoms in the 8th and 6th centuries B.C.E.

F. Conclusion

A factor not often acknowledged in attempts to reconstruct the teaching of Jesus is the reciprocal relationship between an overall image of Jesus (a gestalt) and historical judgments about both the authenticity and meaning of the various traditions attributed to him. At some point, the study of individual traditions begins to generate a gestalt. In this respect, the process through which a historian of Jesus goes is analogous to that of a detective: out of the clues, a "hunch" arises. A hunch or gestalt, once generated, quite naturally begins to affect how the rest of the data are seen. In reconstructions of the teaching of Jesus, the eschatological gestalt leads to a denial or reinterpretation of traditions which suggest a historical future; the gestalt of Jesus as a Cynic leads to a denial of traditions which point to a concern with the community of Israel; and the gestalt of Jesus as concerned with the historical direction and future of Israel leads to a denial or reinterpretation of traditions which seem to point to the imminent end of history. There is no way to avoid this dialectic, and interpretations of the teaching of Jesus in the future will continue to work within it. However, one can be aware of the dialectic, and the effort can be made to seek gestalts which do not prematurely eliminate traditions which otherwise seem well-grounded.

MARCUS J. BORG

THE WORSHIP OF JESUS

The prevalence and centrality of the worship of Jesus in early Christianity from an early date has frequently been underestimated, as has its importance for understanding christological development. On the other hand, Johannes Weiss called the emergence of the worship of Jesus "the most significant step of all in the history of the origins of Christianity" (1937: 37). Since the major types of evidence for the worship of Jesus form a continuous tradition from the NT onwards, this article will treat ante-Nicene Christianity as a whole, and will conclude with the contribution which the tradition of worshipping Jesus eventually made to the trinitarian and christological developments of the 4th and 5th centuries.

 3. Missionary Christianity in the Apocryphal Acts
 4. Persecution and Martyrdom
F. Relationship to Patristic Christological Development

A. Origins

In the nature of the case, firm evidence of the point at which worship of Jesus began in early Christianity is unlikely to be available, but general considerations along with the available evidence point to the earliest Palestinian Jewish Christianity. In the earliest Christian community Jesus was already understood to be risen and exalted to God's right hand in heaven, active in the community by his Spirit, and coming in the future as ruler and judge of the world. As God's eschatological agent, he was the source of the experience of eschatological salvation and the enthusiasm of the Spirit which characterized Christian gatherings for worship, and he was the focus of all Christian relationship, through him, to God. Psalms and hymns celebrating his exaltation by God and God's work of salvation through him were probably sung and composed from the earliest times (Hengel 1983). To the living presence of a figure with this kind of religious role, thanksgiving and worship, naturally included within the worship of God, were the inevitable response. (For the very early origin of the worship of Jesus, see especially Hurtado 1988.)

Acclamations and prayers *addressed* to Jesus go back to the earliest times. The Aramaic cry *Maranatha* ("Our Lord, come!"; 1 Cor 16:22; *Did.* 10:6; cf. Rev 22:20), whose preservation in Aramaic in Greek-speaking churches indicates its very early origin, implies not only the expectation

of the parousia, but present religious relationship with the one who is to come, whether or not it was associated with a eucharistic presence from the beginning. The NT evidence for personal prayer to Jesus as a regular feature of early Christianity has sometimes been underestimated. Paul (2 Cor 12:8; 1 Thess 3:11–13; 2 Thess 2:16–17; 3:5, 16; cf. Rom 16:20b; 1 Cor 16:23; Gal 6:18; Phil 4:23; 1 Thess 5:28; 2 Thess 3:18; Phlm 25) and Acts (1:24; 7:59–60; 13:2) take it for granted (cf. also 1 Tim 1:12; 2 Tim 1:16–18; 4:22). The dominant practice was undoubtedly prayer to God, but since Jesus was understood as the active mediator of grace from God (as in the epistolary formula, "Grace to you and peace from God our Father and the Lord Jesus Christ": Rom 1:7 and elsewhere) and as the Lord for whose service Christians lived, prayer addressed to him was natural. John 14:14 (where the correct reading is probably "if you ask *me*") makes prayer to Jesus a principle of regular petition.

Petitionary prayer to Jesus is not, as such, worship of Jesus. Two phrases drawn from the language of the OT cult, while they cannot be pressed to imply precisely the worship of Jesus, are nevertheless suggestive of the centrality of Jesus as object of religious devotion. In both Acts and Paul (whose usage here certainly reflects pre-Pauline Christian usage) Christians are those who "call on the name of our Lord Jesus Christ" (1 Cor 1:2; cf. Rom 10:12–14; Acts 9:14, 21; 22:16; 2 Tim 2:22; *Herm. Sim.* 9:14:3). The phrase, no doubt drawn into Christian usage especially from Joel 2:32 (Acts 2:21; Rom 10:13), regularly in the OT refers to the worship of God (e.g. Gen 4:26; 12:8; 13:4; Ps 105:1). Secondly, Acts 13:2 portrays the prophets and teachers at Antioch "worshipping *[leitourgountōn]* the Lord [Jesus]." The verb, which in Jewish usage referred to the cultic service of God, must here, in connection with "fasting," refer to prayer in the broadest sense with Jesus as its focus.

Since it was Jesus' functional divinity which made him the object of religious attention in Christian worship from the beginning, the transition from prayer, thanksgiving, and reverence to unambiguously divine worship of Jesus would not have been difficult or very self-conscious. It was a smooth process; there is no evidence that anyone contested or resisted it, even though the issues it raised for monotheistic faith and worship would soon have to be reflectively confronted. Certainly the view that the transition coincided with the movement of Christianity from a Jewish to a pagan Hellenistic environment (Bousset 1913: 92–125) is mistaken. Apart from involving an over-schematized division between Jewish and Hellenistic Christianity and neglecting the continuing dominance of Jewish Christian leadership in the churches of the gentile mission in the NT period, this view founders on the fact that two of the NT works in which the worship of Jesus is clearest—Matthew and Revelation—remain within a thoroughly Jewish framework of thought. That the worship of Jesus did not result from gentile neglect of Jewish monotheism, but originated within and had to be accommodated within a Jewish monotheistic faith, which passed into gentile Christianity along with it, is of the greatest importance for the course of later christological development.

The significance of Revelation, in which it is stressed that Jesus is worthy of explicitly divine worship, is discussed in section E.2. As for Matthew, the issue turns on his emphasis on *proskynēsis* (obeisance, prostration before someone as an expression of reverence or worship) paid to Jesus. Matthew uses the verb *proskynein* with Jesus as object 10 times (whereas Mark uses it in this way only twice, Luke only in 24:52 *v.l.*). On 5 of these 10 occasions there is no Synoptic parallel (Matt 2:2, 8, 11; 28:9, 17). On 3 of them, Matthew supplies the word *proskynein* where Mark has the gesture but not this word (Matt 8:2 = Mark 1:40; Matt 9:18 = Mark 5:22; Matt 15:25 = Mark 7:25). On the remaining 2 occasions Matthew supplies the word where the Markan parallel has not even the gesture (Matt 14:33 = Mark 6:51; Matt 20:20 = Mark 10:35). There are also 2 occasions where Mark has the word but Matthew omits even the gesture, and one where Mark has the gesture but Matthew omits it (Mark 5:6 = Matt 8:29; Mark 15:19 = Matt 27:30; Mark 10:17 = Matt 19:16). However, on these 3 occasions the worship (by demons, the mocking soldiers, the rich young man) would have been considered less than adequate by Matthew.

The evidence therefore suggests that Matthew uses *proskynein* in a semi-technical way for the obeisance which is due to Jesus and emphasizes that it expresses the proper response to Jesus. It is true that the word *proskynein* as well as the gesture it describes could be used of reverence for human beings, without any implication of idolatry (Matt 18:26; Rev 3:9; LXX Gen 18:2; 19:1; 23:7, 12; 33:6–7; 1 Kgdms 28:14; 3 Kgdms 2:19; Isa 45:14, etc.). But a large majority of Septuagintal uses of the word refer to the worship of God or false gods, and the gesture had become highly suspect to Jews in contexts where the idolatrous worship of a human being or an angel might be implied (Add Esth 13:12–14 [cf. Esth 3:2]; *Apoc. Zeph.* 6:14–15; Philo *Dec.* 64; *Gaium* 116; Matt 4:9; Luke 4:7; Acts 10:25–26; Rev 19:10; 22:8–9; cf. also *Mart. Pol.* 17:3). Thus, whereas in Mark and Luke the gesture of obeisance to Jesus is probably no more than a mark of respect for an honored teacher, Matthew's consistent use of the word *proskynein* and his emphasis on the point show that he intends a kind of reverence which, paid to any other human being, he would have regarded as idolatrous. This is reinforced by the fact that his unparalleled uses tend to be in epiphanic contexts (Matt 2:2, 8, 11; 14:33; 28:9, 17). Combined with his emphasis on the presence of the exalted Christ among his people (18:20; 28:20), Matthew's usage must reflect the practice of the worship of Jesus in his church.

In view of the origin of the worship of Jesus in Jewish Christianity, Hurtado (1988: 100) calls it "a significantly new but essentially internal development within the Jewish monotheistic tradition." That it constituted a new "mutation" (Hurtado) of Jewish monotheistic worship, rather than an abandonment of Jewish monotheism, become evident in section E below. Further evidence of the worship of Jesus throughout the whole ante-Nicene period permeates the following discussion.

B. Doxologies

The attribution of doxologies to Christ is particularly clear evidence of unambiguously divine worship, i.e., worship that is appropriately offered only to the One God. Moreover, an unbroken tradition of use of christological

doxologies can be traced from the NT through the whole ante-Nicene period. We distinguish two types: the strict doxological form and the acclamatory doxology.

The basic structure of the strict doxological form, of which many variations and expansions are possible, is: "To whom/him/you (be/is) the glory for ever. Amen." Such doxologies are typically used by Jews and Christians as a conclusion to a prayer, a sermon, a letter, or a part of any of these. Though they are rare in extant Jewish literature, where the benediction (a different form with an equivalent function) is much more common, there is no doubt that the early Christian use of doxologies did derive from Judaism, where they were an expression of monotheistic worship. It is the One God of Israel to whom glory belongs eternally. There could be no more explicit way of expressing *divine* worship of Jesus than in the form of a doxology addressed to him.

A common early Christian way of christianizing the doxology without addressing it to Christ was by the addition of the phrase "through Jesus Christ" (Rom 16:27; Jude 25; *Did.* 9:4; *1 Clem.* 58:2; 61:3; 64; 65:2; *Mart. Pol.* 14:3; 20:2; cf. 2 Cor 1:20; 1 Pet 4:10; Justin *1 apol.* 65:3; 67:2; Origen *or.* 33:1, 6). But doxologies addressed to Christ also came into use. The commonest form was a doxology to Christ alone, of which three examples occur in the NT, though in relatively late NT documents (2 Tim 4:18; 2 Pet 3:18; Rev 1:5–6). Two other NT doxologies (Heb 13:21; 1 Pet 4:11) could but are not very likely to be addressed to Christ, and the same can be said for two doxologies in *1 Clement* (20:12; 50:7) which, if addressed to Christ, would be roughly contemporary with the three certain NT examples. However, the three clear NT examples are from different geographical areas and theological traditions and so presuppose a common Christian practice going back some time before the writing of these works.

Some examples of the strict doxological form addressed to Christ alone from the 2d and early 3d centuries are *Acts John* 77; *Acts Paul & Thecla* 42; *Acts Pet.* 20; 39; Mel. *Peri Pascha* 10, 45, 65, 105; *fr.* II 23 [Hall 1979: 94]; *M. Perp.* 1:6; Tert. *De orat.* 29; Hipp. *Dan.* 1:33; 4:60; Origen *princ.* 4.1.7; 4.3.14. Two special categories of further examples should be noted.

(1) The doxologies that end the homilies of Origen are characteristically addressed to Christ alone. Of 202 such doxologies, 181 are addressed to Christ (5 others may be addressed to Christ or to the Father; Crouzel 1980). This practice of Origen's is especially noteworthy since it contrasts with his own theory (*Or.* 14–15; cf. 33.1), and is likely therefore to be evidence not only of his own devotion to Christ but also of a normal practice of ending sermons in this way.

(2) The early Acts of the Christian martyrs seem always to have ended with a doxology to Christ alone (*Mart. Pol.* 21; *M. Carp* Lat 7; *M. Pion.* 23; *M. Just.* Rec.B & C 6; *M. Perp.* 21:11; *M. Marcell.* Rec.N 5; *M. Irenaeus of Sirmium* 6; *M. Julius* 4:5; *M. Crispina* 4:2). In some cases, the later expansion of an original christological doxology into a later trinitarian form can be clearly seen (*M. Carp.* Gk 47; *M. Just.* Rec A 6; *M. Das.* 12:2; *M. Agap.* 7:2; cf. *M. Eupl.* Gk 2:4). Here the trinitarian doxology is the post-Nicene development; the purely christological doxology is the early form. In many of these cases the christological doxology is attached to a standard form of reference to the reign of Christ (*Mart. Pol.* 21; *M. Carp.* Lat 7; *M. Pion.* 23; *M. Marcell.* Rec.N 5; *M. Irenaeus of Sirmium* 6; *M. Das.* 12:2; *M. Agap.* 7:2), so that the effect is to contrast the divine rule of Christ, to whom worship is due, with Caesar's idolatrous pretensions to divine worship. The doxology thus expresses precisely the issue of worship for which the martyrs died.

As well as the strict doxological form, acclamatory doxologies were also used with purely christological reference. Here the basic form is simply, "Glory to . . . ," with the object of praise expressed in the second or third person. Frequently a relative or casual clause follows, giving the reason for praise. This form is not normally a concluding formula (but see *Odes Sol.* 17:17), but forms an independent or even introductory ascription of praise. Its christological use in early Christianity seems to have been prevalent especially in Syria (*Odes Sol.* 17:17; *Acts John* 43; 78; *Acts Thom.* 59; 60; 80; 153), though not exclusively there (*M. Pion.* 11:6).

Besides its three purely christological doxologies, the NT also contains one doxology addressed to God and Christ together (Rev 5:13; cf. 7:10). This is the nearest the NT comes to later *trinitarian* doxologies in "coordinated" form, i.e., in which glory is ascribed to all three divine persons. They are less common in the pre-Nicene period than the doxology addressed to Christ alone, but are found. It is disputed whether this form of the doxology is original in *Mart. Pol.* 14:3 (see Jungmann 1965: 147 n. 4), but there seems to be a good case for claiming that it was regularly used by Hippolytus in the liturgy as well as in other works (Jungmann 1965: 5–8, 151–52, 152 n. 2, 155; Lebreton 1928: 622–25; but on the liturgy see also Hanssens 1959; 343–68), as it certainly was also in the Syriac liturgies from an early date (Jungmann 1965: 194–200). Other early doxologies to the trinity are in *Acts John* 94; 96; *Acts Thom.* 132 (all these in the acclamatory form); Dionysius of Alexandria (*ap.* Bas. *Spir.* 29).

C. Hymns

Hymns in praise of Christ are probably, as Martin Hengel has argued, "as old as the [Christian] community itself" (Hengel 1983: 93), and, like the doxology to Christ, can be traced in a continuous tradition through the early centuries. The singing of hymns "to the Lord" [i.e., to Christ] is already attested in Eph 5:19, then by Pliny's report (of Christians' own testimony) that Christians habitually, in their morning worship, sang a hymn to Christ as God (*carmen Christo quasi deo;* Pliny, *Ep.* 10.96.7). Ignatius' comment that by the concord and harmony of the Ephesian Christians the praise of Jesus Christ is being sung (*Iēsous Christos ǫidetai:* Eph. 4:2; the following verse continues the thought in terms of singing through Christ to the Father) uses a metaphor which must reflect a practice of singing hymns in praise of Christ. Later evidence of the continuity of this tradition of christological liturgical hymns comes from the context of 3d-century christological debate. An anonymous early 3d-century writer, refuting the heretic Artemon who denied the deity of Christ, adduces as evidence of the antiquity of this belief the fact that "all the psalms and hymns (*ōdai*) written by believing brothers from the beginning hymn Christ as the Logos of God and

speak of him as God *(ton logon tou theou ton christon hymnousin theologountes)*" (Eus. *Hist. Eccl.* 5.28.6). (In this text, as also in *Hist. Eccl.* 7.30.10, note the continuity with the early Christian terminology for such hymns in 1 Cor 14:26; Col 3:16; Eph 5:19: cf. Hengel 1983: 78–80.) Known hymns of some antiquity must be in the author's mind, since he also appeals quite accurately to named 2d-century writers who speak of Christ as God (*Hist. Eccl.* 5.28.4–5). Some years later, Paul of Samosata—the first Christian reformer who attempted to abolish the worship of Christ in the interests of a low christology—put a stop to psalms addressed to Jesus Christ, considering them to be modern compositions (*Hist. Eccl.* 7.30.10). (For the practice of singing hymns in praise of Christ, see also Or. *Cels.* 8.67; Porph. *ap.* Aug. *civ. Dei* 19.23.)

Those fragments of early Christian hymns which are preserved in the NT (and perhaps also in Ignatius) are not actually *addressed* to Christ, but are forms of "narrative praise" recounting the history of Jesus in the third person (especially Phil 2:6–11; 1 Tim 3:16). Like the narrative psalms of the OT, such hymns are praise of God for his saving acts in the history of Jesus, but they are at the same time also praise of Jesus the Savior, as Eph 5:19 makes plain, if it is to hymns of this type that it refers. Indeed, Phil 2:9–11 is virtually equivalent to a doxology addressed *to* Christ and *through* him to the Father. The tradition of hymns of narrative praise must have continued, because the hymnic elements in the work of Melito of Sardis seem clearly indebted to liturgical hymnody of this type. Melito makes the praise of Christ quite explicit by ending such compositions with formal christological doxologies (*Peri Pascha* 10, 45, 65, 105; *fr.* II 23 [Hall 1979: 94]). (Note also the combination of christological doxology and narrative praise in *Acts Thom.* 80, which may reflect a hymnic form.)

But hymns of praise actually addressed to Christ may also have originated at a very early date. A brief acclamation of praise to Christ, drawn from the messianic Psalm 118, is found in the context of the eucharistic liturgy in *Did.* 10:6: "Hosanna to the God of David!" ("Hosanna," originally a cry for divine help, had already in Jewish usage become a shout of praise to God: *TDNT* 9: 682–84; see HOSANNA.) Rev 5:9–10, which addresses praise to Christ in the second person, is not an actual hymn in Christian use: the seer has composed this heavenly liturgy for its context in his work. But it would be surprising if it did not reflect the use of hymns of this kind in John's churches. Moreover, Heb 1:8–12 understands Ps 45:6–7 and Ps 102:25–27 as *psalms addressed to Christ,* while Justin later attests a Christian exegesis of some psalms as addressed to Christ (*Dial.* 37–38; 63; 73–74; 126). In line with Hengel's argument that in the earliest Christian community the use of OT messianic psalms accompanied the composition of new songs (Hengel 1983: 92), this kind of christological exegesis of psalms could have inspired new Christian psalms addressed to Christ. So it may be to this type of hymn that Eph 5:19 and Pliny's report refer. Examples of such hymns which have survived from a later period are the lamp-lighting hymn *Phōs hilaron,* probably from the late 2d or early 3d century (see Tripolitis 1970), Clement of Alexandria's hymn to Christ the Savior in *paed.* 3:12, and probably the original ante-Nicene form of the *Gloria in excelsis.*

The special value of the hymns is that they help us much more than the doxologies to see how the worship of Jesus arose. As Hengel has shown in detail (1983; see also Stanley 1958), the earliest hymns celebrated the saving death and heavenly exaltation of Jesus as the one who now shares the divine throne and as God's plenipotentiary receives the homage of all creation. In offering praise to Christ they anticipate the eschatological consummation when all will acknowledge Christ's lordship and worship him. Thus the worship of Christ is the community's response to his eschatological history. It corresponds to the very high but still functional christology of the earliest Christian Church, according to which Jesus exercises all the functions of God in relation to the world, as Savior, Lord, and Judge, as well as to the same church's strong sense of the living reality of Jesus as the one who reigns now and is coming. The one who functions as God naturally receives divine worship, not of course as a competitor or supplanter of God in the community's worship, but as God's plenipotentiary whose praise redounds to God's glory (Phil 2:11; Rev 5:12–13).

What this shows, however, is that the role which Jesus played in the Christian religion from the beginning was such as to cause him to be treated as God in worship. But in a context of monotheistic worship, in which the uniqueness of God is defined by the restriction of worship to him, this had to be seen sooner or later to mean that Jesus belongs to the being of God. If functional Christology gave rise to the worship of Jesus then it had also to give rise to ontic Christology, as it did already in the NT period as well as subsequently. It is likely that it was the attribution of explicitly divine worship to Jesus which promoted the development of more explicit statements about his divine being.

D. Pagan Perceptions of Christianity

Interesting evidence that the worship of Jesus was the central distinguishing feature of early Christianity comes from pagan observers and critics. "To pagan observers . . . Christian identity centered on the worship of Christ" (Wilken 1980: 113; cf. Mühlenberg 1982: 144). Most 2d- and 3d-century pagan writers who discuss Christianity emphasize the worship of Jesus (Pliny *Ep.* 10.96.7); Lucian *Peregrinus* 13; Celsus *ap.* Or. *Cels.* 8.12, 14, 15; Porph. *ap.* Aug. *civ. Dei* 19:23; cf. *Mart. Pol.* 17:2). Also the 3d-century anti-Christian graffito from the Palatine hill depicts a man in prayer before a crucified man with the head of a donkey, and the inscription: "Alexamenos worships [his] God" (*Alexamenos sebete theon;* cf. Min. Fel. *Oct.* 9: 4; Tert. *Apol.* 16; *Ad Nat.* 1.14). See Fig. ART.48.

In a sense it was easy for pagans to see Christianity as a religious association devoted to the cult of Jesus, in the same way that other religious groups exalted particular teachers and heroes to divine or semi-divine status. But what set Christianity apart, in their eyes, was not only that Jesus was in fact unworthy of such a cult (as Celsus was at pains to argue), but also the *exclusivity* of Christian worship. They saw Christianity as having perverted the exclusive monotheism of the Jews, itself an objectionable superstition (Tac. *Hist.* 5.4–5), into the exclusive worship of Jesus as the only God. Mühlenberg persuasively interprets Pliny's report as implying this: "The skandalon, the fanatic

obstinacy, as Pliny sees it, consists in the exclusivity of the divinity of Jesus" (1982: 139). According to Celsus, whose principal objection to Christians was their antisocial (indeed seditious) opting out of all religious practices except their own, Christians "want to worship only this Son of man, whom they put forward as leader under the pretense that he is a great God" (Or. *Cels.* 8.15). Celsus cannot understand how this can be compatible with the Jewish monotheistic tradition in which Christians claim to stand: "If these men worshipped no other God but one, perhaps they would have had a valid argument against the others. But in fact they worship to an extravagant degree this man who appeared recently, and yet think it is not inconsistent with monotheism if they also worship his servant" (Or. *Cels.* 8.12). In thus perceiving that Christians claimed an exclusive monotheism centered on the worship of Jesus, Celsus strikingly corroborates the accounts of the martyrs which are noted in E.4 below.

E. Christian Adherence to Jewish Monotheism

Before the advent of Christianity, Judaism was unique among the religions of the Roman world in demanding the *exclusive* worship of its God. It is not too much to say that Jewish monotheism was defined by its adherence to the first and second commandments. That the God of Israel was the one and only God meant not only that he was supreme, the Creator of heaven and earth, but also that he alone might be worshipped. By contrast, perhaps the principal religious feature of the rest of the Roman world was interreligious tolerance: One's participation in one cult did not imply that others or even oneself should not participate in other cults. Where a kind of monotheism was held by the more sophisticated—deriving from the Platonic tradition, for example—it denied the legitimacy of none of the existing forms of popular religion. Worship of the supreme transcendent God (in any case known by different names to different nations) was entirely compatible with also worshipping the lesser divine beings who were more immediately involved in affairs here on earth. The difference between Jewish and pagan monotheism did not, of course, turn on the *existence* of supernatural beings inferior to the supreme God, but on whether they might be worshipped.

It was this intolerant Jewish monotheism, with its condemnation of all other cults as idolatrous, which also made Christianity an objectionable oddity in the Roman world, with the additional scandal that Christianity somehow linked this exclusive monotheism to the cult of, not an ancient hero or a noble philosopher, but a recently crucified criminal. Intelligible as the thesis might seem—a priori—that Christianity adopted the worship of Jesus to the extent that it abandoned exclusive Jewish monotheism under the influence of the pagan environment, the evidence does not bear it out. On the contrary, it indicates that from the NT period onwards Christians held to exclusive monotheism as tenaciously as they did to the worship of Jesus, because both features were already definitive of Christian worship when it emerged from its original Jewish context into the pagan world.

The remainder of this article examines some of the evidence that the worship of Jesus was practiced in close conjunction with an adherence to Jewish monotheism.

1. 1 Corinthians 8:6. The worship of Jesus as Lord was undoubtedly practiced in the churches of the Pauline mission, but in combination with the exclusive monotheism of the parent religion. In 1 Cor 8:4–6, Paul takes up the issue of polytheistic and monotheistic worship by Christianizing the *šema*ᶜ. In other words he aligns himself and his fellow Christians with the Jews in their rejection of the "many gods and many lords" of paganism, and does so by referring to the classic, constantly repeated declaration of Jewish exclusive monotheism in the *šema*ᶜ (Deut 6:4). But he so expounds the *šema*ᶜ as to include the lordship of Jesus within its terms, glossing its *theos* (God) with "Father" and its *kyrios* (Lord) with "Jesus Christ" (Wright 1986: 208; de Lacey 1982: 200–1).

2. The Book of Revelation. Revelation portrays the worship of Christ in heaven, quite explicitly as *divine* worship (5:8–12). The heavenly worship of God the Creator (4:9–11) is followed by the heavenly worship of the Lamb (5:8–12), and then, as the climax of the vision (5:13), the circle of worship expands to include the whole of creation addressing a doxology to God and the Lamb together. This very deliberate portrayal of the worship of Christ is noteworthy, not only because it occurs in a work whose thought-world is unquestionably thoroughly Jewish, but also because John shows himself quite aware of the issue of *monotheistic* worship. The whole book is much concerned with the question of true and false worship—with differentiating the true worship of God from the idolatrous worship of the beast. Moreover, the issue of worship is reinforced in the closing chapters of the work by the incident, included twice for strategic effect, in which John prostrates himself in worship before the angel who mediates the revelation to him. The angel explains that he is only a fellow-servant of God and directs John to worship God (19:10; 22:8–9). John is here making use of a traditional motif developed in apocalyptic literature precisely in order to protect monotheistic worship against the temptation of angelolatry (Bauckham 1981: 323–37). The point is that the angel is not the source of revelation, but only the instrument for communicating it to John. The source is God, who alone may be worshipped. But in the same passages Jesus is distinguished as source, not instrument, of revelation (19:10b; 21:16, 20). By implication he is not excluded like the angel from the strictly monotheistic worship, but included in it. It seems clear that in Revelation we have the deliberate treatment of Jesus as an object of worship *along with* a deliberate retention of the Jewish definition of monotheism by worship.

Because of this combination it seems that John is concerned not to represent Jesus as an alternative object of worship alongside God, but as one who shares in the glory due to God. He is worthy of divine worship because his worship can be included in the worship of the one God. Thus chapter 5 is structured so that the heavenly worship of the Lamb (5:8–12) leads to the worship of God and the Lamb together by the whole creation (5:13). It is probably the same concern which leads to a peculiar usage elsewhere in Revelation, where mention of God and Christ is followed by a singular verb (11:15) or singular pronouns (22:3–4; and 6:17, where the reading *autou* should be preferred). (Of these texts, 22:3 is particularly noteworthy as referring to worship.) Whether the singular in these

passages refers to God alone or to God and Christ as a unity, John is evidently reluctant to speak of God and Christ together as a plurality.

3. Missionary Christianity in the Apocryphal Acts. The apocryphal Acts of the late 2d and early 3d centuries are much the best evidence of how conversion to Christianity was represented to outsiders. They should not be branded as gnostic, and their doctrinal peculiarities, with the exception of the *Acts of John,* are not likely to have seemed unorthodox at the time. They represent conversion to Christianity, again and again, as conversion from idolatry to the worship of the only true God *Jesus* (as well as references below, see *Acts John* 42; 44; 79). Admittedly, in the *Acts of John* this treatment of Jesus as the only God is combined with a consistent elimination of all distinction between Jesus and the Father (except in 93–102, 109, which Junod and Kaestli [1983: 581–89] show to be a secondary addition). But the other Acts are not really, as has been claimed, guilty of "naive modalism": they distinguish the Father and the Son as readily as they call Jesus the only God. In fact, they exhibit a relatively unreflective combination of monotheistic worship, worship of Jesus as God, and the trinitarian distinctions—a combination probably characteristic of much popular Christianity and capable, of course, of being condemned as modalism by more sophisticated trinitarian thinkers. (It seems, for example, much like the position of Pope Zephyrinus, quoted by Hipp. *haer.* 9:6, who condemns it as "ignorant and illiterate.")

What is particularly interesting, however, is the evidence that traditional Jewish monotheistic formulas, designed to assert monotheistic worship against paganism, are employed for the same purpose, but with reference to the worship of Jesus. For example, there seems to have been a form of the full doxology, attested only in early Christian literature (Rom 16:27; 1 Tim 1:17; 6:15–16; Jude 25; *1 Clem.* 43:6; *2 Clem.* 20:5) but surely of Jewish origin, in which glory is ascribed to the *only* God. This turns the doxology into an explicit assertion of *exclusive* monotheistic worship. In the apocryphal Acts this kind of doxology is addressed to Jesus (*Acts Pet.* 20; 39; *Acts John* 77; *Acts Paul* [PHeid p.6]; and acclamatory form in *Acts John* 43; and cf. the ascriptions of praise, not in strictly doxological form, in *Acts Pet.* 21; *Acts Thom.* 25; *Acts John* 85). Furthermore, in several of these cases, the words are: "you [Jesus] are the only God and there is no other" (or similar) (*Acts Pet.* 39; *Acts John* 77; *Acts Thom.* 25; *Acts Paul* [PHeid p.6]). This formula derives from Deutero-Isaiah's polemic against idolatry (Isa 43:11; 45:5, 11, 22; 46:9 etc.) and had already been taken up in Jewish propagandist literature in the Roman world (*Sib.Or.* 3:629, 760; *Ps.-Orph.* 16; cf. *Sib.Or.* 8:377, which is most likely Christian). It makes absolutely clear that in the apocryphal Acts, where the worship of Jesus is so prominent, it was conceived primarily in terms of Jewish monotheistic worship.

4. Persecution and Martyrdom. It was for their "atheism"—i.e., for their exclusive monotheistic worship—that Christians were persecuted and martyred. Probably they incurred a good deal of general dislike by their refusal to participate in what to their neighbors was ordinary social life but in their eyes would implicate them in idolatrous worship. Martyrdom resulted from refusal to worship the emperor or the traditional Roman state gods who were understood to guarantee the well-being of the empire.

In the conflict with the empire, which Christians saw as a conflict about monotheistic worship, they again took up traditional Jewish ways of asserting this. This is the case already in Revelation (14:7; 15:4; cf. the parody of a monotheistic formula in 13:4) and is also true of the Acts of the Martyrs (which, whether or not their records of the words of the martyrs are accurate, are evidence of Christian views on this issue). Repeatedly, under questioning, the martyrs claim to worship the One God who made heaven and earth (*M. Pion.* 8:3; 9:6; 16:3; 19:8, 11; *M. Fructuosus* 2:4; *M. Montanus & Lucius* 19:5; *M. Julius* 2:3; *M. Agap.* 5:2; *M. Crispina* 1:7; 2:3; *M. Phileas* Gk 9:10; Lat 3:4), call down destruction on the gods who did not make heaven and earth (Jer 10:11 LXX) (*M. Carp.* Gk 9; Lat 2; *M. Crispina* 2:3; *M. Eupl.* Lat 2:5), appeal to OT commandments prohibiting the worship of any but the one God (*M. Pion.* 3:3; *M. Montanus & Lucius* 14:1; *M. Julius* 2:1; *M. Irenaeus of Sirmium* 2:1; Phil. Thm. *ep.* 10 [*apud* Eus. *Hist. Eccl.* 8.10.10]; *M. Phileas* Lat 1:1), echo traditional Jewish polemic against idols (*M. Carp.* Gk 1:6–7; *M. Marcell.* Rec.M 1:1; *M. Irenaeus of Sirmium* 4:3; *M. Crispina* 3:2), and use other standard formula of Jewish monotheistic worship ("I know of no other God besides him": *M. Crispina* 1:4; cf. Dion. Al. *apud* Eus. *Hist. Eccl.* 7.11.5; "the living and true God": *M. Carp.* Lat 3:4; *M. Julius* 1:4; *M. Crispina* 1:6). But with no sense of incongruity the martyrs also speak of Christ—the crucified man—as God and of his worship (*M. Carp.* Gk 5; *M. Pion.* 9:8–9; 16:4–5; *M. Con.* 4:2; 6:4; *M. Maximilian* 2:4; *M. Julius* 3:4; *M. Felix* 30; *M. Phileas* Gk 5–6; *M. Eupl.* Lat 2:4), while their own prayers and worship as they approach and suffer martyrdom are usually to Christ (*M. Carp.* Gk 41; Lat 4:6; 5; 6:5; *M. Fructuosus* 4:3; *M. Con.* 6:4; *M. Julius* 4:4; *M. Felix* 30; *M. Irenaeus of Sirmium* 5:2, 4; *M. Eupl.* Lat 2:6; 3:3). We have already noticed (section B.) how the standard literary conclusion to the accounts of martyrdom sets the eternal divine kingship of *Christ* in implicit contrast to the pretended divinity of the emperor and the eternity of the empire.

F. Relationship to Patristic Christological Development

How could Jewish monotheism accommodate the worship of Jesus? It seems clear, from what we know of popular Christianity in the first three centuries, that for most Christians this was not a real problem. Worship of Jesus was worship of God. Jesus was not an alternative, competitive object of worship alongside the Father. His worship was included within the worship of the One God. In this way popular Christianity combined the exclusive monotheism of its parent religion with the worship of Jesus that the central datum of Christian faith and experience—the divine function of Jesus—required. However, in order to maintain and safeguard this position, it was necessary for reflective theology to reach a doctrinal understanding of the being of God and the being of Christ which could do justice to the two propositions: that only God may be worshipped, and that Jesus is such that he must be worshipped. The search for such an understanding, within the intellectual context of the time, occupied

Christian thinkers for the whole of the patristic period. The worship of Jesus was a major factor determining the result.

By means of a necessary oversimplification, we can identify two important trends in ante-Nicene Christianity's reflection on the relation of Jesus to God. One trend remained close to the worshipping life of the church *and* to Jewish monotheism; it reflects very faithfully the evidence just surveyed for the worship of Jesus and for the retention, in Christian witness, of exclusive monotheistic worship against the polytheistic worship of paganism. It is easy to see how this combination might lead in the direction of modalism, in which the distinction between the Father and the Son was simply denied. As we have already remarked in connection with the apocryphal Acts, by no means everything that, taken in isolation, sounds modalistic really is. But the danger was present. If only God may be worshipped and if Jesus may be worshipped, then the conclusion could be drawn that there can be no real distinction between God the Father and God as incarnate in Jesus.

Such a proposition was not likely to succeed in the long run. It neglected too much in the witness of the Bible and the tradition to the personal distinction between Jesus and his Father, and while doing justice to the worship of Jesus, abolished his mediatorial role, which was equally strong in the tradition, not least in the liturgy. But it is easy to see why it made an immediate appeal and was at first tolerated by the early 3d-century bishops of Rome. Noetus, defending his modalistic teaching against the elders of the church of Smyrna, asked: "What evil am I doing by giving glory *(doxazōn)* to Christ?" (Hipp. *Noët.* 1.6; the importance of the point is shown by the way Hippolytus takes it up in 9.2; 14.6–8; and concludes the work with his own doxology addressed to the Son along with the Father and the Holy Spirit: 18.2).

The other trend is represented by the tradition of intellectual theology, which was relatively more independent of the worship and witness of ordinary Christianity. This tradition begins in the Apologists of the 2d century and continues in the Alexandrians and the Origenist tradition. At first sight it may seem surprising that the danger of a paganizing of Christianity arose here rather than in popular Christianity, but there is a clear reason why this was in fact the case. Christianity had no difficulty in distinguishing itself from popular paganism towards which it was consistently intolerant, but the Christian intellectuals were engaged in a critical appropriation of pagan philosophy. The result was that they tended to use Platonic monotheism as the model for understanding the relation of Jesus to God. God the Father is the supreme God, while Christ, the Logos, is God in a subordinate and derivative sense. And just as the Platonist did not confine worship to the supreme God, but allowed the worship of lesser divinities to appropriate degrees, so the Christian practice of the worship of Jesus could be permissible as the relative worship of the principal divine intermediary, while absolute worship is reserved for the one who is God in the fullest sense The danger in this Christian Platonism was the loss of monotheism in the Judeo-Christian sense.

In relation to worship we can see one possible effect in a suprising passage of Justin Martyr's first Apology, in which he defends Christians against the charge of atheism by claiming that in fact they worship a number of divine beings: not only God, but also "the Son who came from him . . . , and the host of other good angels who follow him and are made like him, and the prophetic Spirit, we worship and adore *(sebometha kai proskynoumen)*" (*1 Apol.* 6). The inclusion of the angels represents an attempt to assimilate the Christian view of the divine world as closely as possible to the Platonic hierarchy of divinity: first God, second God, and a multitude of lesser divine beings (cf. also Athenag. *Leg.* 10.5; Or. *Cels.* 8.13). This is apologetic and should not be taken as a serious claim that Christians worship angels, but it illustrates how Platonic influence could undermine the Jewish principle of monotheistic worship.

In Origen we see the growing gap between a platonically influenced intellectual theology and the popular faith and practice of the Church precisely in relation to this principle. Origen distinguishes four types of prayer and worship. Three of them (supplication, intercession, and thanksgiving) may quite properly be made to human beings as well as to God, but the fourth, which is prayer in the fullest sense of the word *(kyriolexia)* and is accompanied by praise, is properly offered only to the unoriginated God, not to any derived being and so *not even to Christ* (*Or.* 14–15; cf. *Cels.* 5.11; 8.26). Origen is conscious of how far this diverges from the practice of "uninstructed and simple" Christians (16.1), and the extent of the tension is indicated by his own divergent practice (see B. above) and even apparently divergent theory elsewhere (*Cels.* 8.67; cf. *Or.* 33.1). His ability elsewhere to accommodate actual Christian practice of worshipping Jesus is explained by *Cels.* 5.4: All types of prayer can be offered to the Logos, *provided* "we are capable of a clear understanding of the absolute and relative sense of prayer."

The absolute and relative sense of prayer correspond to Origen's hierarchical view of divinity, in which only the Father, the supreme God, is God in the absolute sense and the Son is divine in a relative sense, deriving his divinity from the supreme God and mediating between the supreme God and the rest of reality. Hence worship in the proper sense is due only to the supreme God, but must be offered through the mediation of the Son (*Or.* 15.1–2), who himself can be worshipped only *as an intermediary* who mediates our prayers to and himself prays to the Father (*Cels.* 8.13, 26). Thus Origen, constrained by, on the one hand, his platonically influenced doctrine of God and, on the other hand, the Christian practice of worshipping Jesus, halts between a rigorously monotheistic worship, which would allow only the one who is God in the fullest sense, the Father, to be addressed in worship, and a Platonic permission to worship, in appropriate degrees, all subordinate divinities (cf. *Cels.* 8.66–67).

Early Arianism was in one sense a reassertion of Judeo-Christian monotheism. Rejecting the notion of degrees of divinity, Arius drew an absolute distinction between the Creator and all creatures. Christ could not be a lesser divinity, and so he had to be in the last resort a creature. The effect was that Arius enabled the christological implications of the worship of Jesus to be clearly seen: Either Christians worship a creature, or Jesus belongs to the being of the One God who alone may be worshipped. If this was not at first fully recognized by the Arians, it was by Alex-

ander of Alexandria (*Ep. Alex.* 31) and Athanasius, who continually accused the Arians of idolatry in worshipping Jesus whom they considered a creature (*Ep. Adelph.* 3; *Depos.* 2.23; 3.16). Arianism itself did not abolish the worship of the Son, but severely restricted it and understood it in a strongly Origenist way—as honoring the one who mediates worship to the Father who is the only proper object of worship (Theognis of Nicaea in *sermones Arianorum* fr. 16; Kopecek 1985: 170–72). The development of Nicene orthodoxy, on the other hand, was the attempt to do theological justice to the church's practice of worshipping Jesus with the worship due only to God. The achievement of the trinitarian doctrine which eventually emerged from the Arian controversies was to do this without lapsing into modalism. The triumph of Nicene orthodoxy at the fundamental level of acceptability to the Church at large was due to the justice it did to the place of Jesus in popular Christian faith, as expressed in the worship of Jesus.

Finally, the worship of Jesus again played a part as a christological principle in the christological debate which led to the Council of Chalcedon. It was the principle continually invoked by the Alexandrians, especially Cyril, against an extreme Antiochene Christology. If Jesus Christ is a man indwelt by God, a human subject alongside a divine subject in a relationship of grace, then the worship of Jesus is the worship of a man alongside the Logos (see Cyr. *Nest.* 2; and the 8th of the Twelve Anathemas in Cyr. *Nest.* 3, later adopted, in expanded form, as the 9th anathema of the Second Council of Constantinople in 553). Only if Jesus is the divine Logos incarnate is the worship of Jesus not idolatry but the worship of God incarnate. So the Council of Ephesus (431) decided.

JESUS CHRIST, SOPHIA OF (NHC III,4). See EUGNOSTOS AND THE SOPHIA OF JESUS CHRIST.

JESUS, BROTHERS AND SISTERS OF.

In the NT and in extracanonical literature there is mention of Jesus' brothers and sisters. The question of Jesus' brothers and sisters has been a point of controversy throughout church history.

A. NT Evidence

Several NT passages mention the brothers of Jesus (and his sisters in Mark 6:3 [= Matt 13:56] and Mark 3:32 according to some mss). In Mark 3:31–32 (= Matt 12:46 = Luke 8:19–20) Jesus' mother and his brothers try to separate him from a crowd that thought he was out of his mind. Jesus responds that whoever does the will of God is his true brother and sister and mother. Mark 6:3 (= Matt 13:55–56) records the judgment of people in Nazareth who questioned Jesus' wisdom by asking, "Is not this the carpenter, the son of Mary, the brother of James and Joses (Joseph in Matt) and Judas and Simon?" However, Mark 15:40 states that James the younger and Joses were the sons of another Mary, presumably not the mother of Jesus.

John 2:12 mentions that the brothers of Jesus accompa-

nied him to Capernaum and they later tauntingly suggest that Jesus should publicly demonstrate his great deeds at the Feast of Tabernacles (7:3, 5, 10). John agrees with the Synoptics in having the brothers of Jesus refuse to believe in him during his lifetime.

Acts 1:14, on the other hand, includes the brothers of Jesus as part of a group praying together after the crucifixion with the 11 disciples and some women, including Jesus' mother Mary. Paul in 1 Cor 9:5 asks if he does not have the right to travel with a Christian woman (wife?) like the other apostles, the brothers of the Lord, and Cephas. And in Gal 1:19 Paul mentions James, "the brother of the Lord."

B. Evidence from ExtraCanonical Literature

Early church tradition associated with the historian Hegesippus and preserved by Eusebius in his *Ecclesiastical History* records the important role played by relatives of Jesus in the Jerusalem church. James is said to have been the first bishop of Jerusalem and after his martyrdom his brother Simeon succeeded him (*Hist. Eccl.* 2.1.10–17; 3.11).

A 2d-century pseudepigraphical work, *The Protevangelium of James,* is the earliest evidence for the view that Jesus' brothers were the children of Joseph from a previous marriage and that Mary remained a virgin after the birth of Jesus (*Prot. Jas.* 9:2; 19:1–20:3).

The gnostic writings from Nag Hammadi contain several references to brothers of Jesus, particularly James and Thomas. In one of 3 apocryphal writings attributed to James, the author states, "The one whom you hated and persecuted came to me. He said to me, 'Hail, my brother; my brother, hail!' As I looked up at him, the mother said to me, 'Do not be frightened, my son, because he said, 'My brother' to you. For you (pl.) were nourished with this same milk. Because of this he calls me 'My mother.' For he is not a stranger to us. He is a brother [by] your father" (*2 Apoc. Jas.* 50, 8–23). The revealer (Jesus) later says to James, "Your father is not my father, but my father has become a father to [you]" (51,19–22). Here James, whose father is presumably Joseph, is said to be a physical brother to Jesus as well as his spiritual brother.

Another Nag Hammadi text, *The Book of Thomas the Contender,* has the savior say to Thomas, "Now since it has been said that you are my twin and true companion, examine yourself. . . . Since you will be called my brother, it is not fitting that you be ignorant of yourself" (138,7–11). This apparently spiritualizes an alleged physical kinship. See THOMAS THE CONTENDER.

C. History of Interpretation

The ambiguity and brevity of the canonical references to Jesus' family led to three main interpretations. One view evidently supported by Tertullian among others, is named after a later proponent named Helvidius. According to this view, the brothers of Jesus were full blood brothers born to Mary and Joseph after the birth of Jesus.

Another view, defended by Origen, Eusebius, and Gregory of Nyssa, is identified with Epiphanius, Bishop of Salamis, whose *Against Heresies* includes the view that the brothers of Jesus were actually the sons of Joseph by a previous marriage.

A third understanding of the brothers of Jesus is found in the work of St. Jerome. Writing in opposition to Helvidius and the view that Mary and Joseph had other children after the birth of Jesus, Jerome argued on the basis of his interpretation of the canonical evidence that the brothers of Jesus were in fact his cousins. Their mother, Jerome argued, was the sister of Mary the mother of Jesus, who was herself named Mary and the wife of Clopas, who was also known as Alphaeus. Jerome's intent is clear from the title of his work, *Against Helvidius: The Perpetual Virginity of the Blessed Mary.*

D. Current Interpretation

Modern biblical scholarship has usually divided along confessional lines with regard to the brothers of Jesus. Protestant scholarship has generally understood the Gk term *adelphos* as referring to a physical brother, i.e., a biological descendant of the same mother and father. Roman Catholic and much of Orthodox scholarship, on the other hand, has generally interpreted *adelphos,* at least with reference to Jesus, as a kinsman or a cousin. This latter interpretation, based partly on the view that *adelphos* is the Gk equivalent of the broader Hebrew term *ʾaḥ,* accords with the views of St. Jerome and Epiphanius and is consistent with the doctrine of the perpetual virginity of Mary, the mother of Jesus. For classic discussions of these patristic views, consult the work of J. B. Lightfoot (1865) and Zahn (1900). More recent scholarship reviewing the history of interpretation can be found in the studies of Blinzler (1967), and McHugh (1975). The role of James the brother of Jesus is the topic of a recent study by Wilhelm Pratscher (1987) and recent scholarship is summarized in the commentary of R. Martin (*James* WBC).

An ecumenical taskforce concluded with regard to the brothers and sisters of Jesus, ". . . it cannot be said that the NT identifies them *without doubt* as blood brothers and sisters and hence as children of Mary. . . . The solution favored by scholars will in part depend on the authority they allot to later church insights" (Brown, Donfried, Fitzmyer and Reumann 1978: 72).

JAMES A. BRASHLER

JETHER (PERSON) [Heb *yeter*]. **1.** The firstborn son of Gideon, who was asked by his father to execute the 2

Midianite kings, Zebah and Zalmunna, captured by Gideon (Judg 8:20). This is an act of bloody vengeance, for Zebah and Zalmunna had earlier killed the brothers of Gideon. However, Jether was not willing to perform the act.

2. The father of Amasa, a commander of David's army who was killed by Joab out of jealousy (1 Kgs 2:5, 32; 1 Chr 2:17). The name appears as Ithra (Heb *yitrā'*) in 2 Sam 17:25. Jether and Ithra are probably variants of the same name, and both are probably correct. He was probably of Ishmaelite origin (1 Chr 2:17) although 2 Sam 17:25 identifies him as an Israelite; the identification of 1 Chronicles has the support of the Codex Alexandrinus reading of the Samuel text. Recently, Levenson and Halpern (1980: 511–12) have put forward the suggestion that Jether may have been a Jezreelite, which has the support of another Septuagintal tradition, the Codex Coislinianus. Another problem is Jether's relationship to David's family. According to 2 Sam 17:25, his wife was Abigail the daughter of Nahash. However, in 1 Chr 2:17, Abigail was Jesse's daughter and so was David's sister. The 2 traditions are difficult to reconcile, although some scholars prefer the text of 1 Chronicles 2 over that of 2 Samuel (*NHT*, 326; McCarter *2 Samuel* AB, 393). McCarter (*2 Samuel* AB, 393) called attention to a peculiarity of the relationship between Jether and Abigail. Both texts of 2 Samuel and 1 Chronicles do not say explicitly that Abigail is the wife of Jether, so they were not married in the usual sense. Either Amasa was the fruit of an illicit relationship or, as McCarter has suggested as likely, theirs was a special type of relationship comparable to the *ṣadiqa* marriage of the ancient Arabs (*AncIsr* 29).

3. The son of Jada, a descendant of Jerahmeel (1 Chr 2:32). Jerahmeel is probably a clan in S Judah (1 Sam 27:10; 30:29) (Williamson *Chronicles* AB, 54).

4. The son of Ezrah, listed as a descendant of the tribe of Judah in 1 Chr 4:17. Myer (*1 Chronicles* AB, 29) suggests that Jether may be connected with Jattir, a town SE of Hebron.

5. A descendant of the tribe of Asher (1 Chr 7:38). He and Ithran of 1 Chr 7:37 are probably the same person (Curtis *Chronicles* ICC, 156).

JETHETH (PERSON) [Heb *yĕtēt*]. One of the 11 "tribal chiefs" (Heb *'allûpîm*) listed in Gen 36:40–43, a Priestly appendix to the Edomite material in Genesis 36, and in 1 Chr 1:51b–54, an abbreviated form of the appendix. The spelling is probably corrupt, and ought to be emended either to Jether *(yĕtēr)* or to Ithran *(yitrān;* cf. 1 Chr 7: 36–37). See also JETHER; ITHRAN.

ULRICH HÜBNER

JETHRO (PERSON) [Heb *yitrô*]. Priest of Midian and father of Zipporah, Moses' wife. After Moses fled Egypt at the death of the Egyptian guard and subsequent Hebrew rejection, he came into the land of Midian in the Sinai wilderness. The Midianites lived in SE Sinai and NE Arabia on both sides of the Gulf of Aqaba. At a well, Moses came into contact with 7 shepherdesses and eventually their father, Jethro, priest of Midian. One of the shepherdesses, Zipporah, became wife to Moses and he remained in Jethro's employ until his call by Yahweh to return to Egypt. Scripture bears record that Jethro was a priest of Yahweh in a unique capacity (Exod 18:7–11).

One difficulty surrounding Jethro is the names that are given to him. He is called Reuel in 2 instances (Exod 2:18; Num 10:29). Apparently Jethro is called Hobab in Judg 4:11, although Num 10:29 indicates that Hobab is actually Jethro's son. The confusion of the names is not explained in Scripture. Several explanations have been offered. (1) The various names could have come from different sources of the original text, one source using Jethro and another using Reuel. (2) A misreading of the Numbers passage could have resulted in Jethro being called Hobab in Judges. (3) Jethro may have been known by various names and titles given to him by the various Midianite clans. Whatever the source of the names, it is clear that Jethro (Reuel) has a prominent place in Moses' life.

Another difficulty concerning the figure of Jethro has been the attempts to connect his priesthood with a pre-Mosaic Yahweh cult whose beliefs and rituals were transferred to Moses and Aaron (Exodus 18). This concept maintains that the Hebrew religion has Midianite roots. Using Exod 6:3 as a basis, some scholars insist that Yahweh was unknown to Israel until the time of Moses, who learned of Yahweh from Jethro, a Midianite Yahwistic priest. Though Moses and Aaron learned much from Jethro, it is doubtful that the concept of Yahwistic worship sprang from the Midianites. Judging from the Exod 18:11 statement, Jethro's conviction about Yahweh is confirmed when he hears of God's great deliverance of the Hebrews from Egypt. He blesses Israel's God by saying, "Now I know that the Lord (Yahweh) is greater than all gods." In fact, Jethro should be considered unique, for it is clear from other sources that generally the Midianites were idolaters (cf. Num 25:17–18; 31:16).

Moreover, Jethro contributed to Moses' ministry with some practical advice. When Jethro observed Moses trying to care for the civil matters of the nation, a job too great for one man, he advised a system whereby lesser problems could be handled by leaders of the people. The nation would be divided into units of thousands, hundreds, fifties, and tens with a leader over each unit. Moses would be then free to teach the people ordinances and laws and delegate the implementation of the law to able leadership.

JOEL C. SLAYTON

JETUR (PERSON) [Heb *yĕṭûr*]. The tenth son of Ishmael (Gen 25:15; 1 Chr 1:31). With the exception of Kedemah, all sons of Ishmael were Arab tribes of the 7th through 5th centuries B.C. See also ISHMAELITES. As a tribe,

Jetur is mentioned in 1 Chr 5:19. See also ITURAEA for the history of this tribe.

A personal name *ytwr/Iatouros* is attested in Nabatean and Gk inscriptions from the Ḥawrân area (Knauf 1989: 81); in Safaitic, i.e., Arabic, the name of the tribe is spelled *yzr*. For its etymology, cf. Sabaic (and Proto-West Semitic) *ẓwr* "rock"; as a verb, "invest, besiege" (Beeston et al. 1982: 173); Safaitic *ẓrt*, Heb *ṭîrôt*, "corrals" (Knauf 1989: 60). Jetur, originally **yaẓûr*, may be translated "The one who builds stone fences," or "The one who besieges" (but whom?).

Orthographically, the Hebrew spelling *ytwr* (instead of **yṣwr*) proves that this name entered the Hebrew tradition via (Official) Aramaic. The texts which refer to Jetur cannot, therefore, antedate the 7th century B.C.

ERNST AXEL KNAUF

JEUEL (PERSON) [Heb *yĕʿû'ēl*]. A personal name combining the theophoric element *'ēl* with a component that cannot be determined with certainty. Rudolph (*Esra und Nehemia* HAT, 78), derives it from Ar *wʿj* which is used to describe the healing of broken bones or the closing of a wound and can also mean "save." Gehman (*WDB*, 441) suggests a derivation from Ar *waʿā* "keep in mind," "remember." Koehler (KB, 338) proposes a derivation from Heb *yʿh* "collect." An often found reading for the name is Heb *yĕʿî'ēl*. See JEIEL.

1. The head of a family from the sons of Zerah who is listed among the postexilic inhabitants of Jerusalem (1 Chr 9:6). The LXX records his name as *Iiēl* which corresponds to Heb *yĕʿî'ēl*. His name is absent from the list of family heads in Nehemiah 11. He and "their relatives" number 690.

2. A Levite of the sons of Elizaphan (2 Chr 29:13) who are listed as participating in the reform of Hezekiah by sanctifying themselves and cleansing the house of the Lord (29:15). Although his name is written in the MT as *wîʿîw'ēl*, it is to be read as *wîʿî'ēl* (LXX *Iiēl*).

3. One of 3 sons of Adonikam who were among those family leaders who returned from Babylonia during the reign of the Persian King Artaxerxes (Ezra 8:13; 1 Esdr 8:39). Ezra has Heb *yĕʿî'ēl* and records that he was accompanied by 60 males. 1 Esdras has Gk *Ieouēl* (Codex Alexandrinus) and *Geouēl* (Codex Vaticanus) while mentioning 70 males. Blenkinsopp (*Ezra-Nehemiah* OTL, 162–63) offers the various interpretations of the description of the Adonikam family as "those coming afterwards" (Heb *'aḥărōnîm*, Gk *eschatoi*).

RODNEY H. SHEARER

JEUSH (PERSON) [Heb *yeʿûš*]. Five persons in the Hebrew Bible bear this name, and the name also occurs in the Samaria ostraca (48:3; Lawton 1984: 340). As a name, Jeush is identical with *Yaġūṯ*, which is the name of a god (in classical Arabic) and of persons (in Safaitic and Palmyrene; Weippert 1971: 247). In Sabaic, the name is attested once as a cognomen (Harding 1971: 678). Whereas the name can be regarded as hypocoristic in Canaanite ("[God DN] helped"), in Arabic it is a descriptive imperfect-name ("He [i.e., the bearer of the name] is helping"; Knauf 1984: 468).

1. One of the sons of Esau (Gen 36:14, *qere* [*ketib* = *yʿys*]). This "son" represents a tribe of the Oholibamah-group, the smallest of the 3 Edomite tribal groups. The list of the Edomite tribes in Gen 36:10–14 may derive from a tradition that dates back to the 7th century B.C. (Knauf 1985a: 10, n. 45, 61–63; 1985b: 249 with n. 23). The names in this list were subsequently copied into Gen 36:18 and finally into Gen 36:5 (Weippert 1971: 437–46).

2. The son of Bilhan, and therefore the name of a family of Benjaminites (1 Chr 7:10).

3. The second son of Eshek, a Benjaminite (1 Chr 8:39).

4. The son of Shemei, a Levite (1 Chr 23:10ff.).

5. The son of the Judaean king Rehoboam and his wife Mahalath (2 Chr 11:19).

ERNST AXEL KNAUF

JEUZ (PERSON) [Heb *yeʿûz*]. A son of Shaharaim, a Benjaminite, mentioned in 1 Chr 8:10 in the detailed genealogy of Benjamin. This name occurs only here in the MT and is not found in the Apocrypha or the deuterocanonical literature. The name means "counselor." 1 Chr 8:9–10 indicates that Jeuz is one of 7 sons born to Hodesh. Shaharaim had already divorced Hushim and Baara (v 8) and was living in Moab. Rudolph (*Chronikbücher* HAT, 77) emphasizes that the structure of this extended genealogy rests in the geographical breaks which show parallel lists of Benjaminite families and their dwelling locations at a given time, probably either during Josiah's reign or the postexilic period. Williamson (*Chronicles* NCBC, 82) disagrees and sees no apparent structure whatever to this genealogy. However, the fact remains that there is a clear association of the family of Jeuz with Moab. This may hearken back to a relationship of earlier times. Ruth 1 and 1 Sam 22:34 clearly show that Israelites resided in Moab. This would have been more likely to have happened before Moabite independence from Israel. Jacob Myers (*1 Chronicles* AB, 60) sees a Benjaminite association with Moab to have been a more accurate reflection of a time when Moab was under Israelite control. Jeuz is said to be a *roʾšê ʾābôt*, which has clear implications of social, political, and military status. The role of Jeuz would have been much like the big men of anthropological terminology (Harmon

1983: 150). Orme (1981: 139) paints a picture of the big men which shows high visibility in community affairs and some judicial functions.

G. EDWIN HARMON

JEWELRY, ANCIENT ISRAELITE.

The study of jewelry in Bible times begins with a brief review of ancient manufacturing techniques, especially for metals, then moves to a summary of how metals are used in the Bible. The significance of a jewelry piece can be dependent on the valuation and association of the metal out of which it was made.

Most importantly, this summary takes into account archaeological finds dated by their contexts to the biblical period. Nevertheless, jewelry items can be treasured over long periods and ancient techniques can be employed in the same workroom with more modern ones. Even though dating for jewelry cannot be as accurate as for other artifacts, such as pottery, here archaeological finds are used with the study of Hebrew words to aid in understanding the meaning of biblical passages. The most striking jewelry mentioned in the Bible is undoubtedly those items belonging to the high priest's garb in Exodus 28 and 39. Although there is no present archaeological evidence for the jewelry, some suggestions are made below (E.1.d.).

Suggestions can be made with much more confidence for the wedding jewelry of Rebekah, the bride of Isaac, and Ezekiel's portrayal of Israel as bride and queen. For the catalogue in Isa 3:18–23 revised definitions of the vocabulary lead to a different interpretation of the passage. Lastly, more accurate knowledge of the booty and offering assemblages from the Exodus period and Midianite battles adds to the descriptive accuracy of the historical settings.

A. Manufacturing Techniques

The most attractive and highly prized jewelry recovered from Bible lands was made from the precious metal gold. When other materials were used, the work had reminiscences of that first accomplished in gold. Important information about jewelry making comes from goldsmithing as depicted on wall paintings in Egypt. Gold can be worked effectively in the relatively pure state found in nature. Copper, silver, and other metals with which it is alloyed act to harden it since pure gold is quite soft. Gold in alloy with large amounts of silver is called "electrum." Silver occurs both in the pure state and combined with various ores from which it is recovered by refining. Silver is also soft and easily worked; usually it is alloyed with copper to harden it for making such items as coins and armaments.

Gold dust or ingots could be melted in a charcoal-fired furnace and poured onto a flat surface; or the ingot could be hammered out on an anvil with a stone tool. The jewelry pieces were made from flat sheets or bars. Scoring tools of bronze, wood, or horn would cut out the basic shape. The design could be worked from the back with a series of punches in *repoussé.* The metal would be placed over a bed of yielding but supportive warm pitch, resin, and wax. Blows from the hammer against the various sizes of punches projected the design in relief. When this procedure was done from the front it was called *chasing.* A similar effect was done by *stamping* when large punches had an entire design engraved on them. *Engraving* with a gouging tool was used infrequently because it wasted the precious metal.

Granulation, the most outstanding decorative process in ancient jewelry, formed rows of tiny gold spheres affixed to the sheet metal base, particularly in triangular patterns, with no trace of solder. After the 10th century of our era the technique was lost to jewelry smiths until 1933, when H. A. P. Littledale rediscovered the process which he named "colloid hard-soldering." Gum and a copper salt form an adhesive paste to affix the granules to the base after being placed on a transfer pattern. As the gold is heated in a crucible over a charcoal fire, an alloying process melts the gold and copper in a barely detectable join. The same method was used for *filigree* where gold wires were swirled and braided in patterns onto a background. The basic design of granulation could have come from bead work. The technique's origin is likely to have been in Mesopotamia at the beginning of the 2d millennium B.C. as a "dog collar" necklace from Ur suggests (Maxwell-Hyslop 1971: 6–7). Subsequently, the art of granulation moved to Byblos and S into Canaan; from there to Egypt and the Greek islands in the Middle to Late Bronze ages.

For basic structuring of a piece requiring a stronger bond, *hard soldering* used a flux and a solder alloy with a melting point lower than the metals to be joined. After cooling, the flux must be removed by scraping or "pickling" in a hot acid solution, as Egyptian reliefs depict.

Egyptians were masters in the art of *cloisonné* from early in the Old Kingdom through at least the LB Age. Here the concern was more with the artistic value of color than the rarity of the jewel; the goal was to present an array of reds and blues to articulate the design. Glass imitations of the intense colors of lapis lazuli, turquoise, and carnelian were a major artistic achievement of Egyptian jewelers. In pre-dynastic times they discovered how to make blue and green *faience* of soapstone or fired powdered quartz coated with vitreous glazes of copper compounds. *Frit* was a form of glass which, after light firing, was homogeneous throughout. Steatite and clay molds from Palestinian excavations were used for making faience and frit beads and amulets.

Casting by the *lost wax* process involved a wax model made in a stone mold. A clay outer cover made from the model could contain molten metal or glass after the wax was melted away. Then the clay could be broken to release the finished product.

Beadwork provided colorful variety and wearable flexibility. Beads occur by the dozens in archaeological excavations and are represented in wall painting and on statuary. In Egypt the common hieroglyph for gold was a collar of beads. Steps in manufacture from casting, piercing, and bow drilling of the individual beads are depicted as well as the complex art of stringing in the construction of broad collar necklaces. Hundreds of shapes of ancient beads have been classified. Shells, seeds, and attractive pebbles were readily available. Precious stones as well as their faience and glass imitations were abundantly used. Metal beads copied shapes of treasured stones, shells, seeds, buds, and blossoms. In Palestine the Egyptian patterns seem to be followed, and it is likely that their colors also symbolize aspects of nature. Dark blue lapis lazuli would be the color of the sky; turquoise of the water. Amethyst was used for the color of dawn and dusk in the desert; serpentine for vegetation. Carnelian probably was associated with blood, "blood-rich" (iron content) soil; gold, with the sun; silver with the moon.

B. How Metals Are Used in the Bible

The significance of a jewelry piece can be dependent on the valuation and association of the metal out of which it was made.

1. Gold. Although gold is the metal mentioned most frequently in the Bible, it is relatively rare among archaeological finds. Nevertheless, when found it tends to retain its original condition—shine, shape, and quality. Gold as used in the Bible represents wealth and leadership, but other associated items are silver, flocks and herds, jewelry, and special garments. The most lavish claims for the possession of gold are ascribed to Solomon. Spectacularly, he received 666 talents plus per year (1 Kgs 10:14–15). It has been estimated that a single talent weighed 75 pounds (Sellers *IDB* 4: 832). Solomon used gold for decorative armaments, his throne, vessels, etc. He instigated commercial enterprises to obtain gold and other products associated with royal riches from the mysterious land of Ophir. "The gold of Ophir" became a metaphor for opulence and was the symbol par excellence for Solomon's commercial acumen in the heyday of his empire.

The biblical emphasis is on Solomon's use of gold in the Jerusalem Temple. Passages describing the greatest amounts of gold used in ancient Israel and a significant majority of the occurrences of the main word for gold *(zāhāb)* in the Hebrew Bible are in association with the furnishings of the Temple. In light of passages such as 2 Kgs 24:13, there is not much hope for archaeological recovery of such items. The golden age which provides the standard descriptions and catalogues of the Temple furnishings is the Solomonic period. As the royal artisan of gold metallurgy and design, especially for the sacred equipment of worship for example, in overlay of cedar paneling, cherubim, doors, woodwork and utensils, Solomon stands without peer in the biblical tradition (1 Kings 6 and 7).

The main focal point of Solomon's wisdom is the building of the Temple, and the most striking aspect of that achievement is the procurement and utilization of gold. In Wisdom literature, gold is a metaphor for wisdom itself (Prov 25:11 suggests gold inlay in silver cloisonné); or the metal is associated with wisdom, but true wisdom is to be preferred over gold (Prov 3:13–14; 8:10; 16:16). The wise precepts of the Lord supercede gold (e.g., Pss 19:11—Eng. v 10; 119:127; Job 28:15, 16,19,23). In prophecy, idolatry is associated with the work of the goldsmith (Jer 10:3–5; Isa 2:7–8; 40:19). Idols of precious metals are presented frequently as the focus of alien and false cults (Deut 7:25; 29:16–18; Hos 2:8; 8:4; Isa 46:1, 6–7).

2. Silver. Silver is used in similar biblical contexts as gold and is paired with gold in catalogues of costly gifts, wealth, tribute, booty, tabernacle fittings, idol composition, and jewelry. Much silver is lost to archaeologists through corrosion in saline soils.

The most striking use of the metal in the Bible is the silver standard for commercial exchange—Heb *kesep* is often translated as "money" (Gen 23:16; 37:28; 42:28; Lev 27:2ff.,15,16ff.; Judg 16:5,18; 1 Kgs 21:2; 2 Kgs 12:10–11; Amos 2:6; Isa 55:1; Jer 32:9).

The most theologically significant to biblical studies and technically relevant to archaeological jewelry craft is reference to the silver-refining process to dramatize spiritual or religious purification (e.g., Mal 3:2–3). This involves crushing, washing, and straining of ore, followed by the cupellation process of heating and the production of "dross," i.e., what is left over of alloys after pure silver has been extracted (Ezek 22:18–22). Silver refining removes alloys of copper, tin, iron, and in the last stage, lead. God uses affliction for Israel's refining process as in Isa 48:10 where suffering points to a future hope.

3. Copper/Bronze and Iron. The terms for copper and iron appear much less frequently in the Bible than those relating to gold and silver. Archaeology has turned up many objects from biblical periods made of copper and iron. The overwhelming majority of jewelry items are in these metals from ancient Israel, but copper/bronze and iron jewelry are rarely mentioned in the Bible.

Israel first met up with metallurgical techniques in the Sinai with the people called "smiths," the Kenites (lit. "Cainites"). Tubal-cain in Gen 4:22 is referred to as the forger of all instruments of bronze and iron. Deuteronomy portrays the glorious bounty of the promised land in terms of metals as well as agricultural riches (viz. Deut 8:7–9).

The same word in Heb *nĕḥōšet* refers to both copper and bronze, an alloy of copper and tin. Malachite ore can contain naturally a small amount of tin, but more than 2 percent tin in copper is considered a deliberate attempt to produce the alloy that in Eng is "bronze." The addition of tin makes the metal stronger, harder, and more resistant to corrosion, and enables copper to have a lower melting point for the casting process when a cleaner, sharper result is required. Purer copper can be hammered into shape while cold, or can be heated slightly, for example by a torch flame, for the malleability appropriate to jewelry making. It is difficult with the naked eye to tell the difference between copper and copper alloyed with nearly 5 percent tin.

The most celebrated objects of cast bronze in the Bible are the Bronze Sea and the 2 pillars set in front of Solomon's Temple (1 Kgs 7:15–26). The Sea probably weighed 25 to 30 tons. Also, some of the Temple fixtures were in bronze, such as the clasps for draperies, pots, and altar grating. Other items in bronze are armaments (e.g., the probable composite bow in Ps 18:35—Eng v 34; Goliath's helmet and coat of mail, greaves, and javelin in 1 Sam 17:5–6; the shields made for the royal guard by order of King Rehoboam in 1 Kgs 14:26; and the fetters for Samson in Judg 16:21 and for King Zedekiah in 2 Kgs 25:7).

As gold and silver are paired in association with treasure and wealth, bronze and iron are paired in metaphor relating to strength, e.g., Behemoth in Job 40:18, and the warrior in Mic 4:13. Iron more frequently is used alone as a symbol of strength and this is surely due to the great variety of durable objects made of that metal, *barzel,* as mentioned in the biblical text. There is a close relationship between weapons and tools. The ability of iron to be shaped into strong instruments that can hit and cut is important in the destructiveness of war as well as the creative activities of peace. The threshing sledge as a weapon of Damascus against Gilead (Amos 1:3) is used in the violent process of making wheat into flour (Isa 41:15–16). Items crafted of iron in the biblical text, then, are heavy instruments for hitting such as rods, clubs, and hammers. Some are sharpened specifically for war, notably swords and spears, but others are crafted as tools: axes, plowpoints, pruning shears, and threshing blades for agriculture; masonry tools, the lapidary's stylus, yoke pieces, and gate bars. The details concerning these metal objects frequently emphasize salient aspects of narratives, laws, prophecies, traditions, epics, and events in the Bible. The strength of iron—its malleability under heat, its ability to be hardened, struck, and sharpened; its weight and durability—convey meanings beyond its immediate use in everyday life.

C. Archaeological Finds of Iron Age Jewelry

There are 2 primary groups of archaeological finds that can be classified as jewelry objects in the Iron Age biblical period, 12th to 6th centuries, in Palestine.

Group 1 contains finely crafted items made of precious metals that are usually found in association with each other. In gold, silver or electrum, they have designs skillfully molded, engraved or worked in repoussé. Generally, to this group belong a few bangle bracelets; some decorated rings including the ornate signet types; earrings, especially the lunate and penannular with various kinds of pendants; crescents, a few flat but most made of a thin wire body with a suspension loop; foil frontlets worn on the forehead and decorated with dots, crosshatchings, and rosettes; almost the whole class of items grouped together as star-disks, rectangular plaques, rosettes, and miscellaneous pieces, some in ivory and bone; a few outstanding fibulae and toggle pins; and decorated triangular plaques.

These are found hidden in hoards and sacred areas as part of obvious treasures of important buildings and carefully designed tombs. Many are illustrated on statues and figurines. Frequently they correspond to similar jewelry pieces in museum collections and those on pictorial representations from ancient Egypt, Mesopotamia, and the Mediterranean world. The closest Palestinian parallels are from the Bronze Age, and the Iron Age examples tend to be in the earliest strata (Iron I). They compare to insignia of office in Egypt, Greece, and Mediterranean countries and would belong to leaders in cult and politics.

Members of Group 2 are more humbly crafted and are found in greater numbers than those of Group 1. Findspots are humble graves, some mass burials and loci of everyday life on the mounds. The jewelry items are associated with other artifacts generally agreed to be of everyday or common use. Their materials are iron, bronze, and bone, made into simple basic shapes with little added design.

To this group belong simple bangle bracelets and anklets, solidly crafted or with 2 ends, of varying sizes and thicknesses; many simple rings similar in shape to bangles but much smaller; quite a number of earrings (lunate, balldrop, mulberry, and plain penannular ring); a few flat-type crescents; the majority of toggle pins and fibulae; and all the bone pendants.

The bone finger-shaped pendant may be the one uniquely Israelite jewelry piece as its existence presently seems to be limited to Iron Age Palestinian sites (Platt 1978: 23–8). The cylinder-like objects range from 5 to 9 cm in length. Their slightly narrower ends are pierced for suspension and they are decorated with rings, cross hatching, and ring-and-dot stamps placed in vertical rows of 3 to 9 designs. See Fig. JEW.01f. Because they are not found in pairs, they are probably not ear ornaments. Most likely they were worn on necklaces with amulets, scarabs, and beads, which are sometimes found in association with them.

The numbers of Group 2 items found in Iron II levels indicate that they belonged to the majority of the population. The design and craftsmanship develop their own styles from indigenous motifs rather than from outside sources. The fewer numbers of cult and political insignia in later periods may reflect the abolition of religious symbolism and imagery as prominent in biblical legislation. Iron II was poorer in traditional treasures but also freer from those traditions which had brought foreign styles and symbols with their accompanying powers. Palestine's jewelry in this period becomes less significant, yet more widespread, plentiful, and useful.

D. Wedding Jewelry for the Queen

1. Genesis 24. Rebekah's jewelry is referred to in Gen 24:22, 30, 47, with some general items of value given as wedding gifts to Rebekah, her mother and brothers in v 53. The narrator's style has provided 2 versions of the incident in which Abraham's servant has 2 kinds of jewelry items for Rebekah, plus a third description by Laban, her brother, saying that he saw her wearing the specific pieces. In the first account, v 22, the servant "took a gold ring weighing a half shekel" (RSV and Speiser *Genesis* AB), and "two bracelets (RSV)/bands (AB) for her arms weighing ten gold shekels." In the second account, v 47, the servant tells Laban that he "put the ring on her nose and the bracelet on her arms."

The words translated "bracelets" or "bands," *ṣĕmîdîm,* and worn in the area of (lit.) her hands probably refer to

bangles as found abundantly by archaeology. In position on arms and wrists of female skeletons in burials and represented on Palestinian fertility plaques and Mesopotamian statuary in the Bronze Ages, these occur in pairs and can be worn in groups. A famous statue from Mari has in common with Rebekah in this chapter the association of a water jar (Frankfort 1963: pl. 62, p. 242, n. 47). The Mari statue holds a water jar in front of her with both hands and she has 3 bangles on each wrist. From the Middle Bronze Age at Tell el-Ajjul, 17th century B.C., and at Megiddo, Shechem, Beth-shan, and Gezer (16th, 15th, 13th centuries B.C.) are specific examples. Ajjul's "cenotaph" hoard, part of a queen's royal parure, had 2 sets of 5 bangles made of solid gold. The basic design is a round bangle with 2 ends, each of which is engraved with linear decorations marking in short cuts of 1 to 5 in number its designated place in 5 pairs. See Fig. JEW.01d. The 3 middle bracelets of each set are flattened slightly making 2 sides so that they can be positioned closely together. The others are flattened only on the one side touching the middle bangles. Interesting, in this Ajjul set there are 10 pieces, perhaps comparable to the 10-shekel weight mentioned for Rebekah's bracelets. The Iron Age has the same bangle style, especially in the metals of bronze and iron.

The Heb word *(ṣĕmîdîm)* is related to "couple" or "pair," with the verbal meaning of the act of joining two. Abraham's servant put on or over Rebekah's hands 2 objects making a pair, perhaps symbolizing the marriage bond.

The words translated "gold ring," *nezem zāhāb,* in v 47, put on the nose, refer in the Bible to a jewelry object worn either in the nose or ear. From Megiddo (Loud 1948: pl. 225:9, #a1102, "Remarks;" Tomb 2121 dated MB str. IX, 15th century?) came a typical small round tubular object with 2 overlapping ends, found "in position as a nose ring." Suspended from the ring and opposite the 2 ends is a drop made up of a cluster of little balls, giving the name of Mulberry Earring. See Fig. JEW.01b. From the Ajjul hoards were 3 singles and 8 pairs; they were also found at Lachish, Gezer, Beth-shan, Tell el Fara (S), and Gerar, and were quite popular during the Iron Age. The basic ring with 2 pointed ends is the most common form of Palestinian ear jewelry. The ends facilitate placement through holes pierced in the ear lobe or secondarily, in the nasal area.

From Tell Jemmeh, identified as Isaac's Gerar (Gen 26:6, etc.), a stone jewelry mold was found with a mulberry earring engraved on it (Petrie 1928: pl. XX:45, Aff 193, 9th century). Molds such as this were used by itinerant jewelry smiths from the EB at least, and especially in the MB. Use of them fit within the life-style of the biblical patriarchs (see bellows in luggage of Beni Hasan painting). The molds would cast beads, amulets, crescents, disks, rosettes, pendants, frontlets, pins, etc. These could possibly be the other kinds of ornaments associated in v 53.

In v 53, *kĕlî* translated "jewelry" (RSV)/"objects" (AB) of silver and gold means "things" or "items" in the majority of its many occurrences in the Bible. The noun is related to the verbal "finished, accomplished or completed" and is used with metals connoting that the material has been fabricated into a useful article. In light of its uses in Gen 31:37 and 45:20, Rebekah could have received various domestic utensils in silver and gold. Alternatively, in the booty passages of Exodus and Numbers, these items are specified as rings of gold in the ears of "wives, sons and daughters," and armlets, bracelets, signet rings, earrings, and beads, hence "jewelry."

The *migdānōt* "costly ornaments" (RSV)/"presents" (AB) given to mother and brother is less precise; no metal or material modifies the noun. In 2 Chr 21:3; 32:23 and Ezra 1:6 the reference is to valuable gifts, some in silver or gold, worthy of royalty or the Temple.

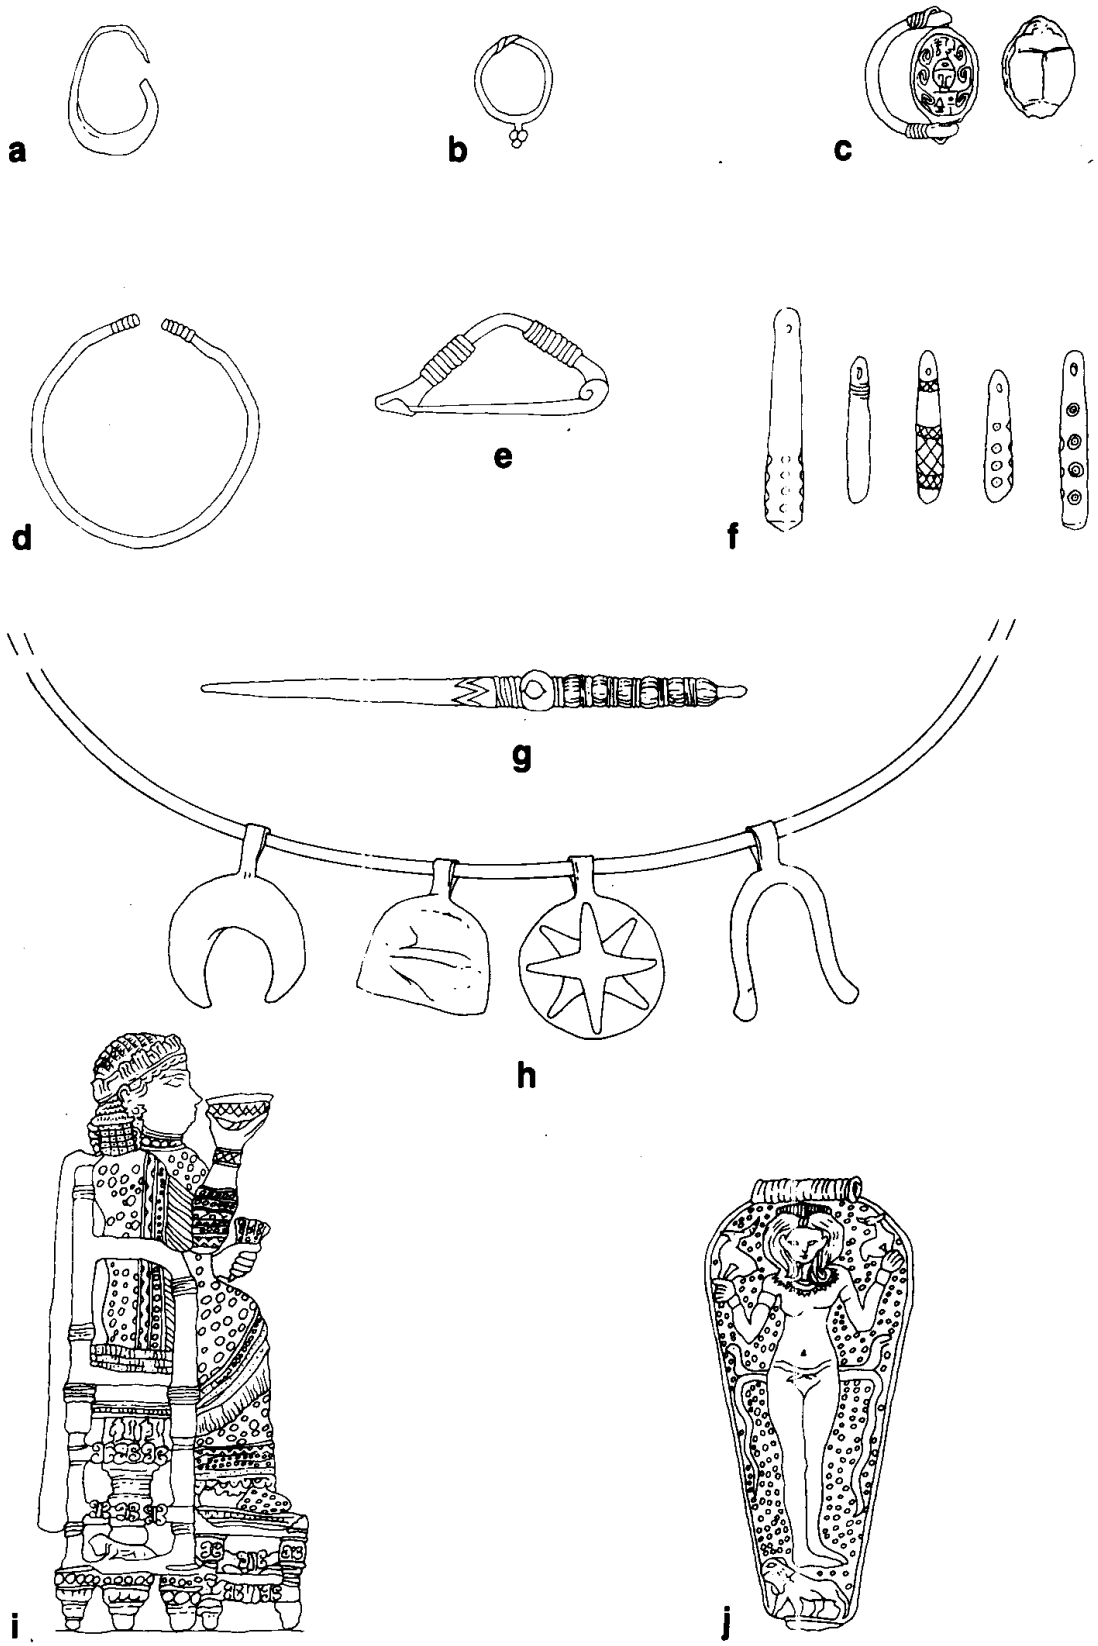
These general and collective terms witness to gifts completing the picture of a wedding agreement. They do not divert attention from the central point of the narrative. Rebekah of the "royal" line, after she has demonstrated her generous nature by watering the camels, receives specific jewelry items of paired bangles and nose ring to wear signifying that she is to be the wife of the wealthy patriarch Isaac, chosen by God.

2. Ezekiel 16. Besides Genesis 24, the narrative of the search for Rebekah as the wife for Isaac, Ezekiel 16 is striking in its use of marriage jewelry. Here more jewelry items are listed, and as if building upon the Rebekah sequence they are designated for particular parts of the body. In this instance characteristically, Ezekiel seems to speak out of knowledge of a long tradition and incorporates a wealth of detailed information. In the Babylonian Exile, 6th century B.C., the prophet knows Mesopotamian adornment styles and Israelite aristocratic costume. He depicts Jerusalem as an unwanted newborn child of mixed background whom God found still "weltering in her blood" of birth and whom he lovingly raised up to maidenhood as his bride and royal queen. The bestowal of fine garments and rich jewelry were the visible sign and pledge of his covenant.

The key passage is Ezek 16:11–13. It begins with two general terms for jewelry from the same root *ʿdh,* "and I *decked* you with *ornaments*" (RSV). The first designated items are "bracelets on your hands/arms" in a phrase reminiscent of Rebekah's wedding jewelry. These *ṣĕmîdîm* would be the bangle with 2 ends, and at this period could have had decorations of animal heads as finials or stylized representations of animal heads on each end. Possibly these finials (of snakes, lions, rams, etc.) could be links to the custom in the Bible of powerful rulers and nobles referred to as certain kinds of fierce animals (Ps 22:21–22—Eng vv 20–21; Jer 50:17; Ezek 22:25), and hence they are royal insignia. The next phrase *wĕrābîd ʿal gĕrônēk,* "and a chain on your neck," only occurs here and in Gen 41:42 (Joseph's necklace from Pharaoh). The reference is most likely not to a metal chain with interlocking loops, rare archaeologically (except in Greece). From Mesopotamia is the style of a single strand of beads worn as a choker high on the neck. The wife of Assurbanipal, on a 7th century B.C. relief from Kuyunjik (now in the British Museum, Maxwell-Hyslop 1971: 255, fig. 157), is seated on a throne at a banquet in a garden with the king. See Fig. JEW.01i. She has a single strand of choker beads and several other items suggested by the Ezekiel passage—bracelets, earrings, crown—and she is feasting. The Nimrud ivories from the palace of Assurbanipal show fashions of royal women from several parts of the empire. Some wear high chokers of beads in several strands. Joseph's neck jewelry is probably the Egyptian beaded broad collar.

It is placed on the *ṣawwā'r*, a term usually stressing the back of the neck where the yoke is worn and where in this case the heavy falcon-spacer finials would be placed. Bronze Age Canaanite fertility figurines also have the intricately strung beaded broad collar. In the Ezekiel phrase *gārôn* has to do with the front of the neck or throat where the voice is located.

The third piece of jewelry is a ring, *nezem*, on the nose. Comparable to Rebekah's it is probably a small round ring with 2 ends for insertion and directly opposite, a tiny pendant with a mulberry (characteristically one cast in a steatite mold). The design had a long life in Palestine, especially popular during the Iron Age, and certainly a possibility in Ezekiel's time. The fourth set of jewelry is "earrings in your ears;" if *nezem* was a common designation for ear jewelry, Ezekiel takes particular care not to use it. He seems to be making specific reference to a style of jewelry particularly worn on the ears. The term *'ăgîlîm* is used here and in Num 31:50 in the singular as an anonymous item in the booty list of Midianite gold articles. The use in Ezek 16:12 is suggested by a clear reference to ears and the fact that it is grouped with other items for the head—following nose ring and preceding crown. The noun is related to conjectured root *'gl* evidently meaning "to roll" (from round objects such as the Bronze Sea), but the overwhelming number of uses in the Bible of the root letters are with words relating to bovine animals such as *'ēgel* = calf; *'ĕglâ* = heifer; *'ăgālâ* = cart, the vehicle drawn by cattle.



The most common shape of gold earring in ancient Israel is an ovoid loop designated "lunate." The longer, narrower end of the loop goes through the pierced ear lobe in the front and bends downward to the back. The other end meets it just under the lobe. This end is thickened and forms the base of the earring. The graduated thickening thus resembles a crescent moon, hence the name "lunate." See Fig. JEW.01a. Because the crescent moon can look like the upturned horns of a bovine animal, there is a long association in the ANE of these 2 shapes. It is possible that lunate earrings are at home with the designation *'ăgîlîm* relating to bovine horns. They were popular in the Iron Age and are found in many excavations from the 13th century at Tell el Fara (S) to the 6th century at Lachish. Spectacular examples come from Tell Jemmeh dated to the 10th century from the "goldsmith's house" (Petrie 1928: pl. 1:4–13). Some are quite long and some have the addition of a row of tiny balls. They also have a long history in Mesopotamia. The most elaborate come from Assyria in the 9th–7th centuries as shown on Assurbanipal's queen and Assyrian reliefs (Maxwell-Hyslop 1971: p. 255, fig. 157; pp. 254 & 237). Pendants suspended from the lunate base can represent 3 botannical stages of the pomegranate plant—the bud, the blossom, and the fruit. There is a bud pendant identified as coming from this type of earring found at Beth Shemesh (Maxwell-Hyslop 1971: 229).

The fifth reference is to a "crown" *'ăṭārâ*, the primary piece of jewelry symbolizing leadership. Gold is mentioned as its composition in 2 Sam 12:30 (1 Chr 20:2) when David took the one belonging to the Ammonite king. In Prov 4:9 it is parallel to "fair garland." Well-known Egyptian crowns have a garland motif, some are in gold with flower medallions. The Nimrud ivories show possible metal crowns with a series of rosettes (Maxwell-Hyslop 1971: pl. 234 a & b). Assurbanipal's queen has a crown with battlements in the fortifications of the city wall. Isa 28:3–5 may have a picture with associations of a crown, flowers, and the city gate. From Palestinian excavations, such as Megiddo, Tell el Fara (S) in Bronze and Iron Ages, is a type of frontlet tied in back and having rosettes and pomegranates which could be a rendition in gold foil of a garland with flowers and fruit.

Enclosing the list of jewelry items is a second reference to the general word for jewelry *'dh* usually translated "ornament" (noun) and "to deck" (verb). Other associations with this term are bridal attire, for example in Isa 49:18; 61:10; Jer 2:32; 31:4. The most-lavish jewelry metaphor is in Song of Songs where parts of the body are compared to actual ornaments (Cant 1:9–11; 4:4,9; 5:10–16; etc.), and of course, the crown (Cant 3:11) with which his mother crowned him on the day of his wedding. These are strong associations of wedding and royalty. The Ezekiel 16 passage concludes in v 13 with "you succeeded to regal estate" *(limlûkâ)*.

Coupled with the theme of royal wedding is a sad and devastating sequence when Ezekiel's queen became unfaithful and sank into the depths of harlotry, as chap. 16 continues. This is a prophetic image in Jer 2:2; 3:1; 4:30; Hos 2:5, etc., probably going back to Exod 32 and the Golden Calf. The vigorous tradition of the pejorative significance of jewelry from incidents such as these no doubt contributes to the noticeable lack (when compared with other ANE peoples) of gold and silver insignia and ornaments in our present Israelite archaeological assemblages.

The *'dh* jewelry becomes the badge of unfaithfulness in Ezek 23:40–42, etc. Because of her actions the prostitute will be given into the hands of her lovers who will take away her jewels and raiment, in contrast to the loving husband who clothes her. From these passages we learn what harlots wore. Especially enigmatic has been Ezek 16:36 (Platt 1975: 103–11). A more accurate translation probably is, "because *your triangular piece (nĕḥuštēk)* was shed" instead of the RSV "your shame was laid bare." "Triangular piece" is parallel in this poetic section to "genital area," "idols," and "blood of children" (RSV). There is a triangular jewelry piece of 3 recognized types that depict a Canaanite female figure with emphasis on the genital area. One exemplary gold foil plaque from Ugarit (Negbi 1970: pl. IV:17) has a female figure wearing a pelvic girdle with a triangle suspended from it at the pubic area. See Fig. JEW.01j. This would illustrate the wearing of the gold plaque or a garment, as other illustrations of the pelvic girdle show, perhaps the menstrual cloth, characteristic of a bovine economy where sexual intercourse during estrus was connected with conception. As polemic against this Canaanite religious practice is such legislation as Lev 18:19, "You shall not approach a woman to uncover her nakedness while she is in her menstrual uncleanness." Notable is the sequence of legislation against adultery (Lev 18:20) and sacrifice of children (Lev 18:21). This sequence was surely in the mind of Ezekiel as he could expect his hearers to make associations automatically. Lev 18:24 goes on to claim that these were the precise acts of the Canaan-

Samples of ancient Near Eastern jewelry. *a*, lunate earring; *b*, mulberry earring; *c*, Hyksos seal ring; *d*, bangle bracelet; *e*, fibula; *f*, bone pendants; *g*, toggle pin; *h*, Assyrian king's necklace; *i*, Kuyunjik relief depiction of Assurbanipal's wife; *j*, triangular plaque from Ugarit. *(Drawings by R. H. Brennecke, courtesy of E. Platt)*

ites who lost their land. Here is a vehicle used by Ezekiel, Jeremiah, and Hosea to express their prophetic messages for their times.

E. Symbols of Aristocratic Office

1. The Signet. a. Biblical Vocabulary. Two Heb nouns are translated "seal:" *ṭabaʿat* and *ḥōtām*. The first *(ṭabaʿat)* is associated with the verbal notion "to sink down" but the verb is not used with the noun, nor is there the logical association of a ring or seal "sinking down" into soft material as a stamp would. In Gen 41:42 and Esth 3:10, the object is put on the hand. In Isa 3:21; Num 31:50; and Exod 35:22, it is listed with other jewelry items. In the tabernacle sections of Exod (chaps. 25–31) the word is used for hardware fixtures of gold, usually translated "ring" (e.g., Exod 25:12).

In Esth 3:12 and 8:8, the verb *ḥtm* "to seal" is used with *ṭabaʿat*. The noun *ḥōtām* is used more often as "seal," e.g., Jer 22:24; Hag 2:23; Gen 38:18.

Lambdin sees *ṭabaʿat* as being of Egyptian origin, while *ḥtm* and its derivatives, used extensively throughout the Semitic languages, was borrowed in the earliest stages of Egyptian (Lambdin 1953: esp. p. 151). Hundreds of years before the biblical period both words were used in Egypt, at least, to refer to the same object or to objects with the same function.

Vergote sees the words referring to 2 different kinds of objects: *ḥtm* = cylinder seal, and Egyptian *dbʿt* = stamp seal ring, which developed later (Vergote 1959: 116f.).

b. History of the Seal. It is generally agreed that the cylinder seal originated in Mesopotamia at the end of the 4th millennium, probably during the "Uruk V" period in the S Euphrates area (Saggs 1962: 25–26). The typical thumb-sized cylinder-shaped object of semiprecious stone had a longitudinal perforation to be worn on a string or cord. Its surface was characteristically carved with a religious scene which when rolled over wet clay transferred the design to a sealed object. Saggs posits that in the 3d millennium exchanges between Mesopotamian and Egyptian merchants on the coast of South Arabia or Somaliland brought the cylinder seal to Egypt. The stamp seal may have had an Asiatic origin, but Hayes attests it in the Old Kingdom of Egypt, the 6th Dynasty, 25th–23d centuries B.C. (Hayes 1953–59: 1.141). It can be circular, rectangular, or oval with a flat side, carved with a design, and having a convex top.

c. The Scarab. The most well-known Egyptian seal is the scarab. Its origin is probably as simple as an ovoid bead strung on a cord, a bead of precious stone or metal fashioned to form an amulet. The ovoid shape occurs naturally among pebbles and could easily resemble the beetle with rounded wing case on the back and flat underside. The ordinary "dung beetle," *scarabaeus sacer*, makes a ball of dung around its food and rolls it with its legs. The Egyptians associated this activity with the globe of the sun rolling across the heavens on its daily journey, perhaps propelled by an invisible cosmic-sized scarab. The Egyptian words for "become" and "come into existence" and one of the sun god's names are from the same stem *(keper)* as the word for scarab beetle. These are written with a hieroglyph depicting the insect.

Scarabs are extremely popular in Egyptian jewelry and if related to bead design, the Egyptian jewelry craft par excellence, they are yet another of the several techniques that seem to be in adaptation, extension, or support of beadwork art. The favorite material is easily carved steatite (sometimes called "soapstone"), a form of talc, white or greenish-gray in color. Scarabs are also found in faience (ground quartz or clay cast into a mold and coated with vitreous glaze, especially in imitation of turquoise). Elegant scarabs were made in gold, silver, electrum, turquoise, lapis lazuli, carnelian, amethyst, jasper, onyx, hematite, feldspar, and glass.

The carved flat undersides make them significant: Their legends have names, titles, slogans, designs with animals, birds, and divine figures. The most familiar design is the cartouche or name plate with a rope at the outer edge lashed at one end, and hieroglyphs spelling the name or titles within. The seal does not necessarily bear the name of the owner but can indicate relationship such as subordinate officer or servant. Also, jewelry items can be heirlooms and their styles can be replicated in commemoration or in archaizing effect along with the modern and creatively contemporary in the same workroom. This is especially true for the most popular single kind of scarab in Palestine and Egypt: that with inscriptions relating to Thutmos III, the New Kingdom pharaoh during the greatest period of Egypt's empire, in LB I. His name was evidently regarded as potent centuries after his death and scarabs were treasured and made with his inscriptions for many years.

Aldred gives evidence that scarabs were worn as rings as early as the Middle Kingdom (Aldred 1971: 160). Originally tied to the finger with linen thread, gold wire came to replace the cord but the wire ends are coiled in imitation. This may be reminiscent of the "shenu" loop of the cartouche. Subsequently, a U-shaped ring base developed and the scarab gemstone was placed over the top with the wire ends wrapping around each side. This design enabled the seal to swivel; the flat surface turned up for sealing or rested against the finger for protection when not in use. During the 2d Intermediate Period (ca. 1630–1523) the ring base becomes heavier and has knobs capping each end of the "U." The knobs make the ring easier to hold in the stamp position. Another development was to mount the scarab in a gold or silver funda or base plate with holes or tubes to take the ends of the hoop, again aiding the swivel mechanism.

d. Seals of the Bible and Archaeological Finds. Gen 38:18 and 25, tribal chief Judah's signet with cord and staff are taken by Tamar in pledge. She speaks of them first, v 18, as "your signet *(ḥōtām)* and your cord and your staff which is in your hand." In both instances they are definite signs of Judah's identity. Speiser following Vergote identifies *ḥōtām* as a Mesopotamian-type cylinder seal; and he adds that "the inclusion of the cord is further proof that no signet ring was involved" (*Genesis* AB, 298). Following Lambdin's views on the words for seal and in light of archaeological evidence that scarab gemstones also occur in Palestine during the patriarchal period, a scarab signet could be suggested here. It is interesting to note that one of the earliest scarabs known comes from the Middle Kingdom in Egypt, Late 11th Dynasty, ca. 2000 B.C., from the burial of the estate manager Waḥ (Hayes 1953–59:

1.230; Aldred 1971: 184). A metal scarab composed of several layers of silver with a gold tube through the center was found with 2 large beads indicating that it was worn on a cord as a necklace or bracelet. In a humble grave from the burial complex of Hatshepsut, which Hayes dates 1489–1469 B.C., a scarab was found tied to the finger of an aged woman. This particular seal bears the name of Hatshepsut's daughter for whom the woman was probably a servant. Here the cord enables the scarab to serve as a ring, and it is important to note that this type of seal is in the possession of a woman.

Gen 41:42 lists 3 items the pharaoh conferred on Joseph: signet ring, garments of fine linen, and gold neck-jewelry. The necklace was most probably the gold-beaded broad collar with large (falcon?) finials as spacers and counterpoises. Vergote believes the reference is to *the* Gold Collar, the sign of the investiture of the Vizier (Vergote 1959: 134). King Tutankhamen conferred the gold signet ring as the sign of accession of Prince Huy as viceroy in Nubia (Mazar et al., eds. 1959: 1.106). Wilson notes that in the Old Kingdom the king's highest official "the Vizier was the Sealbearer of the King of Lower Egypt" (Wilson 1951: 80–81). By this office he was "authorized to supervise the movement of official parties or goods through Egypt," mainly as controller of Nile traffic *(ibid.)*. From the standpoint of the Bible, the ring as the first and most important of pharaoh's gifts is the sign par excellence of royal power. It heralded Joseph's climactic position in Egypt's government. From this position he was able to rescue and protect the house of Israel during famine and ultimately to bring the family to live in Egypt.

The historical period of the Joseph narratives is commonly understood to be at the time of the Hyksos, the Asiatic princes who became pharaohs at the end of the Middle Kingdom just before the end of the 18th century B.C. During the Hyksos period scarabs were produced prodigiously; they are one sign of the extent of the empire in Syria-Palestine. Their legends are difficult to decipher because the hieroglyphs and characteristic inscriptions, perhaps less familiar to them than to native Egyptians, are distorted. One popular feature, probably borrowed from earlier Egyptian design, is an interlocking spiral border. See Fig. JEW.01c. Hieroglyphs of life proclaiming abundant years for the pharaoh, Son of Rē, are also common.

Illustrative of the time of Joseph might be the New York Metropolitan Museum collection of 8 green-glazed steatite scarabs belonging to Ḥar with his titles as tax official for an important 15th Dynasty pharaoh (Hayes 1953–59: 2.8). Also from Palestine in MB II and III at Gezer and Megiddo are some fine examples (Guy and Engberg 1938: fig. 176:3 = pl. 107:19; Macalister 1912: vol. 3, pls. XXXI, XXXV; see Maxwell-Hyslop 1971: pl. 76).

A well-known passage relating to the study of scarab seals is Cant 8:6 which includes the phrases "set me as a seal upon your heart, as a seal upon your arm, for love is as strong as death." The Egyptian New Kingdom provenance for the royal wedding genre also has produced archaeologically heart-scarabs from 1 to 3 inches long. They were placed over the heart in the burial costume and the best examples are mounted in a gold funda and suspended from a cord. From the King Tut burial are also armlets and bracelets with large scarabs.

1 Kgs 21:8 tells how Queen Jezebel wrote letters in King Ahab's name and sealed *(ḥtm)* them with his seal *(ḥōtām)*, thus determining Naboth's fate. There is a famous purchased seal ring dated by the Hebrew paleography to the 9th or 8th century (Ben-Dor 1948). The sharp edges on the ring band made it unsuitable for wearing on the finger so it was probably strung on a cord. The finger inserted into the ring helped with exerting the required pressure for stamping.

Esth 3:10 refers to King Ahasuerus' promotion of Haman with the gift of his ring *(ṭabaʿat)*. From here Haman could effect a massive persecution of the Jews. Later in Esth 8:1–2, Queen Esther had successfully intervened on behalf of her people and Mordecai, her adoptive uncle, succeeded to Haman's position. Ahasuerus set Esther over the house of Haman and then gave Mordecai Haman's ring. Following this Esther set Mordecai over the house of Haman. Perhaps this sequence indicates that Esther is in a situation where as a woman she cannot own a seal of this designation. A stirrup seal-ring found at Persepolis has an antelope carving (Mazar, et al., eds. 1959: 4.194). It came from garrison quarters, near a wall and inside a baked-clay canteen. The stirrup seal type is probably a final stage of development for the signet ring. The entire ring was cast in a stirrup shape of one piece; it was non-swivel, and the seal was carved on the flat top surface. It was popular during the Iron Age in Israel and made its first appearance in Egypt at the beginning of the New Kingdom.

From the contexts of signets belonging to Judah, Pharaoh, and Joseph, Ahab, Ahasuerus, and Mordecai, this jewelry item can be a strong symbol of high office. Its use as a seal for documents, etc., is a significant means by which authority is expressed in the social setting. Seals and sealing with these and other meanings are also mentioned in such passages as Job 14:17; Isa 8:16; 29:11; Dan 6:17; 12:4; Jer 22:24–26; 32:14–15. In Hag 2:23, Zerubbabel, "governor of Judah," is proclaimed as a chosen signet ring on the Lord's hand, dramatically implying that he will be given authority as a precious royal jewel. The gemstones of the high priest's ephod breastpiece, and crown may also carry these associations as they are to be carved with tribal names in the precious stones common to such royal rings "as a jeweler engraves signets," (RSV) Exod 28:11ff.; 39:6ff., 30. There are no extant archaeological illustrations for the high priest's gems.

2. The Catalogue of Isa 3:18–23. The passage has been enigmatic because in its catalogue are items that are little known. The vocabulary is problematic, this being the only place in the Hebrew Bible where the words for some of the items are used (for more on this problem, see HAPAX LEGOMENA). Important clues to their identity can be found in other biblical passages where these words or their relatives occur in explanatory contexts. Also, archaeological studies give some information about extant jewelry pieces to be matched up with the Hebrew words. For easy reference the list below (table 1) has the RSV translation for the numbered words in the first column, then Hebrew transliterations, and new suggestions (Platt 1979: 72). Of the 21 items, the first 13 are jewelry, and it is important to note their societal associations and who wears them. Not included in the list of 21 is the introductory word *tipʾeret* (v 18) which in the Hebrew Bible is primarily a collective

term designating beautiful accoutrements belonging to an office of honored position, characteristically one that is indicated by a crown (e.g., Exod 28:2,40; Isa 28:1,4; 52:1; Jer 13:18,20; Ezek 16:17,39; Esth 1:4; Prov 4:9). Here this could be translated "insignia of office," appropriately summarizing the list that follows.

Table 1. The Jewelry Catalogue of Isaiah 3:18–23

RSV		Hebrew	Suggestions
Isa 3:			
v 18	In that day the Lord will take away the finery of	*tip̄ʾeret*	the insignia of office:
	(1) the anklets,	*hāʿăkāsîm*	the ankle bangles,
	(2) the headbands,	*wĕhaššĕbîsîm*	and the sun- or star-disks,
	(3) and the crescents;	*wĕhaśśahărōnîm*	and the crescents,
v 19	(4) the pendants	*hannēṭîpôt*	the drop pendants
	(5) the bracelets,	*wĕhaššērôt*	and the necklace cords,
	(6) and the scarfs;	*wĕhārēʿālôt*	and the beads,
v 20	(7) the headdresses,	*happĕʾērîm*	the garland crowns,
	(8) the armlets,	*wĕhaṣṣĕʿādôt*	and the armlets (or foot jewelry),
	(9) the sashes,	*wĕhaqqiššurîm*	and the sashes (or girdles),
	(10) the perfume boxes,	*ûbātê hannepeš*	and the tubular "soul cases,"
	(11) and the amulets;	*wĕhallĕḥāšîm*	and the snake charms,
v 21	(12) the signet rings,	*haṭṭabbāʿôt*	the signet rings,
	(13) and the nose rings;	*wĕnizmê hāʾāp*	and the nose rings,
v 22	(14) the festal robes,	*hammaḥălāṣôt*	the loin cloths,
	(15) the mantles,	*wĕhammaʿăṭāpôt*	and the enveloping capes,
	(16) the cloaks,	*wĕhammiṭpāḥôt*	and the mantles,
	(17) and the handbags;	*wĕhāḥărîṭîm*	and the wallets,
v 23	(18) the garments of gauze,	*wĕhagilyōnîm*	and the thin garments,
	(19) the linen garments,	*wĕhassĕdînîm*	and the warriors' belts,
	(20) the turbans,	*wĕhaṣṣĕnîpôt*	and the turbans,
	(21) and the veils.	*wĕhārĕdîdîm*	and the outer cloaks.

(1) *"The ankle bangles."* This expression occurs here and in Isa 3:16 as a verb with more description: "mincing along as they go, *tinkling* with their feet" (RSV). No doubt these are the classic solid, round ankle-bangles worn in pairs as depicted on Late Bronze fertility plaques/figurines and found on female leg bones in burials. These are associated with women and could possibly be worn in imitation of the fertility figure. The word most likely is a technical term for bangles worn only on ankles and not on wrists and arms. The root also forms the name of a daughter of Caleb (Josh 15:16, and others).

(2) *"The sun- or star-disks."* This is the only time in the Hebrew Bible that the word and root occurs. Some linguists have seen a relation to "little suns." With (3) and (4) the designation would fit with associated pendants on the "Dilbat Necklace" (Maxwell-Hyslop 1971: 88–90). From Mesopotamia in the first half of the 2d millennium and now in the New York Metropolitan Museum, the necklace has a crescent moon (4), two sun-symbol rosettes and a star-disk. A 9th-century relief of King Assurnasirpal II shows the head and beard turned sideways to his right revealing a cord necklace with 4 pendants including an obvious crescent and a star-disk (Maxwell-Hyslop 1971: pl. 220). See Fig. JEW.01h. Rosettes perhaps representing the sun in gold, bronze, and bone occur in Palestinian Iron Age jewelry from Beth-shan, Gezer, Beth Shemesh, and Megiddo. Star-disks occur in silver, gold, ivory, and bone at Megiddo, Gezer, Beth-shan, and Hazor. Although the number of extant specimens is limited, star-disks, crescents, and rosettes were used in the time of Isaiah, who as a highly skilled political officer of the kingdom of Judah, prophesied during the second half of the 8th century concerning the Assyrian menace. The Mesopotamian evidence and assemblages of precious jewelry in Israelite sites indicate that these pendants could signify high office.

(3) *"The crescents."* The root having to do with the moon exists in several Semitic languages. In Judg 8:21,26, the plural refers to emblems designated as especially worn by kings of Midian and their camels. Archaeology has produced 2 types: one is flat with perforation in the tips; the other is a slender wire shaped like the letter *c* with the central metal loop for suspension.

(4) *"The pendants."* The root is associated with the dropping or dripping of liquid such as rain, honey, wine, and myrrh. A feminine plural noun is mentioned in Judg 8:26 with crescents and purple garments as belonging to Midianite kings. The obvious archaeological objects are bead-like pendants in drop shapes made in semiprecious stones—for example, turquoise, lapis lazuli, carnelian—as well as glass and faience. These would be strung with crescents and pendants in necklaces.

(5) *"The necklace cords."* This unusual term is probably related to the word for umbilical cord *(śōr)*, and the word for "chains" in Exod 28:14, "two chains of pure gold twisted like cords" to attach the high priest's ephod. In this case they might be the textile cords used for stringing beads and pendants in the ornate necklace styles.

(6) *"The beads."* From *rʿl*, to quiver, shake, reel, or dangle, would be beads in various shapes: seeds, blossoms, flower parts, etc., as well as geometric designs. Hundreds of bead-shapes have been classified in the materials of metals, semiprecious stones, and glass from the ANE.

(7) *"The garland crowns."* The noun is related to the introductory collective term and refers to an ornament worn on the head. In Isa 61:3,10, the bridegroom wears a garland or crown; in Ezek 24:17, there is a turban, perhaps like a bridegroom's crown; in Ezek 44:18, Levitical priests wear these turbans as do Aaron and his sons in Exod 39:28. Archaeological jewelry evidence suggests a frontlet made of a strip of metal foil with holes for ties to be placed across the forehead and knotted in the back. Several of these have flowers and rosettes in repoussé as well as places to attach pendant ornaments (see examples from Iron Age tombs at Megiddo). Palestinian frontlets are reminiscent of more elaborate Egyptian crowns worn by men and women where real flowers were imitated in metal, inlay, fabric, and leather.

(8) *"The armlets."* The word is used in the sing. in 2 Sam 1:10 with reference to Saul's "crown and *armlet* which was on his arm." The term also occurs in Num 31:50 where it is in a booty list coupled with "bangles" as in Rebekah's arm jewelry. From Assyrian reliefs a 2-ended metal bangle worn by royal men on the upper arm has animal-headed finials of rams, lions, etc., perhaps signifying a heraldic animal as used in Ps 22:21–22—Eng vv 20–21; Jer 50:17; Ezek 22:25.

(9) *"The girdles."* The term refers to ornamentation that is "bound on" from the verbal root. In Jer 2:32 the object is part of the queenly wedding dress with other ornaments *(ʿdh);* also the root is in a similar passage of Isa 49:18. If, with RSV, the term is related to a sash, it could be worn in the middle of the body such as the beaded girdles from Egypt worn on the hips (Wilkinson 1971: 264).

(10) *"The tubular 'soul' cases."* The unique phrase could refer to a type of pendant like the Egyptian cylinder amulets of the Middle Kingdom (Wilkinson 1971: 55), and represented later in a development like *tefillin.* These characteristically have papyrus or other rolls in them with writing having spiritual significance.

(11) *"The snake charms."* In Isa 3:3 the list of the men of high office includes "an expert in *charms*" from this root; in Jer 8:17 snakes and charms are associated. The uraeus snake is ubiquitous in Egyptian jewelry.

(12) *"The signet rings."* An example par excellence of jewelry used as insignia of office, Gen 41:42; Esth 8:2.

(13) *"The nose rings."* These are part of the bride-queen's jewelry in Ezek 16:12 with the example of the mulberry "earring" worn also in the nose.

Of these 13 jewelry items, 4 are associated in some way in the Bible with women, 8 more accurately relate to men of high rank. It is possible that women had versions of the items also, but at present the evidence is not convincing that these jewelry pieces were exclusively the property of women at any one historical period. A similar method of analysis applied to the 8 clothing items that follow in the catalogue (nos. 14–21) indicates at least 4 are associated with men of rank. Consequently, the interpretation of the passage must shift from a prophetic oracle denouncing women in general for the vain superficiality of extravagant fashions in dress and jewelry to a critique of persons in high office for their social injustice and misuse of power as is the topic of the entire collection of oracles in Isaiah 3.

F. Booty and Offering Jewelry

Two groups of passages are important for discussion of the types of jewelry items in booty and offering assemblages: (a) those in Exodus related to jewelry to be taken out of Egypt which very likely was part of the metal used for the Golden Calf, the acts of contrition that followed, and ultimately for the freewill tabernacle offering; and (b) the spoil from the defeat of Midian and their kings.

Exod 3:22 occurs in the early material about the Exodus, the most important event in the OT. Surprisingly, jewelry is mentioned as part of the command from God that Moses hears from the Burning Bush. The jewelry aspect must be significant if it is included at the critical time when God reveals himself to Moses and challenges the leader to the heroic task of bringing Israel out of slavery. The command is given initially to women, "each woman shall ask of her neighbor." The goods to be taken from Egypt are not more-usable and practical products for survival on the desert journey—such as grain, foodstuffs, domestic animals, and caravan equipment—but items of gold and silver *(kĕlê kesep ûkĕlê zāhāb),* with clothing mentioned somewhat secondarily in passing. Evidently these were not to be sizeable commodities, because the women, who were simply to ask for them peacefully in their own private domiciles, were directed to put them on their "sons and daughters," surely meaning their little children who had not come of age. Possibly this continues the mother-child theme of the opening chapters of Exodus (Exod 1:15ff.; 2:2; 2:10), but it may also serve to emphasize that these were not large amounts of gold and silver to be carried by adults for use in trade or commercial exchange. Since the items are associated with clothing to be worn, hence displayed openly, they are not secreted or hoarded away.

In Exod 11:1–2, in the midst of the Plague corpus just before the most significant plague (death of the firstborn), the *kĕlê* of both silver and gold is to be asked of Egyptian neighbors by women and this time also by men. In Exod 12:35 the same *kĕlê* is mentioned right after the unleavened bread saying that they had asked it of the Egyptians. Then v 36 serves to explain that this spoil is a special sign of God's favor rather than a valuable commodity in itself; it marks the ascendency of the Hebrews over the Egyptians by God's grace.

In Exod 32:2–3, when Aaron makes the Golden Calf, he asks for the "rings of gold" *(nizmê hazzāhāb)* which are "in the ears of *(bĕʾoznê)* your wives, sons and daughters." Aaron's request is directed to the male heads of households, but the wearers may be just women and children. Later in Exod 33:4 the penitent people mourned and "no man put on his ornaments *(ʿedyô)*." In v 5 God himself commands the stripping of ornaments as a sign that the people were removed from his favor because of the sin of the Golden Calf. Verse 6 makes the striking comment that from Mt. Horeb onward, the ornaments were not worn again.

In Exod 35:22 for the tabernacle offering the *kĕlî zāhāb* are specified; this catalogue gives insight as to the particular objects in the collective term. "So all who were of a willing heart brought brooches *(ḥāḥ)* and earrings *(nezem)* and signet rings *(ṭabaʿat)* and beads *(kûmāz),* all sorts of gold objects *(kĕlî zāhāb),* every man dedicating an offering of gold to the Lord."

Kĕlî is the general word for jewelry used most often in the booty and offering passages of Exodus. Its related verb means "to complete" and in the Bible the noun has many uses usually referring to a wrought or finished object, an article or utensil. The term particularly refers to something of value; in a plural, collective sense it means portable objects or precious goods that can be taken up when moving, traveling, or even going into exile. This can be baggage, furnishings, equipment, musical instruments, weapons, or simply implements and vessels.

In light of Exod 35:22, where the voluntary offering of gold is described, a list of jewelry objects precedes the use of *kĕlî* (of gold) indicating that the word means personal adornment, i.e., brooches, earrings, signet rings, beads, etc. Looking ahead to Num 31:50, the *kĕlî* of gold which "each man found" are specified as armlets and bracelets, signet rings, earrings, and beads. From the standpoint of archaeological finds, these would be the items often occurring together in the assemblages of precious jewelry in the LB and Early Iron Ages. Also, the objects associated under the general term *kĕlî* could be found grouped together in jewelry molds. These are carved stone (steatite, serpentine, etc.) rectangular objects, small enough to fit in the hand, from the Late Bronze and Iron I in Palestine and Egypt, and usually associated with itinerant smiths. They show a

variety of objects which could be cast in gold, for example: beads, amulets, crescents, disks, rosettes, pendants, frontlets, pins, and earrings.

In the passage concerning the act of contrition (Exod 33:4), when "no man put on his ornaments," the noun *ʿadî* is probably synonymous with *kēlî*. The noun is related to the verb "to deck oneself" and in other parts of the Bible the use is with the bride and bridegroom, the king and queen, then the harlot and citizens of high office who misuse their jewelry.

Earrings (*nezem* in the pl.) are the most frequently mentioned specific items of booty and offering (see Exod 32:3; 35:22; Num 31:50; Judg 8:24). In the sing. *nezem* can refer to nose ring, and the term probably means in its most basic sense an object in the shape of a ring used for a variety of purposes as specified. In extant Palestinian jewelry, examples of earrings, nose rings, and finger rings are composed of the same fundamental shape. Evidence from ancient Israel indicates a penchant for earrings with traditions going back to the MB. Elaborate examples occur in Mesopotamia during the 3d Dynasty of Ur, ca. 2100 B.C. In Egypt the style only becomes fashionable in the New Kingdom. Aldred believes that it was an Asiatic custom imported into Egypt during Hyksos times (Aldred 1971: 198). King Tut's elaborate examples are well-known. Dangles in Egyptian earrings tend to be separate and added as beads. In Palestine the pendant was cast with the ring as in the types known as mulberry, ball drop, tassel, and row of balls. The *ʿagîl* type is probably to be identified with the lunate earring. The lower part resembles a thickened crescent that can be associated with bovine horns.

The signet ring (the third term in the list of Exod 35:22) *ṭabaʿat*, is the swivel signet as described in the Joseph narratives, or the stirrup signet, cast in one piece sometimes with added bezel. Wilkinson sees the latter type appearing in Egypt at the beginning of the New Kingdom (Wilkinson 1971: 128–30); King Tut had several. It was popular in Palestine during the Iron Age.

The fourth item in the list is *kûmāz*, translated by the RSV as "armlets" here (Exod 35:22), but in Num 31:50 as "beads." Beads would be expected archaeologically with such items as mentioned in the list, and the related Arabic term means "bunch, heap" which fits well with the definition.

The first item in the list (Exod 35:22) is translated "brooches" (RSV), the only time the English word or its relatives are used in the Bible. Today the English definition is "large ornamental pin with clasp" but the Middle English forerunner of brooch includes pin, peg, spit, and skewer. The first archaeological association would be a fibula—an ornamental, bow-shaped, metal object with a pin for attachment and a clasp sometimes shaped like a human hand. See Fig. JEW.01e. Fibulae seem to have reached the Near East from Italy and Greece and are not generally common in Palestine until the 8th century, B.C. when they appear in overwhelming abundance. The predecessor of the fibula, used for the purpose of pinning the garment, is a straight stave like the Middle English definition. In Palestine it had a point at one end and a knob at the other.

This type of stave pin is found rather consistently in the jewelry of Mesopotamia even as far back into the 3d millennium as the Early Dynastic period in Ur. In MB and LB Palestine handsome gold examples occur at Tell el-ʿAjjul and Megiddo. A string would be tied to the stave under the knob and wound around both ends of the stave to secure the position of the pin in the cloth. As the design developed increasing elegance, more beads could be placed on top of each other with a knot in the cord to keep them from slipping down the stave. Designs in the metal could imitate the row of beads giving a baluster effect, or swirls and twists could decorate the part of the stave designed to remain outside the garment. For the cord attachment a ring was added just below the decoration and could even be worked into the center of the stave. See Fig. JEW.01g. The pierced hole in the center of the stave caused Egyptologist Sir Flinders Petrie to name this jewelry item "toggle pin." He imagined that it was fastened like a button to a garment by means of the hole and subsequently "passed through an eyelet in the other edge" of the garment (from his *Hyksos and Israelite Cities*, p. 12, and quoted in Henshel-Simon 1938: 169–70). It would demand a skilled tailor to make this an effective closing even for a garment of minimum bodily activity.

The decorations on the hafts of toggle pins are clues to their dates, and E. Henshel-Simon developed a typological scheme for identifying archaeological specimens. During the Iron Age, the decorated hafts became more elaborate making the pin top-heavy and awkward to use. When fibulae replaced them, the bead-like decoration was also the feature that distinguished and dated the fibula bow in typological sequence.

In Egypt toggle pins are associated with Hyksos, Asian, and N Mediterranean imports, so as in the case with earrings, it would not be unlikely for Hebrews coming out of Egypt to treasure toggle pins in their "all sorts of gold objects" (Exod 35:22).

The biblical term *ḥaḥ* seems to be related to brier or bramble indicating a sharp, pointed object to hook into something. It refers to an object put in the nose or jaws of a captive beast or person as a sign of subjection and desolation. If the piercing of 2 parts is indicated, it would be appropriate for this jewelry piece: The toggle pin is actually the "brier pin."

Another short catalogue of jewelry objects like that of Exod 35:22 occurs in Num 31:50 at the end of the Wilderness Wanderings when the Israelite soldiers bring a percentage of their spoil from the Midianite battle for "the Lord's offering" as commanded by Moses. Again the general phrase *kĕlî zāhāb*, "articles of gold," is used as a collective term with particular items in the singular in Hebrew but translated in the RSV as pl.: "armlets and bracelets," *ʾeṣʿādâ wĕṣāmîd;* the bangles for the wrists and upper arms, "signet rings," *ṭabaʿat;* lunate "earrings," *ʾagîl;* and "beads," *kûmāz*.

In Judges 8, jewelry items are mentioned again in connection with Midianite spoil but the particular items differ from the Num 31 passages. The Midianites and the Amalekites, ancient enemies from the Exodus-Wandering period, menace the agricultural economy aided by the now perfected technology of camel domestication. Gideon was sent and killed the kings Zebah and Zalmuna, then in Judg 8:21 "took the crescents *(haśśahărōnîm)* that were on the necks of their camels." He refused kingship but asked,

"give me every man of you the earrings of his spoil *(nezem šĕlālô)*" (8:24). The weight came to "1,700 shekels of gold" (8:26), "besides the crescents *(haśśahărōnîm)* and the pendants *(wĕhannĕṭipôt)* and the purple garments worn by the kings of Midian, and besides the collars that were about the necks of their camels." Gideon made an ephod of gold, perhaps following the precedent in Exod 25:7; 28; 29; 35; 39; but what that object was remains enigmatic.

The crescents worn by the Midianite kings and their camels were probably of 2 types, the flat and the suspension loop, as discussed above in Isaiah 3. The pendants worn with the crescents by the Midianite kings were probably of a "drop" shape, representing heavenly phenomena like stars or rain drops.

JEWISH-CHRISTIAN RELATIONS 70–170 C.E.

The time between the Jewish War (ca. 70) and the age of Justin and Melito (ca. 170) was the crucial transition period for Jewish-Christian relations. Before this, Christianity was intimately, if uneasily, related to Judaism and in many ways was still a sectarian movement within it. By the late 2d century, Christian writings reveal a movement confident in its own identity as a gentile community distinct from, and generally hostile towards, Judaism, yet claiming the right to be called the New Israel. During the same period Judaism also underwent profound changes in the wake of 3 disastrous rebellions against Rome (66–70 C.E., 115–17 C.E., 132–35 C.E.). This century is thus one of the most important and intriguing for Jewish-Christian relations. It is also one of the most obscure. The extant evidence is widely scattered and rarely direct. It is also one-sided since most of it is Christian in origin, while Jewish sources are sparse and often embedded in later documents of the rabbinic tradition.

I. Conclusion

A. The Sociopolitical Setting

The political and social status of Jews and Christians in the Roman empire and the effects of the Jewish rebellions against Rome are of considerable importance. The destruction of the Temple and much of Jerusalem in the war of 66–70 C.E. and the resulting ignominy of the Jews has been viewed as the crisis which precipitated the final breach between Christians and Jews (Harnack 1962: 63). Certainly for Judaism the consequences of the war were not insignificant—thousands dead or taken captive; economic chaos and the confiscation of property; increased taxation; the destruction of temple and city; and the disappearance of the sanhedrin. Yet the outcome was less devastating than appears at first sight: The final siege affected Jerusalem alone, the rest of Judea and the diaspora communities being hardly affected; the Jews' legal status was unaffected, and they continued to enjoy tolerance in religious matters; and the Yavnean sages founded their academy with Roman approval. These events may have strained Jewish-Christian relations and caused some Christians to distance themselves from Judaism, but they do not appear to have caused an immediate or final schism.

First-century Christian references to the war in fact concentrate mainly on the recalculation of eschatological beliefs (Mark 13:1–3,14–20 and parallels; Luke 19:41–4); it is only later and in retrospect that it is placed in the context of anti-Jewish polemic—for example, in the claim that the destruction of the Temple was a punishment for Jewish involvement in Jesus' death (Just. *Dial.* 16; *Gos. Pet.* 25). The Bar Kokhba rebellion in 132–35 C.E. had more significant consequences for Jewish-Christian relations. The intense messianism surrounding Bar Kokhba led to the harassment and execution of those who did not accede to it, including Christians (Just. *Apol.* 1.36.6). The severe repression which followed included the banning of Jews from Jerusalem, and this resulted in a definitive change in the Jerusalem Church which, from then on, came under gentile leadership (Eus. *Hist. Eccl.* 4.5). Further, this ban

lived on in Christian memory and, together with the destruction of the temple, became in later writers the primary evidence of God's displeasure with the Jews (Just. *Apol.* 1.47; *Apos.Con.* 5.25) as well as the basis for the myth of the wandering Jew. It has also been suggested that a specific reference to Christians was added to the Jewish malediction against the heretics (see below) in the aftermath of the Bar Kokhba rebellion (Katz 1984: 72; Urbach 1981: 288). Thus the Bar Kokhba rebellion, more than the Jewish War, marked a decisive break between Jews and Christians though naturally things had not stood still in the interval.

Quite apart from these dramatic events the social and political standing of Jews and Christians was an important factor in their relationship. The Jews had been granted unusual privileges by the Romans—such as exemption from military duty and the emperor cult, the right to keep the Sabbath and to collect the temple tax—which allowed them to live according to their own customs and beliefs. They were viewed with suspicion and hostility by some and were occasionally subjected to outbreaks of violence, but the hostility was largely confined to a few of the Roman intelligentsia and the violence caused by localized tensions. More important, indeed one of the causes of Roman antipathy, was their success in attracting both converts and sympathizers (Gager 1983: 113–33). In general Jews thrived under the Romans and they were numerically superior to, and politically more secure than, the Christians.

While Christians still associated with Judaism they could share the privileges and the standing Jews enjoyed. Once separated, they faced a number of problems. They had to find their own niche in Roman society unprotected by the traditional rights of Jews, and it may be that one purpose of the book of Acts, for example, was precisely to support Christianity's claim to be a legal and respectable religion. They were accused of being a novel and upstart cult and were forced to explain their refusal to follow the religious practices of pagans and Jews (*Diogn.* 1–3; Or. *Cels.* 2.1, 2.4). Thus one motive for the claim that they, and not the Jews, were the true Israel was their need for a respectable and ancient pedigree. Christians also had to create a distinct sense of self-identity as well as compete with Jews for the attention of gentile sympathizers. The size and influence of Jewish communities made them powerful competitors and a potential embarrassment to Christian claims. In addition, as antipathy increased the more likely it was that Christians would be subject to Jewish harassment—the situation depicted throughout Acts and mentioned by Justin (*Apol.* 1.31.6), both probably with some exaggeration.

B. Jewish Christians

One group for whom the Jewish War was significant was the church in Jerusalem. Early tradition has it that they fled to Pella in the Transjordan before the final stages of the war (Eus. *Hist. Eccl.* 3.4.3.; Epiph. *Pan.* 29.7.7f.,30.2.7.). The same tradition suggests that they returned after the war and reestablished a somewhat depleted church under the leadership of Simeon, Jesus' cousin (Eus. *Hist. Eccl.* 4.22.4, 5.12; Epiph. *mens.* 15). This tradition has been challenged by the argument that the Jerusalem Christians allied themselves with the Jewish rebels and were slaughtered in the final siege, thus effectively marking the end of Jewish Christianity apart from a few scattered and insignificant survivors (Brandon 1968: 167–84). Alternatively it has been argued that the tradition of a wholesale flight to Pella is a legend designed to bolster the Jerusalem pedigree of the Pella church and that the war had no such dramatic effect on Jewish Christian fortunes (Lüdemann 1980: 161–73). The early tradition should not be too quickly dismissed but, whichever view we take, one stubborn fact remains—we hear little or nothing of the Jerusalem Christians after 70, and we must assume that they lost their previously preeminent position.

Of Jewish Christians in general we hear more but the evidence is obscure and tendentious and tells us more about the internecine disputes among Christians than about their relationship with Judaism. Later Church writers viewed them as heretics, and lumped them together into groups—e.g., Ebionites, Nazoreans, Elchasaites—but they had little first-hand information. Reliance on Jewish Christian sources reconstructed from the later Pseudo-Clementines is now rightly questioned. Justin may give us some information about the situation in the mid-2d century (*Dial.* 46–47), or he may simply be speaking hypothetically from his knowledge of apostolic documents.

About the relationship of Jewish Christian groups with Judaism after 70 we can make only a few generalizations. First, some of them (e.g., the Ebionites) were probably connected to pre-70 groups, but they rapidly became, if they were not already, a minority in the Christian movement, surviving longest in Transjordania and Syria. The mission to the Jews, which Paul already perceived to be largely a failure (Roman 9–11), had probably petered out by the end of the 1st century, and most Jewish Christians were henceforth probably descendants of Jewish Christian families rather than converts from Judaism. Second, in belief and practice they clung to their Jewish heritage, diverging mainly over christological/messianic claims (*Ps-Clem. Rec.* 1.43, 50). They probably attempted to maintain contact with, and where possible remain a part of, synagogue life. It was because they thought Paul chiefly responsible for the conflict with Judaism that they developed a frequently virulent anti-Pauline strain (*Ps-Clem. Rec.* 1:33–71; *Hom.* 11.35.3–6; *Epih.* 30.16.6–9). Third, some later sources express a remarkably irenic, two-covenant concept of salvation which accommodates both Jews and Christians (*Ps-Clem. Hom.* 8:6–7), a view which had earlier exponents too (*Ep. Barn.* 4:6). Fourth, Jewish Christians were ultimately marginalized as a result of their rejection by the two stronger groups, Judaism and gentile Christianity (see below on Matthew). Their fate in the first two centuries—from mother church, through marginal minority, to heretical outcasts—is indicative of the broader schism between Jews and Christians in this period.

C. Yavnean Rabbis and their Successors

The fate of Jewish Christianity immediately raises the issue of rabbinic actions taken at Yavneh. See JAMNIA (JABNEH), COUNCIL OF. It is generally agreed that the rabbis' task was to shore up and redefine Judaism in the wake of the disasters of the Jewish War. Some think that central to this process was a series of anti-Christian moves

which had a profound effect upon the Jewish-Christian schism: the closure of the Jewish canon, the banning of heretical (i.e., Christian) books, the dissemination of anti-Christian propaganda, and above all the adoption of a malediction against the heretics *(birkat ha-minim)* into the synagogue liturgy (Davies 1963: 256–315). It is increasingly recognized, however, that Christians were not the sole, or in some cases not at all, the target of the Yavnean rabbis. The heretics and their works which the rabbis had to counter included far more groups than the Christians—Hellenizing Jews, Jewish Gnostics, indeed all non-Yavnean Jews. Jewish Christians, and later gentile Christians too, were at most only part of the problem. They may have been included in, but did not dominate, the ranks of rabbinic heretics. Further, it is clear that the influence of the rabbis spread only gradually in the first 2 centuries, especially among diaspora communities, so that their actions would have been neither immediately nor universally effective (Kimmelmann 1981: 226–44; Katz 1984: 43–76). Still, there may have been a disparity between rabbinic intent and Christian perception. Justin's frequent references to the cursing of Christians in the synagogues (*Dial.* 16, 35, 96, 107, 137) show that some Christians perceived themselves to be the primary target of Jewish antipathy. This would have been particularly true after 135 if at that time a specific reference to Christians *(noṣrim)* was added to the general malediction against heretics *(minim)*.

Apart from the specific question of Yavnean actions, what can we say more generally about Jewish reaction to Christianity? Unfortunately very little, for Jewish sources are largely silent on the matter. There may be a few scattered references in rabbinic literature to Jesus—portraying him as illegitimate, a magician, and a false teacher who was executed for leading the people astray—but the evidence is far from clear. Several persons named Jesus who lived at different times are confused with each other. Moreover, the evidence is mostly in texts of the 3d and 4th centuries and beyond and reflects the inner rabbinic debates of that time (Maier 1978; 1982). A more promising approach is to read the early rabbinic debate about "two powers in heaven" against the background of the Church's christological claims, though the role of Gnostics and other sectarians in both Judaism and Christianity has to be built into the picture too. It does, however, point to christology and the challenge to Jewish monotheism as a serious point of dispute (Segal 1986a: 133–62). In general, what rabbinic literature tells us about Jewish-Christian relations is slight and obscure. This is not surprising, since it is a literature which emerges from a closed, idealistic world and is notoriously silent about external events, even those that had a radical effect upon Judaism. Not all Jewish communities were like the rabbis, especially those in the Diaspora, but virtually no information about their reaction to Christianity has survived.

D. The Gospels and Acts

Yavnean opposition to Christianity, especially the malediction against the heretics, has often been used to reconstruct the *Sitz im Leben* of Matthew, Luke-Acts, and John. But the impact of Yavnean actions has been exaggerated and, at any rate, they do not fit the gospel evidence with precision. A troubled relationship with Judaism is nevertheless evident.

Matthew contains a curious tension between recognition of the favored position of Israel (Matt 10:5–6) with polemic against the Jews (Matt 8:11, 21:41) and commitment to a universal mission (Matt 28:19). Emphasis on Jesus' Jewishness—as messiah and upholder of the law, sent to redeem Israel—goes hand in hand with a slashing attack on the Pharisees (Matthew 23). Distance from the synagogue ("their synagogues" [Matt 4:23, 9:35, 10:17, 12:9, 13:54]; "their scribes" [Matt 7:29]; "the Jews to this day" [Matt 28:15]) goes along with an overwhelming concern with things Jewish. The work is almost certainly by and for Jewish Christians, recently and unhappily separated from the synagogue but also trying to come to terms with an increasingly dominant and successful gentile Christianity. They were thus an embattled minority vis à vis two majorities—non-Christian Judaism and gentile Christianity. The Judaism they knew bears many of the marks of the Yavnean academy (e.g., Matthew 23) and the gospel shares the Yavnean concern with law and commandments and the doing of God's will (e.g., Matthew 5–7). The Matthean relation to contemporary Judaism was full of tension, stress and hostility, yet relating to Jewish traditions and customs was essential for their own sense of identity.

The situation in John is not so different from Matthew, but the issues that divide Jews and Christians are solely matters of belief and we hear no echo in the Jewish opponents of the concerns of the Yavnean rabbis (Meeks 1985: 93–116). In the characteristic use of irony and misunderstanding it is almost always the Jews who are the foil and who thus misunderstand Jesus (John 5:39f., 7:14f., 8:17f.). Salvation is "from the Jews" (John 4:22) but apparently not now among them, for it comes exclusively through Jesus whom they reject (John 16:6). Indeed throughout John, christology is the main focus of disagreement. There are some clues to the situation at the time of writing: the persistent use of "the Jews" to denote those who oppose Jesus and his followers, most extremely in John 8 where the Jews are diabolized ("you are of your father, the devil," v 44); the references to believers being thrown out of the synagogue (*aposynagogos* John 9:22, 12:42–3, 16:1–4); and the possible inference that some Jews had believed in, but then rejected, Jesus (John 8:31). Not all references to the Jews are polemical, and being cast out of the synagogue cannot be tied directly to the Yavnean malediction against the heretics whose purpose was to curse and not to expel. Yet John indicates a situation of extreme hostility between the Johannine communities and the synagogue, with each side locked into its own position and no room for rapprochement.

Luke-Acts conveys a more distant relationship with Judaism partly because it was written by and for gentile Christians. Luke shares Matthew's concern to establish continuity with Judaism and to show Christianity to be the true inheritor of God's promises. But above all, Luke wishes to present the success of the gentile mission—the shift from Jerusalem to Rome—as central to God's eternal plan. The mission to the Jews has had its successes; but, by the end of Acts, the Church has turned its face towards the gentile world (Acts 28:16f.). Disputes with the Jews center on messiahship (the sermons of Acts) and resurrec-

tion (Acts 23), while the dispute with Jewish miracle workers (Acts 19:11–20) is an interesting illustration of conflict on a more popular level. In Luke, Jewish rejection of Jesus is viewed with pathos and the mitigating ignorance of the Jewish leaders in putting Jesus to death allows them a second chance (Acts 3:17; 13:27). But there is a darker side too, for the Jews are with few exceptions portrayed as the opponents of Jesus, of the early Church, and, especially, of Paul. Their actions are hostile and malicious, though often thwarted by Roman officialdom. This probably reflects the realities of Luke's own day: The Jews had had their chance but rejected it; they are now largely hostile towards Christianity; the future for Christianity lies in the gentile world.

There are similarities and differences between these 3 documents: Each reveals a church separate from the synagogue, but in Matthew there is a lingering sense of trauma and confusion; in John, bitter resentment of Jewish opposition but acceptance of a clean break; and in Luke-Acts, assumption of a separate identity and focus upon a gentile future.

E. Judaizers

"Judaizer" is a slippery term. Commonly it is used of Jewish Christians who encourage gentiles to adopt Jewish ways. Some use it to refer to Jewish Christians who retain, and gentile Christians who adopt, Jewish customs (Gager 1983: 35–36). In ancient texts it refers only to gentiles (Jos. *JW* 2.643; *Acts Pil.* 2:1) and some restrict the term to them (Gaston 1986: 35). It is at any rate clear that Judaizing in the Church was mostly found among gentile Christians, that it was fairly common, and that it provoked fear and alarm among ecclesiastical leaders. The motives for Judaizing probably varied. Justin implies that gentile Judaizers were enticed into the synagogue (*Dial.* 47) and Ignatius that they simply retained attachments that were formed when they were "godfearers" (*Ign. Phld.* 6:1; *Ign. Magn.* 8:1). "Those who call themselves Jews but are not" (Rev 2:9; 3:9) may be gentile Christians turning to the synagogue to avoid persecution. The existence of Judaizers and the reaction to them reveal 2 different but related things: first, that among ordinary Christians Judaism retained some attraction, in extreme cases enough to cause defection from church to synagogue (Just. *Dial.* 47); and second, that church leaders saw this as an alarming return to defunct traditions, a threat to Christian identity, and grounds for outspoken warnings in which opposition to the Judaizers readily spilled over into anti-Judaism.

F. Marcion and the Gnostics

Gnosticism may have originated among marginalized and disaffected Jews and, if not, certainly in close proximity to Judaism. In Christian gnostic writings there are a few neutral or even positive references to Judaism (*Exeg. Soul* NHC II,*6*; *Tri. Trac.* NHC I,*5*), occasional disparaging comments on Jews or Jewish practices (*Gos. Phil.* 52:1–3, 75:30–34) derived mainly from NT sources, and a considerable body of anti-Jewish material in which biblical themes, above all the biblical deity, are deliberately denigrated by reversing their value (thus the sect called the Cainites), or the demotion of Yahweh to the role of evil demiurge. In general, Gnostics were hostile to Jewish traditions and beliefs rather than to the Jewish people and, unlike most other Christians, they had no desire to claim for themselves the heritage and privileges of Israel (Gager 1983: 167–71).

Marcion's views were in some respects similar though more complex. See MARCION. His radical separation of the inferior though righteous God of Israel from the God of Love revealed by Jesus, and his rejection of the Jewish scriptures for his own Christian canon, might appear to be the most extreme expression of anti-Judaism in early Christianity. Yet his rejection of Judaism was rarely marked by hostility towards the Jews, and he conceded to them their God, their traditions, and their messiah (not identified with Jesus), even if they were considered inferior. As with the Gnostics, the absence of any desire to appropriate Jewish traditions seems to have allowed Marcion a more relaxed attitude towards the Jewish people. Marcion's radical separation of Judaism and Christianity, the most extreme of that time, probably had several causes—distorted Paulinism, Gnosticism, a rational and literal turn of mind—among which may have been a reaction to precisely those Christian Judaizers who confused and blurred the boundaries between them (Wilson 1986c: 45–58).

G. Justin and Melito

Justin's *Dialogue with Trypho the Jew* (ca. 165) conveys a remarkably irenic picture of Jewish-Christian interaction. Trypho may be a fictitious character and Justin, as the author, clearly controls both sides of the conversation. Yet Justin appears to be well-informed about contemporary Judaism, attributes believable opinions to Trypho, and, while naturally believing that he has won the day, presents the arguments of Trypho with sufficient fairness that a sympathetic reader may find them the more persuasive. The discussion, generally courteous and respectful in tone, ranges over 3 broad fields: the validity of the Mosaic law for Jews and Christians (*Dial.* 9–31); christology (*Dial.* 32–110); and the role of the gentiles as the children of God or True Israel (*Dial.* 111–42). Central to all 3 is the evidence of the Jewish scriptures, for even at this late date Justin does not call on the authority of Christian scriptures. We learn incidentally of other matters: disputes about the merits of the LXX as against the Hebrew version of scripture (*Dial.* 68–80) and of one version of the LXX as against another (*Dial.* 72–73); the ill-will aroused by Jewish persecution, especially during the Bar Kokhba uprising (*Dial.* 17, 33), and by the cursing of Christians in the synagogues; the existence of different groups of gentile and Jewish Christians and how they related to each other and to the Jews (*Dial.* 46–47).

Both the major issues and the incidental information provide rich insights into Jewish-Christian dialogue. There is every reason to think that they reflect the kinds of issues that divided (as well as some that united) Jews and Christians. Above all, the generally civil tone, despite occasional irritability and an overbearing self-assurance on Justin's part, and the fact that Trypho remains unconverted at the end, witness to a style of Jewish-Christian interaction all too rarely found elsewhere. The less sympathetic tone and the barely credible conversion of the Jew in two roughly contemporary dialogues—*The Dialogue of Athanasius and Zaccheus* and *The Dialogue of Timothy and Aquila*—make the

evidence of Justin the more remarkable (Remus 1986: 59–80; Trakatellis 1986: 287–97).

The *Paschal Homily* of Melito of Sardis (also ca. 165) is strikingly different. Melito, a skilled rhetorician, covers 2 major themes in his overtly anti-Jewish sermon: first, that Judaism, its traditions, beliefs and attributes are defunct, superseded by and having their only continuing reality in Christianity (*Homily*, lines 224–44, 255–79, 280–300); second, that the Jews are solely responsible for the death of Jesus and thus the death of God—the first extant charge of deicide (*Homily*, lines 562–608, 693–716). Melito was a quartodecinan and thus particularly sensitive to the uncomfortable proximity of Jewish and Christian festivals. He was also conscious of the need to impress upon the Romans the respectable pedigree of Christianity. Above all, however, he was aware of the thriving and socially prominent Jewish community in Sardis which posed a constant threat to Christian claims and identity. His response to this situation reveals a level of antipathy and finality matched in early Christian literature only by the *Epistle of Barnabas* (Wilson 1986b: 81–102).

H. Festivals and Cult

In its early decades Christianity was heavily dependent on Jewish models for its organization and worship. Initially, for example, Christians celebrated the Sabbath like the Jews; only later, probably with the specific intent of dissociating Judaism and Christianity, was Sunday established (Bacchiochi 1977). The earliest celebration of Easter was probably no more than an adaptation of Passover, and one group, the "quartodecimans," continued to celebrate Easter on the same day as Passover well into the 3d century. The decision to introduce a distinctively Christian festival (Easter Sunday), which may go back to the gentile bishops who took over in Jerusalem after 135 C.E., was probably also a deliberate move of dissociation. Melito of Sardis, a quartodeciman, illustrates how a close association with Jewish festivals can, paradoxically, fuel strong anti-Jewish polemic.

The destruction of the Jerusalem Temple hit at the heart of the Jewish cult and, while the rabbis at Yavneh offered an alternative focus and took over some of the functions of the cultic personnel, hope for the rebuilding of the Temple was never entirely abandoned. Loss of the Temple could also have created uncertainty among Jewish Christians, while later proposals for its reconstruction could equally be seen by other Christians as a serious threat. The epistle to the Hebrews may illustrate the former. Its date and provenance remain obscure but it is probably of Jewish-Christian origin and written sometime after 70 C.E. partly in reaction to the events of the war. It is soaked in Jewish biblical and cultic traditions yet firm in its assertion of the superiority of the Christian over the Jewish reality. Whether it is covenant, hope, promises, law, or priesthood, the new is always superior to the old (Heb 7:18,22; 8:6; 9:11; 11:35; 12:24) for the old is impotent and imperfect (Heb 7:18,28; 8:7,13; 9:8–10; 10:1,2,9), indeed annulled (Heb 7:18; 10:9). The discarding of Judaism goes hand in hand with a form of self-definition which leans heavily upon it. Yet the argument is firm rather than shrill, marked by enthusiasm for the new rather than dislike for the old.

A quite different note is struck by the *Epistle of Barnabas*. It is best understood when located in Nerva's reign (96–98 C.E.), when Jewish fortunes underwent a brief revival. Nerva rescinded Domitian's extension of the Jewish tax, which had been much abused, and seems to have encouraged Jewish hopes for the reconstruction of the Jerusalem Temple. The strident tone, the note of urgency and anxiety in the letter are caused in part by the author's reaction to these events (Shukster and Richardson 1986: 17–32). The wholesale appropriation of Jewish traditions—properly, usually allegorically, understood—is more extensive, and the denial that the Jews are a covenant people is more explicit than in most other early Christian documents. Three things appear to have motivated the author: first, the tussle with Judaism over the proper interpretation of scripture, a theme which pervades the work and which probably reflects the author's own experiences with an increasingly confident rabbinic Judaism; second, the suggestion that the temple might be rebuilt, thus rejuvenating Judaism and making it an attractive alternative to Christianity, which evokes a passionate denunciation of Temple and cult (2:6–9; 5:1–3; 8:1–4; 16:1f.); and third, the confusion caused by those (Jews? Jewish Christians? Gentile Judaizers?) who claimed that the covenant privileges could be shared by both Jews and Christians—a view that the author adamantly opposes (4:11; 13:1; 14:1–2).

I. Conclusion

Two features of Jewish-Christian relations in this period stand out: their variety and their complexity.

"Variety" refers to the widely differing reaction of groups of Jews and Christians to each other, ranging on the Christian side from preservation or adoption of intimate ties with Judaism (Jewish Christians, Judaizers) to bitter and resolute rejection of it (Barnabas, Melito), and on the Jewish side from active persecution of Christians (Bar Kokhba) to an informed and civil dialogue with them (Trypho). Put simply, neither Judaism nor Christianity was a single, uniform entity. Each of them enveloped a wide variety of belief and practice. Different sorts of Jews met different sorts of Christians, and it is not surprising that they related differently to each other, too.

"Complexity" refers to the host of different factors which bred antipathy between Jews and Christians. *Political events:* the Jewish War and the Bar Kokhba rebellion, including their immediate effects and the subsequent use of them in anti-Jewish polemic. *Social standing:* the relative size, influence and official status of the 2 communities, generally favoring Jews, putting Christians on the defensive and sometimes involving persecution. *Territorial disputes:* common features and festivals, but above all competing claims to the Scriptures and heritage of Judaism which mark every document known to us in this period; in general, the greater the proximity the greater was the conflict. *Overlapping missions:* competition for the allegiance of the same group of interested gentiles, and disputed claims to magical and miraculous power. *Praxis:* reformation and selective adaptation of the Jewish law. *Continuity:* the existence of and the reaction to Jewish Christians, gentile Judaizers and exponents of the two-covenant theory. *Christology:* a crucial dividing line in almost all Christian documents, seen from the other side in the rabbinic

discussion of "two powers in heaven." *Self-identity:* the reformulation of Judaism by the Yavnean sages and the Christian search for a distinctive identity as it went its separate way. *Hellenization:* the demise of the Christian mission to Jews and the shift to the gentile world.

The combined force of these factors eventually and inexorably drove the 2 communities apart. Jewish Christians resisted the trend and ended up in no-man's-land, while Christian Judaizers periodically attempted to reverse it. The Marcionites made a clean and fairly painless break, but for most Christians it was a separation which began in agony and ambiguity and ended in open and lasting hostility. In retrospect the period 70–170 C.E. can be seen to have been the crucial formative century for the essentially negative view of Judaism which was to dominate the Christian West.

STEPHEN G. WILSON

JEWISH WAR (66–73 C.E.). The name usually given by scholars to the uprising of the Jews against the Romans that took place between 66 and 73 C.E.

A. Causes and Factors
B. The Role of the Moderates and the Early Stages of Conflict
C. Preparations for War—Jerusalem and the Galilee
D. The Roman Campaign in Galilee and Judea
E. Anarchy in Jerusalem (67–70 C.E.)
F. The Siege and Fall of Jerusalem (70 C.E.)
G. The Capture of Masada (74 C.E.)

A. Causes and Factors

It is not difficult to find causes for the Jewish revolt against Rome. The primary sources suggest a number of very plausible ones, and modern scholars have offered other possibilities as well. Josephus, for example, focuses on a number of factors. For the most part he blames a small group of fanatical hotheads who utilized whatever means necessary (murder, pillage, burning homes, kidnapping) to foster rebellion (*JW* 1.1.4 §10). He also links the Jewish-pagan hostility which surfaced throughout Judea—especially in Caesarea—during the mid-1st century to the outbreak of the rebellion in Jerusalem (*Ant* 20.8.9 §184). Finally, he points an accusing finger at the corrupt and rapacious procurators whose ambitions, appetites, and incompetence contributed enormously to generating the final confrontation (*JW* 2.14.1 §272–76). Tacitus, too, implies that much responsibility for the war lies with the cruel and irresponsible behavior of governors such as Felix and Florus (*Hist.* 5.9.3–5; 5.10.1). Rabbinic literature, largely ignoring these kinds of historical factors, opts for moralistic considerations—social hostility, a breakdown of values, and overly materialistic concerns (*Tosefta Menaḥot* 13:22; *b. Git.* 55b–56a).

To these reasons modern scholars have added other, socioeconomic factors. The devastating famine of 48 C.E., when combined with the oppressive taxation by the procurators, impoverished the people. Little wonder that brigandage increased markedly in the 50s. The fact that the first act of the Jerusalem populace after the defeat of the Romans was the burning of the Jerusalem archives contain-

ing debt records indicates the role played by economic factors at the outbreak of the revolt. It has been suggested that the wealth pouring into Jerusalem from donations by Jews the world over heightened class tensions, making the rich richer and leaving others in even greater poverty.

Social conflicts within Jewish society at the time are also viewed by modern historians as an important factor that contributed to the revolt. The widening social rift within the city, together with rural disenfranchisement due to heavy taxation, population increase, and growing economic instability, added fuel to the fire of revolt.

Jewish-pagan tensions in late Second Temple Judea have likewise been singled out as a primary reason for the conflict with Rome. These tensions were exacerbated by the employment of local pagan inhabitants in Rome's auxiliary contingents stationed in Judea.

The existence of this wide range of theories regarding the causes for the revolt indicates the complexity of the problem. Our sources can substantiate each and every view, and there can be little doubt that many factors indeed contributed to the outbreak against Rome. The search for one basic cause, however, is misleading, for most if not all of the above factors were present in Jewish society, and each played a distinct role among one or more of the many groups involved in the events leading to the outbreak of the revolt. Divisions among the Jews were numerous. We know of the existence of moderate and radical camps among them. In the former were the high priestly families (undoubtedly Sadducees), some Pharisees, the Herodian family, the urban aristocracy, and others. The radical camp was comprised of a number of different groups that, even at the very beginning of hostilities, fought one another no less than they did the Romans and the moderates. By the end of the war, no less than five different revolutionary parties existed, and the tension and friction among them were devastating.

Compared to the later Jewish revolt under Bar Kokhba, or the previous one under Judah the Maccabee, the revolt of 66 C.E. was unique in its lack of overall organization, planning, and leadership. Given this chaotic situation, in which many different groups, each with its own ideology, leadership, and composition, were competing with one another, it is no wonder that to speak of an underlying cause of the revolt is misleading. The number of grievances were at least as numerous as the many different factions, and no doubt opinions and motivations differed even within any one group. For example, both Rabbi Simeon b. Gamaliel and Rabbi Yoḥanan b. Zakkai belonged to the Hillelite faction within Pharisaic circles. They even functioned together in a number of halakic matters. Nevertheless, their political paths (and presumably their attitudes toward the war as well) differed greatly: Rabbi Simeon, a leader of the moderate faction, stayed in Jerusalem until the bitter end (and probably died there during or soon after the end of the siege); Rabbi Yoḥanan fled the city at the height of the siege, seeking asylum with the Romans.

B. The Role of the Moderates and the Early Stages of Conflict

Judea's plunge into war was neither sudden nor total. Immediately after the cessation of the daily sacrifice on behalf of the emperor, and the capture of Masada in the fall of 66, the leading citizens of Jerusalem, together with the chief priests and Pharisees, tried—albeit unsuccessfully—to dissuade the people from embarking on a course of confrontation with Rome. They then attempted to crush the revolt by urging Florus and Agrippa to send troops to the city. The latter responded by dispatching 2,000 cavalrymen and, in alliance with the moderates, held the Upper City. The Lower City to the east, including the Temple Mount area, was in the hands of the revolutionaries; after a week of fighting the insurgents seized the Upper City as well.

The moderates were led by the wealthy aristocratic Jerusalemites, either of the priestly or lay variety. The Herodian family, the Sadducees, the Boethusians, and others of the priestly oligarchy were certainly foremost in these circles, tending to be more cosmopolitan and pro-Roman than others in the group, whether out of self-interest or because their political, social, and cultural perspectives demanded moderation and accommodation rather than confrontation and fanaticism.

What exactly did the moderates want? Some, indeed, were opposed to the revolt, as, for example, those who wished to avert hostilities by appealing to Agrippa and Florus. Others, however, do not seem to have been completely opposed to a revolutionary posture. Hatred for (or at least dislike of) Rome was probably widespread, even within the upper classes, both because of the desecration of the temple and appropriation of its money and because of Rome's curtailing of the authority of the aristocracy and high priests. Some may have shared in the apocalyptic fervor, while others may have feared the hostility of the urban poor and the rural peasants appealed to by the Sicarii. Some moderates may have wished to simply maintain their position of leadership in the community, even if this entailed a revolutionary stance with which they did not fully identify.

Other circumstances, however, may have been decisive. The anti-Jewish hostility which surfaced in many nearby Hellenistic cities at this moment of crisis, in addition to the threat of Roman retribution, served to unify disparate parts of the nation. Pro-Roman leaders then might have joined with the revolutionaries in self-defense. Undoubtedly, some of the more moderate leaders felt that by cooperating with the rebels they could more easily control the course of events, and perhaps even negotiate a settlement at an appropriate time. Even when the die was cast, there were those—and Josephus himself may have been one of them—who thought in terms of a limited conflict and the creation of a new modus vivendi with Rome, which would include curtailed procuratorial authority and, concomitantly, expanded Jewish autonomy. Preparations for war did not preclude suing for peace at the appropriate moment, as the city of Tiberias did in the spring of 67 (*JW* 3.9.8 §455). Finally, there appear to have been moderate leaders who felt that their cause might be supported—militarily or diplomatically—by fellow Jews throughout the empire.

The radical camp was at first spearheaded by two factions, one headed by a priest—Eleazar, son of Ananias—and the other by the Sicarii under Menachem, a descendant of Judas the Galilean. Eleazar had been the one

primarily responsible for the decision to cancel the sacrifices on behalf of the emperor. He was supported by popular revolutionary leaders and led a coalition of lower priests and leaders of the populace in opposition to the traditional high priestly authorities. In the early days of the revolt Eleazar's group, composed primarily if not exclusively of Jerusalemites, occupied the temple and Lower City, thereby depriving their high priestly opponents of access to the temple (*JW* 2.17.6 §425). No doubt the conflict between these groups smacked of a class struggle as well.

During the course of their struggle, Eleazar and his followers were joined by the Sicarii and Menachem, who assumed control of the revolutionary forces in the siege of Herod's palace and the towers. Menachem entered Jerusalem fresh from the conquest of Masada and at the head of a band referred to by Josephus as "some of the most ardent promoters of hostilities" (*JW* 2.17.2 §408). Capturing the Roman garrison at Masada supplied Menachem and his followers with the weapons necessary to become a significant force in Jerusalem. He is described as having appeared "like a veritable king," and later on is said to have worn royal robes. Presumably, Menachem had regal pretensions, although it is far from clear whether he bore any messianic overtones.

After his victory in the Upper City, Menachem emerged as potentially the strongest leader in Jerusalem, arousing the jealousy of Eleazar's followers—despite their view of Menachem as being of inferior social rank. They thereupon attacked Menachem while he was at worship in the temple. Many were massacred on the spot; Eleazar b. Ya'ir and others escaped to Masada, where they remained for the duration of the revolt (*JW* 2.17.9 §447). Menachem himself took refuge in the Ophel in the Lower City, where he was caught, tortured, and finally put to death.

The Sicarii thus ceased to play any role in Jerusalem affairs. Josephus reports that the urban populace supported Eleazar in his confrontation with Menachem, assuming that the latter's death would end the revolt. This, however, was wishful thinking. A series of events unfolded in the coming months (August–November 66) which eliminated any hopes there might have been for rapprochement. According to Josephus, the same day the rebels decimated the Roman garrison in Jerusalem, the gentiles of Caesarea slaughtered some 20,000 local Jews. This set off a wave of Jewish reprisals throughout the country: Jews attacked their gentile neighbors in Syrian villages, in Philadelphia, Heshbon, Gerasa, Pella, Scythopolis, Gadara, Hippos, and the Golan, as well as in other places along the Phoenician coast from Tyre to Gaza. These were not coordinated attacks under a centralized leadership but rather local conflicts initiated by local leaders. Justus of Tiberias led the attack on Gadara and Hippos; John of Gischala, the one on the Tyrians. The gentiles, for their part, immediately sought vengeance, and many Jewish communities were adversely affected. Specifically mentioned are Scythopolis, Ascalon, Ptolemais, Hippos, Gadara, and Tyre. Even in the territory of Agrippa II, a Jewish delegation of 70 leaders was attacked and massacred.

Finally, and after much delay, the Roman governor of Syria, Cestius Gallus, decided to march on Jerusalem and put an end to the incipient rebellion (*JW* 2.18.9 §499–555). The time was October of the year 66. Gathering a large force of over 30,000 men in Antioch, Gallus passed through Ptolemais and Caesarea, put Lydda to the torch, and approached Jerusalem via Beth Horon. Repelling a Jewish attack in the Beth Horon area, Gallus then moved on Jerusalem and burned Bezetha, the northernmost suburb of the city. At first he tried to enter Jerusalem via Herod's palace, but altered his strategy five days later and decided to mount an assault on the N wall of the Temple Mount. Suddenly, however, Gallus withdrew from the city and headed toward the coast. The Jews, drawing courage from this surprising retreat, pursued the Romans. Apprehending them near Beth Horon, the rebels slew some 6,000 soldiers and captured a good deal of Roman equipment. Only by a deft stratagem was Gallus able to avert a complete and total defeat. The die thus had been cast. The Jewish victors returned to Jerusalem in joyous celebration, and many pro-Roman Jews left the city. The moderate elements united and succeeded in forming a provisional government which was to manage affairs in the city for over a year.

C. Preparations for War—Jerusalem and the Galilee

The defeat of Gallus ended any hopes of early negotiations, and the Jews were now irrevocably committed to war. The first act of the rebels was to set up a revolutionary government (*JW* 2.20.3 §562–68). The tasks of this group were formidable: new policy and strategy had to be formulated, reforms of existing institutions had to be made, and military preparation had to be undertaken. Joseph, son of Gorion, and Ananias, the former high priest, were selected to be supreme commanders in the city. Another member of the high priestly circles who played a prominent role in governmental affairs at the time was Joshua b. Gamla (*Life* 38 §193). Others were chosen to take charge of specific territories in the country: Joshua, son of Sapphas, a high priest, and Eleazar, son of the high priest Neus, were put in charge over Idumea; Joseph, son of Simon, over Jericho; Manasseh, over Perea; John the Essene, over Thamna, Lydda, Joppa, and Emmaus; John, son of Ananias, over Gophna and Acrabetta; and Josephus, over the Galilee, including Gamla (*JW* 2.20.3 §566–68).

We are particularly well informed about the preparations for war in the Galilee, for Josephus himself was central to these events. However, this abundance of information bears a price. Discrepancies and contradictions abound in his reports of the Galilee; his descriptions in *Jewish War* differ from those in the *Life*, and they were written some twenty years apart, each for its own purposes and each with its own tendentiousness.

One matter, however, is quite clear from Josephus' accounts. The Galilee was far from united on the question of war with Rome. Josephus found his greatest support among the "Galileans"—Jews from the countryside and villages. They were always found in his entourage, their leaders dined with him, and they were summoned to a conference, appointed to judicial-administrative positions, and served as emissaries to Jerusalem. These Galileans nurtured a deep hatred of the three largest Galilean cities—Sepphoris, Tiberias, and Gabara—and needed little excuse to attack them. Much of their animosity undoubtedly was linked to the age-old urban-rural tension, but

some must have also related to differing views on the question of war with Rome. Of the larger cities, only Tarichaeae (Migdal) aligned itself with Josephus and was later joined by smaller towns like Jotaphata and Gamla. Tarichaeae's anti-Roman posture may have been influenced by its hostility to nearby Tiberias, which they understood as a direct result of Roman-Herodian rule. Tarichaeae was also a veteran Galilean settlement—in contrast to Tiberias, which had been settled in more recent years (19–20 C.E.) by a mixture of area residents and transferees from other places. Therefore, Tarichaeae's alliance with the rural Galileans against Tiberias reflected a complex set of issues: city versus city, an older settlement versus a newer one, an indigenous population versus foreigners.

When the Romans were finally ready to attack, the Galilee was prepared to offer little more than token resistance. Most were not inclined to fight; however, those who had a penchant for revolution were divided into numerous factions. The major city of Tiberias was torn asunder by rival claims. Josephus was thus able to accomplish very little. John sealed off the Upper Galilee, and the major urban centers turned their backs on revolution. With the arrival of the legions in the spring of 67, many of those whom Josephus had mustered to service had deserted, and Josephus was forced to take refuge in Jotapata, thus ensnaring himself in the Roman siege.

D. The Roman Campaign in the Galilee and Judea

Upon learning of the disastrous defeat of Cestius Gallus, Nero appointed one of his outstanding generals, Vespasian, to direct the campaign against the Jews. In the end, only a few places offered serious resistance to Rome: Jotapata, where a 47-day siege was required to subdue the city; Gamla, finally overrun after a vigorous resistance, triggering a mass suicide; and Tarichaeae, where rural Galileans played an active role in inciting the residents.

The Roman campaign of 67 ended with a quick foray into Judea and the capture of Jamnia and Azotus (*JW* 4.3.2 §130). Garrisons were placed there, and the legions spent the winter months in Caesarea and Scythopolis.

In the early months of 68, Roman strategy called for reducing all resistance in and around Judea, so that Jerusalem would be isolated. By late spring of 68, all Judea—including Perea and Idumea—had been subdued. Only Jerusalem stood alone and remained to be conquered.

At this moment, however, events in Rome caused all operations to be suspended for almost two years. On June 9, 68, Nero died and Vespasian's mandate to conduct the war likewise expired. He was forced to await fresh orders from the new emperor. The transfer of authority in Rome did not go smoothly. This year is known in Roman history as the Year of the Four Emperors. Galba was acknowledged as emperor but was soon followed by Otho; and he, in turn, by Vitellius. Rebellion and insurrection were the order of the day, and no one in the imperial city was interested or concerned enough to address himself to the question of Judea. After a year's waiting, and after having observed with consternation the increasing chaos engulfing Rome, Vespasian, on July 1, 69, staked a claim to become the new emperor of Rome. The road from declaration of intentions to final realization, however, was not altogether smooth, and another half year passed before Vespasian and Titus were able to validate that declaration. In December 69, Vespasian was acknowledged as Rome's new ruler. It was only then that the new emperor was prepared to realize his goals in Judea, but now he had to await the advent of spring, for it was a cardinal rule in the Roman army not to fight during the winter months.

E. Anarchy in Jerusalem (67–70 C.E.)

We know practically nothing about the events in Jerusalem during the year and a half in which the moderates ruled. Josephus' narrative for the year 67 focuses almost exclusively on the Galilee, and only toward the end does it mention Vespasian's campaign in Judea and Perea. Not only did the moderates enjoy supreme rule in Jerusalem but their influence on other areas was considerable as well. Josephus' reports from the Galilee of his contacts with the Jerusalem authorities during the early months of 67 are very important regarding this matter.

It was Vespasian's successes in the Galilee, and even more his incursions into the Judean countryside in late 67, that upset the balance of power in Jerusalem. Refugees poured into the city, and social, political, and religious strains soon became unbearable. One of the first to arrive in Jerusalem (around October 67) was John of Gischala.

Despite Josephus' attempts in *JW* to depict him as a wild-eyed radical, John appears to have adopted a rather cautious, moderate revolutionary posture in Gischala and the Upper Galilee. His political and military activity was spurred not so much by anti-Roman sentiments as by the need to defend his hometown from the raids of non-Jewish neighbors. His opposition to Josephus stemmed not from any radical proclivities but from the rivalry between two strong and moderate prorevolutionary leaders, each of whom aspired to control the Galilee. Nevertheless, John's identification with the moderate Jerusalemites was short-lived. Along with Jerusalem society in general, he, too, became radicalized, turning his back on his former allies and joining the newly emergent Zealot party. This took place during the winter of 67–68.

Josephus associates the Zealot party, which seems to have crystallized about this time, with the leadership of Eleazar b. Simon and Zecharias b. Amphicalleus. It was composed of two main elements—the lower-class priests, and refugees from the Judean countryside (referred to by Josephus as brigands). The formation of this party in the winter of 67–68 was no coincidence. The enormous increase in the population of Jerusalem and the presence among these refugees of disaffected revolutionary and brigand leaders, along with disillusionment with moderate leadership and the losses incurred the previous year, all contributed to an explosive atmosphere in the city. See ZEALOTS.

The Zealots unleashed a reign of terror throughout the city. They succeeded in taking over the temple precincts and fortified themselves against any popular reaction. This action, together with their selection of a nonqualified high priest, aroused public enmity against Zealot excesses. It was only then that the moderate leadership—Joseph, the son of Gorion, Rabbi Simeon b. Gamaliel, and the two priests, Ananus and Jesus b. Gamla, rallied to meet the challenge. Appeals to individuals and a mass move by the moderates was effected, and the Zealots feared an attack by the populace. The moderates then sent a delegation to

negotiate with the Zealots. John was appointed but took this opportunity to change his allegiance (a step that he undoubtedly contemplated for some time) and side with the Zealots. He accused Ananus of betraying the city to the Romans and of preparing an attack on the Zealots scheduled for the next day (*JW* 4.3.14 §216–27). At his suggestion, the Zealots sent for the Jews of Idumea to aid them; with this invitation, yet another radical group was now to be introduced into the city.

Marshalling a large force under the command of four generals, the Idumeans marched to Jerusalem in a driving rainstorm only to find the gates barred. After a short delay the Zealots succeeded in evading the guards and opening the gates. The Idumeans, along with the Zealots, then conducted a purge of the populace, including the moderate leaders. After much plundering and killing, they tracked down the high priests, whom they considered arch-traitors. Ananus, the only moderate leader with sufficient stature to offer an alternative political course, was killed. Josephus claims that the capture of the city began with Ananus' death, its downfall with the sight of a high priest butchered in public (*JW* 4.5.2 §318). According to Josephus, at least, Ananus represented the one hope for a negotiated settlement with Rome. For their part, the Zealots hunted down other major figures. As a result of these acts, the number of people deserting Jerusalem increased dramatically; many of them urged Vespasian to overtake the city as soon as possible.

In the midst of such excesses, the Zealot coalition fell apart. John, who presumably had not taken part in the slaughter (perhaps out of attachment to his former allies), broke with them and was followed by some of the Idumeans. Other Idumeans left the city in disgust, and still others united with some of the priests and Jerusalem populace in order to confine both the Zealots and John within the temple area. Although he severed his ties with the Zealots, John never confronted them militarily. He was an ambitious, opportunistic, and charismatic leader. While he may not have engaged in the same bloody massacres as the Zealots, he was equally unable to unify the factious city.

In the spring of 69 John and the Zealots held the temple while the Idumeans, the remnants of the moderate party, and the Jerusalem populace laid siege to it. The latter groups, realizing they could never deliver the final blow by themselves, turned to another outside force, a move which only succeeded in further dividing the city.

It was at this point that Simon bar Giora was invited into Jerusalem. However, Simon and the Idumeans were unable to dislodge John and the Zealots from the temple area, and for over a year warfare ensued between the several factions. The Zealots were ensconced in the inner temple area, John in the outer temple precincts, and Simon, the Idumeans, and the Jerusalemites were in the Upper and Lower cities. Jerusalem continued to be ravaged throughout this period; murders and plundering were rampant, and vast stores of food were destroyed by both sides (*JW* 5.1.4 §21–6).

Thus, by the time Titus approached Jerusalem in the spring of 70 for his final assault, the city was teeming with rival revolutionary groups, each bearing its own distinct leadership, ideology, origin, and history. Leadership of the city had passed into the hands of Simon. According to Josephus, Simon commanded 10,000 of the 23,000 troops then in Jerusalem and was allied to a 5,000-strong Idumean contingent. John had 6,000 troops at his disposal, and the Zealots 2,400. These Jewish forces had fought one another for a year before they were able to forge some semblance of unity—but by then it was too late. Even if united, they could never have hoped to withstand the Roman onslaught. Sooner or later Jerusalem was doomed to fall. However, with the internal wounds still festering and the Jewish body politic so shredded, conquest by Rome came all the sooner.

F. The Siege and Fall of Jerusalem (70 C.E.)

Titus marched on Jerusalem at the head of four legions. At first the Jewish forces made a number of successful forays against the besiegers, as Titus initially concentrated his efforts on the northwestern section of the city just north of the Hippicus tower. Having successfully breached the outer two walls, the Romans found themselves in the narrow streets of the city. Utilizing their greater mobility and knowledge of the neighborhood, the Jews inflicted heavy casualties, and the Romans were forced to retreat. The respite, however, was brief. Four days later the Romans renewed their attack and, destroying a large section of the wall, took this part of the city. Now came the last and the most difficult stage of the siege—the assault on the Antonia fortress.

The Romans erected four ramparts against the Antonia fortress. Their advance was now much slower and more costly: They succeeded in breaking through the outer wall, only to find that the rebels had built another one directly behind it. Despondent because of the futility of their continual efforts, the Roman troops were given encouragement by Titus, and the siege work resumed. After repeated efforts, the Antonia was overrun, and the Romans continued on to the temple itself, where they were repelled by the forces of John and Simon. Josephus notes that it was at this point that the daily sacrifices at the temple were suspended, due to the lack of animals. With the Jewish forces ensconced within the temple precincts, Titus once again offered terms of peace. The appeal encouraged a number of people, particularly those from the upper classes and priestly families, to cross over to the Roman side. Titus sent them to Gophna, which was being used then as a refugee center.

Unable to dislodge the stones of the temple wall after using the battering ram for days, the Romans set fire to the gates and porticoes of the temple. Continuous fighting slowly forced the Jews back into the confines of the temple's inner court. It was at this point that Titus called a strategy meeting of his chief commanders to determine the fate of the temple: Should it be destroyed or spared? Overriding the advice of his advisers, Josephus reports, Titus decided that the edifice was not to be destroyed under any circumstances, as it would serve as an ornament to the Roman Empire. There is reason to doubt the accuracy of Josephus' narrative, since a 4th-century writer, Sulpicius Severus, reports that Titus himself decided to destroy the Jerusalem edifice. Destroying a temple could easily be construed as an act of impiety, and it is quite understandable that Josephus might have wanted to exon-

erate his friend and patron from having a hand in this act, if indeed he was responsible. The contradiction in our sources as to Titus' responsibility for the destruction of the Second Temple remains unresolved. Josephus reports that the temple was destroyed on August 30, the 10th of Ab, the same day the First Temple was destroyed by the Babylonians according to Jer 52:12 (2 Kgs 25:8 gives the dates as the 7th of Ab, and later rabbinic tradition settled on the 9th of Ab).

The Romans now proceeded to destroy the entire city. Rejecting Simon and John's suggestion to discuss terms of surrender, Titus had his troops burn large sections of Jerusalem. On the 20th of Ab, the Romans began their attack on the Upper City by constructing embankments in four places. At this point, the Idumeans sought to come to terms with Titus but were prevented from doing so by Simon. Completing the embankments in eighteen days, the Romans prepared for a final assault. Resistance was now slight; the remaining forces fled to underground passages or attempted to flee the city. The Romans quickly took the Upper City, and victory was complete; Jerusalem was in their hands. Following a mass slaughter, fire broke out and the city was entirely destroyed. John was sentenced to life imprisonment, and Simon was to be executed following the triumphant procession in Rome. Josephus estimates the number of those who perished in the siege at 1,100,000; Tacitus speaks of 600,000. Both numbers, however, appear to be exaggerated. The entire population of Jerusalem at the height of the siege probably never exceeded 250,000 (its 23,400 soldiers probably represented about 10 percent of the total population).

G. The Capture of Masada (74 C.E.)

Following the fall of Jerusalem, Jewish rebels continued to hold three fortresses: Herodium, Machaerus, and Masada. The first two were taken with relative ease by the new Roman legate, Lucilius Bassus.

In 73 C.E., Bassus died in office and was succeeded by Flavius Silva. The new governor turned his attentions to the last remaining Jewish stronghold at Masada (*JW* 7.8.2 §275–419). Only one spot—the western slope of the mountain—presented itself as an appropriate place for a ramp. The Romans proceeded to erect a 100-m-high embankment, on top of which large stones were placed to serve as a platform for the siege engines. They then threw their battering ram into action with devastating effectiveness, only to find that the Jews had erected a second wall behind the first. They set fire to this wall, but their plan at first appeared to have backfired as the wind blew the flames back in the face of the soldiers. However, a sudden wind change caused the flames to envelop the inner wall and set it ablaze.

The conquest of the fortress was imminent, and realizing that there was no hope of victory Eleazar gathered his comrades in an attempt to convince them that suicide was the only honorable course of action remaining. Josephus has left us a detailed account of what supposedly transpired. To be captured by the Romans would have meant torture, humiliation, and death. Eleazar is said to have reviewed some of the ideological tenets associated with the Fourth Philosophy (for instance, the recognition that there is but one God and that no Jew should become a slave) and finally argued that God had now turned against the Jews, dooming them to destruction. How else would He have let such wholesale destruction take place in Jerusalem or have allowed the city to fall into ruins? The misfortune which befell the entire Jewish nation was to be the lot of the Sicarii as well, but it should come at their own hands and not at the hands of the Romans; let them say, "We preferred death to slavery."

Realizing that not all were convinced by these arguments, Eleazar reportedly renewed his appeal. This time, however, the argument took a more philosophical bent. Its major themes were not Israel, God, and sin but rather soul, death, and suicide: Life, not death, is man's misfortune. Death liberates man's soul from the shackles of the body, from the miseries and pain of mortal life. Thus, the soul is restored to its pure sphere, unadulterated by things human. Eleazar then compared death to sleep in which the soul is liberated from the body to enjoy complete repose, holding conversation with God and foretelling things of the future. The example of Indian philosophers is invoked—people who hasten to release their souls from their bodies through immolation leave the soul as pure as possible. Moreover, God himself has decreed defeat; the Romans cannot claim this victory. To live and see the women and children desecrated, tortured, or sold as slaves is worse than death.

Subsequently, each of the defenders of Masada is said to have executed his own family; and each of these, in turn, was killed by ten men chosen by lot. These ten were then killed by the last survivor, who then committed suicide. Only two women and five children who had hidden in a cistern escaped this fate. The following day, upon entering the fortress, the Romans were astounded and dumbstruck by the mass suicide.

Despite its inherent drama and heroic grandeur, Josephus' account of the Masada episode is not without its problems. How is it that these pious Jews chose suicide? Did Eleazar really make such speeches? Is this story really based on the reports of two women and five children who had been hiding in a cistern? And even if plausible, Eleazar's second speech sounds more like the words of a Stoic philosopher than of a commander of a group of revolutionaries on an isolated mountain fortress in a remote province of the empire. If 960 people committed suicide, where are the remains of their bodies? And why would Josephus glorify a group of people whom he hated? Let us try to resolve at least some of these problems.

In the first place, similar mass suicides are well known in antiquity generally and in Jewish history in particular. Many Jews in Jotapata and Gamla preferred killing themselves to falling into Roman hands, and the actions of the Masada defenders are therefore quite plausible. Secondly, whether all the defenders of Masada died as described or whether some actually died fighting, the fact that so few bones have been found is surprising. No convincing explanation has heretofore been offered. Thirdly, Eleazar's speeches are almost definitely the product of Josephus' pen: he most probably attempted to put into the mouth of a hero what might or should have been said at that critical moment, an exercise that was universally practiced among ancient historians. Finally, it seems that Josephus' intent in telling the story was not so much to idealize the Sicarii as

to fix the blame on this group of revolutionaries. He had Eleazar take responsibility for the war, admit that he was mistaken and had sinned, and that, in the end, God had rejected the Jews. The death of the Sicarii by their own hands was a dramatic statement of the futility and misguidance of those who dared to challenge Rome. Josephus remained the fierce opponent of Jewish revolutionaries to the very end. That he packaged all this in the dramatic account which lent an aura of heroism and even admiration to the victims was not his primary intention. At best, it was the price he was willing to pay to conclude his book on a heroic and dramatic note. (See the discussion in *HJP*^{2} 1: 484–513.)

JEWS IN THE NT. There are many references to "Jews" in the NT. The meaning and interpretation of these references is a matter of debate among scholars.

A. Historical Introduction
B. "The Jews" in Matthew
C. "The Jews" in Mark
D. "The Jews" in Luke
E. "The Jews" in Paul
F. "The Jews" in John
G. Conclusion

A. Historical Introduction

The English word "Jew" is related to *Iudaeus* in Latin and *Ioudaios* in Greek; *juif* in French and *Jude* in German represent similar borrowings. Current usage distinguishes between "Jewish," an ethnic designation, and "Judaic," to refer to the religious movement (especially in the ancient period), but etymologically the same word is in question. The entire complex of adjectives and nouns ("Jew," "Jewish," "Jewry," "Judaic," "Judaism") derives from "Judah," which became the most prominent of the twelve tribes of Israel during the monarchies of David and Solomon (ca. 1000–922 B.C.). Indeed, the consolidation of power in Jerusalem clearly aroused tribal jealousy; despite its theoretically neutral location, it represented the regnant influence of the Judeans (1 Kgs 11:26–40; *BHI* 178, 179; 207, 208). The ascendancy of Judean power therefore contributed to the division of Israel into northern and southern kingdoms at the end of Solomon's reign. Notably, the name "Israel" is appropriated by the northerners, and "Judah" is accepted as the designation of the southern kingdom. In 1 and 2 Kings, the stereotyped phrases, "the book of the chronicles of the kings of Israel," and "the book of the chronicles of the kings of Judah" appear very frequently; for example, in 1 Kgs 14:19; 15:7. When the Assyrians took Samaria (722/721 B.C.), the capital of Israel, and exiled thousands of its citizens (2 Kgs 17:1–6; *BHI* 257–58), the weakened kingdom of Judah—itself practically an Assyrian satellite (2 Kgs 16:5–16; *BHI* 259–61)—was all that survived of the nation. It has been observed that "Israel" is the natural designation of the chosen people of God in their discourse with one another, while "Jew(s)" (*Ioudaios*[*oi*]) is the normal reference of outsiders to the particular folk characterized by fidelity to the Hebrew Bible and its customs (*TDNT* 3: 360–61).

"Jews" might appropriately be used by the gentile Demetrius in respect of the nation (1 Macc 10:23), and—as the conventional designation—representatives of Israel might themselves use the term, especially in diplomatic contents (1 Macc 8:18, 20; *TDNT* 3: 360–61). The usage in the Diaspora appears to have been more common as a self-designation and may refer to the people of the covenant in any part of the world (2 Macc 1:1; *TDNT* 3: 363–65). If "Israel" remained the more proper name, God's own bestowal (Gen 32:28; *TDNT* 3: 362), "the Jews" was current, especially in the Diaspora, conforming with Hellenistic usage (*TDNT* 3: 369–71).

B. "The Jews" in Matthew

The distinction between "Israel" as the true name and "Jew(s)" as a common designation appears, at first sight, to be maintained in Matthew (*TDNT* 3: 376–77). Indeed, apart from one instance, every usage is within the phrase, "King of the Jews," and appears in the speech of gentiles: the three sages (2:2), Pilate (27:11), soldiers (27:29, 37). It has been argued (*TDNT* 3: 376) that Matthew is consistent with rabbinic usage, in that a preference for "Israel" as the correct designation is preserved (2:6, 20, 21; 10:6, 23; 15:24, 31; 19:28; 27:9, 42). But the last usage of "Jews," at 28:15, subverts any such consistency, when it refers to the false story of the theft of Jesus' corpse as ". . . spread among the Jews to this day." The reference not only assumes the same perspective upon people of the covenant as the earlier statements which gentiles make; it also associates "Jews" with a false account which is designed to undermine faith in Jesus' resurrection. For that reason, the usage assumes the division of the early Christian movement from Judaism (McNeile 1957: 434).

Attempts to dispense with the usage at 28:15, as a gloss (*TDNT* 3: 376), are understandable but doomed to failure. The evidence of manuscripts is quite straightforward, and Matthew otherwise manifests the conviction that belief in Jesus amounts to a transcendence of Judaism. The statement attributed to Jesus in 8:10, "Not even in Israel have I found such faith" (compare Luke 7:9), following as it does the Sermon on the Mount, uses precisely the designation ("Israel") which contrasts the centurion's faith to the very principle of Judaism, the election of Israel. When the crowds of 9:33 marvel, "Never was anything like this seen in Israel," the force of the statement is similar; taken together, 8:10 and 9:33 may also be said to shed new light on 15:31. Finally, the phrase "King of Israel" in 27:42

(compare Mark 15:32), a taunt in the mouths of Jesus' Jewish opponents, establishes that the conceptions of Judaism are profoundly at odds with the message to which Matthew is committed. But by this point, such ironies are anticlimactic: the Jewish people have already declared, "His blood be upon us and upon our children" (27:25).

The sources of the manifest anti-Judaism of Matthew are complex. "The Jews" to some extent represent those who reject Jesus and who therefore are themselves to be represented as liars (28:15) and willful murderers (27:25), in order to vindicate the christological claims of the Church (Ruether 1974: 94, 95). Then, too, Matthew—along with the other gospels—represents the Jewish leadership as primarily responsible for Jesus' death, although the method and agency of execution were inescapably Roman. That representation was convenient for apologetic purposes on two fronts. On one front, the Roman Imperium could be exculpated in the matter of the crucifixion: the message concerning Jesus could therefore be promulgated among gentiles without giving political offence (Ruether 1974: 88, 89). The uniquely Matthean episode of the dream of Pilate's wife (27:19) serves that purpose, as well as the people's response in 27:25. On the second front, the growing tension between followers of Jesus and the emerging authorities of synagogues after the destruction of the temple (A.D. 70) made it convenient to fasten guilt on the leaders of Judaism in Jesus' day (27:20; Mark 15:11; Ruether 1974: 87–89). Ruether has aptly referred to this complex of tendencies as the "anti-Judaic left hand" of christology (p. 95). In common with a recent convention, Ruether distinguishes the anti-Judaism of the early Church from the "racial anti-Semitism" of the modern period (pp. 220–21). But the Matthean prejudice against the Jews seems not only to be theological and apologetic (the gospel sets its face against the very people who tell false stories to confound faith in the risen Jesus [28:15], and even against their children [27:25]); but there also appears to be a rejection of "Jews" as such, not merely an argument with the theology and the leadership of Judaism.

The Matthean virulence concerning the Jews may, ironically, reflect the particularly close proximity of the gospel to the structures and authority of Judaism. As in all the gospels, no doubt is left as to the milieu of Jesus and his followers: they are Jewish, root and branch (Chilton 1984). Especially in Matthew, however, the connection between Jesus and Judaism is presented as inextricable to the point that there is no valid Judaism *apart* from Jesus. For example, the Matthean Jesus claims he has come to "fulfill" the law and the prophets (5:17), and even grants that the scribes and Pharisees he attacks "sit on Moses' seat" (23:2, 3). How scriptural fulfillment is to be reconciled with Jesus' formally antithetical attitude toward Scripture in the Sermon on the Mount (5:21–48), and how leaders can be obeyed whose teaching is—in violent terms—described as hypocritical (23:13–36), are matters which are left unresolved. No doubt, such tensions reflect the complex history of the composition of the document. Within that history, one of the axes of development is an ambivalent attitude toward the Jews and Judaism. But the inexorable tendency of that axis is one of an increasing hostility. The dark side of the movement from "the lost sheep of the house of Israel" (10:6; 15:24) to "all nations" (28:19) is a mounting intolerance—on an ethnic scale—of those who reject the message of Jesus.

C. "The Jews" in Mark

The tortured ambivalence of Matthew may be contrasted with the nearly studied restraint of Mark. All uses of the term "Jews" save one are in the phrase, "King of the Jews" (15:2, 9, 12, 18, 26), and do not present any significant novelty. The uses of "Israel" in Mark (12:29; 15:32) are similarly unremarkable, although the latter is as antagonistic to Judaism as its parallel in Matt 27:42. But a uniquely Markan parenthetical notice at 7:3, 4, is startling at two levels. First, the assumption that the reader needs to be informed that "the Pharisees and all the Jews" purify their hands and vessels manifests a greater distance from the institutions of Judaism than is the case in Matthew. Second, the Markan reference to "all the Jews" holding to practices of washing "cups and pots and copper vessels" is hyperbolic and implicitly condescending (Lane 1974: 245–47). The inference that Mark is written from the point of view of a Christianity which is essentially (and self-confidently) gentile, seems inescapable.

D. "The Jews" in Luke

A similarly detached attitude toward Judaism is manifest in Luke, where narrative asides extraneously refer to "elders of the Jews" (7:3) and to "Arimathea, a city of the Jews" (23:51). Obviously, great significance must not be read into such casual references, which are superimposed upon the by-now-familiar phrase, "King of the Jews" (23:3, 37, 38). In Acts, however, an apologetic usage of "the Jews" results in an explicit anti-Judaism, which, if less virulent than Matthew's, is nonetheless more direct (Ruether 1974: 88–90). The usages are ubiquitous (amounting to some seventy-eight instances), but their pattern is straightforward. "The Jews" can be regarded as pious, and to that extent susceptible of mission (2:5, 10, 14; 10:22; 16:1; 18:2, 24; 21:20, 21; 24:24). Mission, however, proves to be the primary occasion of statements against the Jews. The assertion that Jesus is Christ is assumed to be made in the face of Jewish opposition (9:22; 13:6; 18:5, 28) and sometimes of their deadly enmity (9:23; 12:3, 11). Nonetheless, Jesus is understood to have ministered in Judea (10:39), and despite the mortal opposition of Jews, strictures against associating with gentiles were observed (11:19; 16:3) until the full significance of Peter's vision (10:28) was grasped. The move to an explicit mission amongst the gentiles is accomplished, of course, by means of Paul. He preaches in synagogues, addressing Jews and their sympathizers (13:5, 13–16; 14:1; 17:1, 10, 17; 18:4, 19; 19:8–10; 20:21; 28:17), and the result is both success (13:43) and overt resistance (13:50; 14:2, 4, 5, 19; 19:9, the last a particularly evocative moment in the development of a predominantly gentile mission). Apostolic mission is therefore cast into an odd predicament: from the point of view of the Romans, it is Jewish (16:20; 18:14, 15; 19:33, 34; 24:5; 25:8, 10; 26:3), although its primary antagonists are Jews (14:2, 4, 19; 17:5, 13; 18:12; 19:33; 20:3, 19; 21:11, 27; 24:9, 18, 19, 27; 25:2, 7, 9, 15, 24; 26:2, 4, 7, 21; 28:19). That antagonism becomes the occasion on which Paul formally turns from the Jews to the gentiles (18:5, 6; 28:23–28). The last two passages cited manifest the apolo-

getic device which informs the usage of Acts. To the very end, it is insisted upon that some Jews believed in the preaching of and about Jesus (28:24), and yet Jewish disbelief and violence—both legal and illegal—is taken as validating an explicit emphasis upon the mission amongst gentiles. So determined a pattern is in play that it even influences the presentation of the beginning of Jesus' ministry in Luke (4:14–30; Chilton 1987: 125–56).

E. "The Jews" in Paul

The pattern of Acts may be taken as a fulfillment of the Pauline typology, in which the gospel of Jesus and his judgment is to be announced first to Jews and then also to Greeks (Rom 1:16; 2:9, 10; 3:1–8; 9:24; 1 Cor 1:24). The point for Paul, however, is not that Jewish rejection occasions a definitive preference for gentiles, as in Luke—Acts; rather, Paul insists that there is, before the one and only Lord, fundamentally "no distinction between Jew and Greek" (Rom 10:12; 3:9, 29). For just that reason, Paul can refer to the salvation of "all Israel" when he has in mind both Jews and gentiles (Rom 11:25, 26; 1 Cor 12:13; Gal 3:28; Col 3:11). On the whole, Paul is not optimistic about the conversion of his own people (Rom 9:3); despite his best efforts to accommodate to them (1 Cor 9:20; 10:32), they offer only resistance (1 Cor 1:22, 23; 2 Cor 11:24; 1 Thess 2:14). In Galatians, the Pauline ambivalence is at its most tortured. His argument that he advanced in "Judaism" beyond many of his contemporaries (1:13, 14) is used to support the claim that Jewish practices are an illegitimate incursion into the gospel (2:11–21). The next chapter of Galatians attempts to justify that position by means of the argument that the law is but a guide to the covenant of Abraham, which is fulfilled in Christ. The use of the term "Judaism" appears to have been characteristic of Hellenistic Judaism (*4 Macc* 4:26 and *TDNT* 3: 365). In another respect, as well, Paul appears distant from the ethos of Palestinian Judaism. His argument for a "circumcision of the heart, in spirit, not letter" (Rom 2:17–29) as the qualification of a person who is a Jew secretly, is more reminiscent of Philo (*Quaes Gen* 3.46–52; *Quaes Ex* 2.2) than of the rabbis. Paul, then, is torn between rejecting Judaism and redefining it.

F. "The Jews" in John

No such doubt is evident in the gospel according to John, with its approximately sixty-seven references to "the Jews." Unless it is thought that the reader might forget where the events transpired, many of these identifying references, in narrative and even in sayings of Jesus, appear quite superfluous (1:19; 2:18, 20; 3:22, 25; 11:19, 31, 33, 36, 45; 12:9; 13:33; 18:12, 14, 20, 31, 36, 38; 19:7, 12, 14, 20, 31), and the stilted explanation of Jewish customs is reminiscent of Mark (2:6, 13; 4:9; 5:1; 6:4; 7:2; 11:55; 19:40, 42). In most of these instances, practically no useful information is conveyed: to say that Jews take part in debates in Judea, or that they keep a holiday called Passover, would not educate most of the intended readers of John. The point seems rather to typify Jewish reaction to Jesus. The gospel is so imbued with the notion that Jews reject Jesus, that Nicodemus, "a leader of the Jews" (3:1), is addressed by Jesus with a paradox which causes misunderstanding (v 3). When it is borne in mind that Nicodemus has just praised Jesus in remarkably unqualified terms and has apparently visited Jesus at some personal peril (v 2), the reaction seems strange. It is as if the Jewish rejection of Jesus was not only inevitable (1:11) but divinely intended. The dialogue between Jesus and the Samaritan woman (4:1–30) best represents the attitude toward Judaism in John's gospel. Notably, Jesus is in Samaria as a result of Pharisaic opposition in Judea (4:1–3), which is effectively the territory of conflict in John. Jesus addresses a paradox to the woman (4:10), but her perplexity leads to incipient faith (v 29), where in the case of Nicodemus, perplexity brought only doubt and rebuke (3:9, 10). Theoretically, Judaism is declared superior to the worship of Samaria, "for salvation is from the Jews" (4:22), but that statement does not ensure the salvation of any particular Jew. Judaism is the source, but no longer the boundary, of God's salvific activity in sending his son (cf. 3:16–21). It is therefore not surprising when conflict, misunderstanding, and mortal opposition characterize Jesus' relationship with his Jewish contemporaries (5:10, 15, 16, 18; 6:41, 52; 7:1, 11, 13, 15, 35; 8:22, 31–33, 48, 52, 57; 9:18, 22; 10:19, 24, 31, 33; 11:8, 54; 19:38; 20:19). The synoptic phrase, "King of the Jews," is also represented in John (18:33, 39; 19:3, 19, 21), but the most evident feature in the Fourth Gospel in respect of "the Jews" is anachronism. Jews are pictured as excluding followers of Jesus from synagogues during his lifetime (9:22; 12:42; 16:2), and both Jesus and his disciples refer to "the Jews" as if to an alien group (11:8; 13:33; 18:20, 36). There seems little doubt but that such anachronisms reflect the social experience of the community in which the gospel was produced. The attitude is not yet as harsh as in the Revelation, where Jews are called a "synagogue of Satan" (2:9; 3:9), but in the Johannine literature generally there seems to be no backward glance toward Judaism, not even out of sentimentality, as in Paul, or in respect of piety, as in Luke-Acts.

G. Conclusion

The division of Judaism and Christianity is one of the paramount religious developments of late antiquity, and yet the causes, the mechanisms, and the timing of that division are all matters of speculation and debate. That the central figure of the NT was regarded in his own time as a rabbi, and that his first disciples were Jewish, cannot reasonably be doubted; on the other hand, a definitive break with Judaism is reflected in Luke-Acts, John, and the Revelation, assumed in Mark, struggled for in Paul, and agonized over in Matthew. Of course, the use of the term "Jew(s)" is only one criterion of this development; documents such as Hebrews and 1 Peter obviously evidence a relationship with Judaism, although they make no reference to Jews as such. But the use of "Jew(s)" in the NT makes it obvious beyond any doubt that the division came about for social, not immediately ideological, reasons.

The simple fact that some Jews—indeed an eventual majority—did not accept the message concerning Jesus is a necessary, but not a sufficient, condition of the usage of the NT. The nature of that negative response, and of the reaction of early Christians, needs also to be taken into account. After the destruction of the temple, Judaism came increasingly to be a religion of Scripture and tradition, centered upon the Hebrew Bible and the Mishnah.

Jerusalem, the actual, urban, and cultic center could no longer serve as a cohesive focus, and religious authority came increasingly to be located in the expository functions of rabbis. Where the priestly hierarchy had concerned itself principally with what was done in association with sacrificial worship, rabbinic power influenced first of all what was said and thought; and only on that basis could it determine what was done. One index of that development is a Haggadah told of Rabbi Eliezer ben Hyrcanos, an ardent traditionalist who flourished at the end of the 1st century and the beginning of the 2d. Denounced before a Roman judge, Eliezer explained to his disciples that his condemnation was just, since he had once discussed a point of Scripture with a follower of Jesus (*Abodah Zarah* 16b, 17a). See GAMALIEL (PERSON). Apparently, what was once considered acceptable came to be seen as intolerable. Christianity, in the meantime, came more and more to be dominated by the perspective of gentiles, to whom Jewish customs had either laboriously to be explained or else simplistically to be derided. Within the movement of gentile Christianity, christology became the common denominator, rather than the kingdom of God, an explicitly early Jewish concept which Jesus himself had emphasized. The NT, in its reference to "the Jews," manifests various stages in the social interactions which produced, out of the ferment of early Judaism, two mutually hostile stepchildren: rabbinic Judaism, which sought the sanctification of life by means of Scripture and tradition, and Christianity, which anticipated the redemption of life by means of the messiah promised in Scripture (Neusner 1985).

BRUCE CHILTON

JEZANIAH (PERSON) [Heb *yĕzanyāhû, yĕzanyāh*]. **1.** Son of the Maacathite and one of the troop commanders, who, following the destruction of Jerusalem in 587/586 B.C., chose to join Gedaliah, the ruler of Judah, at his administrative center at Mizpah (Jer 40:8; spelled "Jaazaniah" in some mss and in the parallel passage 2 Kgs 25:23). It is possible that he is to be identified with the Jaazaniah whose name appears on a contemporary seal from Tell en-Nasbeh. See JAAZANIAH (PERSON).

2. In the Hebrew text of Jer 42:1, reference is made to Jezaniah, son of Hoshaiah. However, this reading is clearly to be emended following the LXX (cf. also the MT of Jer 43:2) to read "Azariah son of Hoshaiah" (cf. RSV, JB, NAB, NEB). See AZARIAH (PERSON).

JOHN M. BERRIDGE

JEZEBEL (PERSON) [Heb *ʾîzebel*]. **1.** The daughter of Ethbaal, king of the Sidonians, and wife of Ahab the son of Omri and king of Israel (1 Kgs 16:29–31). As it is vocalized in the MT, the name Jezebel is probably a two-layered parody. The original name *ʾîzĕbūl* ("Where is the Prince?") first became *ʾî-zĕbūl* ("No nobility"). *Zĕbūl,* a title of Baal, was then distorted into *zebel* ("dung"; cf. 2 Kgs 9:37).

The biblical texts present a thoroughly negative picture of this undoubtedly powerful woman. Jezebel became the influential queen of the N kingdom as the foreign wife of Ahab. She fostered the worship of Canaanite fertility deities, supporting 450 prophets of Baal and 400 prophets of the goddess Asherah at her royal table (1 Kgs 18:19). In the meantime, she ruthlessly persecuted the rival prophets of Yahweh, causing them to go into hiding (1 Kgs 18:4). The great Elijah himself did not underestimate her death threats (19:1–3). Moreover, she contrived the legal death of Naboth the Jezreelite so that her husband could obtain his vineyard (1 Kings 21). Because of her so-called "harlotries and sorceries" (2 Kgs 9:22), she met her ignominious death at the hands of Jehu. But her death was not without dramatic flourish. Hearing the news of Jehu's massacre of the royal family, Jezebel "painted her eyes and adorned her hair." Looking down at her adversary from her window, she ridiculed Jehu as an upstart claimant to the throne like his predecessor, Zimri. Her harem eunuchs, sensing changes in power in Jehu's favor, flung her down from the window at Jehu's command. Jehu, whose appetite seemingly was not affected by the gruesome death ("he went in and ate and drank"), begrudgingly ordered a burial for the "cursed woman," since "she is a king's daughter." However, fulfilling Elijah's prophecy that "the dogs shall eat the flesh of Jezebel" (2 Kgs 9:30–37; cf. 1 Kgs 21:23), all that remained of Jezebel's body was her skull, feet, and hands.

In depicting her mainly as the unscrupulous foreign woman who illicitly intruded in affairs of her royal husband, the biblical texts gloss over the fact that Jezebel probably wielded considerable authority in her position as queen. According to Brenner (1985), Jezebel had two sources of power. The first was her status in her Phoenician homeland. As daughter of Ethbaal, king of the Sidonians, she was a princess by birth. According to Josephus (*Ant* 8.13.2), Ethbaal was also a priest in the Phoenician cult of the goddess Astarte (Ashtoreth). Brenner suggests that Phoenicia followed the Mesopotamian practice of appointing the king's daughter as the high priestess of the chief local god, in this case, Baal Melqart. With the king as high priest and his daughter serving as high priestess, links between the monarchy and the state religion were considerably strengthened. Together, the two were able to wield substantial political, economic, and religious power over the land. Hence, when Jezebel came to Israel she was accustomed to being an active participant in government. She promoted the cult of Baal, which had long enjoyed

extensive support in Israel, since her status as the god's high priestess was integral to her authority as queen.

Another power base was derived from her husband, Ahab. In spite of the negative bias of the Deuteronomistic framework, the texts reveal that she was an active partner in her husband's rule. Her religious and political skills made her a natural colleague in his administration. She had enough material resources to support the 450 prophets of Baal and 400 prophets of Asherah at *her* table. Moreover, the Naboth story indicates that her letters written in Ahab's name and the use of the king's seal were routine acts on her part, rather than an illegitimate usurpation of authority. There is no suggestion that these exercises of power were restricted just to the Naboth episode. Brenner thinks that Ahab allowed Jezebel to carry on in her religious and political role because it strengthened his own rule more effectively. The biblical narrators would have suppressed information of Jezebel as high priestess of Baal, since they did not acknowledge the validity of a female priesthood and the authority inherent in it.

2. A prophetess in the church of Thyatira who, according to Rev 2:20–23, "beguiles" the congregation "to practice immorality and to eat food sacrificed to idols." Although she was probably a real person, her name Jezebel seems to be symbolic. It refers pejoratively to the "harlotries and sorceries" of the OT queen who supported the prophets of Baal and Asherah at her court (2 Kgs 9:22; 1 Kgs 18:19).

GALE A. YEE

JEZER (PERSON) [Heb *yēṣer*]. JEZERITES. The third of the four sons of Naphtali (Gen 46:24; 1 Chr 7:13). Jezer was the grandson of Jacob and Bilhah (Gen 30:7–8), the maid whom Rachel gave to her husband (Gen 30:3). At the time when Jacob descended into Egypt to visit Joseph, seven children and grandchildren of Jacob and Bilhah were mentioned in his genealogy (Gen 46:25). According to Westermann (1986: 153) and Noth (*IPN*, 172), Jezer's name was a short form of a theophoric name, probably meaning "Formed by God," following the idea present in Gen 2:7 and Jer 1:5. Jezer became the head of the Jezerites, one of the clans of Naphtali (Num 26:49). Jezer and his clan are not mentioned anywhere else in the OT outside of the genealogy of Naphtali.

CLAUDE F. MARIOTTINI

JEZIEL (PERSON) [Heb *yĕzû'ēl* K; *yĕzî'ēl* Q]. One of the ambidextrous warriors from the tribe of Benjamin who joined David during the period of David's flight from Saul (1 Chr 12:3). He was a brother of Pelet and son of Azmaveth; Azmaveth should perhaps be identified with David's warriors in 11:33. In LXX^{B,S}, his name was given as *ioel* (Joel), probably because a text was read without the letter *zayin* in the name. The Chronicler has doubled the list of warriors who supported David (1 Chr 11:41b–12:40) beyond what was contained in the parallel narrative (2 Sam 23:8–39 = 1 Chr 11:10–41a). The source for these additional lists can only be a matter of conjecture, though Williamson has provided a convincing argument for the structure of 1 Chronicles 11–12. The long list reflects the Chronicler's concern to show "all Israel" united in support of David, a characteristic theme of his history. Within the immediate context (1 Chr 12:1–8—Eng 12:1–7) the Chronicler is concerned with showing the support David enjoyed among Saul's kinsmen before Saul's death; the 23 Benjaminite warriors named here joined David while he was at Ziklag, the Philistine city given to David by Achish, king of Gath (1 Chr 12:1; 1 Sam 27:6). Ambidexterity or left-handedness among Benjaminites is also noted in Judg 3:15; 20:16.

RAYMOND B. DILLARD

JEZRAHIAH (PERSON) [Heb *yizraḥyāh*]. Director of the choir at the dedication of the Jerusalem wall (Neh 12:42). His name is omitted in the LXX. The name, which means "Yahweh will shine forth," is the same as that of an Issacharite in 1 Chr 7:3 (RSV Izrahiah).

NORA A. WILLIAMS

JEZREEL (PERSON) [Heb *yizrĕ'ē'l*]. **1.** A descendant of Judah (1 Chr 4:3), usually understood as the eponymous ancestor or personification of the town of Jezreel in Judah (Josh 15:56). See JEZREEL (PLACE).

2. The symbolic name which the prophet Hosea gave, at God's command, to his oldest child, a son (Hos 1:4). In Hebrew, the name "Jezreel" (*yizrĕ'ē'l*) is very similar to "Israel" (*yiśrā'ēl*). The prophet plays on the similarity; Jezreel is a sign of Israel's fate.

The significance of "Jezreel" is twofold. In the first place, the name "Jezreel" recalls Jehu's bloodguilt and anticipates divine judgment against Jehu's dynasty (Hos 1:4–5). Jehu violently overthrew the Omride dynasty in the town of Jezreel, murdering King Joram, the queen mother Jezebel, their leading officials, and the Judean king Ahaziah (2 Kgs 9:1–10:11). Hosea announces that the house of Jehu will be punished with military defeat in the valley of Jezreel (Hos 1:4–5).

Secondly, "Jezreel" suggests divine beneficence. The Hebrew word means "God sows"; the valley of Jezreel is particularly fertile. In Hos 2:25—Eng 2:23, the prophet plays on the positive sense of the name to reverse the earlier word of judgment (cf. also 2:2; 2:24—Eng 1:11; 2:22). The precise meaning of the wordplay is disputed; it may be a promise to Israel of fertility, or it may mean that Israel will be firmly established in the land. In either case,

the significance of the child's name is reversed and applied to the whole of Israel, becoming a sign of restoration and hope beyond judgment.

CAROLYN J. PRESSLER

JEZREEL (PLACE) [Heb *yizrĕʿe'l*]. JEZREELITE. This toponym can be translated as "God sows" or "May God make fruitful." The name is associated with two distinct towns, as well as with a major geographical component of the Israelite kingdom.

1. A town in the tribal inheritance of Issachar (Josh 19:18), which scholars (*HGB,* 42) almost universally identify with Zerin/Tel Yizraʿal (M.R. 181218). The site is located at the E end of a fertile valley which shares the name Jezreel with the town. Jezreel is not mentioned in any ancient source prior to the Iron Age, so the site would seem to be an Iron Age foundation.

The first OT event associated with the site occurs during the preparations for Saul's battle at Gilboa, when the Israelite army camps at a spring near Jezreel (1 Sam 29:1). Under Solomon, Jezreel appears in the border description of the fifth district of the kingdom (1 Kgs 4:12), but serves to limit the district instead of being included within it. Jezreel was probably part of the tenth district of the kingdom (*LBHG,* 315). The town is absent from the list Shishak compiled of his conquests in Israel in the latter part of the 10th century B.C., so it is unlikely that the city was of much political importance at that time (*LBHG,* 327).

By the reign of Ahab (9th century B.C.), Jezreel had become the winter capital of the Israelite kingdom. As a political center, the town was the setting for a number of sanguinary events. Although the site has never been extensively excavated, the OT records that at the time of Ahab the city was defended by a city wall, which had at least one tall tower (2 Kgs 9:17). Ahab's palace was located in Jezreel and would seem to have had an upper story with windows (2 Kgs 9:32).

During Ahab's reign, a number of events occurred at Jezreel. Following the test between Elijah and the prophets of Baal and Asherah on the Carmel, Elijah is said to have run before Ahab's chariot when he returned to his palace in Jezreel (1 Kgs 18:46). A vineyard alongside the palace, belonging to Naboth the Jezreelite (1 Kgs 21:1), was coveted by Ahab and his queen Jezebel. When Naboth refused to sell his inheritance, Jezebel engineered his execution as a traitor (1 Kgs 21:10), so Ahab could acquire the property. Elijah cursed Ahab and his entire house for this crime (1 Kgs 21:23–24). See NABOTH (PERSON).

This curse was not carried out until the reign of Joram, Ahab's son. Jehu, commander of Joram's army, after being anointed by a disciple of Elijah, led a coup against Joram, killing him outside Jezreel and casting his corpse into Naboth's former vineyard (2 Kgs 9:25). On Jehu's order, Jezebel, Joram's mother, was thrown out of a palace window by palace eunuchs, and her corpse was trampled by Jehu's horses (2 Kgs 9:33). During the course of the coup, Jehu piled the heads of 70 sons of Ahab outside the gates of Jezreel, before killing all of Ahab's supporters within the city (2 Kgs 10:10).

As a part of this episode, the MT states (2 Kgs 10:1) that the elders of Jezreel were among the recipients of letters sent by Jehu concerning the fate of the sons of Ahab, who were living in Samaria. This passage is frequently emended (Cogan and Tadmor *2 Kings* AB, 113) on the grounds that since Jehu was in Jezreel at the time, the officials there would seem to have had little impact on the fate of the princes in Samaria.

By the time of Hosea (8th century B.C.), Jezreel had become a powerful symbol of the guilt of the Israelite kingdom, which was to be punished by destruction (Hos 1:4). The theological import of the prophetic passages referring to Jezreel in Hosea 1–2 is open to a number of interpretations (Andersen and Freedman *Hosea* AB, 172–86).

When the Assyrians destroyed the N kingdom of Israel, Jezreel lost its political importance, which was never regained. During the Hellenistic period the name of the town had become Esdraelon, the Greek version of Jezreel, from which the modern Zerin is derived.

In 2 Sam 2:9, Jezreel appears as part of a description of the kingdom of Ishbosheth, inherited from his father Saul. In this instance it seems clear that Jezreel represents a territory beyond that of the city itself, perhaps as large as the lands of Issachar and Naphtali (*HGB,* 31), although some doubt the ability of Ishbosheth actually to control the region following the defeat at Gilboa (McCarter *2 Samuel* AB, 87).

The use of Jezreel as a regional term leads to the question of the relationship of the town to the valley of the same name. Most scholars (cf. *LBHG,* 24) assume that the Jezreel valley stretched W from Jezreel to the plain of Acco and S to Ibleam (M.R. 177205). Some would extend the valley as far E as the Jordan (Pritchard 1987: 114), although most consider that region to be part of the valley of Beth-shean. A minority restrict the extent of the valley of Jezreel to the territory of the town itself (*GTTOT,* 31).

Whatever its exact extent, the Jezreel valley was a vital strategic link on the route between Egypt and Damascus. The valley was the scene of recorded conflict from the time of Thutmose III in the LB Age through the 1967 Arab-Israeli war. Its fertile land, which perhaps inspired the name "God sows," can make the valley an agricultural breadbasket, although neglect of drainage and conservation measures can turn much of it into an unhealthy marsh, as it was early in this century.

2. A town in the territorial inheritance of the tribe of Judah (Josh 15:56), as yet unidentified. Abel's (*GP* 2, 364) suggested identification with Kh. Terrama (M.R. 153098), although accepted by Rogerson (*RAB,* 94), should be rejected since the other towns mentioned in the passage are located to the SE of Hebron. This Jezreel would seem to have been the birthplace of Ahinoam (1 Sam 25:43), wife of David and the mother of his first son, Amnon, although Levenson and Halpern (1980: 513ff.) raise the possibility that Ahinoam came from the N Jezreel.

MELVIN HUNT

JIB, EL. See GIBEON (PLACE).

JIDLAPH (PERSON) [Heb *yidlāp*]. The seventh son of Abraham's brother Nahor and of Milcah (Gen 22:22). The name occurs here in a list made up mostly of personal names, and no evidence currently exists that it is also a name of a town or a region. In fact, it is otherwise unknown, and there is no ready explanation for it. Both "he weeps" and "he is sleepless" have been suggested as possible meanings. See *HALAT,* 214, 373, for the potential Hebrew root or roots and Semitic cognates and for citations of some literature which discusses them. Westermann (1985: 367) believes that the names among which Jidlaph appears do not make up a tribal enumeration. Rather, one has to reckon with a gradual development from a genealogical form still centered in the family to later tribal lists (cf. 25:13–16; 36:15–19). Kidner (*Genesis* TOTC, 144) considers the name to be of interest chiefly as an indication of Israel's consciousness of distant kinships.

EDWIN C. HOSTETTER

JILAT, WADI AL-. A drainage catchment of about 160 km^2 at an altitude between 967 and 755 m, which lies in the SW portion of the AZRAQ basin on the Jordanian plateau.

Wadi al-Jilat is a tributary of the Wadi al-Dabi (Wadi Dhobai), which feeds into Qa al-Azraq. The area currently receives less than 100 mm of rainfall per year and lies vegetationally at the divide between steppe and desert. The surface geology comprises late Cretaceous and early Tertiary limestones, chalks, marls, and cherts, and there are more recent conglomerates and travertines in the valley floor. In an otherwise arid area, Wadi al-Jilat is attractive to settlement because the wadi has incised a shallow gorge in which water is often retained well after the end of the rainy season. Now, this is used on a seasonal basis by bedouin who pasture their sheep, goats, and camels on the sparse vegetation.

The Wadi al-Jilat was also attractive for settlement in the late Glacial and early post-Glacial periods (ca. 25,000–4500 B.C.). In the 1930s Waechter located and sounded a number of sites along the valley floor (Waechter et al. 1938) with flaked chert industries, which he described as "Aurignacian" and "Dhobaian" (he misidentified the location as Wadi Dhobai). More recently, Garrard has resurveyed the valley (Garrard et al. 1985) and located a total of twenty-six Stone Age sites. One of these is Upper Paleolithic (ca. 25,000–20,000 B.C.), at least four are late Epipaleolithic (ca. 12,000–7500 B.C.), and six are Neolithic (7500–4500 B.C.). The latter divide into Pre-Pottery Neolithic B and burin sites, and have stone structures visible on their surfaces. Five sites ranging from Upper Paleolithic to Neolithic were sounded by Garrard (Garrard et al. 1986).

In addition to the prehistoric sites, Glueck (1951), Field (1960), and King (King et al. 1983) have described two dams in the valley. The major dam is 28.85 m long and 5.80 m high, but only the downstream side is visible due to silting. This is faced with well-dressed ashlar masonry and is supported by three rectangular buttresses. It is also banked, with each succeeding stone course set slightly back from the lower one. It is covered with washum and graffiti, but no dating inscription exists. The ruin of a second smaller and more poorly built dam lies downstream, blocking a side wadi. Glueck (1951) suggested a Roman date for the main dam, but King (King et al. 1983) only found Byzantine and Umayyad sherds during his group's survey of the area. Since there are Umayyad parallels for such dams in the Hijaz, and there are a number of substantial Umayyad structures in the Jordan desert (castles and cisterns), the dam seems likely to date to this later period.

ANDREW N. GARRARD

JISR BANAT YA'AQUB (M.R. 209268). The Lower Paleolithic site of Jisr Banat Ya'aqub (Heb Gesher Bnot Yaacov) is located in the N sector of the Syrian/African Rift system, some 4 km S of the Huleh valley. Paleontological remains and lithic artifacts from the site were found in 1933 during the construction of a bridge over the Jordan river.

Between 1936 and 1951, M. Stekelis (1960) carried out a survey and excavations N and S of the bridge. It became evident that the site continues along the course of the Jordan below the present water level and was identifiable on both banks. These observations were corroborated by D. Gilead (1970) through an additional test pit. Proximity to the Syrian/Israeli border, the high-water level of the Jordan, and the various drainage activities have never enabled a thorough and prolonged field study at Jisr Banat Ya'aqub (J.B.Y.).

The prehistoric and paleontological finds are bedded in the Benot Yaacov Formation, which is exposed at the bridge and also known from bore holes drilled in the Huleh valley. The formation was initially described by Picard (1952) as the "Viviparus Beds," due to the dominance of this mollusk species in the sediment.

The Benot Yaacov Formation is bedded unconformably on the Yarda Basalt. This basalt flow yielded a radiometric age of 640,000 ± 120,000 years, and thus contributes indirectly toward dating the implentiferous beds.

Stekelis' observations at J.B.Y. resulted in a stratigraphic sequence of six strata. Layer V is characterized by a lithic assemblage shaped on basalt and is assigned to the Middle Acheulian. The biface component (cleavers and handaxes)

was modified by the "bloc on bloc" technique. The typological proportions of handaxes and cleavers are 51 percent and 49 percent, respectively. The specific choice of basalt, the technique of manufacture, and the interbiface group frequencies are all unique to this layer and are not known elsewhere in Israel. These features are known from African sites; their presence at J.B.Y. might demonstrate the penetration of an African tradition into the Levant. The artifacts from Layers II–IV were modified on flint and manifest the earliest known appearance of the Levallois technique; the biface types/shapes are more evolved than those of Layer V, and the assemblage is assigned to the Upper Acheulian.

The uniqueness of the lithic assemblage, the paleontological assemblage, and the recent discovery of human paleontological remains, as well as the palynological analysis, all demonstrate the importance of the site to Pleistocene research in the Levant.

JOAB (PERSON) [Heb *yô'āb*]. Joab is a simple Hebrew name consisting of a theophoric element—*yô*, for "Yahweh"—in a nominal clause. Its meaning is "Yahweh is father"; hence, Joab is only formally different from Abijah.

1. In the Hebrew Bible, the name Joab is applied primarily to the commander in chief of David's army. This Joab was the son of David's sister, Zeruiah; he was one of three brothers—Joab, Abishai, and Asahel—who played a critical role in the establishment of David's military power. Abishai, at one time or another the commander of both the foreign mercenaries and the king's special corps of *šālišîm* (see DAVID'S CHAMPIONS), served as a kind of adjutant to Joab throughout David's reign (cf. 2 Sam 10:9–14; 20:4–22) and probably died sometime before Solomon's coup. Asahel was killed during the long war between the houses of David and Saul. Joab, the central figure of the three, was the commander of David's assembled armed forces, both the levies and the various components of the professional army. This view is in contrast to that usually expressed; namely, that Joab commanded the levies while Benaiah, the son of Jehoiada, commanded the professional soldiery. In fact, Joab is more often than not depicted as in command of the professional troops (cf. 2 Sam 10:7; the "mighty men" were elite troops and formed a separate category from both the levies and the regular professional soldiers—"the men of war" [cf. Schley *ISBE* 4: 564–65]; another category was the *šālišîm*, a small body of elite warriors loyal only to the king, as well as the foreign mercenaries and the bodyguard). Joab also appears to have had his own body of armor bearers (2 Sam 18:15) and his own following within the army (2 Sam 20:11). Even the doomed Uriah called Joab "my lord" to David, to whom he supposedly owed his highest loyalty (2 Sam 11:11). Joab is credited with taking the royal city of the Ammonites on his own (2 Sam 12:26–28) as well as defeating the Syrians (2 Sam 10:6–14) and Edomites (Ps 60:1—Eng superscript: Joab killed twelve thousand Edomites in the Valley of Salt; a similar feat is ascribed to Abishai in 1 Chr 18:12 and to David in 2 Sam 8:13–14). These are hardly the achievements of a commander of reserves. Joab was the leading military figure of David's reign, a professional soldier to whom all answered, a man who has been called "the gray eminence" of the Davidic era.

The testimony of the Davidic narratives carries a strange ambivalence toward Joab, depicting him both as the staunchest supporter of David, with no ambition for the throne himself, and as the Judean king's chief adversary at the court, at one point even threatening revolt (2 Sam 19:5–7). If the incidental evidence of the Davidic narratives is to be believed, Joab was the power behind David's throne, whether for good or for ill. To him are attributed the murders of the two commanders of the army of Israel, Abner the son of Ner (2 Sam 3:26–30) and Amasa the son of Jether (2 Sam 20:4–13). Joab is also reported to have had the rebel Absalom killed against the express orders of the king (2 Sam 18:1–15), a deliberate act for which he did not apologize and which appears to have cost him his high standing for a time (2 Sam 19:13). There are thus three clear instances in which Joab countermanded the king's wishes and slew, rightly or wrongly, persons in favor with David.

At the same time, Joab, along with his brother Abishai, was the trusted agent of David's policies. According to Chronicles, Joab achieved his leadership of the army when he led a daring raid up the watershaft to seize the city of the Jebusites for David (1 Chr 11:4–9; his name was not included in this tradition in the corresponding passage in 2 Sam 5:6–9). It was Joab who, with his brother Abishai, prosecuted the Ammonite and Syrian wars (2 Samuel 10–12) and yet gave the honor to David (2 Sam 12:26–30), though David had ceased to engage in direct military

campaigns (2 Sam 21:15–17). Again, the two remaining sons of Zeruiah, along with the Philistine condottiere, Ittai of Gath, brought David the victory over Absalom (2 Sam 18:1–17) and put down the rebellion of Sheba, the son of Bichri (2 Sam 20:1–22). Joab elsewhere carried out David's cover-up of his affair with Uriah's wife (2 Sam 11:14–25) and interceded with David on behalf of Absalom (who had avenged the rape of his sister Tamar by slaying his brother Amnon—2 Sam 14:1–24). Conversely, Joab used harsh words to bring David to greet the troops after the death of Absalom and the dispersal of the rebel army (2 Sam 19:1–8b), and it was Joab who carried out David's ill-fated census of the people of Israel, though he had vehemently argued against the measure (2 Sam 24:1–14).

So great was Joab's influence in the Davidic court that he almost succeeded in putting Adonijah, Solomon's older brother, on the throne. Joab's support of Adonijah, in fact, seems to have divided the regime along the lines of the "old guard" and the "new men." The old priest Abiathar supported Adonijah, too, but Solomon found his support in the prophet Nathan, his mother Bathsheba, Benaiah, the son of Jehoiada, newly promoted to command the foreign mercenaries (probably following the death of Abishai), and the priest Zadok, probably a Jebusite, who founded the Zadokite line of priests in Jerusalem. The defeat of Adonijah's party may have been the result of a weakening of Joab's position on account of the absence of Abishai, Joab's brother and longtime adjutant. When Solomon's party came to power, the new king had Abiathar banished. Joab, however, he had killed, fulfilling his deathbed promise to his father to clear the family line of the bloodguilt of Abner and Amasa, whom Joab had slain. In a poignant scene, Joab clings to the horns of the altar for refuge and refuses to come out to die at the hands of Benaiah. "I will die here," he says, refusing either to apologize for his deeds or to seek clemency. In doing so, he embodies an ancient military tradition, that of making neither excuse nor apology for one's actions. If he is to be executed, he will force his enemies to violate the sanctity of the altar, under the protection of which he had so long fought for David, and the name of whose god he bore. That his overt religiosity was devoid of ethical content (Dalglish *IDB* 2: 908) is disputable today, and would have been challenged in his own day as well. After all, the views of Joab's political opponents prevailed in the matter and have guided the efforts to justify the old warrior's fate. In reality his execution was a judicial murder—the slaying of a loyal retainer out of political expedience. Certainly Solomon began his reign with a somewhat different "inner circle" of advisers from that of his father, one which was far more aloof from the ancient traditions and sentiments of the people than David's had been.

From a literary standpoint, the death of Joab served to bring to a close that haunting theme of the Davidic narratives—David's complicity in the deaths of Saul and his sons and successors, and the demise of his house. That Joab would be the final sacrifice in this saga is presaged in David's curse on Joab after the slaying of Abner—"May it [the blood of Abner] fall upon Joab, and upon all his father's house; and may the house of Joab never be without one who has a discharge, or who is leprous, or who holds a spindle, or who is slain by the sword, or who lacks bread!" (2 Sam 3:29; cf. Holloway 1987: 370–75). The way to his death, even at the hands of one who had served with him, is prepared by the rising crescendo of condemnation of the sons of Zeruiah by David (usually in response to Abishai's ruthlessness: cf. 2 Sam 3:39; 16:5–14; 19:16–23). This theme culminates in the infamous scene where the dying monarch names to his son and successor the unsettled scores his heir must even (1 Kgs 2:1–9). David's orders include the command to kill Joab through treachery ("use your wisdom [i.e., cunning], but do not let his gray hairs go down to Sheol in peace"). David reasons that Joab's slaying of Abner and Amasa has brought bloodguilt upon him and his house (a serious concern in ancient times), and that Joab must be slain to cleanse the stain from David's line. Thus, Joab is made to bear the bloodguilt for David's treatment of Saul and his family, a bloodguilt which, in the minds of most Israelites, probably extended far beyond the deaths of Abner and Amasa (see the curse of Shimei, 2 Sam 16:7–8, and the proscription of Saul's remaining sons in 2 Sam 21:1–6). Joab thus serves as the scapegoat for David's own bloody treatment of his political opponents. With Abishai, he also provides a violent foil for the depiction of David as a man of suffering renunciation, a motif which is used to exculpate David in the very matters in which Joab is to be blamed.

The Joab of history and literature is a complex figure, a man of shrewd judgment, ruthless energy, and potentially great treachery, who nonetheless sought no more than to look out for his own interests in the context of his greater service to his king. Joab seems in many respects to have functioned almost independently of David; at least he was willing to act on his own judgment when a weak and injudicious king threatened the longevity of the kingdom, as in Absalom's revolt. One suspects that David both depended upon and resented Joab's autonomy. Joab, for his part, seems to have remained content to let the military power of the kingdom accrue to himself (a significant portion of royal authority in the ANE), while leaving to his uncle, David, the public honor. Joab's career cannot be understood apart from his strong family and party ties to David's cause, probably from the time of David's exile in the wilderness (1 Sam 22:1–2): family loyalties tied Joab's career inextricably to that of David, and Joab, better than anyone, would have grasped and exploited this connection. At the end of his life he was probably a man of unequaled public esteem; for his military exploits alone, he may have enjoyed a popularity far wider than David's, at least among the soldiery. The effort expended to condemn him is the best measure of his stature in the kingdom.

2. One of the descendants of the house of Kenaz, a family of craftsmen (better, smiths) in the tribe of Judah, who dwelt in the "valley of smiths" (1 Chr 4:14).

3. The eponymous ancestor of a Judean clan which returned from the Babylonian exile with Zerubbabel. The clan is regularly listed as "the sons of Pahath-moab, namely, the sons of Jeshua and Joab" (Ezra 2:6; Neh 7:11). This family was still on hand in the time of Ezra the scribe, when it was headed by Obadiah, the son of Jehiel (Ezra 8:9; 1 Esdr 8:35).

JOAH (PERSON) [Heb *yô'āḥ*]. Four individuals in the OT bear this name, which means "Yahweh is brother."

1. Joah the son of Asaph was an official under Hezekiah, king of Judah (2 Kgs 18:18, 26, 37; Isa 36:3, 11, 32). The responsibilities of his office as *hammazkîr* ("the remembrancer," often translated as "recorder") are nowhere defined in the OT and remain somewhat uncertain. Recent opinion has gravitated toward "herald" or official spokesperson (*AncIsr* 1: 132; Mettinger 1971: 52–54), even "chief of protocol" (Williams 1975: 235–37). Joah served as one of three representatives of Hezekiah in negotiations with the Rabshakeh of Sennacherib, king of Assyria.

2. Joah, the son of Zimmah, is named as the fourth of seven generations of Levites of the family of Gershom through Gershom's oldest son Libnah in 1 Chr 6:6—Eng 6:21 in the Chronicler's artful schematization of the tribe of Levi in 1 Chr 5:27–6:66—Eng 6:1–81 (see Williamson *Chronicles* NCBC, 68–70).

3. The third son of Obed-Edom (1 Chr 26:4) in the schematization offered by a reviser of the Chronicler's organization of the gatekeepers in the temple at Jerusalem (Williamson *Chronicles* NCBC, 169; Rudolph *Chronikbücher* HAT, 173).

4. Joah, the son of Zimmah, and, apparently, the father of Eden (1 Chr 29:12), is named as one of the Gershonite Levites who rallied to the cause of Hezekiah's call for reform. Any attempt to identify this figure with one or more of the preceding is hazardous (Williamson *Chronicles* NCBC, 354). It is entirely possible that the list of good levitical names in which this Joah appears had nothing to do with the time of Hezekiah (Rudolph *Chronikbücher* HAT, 295–96).

JOAKIM (PERSON) [Gk *Iōakim*]. **1.** Described as a son of Zerubbabel, a priest, and a leader of returning exiles (1 Esdr 5:5). The reference to Joakim as a son of Zerubbabel conflicts with the information provided in 1 Chr 3:19, where the only sons of Zerubbabel mentioned are Meshullam, Hananiah, Hashubah, Ohel, Berechiah, Hasadiah, and Jushab-hesed; nor is there any reference to a Joakim among the priests of the Davidic line (Myers *1 and 2 Esdras* AB, 66). Accordingly, Torrey has suggested that the Hebrew text may have originally read *wyqm bw zrbbl,* "and Zerubbabel arose with him" (Torrey 1945: 404; cf. Myers, 66).

2. Described in the book of Judith as the high priest, functioning as both religious and military leader, who ordered the residents of Bethulia and Bethomesthaim to deny the Assyrian general Holofernes access to Jerusalem from the north (4:6–7; cf. 4:8, 14; 15:8). Joakim is referred to in both the Latin and Syriac versions of the story as Eliachim, where the prefix *Jeho,* meaning "Yahu," has been replaced by the prefix, *Eli,* meaning "God" (Moore *Judith* AB, 150). The historicity of Joakim's priesthood is in doubt, as are many other ostensibly historical details recounted in the book (Nickelsburg 1981: 106ff.). The name Joakim recalls a postexilic setting and the name of the high priest, Joiakim, son of Jeshua, mentioned in Neh 12:26 (cf. 1 Esdr 5:5 and Jos. *Ant* 20.102 §234), but there is no evidence to suggest that, at the time, the high priest exercised such a wide range of powers (Moore *Judith* AB, 150). For these and other reasons, some scholars have argued that the names used in the book of Judith are pseudonyms for historical figures of other periods. Assigning the composition of Judith to A.D. 117, Volkmar (1863) identifies Joakim with the Judeans who returned to Jerusalem under the reign of either Trajan or Hadrian. Gaster, believing the book to have been written around A.D. 63, identifies Joakim with the Pharisee Onias (*EncBib* cols. 2644–46). And Ball, dating the book to the Hasmonean period, identifies Joakim with the Hellenist Alcimus (Ball 1888; also Steinmann 1953: 23–34, esp. 32). Moore points out, however, that each of these theories is plagued with difficulties that make them less than tenable (Moore, 53–54). It may be that, as Montague argues, Joakim is instead "a representative figure of the priesthood in general" (Montague 1973: 16).

3. Described as the husband of Susanna (Sus 4, 6, 28f., 63).

FREDERICK W. SCHMIDT

JOANAN (PERSON) [Gk *Iōanan*]. The father of Joda and son of Rhesa, according to Luke's genealogy tying Joseph, the "supposed father" of Jesus, to descent from Adam and God (Luke 3:27). Gk *Iōanna* is read in some later texts, including the Vulgate and TR, while D omits it, substituting a genealogy adapted from Matt 1:6–15 for Luke 3:23–31. The name Joanan falls within a list of seventeen ancestors of Jesus who are otherwise unknown in the biblical documents, including Matthew's genealogy (Fitzmyer *Luke 1–9* AB, 500), although Marshall (*Luke* NIGTC, 163), following the suggestions of Hervey (1853: 111–12, 145–46) and some earlier scholars (see RHESA), makes an interesting proposal. This proposal states that, although Joanan appears to be equivalent to Heb *yhwhnn*

(2 Esdr 10:6; 2 Chr 23:1; et al.), with the divine name used as prefix, the Hebrew name has the same meaning as Heb *whnny* (Gk *Hanania;* 1 Chr 3:19; cf. 3:24 with Gk *Iōanan*), with the divine name used as suffix. Thus, Joanan in Luke could be one of Zerubbabel's sons, if Rhesa, which intervenes, is not a proper name (unknown as a son of Zerubbabel) but a transcription of Aram *rys,* meaning "prince," standing in apposition to Zerubbabel. This solution indicates the possibility that Luke was using here an originally Aramaic genealogy in reverse order not dependent upon the LXX. The strength of this position rises or falls upon how Rhesa is interpreted, although there also is the question of the relation of Luke's genealogy to Matthew's, which would still diverge in tracing the line of Zerubbabel.

STANLEY E. PORTER

JOANNA (PERSON) [Gk *Ioanna*]. One of the female followers of Jesus during his earthly ministry listed with Mary Magdalene and Susanna in Luke 8:2–3. Joanna was one of the women who provided monetary or material aid out of their own pockets and efforts to help Jesus' band of disciples. Later, Joanna was a witness to the empty tomb who reported what she saw to the apostles (Luke 24:10). Thus, her name is probably preserved because she was known to the post-Easter community as a witness to the life, death, and empty tomb of Jesus. That only Luke ever mentions Joanna may be because she was one of his sources for the uniquely Lukan material in his gospel.

Joanna is also notable because she was the wife of Chuza, one of Herod Antipas' estate managers. Thus, she is an example of how the gospel affected people connected with the established authorities, people who were financially comfortable compared to most of the Galilean populace. We are led to believe that this rather prominent woman left her family and home to travel with Jesus and to provide assistance for his itinerant band of disciples. We may also see here an example of how the gospel breaks down class barriers and nullifies social taboos, for in the Jewish society of Jesus' day women were not allowed to be disciples of a prominent Jewish teacher, much less to be part of his traveling entourage (Witherington 1984: 6–10, 116–18). In 1st-century Judaism, such behavior would have been considered scandalous for any woman but especially for a married woman. Thus, to some degree Jesus presents both a religious and a social threat to the structure of early Judaism, for he gave both men and women the opportunity to be full-fledged disciples.

BEN WITHERINGTON III

JOARIB (PERSON) [Gk *Iōarib*]. The name of the priestly clan of Mattathias, the original leader of the Jewish resistance against the Hellenizing activities of Antiochus Epiphanes and the father of five sons who aided him (1 Macc 2:1; 14:29). The Heb name *yĕhôyārîb* or *yôyārîb* means "Yahweh contends." It appears as a clan name five times in the OT (Neh 11:10; 12:6, 19; 1 Chr 9:10; 24:7). In 1 Chr 24:7, it is reported that Jehoiarib was made the head of the first of twenty-four divisions of priests by David himself, but the verse probably reflects the Chronicler's view of how the priesthood was or should have been organized in his own day (*Oxford Annotated Bible,* 522). Scholars have sometimes suggested that the list in 24:7–18 derived from the Maccabean period, since the name Jehoiarib replaced the name Jedaiah at the head of the list (cf. 9:10), but Myers (*Chronicles* AB, 165) rejects this view on the grounds that there is a tendency toward the elevation of Jehoiarib in the lists taken as a whole. The other references to Jehoiarib list the clan among those having members return from Exile.

In 1 Macc 2:1 and 14:29, Mattathias is pointedly traced to this clan, which stood at the head of the priestly divisions. Goldstein (*1 Maccabees* AB, 17) suggests that 14:29 belonged to a dynastic document and that the Hasmoneans wished to emphasize their legitimacy as well as God's contending on behalf of Jehoiarib's descendants. Of course, the name itself was subject to derogatory inversion; namely, that God contends for their opponents (cf. *1 Maccabees* AB, 200).

The list of priestly divisions with Jehoiarib at the head was set up on stone in Palestinian synagogues after the second revolt against Rome, apparently in hopes that one day the temple and its priesthood would be restored.

PAUL L. REDDITT

JOASH (PERSON) [Heb *yô'āš*]. Var. JEHOASH. **1.** Father of Gideon; from the family of Abiezer of Manasseh (Judg 6:11, 25–32). His name appears in the narrative describing Gideon's heroic deeds (Judg 6:1–8:35). The account connects Joash with three cultic objects—an oak associated with oracles (the "oak at Ophrah," v 11), an altar to Baal, and an Asherah (v 25). Although Gideon complained that his family was the weakest in Manasseh (v 15), the text portrays his father as wealthy and influential. Joash owned property in Ophrah (v 11) and commanded the respect of Ophrah's citizenry. After Gideon destroyed the altar of Baal, Joash spoke to the city's outraged inhabitants in his son's defense (vv 30–31). See also GIDEON (PERSON).

2. The son of Shelah; a Judahite (1 Chr 4:22). His name appears fourth in the list of Shelah's five sons (1 Chr 4:21–23) that concludes the Chronicler's genealogy of Judah (1 Chr 4:1–23). The LXX B reads *Joada* in v 22.

3. The son of Becher; a Benjaminite (1 Chr 7:8). His name appears second in the list of Becher's nine sons (1 Chr 7:6–12).

4. A "mighty man"; the son of Shemaah of Gibeah; a Benjaminite (1 Chr 12:3). He was second-in-command of the ambidextrous warriors who joined David at Ziklag. By juxtaposing Saul's enmity to David (1 Chr 12:1) with the phrase identifying the warriors as "Saul's kinsmen" (1 Chr 12:2), a sense of irony is created. While Saul is David's enemy, Saul's family are David's friends.

5. The steward in charge of David's "stores of oil"

(1 Chr 27:28). His name appears in a list of officers who manage David's property (1 Chr 27:25–31).

6. A "son" of Ahab (1 Kgs 22:26 = 2 Chr 18:25). According to the text, Joash and Amon (the governor of Samaria) were given custody of the prophet Micaiah after Micaiah prophesied failure for Ahab's Ramoth-gilead campaign (1 Kings 22 = 2 Chronicles 18). If the text is accepted literally, then Joash was an otherwise unknown son of Ahab, king of Israel. Two alternatives have been proposed, however, which challenge this identification. The term "king's son" is used in other passages to designate an official (cf. Jer 36:26; 38:6; 2 Chr 28:7). If the phrase in 1 Kgs 22:26 (= 2 Chr 18:25) is understood in this manner, then Joash was Ahab's officer, not literally his son (Jones, *1–2 Kings* NCBC, 369). The title may have originated with the practice (which was later discontinued) of filling the post with one of the king's sons (de Vaux, *Anc Isr*, 119ff.). A more complicated identification of the Joash mentioned in 2 Kgs 22:25 is based on the assumption that 1 Kings 20 and 22 are out of place. J. M. Miller (1966) argued that the battle accounts in chaps. 20 and 22 originally pertained to the Jehu period. Later, the kings mentioned in the accounts became associated with Ahab of Israel and Jehoshaphat of Judah. The Joash of 1 Kgs 22:26, therefore, is not the son of Ahab but the son of Jehoahaz, king of Israel (2 Kgs 13:10).

7. The ninth king of Judah; son(?) of Ahaziah and Zibiah of Beer-sheba (2 Kings 11–12; 2 Chr 22:10–24:27). Although 2 Kgs 12:2 (—Eng 12:1) states that Joash reigned forty years, scholars vary in their chronology of his reign: 837–800 B.C.E. (Albright 1945: 470); 835–796 (Thiele 1977: 75); or 832–803 [793] (Hayes and Hooker 1988: 38–40). Joash's account can be divided into two sections: his early life and coronation (2 Kings 11; 2 Chr 22:10–23:21) and his reign (2 Kings 12; 2 Chronicles 24).

Joash is first mentioned in reference to the massacre in 2 Kgs 11:1–2. When Athaliah heard of the death of her son (Ahaziah), she ordered the deaths of the Davidic heirs and installed herself as queen of Judah (v 1). According to vv 2–3, Joash, an infant son of Ahaziah, escaped the purge. His aunt (Jehosheba) hid him in the house of the Lord for six years while Athaliah reigned over Judah. In the seventh year, a priest (Jehoiada) presented the seven-year-old Joash to the guards as the legitimate king (v 4).

The report of Joash's escape in vv 1–3 is curious. Why would Athaliah kill Joash when she could have ruled as his regent? How could Joash have escaped her notice for six years? To answer these questions scholars either explain how the escape might have been possible (i.e., Joash posed as a priest's child and thus escaped detection [Gray, *1–2 Kings* OTL, 570]) or challenge the historicity of the massacre and/or Joash's escape (Ginsberg 1967: 91–93; *HAIJ*, 302–5). Ginsberg argued that the massacre (as described in vv 2–3) never took place: Athaliah would not have ordered Joash's death because (1) he was her grandchild; (2) he was an infant and therefore no threat; and (3) Athaliah (being a woman and an Omride) was hated while Joash (being a Davidide) was her only claim to legitimacy. Thus, Ginsberg concluded the account in vv 1–3 arose out of confusion with a prior slaughter, or from a very selective slaughter aimed at protecting Joash from ambitious relatives. While Ginsberg challenged the massacre's historicity, a more radical proposal by Miller and Hayes has challenged the escape's historicity. Perhaps the massacre was more successful than vv 2–3 allows, and *all* the heirs were killed. If this happened, then the child Jehoiada presented to the guards in v 4 was not Ahaziah's son, but a pretender foisted on the people by the priesthood (*HAIJ*, 303–5).

Liverani's literary analysis of Joash's escape and coronation reveals interesting similarities between 2 Kings 11 and other ANE accounts of royal escapes and coups (Liverani 1974: 438–53). All provide dramatically persuasive accounts (with common plot elements) of how a recent usurpation is justified by a former one. The accounts thus function to legitimate the current ruling family and to serve as propaganda.

The report of the coup is found in vv 4ff. After Jehoiada instructed the guards (vv 4–8), Joash was brought to the temple where he was crowned, given the testimony, proclaimed king, and anointed (vv 9–12). When Athaliah investigated the clapping and shouting, Jehoiada ordered the guards to seize and kill her (vv 13–16). Although two covenants are mentioned in v 17 (v 17a—Lord/king/people; v 17b—king/people), this may be due to a case of dittography. Verse 17b is missing from both 2 Chr 23:16 and Lucianic LXX.

The Chronicler both supplements and contradicts the Kings account of the coup. Supplementary material includes the names and lineage of the commanders of the guards (2 Chr 23:1), reference to singers and musical instruments at Joash's coronation (2 Chr 23:13), and mention of Jehoiada's sons at Joash's anointing (2 Chr 23:11). Contradictory material focuses on the coup's participants: for the Chronicler, the Levites and "all Judah" supported the coup, while three groups not mentioned in Kings—the captains, nobles, and governors of the people—rejoice at Joash's enthronement (2 Chr 23:20). The Chronicler mentions only one covenant (between the priest/people/king) after Athaliah's death (2 Chr 23:16).

Was the coup which placed Joash on the throne a popular uprising or a palace conspiracy? Stade (1885) suggested that 2 Kings 11 contains two accounts of the coup, a priestly account (vv 4–12; 18b–20) and a popular account (vv 13–18a) in which the people or the priests play respectively significant roles. However, even in Stade's "popular" source (vv 13–18a), the "people of the land" do little besides ratifying the actions of the priests and guards. Reviv (1986) argued that the priesthood functioned as a "political pressure group" in this period. If so, then the coup may have resulted from strained relations between palace and temple rather than from a surge of nationalism.

The report of Joash's reign is found in 2 Kings 12 and 2 Chronicles 24. Joash's introductory regnal formula is contained in 2 Kgs 12:1–4 (—Eng 11:21–12:3). In the seventh year of Jehu (king of Israel), Joash (son of Zibiah of Beer-sheba) began to reign. Although Joash does "right" in Yahweh's eyes (for Jehoiada is his teacher), he is nevertheless criticized for allowing the high places to continue. Only two events of Joash's reign are recorded—the repair of the temple and an incursion by the Syrians into Judean territory. Both deal with temple finances.

Although the general concern of 2 Kgs 12:5–17 (—Eng

4–16) is the temple's repair, the account focuses more on describing its financial arrangements than on the repair itself. This falls into two narrative sections: the first attempt (vv 5–9 [—Eng 4–8]) and the second attempt (vv 10–17 [—Eng 9–16]). Joash's initial orders to repair the temple are ignored. Only the second attempt (organized and implemented by Jehoiada, the priest) is successful.

Whereas vv 5–17 (—Eng 4–16) deal with the allocation of monies for repairs, vv 18–19 (—Eng 17–18) focus on the role temple finances played in Joash's international affairs. Hazael, king of Syria, captured Gath and made plans to move toward Jerusalem. According to v 19 (11Eng v 18), Joash "persuaded" Hazael to spare Jerusalem by offering tribute from royal votive offerings.

The report of Joash's reign concludes with the account of his death in vv 20–22 (—Eng 19–21). Verse 20 and the latter part of 22 (—Eng 19, 21) contain the usual concluding formula for Judean kings. The intervening verses, however, describe a conspiracy by Joash's servants (Jozacar, the son of Shimeath, and Jehozabad, the son of Shomer) which resulted in Joash's death. No motivation is given for the assassination.

Once again, the Chronicler's account supplements and contradicts the material in Kings. Supplementary material includes the account of Jehoiada's death (2 Chr 24:15–16), Joash's subsequent worship of idols (vv 17–19), and the murder of Jehoiada's son, Zechariah (vv 20–22). In 2 Chronicles 24, however, the report in Kings is contradicted at four main points. First, the writer's positive evaluation of Joash is limited to "all the days of Jehoiada the priest" (2 Chr 24:2) rather than "all his (Joash's) days" (2 Kgs 12:4 [—Eng 12:3]). Second, the details of the temple's repairs differ as to who is responsible for the repair (the priests and Levites), for its initial failure (Levites), for the source of its financing (Mosaic tax), and for the making of utensils of silver and gold for service in the temple. Third, the conflict with the Syrians is portrayed as an actual military engagement rather than an adverted threat (2 Chr 24:23–25). The Syrians "came up against" Joash and killed the princes of the people (v 23). Because of Joash's apostasy, he was wounded and his army "delivered" into the hands of the Syrians. Fourth, the servants named in the conspiracy are different. In Chronicles it is two men of foreign origin—Zabad, the son of Shimeath the Ammonitess, and Jehozabad, the son of Shimrith the Moabitess—who kill the wounded Joash (v 26).

Though it is impossible to say with certainty what motivated the assassination of Joash, it is important to note the relationship between the palace and the temple during this period. Joash was placed on the throne by a coup organized by the priests. In all probability, a priest (Jehoiada) served as regent during the king's childhood. Joash came into conflict with the priests over financing temple repairs and later stripped the temple of its treasures to pay off Hazael. If the account of Zechariah's execution in the temple precinct is true (2 Chr 24:20–22), then this may have further exacerbated relations between the priests and the king. It is very possible that the priesthood which helped put Joash on the throne also had a hand in his death.

8. The twelfth king of Israel; son of Jehoahaz (2 Kgs 13:10–25; 14:8–16 = 2 Chr 25:17–24). According to 2 Kgs 13:10, Joash reigned for sixteen years. Although Albright (1945: 16–22) dates Joash's kingship from 801 to 786 B.C.E., Thiele (1977: 75) places it three years later (798–782 B.C.E.), while Hayes and Hooker (1988: 47–48) date it three years earlier (804–789 B.C.E.). Joash's reign was the third of four generations of the Jehu dynasty in Israel (Jehu, Jehoahaz, Joash, and Uzziah/Jeroboam II).

The introductory regnal formula for Joash (2 Kgs 13:10–11) is immediately followed by a concluding formula (vv 12–13). This leaves the events of Joash's reign (his encounter with Elisha, 2 Kgs 13:14–19; Elisha's death, vv 20–21; Joash's subsequent victories over Ben-hadad, vv 22–25; and Joash's victory over Amaziah of Judah, 2 Kgs 14:8–16 = 2 Chr 25:17–24) standing outside the book's normal framework for each king. Since there is a parallel version of vv 12–13 in 2 Kgs 14:15–16, vv 12–13 are often thought to be secondary. Lucian places vv 12–13 after v 25 and omits 14:15.

In 2 Kgs 13:14–19 is a prophetic tale describing a deathbed encounter between Joash and Elisha. When Joash went to Elisha (who was fatally ill), Elisha commanded him to draw his bow (v 16), shoot an arrow toward Aram (v 17), and strike the ground with the remaining arrows (v 18). When Joash stopped after three strikes, Elisha became angry and revealed that each strike stood for an Israelite victory over Syria. Although Joash could have put an end to the Syrian threat, he would now enjoy only three victories (vv 18–19).

After Elisha's death (vv 20–21), the narrative shifts to Syrian relations with Israel (vv 22–25). Hazael reportedly oppressed Israel during the time of Jehoahaz (vv 22–23) and succeeded in capturing some Israelite territory (v 25). When Ben-hadad (Hazael's son) became king (v 24), Joash is credited with winning three battles and recovering the cities lost during his father's reign. Although no reference is made in vv 22–25 to the words of Elisha (v 19), the placement of vv 22–25 (with the mention of three victories in v 25) gives a "prophecy-fulfillment" structure to these narratives.

At least two epigraphical discoveries—the Rimah Stela and the Zakir Inscription—provide background data for this period. According to the Rimah Stela (see Cody 1970), Adad-nirari III of Assyria campaigned westward, subjugated western kings, and received tribute from Damascus, Tyre, Sidon, and Joash of Samaria. Although the campaign's date is unknown, scholars usually associate it with the last westward campaign made by Adad-nirari III in 796 B.C.E. (Millard and Tadmor 1973: 64; cf. Shea 1978: 101–13 for an opposing viewpoint, i.e., Adad-nirari's first campaign in 805 B.C.E.). The defeat of Damascus by Adad-nirari III may have paved the way for the warfare reflected in the Zakir Inscription (*ANET*, 655–56). Ben-hadad (son of Hazael) formed a coalition of Aramean kings, laid siege to Hatarikka, and was defeated by Zakir, king of Hamath and La'ash. The defeat of Damascus by Adad-nirari III and the internal fighting between Aramean kings reflected in the Zakir Inscription help explain why the Israelite victories mentioned in 2 Kgs 13:25 may have been possible.

Miller argued that the Elisha narrative and the victories reported in v 25 should be associated with Jehoahaz, instead of Joash. Miller's theory is based on the association of the three Israelite/Syrian battles in 1 Kings 20 and 22

with the battles mentioned in 2 Kgs 13:25. According to Miller (1966; 1968), it was Jehu who lost territory to Hazael (cf. 2 Kgs 10:32–33 with 1 Kgs 20:34), and it was Jehu's son (Jehoahaz) who successfully challenged Ben-hadad II. Israel's victories were limited to three due to Jehoahaz's untimely death at the battle at Ramoth-gilead.

In 2 Kgs 14:8–14, Joash's victory over Amaziah of Judah at Bethshemesh is recorded. When Amaziah asked to look Joash "in the face," Joash responded with a fable and a warning (vv 8–10). Amaziah did not listen and engaged Joash's troops at Bethshemesh. Joash's victory cost Judah all the treasures of the temple and palace, a 400-cubit stretch of Jerusalem's walls, and the indignation of hostages (vv 11–14).

JOB, BOOK OF. A book in the third division of the Hebrew Bible (the "Writings") that recounts the story of Job, a righteous man whose motives for being righteous are tested through a series of personal tragedies and sufferings. When three old friends arrive to condole him, they all engage in a dialogue focusing not only on the cause of Job's personal misfortune but also more generally on the problem of evil. Their dialogue (or, more properly, "dispute"), in which Job sharply questions the nature of divine justice, ends without resolution, whereupon yet another character, the young Elihu, appears to offer his own observations on the nature of Job's predicament. Eventually God appears on the scene to upbraid Job for complaining, and to restore Job's family, property, and health.

A. Contents

The book of Job consists of a narrative framework and a poetic core. The prose section is divided into a prologue (1:1–2:13) and an epilogue (42:7–17); the poetry is embedded between these two. Together prose and poetry examine the possibility of being good without thought of either reward or punishment and explore the nature of innocent suffering; whether or not it exists, how one ought to act in the presence of misery, and why such injustice occurs. The prose framework deals with loss and eventual restoration without so much as a raised voice, and in its simplicity embraces and makes possible the eruption of volcanic emotions in the poetry.

Emphasizing the historical gap between the time of the hero and the subsequent narrating of the events, the narrative sets the action in (pre-)patriarchal times. Job's possessions, like those of the patriarchs, consist of cattle and servants; not only his three friends but also his enemies (nomadic Sabeans and Chaldeans) come from the greater environment associated with Abraham's wanderings; the monetary unit, *qeśîṭāh* (42:11) belongs to that ancient era (cf. Gen 33:19); Job's life span exceeds that of the patriarchs; and his sacrifice of animals corresponds to the practice prior to official priests. The name Job recalls a folk hero associated in Ezek 14:14, 20 with Noah and Daniel, probably the Dan'el of Canaanite epic texts. Although the meaning of Job's name is uncertain, similar forms are attested from early times in Egypt and Mesopotamia with the meanings "Where is the divine father?" and "Inveterate Foe/Hated One." In accord with the universality typical of early wisdom, the hero seems to have been an Edomite, famous for the wisdom of its inhabitants, and the setting in the land of Uz echoes the noun *ʿeṣāh* (counsel).

The action of the prologue (1:1–2:13) alternates between earth and heaven, the events of the latter hidden from Job. The hero, perfect outwardly and inwardly according to irrefutable testimony (1:3, 8), enjoys the fruits of virtue—until God directs the Adversary's attention to him, eliciting suspicion of Job's motive for being good and provoking a test to determine the truth. Calamity befalls Job without warning, intruding on a serene setting of festivity. Marauding Sabeans strike Job's property, then fire continues the destruction; Chaldeans wield the penultimate stroke, and a fierce windstorm levels the house in which Job's children are eating and drinking. Messengers convey the news, their formulaic expressions heightening the pain. This narrative strategy informs readers of these events at the same time it informs Job (Weiss 1983). Having lost his children and possessions, Job blesses the Lord as source of good and ill (1:21). A second heavenly scene ensues, with God's "I told you so" and the Adversary's insistence that a real test must touch the actual person (2:3–5). God accedes once more, insisting that Job's life

must not be taken. The final scene depicts a sorely afflicted Job, but one who retains his integrity despite his wife's urging to curse God and die (2:9–10). This time Job's confession takes interrogative form, but he does not curse God. Having heard of Job's misfortune, three of Job's friends, Eliphaz, Bildad, and Zophar, journey from their homes in Teman, Shuah, and Naaman respectively to offer comfort in adversity. Twice the narrator enters the story to pronounce the obvious judgment that in all this Job did not sin, adding "with his lips" the second time. The slight alteration suggests, at least to some people, a gulf between outward expression and inward resentment (*Baba Bathra* 16b). A *Leitwort* (leading, or theme, word) in 1:9 and 2:3 (*hinnam,* for nothing, without cause) links the prologue with the poetry (cf. 9:17; 22:6).

The poetic dialogue consists of three distinct units: Job versus Eliphaz, Bildad, and Zophar (chaps. 3–31), Elihu's attack on Job's friends and on Job (chaps. 32–37), and God's lectures to Job (38:1–42:6, with brief responses by Job in 40:3–5 and 42:1–6). Job opens the dispute with a curse, but not against God except indirectly as creator of the birthday Job damns (chap. 3). He invokes uninterrupted darkness on that day, preferring that his mother had remained in a state of perpetual pregnancy or that he had died at birth, finding rest and equality in Sheol. His hidden fear that calamity might befall him had prompted excessive religious scrupulosity in the story (1:5) and erupts again in 3:25. From here on, each friend in turn responds to Job. This alternation of speakers occurs in three cycles, with the order of the friends being Eliphaz (chaps. 4–5, 15, 22), Bildad (chaps. 8, 18, 25), and Zophar (chaps. 11, 20—note that Zophar has no response in the third cycle). Job answers each of them in turn (chaps. 6–7, 9–10, 12–14, 16–17, 19, 21, 23–24, 26–27). Once the friends are reduced to silence, Job contrasts his former happiness (chap. 29) with his present misery (chap. 30) and utters an oath of innocence designed to force God's hand (chap. 31). Unlike most oaths in the Bible, Job's imprecations actually state the penalty that will beset the guilty person. He disavows, among other things, idolatry, lying, adultery, lust, greed, abuse of power, lack of concern for the poor, and misuse of land.

Surprisingly, Job's extreme action yields an unexpected interlocutor (chaps. 32–37), the youthful Elihu, whose name means "He is my God." Having stood by silently while Job's friends tried to answer his arguments, Elihu can contain his words no longer. Lashing out at the comforters-turned-accusers, he then turns against Job with comparable contempt, claiming that God speaks through nocturnal experiences (33:15–16) and disciplines by means of adversity, both to elicit repentance (33:19–30). Citing Job's own words (e.g., 33:33 and 6:25; 33:24 and 6:23; 33:22 and 6:29), Elihu endeavors to overwhelm him with his own "perfect knowledge," a characteristic of his God as well. Elihu denies that one who hates justice will govern, and notes that God's all-encompassing power rules out any need for partiality (34:17–20). Like Zophar, Elihu exalts God to the point of rendering human deeds worthless insofar as God is concerned: good and evil affect human beings but do not touch God in any way. Such thinking naturally issues in majestic praise of the creator (chaps. 36–37), who now speaks from a storm (38:1). God asks Job question after question, forcing him to recognize that he knows very little about the mysteries of the universe (chaps. 38–39). The heavenly teacher lectures Job on the wonders of nature and calls to mind wild animals who live outside the human domain. God parades these creatures before Job: lion, mountain goat, wild ass, wild ox, ostrich, horse, hawk and eagle (chap. 39).

Not content with Job's initial repentance (40:3–5), God boasts about two special creatures, Behemoth and Leviathan (chaps. 40–41). In introducing them, God seems to concede that human pride and wickedness in general present a challenge even to the creator (40:10–14). Although God transforms the mighty Behemoth and Leviathan into innocuous playthings for the deity's amusement, the puny Job is no match for their strength. Realizing that his earlier Titanism was ludicrous, Job relents (42:1–6). The dispute has not been a total disaster, for Job's second-hand knowledge of God vanishes before the immediacy of sight. Hearing gives way to seeing, which enables Job to gain a proper perspective on his place in the universe. Complaint also acquiesces to profound silence. No longer does Job claim to be the measure of all things.

The epilogue (42:7–17) ties up all loose ends. Having repented, of what is unclear, Job intercedes on behalf of the three friends, at whom God is angry because they did not speak truth about God *as Job did.* A temporal connection between prayer and restoration occurs, and Job returns to his previous state, with one bonus: his three daughters possess unsurpassed beauty, besides an inheritance. Seven times the verb *brk* occurs in the story (1:5, 10, 11, 21; 2:5, 9; 42:12), alternating between the meanings "curse" and "bless" except the last two, which are reversed.

B. Structure

To some extent the shape of the book depends on one's predisposition, but three different ways of viewing the structure commend themselves. Readers may emphasize (1) the diction, (2) the dramatic movement, and (3) the individual components in outline form. By discounting brief prosaic introductions and observations, the 1st approach yields two parts, prose and poetry. The 2d perspective uses narrative introductions—and to some extent conclusions—to distinguish three divisions, specifically 1:1–2:10; 2:11–31:40; and 32:1–42:17. The 3d approach divides the book into five discrete sections: chaps. 1–2; 3–31; 32–37; 38:1–42:6; and 42:7–17.

1. On the Basis of Diction. Perhaps the most noticeable feature of the book is its use of a story to enclose a poetic center. This device was widely employed among sages of the ANE to provide a specific historical framework within which to interpret teachings that had broad application, whether philosophical ruminations about innocent suffering and the governance of the universe or collections of aphorisms to enable others to make wise decisions. For example, Ahiqar and Anksheshankh have left significant proverbial sayings for posterity, but in each instance an account of the teacher's personal adversity encloses the collection of maxims. See also AHIQAR. Little effort to connect this prose framework with the poetic teachings is evident, so that both story and poetry stand on their own. Nevertheless, the juxtaposition of the two parts of the book offers a way of understanding the teaching that would

otherwise not occur. Just as a simple frame enhances a painting, delineating its original features and drawing attention away from itself to the art, so these brief biographies give vital data about the hero's words and character.

In a sense, the Joban poetry interrupts the story, which suspends Job's destiny in midair until the poetry has reached its goal; only then does the tale resume and achieve closure. The narrator of the story, who freely intrudes twice to pass independent judgment on the hero (1:22; 2:10), recedes in the poetry so that other voices may be heard. The lyrical poetry of Job, whose threatened ego fights for survival against overwhelming odds, the confident assurances of Eliphaz and his companions, Elihu's brash rebuttal of all four, and the divine interrogation—all this takes place while the narrator creates a story within an earlier story, the folktale. The narrator's resumption of the tale after Job's claim to have seen the deity gives the impression of returning to reality, at least a realm that ordinary people comprehend. *Do ut des* (I give in order to receive) still functions in this land of Uz, for divine anger departs as a result of Job's obedient deed, and God restores Job at this time. Prologue elicits dialogue, and epilogue terminates it. The epilogue does more than end the dialogue, for the force of "anti-wisdom" within the poetry evaporates under the heavy hand of the narrator. Viewpoints collide everywhere, not just in the dialogue. The prose framework and that in the poetic core speak opposing views: the former ultimately seems to affirm the reward of the innocent (Job is at least compensated for his suffering, if not rewarded for his virtue) while the latter proclaims most persuasively that the innocent are not rewarded. To this day no satisfactory harmonization has been found.

2. On the Basis of Dramatic Movement. Introductions at 1:1–5, 2:11–13, and 32:1–5 suggest another way of dividing the book. The first introduces Job and gives essential insights into his character, which will soon be assailed mightily. The second introduction identifies Job's three friends and sets up expectations about their role as comforters, whereas the third introduction describes Elihu's boldness in venturing to address his elders without their consent and justifies his fury at the level of discourse so far. Thus understood, the book of Job becomes a drama consisting of three episodes: God afflicts Job, Job challenges God, God challenges Job. Another way of stating the drama is the hidden conflict, the conflict explored, and the conflict resolved (Habel 1985). This interpretation depends on an understanding of narration through dialogue, so that the fundamental category of the book is said to be prose with the poetic dialogues retarding the movement of plot and heightening the emotional pitch.

This approach encounters difficulties other than the brevity of the first part, since Job's laconic confessions in this section differ from his outpouring of resentment in the second unit, although his two repentant statements in part three balance the shorter confessions nicely. More to the point, the narrator's commendation of Job's conduct (1:22; 2:10) marks two closures, and although section two ends appropriately (31:40, "The words of Job are ended"), the third section concludes reluctantly. God's first speech evokes Job's final words, or so he says (40:4–5), only to give way to a second divine speech and an additional response from Job (42:2–6). Each indecision necessitates further brief introductions of speakers, but these comments play no role in the suggested structuring of the book. The description of plot development also presents difficulty, for Elihu's speeches hardly contribute to resolving the conflict between Job and God. Actually, the epilogue alone describes the resolution, the divine speeches functioning as disciplinary chastening of the hero.

3. On the Basis of Individual Components. Yet another means of structuring the book derives its clues from the distinctive components in it: (1) a story about Job's affliction, (2) a dispute between him and three friends, (3) the speeches of Elihu, (4) divine speeches punctuated by Job's submission, and (5) a story about Job's restoration. The second division fails to qualify as a consistent dispute, since the 3d cycle breaks off without Zophar's final speech and thereafter Job appears either to address the divine enemy or to enter into nostalgic monologue. This approach does not disparage the dialogue by labeling it an almost interminable retardation of the plot, since the poetic speeches possess value in their own right apart from any progress they may signal toward some unspoken telos. Because the action moves toward a divine pronunciation of Job's innocence in the debate between Job and his friends, the dialogue gives an impression of progress, particularly the emergence of references to the figure of an "advocate" or "redeemer." Emotional changes and high points mark still another kind of movement in the poetry, indicating that progress does occur even when opposing intellectual positions come no closer together than at the beginning.

C. Scholarly Issues

More critical problems surround the book of Job than perhaps any other book of the OT. Many of these problems relate to the structure of the book itself.

Perhaps the most obvious problem concerns the composition of the book, more specifically the relationship of the prose framework to the poetic core (see E below). Even though prose and poetry can be intermixed with great literary effect (e.g., Jonah), a number of apparent inconsistencies are associated with this prose/poetry distinction. The patient Job of the prose framework contrasts with the defiant Job of the poetic core; and the God who is proud of Job and commends him in the prologue/epilogue rebukes him in the dialogue. However, these contrasts can be an understandable function of the plot development. More seriously, the "happy ending" effected by God (42:10–17) seems to undermine the integrity and force of Job's penetrating argument as presented in the dialogue (i.e., that God does not guarantee "happy endings"). Thus, some questions have been raised about the literary relationship between the prose framework and the poetic dialogue: initially the framework was thought to be secondary, although the dominant hypothesis now is that this framework reflects an original folktale that was subsequently embellished by the poetic dialogue.

Indeed, some tension seems to exist between the prose prologue and epilogue. The Satan—whose penetrating questions about the ultimate motives for human righteousness precipitated the "testing" of Job in the prologue—is never mentioned in the epilogue. Moreover, the epilogue does not even return to the issue of the "test."

In the poetic dialogue itself, the most noticeable structural feature is the predictable "round-table" cycle of the debate, with each friend speaking in turn. Yet in the 3d cycle of the debate (esp. chaps. 25–28) this symmetry dissolves: Bildad's 3d speech is surprisingly brief (chap. 25), Zophar has no 3d speech, Job paradoxically seems to express sentiments that previously have been found only on the lips of his three friends (26:5–14), and there are literary clues that several "Job speeches" may have been spliced together (e.g., 27:1; 29:1). Some scholars have attempted to reconstruct a 3d speech for Zophar out of Job's paradoxical statements, while others hold that the hymnic reflections on wisdom (chap. 28) are secondary.

The nature and function of the Elihu speeches (chaps. 32–37) are problematic. Are these speeches secondary or original? Most scholars opt for the former, pointing out that their appearance breaks an otherwise clear pattern: Job never replies to Elihu, and in the epilogue neither God nor the narrator acknowledges his presence and participation in the dialogue (as they do Eliphaz, Bildad, and Zophar; 42:7–9). Indeed, the speeches seem intrusive—something even Elihu must apologetically admit (32:6–22): they delay the smooth movement from Job's plea that God appear and respond (chap. 31) to God's actual appearance and response (chap. 38). However, Elihu's speeches fail to provide the anticipated "breakthrough solution." Is the resultant sense of disappointment unintended (i.e., does the text of Job preserve the remains of a clumsy author [or secondary redactor?] who, like Elihu, tried unsuccessfully to steer the issue to a clear resolution)? Or does the author have some specific reason for introducing Elihu and having his arguments prove so noticeably inadequate; and if so, what is that reason?

Similarly, the nature and function of the theophany (chaps. 38–40) have presented other problems. Was it original, and why are there *two* divine speeches (38:1ff.; 40:6ff.), each ending with a capitulation by Job? Does Yahweh "contaminate" the test of Job's character by appearing in this manner, or has the test already been decisively resolved? Does Yahweh not attempt to "bully" Job into submission just as Job had cynically predicted (i.e., Yahweh forces the issue back to the question of his power, not his justice)?

Other "historical" questions have centered on the time and circumstance of the writing (see F below) and possible connections with other ANE writings (see G below). The more "philosophical" questions, however, have centered on the various "answers" that are (or are not) given for the "problem of human suffering" (see G below). The quest for such "answers" is an understandable human desire, but it may be unfair to expect the book of Job to answer these questions.

However, if he had wanted to, the author undoubtedly *could* have provided some (perhaps even satisfactory) resolution to the story. If he wished to retain the dialogue, the author could have explicitly addressed its point (or its pointlessness?) and the ambiguity of Job's final reaction, explicitly telling the reader whether or not the test was resolved, and if so, how it was resolved. The author similarly could have had God more explicitly underscore the fact that no human being (neither Job nor the reader) can know or understand why the world operates the way it does (i.e., have God exercise his "power play" more obviously and directly on the reader). Indeed, to some extent the author seems to permit the plot to devolve toward this insight.

If he eliminated (or ignored) the dialogue altogether, the author *literarily* could have resolved some aspects of the narrative. For example, he could have portrayed a resolute Job who never complained and who made a complete *and unselfish* submission to God. He could even have depicted this Job continually suffering and eventually dying in pain. In this scenario, Satan would lose the wager, but the narrative could have still ended on the upbeat note that God still retained pride in (the now-deceased) Job (assuming the author cannot portray Job being resurrected from the dead). The reader would at least still be left with a moral example (Job), and whatever vague hopes might be associated with the notion of retaining divine favor posthumously.

Or the author could have depicted Job finally and decisively cursing God and having Satan thereby win the wager. Such a scenario conceding the truth of the Satan's claim could have itself constituted not only a profound anthropological lesson into human motivation (that even the best of human intentions *are* colored by self-interest) but also a touching theological lesson about the predicament of God (who, despite the unconditional love shown for humans, can only be loved conditionally for the benefits rendered, not unconditionally for God's sake).

It is of course unfair to expect an ancient author to write a literary piece to provide satisfying answers to the questions raised by subsequent generations of readers. Nevertheless, many readers have wished that the author could have explicitly cited the "Fall" and "Original Sin" (Genesis 3–4) to explain human suffering, more explicitly drawing the conclusion that (for the time being?) the world does not operate according to God's original intent at Creation. Again, some readers have wished that the author could have developed the figure of a more diabolical "Satan," thereby portraying a sort of cosmic dualism that explains suffering as caused by an evil presence actively working to undo God's otherwise harmonious and just creation.

Regardless of how satisfying or unsatisfying they may be to subsequent readers, all these hypothetical resolutions would at least represent clear and deliberate attempts to resolve the profound problem of human suffering. The fact that the author of the finished book seems not to make such an explicit attempt perhaps reveals an awareness of how intractable the problem is. Perhaps the author was content merely to raise the issues, knowing from experience, reflection, and realization that any answer that human beings can articulate and comprehend is necessarily inadequate.

D. Competing Arguments

In a book that features a deity who asks copious questions, it occasions little surprise that the central theme of the book is stated interrogatively: does anyone serve God for nothing (1:9)? Society seems to take for granted the principle of retribution, the reaping of what one sows, despite occasional exceptions. Job's case stretches the belief to the limit, and in doing so the book probes an even profounder mystery: can religious trust survive every

eventuality? The author recognizes that religion cannot endure unless its adherents transcend self-interest and reject all relationships grounded in the hope of reward for service duly rendered or fear of punishment for failing to meet expected standards of belief or practice.

As one might expect, an ambiguous answer rises above the heat of conflict, and the ambiguity penetrates to the very core of the story as well as the poetic dispute. On the surface, it appears that Job utterly rejects every semblance of a magical concept of reality whereby human beings manipulate deity for their benefit. After all, he retains his loyalty to God in the face of extreme adversity, explaining that we ought to accept weal and woe as equally sent by God. Still, the story endorses the principle of reward and retribution in subtle ways (Job is supremely virtuous and rich) as well as not so subtle (Job offers sacrifices to propitiate deity, and God seems to reward Job in the end for faithfulness). Despite its radical challenge to dogma, especially in the undeserved fate of Job's children, the story ultimately bows to tradition.

The center of gravity shifts in the poetic dispute, where the fundamental order of the universe comes under attack. Job questions the moral underpinnings of human existence, for he no longer receives appropriate dividends from above. Ironically, his complaint presupposes the very principle that he denies, else he would have no basis for dispute with God. The question, "Does God rule justly?" alternates with another, "How should a person respond to undeserved suffering?" Like the Mesopotamian *I Will Praise the Lord of Wisdom,* the book of Job functions as a paradigm of an answered lament, a model for those undergoing present suffering. The model consists of four movements: undeserved affliction, complaint, hearkening, restoration (Gese 1958). It gives free rein to the expression of anger, while at the same time urging the individual to submit humbly to the mystery and majesty of creation. The book offers no satisfactory answer to the agonizing query, the shortest question of all, "Why?" Even if the arrangement between God and the Adversary does not really constitute a wager, the idea of testing a faithful servant is only slightly more palpable, at least to modern consciences.

The book of Job addresses more than one question and proposes several competing answers. Presumably, the author's answer, insofar as one option takes precedence over all opposing views, is hidden within the divine speeches. These lectures on the wonders of nature argue for a morality that transcends human values and contend that God governs the universe wisely. The frightening monsters, described in language that conjures up images of crocodiles and hippopotami, posed a threat to order in Egyptian mythology but yielded to divine domestication according to this astonishing text (Keel 1978). The deity's activity in providing for the needs of wild animals and in causing rain to fall beyond the regions of human habitation implies that caprice does not speak the final word. Saadia Gaon makes the argument more explicit: the gift of life satisfies the issue of divine justice, and anything beyond that falls into the category of mercy. Owing their very existence to the creator, human beings have no claim on God.

This line of reasoning comes closest to Eliphaz' insistence that human deeds have no effect on God, who does not even trust holy ones. For Eliphaz, the basic issue becomes clear in a terrifying revelation: "Can a mortal be more righteous than God? Can a man be purer than his Maker?" (4:17). Not content to rest his case on a word from God, he appeals to proverbial wisdom (reaping and sowing) and to ancestral teaching ("We are older than you"). At first gentle toward Job and holding out hope of eventual restoration as a result of submission, Eliphaz becomes increasingly less patient, accusing Job of heinous crimes. In doing so, Eliphaz fails to see the inconsistency with his earlier insistence that God derives no pleasure from human morality.

Although Eliphaz alludes to human existence as drinking iniquity like water, Bildad extends this point to include the birth process itself. He also expresses an exceedingly low estimate of human worth. Matters lack any ambiguity whatsoever for Bildad; Job's children sinned and paid for it, for God does not pervert justice. It follows that Job's repentance will accomplish restoration. Zophar's contribution to the argument skirts the issue of justice altogether: God takes mercy into account, punishing less than people deserve. Moreover, Zophar bears witness to an inner voice that announces the brevity of ill-gotten wages.

Elihu plows the same furrow that Job's three friends have opened, as if youth inevitably do so. Like Eliphaz, he thinks God warns mortals by means of frightening dreams and visions; Elihu also questions the effect of virtue or wickedness on God, concluding that morality concerns human beings only (35:8). Like Bildad, Elihu cannot even imagine the possibility that God rules unjustly. Like Zophar, Elihu thinks favored persons escape penalty for their sins. His arguments lay greater stress on educative discipline and the role of a mediator in moving the deity to compassion.

Job also entertains thoughts about an advocate who will plead his case and press for vindication. This daring concept (9:33) disappears almost as abruptly as it occurs, only to return a second (16:19) and third time (19:25) with greater tenacity. Job remains adamant in his protests of innocence, and this unyielding stance obliges him to attribute fault to God. Failing to obtain a hearing in the divine court, Job concludes that God has abandoned justice altogether. Because Job believes in the unlimited power of God, he naturally assumes that the problem belongs to the realm of will. The deity clearly does not want to execute justice throughout the land, Job charges, and with this concession Job broadens his scope to include the miserable wretches of society who know nothing but deprivation from birth to death. Fleeting thoughts about survival beyond the grave only distress Job, who denies the likelihood itself. He soon realizes that his only hope consists in a formal pronouncement of innocence within a court of law. To this end he pleads with God to write out the crimes for which he now suffers, vowing to parade the charges for all to see. In desperation, he enters into an oath of innocence, a self-imprecation designed to force God to answer. Confused to the end, Job forgets that human action has no control over arbitrary deities—or free ones (Hempel 1961). Readers forget this point too, frequently remarking that such action forced God to respond. Even Israel's sages

knew better; neither curses nor oaths automatically move from word to deed.

E. Composition

A noticeable lack of coherence within the book implies that more than one author contributed to its final form. Differences between framework and core suggest that the author of the poetry used a popular folktale to pose the religious problem to be examined in the dispute. The depiction of the hero differs sharply in the two parts, a model of patience in the story, a defiant rebel in the poetry. The names for God differ, Yahweh in the prose, El, Eloah, Shaddai in the dispute (with one exception). The story endorses the principle of reward and retribution, despite Job's temporary misfortune, but neither Job nor God subscribes to the theory. Job rejects it outright and God ignores it completely. The epilogue has God condemn the friends for speaking lies about the creator and praise Job for telling the truth, whereas the divine speeches adopt quite a different attitude toward Job's attempt to justify himself at God's expense.

Confusion also exists within the poetic section. The 3d cycle of speeches breaks off prematurely with no response by Zophar; furthermore, Job's arguments at this point become wholly out of character. He seems to surrender to the friends' understanding of things, which contradicts everything he has said previously and makes nonsense of what follows. Various rearrangements of chaps. 24–27 restore Zophar's last speech; perhaps Job's final remarks to the friends were so blasphemous that later readers replaced them with Zophar's sentiments. Chapter 29 presents a problem, for it interprets the argument and offers a feeble rationale for religion. The poem pronounces wisdom off limits for humans (Job seeks God, not wisdom!) but then concedes that God has made it accessible to everyone who is religious and moral, a conclusion Job only reaches after God's speeches. Furthermore, wisdom has two different meanings; practical knowledge in the dialogue, the nature of the universe in the poem. Elihu appears without advance warning and cites previous material with great familiarity. He may represent the later Jewish community's dissatisfaction with the divine speeches. Both God and the narrator in the epilogue ignore Elihu, as does Job. Moreover, the oath in chap. 31 arouses expectation of a divine visitor, which Elihu delays interminably. The divine speeches also seem to suggest supplementation. The primary problem extends beyond particular sections that differ markedly from the rest, especially the descriptions of horse and ostrich, to the simple fact that God speaks twice and elicits two submissions from Job. The second speech has struck many readers as excessive browbeating.

Literary unity within the dialogue has its defenders, who offer various justifications for rejecting a theory of textual accretion. The breakdown of the 3d cycle is a subtle way of declaring Job the victor (but why does Job endorse their view of retribution?). Job 28 functions as an interlude, retarding the action of the drama and assuaging human emotions. Elihu serves as an ironic foil to the deity, and the citation of earlier speeches constitutes instances of literary anticipation or foreshadowing. Variety in style and vocabulary is a mark of literary craft, and God's two speeches address Job's dual charges. Stylistic affinities between the hymn on wisdom's inaccessibility and the Elihu narratives, on the one hand, and the rest of the poetry, on the other hand, have led some interpreters to posit common authorship over a long period of time. The silence about Elihu in the epilogue baffles critics of all persuasions.

The folktale may have developed by stages, with the wife and friends playing somewhat different roles from the ones in the present book (Vermeylen 1986). The three friends may once have functioned in the way the Adversary does now. Inasmuch as these verses featuring "the Satan" can be omitted without serious loss, the story in all essentials probably existed long before the addition of the motif of a heavenly adversary. The story manifests exquisite style, causing one interpreter to question the appropriateness of using the term folktale (Good 1988) and leading another to postulate an epic substratum (Sarna 1957).

F. Date and Language

Although the book is set in pre-Mosaic times, the actual time of composition is much later. Linguistic evidence seems to indicate a date in the 6th century or later (Hurvitz 1974), despite the complete silence about the national calamity in 587 B.C.E. Specific indicators for dating the book are exceedingly rare. Job's powerful outcry about the desirability of incising his testimony on a rock with lead inlay may allude to the Behistun Rock on which the Persian King Darius proclaimed his accomplishments to all passers-by. Mention of caravans from Teman and Sheba (6:19) and the nomenclature of officials (kings, counselors, princes) in 3:14–15 corresponds to Persian hierarchy. The use of the definite article *ha-* with *Śaṭan* suggests a stage in the development of the figure prior to the Chronicler and parallel to Zechariah. The abundance of Aramaisms, while problematic, may indicate a date in the late 6th or 5th century. The relationship between Job and comparable laments or lyrical texts in Jeremiah and Deutero-Isaiah is difficult to assess, but priority may go to the latter books. Similarities between Job and theological probings within the Psalter (37, 49, 73) certainly exist, but the uncertain dates of these psalms render them dubious witnesses about the actual date of the book of Job. The possible allusion to Job in Qoheleth 6:10–11 may echo familiarity with the folktale, and the recently discovered Targum of Job from Qumran, dating from the 2d or 3d century B.C.E., suggests a considerably earlier date for the book of Job.

An attempt to provide a specific historical setting for the book in Teman lacks cogency. According to this hypothesis, the book was written between 552 and 542 B.C.E., when Nabonidus conquered Tema and marauding soldiers took Job's possessions, forcing him to ransom his life (Guillaume 1968). Likewise, an effort to understand the book as a paracultic tragedy intended for use at the New Year Festival (Terrien) has failed to persuade many readers. Two astonishing features of the book remain unresolved: why did the author choose an Edomite for its hero, and why did the analogy between Job's affliction and Israel's defeat by Babylon and enforced exile not affect the depiction of the hero? Given the hostile sentiments toward Edom in prophetic texts from the exilic and postexilic period, the identification of the perfectly righteous man as an Edom-

ite, made explicit in an appendix to the book in the LXX, seems strange until one recognizes the universalism of wisdom literature. Moreover, having set the story in (pre-)patriarchal times, the author could not have introduced an Israelite, for the nation did not appear on the historical scene until centuries later.

Two other factors, sometimes thought to indicate a late date for Job, alter the situation little: the emergence of monotheism and monogamy. The heavenly Adversary can act only insofar as God allows it to do so, and the divine speeches also insist on the creator's authority over the entire cosmos. Such "modified monotheism" still employs mythic language about antagonists over whom the creator exercises control. Moreover, Job imagines the possibility of a mediator's forcing a guilty deity to acknowledge Job's innocence. One hesitates to label such thinking "monotheism," although it resolutely refuses to exonerate God by positing a rival deity. The noteworthy assumption that a wealthy man like Job in patriarchal times had only one wife may suggest that monogamy had become the rule rather than the exception when the author composed the folktale.

The language of the book contains more rare words than any other biblical work, Hosea being its nearest rival. The linguistic forms have caused interpreters to posit theories of composition in another language, primarily Aramaic. Much clarity of language and syntax comes from Northwest Semitic, so that theories of translation into Hebrew from another language seem superfluous. Nevertheless, the rare dialect of the book often defies understanding, and the frequent references to obscure animals and natural objects do not help matters. A single example illustrates the problem. In 4:10–11 five different words for lion stretch modern translators' wits to the breaking point.

G. Related Works in the Ancient World

Belief in the moral governance of the universe was widespread in the ancient world. Gradually this conviction gave rise to confidence that certain actions ensured well-being most of the time. By behaving in specific ways, individuals controlled the gods, who also benefitted from human attention to the cult and to ethics. During periods of social turmoil, doubt about the deity's benevolence became prevalent and produced literary texts resembling the book of Job in some ways. From Egypt come three works of this nature: *The Admonitions of Ipuwer, The Dispute Between a Man and His Ba,* and *The Eloquent Peasant* (*ANET,* 441–44, 405–10), all dating from the 12th Dynasty (1990–1785 B.C.E.).

A section of *The Admonitions of Ipuwer* cites conventional belief ("He [God] is the herdsman of all; there is no evil in his heart. His herds are few, but he spends the days herding them") only to lament the wickedness that the deity allowed to stand. Because of social upheaval, the author denies the existence of a providential deity guiding human affairs. He asks: "Where is he today? Is he asleep?" and insists that "his power is not seen." Although the god possesses authority, knowledge, and truth, "turmoil is what you let happen in the land, and the noise of strife." Death naturally follows, and the poet entertains the possibility that the divine herdsman loves death. *The Dispute Between a Man and His Ba* (*ANET,* 405–7) describes a miserable person who tries to persuade his soul to join him in a pact to commit suicide, primarily because his name reeks and he lacks companions who act virtuously. The man longs for death, which is "like a sick man's recovery," "like the fragrance of myrrh (and lotus)," "like a well-trodden way," "like the clearing of the sky," "like a man's longing to see his home." *The Eloquent Peasant* (*ANET,* 407–10) complains bitterly to a government official, Rensi, son of Meru, about a lesser functionary who robbed him. Because of his rhetoric, the peasant is imprisoned and encouraged to plead his case; unknown to him, scribes record his speeches for the entertainment of the court. The peasant speaks nine petitions, becoming more exasperated over time and threatening to appeal to Anubis. When servants come from Rensi to reward the peasant, he mistakes their purpose and welcomes death with the words: "A thirsty man's approach to water, an infant's mouth reaching for milk, thus is a longed-for death seen coming, thus does his death arrive at last." Like the book of Job, these texts have prose frameworks enclosing poetic complaints.

From Mesopotamia come at least four texts that explore the problem of unjust suffering: *Man and his God, I Will Praise the Lord of Wisdom, The Babylonian Theodicy,* and *A Dialogue Between a Master and his Slave.* In the Sumerian *Man and his God* (2d millennium; *ANET,* 589–91), a sufferer complains to the gods but confesses guilt and is restored. He accuses the deity, here called a "righteous shepherd," of becoming angry, thereby encouraging human enemies to conspire against the sufferer without fear of divine retaliation. Appealing to the intimate relationship of father and son, the sufferer asks how long the deity will leave him unprotected. Nevertheless, he surrenders all right to protest divine conduct and subscribes to conventional wisdom: "Never has a sinless child been born to its mother; a sinless workman has not existed from of old." *I Will Praise the Lord of Wisdom* (*ANET,* 434–37) discovers a solution in the inscrutability of the gods and the necessity for human beings to perform proper cultic acts. The sufferer believes in divine compassion ("I will praise the Lord of wisdom . . . whose heart is merciful . . . whose gentle hand sustains the dying . . .") despite his own wretched state. Contrasting his earlier prestige with his present dishonor, he complains about inability to discover the face of the one to whom he prays. Circumstances compel him to conclude that the gods may have a different value system from the one constructed by human beings. This concession leads him to ask: "Who can know the will of the gods in heaven? Who can understand the plans of the underworld gods? Where have humans learned the way of a god?"

The Babylonian Theodicy (ca. 1100 B.C.E.; *ANET,* 601–4) resembles Job in that a sufferer engages in a dispute with a learned friend. An acrostic poem of 27 stanzas with 11 lines each, this dispute entertains the possibility of divine culpability ("Narru king of the gods, who created mankind, and majestic Zulummar, who pinched off the clay for them, and goddess Mami, the queen who fashioned them, gave twisted speech to the human race. With lies, and not truth, they endowed them forever"). The sufferer complains of having been orphaned early, and his friend reminds him that we all die. When told that wild asses trample fields and lions kill, the friend points out that the

wild animals pay with their lives and that the plan of the gods is remote. The sufferer insists that his good deeds have not brought favorable response from the gods, and this remark arouses the friend's anger over such blasphemy. The friend does concede that the one who bears the god's yoke may have sparse food, but this situation can change for the better in a moment. The sufferer lingers on the notion that morality yields no profit. In the end, the complainant prays that the shepherd (i.e., god) who abandoned him will yet "pasture his flock as a god should."

The Dialogue Between a Master and his Slave (*ANET,* 437–38) resembles Ecclesiastes more than the book of Job, but some features of the Dialogue echo the conditions underlying Job's distress. A master determines to pursue a course of action and his servant, the proverbial aye-sayer, encourages him. The master changes his mind and the slave defends this decision. Nothing commends itself to the master—not dining, marrying, hunting, philanthropy, or anything else—except suicide, better still, murdering the slave. This poor wretch, caught in his rhetoric, seems to say that the master would gladly join him in death within three days.

The Canaanite epic of Keret (*ANET,* 142–49) bears some resemblance to the book of Job. The hero loses his wife and sons but eventually finds favor with the gods and acquires a new wife and additional children. More remote parallels such as Prometheus Bound have been compared with Job, but differences stand out (Prometheus was a Titan, not a human being, and he suffered the wrath of Zeus through wilful conduct). An Indian tale about a discussion among the gods over the existence of pure goodness among earthly creatures singles out a certain Harischandra, whom the god Shiva submits to a test that demonstrates his incredible virtue.

The author of the book of Job may have known about the Mesopotamian (and Egyptian?) prototypes, but the biblical text cannot be explained solely on the basis of earlier parallels. These explorations of the governance of the universe and unjust suffering may have provided an intellectual stimulus, but the biblical author has produced something that stands alone as *sui generis.* Still, structural similarities (framework enclosing poetic disputes) and common ideas place the biblical work in the wider context of intellectual and religious foment. This observation also extends to specific units within the book of Job, for example, the oath of innocence in chap. 31, for which Egyptian execration oaths offer a close parallel (Fohrer *Job* KAT).

The claim that the book of Job is *sui generis* does not imply originality for everything in Job. In fact, striking similarities exist between elements within this book and other biblical material: the laments in Jeremiah (chaps. 3 and 20) and in the Psalms, hymnic passages in Amos (4:13; 5:8–9; 9:5–6) and Deutero-Isaiah, the book of Ruth, prophetic lawsuits, and proverbial wisdom. Sometimes the author seems to offer a parody of biblical texts (e.g., Job 3 and Genesis 1; Job 7:17–21 and Psalm 8). Occasionally Job shares expressions in common with another textual unit (e.g., 38:5 with Ps 30:4, "Surely you know"; and 13:20 with Prov 30:7, "Two things"—but the connection between these texts is unclear).

The book of Job is usually discussed in connection with Proverbs, Ecclesiastes, Sirach, Wisdom of Solomon, and a few Psalms (e.g., 37, 49, 73). Modern scholars call these works "wisdom literature" and consider their closest parallels to be in Egypt and Mesopotamia rather than in the rest of the biblical canon. In some ways Job resists inclusion in this corpus, primarily because of the dominance of the lament genre and the theophany. Nevertheless, it seems best to designate the book "wisdom" and to recognize that, like Sirach some years later, the author of Job begins to widen the scope of traditions accessible to the sages.

On the basis of the texts to which modern critics have given the title wisdom literature, four quite distinct types are discernible: proverbial sayings, religious or philosophical reflections in discourse form, nature wisdom, and mantic revelation. The book of Job lacks the last of these types. Collections of aphorisms from the 3d millennium to the 3d century B.C.E. have survived in Egypt, and Mesopotamian proverbs date from the 3d and 2d millennium. The philosophical probings from both areas rival the proverbial sayings in antiquity. The book of Job unites these two types of wisdom—the brief saying and reflective discourse—while restricting nature wisdom to a discrete unit, specifically chaps. 38–40. In general, the aphorisms present a positive view of reality, resting on belief in a reliable order and in the capacity of the human intellect to control one's actions and thus to promote well-being.

On the other hand, the intellectual reflection about the problem of suffering and the meaning of life is markedly less optimistic. The former type of thinking, by means of aphorisms, has a decidedly practical purpose, although its utilitarianism possessed a profound religious grounding: because right conduct sustained the order of the universe, the gods reward appropriate behavior. The reflective discourses question such certainty as found in these brief aphorisms, comprising a sort of "anti-wisdom." The sages therefore demonstrate unusual willingness to examine their presuppositions and to criticize themselves. The author of Psalm 37 affirms traditional belief in the face of all evidence that seems to indicate otherwise, but Psalm 49 takes human frailty much more seriously, and Psalm 73 probes deeply into the nature of the relationships between worshipper and deity. Here the assurance that God is good to the upright appears dubious when taking into account the prosperity of evildoers, until the psalmist goes to the holy place and reflects on the destiny of the evil ones. Then the intimacy with God becomes a source of unsurpassed joy and divine presence more precious than anything else in all creation.

Although the nature wisdom in the book of Job resembles lists of flora and fauna from onomastica in ancient Egypt—where encyclopedic knowledge of different subjects seems to have served to train young courtiers (von Rad 1972)—decisive differences make the identification of Job 38–40 as lists highly doubtful (Fox 1986). Ancient sages study nature as a means of learning more about human beings through analogy, for the wise assume that the same laws govern the universe, animals, and humans.

Because undeserved suffering posed an immense intellectual and religious problem for the sages, they sought arduously for a satisfactory answer. Their most common understanding, the *retributive,* is grounded in the order of the universe and the will of its creator. A second explanation, the *disciplinary,* derives from the context of the family,

where well-intentioned parents punish their children as an act of love, hoping thus to shape character and to protect the young ones from harm. In time, the school also endorses this method of controlling the actions of youth. A third approach to suffering, the *probative,* bears impressive witness to the disinterested nature of religion. God tests human hearts to ascertain whether or not religion is pure, and in doing so replaces human self-interest with the centrality of holiness. A fourth interpretation, the *eschatological,* contrasts present discomfort with future restoration, indicating that hope springs eternal in the human breast. A fifth suggestion, the *redemptive,* derives from the sacrificial system and the idea that the spilling of blood alone makes atonement. A sixth response, the *revelatory,* takes suffering as an occasion for divine disclosure of previously hidden truth, both human pride and the mystery of the living God. A seventh understanding of suffering, the *ineffable,* is a humble admission of ignorance before unspeakable mystery, one so profound that a self-revealing deity in the book of Job remains silent about the reason for Job's suffering and fails to affirm meaning behind such agony. An eighth explanation for suffering, the *incidental,* implies that an indifferent deity stands by and thereby encourages evil, which seems trivial to the High God who fashioned mortals to be subject to suffering as the human condition. All these understandings of suffering in one way or another find expression in the book of Job.

H. Canon and Text

As in the case of Qoheleth (Ecclesiastes), the disturbing thoughts of Job did not prevent its acceptance in the biblical canon. An occasional rabbinic dissent against the historicity of the character Job has survived (*Baba Bathra* 15a), and one Christian thinker, Theodore of Mopsuestia, questioned the book's sacred authority. The sequence of writings varied at first, Job being placed between Psalms and Proverbs in the Talmud, and in Codex Alexandrinus, but preceding Psalms and Proverbs in Cyril of Jerusalem, Epiphanius, Jerome, Rufinus, and the Apostolic Canons. Jewish tradition designates the two different sequences by the acrostic abbreviations *ʾmt* ("truth") for Job (*ʾiyob*), Proverbs (*mišlê*), and Psalms (*tehillîm*), and *tʾm* ("twin") for Psalms, Job, and Proverbs. The Council of Trent fixed the order with Job in the initial position.

Textual problems abound in the book, and the much shorter Greek versions seldom resolve the difficulties. Often merely a paraphrase, the Greek text sometimes elucidates a theological bias in the present MT, for example the repointing of a negative particle in 13:15 to affirm trust in God even when faced with the prospect of death at the deity's hand (Pope, *Job* AB, 95–96). The Syriac Peshitta assists in clarifying obscure meanings of the Hebrew text. Enough of the Targum from Qumran has survived to confirm the same disorder in chaps. 24–27 as that in the Hebrew. One surprising feature of the Targum is its termination at 42:11 instead of 42:17. See also JOB, TARGUMS OF. Jerome's Latin translation of the Hebrew text of Job was influenced by the Greek translations of Aquila, Theodotion, Symmachus, and the Alexandrian version as mediated by Origen's Hexapla.

I. History of Interpretation

The *Testament of Job,* the oldest surviving interpretation of the book of Job, probably comes from Alexandria in the 1st century B.C.E. See also JOB, TESTAMENT OF. One of many such "last words" of a famous person, it is characterized by zeal against idols, extensive speculation about Satan, cosmological dualism, interest in women, burial customs, magic, merkabah mysticism, angelic glossolalia, and patience. The *Testament of Job* differs considerably from the biblical story. The essential variations are that (1) Job destroys Satan's idol, incurring wrath, but an angel reveals Satan's identity to Job; (2) Job's possessions and good works are magnified in haggadic fashion; (3) Job's devoted wife, Sitis, begs for bread and eventually sells her hair to enable them to survive; (4) Satan concedes defeat in wrestling with Job; (5) Baldad poses "difficult questions" and Zophar offers royal physicians, but Job relies on the one who created physicians; (6) Sitis refuses to die until she knows that her children receive proper burial, and Job assures her that their creator and king has already taken them up; (7) God condemns the friends for not speaking truth *about Job;* (8) Job's daughters inherit magical items, enabling them to speak ecstatically; and (9) chariots take Job into heaven.

Unlike the Epistle of James (5:11), early opinions about Job's character did not always emphasize his patient endurance. The *Abot de Rabbi-Nathan* accuses Job of sinning with his heart and in this way defends divine justice. Rashi faults Job for talking too much. According to Glatzer (1966), later interpreters went beyond calling Job a saint or an imperfectly pious man to quite different categories: a rebel (Ibn Ezra, Nachmanides), a dualist (Sforno), a pious man searching for truth (Saadia Gaon), one who lacked the love of God (Maimonides), an Aristotelian denier of providence (Gersonides), one who confused the work of God and Satan (Simeon ben Semah Duran), a determinist (Joseph Albo), one who failed to pacify Satan, a scapegoat, and isolationist (the Zohar), one who suffered as a sign of divine love (the Zohar, Moses ben Hayyim). In Jewish legend, God turned Job over to Samael (Satan) to keep him occupied while the Jewish people escaping from Egypt crossed the Red Sea, then God rescued Job from the enemy power at the last moment.

The early church stressed Job's suffering as a lesson in living and had readings from Job in the liturgy of the dead. Gregory the Great wrote thirty-five books of Sermons on Job, and Augustine read the book as an example of divine grace. Thomas Aquinas saw the book of Job as the starting point for discussing the metaphysical problem of divine providence (Damico and Yaffe 1989). Calvin wrote 159 sermons on Job, mostly polemical defenses of providence (Dekker 1952). This early Christian concentration on the suffering hero of faith gave way in the 17th and 18th centuries to an emphasis on Job as a rebel. For instance, Voltaire saw Job as a representative of the universal human condition (Hausen 1972).

Modern critics continue the tendency to understand Job in the light of prevailing intellectual or religious sentiments. For Carl Jung, psychological insights provide the key to understanding Job. Jung emphasizes the importance of a marriage between an unreflective but powerful deity, Job's afflicter, and *Ḥokmāh* (wisdom), who taught

God that the Cross, not abusive force, was the answer to Job. Jack Kahn draws on modern psychiatry to understand the grief process through which Job passed. Two literary treatments of Job have greatly influenced Western thinking about the problem of evil, Goethe's *Faust* and Archibald MacLeish's *J.B.* An anthropological approach to the book of Job emphasizes the people's desire to establish order by sacrificing Job as a scapegoat (Girard 1987), and a liberation theologian stresses Job's identification with the causes of the poor (Gutiérrez 1987). A philosopher explains Job's offense as ingratitude, a bitterness of spirit that harbors resentment toward God for allowing affliction to strike a heavy blow against Job's security (Wilcox 1989). Artists depict Job's suffering in the light of Greek mythology (William Blake) and the Holocaust (Hans Fronius). A Yiddish interpreter uses Goethe's *Faust* as a lens through which to view Job positively (Chaim Zhitlowsky 1919); a contemporary novelist likens the Jewish fate under Hitler to Job's affliction (Elie Wiesel) and is opposed by a humanist who contrasts Job's survival with the victims of Auschwitz and Dachau (Rubenstein). Some existentialist writers seem to have used Job as an example of the human situation (Camus, Kafka), and at least one Marxist philosopher thinks of Job as an exemplary rebel against theism and abusive power that religion fosters in the western world (Ernst Bloch).

The current fascination with literary theory has produced several different understandings of the book of Job. In one instance, readings are offered from the perspective of feminism, vegetarianism, materialism, and NT ideology (Clines 1989). An older reading of the book as drama has been revitalized (Alonso-Schökel 1977), and a shift from viewing Job as tragedy to comedy has occurred. In this view, Job's final restoration qualifies the book as a comedy in the classical sense of the word (Whedbee 1970). Attention has come to the ways modern interpreters silence the shrill voice of dissent, whether in the revised Roman Catholic liturgy (Rouillard 1983) or in the act of interpretation itself (Tilley 1989). In providing a fresh translation, a contemporary poet (Stephen Mitchell) has taken great license and removed the sting of Job's *cri de coeur* by omitting crucial verses.

Specialists in Hebrew Bible continue to wrestle with the meaning of key texts in the book of Job, particularly 19:23–27 and 42:6. Confronted with several possible translations (and probable textual confusion in 19:23–27), interpreters concede the impossibility of certainty. A parallel in the Canaanite epic of Baal and Anat may explain Job's daring thought that extends the concept of a *gō'ēl* to the realm of the gods, but the matter is complicated by the two previous allusions to an umpire (*mōkîaḥ*, 9:33) and a witness (*ʿēdî // sahadî*, 16:19, 21). Such foreshadowing occurs throughout the book of Job: 9:17 and 38:1–42:6; 11:5–6 and 38:1–42:6; 13:7–12 and 42:7–9; 22:30 and 42:10; 9:32–35 and 32–37 (ironically); 8:6–7 and 42:10–17 (Habel 1985). Moreover, the ambiguity of Job's remarks in 19:23–26 leaves unclear Job's personal circumstances at the time of seeing God. Does Job expect vindication before death, or is his expectation considerably more bold? With respect to the missing object in 42:6, the suggestions are varied: Job repents of his finitude, he rejects (drops) his anticipated lawsuit, he falls down to the earth in shame, he only pretends to repent, knowing how to manipulate an unjust ruler, he rejects God, he recants his earlier words. Less likely, the verb *m's* is understood reflexively (I loathe myself, I melt away, I abase myself).

One conclusion seems to force itself on readers: the author of the book does not believe that the natural order is moral (Tsevat 1966). The God whom Job worships and accuses of injustice transcends morality. Consequently, this book does not present a comforting deity nor a particularly accommodating universe. Perhaps that attitude is appropriate in an examination of the possibility of disinterested goodness. Nevertheless, the evocative power of this book "crashes into the abyss of radical aloneness" (Susman 1969) and arouses high praise in many readers, for example: "Here, in our view, is the most sublime monument in literature, not only of written language, nor of philosophy and poetry, but the most sublime monument of the human soul. Here is the great eternal drama with three actors who embody everything: but what actors! God, humankind, and Destiny" (Alphonse de Lamartine, cited in Hausen 1972: 145).

JAMES L. CRENSHAW

JOB, TARGUMS OF. There are two mss of targums (Aramaic translations) to the book of Job among the Dead Sea Scrolls found at Wadi Qumran: a substantial text found in Cave 11, consisting of about 20 percent of the book in 38 fragmentary cols (11QtgJob); and two small ms fragments from Cave 4, essentially comprising about a dozen fragmentary lines from two cols (4QtgJob). The ms do not overlap; the Cave 4 fragments preserve text from chaps. 3–5, while the Cave 11 material preserves intermittent text from 17:14 to the end of the book. Because of the lack of common text and, even more, because the Cave 4 Targum is so little preserved, it is an open question as to whether these two texts preserve the same or distinct Aramaic versions of Job. In any case, neither of these targums appears to show any direct relationship to the standard targum found in the Rabbinical Bible and available, for example, in the edition of Lagarde (cf. Fitzmyer 1974).

The larger targum from Cave 11 was published by van der Ploeg, van der Woude and Jongeling in 1971, and there followed an edition by Sokoloff in 1974, which is now considered the standard reference on the text. Major studies of 11QtgJob include Beyer 1984: 280–298; Jongeling et al 1976: 1–73; and Sokoloff 1974). The targum fragments from Cave 4 were published by Milik in 1977 (DJD vol. 6).

These two targums, especially the Cave 11 targum, are of considerable importance for the study of the book of Job, for the study of targumic traditions, and for the study of Aramaic during the Hellenistic and Roman periods. They constitute the earliest mss of Job translations in existence and 11QtgJob is the earliest known ms of Job of any significant length. It is also the only lengthy targum known from so early a period. (There exists another Qumran targum, a translation of Leviticus, but like 4QtgJob it is fragmentary.) Paleographical considerations suggest that both existing Qumran Job targum mss were copied during the 1st century C.E. The original editors proposed that 11QtgJob was actually composed in the latter half of the 2d century B.C.E.; more recently a later date has been proposed, namely, the 1st century B.C.E. (Kaufman 1973; Zuckerman 1987).

By and large, the Cave 11 Targum seems to adhere to its Heb *Vorlage* quite closely, certainly far more closely than targums of the Palestinian tradition preserved by the early rabbis. (The Cave 4 targum seems to be fairly literal as well, although it is simply too small to allow for reasonable judgment as to characteristics of this sort.) Where there appear on occasion to be editorial alterations in 11QtgJob, they tend to be focused upon avoiding implicit disrespect for the Deity, upgrading the image of Job, and perhaps downgrading the image of the friends, especially Elihu (cf. Tuinstra 1970; Zuckerman 1980). In this respect the sentiments of the translator seem to fall somewhat in line with

the view of Job found in the pseudepigraphical *Testament of Job*.

The targum also appears to preserve the famous rereading of the phrase in Job 13:15, *lw ʾyḥl*, traditionally translated, ("though He [i.e., God] slay me, yet will I trust in Him") instead of *lʾ ʾyḥl* ("if He slays me, I have no hope"). Although a direct translation of Job 13:15 is not preserved in the existing 11QtgJob, the phrase appears to be quoted in 11QtgJob 25:7 = Job 34:31. The translator also shows some indication of exemplifying the rabbinical rule of scriptural interpretation, exposition by means of another similar passage (Zuckerman 1978).

It may be more than simply a coincidence that two out of the three clearly targumic texts found among the Dead Sea Scrolls are targums of Job. Moreover, in the most prominent discussion of targums in the early rabbinical literature (*t. Šhabb.* 13:2; cf. *b. Šhabb.* 115a; *j. Šhabb.* 16:1), the particular targum under discussion is also a targum of Job. In that instance, Rabban Gamaliel (80–110 C.E.) is said to have been reading a targum of Job, which reminded R. Halafta that Gamaliel's grandfather, Gamaliel the Elder (30–70 C.E.) had once been brought a targum which he subsequently ordered to be hidden. In this latter instance the targum in question was, once again, a targum of Job.

We can only wonder why a good deal of the specific evidence we have of written targums from the period of the early rabbis centers upon targums of Job? One probable reason is that the Hebrew of Job, even at this early time, must have been recognized as being notoriously difficult to read and comprehend. Hence, if any biblical text cried out for a popular translation so that it would be more widely accessible in the vernacular of the day, Aramaic, it would certainly have been Job. Moreover, it would not only be because of the difficult nature of the language that targumic renditions of Job were called for. In all likelihood the controversial issues raised in Job were also deemed to require special handling, especially in more popular translations that would make Job more broadly available to the Jewish community in rabbinical times. We might suspect that it was in translations of this nature that various small adjustments were often made in order to conform the text to pietistic standards.

On the other hand, it is also quite likely that more straightforward renderings of Job were made in targumic form. After all, 11QtgJob and 4QtgJob, insofar as they are preserved, are fairly accurate renderings which contain relatively limited editorial adjustments. In fact, it may even be partly for this reason that Gamaliel the Elder wished to hide away the targum that was brought before him. That is, he may have deemed the targum too correct to be exposed to the uninitiated (note in this respect *b. Meg.* 3a). It is also likely that Gamaliel did not like the idea that any biblical text should be committed to writing in the vulgar language of the time and that this also prompted his suppression of the targum brought to his attention.

Regardless, it does seem fairly reasonable to assume that when the rabbis thought of a biblical targum around the beginning of the Common Era, the stereotypical example would seem to have been a targum of Job. And this at least supports the assumption that the Job known to the popular audience of that time was likely Job in translation as opposed to Job in the hard-to-read original Hebrew.

BRUCE ZUCKERMAN

JOB, TESTAMENT OF. Slightly shorter than the NT book of Romans, the *Testament of Job* embellishes the biblical story of Job in praise of the virtue of patience *(hypomonē)*. The prosaic and occasionally humorous composition shows characteristics of similar works such as the *Testaments of the Twelve Patriarchs* and the *Testaments of Abra-*

ham, Isaac, and *Jacob.* Though listed among non-canonical works in the 6th-century Gelasian Decree (5.6.4), the *Testament of Job* is otherwise unmentioned until the 19th century, when its first modern edition was edited by Cardinal Mai (1833), who took the work to be Christian. Migne's French translation, a quarter century later (1858), provided the first translation into a modern European language.

Flanked by a prologue (*Testament of Job* 1) and an epilogue (chaps. 51–53), the bulk of the *Testament* (chaps. 2–50) engages Job first with a revealing angel (chaps. 2–5), then with Satan (chaps. 6–27), next with the three kings ("friends" in the biblical book of Job; chaps. 28–45), and finally with his three daughters (chaps. 46–50). Five poetic passages appear at *T. Job* 25:1–8; 32:1–12; 33:3–9; 43:1–17; and 53:2–4. The *Testament of Job* locates the cause of Job's illness in his destruction of an idol's temple. Job's wife Sitis—and indeed female slaves, widows, and daughters—all figure prominently in this curious text. Jewish burial interests abound. But the principal moral point of the work is captured in the sentence, "Patience is better than anything" (27:7).

The text exits in 4 Gk mss dated from the 11th to the 16th centuries. In addition 3 mss, only one of which is complete, survive from a translation into Old Church Slavonic done around the 11th century (three other Old Church Slavonic mss may exist: Schaller 1979: 317, n. 134). Since 1968, fragments of a 5th century Coptic version (P. Köln 3221) have been known. The impending publication of these will make possible the publication of a critical edition of the text of the *Testament of Job.*

The *Testament of Job* clearly draws from the LXX (Schaller 1980), especially Job 29–31. Septuagintal phrases, and in a few cases apparent direct quotations, have been taken into the *Testament.* Scholars are divided on the unity of the book, but a strong case in its favor has been made by Schaller (1979: 304–6).

The origin and purpose of the work have been variously assessed. M. R. James (1897), who first extensively studied the *Testament,* proposed a Jewish Christian origin in Egypt. K. Kohler (1898) conjectured, mainly from the hymnic sections of the document, an origin among the Therapeutae—a Jewish contemplative sect described by Philo in *De contemplativa* Spitta (1907) concluded the writing to be pre-Christian but unrelated to the Essenes or to the Therapeutae. Later scholarship has come to favor the Jewish origins of the *Testament of Job* (Rahnenführer 1971; Schaller 1979). Similarities to Jewish merkabah mysticism—speculations about the divine chariot—have been noticed (Urbach 1967; Kee 1974). Jacobs (1970) views the *Testament* as a sample of Jewish martyrdom literature, while Rahnenführer (1971) sees the text as a piece of Jewish missionary propaganda. A proposal has been made that an original Jewish testament was edited by 2d-century Montanists to argue precedent for female prophecy (Spittler 1971), but this view has not found wide acceptance.

It seems best to regard the text as one of unclear origin within sectarian Judaism, mingling interests in magic, merkabah mysticism, standard Jewish features such as burial proprieties and opposition to idolatry along with the care of the poor and female prophetic utterance. Neither a specific origin nor a date more precise than 100 B.C.E.–200 C.E. can be determined.

Two eras in modern times reflect scholarly interest in the *Testament of Job.* A 15-year period at the turn of the century (1897–1911) yielded the first modern edition of the text (James 1897), the first English translation (Kohler 1898), and the first major study (Spitta 1907). With the publication by Philonenko (1958) of a French translation, with introduction and notes, a generation of renewed study began. This period gained impetus from S. Brock's publication (1967) of a new edition of the text, saw the emergence of several doctoral dissertations (Carstensen 1960; Spittler 1971; Nicholls 1982), and witnessed additional translations into German (Schaller 1979; before him, Riessler 1928), English (Spittler, *OTP* 1: 829–68; Thornhill 1984), modern Hebrew (Hartom 1965). During the thirty year period of 1958–1988, the *Testament of Job* increasingly appeared in introductions to pseudepigraphic literature and achieved deserved recognition as an exemplar of the mingled diversity of Hellenistic Judaic spirituality.

JOBAB (PERSON) [Heb *yôbāb*]. Five individuals in the Bible bear this name. The name has been compared with the Sabaean tribal name *yhybb*, probably to be vocalized *yuhaybab*, by J. Halevy and E. Glaser (1890: 303, see Jobab no. 1 below). The difference between the Sabaean name and its Heb rendering (one would perhaps expect Heb *yêbāb*) may be explained by the fact that the form of the foreign name was assimilated to the NW Sem name *yôbāb* (see *IPN*, 226, n. 3). The identification of the biblical *yôbāb* with the Gk *Iōbaritai* mentioned by Ptol. (*Geog.* 6.7.24), first proposed by S. Bochart (*Geographia sacra* 1: 190), is not acceptable. On the one hand, the Gk rendering would have to be altered in an inadmissible way to *Iōbabitae;* on the other hand, that tribal name mentioned in SE Arabia beside the Gk *Sachalitai* (= Sabaean *s²kln*) is to be identified with the legendary place name Wabār in the sands of the large Arabian desert. According to its formation, the name *yhybb* is an imperfect form of the causative stem, since it is found occasionally in Sabaean names of tribes or clans (e.g. *yhblḥ, yhśḥm,* etc.). The meaning of the name is not known, since it remains uncertain whether the root *ybb* is to be connected with Ar *yabāb*, "waste, deserted."

1. The last of thirteen sons of Joktan (Gen 10:29; 1 Chr 1:23). This name occurs in the so-called "Table of Nations" (Genesis 10) where it is a tribal rather than personal name associated with the progenitor of Arabic tribes, Joktan (Westermann 1984: 526). The Sabaean tribe with a similar name *(yhybb)* was one of the three old tribal federations of the ancient country of Sumᶜay in the central highland of Yemen. This tribe or its tribal leaders are mentioned in several inscriptions from the same region (CIS IV 37.6; RES 4176.5, 8, 9; 4231.2; Gl 1378.2). The text of RES 4176 was engraved into a large rock near the mountain of Riyām in Arḥab during the first quarter of the 3d cent. B.C. and contains the statute of the god Taᵓlab for his worshippers from Sumᶜay. In these regulations it was ordained that the leader of the tribe *Yuhaybab* was placed in charge of the property of the god and that he had to organize a banquet for the pilgrims during the annual pilgrimage to the sanctuary of Taᵓlab.

W. W. MÜLLER

2. The son of Zerah from Bozrah, and the king who ruled in Edom after Bela (Gen 36:33–34 = 1 Chr 1:44–45). The name occurs in parallel lists (Gen 36:29–39 = 1 Chr 1:43–50) which utilize a formula found elsewhere in the Bible (1 Kgs 16:22; 2 Kgs 1:17; 8:15; 12:22; 13:24) to recount the succession of kings (in Edom and Israel). The formula is "King X reigned. He died and King Y reigned in his stead." The LXX associates this Jobab with the main character of the book of Job in its enlargement of the final chapter of the book (see Pope *Job* AB, 354).

3. The king of Madon summoned by Jabin king of Hazor to fight against the invading Israelites (Josh 11:1). He is also counted among the kings defeated by Joshua W of the Jordan (Josh 12:29), although in this list he is not mentioned by name.

4. The first son born in Moab to Shaharaim and his wife Hodesh (1 Chr 8:9). The name appears twice in this genealogy of Benjamin (1 Chronicles 8); once as a son (v 9), and the other time as a grandson of Shaharaim (v 18, see below). As with several names that recur in the Chronicler's genealogies (cf. e.g. CALEB, GERA), it is difficult to identify each Jobab.

5. A son of the Benjaminite Elpaal, son of Shaharaim and his wife Hushim (1 Chr 8:18). After Shaharaim sent Hushim and another wife, Baara, away he had offspring by Hodesh in Moab. Elpaal's sons appear in two sections (1 Chr 8:12–15, 17–18), and Jobab is the last son in the second segment.

MARK J. FRETZ

JOCHEBED (PERSON) [Heb *yôkebed*]. A Levite woman, wife of Amram, mother of Aaron, Moses, and Miriam (Num 26:59). Jochebed is mentioned by name only in the Levitical genealogies of Exodus 6 and Numbers 26 (cf. Exod 2:1–10). The writer of Exod 6:20 introduces her as Amram's wife and aunt (*dōdātô;* RSV "his father's sister") and mother of Aaron and Moses. Num 26:59 omits the information that she was Amram's aunt, describing her instead as "the daughter of Levi, who was born to Levi in Egypt." Numbers 26 adds that she was mother of Miriam as well as Moses and Aaron.

Exod 6:20 describes Jochebed as Amram's *dōdātô,* a word which means "uncle's wife" in Lev 20:20 (cf. Lev 18:14). The RSV of Exod 6:20 translates *dōdātô* as "father's sister," probably on the basis of Num 26:59, which calls Jochebed "the daughter of Levi," that is, sister of Amram's father, Kohath. However the relationship is to be understood, the marriage of Amram and Jochebed seems to run contrary to priestly laws which prohibit sexual relations between a man and his "uncle's wife" (Lev 18:14; 20:20) and between a man and his "father's sister" (Lev 18:12). This may be the reason that the LXX of Exod 6:20 presents Jochebed as Amram's cousin, "daughter of his father's brother." In referring to Jochebed as "the daughter of Levi," the genealogist of Num 26:59 underscores the relationship between the family of Jacob and later generations of Israelites. See Burns (1987: 85–90).

In including Jochebed as the first of three women in the family line of Aaron, the genealogist of Exod 6:20–25 reflects the postexilic community's interest in the pedigree of priests' mothers and wives. See Johnson (1969: 87–99). Although Jochebed is the only wife and mother to be included in the genealogy of Numbers 26, her appearance there, together with her ancestral lineage, likewise establishes the full legitimacy of Aaron as priest in the family of Levi. In fact, according to Num 26:59 Aaron (who is the

focus of vv 58b–61) is more closely linked with Levi through Jochebed than through Amram.

RITA J. BURNS

JODA (PERSON) [Gk *Iōda*]. Var. HODAVIAH; HODIAH. **1.** Son of Iliadun and one of the Levites over twenty years old appointed under Zerubbabel to oversee the reconstruction of the temple (1 Esdr 5:58). An LXX variant substitutes "Judah" (Gk *Iouda*), which also appears in the Ezra 3:9 parallel of this passage where the MT reads Heb *yĕhûdâ*. However, instead of "Joda," other parallel lists of Levites mention either Hodaviah (Ezra 2:40 = Neh 7:43 = 1 Esdr 5:26), or Hodiah (Neh 9:5; 10:10–11—Eng 10:9–10) along with Jeshua and Kadmiel. Therefore, it is difficult to be certain whether to identify LXX *iōda* with Heb *yĕhûdâ*, Heb *hôdawyāh*, or Heb *hôdîyāh;* although Joda might be considered a separate person altogether.

2. The son of Joanan and father of Josech in Luke's genealogy of Joseph, the husband of Mary (3:26). Since Joda and sixteen other names in vv 24–27 appear nowhere else in the Bible, it is wise not to attempt identification with OT persons (Fitzmyer *Luke* AB, 500). However, Kuhn (1923: 212) maintains that Luke's *iōda* results from an incorrect spelling of LXX *ōdia* (or *ōdouia*) in 1 Chr 3:24 (Heb *hôdawyāhû*, "Hodaviah"). He concludes that even though the position of Joda in Luke's genealogy does not correspond to his position in 1 Chronicles 3, the frequent confusion of *iōda* and *ōdia* in the LXX justifies the identification of Luke's Joda with Hodaviah/Hodiah of 1 Chr 3:24. Consequently, in Matthew's parallel genealogy (1:13), Abiud may represent Luke's Joda. See ABIUD.

MARK J. FRETZ

JODAN (PERSON) [Gk *Iōdanos*]. One of four priestly descendants of Jozadak who divorced their foreign wives during Ezra's reform (1 Esdr 9:19). The parallel in Ezra 10:18 also lists four descendants of Jozadak through Jeshua, but in the place of Jodan it records Gedaliah. The difficulties of identifying individuals such as Jodan raise questions about the sources of and literary relationships among Ezra, Nehemiah, and 1 Esdras.

MICHAEL DAVID MCGEHEE

JOED (PERSON) [Heb *yôʿēd*]. The father of Meshullam and an ancestor of Sallu, a Benjaminite and provincial leader who agreed to settle in Jerusalem (Neh 11:7). Although Sallu's line is referred to in both the list in Nehemiah 11 and 1 Chronicles 9 (cf. v 7), Joed is not mentioned. This, like other differences in the two lists, suggest that there is no direct literary relationship between the two lists (contra Kellermann 1966: 208–27 and Mowinckel 1964: 146–47). Some, however, have conjectured that both writers were dependent upon common archival materials (Schneider *Esra und Nehemiah* HSAT, 42–43; Brockington *Ezra, Nehemiah and Esther* NCBC, 187; cf. Myers *Ezra, Nehemiah* AB, 185). In any event, the presence of Joed in the list provides no further evidence of use in resolving the problem. Apart from the probable significance of the name itself ("Yahweh is witness"), nothing is known about this Benjaminite patriarch (Brockington, 189).

FREDERICK W. SCHMIDT

JOEL (PERSON) [Heb *yôʾēl*]. Relatively common name in ancient Israel. As Dahlberg (*IDB* 2: 925) points out, the wide distribution of the name among the tribes of Israel is theologically significant in view of its meaning: "Yaw (Yahweh) is God."

1. A prince (Heb *nāśîʾ*) in the tribe of Simeon who is listed in 1 Chr 4:35 in the context of two accounts (4:39–41 and 42–43) about territorial expansions of the Simeonites in the time of Hezekiah. The list of princes in 4:34–37 may have been independent at one time. Its connections with the surrounding passages are not strong. This is particularly true with regard to the lists which precede it. None of the names in 4:34–37 is directly related to the descendants of Simeon in 4:24–26. No other information is given in the Bible about this Joel or any of the other individuals listed in 4:34–37.

2. A Reubenite listed in 1 Chr 5:4. The section of genealogy which Joel heads (5:4–6) is probably a fragment. It is not at all connected with the beginning of the Reubenites in 5:3. Also, while some of the names in 5:3 are found in other Reubenite genealogies (Gen 46:9; Exod 6:14; Num 26:5–6), the names in 5:4–6 are not found elsewhere in the OT as Reubenites. Certain variant readings in the versions (LXX^{L}—"Joel his son," Syriac—"Joel son of Carmi") reflect attempts to integrate Joel into Reuben's line (Braun *1 Chronicles* WBC, 70). The occurrence of the name Baal in 5:6 may indicate the presence of authentic and early N tradition in the fragment, as Williamson (*Chronicles* NCBC, 64) suggests. The lack of connection between 5:3 and 5:4–6 means that the reference in v 6 to exile under Tiglath-Pileser III cannot be used to interpret 5:1–2 as an allusion to the transfer of Reuben's birthright to Joseph (*contra* Myers *1 Chronicles* AB, 35–36).

In 5:8 the name Joel is found again. However, 5:7–10 may be another fragment. The editor of the passage apparently makes Beerah the antecedent of *ʾehāyw* and sees 5:7–10 as the continuation of 5:4–6. But this connection is not strong and does not seem original. In addition,

the different titles for Beerah (*nāśî'*) and Jeiel (*rō'š*) suggest that 5:4–6 and 5:7–10 are two separate groups of Reubenites from two different time periods. Hence, the identification of the Joel in 5:4 with the one in 5:8 is probably secondary.

3. Reubenite listed in 1 Chr 5:8 who has been identified secondarily with the Joel in 5:4 (see above). That the Joel in 5:8 was a Reubenite is suggested by the references in that verse to Aroer, Nebo, and Baalmeon which are found in earlier Reubenite settlement lists (Num 32:34, 38; Judg 13:9) and on the Mesha stele (lines 9, 14, 26, 30) as part of the territory taken from Israel under Omri's son.

4. Chief (Heb *rō'š*) of the tribe of Gad mentioned in 1 Chr 5:12. The entire genealogy in 5:11–17 is distinctive in that it contains no material from elsewhere in the OT (Williamson NCBC, 65).

5. Kohathite Levite and ancestor of Samuel the prophet according to 1 Chr 6:21—Eng 6:33. This Joel, however, does not appear in the parallel genealogy in 6:7–13—Eng 6:22–28. Instead, one finds the name Shaul, although Williamson (NCBC, 71) sees these as distinct, albeit related, genealogies. The Chronicler has apparently incorporated Samuel into the Kohathite line in order to legitimize his activities as a priest.

6. The older son of Samuel the prophet (1 Sam 8:2) and according to 1 Chr 6:18—Eng 6:33; 15:17 the father of Heman, the chief singer of the Kohathite Levites under David and Solomon. The name Joel has been lost from the MT at 1 Chr 6:13—Eng 6:28 but can be restored, as in the RSV, on the basis of the passages just cited and of the readings of the versions (LXX, Syriac) for 6:13.

7. Man of Issachar whose name occurs in 1 Chr 7:3 in the context of a military census list now in genealogical form (7:2–5). Only 7:1 has parallels elsewhere in the OT (Gen 46:13; Num 26:23–25).

8. One of David's "mighty men" according to 1 Chr 11:38. In the parallel list 2 Sam 23:36 has Igal (*yigʾāl*). The variant names obviously reflect a *g/w* confusion, though it is not clear which is original. Chronicles also refers to Joel as the brother of Nathan, while Samuel has "son of Nathan." See DAVID'S CHAMPIONS.

9. A chief (Heb *śār*) of the Gershomite Levites at the time when David brought the ark up to Jerusalem (1 Chr 15:7, 11). Dahlberg (*IDB* 2: 925) assumes that this Joel is the same as the one in 1 Chr 23:8; 26:22 (see item no. 10 below), although the texts themselves do not explicitly indicate this.

10. Gershonite listed among the Levites whom David organizes in preparation for Solomon's building the temple in 1 Chr 23:8; 26:22. (On the form "Gershon" instead of "Gershom" see Braun WBC, 82). In 1 Chr 23:8 this Joel is the son of Ladan and the brother of Jehiel, while in 26:22 he is the brother of Jehiel and the grandson of Ladan. (Ladan is elsewhere called Libni (1 Chr 6:3—Eng 6:17; Exod 6:17; Num 3:21.) Also, in 26:22 Joel and Zetham are described as being in charge of the temple treasuries.

11. A chief (Heb *śār*) of Ephraim, included in 1 Chr 27:20, in the Chronicler's list of chiefs (27:16–22) in connection with David's census described in 1 Chronicles 21. In 27:23–24, the Chronicler not only explains why the census was sinful ("Yahweh had promised to make Israel as many as the stars of the sky") but also mitigates David's offense by explaining that he neither included those below twenty years of age nor completed the census.

12. Kohathite, called the son of Azariah, whom Chronicles (2 Chr 29:12) lists among the first Levites to respond to Hezekiah's orders to cleanse the temple. The passage as a whole is a stylized presentation of how all Levitical branches participated with equal enthusiasm in Hezekiah's reform movement.

13. Son of Pethuel and prophet. See JOEL, BOOK OF.

14. Member of the family of Nebo (Gk *Nooma*) who is listed in Ezra 10:43 (= 1 Esdr 9:35) among those in postexilic Judah who divorced their foreign wives and children at Ezra's bidding. Several differences occur between the lists in Ezra 10:43 and 1 Esdr 9:35, but Joel is found in both. Cogan (1979: 37–39) cites similarities between these two verses and the Reubenite list in 1 Chr 5:4–8 (see nos. 2 and 3 above) in support of his suggestion that the names in Ezra 10:43 (= 1 Esdr 9:35) refer to Reubenites who resettled their homeland E of the Jordan following the exile. He thinks that it was these repatriated Reubenites who were the Chronicler's source for his Reubenite genealogies.

15. Overseer (Heb *pāqîd*) of postexilic Jerusalem according to Neh 11:9. The verse raises several intriguing questions. It is not clear, first of all, whether Joel was considered a member of the tribe of Judah or of Benjamin. The fact that his second in command is named Judah suggests the former, but certainty is not possible. Secondly, the precise function of the office of *paqid* remains obscure, though it seems to be a title for a lay leader as opposed to a priestly (*nāgîd* 11:11) or a military title (*śār* 7:2).

F. Canonical Position

A. Unity

Underlying all aspects of the study of Joel is the fundamental issue of the book's unity. Though one of the

shortest prophetic books in the canon, Joel contains two distinct parts. The opening chapters describe a natural disaster resulting from a locust plague (chaps. 1–2 [—Eng 1:1–2:27]), while the concluding chapters predict the restoration of exilic Israel after an apocalyptic war with the nations (chaps. 3–4 [—Eng 2:28–3:21]; on the different versification in Hebrew and English Bibles, see E below). Since these two sections of Joel are unified by certain obvious similarities of language and thought and at the same time set apart by clear differences, an ongoing debate exists among scholars about their relationship. Do the two parts of Joel represent two distinct messages which have been subsequently combined into one prophetic collection, or are they elements of a single prophetic proclamation?

The traditional view that the book of Joel contains a unified message from a single prophetic figure is still the most popular among modern commentators (e.g., Kapelrud 1948; Ahlström 1971; Rudolph *Joel* . . . KAT; Wolff, *Joel and Amos* Hermeneia; Prinsloo 1985). According to this view, the two parts of Joel form a coherent whole in which the locust plague (chaps. 1–2 [—Eng 1:1–2:27]) signifies the approaching apocalypse (chaps. 3–4 [—Eng 2:28–3:21]). As the armies of locusts have invaded Judah and will be destroyed, so the armies of the nations will gather against Judah to be judged and defeated. The identification of both events with the day of Yahweh (1:15; 2:1, 11; 3:4 [—Eng 2:31]; 4:14 [—Eng 3:14]) links them together under a single concern: the ultimate vindication of Judah.

Since Vernes (1872) first questioned the unity of Joel in the last century, an alternative interpretation of the relationship between the two parts of Joel has become widely accepted. According to this view, put into its classical form by Duhm (1911: 184–88), the two parts of Joel are too distinct to represent a unified language or point of view. Whereas chaps. 1–2 [—Eng 1:1–2:27] describe a locust plague which has already happened and which has brought divine judgment on Judah in the form of an agricultural catastrophe, chaps. 3–4 [—Eng 2:28–3:21] do not mention locusts, Judah's agricultural catastrophe, or divine judgment on Judah at all. Instead these chapters predict a future cosmic battle in which the destruction of Jerusalem and the Diaspora will be avenged on the nations in order to restore the political fortunes of Judah. Two different authors seem to be present: a prophetic figure interpreting a massive locust outbreak as divine judgment, and a later apocalyptic writer anticipating the culmination of human history and the exaltation of Judah in a great cosmic conflict. Thus, Joel is a collection of diverse traditions rather than a unified composition.

The lack of a consensus about the unity of Joel illustrates the difficulty of interpreting the relationship between two parts of the same corpus which have similarities and differences, both of which are rather striking. Each position must account for conspicuous evidence to the contrary. A. Weiser (*Der Zwölf kleinen Propheten* ATD) has tried to avoid the difficulties of both positions by suggesting that the two sections of Joel were written by the same author in two different times and situations, but Weiser's view has not been adopted by many. In spite of the fact that many recent commentators are persuaded by the similarities between the parts of Joel to regard the book as a unity, the differences are more significant. The stronger arguments support a modified version of the two-stage interpretation of the book of Joel, a view which will be presented together with the prevailing alternatives in the analysis of Joel which follows.

B. Literary Structure

1. The Book. While the book of Joel contains a variety of literary forms, those who regard Joel as a unity see in it a literary architecture which unites these forms in a coherent whole. Two of the more thorough and influential presentations of the structure of the book of Joel as a unity are those by Kapelrud (1948: 3–9) and Wolff (*Joel and Amos* Hermeneia, 6–12).

Kapelrud sees in Joel a single liturgy, designed for a ritual of repentance at the temple, which begins with a psalm of lamentation (1:2–2:18) that includes a community lament (1:2–12), a description of distress (2:1–11), and calls to repentance (1:13–20, 2:12–18). The liturgy concludes with a divine oracle (2:19–4:21 [—Eng 2:19–3:21]) delivered in response to the lament and containing three subsections (2:19–27; 3:1–5 [—Eng 2:28–32]; 4:1–21 [—Eng 3:1–21]). Wolff recognizes similar basic subdivisions within Joel but considers them linked by the symmetry of a literary parallelism rather than by a liturgical structure. A lament over scarcity (1:1–20), an announcement of catastrophe (2:1–11), and a call to repentance (2:12–17) in the first part of the book are balanced and reversed respectively by a promise of economic restoration (2:21–27), a promise of Jerusalem's salvation (4:1–3, 9–17 [—Eng 3:1–3, 9–17]), and a promise of the spirit (3:1–5 [—Eng 2:28–32]).

According to these analyses, the center of Joel is to be found at 2:17, 18. Speeches before this midpoint describe disaster, those after it salvation. Calls to lamentation and repentance before this point are followed by oracles assuring a divine response and restoration. This two-part structure is not uncommon in prophetic books which usually begin with oracles of judgment and conclude with oracles of salvation.

Even for those who regard Joel as a compilation of the works of different authors, Joel 2:17, 18 is generally recognized as the center of the book, in this case marking off the oracles of judgment of the original prophet from those of a later apocalyptic editor predicting salvation. Duhm (1911: 184–88), for example, sees in 1:1–2:17 a series of prophetic speeches concerning various disasters—military invasion, locust plague, drought—composed in poetry. He then understands Joel 2:18–4:21 (—Eng 2:18–3:21) as an addition written in prose by a synagogue preacher with an apocalyptic ideology.

2. Community Lamentations and Prophetic Response (Chaps. 1–2 [—Eng 1:1–2:27]). The language and literary forms Joel uses to deliver his response to the locust plague are indebted to the speech forms of Joel's own prophetic tradition as well as to the forms developed by temple personnel for the religious liturgies used in public worship.

The title of the book of Joel (1:1), as is customary for prophetic books, names the author of the book, his family, and identifies his speeches as divine rather than human utterance. Unfortunately for a determination of Joel's his-

torical setting, the title does not list the reigning monarch as prophetic titles frequently do.

The speeches of Joel actually begin with a summons to listen (2:2–4), a conventional form used by prophets to gain the attention of their audience and alert it to the delivery of a solemn proclamation (cf. Isa 1:2; Mic 1:2; Jer 2:4; Amos 8:4). This summons includes a brief description of the disaster, which will be the focus of the prophetic message, and an admonition to recall it in future generations.

The opening summons is followed by a series of speeches delivered to various sectors of society: consumers (drinkers of wine; 1:5–10), farmers (1:11–12), and priests (1:13–18). Using elements of the lament genre, a prayer employed in temple liturgy to appeal to God for assistance in a crisis, Joel urges each group to declare its distress to God and appeal for divine aid. The opening two lines of each speech begin with imperative verbs, the second of which is always *hêlîlû*, "wail!", a term used frequently in the Bible in descriptions of ceremonies of lamentation (e.g., Jer 4:8; Amos 8:3). The first two elements in the lament genre, a cry to God followed by a description of the nature of the distress, are recognizable in these speeches. Concluding the series of speeches is the prophet's own prayer of lament (1:19–20).

The description of the locust infestation embedded in these calls to lamentation is concluded in a poem about the day of Yahweh (2:1–11). The unity of this poem is indicated by the use of inclusion in which references to the day of Yahweh and the darkness which accompanies it (2:1–2, 10–11) enclose the description of the locust plague in 2:3–9. In this poem and throughout the preceding speeches the prophet employs highly figurative language to convey the terror of the massive infestation of the locust. The insect hordes are described as a populous nation occupying the land (1:6), as brush fires crackling through the stubble (2:3, 5), as lions with fearsome teeth (1:6), as thieves who steal through the windows (2:19), and as thunderclouds darkening the sky (2:2, 10). But the most prominent metaphor for the locust is the invading army (1:6; 2:4–9). Contrary to some who wish to reverse the last image and see human or apocalyptic armies described with the image of locusts in chaps. 1–2, the structure of the simile in 2:4–9 clearly indicates that locusts are described using the image of human armies (Thompson 1955; see further C.2 below).

The culmination of Joel's appeals to society is found in a call to repentance (2:12–17). The call reflects both prophetic and priestly perspectives. In the prophetic tradition, this call emphasizes that true repentance is an inner reorientation and commitment: "Rend your hearts, not your garments" (2:13). At the same time, Joel insists that regular cultic rituals be observed, and he calls the priests to gather the entire community for a public ceremony in order to grieve for its sins and appeal for God's compassion and assistance.

Joel 2:18–27 is a prophetic oracle conveying the divine response to the lamentations prescribed in the previous speeches. Since the oracle promises salvation, as do those following in 3:1–4:21 (—Eng 2:28–3:21), it has been widely regarded as the beginning of the second half of the book of Joel. There is no doubt that in its focus on salvation Joel 2:18–27 resembles the speeches following it, but when its language is examined in detail, its closest ties are with the speeches which precede it.

The language of the salvation oracle in Joel 2:18–27 is directly based on the description of the locust plague in 1:2–2:17 and systematically reverses the previous images of devastation. God answers the cry for compassion and promises mercy (2:18–27; cf. 2:17). Grain, wine, and olive oil will be restored (2:19; cf. 1:10) and Judah's reproach removed (2:19; cf. 2:17). The invading locusts will be driven out into lands as desolate as those it brought into being in Judah (2:20; cf. 2:3). The land which mourned is told to rejoice (2:21; cf. 1:10). The animals longing for pasture will again graze (2:22; cf. 1:19–20). Orchards, trees and vineyards stripped of fruit and foilage will again produce (2:22; cf. 1:12). Everything devoured by the locust will be restored (2:25; cf. 1:4). A people summoned to wail *(hêlîlû)* will again praise *(hillaltem)* God (2:26; cf. 1:5, 11, 13).

Since the linguistic connections between Joel 2:18–27 and the preceding sections are so numerous and carefully constructed, and since neither the locust nor the images of ecological disaster it caused are mentioned in Joel 3:4 (—Eng 2:28–3:21), this salvation oracle is better understood as the conclusion to the 1st part of Joel rather than the introduction to the 2d part.

3. Hymns of the Apocalypse (Chaps. 3–4 [—Eng 2:28–3:21]). Two oracles proclaiming God's future activity make up the concluding section of Joel. Both are joined to the preceding chapters by conventional editorial phrases employed to append supplemental material: "After this" (3:1 [—Eng 2:28]) and "In those days, in that time" (4:1 [—Eng 3:1], cf. Amos 9:11). Both of these oracles describe an apocalyptic conflict as a result of which Jerusalem will be vindicated and restored.

The second oracle (4:1–21 [—Eng 3:1–21]) is the most elaborate. It is generally understood to be a continuation of the preceding prophetic oracles (2:18–3:5 [—Eng 2:18–2:32]) which answer the prayers of lamentation in the first part of Joel (e.g., Kapelrud 1948: 7–8, Wolff, *Joel and Amos* Hermeneia, 73–75). In most cases the chapter is viewed as a composite work and divided into at least four sub-units, vv 1–3, 4–8, 7–17, 18–21, the second of which is frequently considered a later addition (Wolff, *Joel and Amos* Hermeneia, 74).

The literary form which throws most light on the structure and function of Joel 4 (—Eng 3), and suggests that the chapter may in fact represent a more unified composition than generally believed, is the divine warrior hymn. Hymns celebrating divine victories over Israel's enemies are among the oldest poems in the Bible (e.g., Exod 15:1–18, Judges 5) and are common during the Israelite monarchy (e.g., Psalms 2, 24, 29, 68, 89, 97). In the postexilic period, this hymnic form was revived by apocalyptic writers to describe the divine warrior's final vindication of Judah and defeat of its enemies (Isa 59:15b–20, 66:14b–16, 22–23; Zech 14:1–21, Ezekiel 38–39; see Hanson 1975: 123–34). Based on an ANE mythic pattern of divine combat, reflected in such ANE works as the Baal Cycle and Enuma Elish, these hymns describe the deity challenged by an enemy, marching out to battle while the cosmos shakes, defeating the enemy, returning victoriously to the

mountain sanctuary to be enthroned king, and finally bestowing fertility and plenty on the world.

Such is the pattern which underlies Joel 4 (—Eng 3). The hymn opens with the description of the challenge to the sovereignty of the divine warrior by the nations who have exiled God's people, sacked the divine sanctuary, and seized the land (4:1–8 [—Eng 3:1–8]). In response, the divine warrior declares war and goes into combat to destroy the nations (4:9–14 [—Eng 3:9–14]). The cosmos is shaken during God's march (4:15–16 [—Eng 3:15–16]). Victorious in battle, the divine warrior is enthroned on the holy mountain (4:17 [—Eng 3:17]). Fertility and well-being are bestowed on all creation (4:18 [—Eng 3:18]). Finally, the salvation of God's people is proclaimed (4:19–21 [—Eng 3:19–21]).

Preceding this divine warrior hymn is a shorter composition, Joel 3:1–5 (—Eng 2:28–32), which anticipates the same events described in more detail in Joel 4 (—Eng 3): the salvation of God's people in an apocalyptic conflict (3:3–5 [—Eng 2:30–32]). Rather than detailing the conflict which will usher in the new era, this brief eschatological oracle describes the egalitarian character of the community which will emerge (3:1–2—Eng 2:28–29).

C. Theological Themes

Joel has not always been held in high regard as a major contributor to prophetic thought (e.g., J. M. P. Smith et al., *Micah . . .* ICC, 67–68). The locust plague has been viewed as a less significant crisis than the great political developments to which such prophets as Isaiah and Jeremiah addressed themselves (Duhm 1916: 398–99). The book lacks the hard hitting social criticism of other prophets. And the eschatological hymns in chaps. 3–4 (—Eng 2:28–3:21) detailing the divine judgment on Israel's neighbors have been seen as representing the narrow exclusivism of postexilic Judaism (Wood *JBC*, 442).

In spite of this assessment, the book of Joel is a fine example in many respects of both prophetic and apocalyptic thought, and such images in Joel as the rending of the heart (2:13) and the pouring out of the spirit (3:1–2 [—Eng 2:28–29]) have enjoyed a lively history in later generations. In Joel's response to the ecological crisis precipitated by the locust infestation, Joel may in fact have a unique contribution to make among Israel's prophets to a vision of the integrity of creation—the interrelatedness between human society and its environment—in biblical religion. Of all the themes in Joel, the one most widely recognized and discussed as a controlling topic in the book is the "Day of Yahweh." This is indeed a useful topic on which to center a discussion of the themes of Joel since it ties together the major concerns of Joel and at the same time is a crucial topic in the debate on the unity of the book.

1. The Day of Yahweh. The day of Yahweh is referred to five times at significant points in the corpus of Joel (1:15; 2:1, 11; 3:4 [—Eng 2:31]; 4:14 [—Eng 3:14]). Its precise meaning in Joel is not completely obvious, however, since the concept of the day of Yahweh is put to a variety of uses in biblical literature as a whole.

In general, the day of Yahweh is used by biblical writers for a decisive divine intervention in human affairs (Everson 1974: 335–37). In the earliest actual occurrence of the phrase, Amos 5:18–20, the prophet Amos employs it for an act of divine judgment when Israel will experience defeat and disaster (cf. Ezek 7:1–20; 13:1–5, Zephaniah 1). Amos implies, however, that his audience thinks of the day of Yahweh as a day of salvation and good fortune rather than a day of punishment, a fact which has led scholars to the conclusion that the phrase traditionally had a positive meaning, describing either the victory of Yahweh on Israel's behalf in a holy war (von Rad 1959) or the enthronement of Yahweh in Israel's cult (Mowinckel 1961: 2.229). This positive use of the concept is in fact revived among apocalyptic authors following the exile who apply it to the anticipated restoration of Judah and judgment of its enemies (e.g., Zech 14:1–9, Obad 15–21, Isa 63:1–4). Which of these conceptions is intended in the use of the day of Yahweh in Joel is dependent on a closer examination of the contexts in which the phrase occurs.

2. The Day of Judgment: The Locust Plague. The concern of the first half of Joel is a massive outbreak of the desert locust which has plagued human society in the Middle East since the earliest human records (Thompson 1955). Traditionally designated *Schistocerca gregaria,* the desert locust of North Africa and the Middle East has, since V. M. Dirsh's reclassification of locusts in 1974, been recognized as a subspecies of *Schistocerea americana,* a species of locust at home in North America. It is now classified *Schistocerca americana, subspecies gregaria.* Known popularly as the desert locust, *Schistocerea americana, subspecies gregaria* inhabits and breeds in the immense desert stretching from Saharan Africa through the Arabian Peninsula and into W India, an area including the Sinai Peninsula and Judean desert. In the right combination of circumstances, still not completely understood by scientists, but involving climate as well as biological and behavioral changes in the insect itself, the desert locust multiplies rapidly, crowds together into dense, gregarious swarms, and migrates in large bands borne on wind currents into neighboring fertile areas in search of food (Krebs 1978: 302–16).

The effect of such a swarming of the desert locust can be catastrophic. Locusts eat their own weight in green food each day. An invasion of Somaliland in 1957 was estimated to include 1.6×10^{10} locusts and weighed 50,000 tons. Observers have left reports of the kind of devastation this swarming caused in the last great infestation of Jerusalem and its environs (Whiting 1915), an account highly reminiscent—down to such images as darkening skies and whitened tendrils of the fig tree—of Joel's description of the plague he experienced (1:7; 2:2). Though partially controlled in the modern era by insecticides sprayed from the air on breeding areas, the desert locust remains a serious threat and is monitored constantly by the United Nations Food and Agriculture Organization's Emergency Center for Locust Operations. As contemporary experience illustrates, the swarming of the desert locust described by Joel represents no mere inconvenience nor mundane difficulty for human society. With its spectre of malnutrition, starvation, and loss of life the locust plague poses a threat to human society every bit as serious as a military invasion, to which it is in fact compared (1:6; 2:1–11).

Joel's perception of the life-threatening character of the ecological crisis and of the extent to which the fate of

human life is linked to the fate of the earth is illustrated by his repeated use of the same terms and images to describe the responses of humanity and nature to the locust infestation. As the priests mourn so does the land (1:9–10). As the vines wither and dry up so do the farmers and so does the joy of the people (1:11–12). As Joel cries out to God so do the animals in the barren pastures (1:19–20). Assurances of restoration are directed to the land, animals, and people (2:18, 21, 22). Within these images lies a profound appreciation for the interrelatedness of a people and its environment and for the crucial significance of this relationship for human survival.

Because descriptions of the locust plague are followed in Joel by the great apocalyptic hymns in chaps. 3–4 (—Eng 2:28–3:21), scholars have customarily interpreted the plague as a sign of and prelude to these coming events rather than as a crisis with its own independent significance. This interpretation of the locusts is closely related to a particular view of the day of Yahweh in Joel. According to this view, the day of Yahweh refers to a single event, the day of apocalyptic salvation with which it is associated in Joel 3:4 (—Eng 3:14). References to the day of Yahweh in the context of the plague (1:15; 2:1, 11) link the locusts to this coming conflict and restoration.

A recent illustration of this common understanding of the day of Yahweh in Joel is found in Wolff's designation for Joel 1:1–20, "Locusts as Forerunners of the Day of Yahweh," and in his interpretation of the great day of Yahweh poem in 2:1–11 as a hymn in which locusts are only a metaphor for the invasion of apocalyptic armies (*Joel and Amos* Hermeneia, 17, 37–48). Even those who believe the two parts of Joel come from different authors tend to see a single, apocalyptic meaning for the day of Yahweh in Joel. They differ from such scholars as Wolff who defend the integrity of Joel, however, in that they understand the references to the day of Yahweh in 1:15 and 2:1, 11 as interpolations made by an editor responsible for chaps. 3–4—Eng 2:28–3:21 in order to unite the older material about the locust plague with the newer apocalyptic additions (Duhm 1911: 184–88; J. M. P. Smith et al., *Micah* . . . ICC, 50–51).

Though adopted by only a few scholars (e.g., Bourke 1959), the interpretation of the day of Yahweh in Joel 1:15 and 2:1, 11 as a day of divine judgment distinct from the apocalyptic salvation described in Joel 3–4 (—Eng 2:28–3:21) is a reasonable alternative. The appeal to the priests to lament the day of Yahweh in 1:15 connects this day directly to the current disaster. Likewise, the use of the day of Yahweh as an inclusive device to frame the vivid picture of the locust hordes in 2:1–11 also unites the day to the plague. A close connection appears to be drawn in this poem between the conventional language of darkness accompanying Yahweh's judgment day and the dark clouds of invading locusts (2:2, 10; cf. Amos 5:18–20 and Zeph 1:14–16). The interpretation of the day of Yahweh as judgment is particularly compelling if Joel 1–2 (—Eng 1:1–2:27) is seen as an original whole, not to be understood through the interpretive lens of Joel 3–4 (—Eng 2:28–3:21). According to this point of view, Joel, in the tradition of the classical prophets Amos and Zephaniah, saw in Israel's reversals the day of Yahweh's judgment and seized the opportunity to call for repentance and renewal.

In his calls to remorse (1:5–20) and repentance (2:12–17) in the day of divine judgment, Joel stands firmly at the center of Israel's prophetic tradition. While he does not, in this brief account of the locust plague detail social injustice, Joel does reflect the fundamental prophetic insight that ritual activity without genuine inner renewal will not avert the disintegration of the society. "Turn to me with your entire heart (self)," writes Joel, "rend your hearts, not your garments" (2:12–13).

3. The Day of Salvation: The Apocalypse. The meaning of the Day of Yahweh in chaps. 3–4 (—Eng 2:28–3:21) is seldom debated. Here it clearly designates a day of salvation: a climactic war in which the nations that have occupied Judah and exiled the Jews will be judged and defeated and in which Judah's political and economic fortunes will be restored. This understanding of the day of Yahweh places Joel 3–4 (—Eng 2:28–3:21) within the apocalyptic movement which developed in the postexilic era.

The development of apocalyptic thought among prophetic schools in the postexilic period has been described by such scholars as Plöger (1968) and Hanson (1975). A key feature of this apocalyptic movement was a vision of salvation conceived less and less in terms of the actual political and religious institutions of Israel and the Near East, and more and more in terms of a cosmic intervention in human affairs and a radical alteration of the status quo. Oracles and hymns describing these expectations were composed and appended to such prophetic collections as Isaiah (chaps. 56–66) and Zechariah (chaps. 9–14) to give them an apocalyptic cast.

The divine warrior hymn in Joel 4 (—Eng 3) reflects this apocalyptic mentality. The war it describes is not one in the flow of ordinary history but a cosmic conflict which will usher in a new era of world politics. All of Israel's past enemies will be defeated in a single stroke of divine combat. The nations actually singled out—Tyre, Sidon, Philistia, Egypt, Edom—are Israel's traditional enemies and are symbolic of all hostile powers rather than allies in an actual war. The location of the battle—the Valley of Jehoshaphat—is not an actual place but a symbolic name, "Yahweh has judged," which described the character of the war. The images of the fertility and abundance accompanying a restored Judah are so excessive that they suggest a recreation of the natural order. The possession of the spirit by all flesh described in Joel 3:1–2 (—Eng 2:28–29) reflects a reality beyond the experience of postexilic Jews. These apocalyptic images reach beyond current events and political structures to describe a future salvation in ultimate terms.

The apocalyptic mentality which dominates Joel 3–4 (—Eng 2:28–3:21) has been faulted for its otherworldly orientation, its violent resolution to the predicament of postexilic Israel, and its exclusiveness which reserves salvation only to the community on Mount Zion. Indeed, when the author of 4:10 (—Eng 3:10) calls for the nations to beat their plowshares into swords, he reverses a traditional prophetic image (Isa 2:4, Micah 4:3) which anticipated the resolution of Israel's relations with the nations in more peaceful and inclusive terms.

While these characteristics of the apocalyptic vision in Joel 3–4 (—Eng 2:28–3:21) cannot be denied, they should

be understood as elements of a world view uniquely capable of sustaining the faith and life of a community marginalized by present power structures (see D.2 below). Such groups—among them the group which likely produced Joel 3–4 (—Eng 2:28–3:21)—often perceive most clearly the violence and corruption within powerful human institutions and their need of divine judgment (4:1–8 [—Eng 3:1–8]). The judgment envisioned, however, is not something such a community has in its power to accomplish, but rather a judgment which it leaves to divine prerogatives (4:11–12 [—Eng 3:11–12]). These groups often find the will to survive in the interim by visions of cosmic renewal (4:18–21 [—Eng 3:18–21]) and of egalitarian societies undivided by traditional categories of age, gender, family, and class (3:1–2 [—Eng 2:28–29]). The apocalyptic vision of Joel thus represents powerful images for survival in a situation in which the status quo offers little well-being or hope for change.

D. Author

1. Name. Joel is a sentence name composed of a shortened form of the divine name Yahweh (*yô*-[Jo-]) and the word *ʾel* (-el), "God." It means Yahweh is God. The name Joel was not uncommon in ancient Israel. It appears, for example, as Samuel's oldest son (1 Sam 8:2) and as one of David's heroes (1 Chr 11:38). The occurrence of the name Joel chiefly in the Chronicler's History is regarded by Wolff (*Joel and Amos* Hermeneia, 24–25) as evidence of its popularity in the postexilic period, and an indication of the postexilic date of the prophet. Its use in the Deuteronomistic History, however, makes this argument inconclusive (1 Sam 8:2).

2. Social Role. Since neither the superscription (1:1) nor the speeches of Joel provide more information about the prophet than his and his father's names, nothing certain can be said about his occupation or position in Israelite society. A popular theory, however, describes Joel as a cult prophet, an official related to the temple in Jerusalem. Especially prominent among Scandinavian scholars (Kapelrud 1948: 176; Ahlström 1971: 130–37), this theory is based on the fact that Joel calls the people to a community ceremony of repentance at the Temple (2:15–17) and employs features of temple prayers to call the people to lament (1:5–10; see B.2 above). In fact, Kapelrud has argued that the book of Joel represents a unified Temple liturgy designed for communal worship (1948: 3–9).

While Joel was certainly familiar with temple worship and its forms, and considered participation in communal ceremonies of repentance crucial, no firm evidence confers on Joel's cultic status. Many features of the book, however, argue to the contrary: Joel's authority and stance toward society derived not from his official status in the cult but from the personal reception of divine revelation which marked out prophetic figures in Israel (1:1a). Prophets in Israel commonly delivered speeches at religious sanctuaries (e.g., Jeremiah 7; Amos 7:10–17) and even came from priestly families (e.g., Jeremiah 1:1; Ezekiel 1:3), yet they do not appear to be professional members of Israel's religious institutions. They spoke on the basis of their own charismatic gifts (e.g., Amos 7:14–15). Joel addresses the priests not as part of his own social group, but as one sector of society which must respond to the crisis. Furthermore, his own words heavily reflect prophetic forms of speech (1:1–4; 2:18–27; see B.2 above), and his language makes use of traditional prophetic phraseology (e.g., 1:5 and Isa 13:6; 2:2 and Zeph 1:15–16). Thus the common characterization of Joel as a cult prophet is by no means assured. He may well have found his place among prophetic circles who represented an institution in Israelite society distinct from the cult (Wolff *Joel and Amos* Hermeneia, 11–12).

If Joel 3–4 (—Eng 2:28–3:21) is a later addition to the prophetic response to the locust plague, then the question must be raised about the author of this material and his social setting. As has already been noted in the treatment of the themes of these chapters (C.2), they appear to represent the new apocalyptic orientation of the postexilic era. The apocalyptic orientation seems to arise especially among members of prophetic schools who have been excluded from current power structures and have lost hope of achieving salvation within the status quo. The loss of status, power, and wealth was a common experience of Jews following the destruction of Jerusalem and the fall of the monarchy. The experience of disenfranchisement may have been even more acute, as Hanson (1975) has argued, among particular groups within postexilic society who found themselves outside the restructured temple hierarchy and its vision for a restored Judah. Within such a precarious social position, the apocalyptic vision of radical renewal by cosmic intervention has great power. It is likely that groups in just this social situation, as Plöger (1968: 96–105) and Hanson (1986: 313–14) have argued, composed the hymns in Joel 3–4 (—Eng 2:28–3:21) and appended them to the Joel corpus.

3. Date. The brief superscription (1:1) of Joel contains no historical data, unlike many of the prophetic books which date the prophecy to the reign of a particular king. As a result, the historical setting of the author and the date of the book of Joel must be inferred from references in the text of the book itself. This inductive task is made particularly difficult because the first part of the book centers on an ecological catastrophe rather than a historical crisis and the second part of the book mentions neighboring countries in highly symbolic fashion. Joel thus contains few references to Israelite or ANE politics which might help to locate the book within a definite historical period. Scholarly estimates of the date of Joel have consequently ranged widely from preexilic to postexilic times.

The placement of Joel together with the 8th century prophets near the beginning of the Book of the Twelve in both the Hebrew and Greek canons (see F below) reflects a traditional understanding of Joel as preexilic prophet. This view is still common with estimates of Joel's preexilic date ranging from the late 9th century (Bič 1960) to the early 6th century just before the fall of Jerusalem (Rudolph, *Joel* . . . KAT). Most scholars, however, now place Joel in the postexilic period, somewhere between the late 6th (Ahlström 1971: 129) and the early 4th centuries (Wolff *Joel and Amos* Hermeneia, 4–6).

The issue of Joel's unity has a direct bearing on the question of date, since a two-stage development of the book, which appears likely, would involve two different historical settings for the two parts of the collection. A

judgment about the date of the second part of Joel is much easier to make in this regard than a judgment about the first part. References in Joel 3–4 (—Eng 2:28–3:21) to the fall of Judah, the dispersion of the Jews, and the return of the exiles (4:2, 7 [—Eng 3:2, 7]) all point to a postexilic political scene. Furthermore, the apocalyptic vision expressed in the form of a divine warrior hymn reflects the perspective and literary activity which provided eschatological additions in the postexilic period to such other prophetic collections as Isaiah, Zechariah (Hanson 1975) and Habakkuk (Hiebert 1986: 136–43). References to the Greeks (4:6 [—Eng 3:6]), and quotations of earlier prophetic literature (e.g., 4:10—Eng 3:10 = Isa 2:4; 4:16 [—Eng 3:16] = Amos 1:2) may be further evidence for the postexilic period.

The first part of Joel is much more difficult to place. In its view of the locusts as God's judgment and its call to repentance and inner renewal, Joel reflects the major concerns of preexilic prophecy. Its language of the day of Yahweh is remarkably similar to that of the 7th century prophet Zephaniah (1:14–16), and similarities have also been noted with Jeremiah's speech (Kapelrud 1948: 179–80, 189–90). Other characteristics, however, may point to the postexilic period. Lack of reference to a king, frequent references to the priests, and a positive view of cultic ritual have been taken to reflect the priestly theocracy described in such postexilic prophets as Haggai, Zechariah, and Malachi. Furthermore, such expressions as "gracious and compassionate," (*ḥannûn wĕraḥûm;* 2:13) and "house of our God" (*bêt ʾĕlōhênû;* 1:16) have been judged to reflect postexilic Hebrew conventions (Hurvitz 1966: 95, 172). It is difficult to know which of these data to weigh more heavily in determining the actual date of the original speeches of Joel to which the apocalyptic visions were later added.

E. Text and Versions

The textual witnesses to Joel and the rest of the twelve Minor Prophets derive from the same basic tradition of textual transmission. No major textual traditions or families can be distinguished in Joel and the Minor Prophets, as can be identified, for example, in such other sections of the Hebrew Scriptures as the Pentateuch and some of the historical books (Former Prophets). Yet the various witnesses do preserve variant readings and are useful in establishing the text of Joel.

The MT is, in general, well preserved. An early witness to the textual tradition preserved by the Masoretes is a scroll of the Minor Prophets from the era of the Second Jewish Revolt which has been recovered from the Wadi Murabba'at (DJD 2). It contains portions of Joel 2:20–4:21 (—Eng 2:20–3:21). Fragments of the Hebrew text of Joel are now available from an even earlier manuscript of the Minor Prophets (75 B.C.E.) discovered among the Qumran Scrolls (4QXII^{c}; DJD 11: 54–99). This manuscript, which contains portions of Joel 1:10–2:1, 2:8–23, and 4:6–21 [—Eng 3:6–21], stands in the same textual tradition as the MT and the versions. Its relative affiliation with MT or OG cannot be determined.

A unique feature of the Greek versions is their division of Joel into only three chapters instead of the four of the MT, a division followed in modern English Bibles. Joel 3:1–5 of the MT is affixed by G to Joel 2 as vv 28–32. Joel 4:1–21 of the MT thus becomes Joel 3:1–21 in G. Among the Greek translations extant for Joel, the OG is the most significant. It is a literal translation on the whole and is close to MT in character. A scroll of the Minor Prophets from Nahal Heber contains portions of Joel and is a recension of the OG which aims to bring the OG into harmony with proto-Rabbinic texts (Barthélemy 1963). The Targum Jonathan to the Prophets and the Vulgate both presume the MT and present few independent readings.

F. Canonical Position

Joel appears in the biblical canon among the twelve shorter prophetic books often referred to as the Book of the Twelve or the Minor Prophets because of their brief length. An important principle determining the order of the twelve in both the Masoretic Text and the Septuagint appears to be their relative chronology, established by their superscriptions or historical allusions within the book themselves. In both collections, the 8th century prophets (Hosea, Amos, Micah) appear at the beginning, while the late preexilic (Nahum, Habakkuk, Zephaniah) and postexilic (Haggai, Zechariah, Malachi) prophets appear at the end. The books for which a date is difficult to determine—Joel, Obadiah, and Jonah—are scattered among the 8th century prophets in the MT and grouped after them in the LXX.

In the MT, Joel is located second, after Hosea and before Amos. This position seems to have been determined by parallels in content between the last chapter of Joel and the book of Amos which follows (Wolff, *Joel and Amos* Hermeneia, 3–4). The bicolon "Yahweh roars from Zion/ And from Jerusalem utters his voice: is found verbatim at the end of Joel (4:16 [—Eng 3:16]) and at the beginning of Amos (1:2). Joel 4:18a (—Eng 3:18a) has a close parallel in Amos 9:13b. In addition, three of the nations Joel refers to in the final chapter—Tyre, Philistia, and Edom—are also singled out by Amos in the oracles against the nations which introduce his prophecy. The editors of the Minor Prophets in the MT may in fact have wished the reader to interpret Amos' critique of the nations in light of Joel's vision of their universal judgment (chap. 4 [—Eng chap. 3]).

In the LXX, Joel is located fourth among the Minor Prophets, after the three 8th century prophets Hosea, Amos, and Micah, and together with the undated books Obadiah and Jonah. The editors of the LXX thus appear to have been somewhat more interested in chronological categories than the editors of the MT. While the occurrence of Joel with the 8th century prophets and before the later preexilic prophets in both the MT and LXX has been taken into consideration at times in the dating of Joel (D.3), Joel's canonical position is no more decisive for its date than the position of its companions Obadiah and Jonah, both of which are now widely considered late.

THEODORE HIEBERT

JOELAH (PERSON) [Heb *yôʿēʾlâ*]. Brother of Zebadiah and son of Jeroham from Gedor, one of the ambidextrous warriors from the tribe of Benjamin who joined David during the period of his fleeing from Saul (1 Chr 12:8—Eng 12:7). While many of the cities mentioned in 1 Chr 12:1–8—Eng 12:1–7 can be located within the borders of Benjamin, the location of Gedor is not certain. Curtis (*Chronicles* ICC, 196) argued that the towns in 12:5–8—Eng 12:4–7 were in Judah rather than in Benjamin (1 Chr 4:4) and that two lists had been combined here as coming from Benjamin alone. The Chronicler has doubled the list of warriors who supported David (1 Chr 11:41b–12:40) beyond what was contained in the parallel narrative (2 Sam 23:8–39 = 1 Chr 11:10–41a). The source for these additional lists can only be a matter of conjecture, though Williamson has provided a convincing argument for the structure of 1 Chronicles 11–12. The long list reflects the Chronicler's concern to show "all Israel" united in support for David, a characteristic theme of his history. Within the immediate context (1 Chr 12:1–8—Eng 12:1–7) the Chronicler is concerned to show the support David enjoyed among Saul's kinsmen before Saul's death; the twenty-three Benjaminite warriors named here joined David while he was at Ziklag, the Philistine city given to David by Achish, King of Gath (1 Chr 12:1; 1 Sam 27:6). Ambidexterity or lefthandedness among Benjamites is also noted in Judg 3:15; 20:16.

RAYMOND B. DILLARD

JOEZER (PERSON) [Heb *yôʿezer*]. One of the ambidextrous warriors from Benjamin who joined David during his time at Ziklag (1 Chr 12:7—Eng 12:6). He and four others are designated Korahites. Korah is probably intended as the name of an otherwise unknown locality in Benjamin, though some have thought it was a town in Judah (1 Chr 2:43). Alternatively Korah could be an ancestor, possibly identified with one of the other individuals known by that name in the Bible. See also JOELAH.

RAYMOND B. DILLARD

JOGBEHAH (PLACE) [Heb *yogbāhâ*]. A fortress town built by the sons of Gad in the kingdom of Sihon, which was given by Moses (Num 32:35). It is identified near the caravan route which led the three hundred men of Gideon to victory over the armies of Midian (Judg 8:11).

Wüst (1975), Kallai (*HGB*, 296–97) and many others locate Jogbehah, an Ammonite frontier fortress, at *Ruǧm ʾal-Gubēḥah* (M.R. 231159), where an Ammonite military tower is found. Along with Jazer, Jogbehah is the easternmost boundary between Gad and Reuben. Tel Ṣāfūṭ (32°3′N, 35°49′E) is occasionally mentioned as the location because *Gubēḥah* is outside of known Ammonite territory.

The LXX mistakenly reads at Num 32:35 *kai hupsosan autas* ("and they elevated them") because this is the only city in the list that is missing the *nota acusativi* in Hebrew.

PAUL NIMRAH FRANKLYN

JOGLI (PERSON) [Heb *yogli*]. The father of Bukki, who was selected to oversee the distribution of the land of Canaan (Num 34:22). Neither the derivation nor the meaning of the name is clear. It is generally analyzed as a *Qal* (not *Hopʿal*) imperfect from the root *glh* "reveal, be manifest" (*TPNAH*, 164). It falls in the class of abbreviated names for which no theophoric element is attested (*TPNAH*, 169).

RAPHAEL I. PANITZ

JOHA (PERSON) [Heb *yôḥā'; yōḥā'*]. **1.** A Benjaminite, the son of Beriah (1 Chr 8:16). His father and uncle Shema (= Shimei? 1 Chr 8:21) are named as the heads of families which once lived in Aijalon, who put to flight the inhabitants of Gath (1 Chr 8:13), an incident otherwise unknown. He is attributed five brothers, if one understands (with the RSV) the names in 1 Chr 8:14 as referring to additional brothers of his father and uncle (contra the NEB!). His name occurs in the 2d of two Benjaminite lists in 1 Chronicles (1 Chr 7:6–12; 8:1–40), each reflecting a different tradition and time period. According to 1 Chr 8:28, Joha and his Benjaminite contemporaries apparently lived now in postexilic Jerusalem, although this impression may have been secondarily imposed from 1 Chr 9:34 upon material originally supportive of contemporary Benjaminite locations outside Jerusalem. At any rate, the Chronicler's interest in the tribe of Benjamin for his day is self-evident.

2. A Tizite, the son of Shimri and brother of Jediael, and one of David's mighty men (1 Chr 11:45). In the LXX mss Vaticanus and Alexandrinus he is called "Joazae." His name is one of sixteen names listed in the unparalleled supplement (1 Chr 11:41b–47) to the larger synoptic list (2 Sam 23:8–39 = 1 Chr 11:10–41a) of notable men of war who supported David in his rise to power (1 Chr 11:10). As numerous other gentilic names in this supplement appear to refer to Transjordanian locations, this individual too must have hailed from a place E of the Jordan. See TIZITE.

ROGER W. UITTI

JOHANAN (PERSON) [Heb *yôḥānān*]. A relatively common name in the Hebrew Bible meaning "Yahweh is or has been gracious."

1. One of the Benjaminites who joined David's forces at Ziklag when he was fleeing from Saul according to 1 Chr 12:5—Eng 12:4. By means of this list the Chronicler makes the point that some of Saul's fellow tribesmen like Johanan supported David from the beginning.

2. Eighth name in the list of the mighty Gadite officers who also joined David at Ziklag according to 1 Chr 12:13—Eng 12:12.

3. One of those listed in the high priestly genealogy in 1 Chr 5:27–41—Eng 6:1–15. He was the son (or descendant) of Azariah, the priest at the time of Solomon, according to 5:35–36—Eng 6:9–10. (The parenthesis describing Azariah should be read with 6:35 [—Eng 6:9] and not with 5:36 [—Eng 6:10] as it stands in the MT [*IDB* 2: 929]).

4. Ephraimite whose name is incorrectly transliterated as Johanan by the RSV in 2 Chr 28:12. It should be "Jehohanan" instead. See JEHOHANAN.

5. Oldest son of king Josiah according to 1 Chr 3:15. He may have died at an early age since he did not succeed his father and nothing else is known about him.

STEVEN L. MCKENZIE

6. The son of Kareah, and one of the Judean troop commanders who, following the destruction of Jerusalem in 587/6, chose to join Gedaliah, the ruler of Judah, at his administrative center at Mizpah (Jer 40:7–8; 2 Kgs 25:23). Following the assassination of Gedaliah, Johanan emerges as the leader of "all the remnant of Judah," a community which he then leads to Egypt.

The OT does not provide a date for these events. However, the fact that the text states only that Gedaliah's assassination took place "in the seventh month" (Jer 41:1; 2 Kgs 25:25) appears to imply that this occurred in the same year as the fall of Jerusalem ("in the fourth month" [Jer 39:2]). But it is also possible that the assassination took place some years later, and that it was this that led to the deportation which, according to Jer 52:30 (cf. Josephus, *Ant* 10.9 §7), occurred in Nebuchadrezzar's twenty-third year (582/581).

Whereas 2 Kgs 25:22–26 gives only a brief description of the appointment and assassination of Gedaliah and the flight to Egypt (the Chronicler makes no mention of this period), a full account of these events is contained in Jer 40:7–43:7. Without addressing ourselves to the question of the historicity of the events relating to Johanan, son of Kareah, we may take note of these events as they are narrated in the book of Jeremiah. Although told by Johanan of the plot against his life, Gedaliah chose not to believe this warning; he also rejected Johanan's offer to kill Ishmael secretly (40:13–16). Following the assassination of Gedaliah and others (41:1–3, 4–7), Ishmael sought to escape to Ammon, taking as hostages the daughters of the king (entrusted to Gedaliah) and "all the people who were left at Mizpah" (41:10). His plans were foiled when he was intercepted at Gibeon by Johanan and his allies. Although Ishmael escaped, his hostages were able to join Johanan (41:11–16). Fearing Babylonian reprisals for the assassination of Gedaliah, Johanan and the people made their way to a place near Bethlehem, intending to go to Egypt (41:17–18). Here they consulted the prophet Jeremiah (42:1–6; although 40:6 informs us that Jeremiah opted to remain in Judah with Gedaliah, it is noteworthy that he plays no role in 40:7–41:18). In the prose sermon delivered by Jeremiah (42:9–22), a choice is laid before the people: if they remain in the land of Judah, there is the promise of restoration; but if they persist in their plan to go to Egypt, each and every one will perish "by the sword, by famine, and by pestilence" (42:17 [15–17], 22). Accusing Jeremiah of having spoken falsely (43:2–3), Johanan and "all the remnant of Judah" (43:5; cf. 40:15; 42:2, 15, 19) depart for Egypt, taking Jeremiah and Baruch with them (43:4–7).

Both Jer 40:7–43:7 and 2 Kgs 25:22–26 underscore the view that hope for the future lies not with those who were left in the land of Judah (this was forfeited when Johanan and "all the remnant of Judah" chose to go to Egypt), but with the exiles in Babylon.

JOHN M. BERRIDGE

7. Son of Elioenai (1 Chr 3:24) and a member of the last generation of the Davidic line recorded in the genealogy for David in 1 Chronicles 3.

8. One of those who returned from Babylon with Ezra according to Ezra 8:12 (= 1 Esdr 8:38). He is called the son of Hakkatan, but Dahlberg (*IDB* 2: 930) may be correct in suggesting that one should read *haqqaton* as an epithet for Johanan: "Johanan the younger."

9. High priest after the return from exile listed in Neh 12:22–23. These two verses are apparently an editorial note about the chronology and method of recording the heads of Levitical families. Verse 22 contains later additions ("and Jaddua" and "and the priests in the reign of Darius the Persian") which have made it difficult. Williamson (*Ezra, Nehemiah* WBC, 357–65) summarizes proposed solutions and offers a compelling one of his own.

The relationship of the Johanan and Eliashib mentioned in 12:22–23 to each other and to others of similar names is extremely important for the thorny issue of the date of the return of Ezra. Eliashib in these two verses and elsewhere (12:10–11; 13:28) was the high priest in Nehemiah's day (Neh 3:1). Johanan the high priest in 12:22 should be identified with Jehohanan the high priest referred to in one of the Elephantine papyri (30:18 in *CAP*). This Johanan is called the son of Eliashib in Neh 12:23 and is listed following Eliashib and Joiada in 12:22. Most scholars have concluded, therefore, that Johanan was the grandson of Eliashib. In 12:11 the name Jonathan for the grandson of Eliashib and son of Joiada may be an error for Johanan. The Jehohanan son of Eliashib in whose chamber Ezra fasted according to Ezra 10:6 is also frequently identified with Johanan the high priest of Neh 12:22–23 and elsewhere. Josephus' reference to Johanan *(Iōannēs)* the high priest (*Ant* 11.297–301) is often cited as further information about this individual (e.g., *IDB* 2: 930) but should probably be disqualified from consideration for it would appear to describe an individual who lived much later (Williamson 1977).

If these identifications (except for the one by Josephus) are correct they provide an important argument for dating Ezra after Nehemiah. Ezra fasted in the room of Jehohanan (Ezra 10:6) who is identified as the grandson of Eliashib who served as high priest during Nehemiah's reforms. In addition to variations on this argument (Williamson *Ezra, Nehemiah* WBC, 152–53), however, there are at least two important perspectives that make it far from conclusive. Williamson's own view is that the identifications above are dubious (WBC, 153–54). He points out that both Eliashib and Johanan are common names. He further suggests that the reference in Neh 13:4 to Eliashib the priest who was over the chamber of the temple both distinguishes this Eliashib from the high priest and relates to the chamber in Ezra 10:6, so that Jehohanan in the latter verse should not be identified with Johanan the high priest of Neh 12:22–23. While the identification of Johanan the high priest (Neh 12:22–23) as the grandson of Eliashib the high priest seems well founded, Williamson's caution is well taken, particularly as it applies to Ezra 10:6.

Another important proposal relating to the identification of Eliashib and Johanan in these passages has been made by Cross (1975). The list of priests in Nehemiah 12 is too brief for the period of time it is meant to fill and is almost certainly defective. On the basis of the attested practice of papponymy (naming a son after his grandfather) in the high priestly line and of evidence from the Samaria papyri, Cross restored two generations at two different places in that genealogy. The names had been lost from the genealogy as a result of haplography. One of his restorations involved the inclusion of an Eliashib and a Johanan before the Eliashib who was a contemporary of Nehemiah. It was the earlier (restored) Johanan referred to in Ezra 10:6. Cross' proposal is based on sound arguments and must be given very serious consideration.

STEVEN L. MCKENZIE

JOHANNINE COMMA. In the Clementine edition of the Vg and in the Textus Receptus, 1 John 5:7–8 reads:

> For there are three who bear witness *[in heaven, the Father, the Word and the Holy Spirit; and these three are one. And there are three who bear witness in earth],* the spirit and the water and the blood; and these three are one.

The bracketed words constitute the so-called "Johannine Comma," a reading which has been the object of considerable controversy in NT textual criticism.

Support for the reading in Gk manuscripts is meager, occurring only in 61, 629, 918, and 2318, as well as in varying forms by later hands in the margins of five others (88, 221, 429, 635, and 636), and none of these can be dated earlier than the 14th century. In ancient versions other than the Lat, the Comma is noticeably absent from all pre-14th century manuscripts of the Copt, Syr, Eth, Arm, Ar, and Slav translations of the NT. It does not occur in the Gk Fathers, who would certainly have used it to their advantage in the trinitarian controversies if only they had known it. Even in the Lat version, the Comma does not appear in OL manuscripts until after A.D. 600, nor in the Vg until after A.D. 750, and even then it is geographically limited to texts of Spanish origin or influence until the 10th century.

The tripartite reading of spirit, water, and blood in 1 John 5:7–8 was the subject of trinitarian reflection in North Africa in Cyprian, *De eccl. cath. unit.* 6 and *Epist.* 73.12, but with no certain reference to the Comma. Facundus, a 6th century bishop from N. Africa, cites the text without the Comma (*Pro Def. Tri. Cap. Iust.* 1.3.9) and quotes Cyprian as giving a trinitarian understanding of the shorter text. The earliest uncontested use of the Comma is the *Liber Apologeticus* (1.4) of Priscillian, a 4th

century bishop in Spain. It occurs in the 5th century *Contra Varimadum* (1.5), a trinitarian treatise of N. African provenance, and in the *Hist. persec. Afr. Prov.* (2.82) of Victor, bishop of Vita, as well as in *De Trinitate* (1.4.1) of Fulgentius, 6th century bishop of Ruspe, both in N. Africa. In Italy, Cassiodorus quotes the Comma in *Epist. S. Joannis ad Parthos* (10.5.1) and in Spain, Isidore of Seville, who died A.D. 636, has awareness of it in *Test. div. Script.* 2. So, certain Latin Fathers from N. Africa and Spain from A.D. 400–650 evidence knowledge of the Comma and about A.D. 600 the reading begins to surface in some Lat manuscripts of the NT of Spanish origin. It must be remembered, however, that the Comma does not appear in Tertullian, Hilary of Poitiers (treatise on the Trinity), Ambrose, Augustine, Bede, and other major Latin Fathers, nor does it occur in the Vg of Jerome.

The Comma, which interrupts the thought of the passage, is an interpolation originating in the 3d or 4th century as a trinitarian explanation of 1 John 5:7–8. What was likely a marginal gloss was incorporated into certain Lat texts and eventually translated back into Gk in some late Gk manuscripts.

In view of the paucity of external evidence and the transcriptional probability that the Comma arose due to theological reasons, this reading would have been relegated to a historical footnote had it not been for certain events in the 16th century. Observing that the Comma occurred only in the Lat version and not in any Gk manuscript known to him, Erasmus omitted it from his editions of the Gk testament in 1516 and 1519. Stunica, editor of the Complutensian Polyglott (printed 1514; published 1522), assailed Erasmus for omitting the Comma and included it in his own text, translated from the Lat. In response to a wider outcry, Erasmus maintained that he had searched many Gk manuscripts, failing to find even one which contained the Comma. Ms. 61, containing the Comma and apparently produced at the time for that very purpose, was brought to Erasmus' attention and, fearing a negative response to his edition, he included the Comma in his 3d edition of 1522, but not without suspicion that 61 had been revised according to the Lat. The reading was accepted into Stephanus' 3d edition of 1550 and the Elzevir text of 1633, later known as the Textus Receptus. It then achieved wider currency in the Clementine Vg in 1592, which became the official Bible of the Roman Catholic Church, and in the Rheims edition. Not originally in Luther's Bible, later editors added it to his text beginning in 1582. Although earlier bracketed by Tyndale as questionable, the reading was adopted in the KJV. Thus the Comma gained widespread acceptance in the 16th and 17th centuries.

However, since Lachman in 1831, the Comma has been rejected from critical editions of the Gk text as a dogmatic expansion of the text in the Latin tradition.

CARROLL D. OSBURN

JOHN (DISCIPLE) [Gk *Iōannēs*]. The name of John, the son of Zebedee and the brother of James, occurs thirty times in the Synoptic Gospels, Acts, and Galatians. These NT texts are the best sources for accurate information about this disciple of Jesus. Without his name having been specifically cited, John is mentioned in the epilogue to the Fourth Gospel (John 21:2). As one of the sons of Zebedee, he belonged to a group of seven disciples who witnessed an apparition of the risen Lord.

A. General
B. The Synoptic Gospels
C. Acts
D. The Gospel of John
E. Ecclesiastical Tradition

A. General

The Gospels are less clear about the name of John's mother than they are about the name of his father. Mark indicates that a woman named Salome was a bystander at the crucifixion of Jesus (Mark 15:40) and Matthew tells that the mother of the sons of Zebedee was one of the onlookers (Matt 27:56), leading to the plausible suggestion that Salome was the name of John's mother. By trade John was a fisherman (Matt 4:21; Mark 1:19; Luke 5:10; cf. John 21:3), the trade of his father. The family business was moderately successful and the family seems to have been of some means because they had hired servants (Mark 1:20). From Mark 1:21 it would appear that they lived near Capernaum, on the N shore of the Sea of Galilee.

Within the Gospels, John is clearly portrayed as a disciple of Jesus (Matt 10:1; Mark 14:32; Luke 6:13; 9:54; John 21:1), that is, as one who followed after Jesus, the itinerant and charismatic preacher (Matt 4:22; Mark 1:20; 5:37; Luke 5:11). He was chosen as one of the twelve (Matt 10:2; Mark 3:17; Luke 6:14) and is called an apostle (Matt 10:2; Mark 3:14; Luke 6:13).

Since John's name appears after James' on all three Synoptic lists of the twelve and since James is twice identified as Zebedee's son, while John is identified as his brother (Matt 4:21; 10:2; Mark 1:19; 3:17; cf. Matt 17:1), it is likely that John was younger than James.

B. The Synoptic Gospels

John appears most frequently (ten times) in Mark, the earliest of the Synoptics. On Mark's list of the twelve chosen by Jesus, John and his brother James are cited immediately after Simon Peter (Mark 3:16–17). Their position on the list is indicative not only of the earliness of their call, but

also of the importance which they enjoyed among the Twelve.

Mark emphasizes their importance by indicating that the pair of brothers, like Simon, received a special name from Jesus. John and James were called *Boanerges,* which Mark translates as "sons of thunder" (Mark 3:17). Apart from this translation, Mark offers no explanation of the epithet—just as he offers no explanation of the name Peter (Mark 3:16; cf. Matt 10:2; 16:18). Perhaps the name is indicative of the brothers' impetuosity (Mark 9:38–41; 10:35–45; Matt 20:20–28; Luke 9:49–50; 52–56). The more recent Synoptic Gospels, Matthew and Luke, avoid the epithet. They also cite Andrew, Simon's brother, before citing the names of James and John on the list of the Twelve (Matt 10:2; Luke 6:14).

John and James were among the first disciples called by Jesus during the Galilean ministry (Mark 1:19–20; Matt 4:21–22). Like the other pair of brothers among the Twelve, Simon and Andrew (Mark 1:16–18; Matt 4:18–20), John and James were called by Jesus while they were at work. They were mending their nets at the time that they received the invitation. Matthew and Mark emphasize the radical nature of their decision to follow Jesus, the itinerant preacher, by citing its immediacy and the fact that it entailed the abandonment of their work.

Luke has combined the tradition of the call of John and James with a tradition about a miraculous catch of fish (Luke 5:1–11). James and John, identified as the sons of Zebedee, are presented as partners with Simon. The three partners were so amazed at the miraculous catch of fish, and Jesus' words to Simon, that upon their return to shore they abandoned everything in order to follow Jesus. Since it is quite unlikely that James and John were business partners of Peter (compare *metochoi,* "partners" of v 7 with *koinōnoi,* "partners" in v 10), it is reasonable to assume that the Lukan narrative reflects the special association of the triumvirate of Simon, James, and John in the ministry of Jesus.

James and John were with Jesus when he entered the house of Simon and Andrew on the occasion of the cure of Simon's mother-in-law (Mark 1:29). Peter, James, and John were the only three disciples whom Jesus allowed to accompany him when he raised the daughter of Jairus from the dead (Mark 5:37; Luke 8:51). The three were chosen by Jesus to ascend the mountain where Jesus was transfigured and to witness the transfiguration (Mark 9:2–4; Matt 17:2–3; Luke 9:28, 31). Enveloped by a cloud, they heard the heavenly voice which identified Jesus as the Son. Luke adds the detail that they had been overcome by sleep prior to the vision (Luke 9:32), while Matthew adds that they were overcome by awe at the sound of the voice (Matt 17:6). All three accounts suggest that John and the others remained silent about their experience until after Jesus' resurrection from the dead (Mark 9:9–10; Matt 17:9; Luke 9:36).

The intimacy that the group of three enjoyed with Jesus continued until the time of his passion. Peter, James, and John, accompanied by Andrew, whose name is listed in last place among the group, privately asked Jesus about the final times as they were sitting on the Mount of Olives opposite the city of Jerusalem (Mark 13:3). Jesus' eschatological discourse (Mark 13:5–37; par.) was addressed to them. Peter, James, and John were again selected by Jesus to be with him at the time of the agony in the garden (Mark 14:33; Matt 26:37). In their account of the scene, as in their accounts of the raising of Jairus' daughter and the transfiguration, the Synoptics generally highlight the initiative of Jesus in choosing the three to accompany him.

Although John was one of the privileged three chosen to accompany Jesus on these significant occasions, Mark tells that John was twice rebuked by Jesus. Once John, serving as a spokesman for the disciples, reported that they had forbidden an exorcist who did not belong to their company to expel demons in the name of Jesus (Mark 9:38–41; Luke 9:49–50). Jesus ordered the disciples to desist "for he that is not against us is for us," but Luke notes that this order (phrased in the plural, and therefore intended for all the disciples) was specifically directed to John.

Another incident serves to highlight John's lack of real understanding of the significance of Jesus' ministry (Mark 10:35–45; Matt 20:20–28). Inappropriately, James and John asked Jesus for a favor, which they specified as the privilege of being seated beside him when he entered into his glory. Apparently they had understood the kingdom preached by Jesus according to the nationalist and militaristic views popular among many contemporaries with an apocalyptic outlook. Their self-serving request prompted the indignation of the ten others in the group of twelve. Jesus asked James and John whether they were ready to drink his cup and to be baptized with his baptism, apparently a reference to Jesus' imminent suffering and the disciples' future martyrdom. While assuring the sons of Zebedee that they would have opportunity to suffer for his sake, he told them that it was beyond his power to give them a privileged place in the kindom. Jesus profited from the occasion to speak to the group of disciples about the quality of leadership expected from them.

Matthew who tends to idealize the disciples and, consequently tends to improve upon the somewhat negative portrayal of the disciples in Mark (e.g., by dropping Jesus' reproach of John in Mark 9:38–41), attributes the importunate question to the mother of the sons of Zebedee (Matt 20:20–21), but implies that the brothers were associated with her in the request (Matt 20:22–24).

Matthew seems to have been impressed that Jesus had called two sets of brothers (Matt 4:21; 20:24; cf. Mark 10:41). Twice he refers to James and John as the (two) sons of Zebedee without mentioning their names (Matt 20:20; 26:27). On the other hand, he seems not to have given as much emphasis to the association of the three privileged disciples in Jesus' ministry as did Mark. Matthew does not mention that James and John accompanied Jesus to Peter's house (Matt 8:14; cf. Mark 1:29) nor that the three went with Jesus to Jairus' house (Matt 9:22–23; cf. Mark 5:37). He omits the specific reference to the four disciples gathered on the Mount of Olives for the eschatological discourse (Matt 24:3; cf. Mark 13:3).

Luke tells a story about John and his brother (Luke 9:52–56) that is found in neither of the other two Synoptics. After making the decision to move towards Jerusalem, Jesus sent two of his disciples into a Samaritan town to prepare the way. Because of Jesus' intention to go to Jerusalem, the townspeople refuse to accept Jesus. The

brothers want to call divine vengeance upon the town in the form of a destructive fire, but Jesus impedes them with a rebuke. All told, this is the third reproach addressed to John in the Synoptic tradition.

On the other hand, Luke seems occasionally to intimate that John had a more important role in the early Church than did his older brother. He specifies that Peter and John were the two disciples sent into the city to prepare for Jesus' final passover (Luke 22:8; cf. Mark 14:13). When describing the presence of the privileged three in the home of Jairus (Luke 8:51) and on the mountain of transfiguration (Luke 9:28), Luke cites the name of John before that of James. This is consistent with the sequence of the names (John followed by James) found on the list of the eleven in Acts 1:13.

C. Acts

When James was killed by Herod Agrippa I in 43 A.D., prior to the arrest of Peter, James is identified as having been "the brother of John" (Acts 12:2). This is another indication of Luke's according a greater role to John than to James.

Acts does not ascribe any particular role to John at the so-called Council of Jerusalem (Acts 15:4–30). Nonetheless, in what appears to be a reference to those events, Paul (Gal 2:9–10) mentions John, along with James (the brother of the Lord) and Cephas as one of the pillars *(styloi)* of the community of Christians in Jerusalem. The pillars not only extended a gesture of fellowship to Paul and Barnabas but also, according to Paul's say-so, recognized the legitimacy of the latter's mission to the gentiles.

Paul's linking of Cephas and John, indicating the authority enjoyed by these two in Jerusalem, concurs with the traditions cited in Acts which, apart from Acts 12:2, always links John with Peter (cf. Luke 22:8). Neither John's father nor his brother is mentioned in the three accounts of Acts where John appears with Peter (Acts 3:1–11; 4:1–22; 8:14–25). In all three accounts the principal role is ascribed to Peter; John has nothing specific to do or say (despite the defense attributed to both Peter and John in Acts 4:19–20 and the retrospective attribution of the speech in Acts 3:12–26 to both Peter and John in Acts 4:1).

In the first account (Acts 3:1–11), John is with Peter as they go to the temple to pray at the ninth hour. They (cf. v 11) were the means of the cure of the lame man brought about in Jesus' name. A second account (Acts 4:1–22) describes the arrest, scrutiny, and release of Peter and John who had proclaimed Jesus' resurrection from the dead. They were perceived as having been disciples of Jesus (v 13: "with Jesus"; cf. Mark 3:14) and as being bold in their proclamation (cf. Acts 4:31) despite the fact that they were incapable of writing and that they were just "ordinary" people (*idiotai*, either as an affirmation of their lack of expertise or as a repeated reference to their apparent illiteracy). In their rebuttal, Peter and John spoke of their role as witnesses (v 20). In Acts 8:14–25, Peter and John again appear as leaders of the Jerusalem church, this time delegated to go to Samaria to oversee the evangelization of that area by Philip. On that occasion they prayed for and laid hands upon those whom Philip had baptized.

D. The Gospel of John

John is never mentioned by name in the Fourth Gospel. Under the rubric of the "sons of Zebedee" his presence at the fishing incident connected with an appearance of the risen Jesus is cited in the epilogue to the gospel (John 21:2).

Ecclesiastical tradition has commonly associated the Fourth Gospel's BELOVED DISCIPLE (John 13:23–26; 19:26–27, 35; 20:2–10; 21: 20–24; cf. 1:35–40; 18:15–16), presumed to be the author of the gospel (John 21:24), with John, the son of Zebedee. If the identification is correct—as some scholars continue to maintain—the Fourth Gospel provides additional information about John: his intimacy with Jesus, his acquaintance with the high priest, his presence at the foot of the cross, his inspection of the empty tomb, and so forth.

There are, however, weighty arguments against the identification. The weightiest may be the affirmation that John, the Galilean fisherman, was unable to write (Acts 4:13). Another serious argument is the tradition about the death of John. Although Mark 10:39 may well be a *vaticinium ex eventu* (prophecy after the event), it probably indicates that John had died before the gospel of Mark was written, that is, sometime before the Fourth Gospel was composed.

E. Ecclesiastical Tradition

The common tradition of the Church affirmed that, after his leadership role in the church of Jerusalem, John moved to Ephesus, where he lived to an old age and died a natural death. The tradition is summarized by Eusebius (*Hist. Eccl.* 3.18.1; 23.3–4; 39.3–4; 4.18.6–8; 5.8.4; 18.14; 20.6; *PG* 20.252, 255–64, 296–98, 376, 449, 479–82, 486) who appeals to Irenaeus (3.18.1; 39, 3–4), Justin (4.18.6–8), Clement of Alexandria (3.39.3–4), Apollonius (5.18.14) and Polycrates (5.24.3) as early witnesses to the tradition.

The testimony of Irenaeus (*Haer.* 2.22.3.5; 3.1.2; 3.4; *PG* 7.783–85, 845), Justin (*Dial.* 81.4; PG 6.669) and Clement of Alexandria (*q.d.s.*, 42; *PG* 9.648–50) about John is known from extant sources, but the pertinent texts from Apollonius and Polycrates are extant only in the portions cited by Eusebius. Irenaeus claimed that he had reports on John's Ephesian ministry coming from Polycarp and Papias.

The mid-2d century apocryphal *Acts of John* is another early witness to an Ephesian residency by John. Among the Latin Fathers, Tertullian tells of John's death at a late age (*De anima.* 50; *PL* 2).

The tradition maintained that John was once banished to the island of Patmos, an island not far off the coast of Asia Minor relatively near Ephesus, but that he later returned to Ephesus where he lived until the time of Trajan. Since the tradition ascribed all five books in the NT's Johannine corpus (John, 1-2-3 John, Revelation) to John, the Patmos exile allowed for John's presumed composition of Revelation (Rev 1:9). Historical criticism has, however, convincingly shown that all five works could not have been written by the same author and that it is highly unlikely that John, the son of Zebedee, was the author of any one of them.

Making use of his several sources, Eusebius narrated a number of stories about John, including his raising a man from the dead at Ephesus (*Hist. Eccl.* 5.18.14; *PG* 20; 479–

82) and his regaining a robber and murderer for Christ (3.39, 3–4; *PG* 20.296–98). Irenaeus tells of his having opposed the heretic Cerinthus (*Haer.* 3.3.4; *PG* 7.853). Later, Jerome told the story of John, feeble and quite old, being carried to gatherings of Christians, for whom he had but a single message: "Little children, love one another" (*Commentary on Galatians* 6,10; *PL* 26, 433).

The Patristic tradition about John is, however, not entirely consistent. The Muratorian fragment suggests that John was with the other apostles when the gospel was written, a version of the tradition that would preclude the late date suggested by other Patristic witnesses for the gospel's composition. Heracleon (cf. Clement of Alexandria, *Strom.* 4.9; *PG* 8.1281), and later authors like Philip of Side (5th century) and George the Sinner (9th century) intimate that John died a martyr's death.

RAYMOND F. COLLINS

JOHN (PERSON) [Gk *Iōannēs*]. John was a common Jewish name during the Hellenistic age and was especially popular among the priesthood.

1. The son of a priest named Simeon, from the clan of Joarib. He was the father of Mattathias and the grandfather of Judas Maccabeus (1 Macc 2:1; cf. 14:29 and Josephus *Ant* 12.6.1 §265). The Joarib clan had an illustrious ancestry (1 Chr 24:7; Josephus *Life* 11). Some scholars maintain, however, that the importance of the clan in Chronicles, Ezra, and Nehemiah was a result of Hasmonean interpolations (opposing this viewpoint are Liver 1968: 33–52 and Grintz 1972: 155–56). The family had long resided in Jerusalem (1 Macc 2:70; 9:19; 12:25; see also *Ant* 12.6.1 §265).

2. The eldest of the five sons of Mattathias and the brother of Judas Maccabeus (1 Macc 2:2; *Ant* 12.6.1 §266). His nickname (or *cognomen*) "Gaddi" was used to distinguish one bearer of a common name from another. A nickname was formed by shortening or altering an existing name (see *IPN,* 36–41) or by a descriptive (or derogatory) epithet. In the case of Gaddi, the nickname has been transliterated from Hebrew or Aramaic *(gaddî)* into Greek *(Gaddi).* Some scholars have suggested that Gaddi is formed with the DN Gad, the Semitic god of fortune, and therefore might have had the meaning "my fortune" (on this question, see Fowler *TPNAH,* 157, 340); however, the exact meaning remains uncertain.

When Bacchides determined to move against the Maccabeans, Jonathan sent his brother John with a convoy of goods to the Nabateans, perhaps as a bribe for their support (1 Macc 9:32–42; *Ant* 13.1.2, 10–11; 13.1.4, 19–21; Goldstein *I Maccabees* AB, 380–83). A marauding tribe called the Jambrites from Medeba ambushed the convoy, plundered the goods, and killed John and his companions. Josephus called the tribe *Amaraioi,* perhaps indicating the Semitic *ʾmry.* The personal name *yʾmrw* is attested in a Nabatean inscription (*CIS* II 195; dated 39 C.E., from Umm-er-Resas, 16 miles SE of Medeba), which might indicate that the Jambrites were a Nabatean tribe (see Clermont-Ganneau 1898: 185). Jonathan's band avenged John's murder by devastating the Jambrites and their allies the Nadabites at an important wedding ceremony.

SCOTT T. CARROLL

3. The "son of Acco" and father of Eupolemus; Eupolemus was one of the men selected by Judas Maccabeus to head the Jewish delegation to Rome (1 Macc 8:17). The phrase "son of Acco" probably denotes John as a member of the priestly clan of Hakkoz (1 Chr 24:10). This John is remembered for having earlier negotiated certain concessions from Antiochus III, concessions that were beneficial to the Jews but that were rescinded when the pro-Hellenizing Jason, aided by Antiochus IV Epiphanes, supplanted Onias III as high priest in Jerusalem (2 Macc 4:11; see Goldstein *II Maccabees* AB, 228–29). The rescinding of these policies was one of the factors that led to war between the anti-Hellenizing Jews led by Judas Maccabeus and the Seleucid forces of Antiochus IV.

4. An envoy whom the Jews sent to Lysias, a general of Antiochus IV attempting to end the war between the Jews and the Seleucids (2 Macc 11:17). John and Absalom are mentioned as Jewish envoys in a letter Lysias addresses to "the community of the Jews" (vv 16–21). The author of 2 Maccabees depicts Lysias as negotiating with Judas Maccabeus, the leader of the anti-Hellenizing Jews; however, because the pro-Hellenizing Jewish high-priest Menelaus is mentioned twice in another letter preserved in 2 Maccabees 11 (vv 27–33), it has been argued that Lysias actually negotiated with Menelaus, and that John and Absalom were envoys who served his faction, not that of Judas Maccabeus—a claim Goldstein originally supported (*I Maccabees* AB, 271) but subsequently opposed (see *II Maccabees* AB, 409–10).

6. See JOHN (DISCIPLE).

7. See MARK, JOHN (PERSON).

GARY A. HERION

8. The father of Simon Peter (John 1:42; 21:15–17). Matt 16:17 describes Simon as Bar-Jona *(Bariōna),* that is, "son of Jonah," not John. The familiarity of the Matthean text led to a reading "Jona" *(Iōna; Iōanna* in Codex Koridethi) in some majuscule and most of the minuscule mss of John 1:42. The most important witnesses of John 1:42, including the early papyri (P^{66} and P^{75}), read "son of John" *(ho huios Iōannou).* An elliptical "of John" (only *Iōannou*) appears in John 21:15–17, where some mss also have a variant reading under the influence of Matt 16:17. Greek-language Christians may have regarded *Iona* as a diminutive of *Iōanes,* but the Hebrew clearly distinguishes Jonah

(yônâ) from John *(yôḥānān)*. Since nothing is known about the man except that he was the father of Simon Peter, it may be that there were two different traditions about his name.

9. A member of the high priestly family (Acts 4:6). Nothing further is known about this John and his relative Alexander (Acts 4:6). Luke's text suggests that the high priest then in office was Annas, who was in office from 6 to 16, but who continued to be influential during the term (17–36) of his son-in-law, Joseph-Caiaphas (John 18:13). A Western reading of Acts 4:6 substitutes "Jonathan" (*Iōnathas* in Codex Bezae and many Old Latin mss.) for "John," apparently identifying the individual as the son of Annas who succeeded Caiaphas in the office of high priest (Josephus, *Ant* 20.8.5; *JW* 2.13.3).

RAYMOND F. COLLINS

JOHN THE BAPTIST. A 1st-century Jewish oracular prophet significant in the NT as a precursor of Jesus. John the Baptist was an ascetic, and conducted a ministry in the Judean wilderness that involved preaching and baptism. His popularity and the revolutionary possibilities of his message of social justice led to his arrest, imprisonment, and execution by Herod Antipas, probably in A.D. 28 or 29.

A. The Sources, Their Character, and Their Use
1. Josephus
2. Mark
3. Matthew
4. Luke-Acts
5. John
B. A Reconstruction of John's Mission
1. The Origin of John the Baptizer
2. John's Prophetic Mission
C. Summary

A. The Sources, Their Character, and Their Use

There are two forms of John's title in the NT: *ho baptistēs* "the baptist" is a formal title; *ho baptizōn* "the baptizer" is an epithet. Grammatically, the latter form is a present active participal in which the verbal meaning of habitual behavior rings strongly; it most likely was the earlier form, historically speaking.

The primary sources for determining the history of John the Baptist are the NT and Josephus. In the NT John is referred to in all four gospels and in the book of Acts, while in Josephus there is one short but suggestive passage. This passage is especially important because it is the only extrabiblical source. However, we cannot use either of these sources without weighing their historical reliability. All ancient historical documents are biased in one way or another by special interests and apologetic concerns. This judgment applies to Josephus as well as to the NT. The distinctive character and perspectives of each of the gospels and Acts have been greatly illuminated through tradition criticism, redaction criticism, the new literary criticism, and social science criticism. Likewise the interests (both social and personal) that govern Josephus' histories have come under closer scrutiny. All of this newer understanding (as well as older methods of scholarship) must be considered as we try to determine the history of John the Baptizer.

How does John appear in each of the sources? The sources will be examined in the order Josephus, Mark, Matthew, Luke-Acts, John. (Neither at this point, nor elsewhere in this study, is any single theory of gospel origins assumed.)

1. Josephus. Josephus' *Jewish Antiquities* is a work of 20 books relating the history of the Jews from creation to the Jewish-Roman war of 66–70 C.E. The immediate context of Josephus' report about John is an account of events during the early 1st century C.E., beginning with the assessment of property in Judea by the governor of Syria, QUIRINIUS (see also CENSUS, ROMAN). This occasioned an uprising under Judas the Galilean, the narrating of which leads Josephus to describe the three "philosophies" of Judaism (the PHARISEES, SADDUCEES, and ESSENES), as well as the "fourth philosophy" (the ZEALOTS) started by Judas. He reports among other events the building of Tiberias by Herod Antipas and various indiscretions by Pilate, who was procurator of Judea. Especially important is the report of Jesus' life and death in a paragraph (*Ant* 18.3.3) a bit shorter than the one about John, a paragraph whose authenticity has been hotly disputed in modern times.

The paragraph about John the Baptist is immediately preceded by an account of Herod's divorce from the daughter of Aretas, king of Petra, and of the latter's retaliation by making war on Herod. Aretas defeated Herod, and the paragraph on John picks up from that defeat, which some Jews believed was caused by God as just vengeance on Herod for his execution of John. He had executed John even though the latter was said to be a good man who exhorted his fellow Jews to live righteously and practice justice and piety. Josephus observes that John baptized people as bodily parallel to inward cleansing. But the size of John's movement frightened Herod and so he struck preemptively by executing John at the fortress of Machaerus. The text of Josephus' account of John the Baptist follows:

> But to some of the Jews the destruction of Herod's army seemed to be divine vengeance, and certainly a just vengeance, for his treatment of John, surnamed the Baptist. For Herod had put him to death, though he was a good man and had exhorted the Jews to lead righteous lives, to practice justice toward their fellows and piety towards God, and so doing join in baptism. In his view this was a necessary preliminary if baptism was to be acceptable to God. They must not employ it to gain pardon for whatever sins they committed, but as a consecration of the body implying that the soul was already thoroughly cleansed by right behavior. When others too joined the crowds about him, because they were aroused to the highest degree by his sermons, Herod became alarmed. Eloquence that had so great an effect on mankind might lead to some form of sedition, for it looked as if they would be guided by John in everything that they did. Herod decided therefore that it would be much better to strike first and be rid of him before his work led to an uprising, than to wait for an upheaval, get involved in a difficult situation and see his mistake.

Though John, because of Herod's suspicions, was brought in chains to Machaerus, the stronghold that we have previously mentioned, and there put to death, yet the verdict of the Jews was that the destruction visited upon Herod's army was a vindication of John, since God saw fit to inflict such a blow on Herod. (Josephus *Ant* 18.5.2 §116–19)

The following observations concern this report. Points 1–3 concern Josephus as an author; points 4–7 are about John's life.

1. Josephus did not have to report the connection between John and Herod's death in order to tell the history of Herod. Why did he report it?
2. Josephus judged John favorably as a good man. (Thus John was good grist for Josephus' apologetic mill.)
3. Josephus knew John's "theology." Baptism was a bodily action parallel to and expressive of soul cleansing and righteous behavior.
4. John exhorted people to live uprightly and to practice just acts toward others and piety toward God.
5. John baptized people who responded to his exhortations.
6. John was popularly known after his death to the degree that people could connect him with Herod's defeat by Aretas, king of Petra. John had a high degree of prominence.
7. Herod killed John preemptively because he became suspicious of and alarmed by the size and enthusiasm of John's following.

2. Mark. At the beginning of Mark's story of Jesus, John appears prominently as a preacher and baptizer to whom many people—including Jesus of Nazareth—responded. As Jesus is baptized, God tells him that he is his son. After John is arrested, Jesus begins his own preaching mission in Galilee. However, the narrative of John's arrest and execution (6:14–29) is held until about one-third of the way through the gospel. A previous narrative concerns John's disciples' practice of fasting as the Pharisees did, in contrast to the practice of Jesus' disciples, who didn't fast (2:18–22). John the Baptist next appears in the middle of the gospel, at the point where Jesus asks his disciples who people say he is; some answer that he is John (8:28). Finally, when Jesus is in Jerusalem, and the Jewish leaders ask Jesus about his authority, he evades answering directly by asking them whether they believe John's baptism was from God or not (11:27–33).

The following observations may be made about how John the Baptist fits into Mark as a story, and about what we learn concerning John beyond what is found in Josephus. First, regarding Mark as a story, Mark tells us very little about John. This gospel seems to have no interest in John for his own sake. Second, Mark's interest is in Jesus; consequently, all of the material about John is subordinated to this interest. John's preaching and baptizing mission gives Mark the opportunity to emphasize that the missions of both John and Jesus are the fulfillment of prophecy (1:2–3). John is seen obliquely as Elijah (1:6; 9:11–13), who prepares the way for Jesus and announces his arrival as the one mightier than John: Jesus will baptize with the Holy Spirit rather than with water (1:1–8). The fasting of John's disciples gives Mark a chance to portray Jesus and his disciples as the new, to be contrasted with the old (2:18–22). John's death becomes an opportunity for Mark to emphasize that Jesus and his true disciples must also face death if they are to remain faithful (6:7–44; 8:34; 9:13; 13:9–13). Finally, John's popularity makes possible Mark's portrayal of Jesus as superior to the Jerusalem authorities (11:27–33).

Regarding John's life, it can be observed that:

1. John was a prophet (1:6–8; 11:32) who lived an ascetic life (1:6; 2:18) in the wilderness (1:4).
2. He preached that people should repent and be baptized for the forgiveness of one's sins. Those to whom he preached included Herod Antipas (6:18).
3. He also predicted that a person far mightier than himself would come and baptize with the Holy Spirit those whom he had baptized with water (1:7–8).
4. Many people responded to his preaching and were baptized (1:5). They took him for a prophet (11:32); some of them remained with him as his disciples (2:18; 6:29); they fasted as the Pharisees did (2:18); and some of them buried John (6:29). John's movement was of a magnitude similar to that of Jesus' (6:14–16; 8:28).
5. One of those baptized by John was Jesus, who believed that John was Elijah (9:11–13); Jesus' disciples did not fast (2:18).
6. The Jerusalem authorities knew John well and were aware of his reputation as a prophet (11:30–33).
7. Herod arrested and killed John for personal reasons, because John criticized him for marrying his sister-in-law, Herodias (6:17–18). Herod killed John because of pressure from Herodias (6:19). He himself didn't want to kill John because he also regarded him as a righteous and holy man (6:20).
8. Jesus began his preaching mission in Galilee after John had been arrested (1:14).

3. Matthew. Matthew's distinctive use of traditions about John the Baptist is evident from deviations from Mark both in material with parallels in Mark and in additional material. After Matthew's story of Jesus' birth, John appears in the wilderness preaching not (as in Mark 1:4) a "baptism of repentance for the forgiveness of sins," but rather repentance, "for the kingdom of heaven is at hand" (Matt 3:2). This is exactly the same message that Jesus preached in his own mission (4:17), and is just one of many ways in which Matthew ties John and Jesus together. Other links are the story of children sitting in the market, in which John and Jesus are portrayed equally as messengers from God who are rejected by their generation (11:16–19), and the ignoble death meted out to both (17:9–13).

Whereas Mark's ordering of material implies that John is the forerunner of the Messiah, Matthew makes this point explicitly through the formula he uses eleven times to introduce fulfilled prophecy: "For this is he who was spoken of by the prophet" (3:3). (This proof from prophecy is only one example of the generally argumentative character of Matthew.) Matthew's emphasis on prophecy fulfillment probably accounts for his placement of the

description of John's way of life next (3:4–6). Matthew means to say here (as he makes explicit later on [17:9–13]) that John is Elijah, who must precede the Messiah, who is Jesus.

Another of Matthew's major themes appears in John's extremely harsh preaching against the Pharisees and the Sadducees (3:7–10, 12). They are declared by John to be presumptuous hypocrites who have to be with obvious insincerity (3:7). This theme of insincerity is developed with respect to the Pharisees in Matthew 23. The character of the Jewish leaders in Jerusalem is likewise portrayed in the question about Jesus' authority (21:23–27), as well as in the parable of the two sons that follows (21:28–32). In both cases the leaders refuse to believe that John the Baptist is a prophet of God (referred to euphemistically as "heaven," "righteousness," 21:26, 32), which makes them worse than the lowest members of society, "tax collectors and harlots," who did believe John (21:32).

The next section, found exclusively in Matthew, contains a conversation between Jesus and John (3:14–15). It indicates that John knew Jesus, and implies that he knew Jesus to be the sinless Messiah. This episode has two Matthean emphases: how close John and Jesus are, and how wrong John's followers are when they do not turn to follow Jesus after Jesus' baptism by John.

In Mark, the entire populace asks Jesus why John's disciples fast, unlike Jesus' disciples; in Matthew (9:14) by contrast, John's disciples themselves ask the question, and thereby condemn themselves through the implicit association with unbelieving Pharisees. They are the "old" in contrast to John and Jesus who are the "new" (9:16–17).

It is in this light that we can understand John the Baptist's question to Jesus as Matthew intends it (11:2–6). John of course clearly knows that Jesus is "he who is to come" (3:1–17). This episode is told by Matthew for the benefit of John's disciples, who have not yet become Christians. "And blessed is he who takes no offense at me" (11:6), i.e., you people who in the late 1st century still remain followers of John instead of Jesus, whom John declared mightier than himself (3:11).

This message is additionally emphasized in the next section (Matt 11:7–15), John is praised as the prophet Elijah, as "more than a prophet," as the messenger of the Messiah, as the greatest of humans (11:9, 10, 11, 14); at the same time it is Matthew's belief that the least Christian is greater than John (11:11), even though Christians suffer violence as John and Jesus did (11:12). That John suffered violence is shown by the story of his death (14:1–12). This tale, as well as the report that some thought that Jesus *was* John the Baptist (16:14), again shows the close connection between prophet and Messiah. Indeed, John and Jesus are united in a common liquidation at the hands of the powerful (17:9–13), whose antagonism to both prophet and Messiah (in contrast to Jesus' high regard for John) is seen once more in the passage where the Jerusalem officials question Jesus' authority (Matt 21:23–27).

Matthew has used John the Baptist traditions with distinctive aims and purposes, among which the following are prominent:

1. John is the prophet (Elijah) of Jesus (the Messiah). John knowingly prepares for Jesus' coming as Messiah, while Jesus knowingly regards John as Elijah, the greatest of humans before Jesus.
2. John and Jesus are equally men of God. All righteous people (Jesus' disciples, Christians) will believe their messages, while the unrighteous (John's disciples, Pharisees, Herod, Jewish leaders) disbelieve and even kill them.
3. Despite Jesus' high regard for John, even the least Christian is greater than John.

What historical material beyond that found in Josephus and Mark is present in Matthew?

1. There is an additional reference to John's asceticism (11:18).
2. John harshly attacked the Pharisees and Sadducees (3:7–10), Herod (14:4), and the Jewish leaders in Jerusalem (21:32). These people did not believe in John, but outcasts such as tax collectors and harlots did (21:32).
3. John preached the same message as Jesus (3:2; 4:17).
4. John knew of Jesus and regarded him as the sinless Messiah before he baptized him (3:14–15). Jesus regarded John very highly (11:9–14), but he regarded his own followers even more highly (11:11).
5. While John was in prison he had doubts about whether Jesus really was the Messiah (11:2–6). These doubts evidently rested on the unexpected character of Jesus' activity and message (11:5–6).

4. Luke-Acts. As in the case of Mark and Matthew, the author of Luke-Acts also has a distinctive portrayal of John the Baptizer. This is seen most readily and fully in the birth story of John and Jesus (Luke 1 and 2), and the account of John's appearance as a baptizer and Jesus' baptism (3:1–22). Luke's perspective is succinctly summed up by Jesus himself in 16:16: "The law and the prophets were until John; since then the good news of the kingdom of God is preached." Thus, Luke fits John into his historical scheme: Israel (law and prophets including John), Jesus, and the Christian Church.

Most distinctive in Luke is the opening tale, which interweaves the stories of the birth of John and Jesus. The scheme can be set out as follows:

The announcement of *John's* birth (1:5–25)
The announcement of *Jesus'* birth (1:26–35)
The two mothers meet (1:36–45)
Mary praises God for *Jesus* (1:46–56)
Zechariah praises God for *John* (1:57–80)

Thus we have the chiastic pattern A, B, A + B, B, A. In this way Luke makes the basic two-sided point: John the Baptist and Jesus are closely allied in the scheme of salvation, but John is subordinate to Jesus.

John and Jesus are allied through Luke's stories of their births, which are united together because their mothers are relatives (1:36); both births are miraculous and thus merit special praise to God. Yet John is subordinated to Jesus in several ways: Elizabeth is barren and both she and her husband are very old, yet she conceives in the normal manner (1:24), while Mary conceives by the Holy Spirit

when she is still unmarried (1:34–35); when Mary greets Elizabeth, the fetus (the future John) leaps in her womb for joy in the presence of the mother of her Lord, i.e., Jesus the Messiah (1:41, 44). Finally, and most importantly, John is clearly only a prophet (1:76) like Elijah (1:17), while Jesus is the Son of God and Messiah (1:32–35).

Perhaps most significant for our analysis is that after the birth story there follows the story of John's appearance and Jesus' baptism (chap. 3). The same themes of alliance between John the Baptist and Jesus, with the subordination of the former to the latter, are again present. Essentially, John is the prophet of Jesus the Messiah. Apparently, John does not even baptize Jesus, since he is already imprisoned when Jesus is baptized (3:20, 21; cf. 4:14 with Mark 1:14). John's prophetic status is emphasized by the inclusion of his prophetic preaching to the wealthy, tax collectors and soldiers (3:10–14), as well as by the note about reproval of Herod for his marriage to Herodias and "for all the evil things that Herod had done" (3:1, 9–20). The implied antipathy between John and Herod is echoed later by Herod's wish to kill Jesus and the latter's defiant response (13:31–33). This reference reminds us that Luke omitted the story of John's execution by Herod (after 9:7–9), and this omission expresses Jesus' distinctive superiority to John, for it is the Messiah who must die in a special way (24:26). In the baptism story it is made explicit that Jesus—not John—is the Messiah (3:15–17).

Luke elaborates the distinction between John's and Jesus' disciples. Along with fasting he adds prayer as another difference between them (5:33; 11:1) and he molds the "parable" of the garment so as to emphasize the rejection of Jesus by John's (and the Pharisees') disciples: they say "The old is good" (5:39, 36). Furthermore, Luke emphasizes more than the other gospels the difference between positive and negative responses of various groups to John and so to Jesus. This difference is not only present in the tales about Jesus' authority (20:1–8) and John's question to Jesus (7:18–23), but is made even more fully in Jesus' comments on John, which set out the different responses to John's preaching. Luke's Jesus declares that "all the people and the tax collectors" accepted baptism by John while the "Pharisees and the lawyers" did not, and they thereby rejected the "purpose of God for themselves" (7:29–30).

Thus, in various ways John the Baptist is the transitional figure between "the law and the prophets" and Jesus the Christ, the Son of God. This view is confirmed by all seven references to John the Baptist in Luke's second volume, the book of Acts.

5. John. The picture of John the Baptizer in the gospel of John is very clearly focused, and as in Luke's case it may be summed up in one of the gospel's pungent statements: "He was not the light, but came to bear witness to the light" (1:8). In accordance with this gospel's outlook, John the Baptist is not seen in strictly historical terms. Rather, the terminology is abstract and especially legal: John is essentially a witness sent by God (1:6) to tell the truth about Jesus (5:33, 35; 10:41). This basic theme is sustained by two subthemes; John is not the light, rather Jesus is the light; since Jesus is the light he ranks before John and must increase in stature, while John must decrease.

Apart from brief references to John the Baptist in chaps. 5 and 10, all of the material about the Baptizer is found in chaps. 1 and 3. The opening of the gospel presents Jesus as the true light of the world and John as the true witness to that light. The basis for the truth of John's witness is that he was "sent from God" (1:6). But that he was really sent from God and that he speaks the truth is shown substantively by his exaltation of Jesus over himself (1:15), and by his denial before Jews sent from Jerusalem that he has any status as Messiah, as Elijah, or as the prophet (1:19–28). As a witness John is simply the voice announcing the coming of Jesus as Lord and Son of God (1:23, 34), who was revealed to him and Israel as the "Lamb of God, who takes away the sin of the world" (1:29, 36) during his baptizing mission (1:30, 33). Moreover, John baptizes only with water (1:26, 31) while Jesus "baptizes with the Holy Spirit" (1:33). Finally, John's disciples turn to Jesus because they too see him as the Messiah (1:35–41).

After Jesus performs various signs which manifest his glory (2:11), all of these basic themes are reemphasized in the second half of chap. 3 (including 4:1). Prior to John's imprisonment (3:24), he and Jesus are carrying on parallel baptizing missions. However, Jesus and his disciples are "making and baptizing more disciples than John" (3:26; 4:1). When John's disciples report this to him, he is not chagrined at all; rather he is filled with joy because these developments conform to his true testimony that he must decrease while Jesus the Christ must increase (3:26–30).

These, then, are the sources at our disposal. They must be used critically in any attempt to describe the life of John the Baptist and his following. Scholars who focus on the history of the Christian groups that produced the gospels try also to ascertain the relation of these groups to followers of John the Baptist as this is reflected in the gospels. For example, gospel materials that emphasize John's allegiance and subordination to Jesus are seen as evidence for (1) the existence of discrete groups of John's followers in the late 1st century and (2) the Christians' efforts to convert them to Jesus as the Christ. Here we will focus only on an attempt to reconstruct the career of John.

B. A Reconstruction of John's Mission

Historical reconstruction requires critical methodology in at least two areas: (1) the development and use of criteria to judge the historical reliability of evidence, and (2) the development and use of appropriate models for locating biblical persons and groups in settings which are understandable to modern readers. The former requirement has engaged scholarship for generations, and some degree of consensus has been reached (Boring 1985; Oakman 1986, Appendix 1). Yet scholars always vary in their application of various criteria. In the present reconstruction the "environmental criterion" is seen as of primary importance. This criterion states that evidence must fit the situation of the persons or groups being studied.

The latter requirement is quite new in scholarship because the social sciences, from which appropriate models are derived, have not been used much until recently. This has been the case not only in biblical studies (Hollenback 1983) but also in all historical scholarship on the ancient world. However, now scholars have demonstrated that researchers must develop and use appropriate models if they are to avoid ethnocentric and anachronistic reconstruc-

tions. (For biblical studies see especially the work of Malina; for the ancient world in general see especially Carney 1975 and Kautsky 1982.)

Briefly, for our immediate purposes, the studies of Richard A. Horsley (1984; 1985) are especially helpful. As we reconstruct the "historical John the Baptist," it will be seen that he fits quite well the type "oracular prophet," which Horsley distinguishes from the "action prophet." These in turn he distinguishes from "social bandits" and "popular kings" as well as sicarii and zealots. These types must be seen in two primary settings: (1) the specific socioeconomic conditions of 1st-century Palestine and (2) the specific cultural traditions of Israel. The essence of the former is the aristocratic-peasant social structure while the essence of the latter are the traditions derived from the Hebrew scriptures that remain popular in the oral traditions of the non-literate population.

The aristocratic-peasant social structure is characterized primarily by exploitation of the latter by the former through heavy taxation and brutal treatment. These conditions were perennial, but they were exacerbated in times of devastating crises such as famines and wars. Thus varieties of social disturbance were the result. This was especially the case at the time of Herod's death in 4 B.C.E., Pontius Pilate's rule (26–36 C.E.), and just before and during the great revolt (66–70 C.E.).

The cultural traditions of Israel help us to grasp the various social types present in 1st-century Palestine. We are especially interested in the prophetic types (Horsley and Hanson 1985; Horsley 1985). The "action prophet" both announced the messages of God and led a popular movement with the expectation that God would intervene in liberating action. The prototype of the tradition was the Exodus from Egypt. Moses, Joshua and the Judges were the main prototypes, as on a lesser scale perhaps were Elijah and Elisha. In the 1st century there was the unnamed prophetic leader of the Samaritans who led a movement to restore the temple on Mt. Gerizim, a movement which was ruthlessly crushed by Pilate (*Ant* 18.4.1 §85–87). Around 45 C.E. Theudas led a movement to the Jordan River in apparent imitation of the Exodus, but he and his followers were also crushed by the Judean governor Fadus (*Ant* 20.5.1 §97–98). Finally, about 56 C.E., a Jewish prophet from Egypt led a movement to capture Jerusalem by commanding the walls to fall down in apparent imitation of Joshua at Jericho. In this case the leader escaped but many of his followers were killed by the governor Felix (*Ant* 20.8.6 §168–71; *JW* 2.13.5 §261–63).

Josephus' accounts of these and other similar prophetic movements establish a distinctive pattern: a popular prophet preaches a message of liberation that captures the imagination of the common people, who then march out en masse to a holy site expecting a miraculous deliverance from God as in the days of old.

The "oracular prophet" did not lead such a movement, but rather only pronounced words of judgment or redemption, as did the classical prophets of the 8th and 7th centuries. The two cases in the 1st century about whom we have some information are John the Baptizer and Jesus son of Ananias. We shall note the case of the latter in order to see the pattern of the oracular prophet, and then test whether John the Baptizer fits the category as far as we can determine from our sources. The following is Josephus' narrative concerning Jesus son of Ananias:

> But a further portent was even more alarming. Four years before the war [62 C.E.], when the city was enjoying profound peace and prosperity, there came to the feast at which it is the custom of all Jews to erect tabernacles to God, one Jesus, son of Ananias, a rude peasant, who, standing in the temple, suddenly began to cry out, "A voice from the east, a voice from the west, a voice from the four winds; a voice against Jerusalem and the sanctuary, a voice against the bridegroom and the bride, a voice against all the people." Day and night he went about all the alleys with this cry on his lips. Some of the leading citizens, incensed at these ill-omened words, arrested the fellow and severely chastised him. But he, without a word on his own behalf or for the private ear of those who smote him, only continued his cries as before. Thereupon, the magistrates, supposing, as was indeed the case, that the man was under some supernatural impulse, brought him before the Roman governor; there, although flayed to the bone with scourges, he neither sued for mercy nor shed a tear, but, merely introducing the most mournful of variations into his ejaculation, responded to each stroke with "Woe to Jerusalem!". When Albinus, the governor, asked him who and whence he was and why he uttered these cries, he answered him never a word, but unceasingly reiterated his dirge over the city, until Albinus pronounced him a maniac and let him go. During the whole period up to the outbreak of war he neither approached nor was seen talking to any of the citizens, but daily, like a prayer that he had conned, repeated his lament, "Woe to Jerusalem!". He neither cursed any of those who beat him from day to day, nor blessed those who offered him food: to all men that melancholy presage was his one reply. His cries were loudest at the festivals. So for seven years and five months he continued his wail, his voice never flagging nor his strength exhausted, until in the siege, having seen his presage verified, he found his rest. For, while going his round and shouting in piercing tones from the wall, "Woe once more to the city and to the people and to the temple," as he added a last word, "and woe to me also," a stone hurled from the ballista struck and killed him on the spot. So with those ominous words still upon his lips he passed away (*JW* 6.5.3 §300–9).

There were many other prophets besides Jesus son of Ananias, to whom Josephus refers only in general terms. For example, Josephus refers to "numerous prophets" who called on the people in the midst of crises during the great revolt, to "await help from God" for their deliverance (*JW* 6.5.2 §286). These prophets also follow a distinctive pattern: an oracular prophet preaches a message either of judgment on the powerful (e.g., Jesus son of Ananias), or of deliverance for the suffering masses in the midst of crises when apocalyptic hope is at fever pitch among the common people (e.g., the "numerous prophets" in Jerusalem during the war). They are regarded by the "upper-class Roman collaborators" either as threats to political stability or as raving madmen, so the authorities try to

silence or even kill them. "Oh Jerusalem, Jerusalem, killing the prophets and stoning those who are sent to you!" (Matt 23:37; Luke 13:34). Now our question is whether John the Baptist was one of these oracular prophets.

1. The Origin of John the Baptizer. Since Josephus says nothing about John's origin, we must depend on the gospels. The case for understanding Luke's birth story of John as legendary no longer needs demonstration (R. E. Brown 1977). Yet, whether or not Luke 1 and 2 reflect a Baptist source (Wink 1968, Dodd 1963), there seems to be no good reason to doubt that, as this story indicates (Luke 1:5), John was a descendant of devout rural priests. Indeed, other sections of the gospels confirm that John had priestly concerns. He engaged in the rituals of baptism, fasting, and prayer (Luke 5:33; 11:1).

Yet John comes on the scene as more than simply a rural priest. He appears in the wilderness of Judea as a radically alienated person. In addition to the wilderness habitation itself, his alienation is indicated not least by his food and clothing: "Now John was clothed with camel's hair, and had a leather girdle around his waist, and ate locusts and wild honey" (Mark 1:6). This asceticism became proverbial: "For John came neither eating nor drinking" (Matt 11:18). Most of all, he scathingly attacked the Jerusalem establishment for its impiety and injustice (Matt 3:7–10).

How can we account for John's Jeremiah-like separation from the normal securities and meanings of traditional life? First, John's general cultural setting is significant. There was a long-standing tradition of alienation among the prophets of ancient Israel. Jeremiah has already come to mind: "I did not sit in the company of merrymakers, nor did I rejoice; I sat alone" (Jer 15:17). Then, in exilic and postexilic Judaism various groups of alienated priests appear on the scene. P. D. Hanson sees the "dawn of apocalyptic" taking place among groups of alienated visionary priests as early as the 6th–5th centuries B.C.E. (1975: 209–28, 280–86, 389–401). Moreover, in the middle of the 2d century B.C.E. there was a sharp revulsion against the Maccabees which nourished, among others, the Qumran community, a group that consisted largely of lower rural priests alienated from the aristocratic urban priests of Jerusalem (Cross 1958: 95–119; 1973: 332–42). Among the important statements from the Dead Sea Scrolls which express this rift is the following interpretation of Hab 2:8a ("Because you have plundered many nations, all the remnant of the people shall plunder you."): "This refers to the final priests of Jerusalem who will amass for themselves wealth and gain by plundering the people" (1QpHab 2:8; Gaster 1964: 249). The case of Qumran is especially significant because John was like the people of Qumran in many respects; he may even have been a member of that group or a similar group (Davies 1983; Betz 1985). Josephus supports this statement by his references to the great social and economic gulf that existed between the aristocratic priests and the large mass of lower clergy that developed just before the great revolt in the 60s C.E.

> There now was enkindled mutual enmity and class warfare between the high priests, on the one hand, and the priests and leaders of the populace of Jerusalem, on the other. Each of the factions formed and collected for itself a band of the most reckless revolutionaries and acted as their leader. And when they clashed, they used abusive language and pelted each other with stones . . . Such was the shamelessness and effrontery which possessed the high priests that they actually were so brazen as to send slaves to the threshing floors to receive the tithes that were due to the priests, with the result that the poorer priests starved to death (*Ant* 20.8.8 §180–81; also 29.9.2 §205–7; further details in Stern 1976: 561–700).

More broadly-based alienation is indicated by the first revolt of the Jews against the Romans upon the death of Herod the Great in 4 B.C.E. (*JW* 2.1.1–6.2 §1–92; *Ant* 17.9.1–11.3 §206–314; Farmer 1958; Horsley and Hanson 1985: 111–17).

A striking confirmation of the luxury of the Jerusalem (probably priestly) aristocracy has come to light in the recent excavations in the "Jewish Quarter of the Old City" of Jerusalem (Avigad 1976: 1.23–35). In this "fashionable and wealthy residential section overlooking the Holy Temple" a Herodian house of 2,000 square feet was unearthed, as well as a larger one the archaeologists dubbed "The Mansion." On a stone weight found in "The Mansion" was inscribed "Bar Kathros," the name of one of four priestly families mentioned in the Talmud (*Pesaḥ* 57a) as exploiting the people and beating them with rods. "Our Bar Kathros was probably of this family," conjectures Avigad (1976: 29; see also Mazar 1980). These houses with their varied contents demonstrate the luxury of the aristocracy in Jerusalem just before the time of John the Baptist.

Thus John was surrounded by a pervasive climate of alienation; one scholar (Ford 1976) argues that this probably reached into his own family. It was from this urban setting that John retreated to the wilderness, a location of profound symbolic significance as the place of death, purification and rebirth (Hollenbach 1974; W. D. Davies 1974: 75–104). These meanings are reflected at Qumran, where those who joined the community separated themselves from the wicked "to the end that they may indeed 'go into the wilderness to prepare the way,' i.e., do what Scripture enjoins when it says, 'Prepare in the wilderness the way . . . make straight in the desert a highway for our God' [Isa. 40:3]" (1QS 8:12–16; Gaster 1964: 64). That going into the wilderness sometimes had even messianic significance is indicated by Matt 24:26a: "So, if they say to you, 'Lo, he [the Messiah] is in the wilderness,' do not go out."

This is as far as a quest for the origin of John can take us. We may conclude, despite the paucity of particulars about John before his public appearance, that he came from a family of radicalized rural priests. This direction was most likely the result of the alienation the lower rural priesthood generally felt toward the Jerusalem aristocracy. At some point John left his family and took up a prophetic desert existence. (Zech 13:4 shows that John adopted clothing of a type worn by other alienated prophets, not only Elijah [as in 2 Kgs 1:8].) Finally he appeared in public as an apocalyptic prophet.

2. John's Prophetic Mission. A basic problem in determining the meaning of John's prophetic-baptizing mission is the question of the audience to which his various procla-

mations and judgments are addressed. Scholars often make no distinctions in this respect. Scobie (1964: 62–73) is typical when he speaks vaguely of "people" or of the "wicked" in contrast to the "righteous" without inquiring into the socioeconomic class structure of Palestine. Kraeling (1951: 49–59) is of the exceptional opinion that the "brood of vipers" saying was addressed to the priestly aristocracy. Horsley and Hanson (1985: 177–80) carry this further: there is evidence of "class conflict in John's message" in that he announces "God's imminent overthrow of the established order as headed by the sacerdotal aristocracy and Herod Antipas."

Who was John's first audience? It may be that he never preached a general message to the nation at large. If he did, it is now difficult to determine what the message was. What would it mean for him to preach such a general message anyway? Preaching to the nation "as a whole" (Kraeling 1951: 49) is a vague notion hard to pin down. Of course his particular proclamations undoubtedly had import for the Jewish people at large, and perhaps even for the Diaspora; but he, like Amos at Bethel and other OT prophets in their particular places, must have spoken specific messages at specific times and places to specific groups. Even if we accept Mark's statement that "all the country of Judea and all the people of Jerusalem went out to him" (1:5), nevertheless, before that occurred, John must have preached something to someone that attracted other people's attention.

a. John's Opening Salvo. (1) His Audience. If John was an alienated rural priest who was compelled to take up the role of an apocalyptic prophet, then it is reasonable to assume that his first and major proclamation was an attack on the powerful Jerusalem establishment (Matt 3:7) and other associated powerful social groups (Luke 3:10–14). We have good indirect evidence for this, while we have no evidence at all for his preaching to the powerless. We cannot use Matt 21:32 as evidence because it is another case of Matthew making John like Jesus (21:31). John, like other oracular prophets, may have been a "spokesperson for the common people" (Horsley and Hanson 1985: 179), but this is very different from the idea that he had a "ministry to the poor" (Wink 1968: 20). Rather, his message of judgment was to the powerful, as Luke 7:30 indicates: "Pharisees and lawyers."

(2) His Message. What was John's message to these powerful ones? It can be inferred only from what he says to those who come to him for baptism, for we do not have accounts of any of his words spoken to persons in other settings except his attack on Herod Antipas (Mark 6:17–18; Luke 3:19). Considering the OT prophetic tradition, John's message must have been that the wrath of God was coming on them as faithless Israelites (Matt 3:7). Only if they repented of their apostasy, gave up their presumption (Matt 3:9), and instead did works fit for repentance (Matt 3:8), both works of ritual purification (John 3:25; Dodd 1963: 281; Kysar 1975: 63) and works of social justice (Luke 3:10–14), would they escape God's wrath. Apocalyptic emphasis on God's imminent intervention against them must also have been strong (Matt 3:10).

Most distinctive was John's call for the repentant ones to come to the Jordan to be baptized as an action symbolic of their return to God. The fact that he was labelled "the baptizer" indicates the emphasis he must have put on this ritual. Both Mark (1:4) and Luke (3:3) say that he preached "a baptism of repentance for the forgiveness of sins," and this fits his initial message. That was the meaning of his baptism as he proclaimed it to the powerful apostate. However, at the time that he actually baptized some of them, he added a further component to his ritual: it anticipated the coming of one who would bring a radical purification to the repentant ones (Luke 3:16–17).

This means that we have no evidence that John initially proclaimed the coming of a messianic figure, let alone the kingdom of God. It is doubtful that John preached about the one to come except to the repentant individuals who came for baptism. He seems not to have mentioned the coming one even to the unrepentant ones who desired baptism (Matt 3:7–10). Moreover, it is also likely that John's ethical preaching (Luke 3:10–14) was addressed only to persons who actually came to him for baptism. In other words, John's opening salvo was a stark message of doom familiar from portions of the OT prophets, except that he added the possibility of escape through the baptism of repentance.

(3) His Location. If this was John's message, where did he deliver it? It is almost impossible to believe that he was "preaching" (it) in the wilderness of Judea" alone (Matt 3:1). Luke (3:2–3) says only that the "word of God came to John . . . in the wilderness" but that he called for people to be baptized in "all the region about the Jordan." In this respect Luke differs from Mark and Matthew who say that people from Judea, Jerusalem (Mark, Matthew), and the region of the Jordan (Matthew) went out to John. While the gospels (especially Luke) tend to generalize, one wonders whether all the people who came from as far away as Jerusalem and beyond (Jesus evidently came all the way from Galilee!) responded to hearsay reports alone. Is it not more probable that John had previously preached his message in populated places, in the villages and cities, even in Jerusalem itself? Kraeling (1951: 64) raises this issue and suggests that John went to the highways to preach, while W. R. Brownlee (1957: 36) suggested that John "found places in the wilderness where he could meet people" in villages and towns. It would be in such places that he could address directly those for whom his message was intended. That he traveled about considerably is supported by the claim that he went as far away from Judea as Aenon-at-Salim, which is at least 30, if not 70 kilometers N of the Dead Sea and Jerusalem (John 3:23; Brown *John* AB, 151). This coheres with what we know about prophets in general, namely, they went to the people to whom their messages applied.

Why don't we hear more about John's travels? Because the gospel writers weren't interested in that sort of thing. They don't tell us very much about John at all, and while they tell us a lot about Jesus, we learn little from them about his movements. Consider the following: if not for the gospel of John we would never know that John went as far N as Aenon-at-Salim, or that Jesus baptized and had disciples while John was still carrying on his own public mission. Besides all this the gospels are interested not in John's mission itself, but rather in proving that John "appeared in the wilderness" as the forerunner of Jesus in fulfillment of Isa 40:3 (Mark 1:2–4).

We are left then with the following picture: John the Baptizer originates as a wilderness character who emerges as a prophet in populated places, proclaiming to powerful sinners a prophetic-apocalyptic message of imminent doom on them because of their impurity and injustice, and calling upon them to come to the Jordan and be baptized as a sign of their repentance and a pledge of their renewed faithfulness to God.

b. John's Message to Those Coming for Baptism. In the gospel accounts all of John's words (except the word against Antipas) are spoken to persons seeking baptism. These words show that John was hostile to those whom he judged to have bad faith, while he was friendly to those who were truly repentant. To the former he repeated threats and warnings and perhaps added new ones, while to the latter he gave hope for further dramatic renewal of their lives as well as ethical guidance relevant to their particular vocations.

(1) To the Unrepentant Powerful. (a) The Priestly Aristocracy in Jerusalem. That Matthew (3:7–10) and Luke (3:7–9) differ with regard to John's audience is of little consequence in determining its identity since the "brood of vipers" speech itself shows the audience's character clearly enough. This speech is his "most contemptuous saying" (Kraeling 1951: 49), but except for the Antipas saying, it is his only thoroughly negative one. Indeed, all of his other sayings are wholly positive, spoken to repentant sinners. To say that "John concentrated by far the greater part of his attention on stern warnings of future punishment . . ." (Scobie 1964: 62) is at best misleading.

The "brood of vipers" saying is consistent with numerous doom sayings that OT prophets commonly spoke against the unrepentant powerful of the nation, a likeness apparent first in the epithet, for to accuse someone of being a viper was "to castigate him as evil in his inmost being" (Kraeling 1951: 48). Thus, and second, the following query must be bitter and sarcastic irony, especially since the verb "show" *(hypodeiknymi)* is normally used for special or divine revelation (Acts 9:16). Third, the sarcasm is occasioned by the fact that the addressees are hypocrites in that they do not practice deeds to match their sham repentance (Luke 3:8a) and by the fact of their arrogant and complacent presumption about their standing with God (3:8b). John then rounds off his castigation with the warning, doubtless repeated from earlier occasions, that in "the coming wrath" which is already appearing (3:9a) these arrogant hypocrites will be destroyed (3:9).

It is important to note that John does not say anything here about repentant ones escaping the coming doom. It needs to be emphasized that in this saying he pronounces doom for a specific group of unrepentant persons because the specificity of the particular group he is addressing makes superfluous a reference to repentant ones. The failure to notice the particularity of John's message to specific groups has caused the unwarranted generalizing of his message. Kraeling (1951: 49) is thus correct that this denunciation is "too bitter to be addressed to the nation as a whole." There is only one group that it fits well and that is the ruling priestly aristocracy in Jerusalem, which perpetrated the most heinous social injustices.

If the view just adumbrated is accepted, an interesting question naturally arises: why did those aristocrats come at all to be baptized, especially since they were apparently insincere? Did they come simply to observe or even to interrogate John? John 1:19–25 supports this view, and Josephus (*Ant* 15.10.4 §365–69) shows that political leaders such as Herod the Great spied on various persons and groups. Or did John act ironically, as if they came to be baptized, in order to shame them further? Maybe the statement that they were coming for baptism is erroneous. But John's opening question could mean at least that the addressees were coming with some kind of positive intentions if not for baptism itself. Or perhaps, upon encountering the audacious prophet again in person, some of these authorities thought it wise to make a kind of Pascalian wager and so sought baptism without concern about the "good fruit" it presupposed, simply to be on the safe side. (Gamaliel later suggested a similar wager to the Jerusalem authorities, Acts 5:33–39.)

Probably this question cannot be answered. But it seems certain that in John's mind his addressees were another group of complacent authorities who were perpetrating injustice. These authorities in particular have it in their power to "bear fruits" of piety and justice, and John directs his harshest words (as far as we know) to those who would make a charade of even the sacred ritual of baptism. There is no evidence that any of these most powerful ones responded positively to John's preaching, and one passage appears to indicate that they did not (Matt 21:32a: "For John came to you ["chief priests and elders," 21:23a] in the way of righteousness, and you did not believe him").

(b) Herod Antipas. In connection with John's attack on the unrepentant powerful who came to him, it is appropriate to include his denunciation of Herod Antipas, even though we have no record that the latter ever came to him for baptism or for any other purpose. Antipas is the only named individual who is said to have been denounced by John. Despite the fact that gospel materials about John and Antipas have been the subject of legendary elaboration, there is good reason to accept the historicity of John's attack on Antipas, as both Kraeling (1951: 83–88) and Scobie (1964: 179–86) do.

This denunciation is especially remarkable because Antipas was a political figure of some stature. John's attack and the revolutionary potential of his movement were apparently what caused Antipas to arrest and execute him. What caused John to denounce Antipas? An attempt has been made above to explain his attack on the Jerusalem authorities. Can this attack on Antipas also be explained? Was there some occasion in John's career that made it appropriate for him to express such a negative judgment? Was it made at a face to face meeting either when Antipas sought out John or when John sought out Antipas in his palace in Tiberias or elsewhere?

A comparison of three related texts makes the following picture plausible: at a later time, when Jesus had gained some notoriety, which included having crowds follow him and sending his disciples out on a preaching mission, Jesus looked like John to Antipas (Mark 6:14–16) and Antipas became intent on arresting and killing him (Luke 13:31–33). But Jesus left his territory and frustrated this intention. This analogy between Jesus' movement and John's is confirmed by Josephus in that he also attributes Antipas' attention to John to the fact that he was leading a mass

movement that was seen by Antipas as a political threat (*Ant* 18.5.2 §118). It is interesting to notice that when Jesus was warned about Antipas' evil intention, he let loose against him one of the most severe verbal attacks recorded of Jesus. He called Antipas a "fox" (a cunning destroyer) (Luke 13:32). Is it not likely that when John became aware of Antipas' interest in him, he similarly let loose a verbal attack on him? This kind of an occasion is all the more likely when it is considered that John had no vocational or social connection with Antipas as he had with the Jerusalem aristocracy. If this suggestion has merit, it also indicates something of the range as well as the size of John's movement; it must have spread far beyond Judea into Antipas' territory. It is significant in this connection also that John was not liquidated by the Jerusalem authorities as was Jesus but by the ruler of Galilee and Perea.

Whatever may have been the occasion for John's attack it needs to be stressed that his attack had legal, moral, and political significance. It probably was much more wide ranging than simply a criticism of Antipas' marriage. Luke 3:19 has John reprove him also "for all the evil things that Herod had done." The marriage was a legal issue because it contravened Lev 20:21: "If a man takes his brother's wife, it is impurity"; this aspect is stressed in the gospels. It was a moral issue because the divorce shamed Antipas' first wife, the Nabatean king Aretas' daughter, whom Antipas put away in order to marry Herodias; this aspect is found neither in the gospels nor in Josephus. Finally, it had political significance because it threatened to further destabilize an already unstable political situation caused by the divorce of king Aretas' daughter, whom he had originally married for political reasons. As a matter of fact, this issue seems to have been a prominent cause of the later war (in 36 C.E.) between Aretas and Antipas in which Herod was defeated (and which is the context of Josephus' story of John's arrest and liquidation [*Ant* 18.5.1 §109–15]). In view of these many factors the conclusion is likely that John's criticism was a massive attack on the integrity of Antipas as a person and as a ruler. That is why Antipas had him eliminated but did not destroy Jesus, who escaped for the moment.

Thus, the view of those scholars who seek to prove "that John's Messianic preaching must have been completely non-political" (Scobie 1964: 184) must be rejected. In the first place, this part of John's preaching is not messianic. In the second place, it is historically inappropriate to separate so sharply John's "religious" from his "political" message. While it is possible to distinguish politics from religion, especially for 20th century people, nevertheless, at no time is it possible to separate them, and in 1st century Palestine, as social scientists have shown, it would not be possible even to distinguish them (Carney 1975; Malina 1986b). Thus only one conclusion is possible, namely, that John was calling on Antipas to change himself, his politics, and his policies. He must have also called on him and the Jerusalem authorities to practice piety and justice. See also HEROD ANTIPAS.

(2) To the Repentant Powerful. John the Baptist addressed two different kinds of words to the truly repentant powerful who came to be baptized. Again, chronology is uncertain but it is logical to examine them in the order that follows.

(a) The Second Baptism. If we are to interpret this section (Luke 3:16b–17; Matt 3:11–12; Mark 1:7–8) adequately, it is essential to observe two factors in the texts not usually taken into account. First, John addresses in this particular case those whom he is in the process of baptizing. He is not speaking to others, such as those who are seeking baptism in bad faith, let alone to people in general. Rather, he is speaking only to those who are seeking baptism in good faith. His first words, "I baptize you with water" (Matt 3:11a; Luke 3:16a) have almost the character of a baptismal formula and can be seen as an analogue of the Christian formula, "I baptize you in the name of the Lord Jesus" (Acts 19:5). He tells those he is baptizing that their present baptism is to be succeeded by a second and much greater baptism performed by a much greater person than he.

Second, John's emphasis falls not on the fact that one mightier than he is coming, but rather on the fact that his baptism will be succeeded by another, greater baptism. By making the announcement during the very act of baptizing, John radically depreciates his own rite. His baptism will be superceded by a second baptism because the latter will effect a result that John's baptism is incapable of performing. He says in effect: "There is one coming after me who is mightier than I because he has to do a mightier deed than I, namely, baptize with Holy Spirit and fire." The second baptism, thus, is the really important one, while his first baptism is but a preliminary to it. To be sure, the self-depreciation of John the Baptist in the gospel of John is exaggerated and related to the ministry of Jesus, but as Dodd (1963: 256–59) argues, apart from that it is essentially historical. John understood his work to be inadequate compared to what he evidently saw that needed to be done.

This understanding of second baptism as John the Baptist expressed it was very soon supplanted by the early Christians' identification of the "coming one" as Jesus. The process can be seen in Paul's first sermon in Acts (13:16–47), where John's baptism is no longer connected to the coming one's baptism (Acts 13:24–25). In fact, baptism is not even mentioned in connection with the coming one, and even the announcement of his coming is separated from John's baptism: "Before his [Jesus'] coming John had preached a baptism of repentance to all the people of Israel. And as John was finishing his course, he said, 'What do you suppose that I am? I am not he. No, but after me one is coming, the sandals of whose feet I am not worthy to untie' " (Acts 13:24–25). This separation of John's baptism from the second baptism of the coming one has prevailed in Christian thought and even in modern scholarship up to the present time.

What John meant by his baptismal statement must be determined in the light of these two factors. The focus thus should be not on identifying the character of some "coming one" but on the contrast between John's water baptism and another's "holy spirit and fire" baptism. Those who focus on the coming one as a "transcendent" messiah (Kraeling 1951: 63; Scobie 1964: 66) go beyond the evidence. The fluidity of messianic ideas in John's day is ignored as well (de Jonge 1966; *IDBSup*, 588–91; see also MESSIAH). What John meant by his water baptism is clear enough even without referring to the Christian summaries

of it ("a baptism of repentance for the forgiveness of sins"), for his speech to the unrepentant powerful strongly implies that it had to do with repentance and commitment to new acts of righteousness which are the fruits of repentance (Matt 3:8).

The important and more problematic matters are determining the original words describing the second baptism and establishing their meaning. The phrase "Holy Spirit and fire" has received most scholarly attention. What is its meaning? Since John is addressing repentant sinners coming for baptism, they are doing a positive act to which one would expect him to respond positively. Just as he responded negatively to those who came for baptism in bad faith, so one would expect him to respond positively to those who came in good faith. Hence, "Holy Spirit and fire" must have a positive meaning. Negative meanings involving judgment and destruction can be eliminated from consideration so the question that remains is, What positive meaning is intended?

A significant possibility is purification. Purification is linked with an anticipated messenger in Mal 3:1–3: "the messenger of the covenant in whom you delight, behold, he is coming. . . . For he is like a refiner's fire and like fuller's soap; he will sit as a refiner and purifier of silver, and he will purify the sons of Levi and refine them like gold and silver . . ." The Rule of the Community from Qumran proclaims that at the time of God's visitation he will "purge all the acts of man in the crucible of his truth, and refine for Himself all the fabric of man, destroying every spirit of perversity from within his flesh and cleansing him by the holy spirit from all the effects of wickedness. Like waters of purification He will sprinkle upon him the spirit of truth, to cleanse him of all the abominations of falsehood and of all pollution through the spirit of filth . . ." (1QS 4:20, 21; Gaster 1964: 53). Notice especially the analogy between "waters of purification" and cleansing by the "holy spirit" and the "spirit of truth." Note also Ezek 36:25–26: "I will sprinkle clean water upon you, and you shall be clean from all your uncleannesses . . . A new heart I will give you and a new spirit I will put within you . . ."

Fire is a traditional symbol of judgmental destruction. The prophet Malachi (3:18–19—Eng 3:18–4:1) envisions the day when God acts as "burning like an oven" and destroying the arrogant and evildoers. A strikingly vivid image from one Qumran hymn foresees the "rivers of Belial" (1QH 3:28) overflowing "like a fire consuming all . . ." (1QH 3:29). But destruction is not the only meaning of fire imagery, and cannot be its meaning in John the Baptist's preaching. That John was particularly interested in purification coheres with his priestly background and also with his interest in religious-ascetic practices, such as fasting and prayer (Luke 5:33; 11:1; Acts 14:23; *Gospel of Thomas* 104). Hence, it may be concluded that John told those he was baptizing that his baptism of repentance would be followed soon by a second, radical cleansing of them from all evil. In this regard John is in full accord with the OT prophetic emphasis on the need for radical renewal, a perspective seen, for example, in the call for a new covenant by Hosea (1–3) and Jeremiah (31).

There is one major problem with this line of interpretation. Luke 3:17 appears not to fit the meaning we argue for 3:16. The imagery of Luke 3:17 seems to represent the separation of the righteous from the wicked in a metaphor of winnowing; grain is separated from chaff, which is burned with "unquenchable fire." The analogy with purification is strong: purification involves the removal of impurity from a valued substance; so winnowing removes the impurity, the chaff, from the valued grain. However Luke 3:17 is interpreted, 3:16 must be taken to mean that John looked for an eschatological purification of his repentant baptized ones.

John the Baptist's message can be summarized thus: Now is the time of repentance in view of the imminent execution of God's wrath on unrepentant powerful sinners. Those that do not repent will be destroyed by God's wrath, while those who do will receive an additional second baptism greater than John's that will bestow on them a final and perfect purification. In the meantime, they are to do ritual and moral acts that befit their repentance and that anticipate the final purification.

(b) Ethical Criticism and Obligation. Among those who came to be baptized by John were at least three distinct social or vocational groups. There seems to be no good reason to doubt the historical authenticity of John's baptism of persons from these groups even though we have no other supporting evidence except Luke 7:29 and Matt 21:32. However, we cannot accept as historical Luke's statement (3:10) that "multitudes asked" John, "What then shall we do?" For not only is "multitudes" a favorite Lukan editorial term (see 3:7), but it does not appropriately describe the specific groups mentioned, namely the tax collectors and soldiers. Therefore, the likely addressees must be deduced from John's answer; the Baptist's response targets those who have more than the minimum of food and clothing, the relatively wealthy. The questions asked of John indicate that the relatively wealthy have responded positively to his message. Part of that response would be their baptism and further instruction. John addresses appropriately specific demands to each group. The relatively wealthy are to share their clothing and food with the destitute. Tax collectors are not to extort but are to follow the exact demands of their superiors. And soldiers are to quit taking advantage of their possession of the force of arms and their social position (which gave them judicial advantage) in order to rob others; and they should not agitate for salary increases.

Several things are noteworthy about John's ethical criticism, but the most important is that every one of these three cases of criticism has to do with economic matters. Each case assumes the distinction between a relatively wealthy class and a very poor class that suffers oppression by the wealthy. In line with the OT prophets, John asks the oppressors, as part of their baptism of repentance, to cease their oppression of the poor who are powerless against them. Their changed practices will constitute "fruits that befit repentance."

(i) Tax Collectors. The case of the tax collectors is particularly clear and helps in understanding the other cases. There were a variety of ways in which the local Jewish authorities as well as the Romans extracted money from the populace. Stern (1976: 330–36) lists no less than five Roman forms alone: poll-tax (census tax), agricultural tax, customs, confiscation (especially of Temple funds),

and the *angria*, a type of corvée. In addition to these Roman taxes, there were the Jewish religious taxes, the Temple tax and the tithes. See also CENSUS, ROMAN; TAX COLLECTOR.

But it was in connection with collecting customs on transported goods and various other government revenues that the specific kind of official referred to in Luke 3:12 figures, for the collection of such duties was farmed out to local Jews by the Romans. There was a hierarchy of such officials. Zacchaeus, for example (Luke 19:1–9), was the "head of a society of publicans" (Stern 1974: 333) who were subordinate to him. Tax collectors (called publicans) could grow rich through collecting "more than [was] appointed" them (Luke 3:12), i.e., more than they had contracted with and paid their superior for. Zacchaeus, for example, had paid some official (probably a Roman) for his office, which gave him tax collecting privileges at Jericho. He in turn was paid by others for the privilege of collecting certain of those taxes. At each of these levels a tax collector could earn his own livelihood and usually also gain his relative wealth by collecting more than he paid for his office (Herrenbruck 1981; Oakman 1986).

That some publicans grew very rich is seen in the case of Zacchaeus. Zacchaeus could give away half his income and restore fourfold any fraudulent acquisitions and still be a rich man. In 66 C.E. at Caesarea, "the Jewish notables, with John the tax collector . . . offered Florus eight talents of silver" as a bribe in order to get him to stop undesirable building activities next to the synagogue (*JW* 2.14.4 §284–88).

The point is that publicans were not only quislings contaminated by contact with Gentiles, and sometimes robbers, but were also part of the wealthy oppressing establishment. For such persons to heed John's call to repentance with its accompanying demand of good works would entail a total rejection of their former way of life with its class involvement and class consciousness. When John the Baptist demanded that they should not collect funds beyond what they had contracted for, he was striking at the root of the tax-farming system. That this was the case, and the possibility that John had repentant tax-collectors among his followers as well as numbers of poor tax-payers who had felt their oppression and were glad to hear John denounce the oppressive system, may have been the major reason that Antipas finally took notice of John. Note that upon the death of Herod the Great, the requests made of the new ruler, Archelaus, are the following: "that he should lighten the yearly payments," that he "release . . . the prisoners," and that he remove the taxes "levied upon public purchases and sale" that "had been ruthlessly exacted" (*Ant* 17.8.4 204–5). It is also generally accepted that taxes were a contributing factor in causing the Great War of 66–70 C.E. (Rhoads 1976: 80–81).

(ii) Soldiers. There is a connection between tax collectors and soldiers in the sense that people like Zacchaeus and Joseph, as indicated above, could "avail themselves of the assistance of military forces" (Stern 1974: 333; Gibson 1981). Alliances between tax collectors and the military were common in ancient societies. Kautsky (1982) has shown that the two main functions of ancient aristocratic governments were taxation and warfare. The point is that they, like all military and police forces, served the needs of those who ruled. They may have been direct supporters of the tax collectors, as the Greek phrase *kai hymeis* "and we" (Luke 3:14) suggests. Or they could have been supporters of the Jerusalem establishment. In the course of military service soldiers might commit various deeds of oppression, motivated in part by their aspiration to rise above the mediocrity of their social situation compared with those whom they served.

Upon these soldiers John lays radical ethical demands. If the soldiers heeded these demands, just as in the case of the tax-collectors, it would have meant a radical revision of their private conduct, and might also have challenged the very foundations of the social order. For example, John asked them not to request a raise in pay (suggesting personal sacrifice) because their wages were already being taken out of the hides of the powerless poor. In addition, soldiers attempting to implement John the Baptist's reforms risked being guilty of insubordination, because they might have had to disobey the orders of superiors to enforce their demands against the populace, who had limited means to resist official predation.

(iii) The Relatively Wealthy. In the case of the first group whom John the Baptist addresses (tax collectors), economic matters are at the forefront and the distinction between the destitute and the relatively wealthy is prominent. The very wealthy were not necessarily directly enjoined. John asks the relatively wealthy to share their moderate wealth with the destitute.

If we connect the image of social stratification indicated by John's words with the fact that at his time Palestine was relatively prosperous compared to the period just after Herod's death and just before the great revolt, we arrive at a significant observation regarding the context of John the Baptist's ethical criticism. Like the period of Jeroboam II in which Amos prophesied (ca. 750 B.C.E.), the Herodian era was a period characterized by relative prosperity along with "the impoverishment of the masses" (Stern 1976: 577; see further chaps. 11–12, esp. pp. 691–92). In other words, it was a classic case of social and economic oppression and John puts the burden of justice directly on the bureaucracy and indirectly on their superiors, the ruling elite.

(iv) Social Justice. In every case of John's ethical criticism he strikes at structural injustice. He directly addresses the relatively privileged and powerful groups in society who perpetrate injustices. It is notable in this connection that he does not ask those who are repenting to fast and pray. Evidently, these specifically religious practices were reserved for his more immediate followers. Presumably John's assumption is that these people will return to society and play their normal vocational roles. Thus, John's baptism is nowhere exclusively connected with fasting and prayer but is directly connected with social justice. He asked the baptized to forsake the normal socially accepted ways of acting and living and to take up new ways. In this sense, then, it is necessary to call John the Baptist a social rebel (Hobsbawn 1971; Kautsky 1982). John is a rebel insofar as he leads a movement which sharply attacks the legitimacy of the current social structures. His movement has not yet spilled over into overt disruption of society (he has not yet become an "action prophet"), though it is clear that his movement has that potential (and Antipas appar-

ently saw it that way); but he certainly is fomenting social unrest. And for him the restructuring of society begins not with the "common people," nor with the very wealthy, but with the relatively privileged bureaucratic groups who have some power to change affairs. Evidently at John's time there were at least a few members of these classes who still had some sensitivity to injustice and were vulnerable to his eschatological-apocalyptic message. While undoubtedly some of his following, maybe even most of them, were the destitute masses, it remains true that not one word in the NT is addressed to them. John the Baptist's criticism of the powerful, of course, implies concern for the weak. Like the classical prophets he addresses only those responsible for and likely to change the sorry state of affairs reigning in his society. Thus it is misleading to say "that John's converts were drawn from the common people" (Manson 1949: 39), and it is pertinent to observe that "it is prosperity, not poverty, that causes social criticism and, ultimately, revolution" (Schneidau 1976: 38).

C. Summary

The preceding analysis seems to justify the following picture of John the Baptist's career. Having suffered the outrages perpetrated on the lower country clergy by the urban priestly aristocracy of Jerusalem, John the Baptist also suffered profound alienation from the status quo and left society for the real and spiritual wilderness of Judea. Perhaps he was at Qumran or some such place for a while. Then there explodes in him and from him a radical prophetic-apocalyptic vision that brings him back to attack society at its heart, its powerful ones. He proclaims an imminent day of wrath for the unrepentant perpetrators of impiety and injustice unless they are baptized in repentance and begin to do deeds of justice that ultimately entail the radical revision of the social system of his day. As might be expected, most of the powerful respond to him negatively and eventually facilitate his liquidation.

Surprisingly enough, however, some of them responded positively. Sensing perhaps that he has asked the impossible of them, as he baptizes them he promises that they will soon be baptized in a new way by a greater one who will be able to cleanse them of evil in radical eschatological fashion. With this cleansing they will be up to following the ethical standards that he has demanded of them. Meanwhile, they are to return to their former social roles and begin to practice the new vision of social justice they have gotten from him. Some of them, however, stay with him, practicing forms of piety such as fasting and prayer that were seen perhaps to anticipate that final cleansing. These disciples formed a distinct group, one of many such groups that sprang up at that time. This group, however, was distinguished from others by its unique prophetic-social vision and practices, at least as long as it remained under the inspiration of its founder, John the Baptist.

Thus, John the Baptist fits the model of an oracular prophet very well, with the proviso that he adds uniquely to that model his practices of baptism, fasting, and prayer.

PAUL W. HOLLENBACH

JOHN THE DIVINE, DISCOURSE OF. See VIRGIN, ASSUMPTION OF THE.

JOHN, ACTS OF (BY PROCHORUS). A 5th-century Greek romance that primarily describes the miraculous activities of John on Patmos. It must be distinguished from the earlier *Acts of John* ascribed to Leucius, to whom five 2d and 3d century Apocryphal Acts are attributed: the Acts of John, Peter, Paul, Andrew, and Thomas. These early acts provided impetus and served as models for a number of later writings that are sometimes called "secondary Acts" (See *IDB* 1: 167; *NTApocr* 571–78). The *Acts of John by Prochorus* belongs to this later collection of Acts. The author used the earlier *Acts of John,* but he modified the material rather extensively (*NTApocr* 575). Prochorus, the legendary author, appears in Acts 6:5.

In addition to the Greek text, manuscripts exist in Latin, Coptic, Ethiopic, Arabic, Armenian, and Old Slavonic (*IDB* 1: 932; Zahn 1880: iii). A complete Greek text may be found in Zahn, and a summary of the work is provided by Lipsius. No English translation is available at this time.

The *Acts of John by Prochorus* begins with the disciples meeting in Gethsemane after the ascension. Peter informs them of their mission to travel, teach, and baptize. John is selected to go to Asia, and Prochorus is to accompany him. Like the other Apocryphal Acts, this work is structured around a series of journeys. It contains the typical earthquakes, stays in prison, storms at sea, and a shipwreck. The journeys provide the occasions for John to perform many miracles, such as casting out demons, healing the sick, bringing the dead back to life, and changing sea water into drinking water. Sometimes those who learn of John's activities are offended and attempt to kill him or exile him. On one occasion John is killed by an angry mob; but he returns to life. However, these miraculous activities most often result in the conversion and baptism of those who witness them.

DANA ANDREW THOMASON

JOHN, APOCRYPHON OF (NHC II,*1;* III,*1*; IV,*1;* and BG 8502,2). This is the clearest and therefore the most important text representing mythological Gnosticism. The tractate was originally written in Gk and survives in three independent translations into Coptic. BG 8502,2 and NHC III,*1* represent a short recension of the work, while II,*1* and IV,*1* are copies of the same Coptic translation of a long recension.

Most the scholarly discussion of *Ap. John* has been based on BG 8502,2 which was published earlier (Till 1955) than the copies in the Nag Hammadi codices (Krause 1962) and is also better preserved. It occupies pp. 19,6 to 77,7 in the Papyrus Berolinensis 8502 with only pp. 21–22 having suffered serious loss. The other representative of the short recension NHC III,*1*, originally comprised pp. 1 to 40,11 but of these pp. 19–20 are missing, only a small fragment survives of pp. 1–2 and 3–4, and pp. 5–8 and 21–40 show serious lacunae in the text. Of the long recension NHC II,*1* is found on pp. 1,1 to 32,9 and IV,*2* occupied pp. 1,1–49,28. II,*1* is relatively well preserved with serious loss of text limited to pp. 1–4. IV,*1* is in an extremely fragmentary state. Its value lies in supplementing II,*1* where it suffered lacunae or scribal error. Thanks to the presence of parallel versions the Coptic text of both the short and long recension can be determined with a high degree of accuracy except for a few words and phrases.

All four copies of *Ap. John* are written in Sahidic with IV,*1* conforming more closely to the standardized spelling of this Upper Egyptian dialect. In spite of the presence of three independent translations of the Gk, it is often difficult if not impossible to determine from the original reading where they differ. It appears that all three translators had serious difficulties understanding and/or rendering the complexities of the Gk text. Thus a dependable critical edition that reflects the original Gk seems out of reach.

The title *Apocryphon of John* is found as a subscript to all four copies. It reflects the Christian framework of the revelation found at the beginning and end of the tractate (II *1,5–2,26* and *31,25–32,5*) in which John, the son of Zebedee, receives a revelation from the resurrected Christ in response to questions about the Savior, his Father and "that aeon to which we shall go." Afterwards the savior instructs John to write the mysteries down and give them secretly to his fellow spirits.

The revelation itself is only marginally Christian and does not directly deal with John's questions. Rather it presents a description of the ineffable Spirit, the divine realm of light, the origin of the evil Creator Yaldabaoth, the creation of the spiritual world rulers and of man, and the rescue of the immovable race from the imprisonment in the body and material world. Christ and Sophia are part of the light world. The Fall occurred when Sophia desired to bring forth a being without the consent of the great Spirit and her consort. She produced Yaldabaoth who possesses some of her light power. He created angels to rule over the world and together they fashioned man in the image of the perfect Father. Yaldabaoth is tricked to breathe the light power of his mother into Adam. The evil powers created woman and sexual desire to spread the light particles, and to make escape more difficult. The savior was sent down to rescue those who possess the light sparks by reminding them of their heavenly origin.

It is clear that the cosmological section of *Ap. John* was already known to the Christian heresiologist Irenaeus in about 185 C.E. He assumed that the writing available to him represented the teachings of certain Gnostics (*Haer.* I.29). It appears that Irenaeus knew only a literary source or an early form of *Ap. John* without the Christian framework, the latter part of the revelation, and the present title. The long recension is most likely an expanded form of the short one. It adds, apart from minor details, a descriptive title at the beginning (II *1,1–4*), a lengthy enumeration of the powers who rule over the different parts of the human body (II *15,29–19,12*), and a remarkable section at the end of the revelation spoken in the first person by the perfect Pronoia relating three descents into the world (II *30,12–31,25*).

Ap. John shares a number of themes and mythologumena with such other representatives of mythological Gnosticism as *The Hypostasis of the Archons* (NHC II,*4*), *On the Origin of the World* (NHC II,*5*), *The Gospel of the Egyptians* (NHC III,*2* and IV,*2*), *The Sophia of Jesus Christ* (NHC III,*4* and BG 8502,3), *The Three Steles of Seth* (NHC VII,*5*) and *Trimorphic Protennoia* (NHC XIII,*1*). In view of the important differences between these writings, it is unlikely that they come from the same sectarian background. Literary borrowing would explain both the common traditions and the different uses to which these are put. There is no basis to assume with Irenaeus and other opponents of Gnosticism that such writings represented the teaching of distinct sects. The fact that the details of the myths proved to be very unstable and were readily corrupted in the translation and copying process indicates that they were not intended as object of belief and held little importance in themselves.

The importance of *Ap. John* lies in the insight it gives into esoteric, speculative thought and biblical interpretation found on the heterodox fringes of 2d and 3d century Christianity. Secondly, the short and long recension of *Ap. John* present a good example of the way such texts were sometimes augmented and changed in the process of transmission. Furthermore, the two copies of the long recension show how Coptic orthographic conventions evolved in the 4th century C.E.

The two recensions of *Ap. John* appear to be 3d century creations based, at least in part, on a 2d century antecedent. The text has left no hints about the identity of the original author, the redactors, or their provenance.

FREDERIK WISSE

JOHN, EPISTLES OF. The three documents in the NT traditionally known as the Johannine epistles are not in each case epistles in the strict sense of the word, nor are they necessarily the work of an individual named John. 1 John (1 Jn) does not name its author, and 2 John (2 Jn) and 3 John (3 Jn) are the work of one identified in the letters as "the Elder." While 2 and 3 Jn clearly are epistles in the ancient sense of that classification, the literary form of 1 Jn is quite different and problematic. Their place in the Christian canon results from several factors, not least of all is their traditional association with the fourth evangelist. But they won their canonical status also by their relevance to the ongoing struggles of the Church to maintain its identity and order.

There are apparent allusions to these documents in the writings of church leaders by the middle of the 2d century (*Ep. Barn.* 5:9–11). Some claim that these allusions are closer to actual citations (Polyc. *ep.* 7), although such claims are debated. The first unquestionable citations appear in Irenaeus toward the end of the 2d century, demonstrating that the author knew 1 and 2 Jn (*haer.* 1.16.3; 3.16.5). The Muratorian fragment, which lists the documents generally accepted as authoritative, seems to refer to two epistles and attributes them to John, the fourth evangelist. Unfortunately, scholars are still divided as to whether the fragment should be dated at the end of the 2d or 4th centuries. Other citations toward the end of the 2d century and fragments of Clement's commentary on the NT books (*Adumbrationes*) affirm the recognition of 1 and 2 John.

3 Jn is attested by the middle of the 3d century (Euseb. *Hist. Eccl.* 6.25.10), but along with 2 Jn appears to be among the disputed books by the time of Eusebius. The

more ready acceptance of 1 Jn seems to have been based on its association with the thought and language of the Fourth Gospel. That the author of 2 and 3 Jn is "the Elder" cast doubt on their authenticity as apostolic writings. Origen acknowledges the doubt of the Johannine authenticity of 2 and 3 Jn (*Jo.* 5.3). Jerome in the 5th century still questioned a common authorship of the three writings.

However, all three were generally accepted and associated with the fourth evangelist by the late 4th century in the western church. The eastern church was slower in recognizing the documents. 1 John is found in the *Syrian Peshitta* (5th century) and 2 and 3 John only later in the *Philoxenian Version* (ca. 500).

It is sometimes proposed that 1 Jn was valued by the early Church because it represented an acceptable treatment of the thought of the Fourth Gospel over against the gnostic interpretation of the Gospel of John. It contributed, therefore, to the effort to the Church to seize the Fourth Gospel as an "orthodox" writing. 2 John likewise treats the reaction of the Church to a schismatic movement similar to the one found in 1 John (supposed to be gnostic) and hence won its way into the accepted writings of the Church. Its common authorship with 2 John ("the Elder"), plus the fact that it strove to secure order for the Church, succeeded in finally bringing about the acceptance of 3 John.

Many of the questions which emerged in the early evaluation of these three writings continue to be central issues in the critical study of them. Who was their author? What is their relationship with the Fourth Gospel? What is the nature of their response to the separatist of which they speak? This article will attempt to suggest the contours of the contemporary discussion of 1, 2, 3 John and to pose a viable approach to them. Our discussion will move through the following topics:

A. Textual Considerations
B. Literary Genre
C. Style
 1. 1 John
 2. 2 and 3 John
D. Structure and Contents
 1. 1 John

 5. The View of the End Times
H. Value

A. Textual Considerations

The texts of 1, 2, and 3 Jn are well preserved. They are not strongly attested in the Greek mss although eighty-one such witnesses are preserved. The Latin witnesses contain a number of readings not attested in the Greek. It has been argued both that this fact renders the Latin witnesses of little value and that it hints at the existence of Greek mss which have not survived.

The textual problems in the three writings are fewer in number than is the case in many other NT books. Still, there are a few which merit attention.

1 Jn 1:4 contains the problem of whether "our" or "your joy" was intended. The textual evidence itself is almost equally divided. That the writing completes the writer's joy seems the more difficult reading which copyists might have attempted to resolve. The "your" may also reflect the influence of John 15:11 on copyists.

1 Jn 2:20 reads "you all *(pantes)* know" and "you know all things *(panta)*" in various manuscripts. The textual evidence itself is indecisive and so the issue must be determined on the basis of the sense of the context. Does the author intend to affirm the knowledge the readers have or to declare that as a result of their anointing they need no further knowledge? The former seems the more likely, and the latter an effort of copyists to supply an object for the verb "know."

1 Jn 3:14 is represented without "the brethren" as well as with it and with "our brethren". The importance of this variation has to do with the author's concept of the community's love. Many prefer the shorter reading and argue that there was a tendency for copyists to add direct objects to verbs.

1 Jn 5:6 is found in two different forms. In some "spirit" is substituted for "blood" after "came by water and". In others "spirit" is added either before or after "water". The textual decision is important in this problematic verse for what it tells us about the author's central affirmation of the historical Jesus. Most, however, agree that the efforts to introduce the spirit here are efforts to imitate John 3:5.

The famous "Johannine Comma" after 1 Jn 5:7 is found in the Latin textual tradition and a very few Greek witnesses. The addition reads, "in heaven: Father, Word, and Holy Spirit; and these three are one; and there are three who testify on earth": (continues with v 8). There is near unanimity that this is an addition which arose from the trinitarian controversies of the later church during the 4th century.

2 Jn 8 presents the reader with a series of personal pronouns, "your . . . you . . . you" in the RSV (*apolesēte . . . eirgasametha . . . apolabēte*). Textual witnesses suggest two alternative readings: "your . . . we . . . you" and "we . . . we . . . we." The reading, "your . . . we . . . you," appeals to many critics in spite of the fact that it is the most weakly attested of the alternatives. This preference is due to two reasons: it represents the most difficult of the three and it is likely to have invited scribal correction for the sake of smoothness.

3 Jn 9 implies a previous letter of some kind written by the author to Gaius ("I have written something" *egraspa ti*). Textual witnesses in some cases add *an* after the verb, which introduces a subjunctive mood ("I would have written"), and others lack "something" *(ti)*. Most accept the

NovTG[26] and UBSGNT readings (RSV translation) as the best and argue that a tendency to avoid an implicit depreciation of an apostolic letter, as well as common error, caused the variant readings.

B. Literary Genre

While the three documents have been labeled "epistles" the question of the literary genre is problematic in the case of 1 John. There is little doubt that 2 and 3 John are representative of the epistolary form of the Greco-Roman world. They have formal affinities with certain of the letters of the NT (Philemon, Titus) and extant secular Hellenistic correspondence.

The case is not as clear with 1 Jn. On the one hand, there are the recurring allusions to the writing of the document, "I am (we are) writing" or "I write" (1:4; 2:1, 7, 8, 12, 13, 14, 21, 26; 5:13). But the document lacks the usual epistolary features as a comparison with 2 and 3 John shows. There is no addressee or author named (2 Jn 1 and 3 Jn 1), greeting or prayer (2 Jn 3, 3 Jn 2), thanksgiving (2 Jn 4, 3 Jn 3–4), closing and greetings to others (2 Jn 12–13 and 3 Jn 13–15). Its content lacks what has been called the "conversational" quality of an epistle (1 Corinthians). The problem is further aggravated by the somewhat disconnected nature of the structure of the writing (cf. D.1 below).

Efforts to isolate the precise literary genre of 1 John have produced a variety of suggestions. Among the most prominent of the proposals is that 1 Jn should be read as a "general epistle" intended to be passed among a number of groups much as Galatians might have been intended for a number of Christian communities in the region of Galatia. Others find it helpful to think of it as a "tractate" or an "instructional booklet" produced for general reading by Christians, even if an immediate group was in the author's mind. A comparison with a document such as 1 Timothy leads some to argue that a category like "pastoral epistle" is the best way to understand the author's work. That 1 John is a homily has been proposed. It has been called a "manifesto" in that it is intended to make public a particular point of view.

A number of features of 1 John help to shape the literary form in which it needs to be read. First, it is obviously a written communication intended for those affected by a rather specific set of circumstances (cf. E.1 below). Second, it is comprised of a series of rather loosely related subsections which have a homiletical quality about them. The repetitious style of the book (cf. C.1 below) betrays the origin of much of its content in oral communication. Third, the document has a "pastoral flavor" about it. That is to say, the efforts of the author demonstrate a deep concern for the readers and an attempt to address their needs, emotional as well as moral and creedal. Fourth, the author assumes a posture of authority with regard to the readers which influences the reception of the writing.

These features dictate certain conclusions regarding 1 John. One cannot take it to be a general letter of some sort given the specificity of the situation addressed therein. The author certainly has a particular community of readers in mind. But it cannot be assumed that the document does not have its roots in homilies simply because it is presently in written form. The work is profitably read with attention to the pastoral stance of its author and the function the work was designed to play in the lives of the first readers. The author was known to the first readers and was accepted as one who spoke from the vantage point of some authority or privilege.

It may, therefore, be useful to imagine that the present form of 1 John is the result of the author's effort to draw together bits and pieces of several homilies, link them loosely together, give the whole a general unity by means of thematic links among sections, and supply a written tone by the use of frequent references to "I write" or "I am writing". The effort would have been to bring together homilectical pieces directed to the critical situation facing the community as a pastoral attempt to reassure and strengthen the faith of some of the segments of a community schism. The disparate portions of the document were drawn from different homilies delivered at different times and perhaps different locations amid the emerging crisis. They were pulled together and published as an effort to make a more concerted response to that crisis and to make the response more widely available. This view is reflected in the proposed structure of the document (cf. D.1 below) and is made more feasible by an understanding of the situation facing the first readers (cf. E.1 below).

C. Style

1. 1 John. The style of 1 John has long been recognized as one of its unique and problematic features. It is commonly acknowledged that the progression of thought in 1 John is not a simple linear development. The classical view is that the document moves in what has been called a "spiral" development. That is to say, the author tends to repeat certain themes and to advance similar themes in different parts of the writing. Characteristic of the spiral is that it moves forward but only by returning to one of its original points in the process of that advance. The readers feel as if they are being brought back to a point made earlier while the recurrence of the theme provides a slightly different perspective or association. This feature has been only somewhat differently characterized by speaking of "cycles" of argument or of "recapitulation". A simple example of this spiral logic is found in the antichrist theme in 2:18–23 and 4:2–3. An appreciation of the author's style allows the reader to see that the return to this theme is to further its explication by making more specific the nature of the doctrinal position of the opponents under attack. While the recognition of such a spiral development is helpful, it does not entirely account for the repetitious quality of the writing.

That repetition has both a thematic and a linguistic dimension. Themes are repeated as the example given above and the recurrence of the theme of the "world" (2:15; 3:13; 4:5; 5:4) illustrate. But the repetitious quality of the author's style is reflected in stereotypical expressions as well as in major themes. Examples abound: "born of God" (2:29; 3:9; 4:7; 5:4, 18), "little children" (2:1, 12, 28; 3:7, 18; 4:4; 5:21), "beloved" (2:7; 3:2, 21; 4:1, 7, 11), "abides" (*menein*, e.g., 2:6; 3:6; 4:12), and "walk" (1:6, 7; 2:6, 11).

The literary function of both repetition and spiral-like progression seems clear. It has the effect of reinforcing

certain themes and of fixing certain images in the readers' minds. Its purpose seems clearly to be didactic since it strengthens the author's communication of fundamental points. It also gives a somewhat disjointed document a stylistic unity.

Another feature of the style of 1 John is the use of various kinds of parallelism. Parallelism in this case refers to the pattern which states a proposition in one sentence or clause and then either repeats it in different words in the next (synonymous parallelism), or states the opposite of the proposition in the next sentence or clause (antithetical parallelism). It is not too much to say that this is the manner in which the author's logic works: to state one proposition and to draw from it still another which may be the opposite of the first or another affirmation drawn from the positive side of the first. In either case, in the second half of the parallelism the author draws out an implication of the first half. An instance of this kind of logic appears in 4:7. The equation of loving and knowing God is first stated. From that proposition arises its opposite: one who does not love does not know God.

Examples of synonymous parallelism appear in 2:11, 27; 3:6; and 5:2–3. Examples of the antithetical parallelism are found in 1:5b, 6–7, 8–9, 4–5; 2:9–10, 23; 3:7b–6a, 14; and 4:6.

A perusal of these examples makes a number of things clear about the author's style. This author uses parallelism loosely and freely, so that the pairs of propositions need not be strict parallels. Obviously the author is more fond of antithetical than synonymous parallelism for the examples of the former are more easily found than those of the latter. Further, there is a certain poetic quality about the author's argumentative style. In the parallelism there is a sound and resonance which, although short of strict poetry, nonetheless has a poetic quality, especially when read aloud. The repetitious quality of the use of parallelism implies that this material may have been written to be heard rather than read or that oral-homiletic sources are at its base.

Moreover, the use of antithetical parallelism suggests the dialectical style of this author. By this is meant that the author exploits the way a proposition generates an opposite proposition. The technique is to use one statement as the ground from which to derive a contradictory statement. The author then explores the relationship between the opposing assertions. This is typical not only of the argument throughout the writing but also of the structure of the work as a whole (cf. D.1 below).

Finally, and closely related to the dialectical style of the author, antithetical parallelism exemplifies a dualistic style. The author is prone to draw distinctions in sharp contrast, e.g., one is either a child of God or of the devil (3:10). But the contrasting style in which the text is written suggests a dualistic mode of thought as well. The author tends to contrast opposites, to use opposing terms, and to state the negative and positive side by side. The dualism of the thought of the document joins forces with the dualistic style to stress the limitation of choices for the reader—alignment with one or the other side without recourse to a moderate position.

Another stylistic feature has been called "variation". This refers to the way in which the author uses an expression a number of times and then varies it slightly in other uses. The use of familial language illustrates this point. The author refers to Christians as "children of God" (e.g., 5:2), "little children" (e.g., 5:21), "born of God" (e.g., 3:9), "fathers" (2:13–14), and "brothers" (e.g., 3:13). Another example is the language the author uses for the relationship a Christian has with God. It is spoken of as "knowing" God (2:3), "seeing" God (3:6), "abiding" in God (4:13), "have fellowship" with God (1:6), being "in the light" (2:9), and being "of God" (3:10). With this technique of variation the author states the matter in such a range of ways that the reader cannot help but understand one or the other of them. Furthermore, the author simply avoids boredom through variation.

Another stylistic feature is the use of catch-words, or the association of thoughts through single words or phrases. The outline of the structure given below (D.1) suggests that the major segments of the document find their relationship through the association of words or phrases. But often, too, the argument within any given segment proceeds on the basis of word association. The course of the argument within 3:4–18 exemplifies this practice. The author uses the word "deceive" in v 7 which seems to spark the idea of the "devil" in v 8. To "love his brother" in v 10 calls to mind the negation of brotherly love, namely Cain (v 12). "Murder" (v 15) brings to mind the free giving of life in the crucifixion (v 16), which in turns initiates the thought on the free surrender of worldly goods in v 17.

This is not to say that the author's thought wanders aimlessly in a kind of stream of consciousness, although that may sometimes appear to be the case. More accurately, the way in which the author makes a point is often through the association of words and phrases. If some would characterize the structure of the thought of 1 Jn in terms of a spiraling of thought, others could just as successfully argue that it is through the associative relationship of words and expressions.

The final stylistic feature of 1 Jn to be noted may be appropriately labeled "pastoral". What is meant by this expression is that the author seems to possess a concern for the total condition of the readers and to address them in a way that nurtures their whole life of faith. It is instructive, for instance, the way in which this author combines and alternates between exhortation and comfort or assurance. Seldom do you find exhortation in 1 Jn far from some assuring word of comfort. Two examples must suffice. Note the relationship of 4:1–3 and 4:4–6. Contrast 2:7–11 and 2:15–17 with 2:12–14.

The author is skillful enough as a pastor (or simply as a teacher) to know that the readers must be affirmed in their present condition and feel secure there if they are to be able to respond to exhortations to do more. This is a mark of one sensitive to the human condition and effective in motivating the reader.

All in all, while the style of 1 Jn is problematic in many ways, it shows signs of considerable skill and effectiveness.

2. 2 and 3 John. The rhetorical style of the two shorter letters may be characterized as epistolary exhortation. But the style is far more subtle than the simple announcement of injunctions. Both letters reflect a careful design to ingratiate the author with the reader before stating the exhortation. The first four verses of each of the letters

serve to establish a cordial relationship with the reader in the context of which the exhortations are announced. The hope of the author to see the reader personally in each case (2 Jn 12 and 3 Jn 14) has the effect both of reminding the reader of that personal relationship with which the letters began and subtly to suggest that the reader will be held accountable to the author.

The logic of these letters is much more straightforward and clear than that of 1 Jn. In 2 Jn the author establishes the general principle of communal love (5–6), then describes the dangers of the "deceivers" (7–9), and finally exhorts an exception to the principle of communal love (10–11)—it is not to be applied to the deceivers. In 3 John the pattern is even clearer. The general principle of hospitality is announced (5–8). It is then applied to Diotrephes to show him in violation of it (9–10). Then appeal to an even more general principle is made—imitating good (11–12). The pattern is that of the positive, the negative, and again the positive. In both cases the logic is simple and appealing.

Both arguments, however, contain still further subtle tones. In 2 Jn, for instance, a careful use of warning is found in v 8—not overstated but clearly articulated. In 3 Jn the use of example is effective. The negative example of Diotrephes, who refuses hospitality (9–10), is contrasted with Demetrius (11–12), whose exemplary Christian life need only be mentioned, not detailed.

Short as they are, these two letters show signs of having been thoughtfully conceived and executed. They are examples of skillful persuasion.

D. Structure and Contents

1. 1 John. To discern a clear and logical structure to the contents of 1 Jn is very difficult. This is due in no small way to the fragmentary nature of the document the author has produced and the author's unusual logic (cf. C.1 above). It is further due to the nature of the document, its literary form, and its compositional history.

A variety of structures have been proposed. They range all the way from very simple to vastly complex. Simple structures have been proposed: A prologue with three "cycles" of argument; three major parts, introduced by an "exordium" or prologue and concluded with a postscript. More complex structures include these proposals: Two major sections in parallel structure (e.g., within the first part 2:12–17 parallels 1:8–2:2); fourteen units linked together; five divisions with a total of 196 cola.

Essential to the discernment of the structure of 1 Jn is the detection of a central theme or themes. This involves the decision as to what message is central to the author's intent and how subordinate themes are used to further the main argument. Again, there is a variety of views. Some proposals include (1) the description of the Christian life, (2) the essence of Christianity and the community of faith, (3) criteria for the new covenant communion with God, (4) exploration of fundamental affirmations about God, and (5) applications of the certain Christian principles to the crisis brought about by the schism in the community.

It has been proposed, too, that the structure is best understood in relationship to the structure of the Fourth Gospel. Attempts are made to see the major sections of 1 Jn as elucidations of the major sections of the gospel of John. Each of the writings has a prologue, two main parts and an epilogue. 1 Jn 1:1–4 parallels John 1:1–18. 1 Jn 1:5–3:10 is a kind of commentary on John 1:19–12:50, and 1 Jn 3:11–5:12 a commentary on John 13:1–20:29. 1 Jn 5:13–21 parallels John 21:1–25.

A further effort to understand the structure (or lack of it) in 1 Jn has turned to theories of sources and rearrangement. It has been proposed that the apparent lack of clear order is due to the none too careful use of a written source or sources by the author. Furthermore, might it be that the original order of the document was disrupted by some disarrangement and that the writing must be reordered if one is to discover the author's own structure?

In some of these cases the ingenuity of the critic seems to exceed that of the author of the document. It may be better to recognize and take more seriously the fragmentary nature of the writing, but even then one is not clear where one fragment concludes and another begins. Clearly the author of 1 John worked out of a logic which is quite different from that of the modern critic.

Still, the following proposed structure is a basis upon which to try to discern the major movements of thought in 1 John. It is proposed that nine discrete segments are detectable. These are perhaps fragments of homilies originating in the Johannine community. Each of the segments is dialectical in its internal structure, that is, each poses two topics and explores the relationship between the two. The outline given below further suggests the possibility that each of the major units has a triadic structure, i.e., three subdivisions. The five major units are linked together by means of one of the author's favorite stylistic techniques, the use of word or phrase association (cf. C.1 above). These individual units are: (1) Introduction: Christian Life and Fellowship (1:1–4); (2) Light and Darkness (1:5–2:11); (3) Believers and the World (2:12–17); (4) Truth and Lie (2:18–29); (5) the Children of God and the Children of the Devil; (6) the Spirit of Truth and the Spirit of Error; (7) God's Love and the Believer's Love; (8) the Son and Witnesses to the Son; and (9) Conclusion: Knowing and Doing.

The interrelatedness of these disparate units is found in links between a section and the preceding one made through words or phrases. This linking technique is part of the author's way of moving the argument through word and phrase association (cf. C.1 above). The following connections between the major sections and the words or phrases which bind the connection may be no accident: 1:1–4 to 1:5–2:11 by "proclaim," (1:3 and 5); 1:5–2:11 to 2:12–17 by "walks in darkness" (2:11) and "sin" (2:12); 2:12–17 to 2:18–29 by "world passes away" (2:17) and "last hour" (2:18); 2:18–29 to 3:1–24 by "born of God" (2:29) and "children of God" (3:1); 3:1–24 to 4:1–6 by "the Spirit" (3:24) and "every spirit" (4:1); 4:1–6 to 4:7–5:5 by "we know the spirit of truth" (4:6) and "knows God" (4:7); 4:7–5:5 to 5:6–12 by "Jesus . . . the Son of God" (5:5) and "Jesus Christ" (5:6); and 5:6–12 to 5:13–21 by "life" and "Son of God" (5:12) and "eternal life" and "Son of God" (5:13).

Such a structure as proposed here, along with the means of tying the units together through word or phrase associ-

ation, emphasizes the role of homiletical pieces in the composition of 1 John and the style of the author.

2. 2 and 3 John. The content and structure of the two short epistles is far less difficult to describe than is the case with 1 John. 2 and 3 John clearly follow an epistolary form at the heart of which are a series of exhortations. Scholars have seen the relationship among the exhortations in different ways, but there is general agreement that some such exhortations form the core of the letters.

2 John is addressed to a community of Christians—"children of the Elect Lady". The letter is comprised of six parts: (1) salutation (vv 1–2); (2) apostolic greeting (v 3); (3) thanksgiving (v 4); (4) exhortations (vv 5–11); (5) closing (v 12); and greetings (v 13). 3 John is structured in a very similar manner, but it is addressed to an individual—Gaius. The letter has seven parts: (1) salutation (v 1); (2) prayer (v 2); (3) thanksgiving (v 3); (4) exhortations (vv 5–11); (5) commendation (v 12); (6) closing (vv 13–14); and (7) peace and greetings (v 15).

Several observations are appropriate. First, the letters are in epistolary form but reflect a peculiar Johannine flavor, e.g., the use of "truth" (2 Jn 1; 3 Jn 12). Second, they are very similar in structure with conclusions that are almost identical in content. Third, 3 Jn is far more specific, naming three different individuals, while 2 Jn is more general without mention of individuals.

E. Setting and Purpose

1. 1 John. There is universal agreement that this writing was produced to address a situation brought on by a schism within a Christian community. It has been argued, however, that some of the references to the dissenting group are purely rhetorical and should be taken as little more than an inner-family disagreement. Still, 2:19 unquestionably refers to a group which seems to have separated itself from the community addressed in the document. Exegetes have attempted to discern in this verse whether the separatists left voluntarily or were expelled. The sense of the verb *(exerchesthai)* is usually taken to mean that this group has by its own will separated itself from the body addressed by the author.

From 1 Jn we gain some impressions of the nature of the separatist group. A conservative reading of the document suggests that they are charged by the author with a number of things: (1) They do not practice love in their relationships with the readers (2:9–11; 4:20–21). (2) They do not acknowledge the humanity of the Christ (4:2–3; cf. 2:22; 5:5–6). (3) They have aligned themselves with those forces which are opposed to faith, i.e., "the world" (4:5–6; 2:15–15). (4) As a consequence of the above, the author views them as instruments of evil (3:8) and actors in the last days, i.e., antichrists (2:18–23). Such a drastic assessment of former colleagues in the faith suggests the seriousness with which the author understands the situation. (5) They were never authentic Christians, i.e., truly members of the confessing community addressed by the author (2:19).

From these explicit references other of the author's statements may be seen as allusions to the views of the separatists. (1) They do not adhere to the teachings of the author and/or the general community (4:6). (2) They falsely claim to know and love God (2:4; 4:20) and to be "in the light" (1:6; 2:9). (3) They are guilty of "mortal" sin (5:16). (4) They falsely regard themselves free of sin (1:6–10; 3:3–6). (5) They are without moral restrictions in their behavior (3:4–10).

Efforts abound to identify the separatists with a specific group known to us elsewhere in the NT or in early church history. Some have argued that they are Jews, but most seek their identity among Christian groups. It is clear that the author has a christological difference with the separatists. It has been advanced both that the dissenters held a view of Christ which stressed his humanness and that they emphasized his divinity to an excess unacceptable by the author. It is clear too that the author has a moral quarrel with the separatists. But as to whether they embraced a total amorality or simply a more liberal morality is not clear. The separatists have been grouped with the NT forms of proto-gnosticism attacked in Colossians (2:8) and 1 Timothy (6:20), the libertines inferred from 1 Corinthians 8–9, and followers of John the Baptizer. Likewise, there are those who see a direct line of descent between these separatists and the docetists and gnostics attack in early church writers, e.g., Irenaeus. It has also been proposed that the dissenting group was comprised of gentiles who had not experienced the expulsion of the Johannine Christians from the synagogue (see JOHN, GOSPEL OF) and who shared a different religious background from the formative group of Johannine Christians.

The nature of the evidence about the separatists seriously qualifies our ability to identify them with other groups. These dissenters are known only indirectly through the author's polemic against them, and wisdom leads us to be careful about defining a group too precisely from the words of an antagonist. A more cautious description admits only a sketch of the views of the separatist group. They probably held a view of Christ which was conservative in its attribution of human characteristics to the Messiah. They did not practice a strict morality which evoked the charge that they did not love others in the community as they should. That they were pure docetists and/or antinomianists pushes the evidence too far. But that they were predecessors of a later gnostic Christianity and even that their descendants found a comfortable church home among such a group is very likely.

From this evidence arises a scenario which may have produced the setting for the writing of 1 John. Within a community which stood in the tradition of that one responsible for the Fourth Gospel (cf. F.1 below) there arose a tension between two groups. It is likely that the single community to which we refer was comprised of a number of congregations associated with one another by a common origin and tradition. It may be that we should imagine a parent body with a number of smaller gatherings of Christians (perhaps "house churches"). One of the two groups held to a view of Christ and a morality which gradually alienated them from their brothers and sisters in the church until that group eventually withdrew from the community. On the basis of the evidence for the relationship between 1 John and the Gospel of John it may be surmised that the dispute centered in the interpretation of the tradition of the community, known to us in the Fourth Gospel. Specifically, the dispute centered in the under-

standing of the christology and moral teachings of the Gospel of John.

The schism produced anxiety and anger within the remaining community. On the one hand, there were those who viewed the separatists as apostates from the true faith. Most likely the leaders of the community, including the author of 1 John, took this posture toward the separatists. On the other hand, there were those who were confused and troubled by the schism, unsure of the correct stand on the central issues. We may surmise that a majority of the community found themselves in this situation. To address the latter group, the author of the document again and again directed portions of homilies toward the situation, seeking to reassure the "faithful" that the dissenters were guilty. Finally, to share that view with a wider segment of the community the author published a collection of fragments of those homilies for circulation.

The general purpose of 1 John, then, was to preserve a Christian community from dissolution, to protect the identity and composition of that community, and to arrest a movement which threatened the very heart of what the author understood to be a genuine faith and life.

The specific purposes of 1 John were twofold: First, it sought to show convincingly that the Christian commitment of the separatists was doubtful and that their views did violence to a proper understanding of the faith. Second, it sought to assure the remaining community that they stood within the fold of the truth faith and to reinforce their position in order to prevent further disintegration.

2. 2 John. This epistle seems to share a concern for the influence of another group of Christians whose views the Elder finds threatening. The exhortations contained in the letter address two issues which stand at the center of the view of the separatists in 1 John. First, the readers are exhorted to remain faithful to a morality which, it is charged in 1 John, the separatists have violated (5–6, compare 1 Jn 2:7–11). Further, the readers are urged to resist the views of those who advocate a christology which does not stress "the coming of Jesus Christ in the flesh" (7, compare 1 Jn 4:2). They are exhorted to protect "the doctrine of Christ" by denying hospitality to any who seem to compromise it (9). For good reason, therefore, most critics understand that 2 John was written amid a stage of the same crisis discernible in 1 John.

It would appear that 2 John was evoked to protect individual congregations from the threat posed by the separatists more fully described in 1 John. It was written because those separatists were being received by the congregations in the name of Christian hospitality and were hence able to exert the influence of their views. The purpose of 2 John is to suggest that the preservation of "true Christian doctrine" is a higher value than the extension of hospitality to all who claim Christian commitment.

3. 3 John. The situation is not so clear in the case of the last of the epistles. Here a certain Diotrephes is charged by the Elder with four offenses. First, he is asserting authority and importance for himself (9a). Second, he refuses to acknowledge the authority of the Elder and perpetuates gossip about the author (9). Third, he refuses hospitality to "the brethren" (10). Finally, he ejects from the church those who will not abide by his view (10). Gaius, the recipient of the letter, is subtly urged to side with the Elder against Diotrephes and to offer hospitality to other Christians (5–8). The letter has the obvious purpose to enlist the loyalty of Gaius for the author and to strengthen the Elder's influence in a congregation in which Diotrephes threatens it.

But the picture is clouded. Among the issues involved in determining the situation and purpose of 3 John are these questions: Are Gaius and Diotrephes leaders in one congregation or separate ones? Is Diotrephes himself a member of the separatist group? Is the situation of 3 John related in any way to the schism which seems to have occasioned 1 and 2 John? What is the authority of the Elder? Scholars differ in their answers to these questions.

Still, a viable picture arises. It is most likely that Gaius and Diotrephes are leaders in a single congregation, hence the Elder hopes to preserve his influence there by winning Gaius' support. That Diotrephes was a separatist seems unlikely. While the charge that he challenges the authority of the Elder fits the image of the view of the separatists, the charge that he denies hospitality makes little sense unless he is a member of the same community over which the Elder has some authority. Care must be taken not to read the situation of 1 and 2 John into 3 John, but the common authorship of 2 and 3 John ("the Elder") suggests the possibility that a similar situation is obtained for both. The likelihood of that possibility depends upon whether or not the evidence of 3 John can be reasonably fitted within the picture of the situation proposed above for 1 and 2 John.

What may have been the case is that Diotrephes is one who has tried to preserve his segment of the community (a satellite or house church) from the schism troubling other segments. He has done so by advocating that his congregation become independent of the influence of the parent body and simply refuse to receive representatives of either of the two positions in the schism. "The brethren" to whom Diotrephes refuses hospitality may well have been representatives of the Elder and of the parent body which was trying to hold firm against the action of the separatists. Hence, the congregation represented by Gaius and Diotrephes, in the Elder's view, stands a chance of drifting away from the position of the parent body. The letter is written to try to protect such further disintegration of the total community.

But in trying to prevent the alienation of this segment of the community the author clashes with the authority of one of the leaders of the congregation in question. The Elder challenges the authority of Diotrephes and hence raises the question of the structure of authority in the community. 3 John has often been compared with other early Christian literature (e.g., 1 Tim 3:1–16 and *Didachē*) as evidence for the emergence of church order. While it is true that some order of authority is implicit in the letter and that there is an effort on the part of the Elder to firm up that order, the epistle is too brief for us to surmise from it the exact structure of the Johannine church at the time of its writing.

Hence, it does appear that the crisis of the schism is the occasion for all three of the writings. But that such was the case poses further questions of the authorship of 1, 2, and 3 John, as well as the sequence of their composition.

F. Authorship, Date, Locale, and Sequence

The theories of authorship, date, locale, and sequence are premised on views of certain related issues. Only after dealing with those can one suggest possible solutions to these four puzzles.

1. The Johannine Epistles and the Gospel of John. The first of the cluster of issues involves the relationship between these writings and the Fourth Gospel. There is common acknowledgment of similarities between the Johannine gospel and 1, 2, and 3 John.

Between 1 John and the Gospel of John there are numerous common features and themes. Among the most important are these: Life (e.g., John 1:4)—1:2; 4:9; 5:11–12, 16. Eternal Life (e.g., John 3:16)—1:2; 2:25; 3:15; 5:11, 13, 20. Light and Darkness (e.g., John 8:32)—1:5; 2:8. Truth (e.g., John 8:32)—2:21; 3:18; 5:7. Father/Son (e.g., John 3:35)—2:22, 23; 4:14. Son, used as title for Christ (e.g., John 5:23)—1:7; 2:24; 3:23; 4:9, 10, 14; 5:9, 10, 11, 12, 20. Abide in (e.g., John 15:5)—2:24, 27, 28; 3:15, 24; 4:13, 15, 16. New Commandment (e.g., John 13:34)—2:7–8.

Between 2 John and the Gospel of John there are fewer common features or themes: Truth—1, 2, 3, 4. Abide in—2, 9 (twice). Father/Son—3, 9. New Commandment—5.

3 John and the Fourth Gospel share one common theme, namely, truth—1, 3 (twice), 4, 8, 12.

Still, there are important differences between the Gospel of John and each of the Johannine epistles which are equally important. Examples of the uniqueness of 1 Jn when compared with the Fourth Gospel include the following themes: imminent "last hour" (2:18), expiation (2:1; 4:10), anointing of believers (2:20, 27), lust (2:16–17), antichrists (2:18; 22; 4:3), lawlessness (3:4), false prophets (4:1), spirit of error (4:6), day of judgment (4:17), mortal and nonmortal sins (5:16–17), and ethical considerations (3:4; 4:20).

Concepts articulated in 2 John but notably absent from the Fourth Gospel include these: doctrine (9–10), the church as "lady" (1, 5), antichrist (7), and reward (8). In 3 John the following are found but missing in the Gospel of John: church (6, 9, 10), heathen (7), and authority (9).

The similarities and differences are enough to have evoked theories both that the fourth evangelist was the author of all the Johannine epistles and that that evangelist authored none of the other Johannine writings. The assessment of the evidence must be done with attention to the facts that we are dealing in 1, 2, and 3 Jn with different genre than gospel, that clearly a different situation obtains between the writing of the gospel and the epistles, and that the relative lengths of the gospel and epistles seriously affect their comparison. Each of the epistles must be evaluated individually.

The similarities between the Fourth Gospel and 1 John are the most impressive. But the differences are so significant as to weigh against the tradition that equates the fourth evangelist with the author of 1 John. For instance, the careful articulation of the present and future eschatologies of the Fourth Gospel is entirely lost in 1 Jn with its view of the imminent end (cf. G.5 below). It might be argued, however, that the evangelist wrote 1 Jn at a time when the author embraced a different eschatology. This means that 1 Jn might have been written before the Fourth Gospel at a time when the evangelist held strictly to a futuristic eschatology. But the situation implicit in 1 John argues decisively against a pre-gospel date. Could it then be that the evangelist wrote 1 John a decade or more after penning the gospel and at that time conceived of eschatology quite differently?

A simpler solution seems to be that the author of 1 John was a student of the Fourth Gospel and lived in a community which cherished that gospel as its primary tradition. The community had, however, undergone changes since the writing of the gospel, so that its views were no longer identical to those articulated by the fourth evangelist. In particular it may be that the differences between 1 John and the Gospel of John could be the result of the influence of other Christian traditions on the community. Particularly that seems to have been the case with regard to the soteriology of 1 John, which is markedly different from that of the gospel (cf. G.2 below). Hence, it is most likely that 1 John arose within a community descended from the community behind the Fourth Gospel but was written by one other than the fourth evangelist. This view accounts for both the similarities and the differences between the two writings.

That proposal is equally effective in dealing with 2 and 3 John. The evidence in each case is, of course, limited, since these two epistles are so very brief. But the similarities with the Gospel of John dictate nothing more than a Christian orientation influenced by the tradition which arose out of the Fourth Gospel. The presence of such concepts as "doctrine" in 2 John and the "church" in 3 John suggests significant developments beyond the conceptuality of the Gospel of John.

Hence, while sharing a tradition rooted in the Gospel of John, 1, 2, and 3 John do not evidence a common authorship with the gospel.

2. The Relationship among 1, 2, and 3 John. The next seminal question is whether one author is responsible for all three of the writings. That 2 and 3 John both claim to come from the hand of one identified as "the Elder" argues for their common authorship, as do marked similarities among these two epistles (2 Jn 12 and 3 Jn 13–14) and the fact that they are nearly of identical length. It is possible that one or the other was written by someone attempting to mimic an original, but the differences between the two (the absence from 3 John of any reference to the christological issue of 2 John) argue against such a view.

1 John shows impressive similarities with 2 and 3 John. The vocabulary is strikingly similar (86 percent of the words in 2 John and 70 percent of those in 3 John are found in 1 John). But the differences are notable. 1 John does not identify its author as "the Elder," betrays a different and far more poetic style, and demonstrates nothing of the more developed view of the church and its authority structure found either implicitly or explicitly in 2 and 3 John. But again the evidence is slim, given the reduced size of 2 and 3 John, and the literary genre of 1 John is distinctively different from that of its companions.

The question of the identity of the Elder responsible for 2 and 3 John must be addressed. While it is sometimes claimed that the Elder assumes some official status in those

epistles which bear this title, such a view is questionable. It is to be noted that in neither 2 nor 3 Jn does the author threaten any sort of "official" action against the disobedient. To the contrary, the Elder seems intent upon eliciting some respect by virtue of persuasion and appeal to sound doctrine (2 Jn 9). The manner in which the Elder attempts to win the favor of the reader (cf. C.2 above) counts against the view that the author speaks from any position of official authority. Clearly the Elder is a revered leader of some sort, but that does not presuppose a position of official authority. Hence, the Elder speaks with authority not unlike that of the author of 1 John who appeals to his/her role in the preservation of the tradition of the community (1:1–4).

Nonetheless, given all of these considerations, it is the wiser choice to conclude that the evidence for common authorship is not convincing. But, on the other hand, the similarities are enough to argue for the three having originated in a single community. Furthermore, the situation implied by the three is sufficiently similar to suggest that, not only were they all written for segments of the same community, but that they represent efforts to address portions of that community in a relatively common period of time.

3. The Sequence of the Composition of 1, 2, and 3 John. If it is the case that these three writings come from at least two different hands (none of which is the fourth evangelist) out of a community which embraces the Johannine tradition shaped by the Fourth Gospel and address a common situation (if at different points in time), can one discern their chronological order with any greater exactness?

A variety of views have been proposed, ranging all the way from the theory that the canonical order reflects their chronological order to the exact opposite. The similarities between the content of 1 and 2 John tie them closely together. But the nature of 1 John makes it difficult to determine precisely what stage the schism had reached at the time the document was published. This is due in part to its fragmentary nature (cf. D.1 above) and its genre (cf. B above). Still, it is clear that 2:19 was written after the separatists had left the community addressed in 1 John. It has been proposed that 2 John was written while the separatists were still exerting influence within the community before their withdrawal. But that view supposes that the separatists did not continue to try to influence satellite congregations after terminating relationships with the parent body of the community.

It is impossible to demarcate exactly the order of 1 and 2 John, and far better to suppose that they were written at nearly the same time and at the same stage in the schism of the church. Perhaps 2 John was written by the Elder to alert the satellite congregations of the dangers of extending hospitality to the separatists at the very time the author of 1 John was publishing the collection of homiletical fragments as a way of bolstering the entire community (parent and satellite congregations) amid the crisis.

3 John represents another kind of a problem. On the one hand, the Elder's attack upon Diotrephes for not offering hospitality to some seems strange, if the congregation has just received a letter from the same author warning against indiscriminate hospitality. On the other hand, could Diotrephes be one of the dissenters still in the community before the schism mentioned in 1 John 2:19 has taken place? Some would, of course, cut 3 John free of the situation implied in 1 and 2 John and propose that it comes either significantly before the surfacing of any dissension in the community or long after the schism has been survived.

It has been proposed above (E.3) that Diotrephes was attempting to preserve his satellite church from the schism disrupting the entire community. If that indeed was the case, it is likely that 3 John was written after its two companions and reflects the ongoing problems brought about by the schism in the near past. That is, 3 John reflects the efforts of some in satellite congregations to try to deal with the situation brought about by the schism. Diotrephes was simply endeavoring to free his congregation of any involvement in the issue. The Elder, in this case, is trying to modify an earlier injunction against the extension of hospitality to the separatists by saying that the congregation should receive "the brethren" (5, 10), i.e., the representatives of the parent body of the community. The indications are that 3 John was written after 2 John to correct, among other things, an overzealous reaction to the first of the letters from the Elder.

Therefore, there is some chronological sense to the canonical order of these three documents, even if such a correspondence occurred as much by accident as by design.

4. Date and Locale. The dates of the three documents can be fixed only approximately. The dating of each depends, of course, on the conclusion one has reached with regard to its relationship with the Gospel of John and the other two writings. While some would contend that one or more of the epistles predates the gospel, most would locate them in time after the writing of the Fourth Gospel. If the theory advanced above is sound, a number of considerations enter into the process of determining the date to be assigned.

The first issue regards the dating of the Gospel of John itself. Many would date the Johannine epistles at least a decade later than the gospel, although that period of time is little more than an informed guess. How long a period of time might have elapsed between the writing of the gospel and the publication of the epistles? Several things seem to have occurred in the intervening period of time. First, the Johannine community has recovered from the trauma of the expulsion from the synagogue which occasioned the production of the gospel. See JOHN, GOSPEL OF. The issue is no longer the relationship of the community to the synagogue and external opponents, but now an internal matter. Second, it would appear that the Johannine community has come under the influence of other Christian perspectives and to some degree integrated those perspectives within their own view of Christian life and faith (and death of Jesus understood as expiation, 1 Jn 2:2). Third, the tendency of the community to understand faith in terms of proper doctrine (2 Jn 9) has developed beyond the hints of that view found in the Gospel of John. Fourth, some unofficial organizational structure has emerged in the Johannine church to replace the informal, spirit-led authority implied in the Gospel of

John, with the consequences that the terms, "church" (3 Jn 6, 9, 10) and "Elder" have become commonplace.

It is feasible that such changes might occur within the course of a decade in a body which is still in the process of finalizing its form and nature. Therefore, if one dates the Gospel of John 90–95, as do many, the Johannine epistles could be assigned dates of 100–5. If one is inclined to date the gospel a decade earlier, the Johannine epistles could well have been written by 90–95.

Little can be said with certainty about the locale of the Johannine community. Tradition has placed it in Ephesus, and many would still argue for that tradition. Recent developments in Johannine scholarship, however, have been inclined to locate that community in closer proximity to Palestine. Hence, a theory that the community was in Syria is feasible, if unprovable. Such a theory arises from speculation concerning the character of the synagogue which it is supposed was the original home of the Johannine Christians. Assuming that the locale of the Fourth Gospel is the same locale in which 1, 2, 3 John were written, the theory might also be a reasonable hypothesis for the Johannine epistles.

G. Theology

1. The View of Christ. The nucleus of the teachings of 1 and 2 John is the view of Christ. No other NT writing stresses the importance of the humanity of Jesus for Christian faith as do these two documents. It is doubtless that this insistence arose in response to the views of the separatists who seem to have qualified the humanity of Christ (cf. E.1 and 2 above). Hence the christology of these two writings is expressed in a polemic tone.

The author of 1 John stresses that Christ "has come in the flesh" (*en sarki,* 4:2) and the Elder echoes that the "deceivers" are those "who will not acknowledge the coming of Jesus Christ in the flesh" 2 Jn 7). The insistence that Jesus is the Christ in 1 John (e.g., 4:15; 5:1) seems to arise from a desire to equate the messianic agent of God with the human, Jesus. The meaning of 1 Jn 5:6 is often debated, but generally exegetes agree that it has to do with this central motif of the humanity of Christ. It is feasible that "water" represents either the human birth of the Christ or his baptism and that "blood" is a cipher for the reality of his death. The denial that Jesus came "not with the water only" may be a refutation of a view which attempted to limit the association of the Christ with the human Jesus to a period after his baptism but short of his death.

The theological contribution of 1 and 2 John is not only that they affirm the importance of the affirmation of the humanity of Jesus but, as well, the fact that they position this view so that it becomes the focal point of the whole of Christian faith. In 2 John this view of the human, historical appearance of the Messiah is elevated to the status of "the doctrine *(didachē)* of Christ". This is a way of saying that such a view of Christ is the "proper" understanding of Christ. With this perspective the epistle contributes toward the emergence of an "orthodoxy" within the Church, especially as it has to do with the correct understanding of Christ. The Elder identifies those who would qualify this proper doctrine as "the antichrist" and "deceivers" (*planos,* 7), a probable reference to the apocalyptic view that the last days would see the emergence of agents of evil who would try to seduce the true believers into falsity (e.g., Rev 13:14; cf. 5 below).

2 John simply summarizes what is affirmed in 1 John in this regard, for the author of 1 John claims that failure to believe in the humanity of Christ has dire consequences for the faith. The failure to identify Christ with Jesus is equated with the eschatological "lie" (cf. Rev 14:5), and one who holds this view is among the dreaded "antichrists" of the last time. Such a faulty view of Christ is a denial, not only of the messianic agent, but of God as well (2:22). The "spirit" which inspires persons to deny that Jesus came in fleshly form is "not of God" (4:3), and such persons are part of the realm of unbelief, i.e., "of the world" (4:5). The appearance of Christ in the human Jesus is the witness of God; consequently those who deny that appearance do not believe God but make God out to be a "liar" (*pseustēs,* 5:10), thus equating God with the Devil (John 8:44). By implication, one who embraces the view of the fleshliness of the Christ has the Son and hence "life," and one who does not is denied a relationship with Christ and its benefits, namely, salvation (5:12).

This emphasis upon the humanity of the appearance of Christ is surely rooted in the Johannine tradition. "In the flesh" of 1 Jn 4:2 and 2 Jn 7 is reminiscent of John 1:14. At the same time, it is a decision to stress that dimension of the Fourth Gospel over those indications in the Johannine view of Christ which minimize his human qualities (in John 19:30 Jesus does not die but "gave up his spirit"). 1 and 2 John reflect an interpretation of the Johannine tradition which allows it to be read in harmony with the emerging "orthodoxy" of the Church, as opposed to the separatists from the community who interpreted the same tradition along lines more compatible with what was to become the gnostic heresy.

2. The Saving Work of Christ. 1 John teaches a soteriology which goes beyond the tradition rooted in the Fourth Gospel. That gospel gives expression to an understanding of the death of Jesus which never uses metaphors of a sacrificial death drawn from Jewish cultic practices. See JOHN, GOSPEL OF. The soteriology of 1 John, on the other hand, betrays a quite different understanding of the saving work of Christ.

Christ appeared, it is affirmed in 3:8, in order to destroy the power of evil. The death of Jesus is spoken of as an "expiation" (*hilasmos,* 2:2; 4:10). The word is unique to this writing, but its root is present in words used in Rom 3:25 and Heb 2:17 to articulate the meaning of the cross. Its basic meaning is a making of appeasement and is used in the Septuagint of a sacrificial "covering over" in cultic practices. It expresses an effort to alleviate the cause of the alienation between the divine and humans.

Other images called forth to speak of the meaning of the death of Jesus include that of the "cleansing" of sin by his blood (1:7b, 9). The verb, *katharizō,* has the sense of a freeing of contamination and has roots in the concept of the sin offering in the Hebrew Scriptures (Lev 4:1–12). That Jesus himself was free of sin (3:3 and 5) also relates to the cultic images employed, since the atoning sacrifice offered to God for sin must itself be free of sin (Leviticus 4 and 1 Pet 1:19). The work of Christ is characterized as "forgiveness," which is used in synonymous parallelism

with "cleansing" (cf. 1:9 and 2:12). A similar expression is found in 3:5 where it is declared that Jesus "appeared to take away *(airein)* sins". With regard to the overcoming of sin Jesus is called an "advocate" *(paraklētos)* in 2:1. It is a Johannine word (John 15:26) which means "one called to the side of another" for the purposes of defense and aid.

It is clear that the author of 1 John was free to use a number of different metaphors in the effort to express the significance of the death of Jesus. But it is also clear that metaphors drawn from the sacrificial cultic practices of Judaism figured prominently in those efforts.

That the saving work of Christ has universal effect is affirmed in 2:2 with the expression, "the sins of the whole world". The efficacy of the death of Jesus is suggested by the use of the word "all" *(pas)* in 1:7 and 9.

Associated with the appropriation of the benefits of the work of Christ in 1 John is the "anointing" (*chrisma,* 2:20 and 27). This unction is by "the Holy One" and yields confidence in the faith (2:20). It teaches the Christian what is necessary and "abides" with the believer (2:27). Commentators disagree as to what practice lies behind these references. Some argue that it is an allusion to baptism; others claim that it has to do with an initiatory anointing with oil. Whichever view one adopts, the anointing seems to have been a cultic practice in the Johannine church by means of which the new believer appropriated for her/himself the benefits of Christ's work.

The result is that one who embraces the benefits of Christ's death is freed of sin and its influence (3:5). But therein lies a problem in understanding the theology of 1 John.

3. The Understandings of Sin. The author of 1 John uses the noun, sin *(hamartia),* no less than seventeen times. Six of those uses are in the plural and eleven in the singular, which suggests that the author was not careful to distinguish between the state of sinfulness and its expression in specific acts. In addition, the verbal form is used nine times. Obviously sin is synonymous with a condition alienated from God and unbelief, aligned with the forces of evil (3:8), and given to behavior which violates the will of God. The author equates sin with "lawlessness" (*anomia,* 3:4). The separatists are labeled as victims of sin (3:9) who "walk in darkness" (1:6), an allusion to a lifestyle disengaged from the Creator.

But a serious contradiction arises within the treatment of sin in the first of the writings. The author claims, on the one hand, that the Christian is guilty of sin (1:8, 10). On the other hand, there is the absolute assertion that the Christian does not sin (3:6, 9). This contradiction is resolved by interpreters in a number of ways. One such effort is to argue that the author intended to contrast sin as a way of life, which the Christian has repudiated, and sin as an occasional lapse in behavior of which the Christian is guilty. Such a view is made more attractive when one understands 1 Jn as a series of homiletical fragments loosely linked together. It is feasible that one homily stressed the sense in which the Christian has been removed from a lifestyle characterized by alienation from God, while another emphasized the inevitable failure of Christians to live out what they have become in Christ.

Still another approach to this contradiction is to contrast two different views of sin. The claim that the Christian is free to sin builds upon the view of sin in the Gospel of John which understands it basically not as a matter of immoral life but rejection of the revelation of God in Christ (e.g., John 15:22; 16:8). Sin is the opposite of belief, in this case. That the Christian is guilty of sin presupposes a different view of sin, namely, that of immoral behavior. Such a view is also rooted in the Gospel of John (John 8:46).

Some have proposed that the separatists held to a pregnostic view of perfectionism, which claimed that the believers were those whose origin was "born of God"—the true Creator God—and hence they could not sin and were free of any moral law. (Hence they are characterized as "lawless," 3:4.) The author of 1 John, however, attacks such a view and advocates instead a "Johannine perfectionism," which holds that unbelief is the only sin in the ultimate sense. In the author's attack upon the opponents, the reality of Christian sin is stressed; in the advocacy of the community's position, the freedom from sin is affirmed.

Yet another important element in the view of sin in 1 John is encountered in 5:16–17. There the author makes a distinction between "mortal" and "nonmortal" sin (*hamartia pros thanaton* and *hamartia mē pros thanaton*). It is this distinction which has led the Church at times to try to classify specific immoral acts in these two ways, and which has caused exegetes to struggle with the distinction for centuries. Again it may be helpful to read 1 John in the light of the Johannine tradition. What the author chooses to call "mortal sin" is unbelief. Failure to believe costs one "life" in the Johannine sense of salvation. Unbelief leads inescapably to the opposite of life, "death". "Nonmortal sin" is simple human failure to live the will of God within the context of faith. The author's concern for the quality of the Christians' moral lives and the development of ethics beyond the confines of what is found in the Fourth Gospel leads to the distinction made in this passage.

4. Morality. The authors of these writings are all concerned with nurturing a proper Christian moral life. This is doubtless the case, in part at least, because of the threat posed by the separatists, whose moral perspective was liberal at best. 1 John in particular stresses the centrality of morality for the Christian and the Elder builds a moral appeal into both of the epistles (2 John 5–6, 3 John 11).

In 1 Jn the morality of the Christian is characterized as "walking in the light" (1:7), "keeping his commandments" (2:3), and being "in the truth" (2:4). It is in righteous living that Christians express the fact that they are "born of God" (e.g., 3:9), "children of God" (e.g., 3:1), and "abide in" God or Christ (e.g., 2:6, 24). Loving others is the sign that Christians that have passed from death to life (3:14). Indeed, one who loves is "born of" and "knows" God (4:7). In 3 John the readers are exhorted to imitate good and assured that one who "does good" is "of God" (11).

But righteousness is understood as concrete behavior, not some internal state of the soul. Righteousness is doing the right or just thing (*ho poiōn tēn dikaiosynēn dikaios estin,* 3:7). "Doing good" is the comparable expression used in 2 John (11). The moral life involves separation from the "world," which is the symbol of unrighteousness (4:5), and overcoming the "lust" and "pride" of the world (2:16).

The moral life is rooted in love, and it is for its clear articulation of the centrality of love that 1 Jn has rightly

become best known. Love has its origin in God, for "God is love" (4:16), and "love is of God" (4:7). The divine love is expressed in Christ (4:9), and hence God took the initiative in loving humans (4:10). But that expression of divine love is what evokes and even creates the possibility of love among humans (4:11, 19). God, who is unseen, abides among humans as love (4:12) so that abiding in love is abiding in God (4:16). Human love for God is appropriately expressed in loving others (4:20; 5:1).

The commandment of the Johannine Jesus to "love one another" (John 13:34) is repeated five times in the course of 1 John (3:11, 23; 4:7, 11, 12) and once in 2 John (5). Paraphrases of that commandment ("love his brother/the brethren/the children of God") occur six times in 1 John (2:10; 3:10, 14; 4:20, 21; 5:2). That this injunction is stated in the restricted form of loving other Christians of the community, rather than all humans, is troublesome to some. Some arguments have been advanced which favor interpreting the commandment in terms of a universal love. Those efforts, however, may not be entirely honest with the limited vision of the Johannine community. However, given the discussion of the divine nature of human love, it is clear that the logic of the Johannine position moves toward the universal character of the Christians' responsibility to love, even if that view is not explicitly expressed in the formulas of 1 and 2 John.

But like being righteous, loving is a matter of concrete behavior. It is not enough to speak about love, but love must be executed in deeds (3:18). In 3 John love is executed specifically in the extension of hospitality and the support of other Christians (5–8). In 1 John love means sacrificially giving of one's worldly goods to others in need (3:17). Such giving is modeled after Jesus' act of sacrificing his life. That model dictates that Christians, too, must be willing to "lay down our lives for the brethren" (3:16).

The eschatological view of the author of 1 John motivates moral purification (3:3). But a faithful response to the injunction to love eliminates any fear of facing the judgment of that last day (4:18).

5. The View of the End Times. Eschatology is not a peripheral issue in 1 John. The "last hour" is present, the author asserts, because the "antichrists" of the end times are present (2:18). This single verse raises two questions relevant to the eschatology of the document. First, why does the author use the expression, "the last hour," instead of the more standardized, "last days" (John 6:40)? It has been proposed that the imminence of the final acts of God led the author to use "hour" rather than "day." It has also been argued that the expression is shaped by the references to Jesus' "hour" in the Fourth Gospel (John 2:4).

Even more perplexing in 2:18 is the word "antichrist" *(antichristos)* which is used four times in 1 John (2:18—twice, 22; 4:3) and once in 2 John (7). These are the only uses of this word in the NT. It is not found in the Jewish intertestamental literature, the Midrashim, nor the Talmud. It seems that the Johannine community, by the time of the writing of 1 and 2 John, had devised this title as part of its apocalyptic expectation. That the author of 1 John can use the term in both the singular and plural (2:18) is an indication that the concept was pliable. It seems to symbolize the final assertion of evil at the end time, an idea expressed in other imagery in NT apocalypticism (e.g., 1 Thess 2:1–12). It may be that the title was conceived amid the Johannine crisis, since the view of Christ was a central issue in the debate with the separatists.

In the view of the author of 1 Jn the end time involves the appearance of the antichrist(s), as well as the power of lie (2:22) and deceit (2:26, cf. 2 Jn 7). Christians are protected against these mighty evil forces by their anointing (2:27, cf. 2 above). The expectation of the parousia of Christ is expressed in 2:28. That event will bring a transformation of the Christians, in which they will become "like him" (3:2). The last day will include a final judgment (4:17) in the face of which Christians need have no fear, if they have been faithful in their love (4:18). That some reward awaits Christians is suggested by 2 Jn 8. The moral implication of this hope is the call for purification (3:3).

It is interesting that 1 and 2 John give expression to an eschatology which is of an apocalyptic kind. While some features of a futuristic and even apocalyptic eschatology are found in the Gospel of John (resurrection, 6:40), such features are not the most distinguishing mark of Johannine eschatology. The views of 1 and 2 John are evidence that the Johannine community had been influenced by other Christian beliefs about the end time. But they may also reflect the way in which the crisis of the schism in the community aroused apocalyptic expectation.

H. Value

The value of these three documents resides in four interrelated areas. The first is the contribution they make to an understanding of the emerging church at the end of the 1st century. They exemplify the way in which the Church found it necessary to begin to draw more clear lines between what constituted an authentic Christian faith and what needed to be deemed an aberration of that faith. The Church thought it important to develop an orthodoxy in the light of which claims of truth could be evaluated. While such a development is unfortunate in some ways, it provided the Church with a clear identity by which to preserve itself in the future. 1 and 2 John contribute two vital aspects of that emerging orthodoxy. The first is the centrality of the humanity of Christ, and the second is the importance of the moral dimension of Christian life. Around these two themes a good deal of what is essential to historic Christianity could be summarized.

More specifically, in 1, 2, and 3 John one witnesses the Christian community struggling to rescue itself from an annihilation resulting from a schismatic movement. The writings are a glimpse into the heart of a religious community attempting to contend with a diversity of views and beliefs. The glimpse informs the readers of the traumatic nature of schism and the array of emotions which arise as a consequence of the tearing asunder of what once had been a single religious body. The defensive and polemical stance of the authors does not exemplify the best response to diversity—indeed, one would hope that there are more creative possibilities. But still the authors show us what is at risk in diversity and what the tragic results of different fundamental orientations can be for the solidarity of a community.

The second contribution is the way in which 3 John promotes the emergence of a clear structure of authority in the Church. While that structure is not specifically

defined in 3 John, directions for its development are obvious. For its identity and preservation the Church thought it necessary to have, not only a clear orthodoxy, but also to be able to manage itself in the face of the improper assertions of power on the part of persons such as Diotrephes. With that development of authority there came some new dangers. But in 3 John we see none of the absoluteness and inflexibility of ecclesiastical authority characteristic of later periods in the history of the Church. What we do see is the effort to establish legitimate authority to preserve good order for the sake of the community.

Third, the three writings suggest a pastoral sensitivity and mode of operation which has value for today. The writers in each case were acutely aware of the human condition and ways by which humans may be nurtured to deal with that condition. In 1 John there is evidence of a concern to balance exhortation with affirmation. In 2 and 3 John there is evidence of an awareness of what motivates humans to change their behavior and a high degree of importance attached to personal relationships.

Finally, the value of the so-called Johannine epistles cannot be discussed without mention of the view of Christianity as rooted and centered in love. If there is one single ingredient which characterizes the core of the Christian gospel and its moral imperative, it is surely love. 1 and 2 John give expression to that fact with a clarity unsurpassed in the NT literature. For that contribution alone the writings merit preservation and appreciation.

ROBERT KYSAR

JOHN, THE GOSPEL OF. The fourth of what are now the canonical gospels was attributed to John, a disciple of Jesus, as early as the last quarter of the 2d century. Irenaeus clearly identifies the "disciple whom Jesus loved" with the author of the Fourth Gospel (*haer.* 3.1.2), and the Muratorian Canon speaks of a disciple, John, as responsible for the fourth of the gospels. The traditional association of the gospel with the disciple, John, Son of Zebedee, was firmly embedded by the 4th century.

There is textual evidence of the existence of the Gospel of John early in the 2d century, but its inclusion in the canon was not without difficulty. Its use in the writings of the earliest Church Fathers is not prominent, although it is argued that allusions to the gospel are discernible. It is perhaps only the prominence of John in gnostic Christian circles which brought it center stage for the Church as a whole. Its role in Valentinian Gnosticism has been long recognized. More recently, its affinities with the library discovered at Nag-Hammadi further document the popularity of the gospel among gnostic Christians. It was the gnostic, Heracleon, who wrote the first commentary on the Gospel of John.

In its defense against Gnosticism the Church embraced the Gospel of John and attempted to demonstrate that the gospel affirmed the "orthodox Christian faith". The affiliation of the gospel with gnostic Christian beliefs led some, however, to reject it along with Revelation, as Irenaeus witnesses (*haer.* 3.2.12). There ensued a struggle between those who favored the gospel and those who believed its gnostic associations barred it from a place among the books of the Church. The naming of John among the accepted writings in the Muratorian Canon may be evidence of such a struggle. Origen sought to wrest John from the grip of gnostic interpreters. By the end of the 4th century it was clear that John's place in the canon was secured.

The storm of controversy around the gospel in the nascent centuries of Christianity continues in recent times, and the question of its interpretation is still not settled. This article will attempt to characterize the current status of that debate and delineate what seem to be the major lines of interpretation today.

A. Textual Considerations

The oldest extant portion of NT writings is a papyrus fragment (P^{52}) containing bits of John 18 and dating from the first half of the 2d century. John is well represented in other papyri, including such witnesses as P^{66} and P^{75}. Many conclude from this strong witness the importance of John in a so-called "Egyptian" text which existed as early as, if not prior to, the "Western" text. Among the important uncial codices and versions John is equally well represented. The significance of patristic citations has been a point of recent controversy, but there, too, the text of John is suitably established. Origen's text of the gospel exhibits great affinities with the "Caesarean" text and the Vaticanus and Sinaiticus codices.

However, the gospel has its share of disputed passages. Only a few of those which are particularly significant and in some cases controversial can be mentioned here.

7:52–8:12 has been decisively shown not to have been a part of the original gospel. The oldest Greek witnesses do not include it (e.g., P^{66} and P^{75}). In other mss the section is located elsewhere or missing entirely.

1:3–4 may be punctuated several different ways. Should "that which was made" (*ho gegonen*) be taken with the conclusion of v 3 or the beginning of v 4? A quotation in Tatian lends weight to beginning a new sentence with *ho gegonen,* as does the omission of *en* in v 4 by P^{66}.

1:18 contains the unresolved question whether to read *ho monogenēs theos* or *ho monogenēs huios*. The attestation of $P^{66\ 75}$ for the former leads many to prefer it.

7:39 may be read "For as yet the Spirit had not been given" or "For as yet the Spirit was not". The first is supported by Latin and Syriac versions, while the second is attested in Greek mss and is the more likely.

7:52 raises the problem of whether or not "the prophet" was used here as a messianic title. The definite article, "the," is missing in the majority of witnesses, but present in P^{66}. The latter is increasingly gaining acceptance as the preferred reading.

20:31 holds the difficult question of whether an aorist ("may come to believe") or a present subjunctive ("may go on believing") was intended. Both have strong early support (cf. D.1 below).

B. Structure and Distinctiveness

Studies of the structure of the gospel and its distinctiveness stress both the problematic character of the work of the evangelist and its artistic quality.

1. Structure and Contents. The structure of the gospel presents the reader with a number of difficulties. Among these is the geographical locale of Jesus in chaps. 5 and 6. The setting for chap. 5 is Jerusalem (v 1), and the reader is never told of a movement to Galilee in the course of the chap. But the next chap. opens with Jesus in Galilee (6:1). Some have proposed that chap. 6 belonged originally after chap. 4 and that the order of the chaps. suffered disarrangement. 14:31 is another anomaly. It would seem to indicate a conclusion to the final discourses, even though they continue in the succeeding chaps.

A period of Johannine scholarship was marked by the effort to restore the structure of the gospel to a better and proposed original order. Those efforts met with little consensus among scholars and today have for the most part given way to an effort to see purpose in the present order. While the recent appreciation of the present order has succeeded where theories of rearrangement failed, the reader is still left with the impression that the fourth evangelist did not always smooth over transitional points in the narrative. It must be said that while the structure of the gospel exhibits considerable skill, it is not without its faults. A common view is that the evangelist has incorporated and redacted traditional materials without always covering the "seams" between the traditional and redactional materials. Moreover, one must conclude that, in spite of arguments to the contrary, geographical movements were not central to the author's purpose.

The structure of the gospel has most frequently been viewed in two major parts. The first, sometimes called the "Book of Signs," covers chaps. 1–12 and the second, labeled the "Book of Glory," chaps. 13–20. There is ample justification for such a division, even though the titles may not be as descriptive as they might. The first section, 1–12, depicts Jesus' public ministry. There he performs a number of wondrous deeds, engages in discussion with opponents and the crowds, and moves freely between Galilee and Judea. In chaps. 13–20 Jesus is restricted to discussions with his disciples alone (13–17) and to the passion experience (18–21). The theme suggested by the text itself pivots around "the hour"—the death and resurrection. In chaps. 1–11 it is declared on several occasions that Jesus' "hour has not come" (2:4; 7:30; 8:20). 12:23 announces the advent of the crucial time of revelation, and throughout chaps. 13–20 the presence of the "hour" is affirmed (13:1; 17:1). The first major part of the gospel is preparation for the "hour," the second the depiction of the "hour" itself.

Another pivotal theme in the relationship of the two major parts of the gospel is conceptually synonymous with the "hour" but employs the language of "glorification" (17:1). In the first section the "glorification" is spoken of as a future event (7:39; 12:16). In chaps. 13–21 the time of glorification is present (13:31; 17:5). Chap. 12 is clearly intended in this structure as the transitional bridge between the two.

The narrative of Jesus' ministry is prefaced with a hymn (1:1–18) which celebrates the salvific work of God through the Word *(logos)*. Here the author alerts the reader to the identity of Jesus and his place in the divine plan. The reader thus knows from the first chap. the issue which is central to the entire gospel and the resolution of the discussions which transpire through the course of the story, namely, who is this man Jesus.

1:19–51 briefly establishes the relationship between Jesus and the immediate circle of disciples and provides a historical beginning for the ministry of Jesus. Included in this section is the first of the several witnesses of John, the Baptizer.

2:1–5:47 includes the narration of three wondrous acts (signs) and a series of discussion/dialogues. It begins with the Cana sign (2:11) and moves immediately to the cleansing of the Temple which announces Jesus' relationship with the Judaism of his day (2:19). The Nicodemus discourse is followed by another testimony of the Baptizer and then by the story of the faith of the Samaritans. Two healings—the royal official's son and the man with the thirty-eight year illness—are back to back in 4:43–5:18. Speeches on the subject of the relationship of the Father

and the Son's activity and the witnesses to Jesus conclude the section. The section climaxes with the accusation of unbelief (5:19–47).

That accusation of unbelief begins the steady crescendo of opposition to Jesus which is sharply heightened in chap. 6. The chap. begins with three wondrous deeds—the feeding of the multitude, the walking on the sea, and the wondrous landing of the boat (6:1–21). There follows the lengthy bread of life discourse. Here Jesus makes the high claims for himself consistent with the announcement of the prologue of the gospel. The response is a schism among his hearers which finds many who had believed now leaving him (6:22–71).

In dramatic fashion the evangelist portrays the degree of opposition to Jesus' claims at the end of chap. 6 and then brings him to the locale where that opposition is the strongest (7:1–9). 7:10–10:42 has Jesus in Jerusalem, the center of the opposition and unbelief. A series of addresses in the Temple (7:10–52; 8:12–59) clarify the nature of the opposition. Chap. 9 is the skillful story of the possibilities of faith told through the giving of sight to the blind man and the resultant blindness of the religious leaders. Chap. 10 further explores that opposition in contrast to the relationship of believers with Jesus.

The opposition reaches its peak in chap. 11, when in response to the wondrous act of raising Lazarus to life the plot on Jesus' life is set in motion. The inevitability of that plot is confirmed in the anointing of Jesus' body for burial (12:1–11). There follows the entry into Jerusalem which suggests the nature of Jesus' kingship and the arrival of the Greeks which signals the advent of the "hour" (12:12–36). Significantly the first major portion of the gospel concludes with the statement of the unbelief of the religious leaders, its meaning in terms of OT prophecy, and a final public word of Jesus concerning the division among humans caused by his presence (12:37–50).

The second major portion of the gospel is prefaced by the foot washing and the commandment to love one another. These acts and words of love, however, are set over against the prediction of Judas' betrayal and Peter's denial (13:1–38).

Chaps. 14–17 are comprised of three clusters of final instructions to his disciples and a prayer for them and their glorification in Jesus' glorification. The so-called "farewell discourses" are a mosaic of themes introduced, explored, dropped, and reintroduced. They address the loss of the disciples in the death of Jesus in contrast to their gain, the intimacy they have with Christ, and the assurance that is theirs in tribulation. Woven into these themes is the promise and the role of the "Counselor" who comes to continue Jesus' ministry. The prayer of chap. 17 focuses on Jesus' concern for his disciples and his imminent fate.

The passion narrative is the story of the exaltation and glorification of Jesus (18:1–20:29). Judas' betrayal and Peter's denial are told now as they were predicted. The religious trial is narrated with the greatest of brevity. The political trial before Pilate, however, is given detailed attention and focuses upon the nature of the kingship that is bestowed upon Jesus in the cross (18:28–19:16). The royal disposition of Jesus which marks the whole of the passion story is maintained as he dies on the cross and is buried in a tomb fit for a king (19:17–42—cf. G.2 below).

The discovery of the empty tomb is told but with attention to the possibilities for faith it offers (20:1–10). Three resurrection appearances bring the story to its final climax. First, the risen Christ appears to Mary Magdalene (20:11–18); second, he presents himself to the disciples with Thomas absent (20:19–23); and finally, to Thomas and the other disciples (20:24–29). The final words of Jesus in the gospel are an invitation to belief and a beatitude for those who believe without seeing. The final words of a human actor in the gospel are an affirmation of the assertions with which the gospel began—"My Lord and my God!" (20:27–29). Against the opposition which tried its best to turn its back on Jesus, God in the cross and resurrection reveals that man's status as the king of humanity.

The evangelist's own conclusion recognizes the limitations of the gospel but declares it has been written to evoke faith in Jesus as the Christ and Son of God (20:30–31).

Chap. 21 is clearly an appendix, added after the completion of the first 20 chaps. But it appropriately concludes some issues of importance left unresolved in the earlier chaps., namely, Peter's reinstatement and commissioning, as well as the role of the beloved disciple.

2. Distinctive Features. This gospel is marked by a series of features which are distinctive when compared with the first three gospels of the canon. Those features may be summarized in three general categories.

a. Vocabulary and Style. Many of the most frequent expressions found in the Synoptic Gospels are rare or missing entirely from the Gospel of John (e.g., "Kingdom of God/Heaven," "Sadducees," "scribes," "forgive," "demons," "tax collectors"). In contrast there is an almost unique Johannine vocabulary which makes use of such expressions as "life," "light," "darkness," "truth," "world," "the Jews," "know," "Counselor" and "Son" as a title for Jesus. While not absent from the synoptics, the term "Father" used of God appears with common regularity in John, as does the expression, "him who sent me," a rare synoptic reference to God. The double "amen" (e.g., 1:51; 10:1; 12:24) is unique to the Fourth Gospel. The "I am" formula in its various forms, so frequent in John (e.g., 6:20, 35, 51; 8:24; 15:5) is seldom encountered in the first three gospels.

The style of the Fourth Gospel also sets it apart from the other gospels (cf. C.1 below). Most notable is the style of the Johannine Jesus' discourses. In contrast to the economy of the words of Jesus as they are found in the first three gospels, the Johannine Jesus is made to speak at great length and repetitiously. Even the so-called sermons in the Synoptic Gospels are comprised of short, distinct sayings as opposed to the longer and often rambling discourses of the fourth evangelist's Jesus (compare Matthew 5–7 with John 14–16).

b. Order and Content. One striking difference between the synoptics and the Fourth Gospel is that the latter narrates the ministry of Jesus within a framework of three Passovers (2:13; 6:4; 13:1), while the synoptics have only one Passover (e.g., Mark 14:1). The result for the Johannine story is that Jesus' Judean ministry is much more lengthy than is the case in the synoptic accounts.

The order of events is often different in John, for example, the place of the Temple cleansing (contrast John 2:13–20 and Mark 11:11–17). While the synoptics agree that the crucifixion took place on the day of Passover (e.g., Mark 14:12; 15:42), the fourth evangelist takes care to say that Jesus died one day earlier on Passover eve (e.g., 18:28; 19:14). Unlike the Synoptic Gospels, the fourth evangelist narrates concurrent ministries of Jesus and John, the Baptizer (e.g., 3:23).

Equally important are the major synoptic narratives which are missing from the Johannine account, such as the baptism and temptation of Jesus (e.g., Mark 1:9–13), the confession at Caesarea Philippi (e.g., Mark 8:27–30), the transfiguration (e.g., Mark 9:2–10), the Garden of Gethsemane story (e.g., Mark 14:32–42), and the institution of the eucharist (e.g., Mark 14:22–25). Certain kinds of narratives and discourses, such as exorcisms and narrative parables, are missing in John, although abundant in the synoptics.

On the other side, the Johannine gospel includes a significant number of narratives unique to itself. Among them are the wonder at Cana (2:1–11), the conversations with Nicodemus (3:1–13) and the Samaritan woman (4:1–42), the raising of Lazarus (11:1–44), the foot washing (13:1–20), the conversation with Pilate (18:28–19:16), and three resurrection stories unknown outside of John (20:11–29).

The Johannine discourses are equally unique in kind and content. Among the "I am" sayings are the distinctive "allegorical sayings" such as 10:1–16 and 15:1–10. As well there are the so-called "farewell discourses" of chaps. 14–16 which include the Paraclete ("Counselor") sayings (14:15–17, 26; 15:26–27; and 16:7–14) and which conclude with the unique prayer of chap. 17.

c. The Portrayal of Jesus. The most evident distinction in the presentation of the figure of Jesus is the fact that the Johannine Jesus is made constantly to speak of himself and his unique identity, while the Synoptic Gospels most often have Jesus speaking about the kingdom of God/Heaven. When, for example, Jesus is challenged for having performed a healing on the Sabbath, he defends his action by appealing to his unique status (5:19–23). While the synoptic Jesus is frequently found in a rabbinical form of dialogue with others (e.g., Matt 22:23–33), the Johannine Jesus is more often proclaiming his unique relationship with God. The commands to keep silence with regard to who Jesus is or what he does found scattered throughout the synoptics (e.g., Mark 8:30) are conspicuous by their absence in the Fourth Gospel.

The Johannine Jesus is given an aura of divine foreignness with the result that he is described with greater emphasis upon his divine nature than is the case in the synoptics. He knows the thoughts of others before they are expressed (e.g., 2:24–25); he has no need to pray, because of his unique relationship with the Father (11:42); and he is rescued from the hostile intent of a crowd simply because "his hour had not come" (7:30). Such a presentation is captured in the christological title the fourth evangelist uses four times, "only *(monogenēs)* Son" (1:14, 18; 3:16, 18).

The wonder stories of the Fourth Gospel contribute to this unique presentation of Jesus. They are called, "signs" (*sēmeia,* e.g., 2:11; 4:54; 20:30). The Synoptic Gospels use this term in reference to wonders only to suggest an illegitimate request for a demonstration of power (e.g., Luke 11:29, but cf. Acts 2:22 and 2:43). The wondrous deeds of Jesus are conceived by the fourth evangelist in a way quite distinct from the Synoptic Gospels. In the first three gospels the wonders are expressions of the inbreaking of the reign of God announced by Jesus (e.g., Luke 11:20). In John the wonders are indications of the identity of the person of Jesus and point to the "bringer" rather than that which is brought. The manner in which the symbolic meaning of the signs is exploited by the fourth evangelist (cf. C.5 below) is still another distinctive quality in the portrayal of the wonders of Jesus.

John contains only seven or eight wonder stories (depending on whether one understands 6:16–21 as one or two signs), but the wondrous character is often more emphasized. The healing is done at a distance (4:43–53). The dead one who is raised has been buried four days (11:39, contrast Mark 5:35–42). Jesus not only walks on the water but immediately effects the landing of the boat (6:16–21, contrast Mark 6:45–52). He changes ordinary water into the finest wine of the wedding party (2:1–11). Such an accenting of the wondrous quality contributes to the portrayal of the uniqueness of the man Jesus.

These three types of unique differences between John and the Synoptic Gospels set it off from its canonical colleagues. They suggest some of the unique literary features of the document as well.

C. Literary Features

It is clear that the structure of the gospel, viewed as a literary creation, is deliberate and effective. Such is only one example of what scholars are more and more seeing as evidence of the literary skill of the fourth evangelist.

1. Style. The vocabulary and grammar of the gospel is deceptively simple in its appearance. The vocabulary is relatively limited and the grammar lacks many of the complexities of other Hellenistic writings. It has been argued that the style reflects Semitic influences and may even be a translation from Aramaic. Original Semitic expressions dot the pages of the document, e.g., *messias* (Messiah, 1:41 and 4:25) which is unique to John among the NT writings. Other phrases have a Semitic coloring to them, e.g., "doing the truth" (*poiein tēn alētheian,* 3:21). Modern scholarship has shown little interest in the proposal that the gospel was originally written in Aramaic and then translated into Greek but has tended to believe that the evangelist's Greek was strongly influenced by a Jewish background.

The style also exhibits a poetic quality, which is evident especially in the speech materials. Examples abound, but chap. 17 certainly betrays the signs of balance, rhythm, parallelism, and resonance. The repetition which is so prominent in the speeches of Jesus suggests poetic redundancy and indicates that the material may have been written to be read aloud. That this poetic style reflects a meditative quality has long been acknowledged. Stereotyped expressions (e.g., "I have come" 5:43; 12:46; 18:37) expose didactic and reflective purpose. Recent studies have proposed numerous chiastic structures in both the speech and narrative sections (e.g., 6:36–40). In a similar manner

the use of inclusion is more and more recognized. The subunit, 6:51–58, begins and concludes with the statement that one who eats the bread from heaven "will live for ever". On a larger scale the prologue concludes by using the term, God, to describe the Word (1:18), and Thomas' words in 20:28 confess Jesus to be God.

2. Drama. The narratives of the gospel are often told in a dramatic style. They progress in deliberate stages which constitute scenes and evoke a sense of suspense as the narrative moves forward. Such dramatic structure is typical of a series of longer narratives within the gospel. Among these are 4:1–42; 6:1–71; 9:1–41; 11:1–44 and 18:28–19:16.

In 9:1–41 the author has constructed a dramatic story comprised of seven scenes (vv 1–7, 8–12, 13–17, 18–23, 24–34, 35–38, and 39–41). With those scenes the evangelist gradually shifts the attention of the reader from the physical healing of the blind man to the spiritual insight concerning Jesus' identity. The result is that the man is healed not alone of his physical ailment but his spiritual blindness as well, and the lack of sight is revealed to be the ailment of the religious leaders. Similarly one is treated to the progressive faith of the man healed of blindness and the progressive unbelief of the religious leaders. 18:28–19:16 is another prime example of a longer narrative structured with dramatic skill.

The narratives, however, are not exclusively of this longer variety. Punctuating the story are much shorter tales told with economy and clarity (e.g., 2:1–11; 2:12–25; 4:43–54; 12:1–11; 13:1–30). The author has skillfully alternated the style of the stories to keep the reader off guard. Nor is drama the exclusive property of the longer narratives. In 4:43–54 the reader's suspense is piqued by Jesus' implication that he will not perform the healing (v 48), then by the question of whether or not the healing has actually been effected (v 51). The shorter narratives are told with as much care and skill as are the longer ones.

3. Narrative and Discourse. More briefly it should be noted the way in which the gospel moves back and forth between narrative and discourse. The Fourth Gospel contains more discourse materials than do the Synoptic Gospels, but not at the expense of narrative. The interrelationship between narrative and discourse is a feature of the literary skill of the author.

In many cases the author attaches to a narrative discourse material which explores the meaning of the story just related. This is most obviously the case in chap. 6 in which the bread of life discourse is clearly intended to be the elucidation of the meaning of the feeding of the multitude. Such a pattern is discernible in 5:1–47; 9:1–10:42; and 13:1–38 as well.

However, the author is equally satisfied to allow narratives to stand by themselves and speak for themselves (e.g., 2:1–11; 4:43–54; 12:12–19; and 18:1–19:42). Sometimes speech material is unaccompanied by narrative setting of any significance (e.g., 7:10–52; 8:12–59; 14:1–17:26). Sometimes the discourse illuminating the narrative is integrated into the story itself, as is the case with 4:1–42 and 11:1–44.

The evangelist saw both discourse and narrative as important to the purpose of the work, but varied the relationship between the two in a provocative and unmonotonous way.

4. Irony and Double Entendre. Irony is an important feature in this gospel. The author is fond of setting up situations in which the reader knows something important that some of the actors/speakers in the narrative do not know. In that situation the actors are made to say something of far greater significance than they know. Examples include 4:12; 7:27, 35–36; 8:22; 11:50; 12:12–15, 19; 13:37; 19:19.

But irony is more than an occasional technique found in individual sayings. The whole gospel is framed in irony. The opening verses of the gospel inform the reader of the identity of Jesus, while individual characters throughout the narrative struggle to make this discovery for themselves (e.g., 1:43–51; 6:30–31; 14:8; 18:33, 37). Irony is essential to the author's presentation of the crucifixion. Pilate mockingly calls Jesus the king (19:14), places the sign on the cross declaring Jesus to be king (19:19), and puts Jesus to death for having claimed to be king of the Jews (19:12). Ironically, Jesus is king (19:36), and the crucifixion is his enthronement in the view of the evangelist (cf. G.2 below). While the actors believe that they are ridding their society of a troublesome false claimant to royalty, they are actually enthroning him in his rightful office. This author captures and articulates the ironic quality of the Christian view of the cross.

The author's fondness for the use of words with multiple meanings is closely related to irony. This pattern in the discourse materials is frequent: Jesus uses an ambiguous word or an expression which is misunderstood by his listeners and occasions a continuation of his speech. The best known example of this is found in the use of the word *anōthen* (3:1–13) which means "again," "from above," or "from the beginning". While Jesus intends the second or third meaning, Nicodemus understands the word in terms of its first meaning and is puzzled; Jesus must then go on to explicate his meaning. Such misunderstanding occurs in a number of other conversations (e.g., 2:19–20; 4:7–16, 31–34; 6:41–43, 52; 7:52; 8:22; 12:32–36; 18:33–38 and possibly 5:18 and 10:33). In most of these cases Jesus speaks on a spiritual or intangible level while his listeners understand his words on a physical or tangible level of reality.

The functions of such misunderstanding are several. In some cases they produce a humorous situation (e.g., 4:15). Often they occasion Jesus' continuation of his speech and hence move the conversation forward (e.g., 3:5–13). The reader gradually gains an impression after several occurrences of this pattern. Humans are attached to the physical, mundane reality of their existence in such a way as to be blinded to the spiritual dimension of life and, more importantly, the revelation of God in Christ.

The double entendre, however, is also a means by which the author communicates a profound depth of meaning. The author may have intended several of the meanings embedded in the ambiguous language attributed to Jesus. This is to suggest that *anōthen* is intentionally used to imply that the Christian experience of faith is both a birth "from above" (from God) and a re-birth. *Pneuma* used in 3:8 becomes a condensed analogy in which the Spirit is compared to the wind. On three occasions Jesus is made to

speak of his being "lifted up" (*hyspoō,* 3:14; 8:28; and 12:32). It is clear that this is Johannine language for the cross. The verb had two distinct meanings in Hellenistic Greek: To be lifted up on a cross and to be exalted to high office (as in the enthronement of a king). The evangelist's view of the cross as the enthronement of Jesus as king leads one to conclude that both meanings of the word are appropriate.

Such rich, ambiguous language teases the reader into contemplation of the meaning of the Christ revelation for human existence. It is a poetic kind of use of language in which words are made to say all that custom takes them to mean and even more.

5. Symbolism. The centrality and power of the symbolism of the Fourth Gospel is a long acknowledged feature of the work. This constitutes still another instance of the poetic quality of the author's style.

Three kinds of symbolism are apparent in the gospel. The first are the metaphorical speeches of Jesus in which he is made to identify himself with another reality. This kind of symbolism is found in 4:13–14; 6:35–65; 8:12; 10:1–16; 15:1–10, as well as elsewhere. The reader is invited to reflect on the way in which Jesus is comparable to such realities as light, water, bread, a shepherd, a vine, resurrection and life, and the way.

Another kind of imagery is found in the dualistic symbols of the gospel. They are a variety of means of speaking of the contrast between the life of faith and of unbelief (cf. G.3 below). Such symbols are found in abundance in the hymnic prologue to the gospel (e.g., light and darkness in 1:5, but cf. 1:4, 10–12). Another instance of dualistic symbols is "above and below" (e.g., 8:23). The religious background of such a dualism is often debated, but its literary significance seems clear: The reader is made to sense that one must decide between the poles of the dualism—one either accepts or rejects the revelation of God, and there is no middle option.

Finally, there is a symbolic dimension to the narratives of Jesus' actions in the gospel. That symbolic dimension is articulated in a number of cases (e.g., chaps. 6, 9, and 11). In others it is left to the reader to exploit the full meaning of the action of Jesus. Hence, the narrative of the cleansing of the Temple is thought to be a representation of the manner in which the revelation of God in Christ cleanses and replaces contemporary Judaism. Other narrated actions of Jesus (and others) are rich with symbolic possibilities—2:1–11; 6:16–21; 12:1–11, 12–19, 20–22; 20:1–10; 21:1–14.

As powerful as the symbolism of the gospel is, it has become a problem for interpreters of the text. Implicit symbolic meaning opens the door for speculative proposals. Furthermore, it may lead the interpreter to seek additional meaning where none may have been intended. But such is the nature of the reading of a poetic gospel—meaning is constituted not alone by the writer's intention but also by the reader's own dialogue with the text. There is, consequently, a certain open-endedness to the meaning of the Gospel of John, which can only be credited to the skill of the author.

6. Characters. There is no modern sense of characterization in the figures presented in the gospel, but they are used effectively by the author in the task of proclamation. In general one may say that the characters of the gospel are models of faith or unbelief. The opponents of Jesus serve as models of what it means to reject the revelation in Christ, while the disciples are models of acceptance.

Believers are, however, representations of faith at different levels of maturation. There are characters who model the transition from unbelief to the beginning stages of faith (e.g., Nicodemus, 3:1–13; 7:50–51; 19:39, the Samaritan woman, 4:1–30, 29–42, and the blind man, 9:1–41). There are characters who model the failure to come to faith (e.g., the man with the thirty-eight year illness, 5:1–18, and "many disciples," 6:60–71). The royal official represents a profound faith which believes on the basis of Jesus' word without evidence of the success of the wondrous healing of his son (4:43–54). Martha models growth in faith (11:1–44), and Mary the gratitude and love of faith (12:1–8). Thomas demonstrates the way in which faith is born from doubt (20:24–28). In the tale of the discovery of the empty tomb the evangelist represents three different kinds of faith in the three characters involved (20:1–10).

Some persons are passed over with little or no interest (e.g., Annas, 18:19–24, Joseph, 19:38–42), while others are more developed (e.g., Pilate, 18:28–19:16). But in each case they invite the process of identification by the reader. Thereby, the evangelist has enticed the readers to examine their own posture in relationship to the revelation of God as they contemplate each of the characters depicted in the pages of the gospel.

D. Purpose and Historical Origin

The purpose of the document and theories of its origin are closely interrelated. The first can only be discovered through the process of exploring the second.

1. Purpose. The purpose of the gospel is explicitly stated in what was most likely the original ending of the document, 20:31. The author declares that the gospel has the purpose of nurturing the faith of the readers in Jesus as the Christ and Son of God, in order that they might gain "life". Such a purpose is clearly evident throughout the document.

But 20:31 is plagued by a textual problem which hampers a more precise understanding of the purpose of the gospel. Is the faith it seeks to nurture an initial acceptance of Christ, or the strengthening of Christian life? Was the gospel a missionary document written for evangelistic purposes, or was it written for a community of faith in order to advance the maturation of faith? The key verb in the verse is "believe," but the textual witnesses are divided over whether the form of the verb is an aorist *(pisteusēte)* or a present subjunctive *(pisteuēte).* Both have impressive attestation, making any textual decision tenuous at best. But further, did the author use the tenses of the subjunctive mood carefully and deliberately? Consequently, the verse does not help us to decide if the purpose of the gospel was missionary or maturational.

The decision must be determined on the impression gained from the reading of the whole document rather than on the basis of the statement in 20:31. While contemporary scholarship is not unanimous in its view, there is a clear preference for the view that the gospel was addressed to members of a Christian community in order to

strengthen their faith in the midst of a critical situation. Such a view is admittedly somewhat impressionistic. Still, the attention to the nurturing of faith in the farewell discourses (chaps. 14–17), the concern for apostasy (e.g., 6:60–69), and attention to the theme of the quality of sound faith (e.g., 4:43–53; 6:25–27; 20:29) contribute decisively to that impression.

2. Historical Origin. Equally significant in determining the precise purpose of the gospel is the supposed situation out of which and for which it was written. A variety of options have been proposed. The setting has been reconstructed in terms of a conflict over authority in the community, the crisis of martyrdom in the midst of evangelistic endeavors, the threat of docetism, and a mission to the Samaritans, to mention only a few.

But another reconstruction has gained considerable prominence in recent decades. That hypothesis holds that the gospel was written to a Christian community which had only recently suffered expulsion from its synagogue home. The evangelist's purpose, it is proposed, was to nurture faith in the crisis brought on by that experience. On three occasions the word, *aposynagōgos* ("put out of the synagogue"), appears in the gospel (9:22; 12:42; and 16:2). The proposal is that such references reflect the time and situation of the author and his community and not that of the historical Jesus. Other evidence of a similar kind supports such conjecture. The high claims Jesus makes for his own authority and the response that he thus made "himself equal to God" (5:18) fit more likely within a context of a Christian-Jewish dialogue than within the context of Jesus' own ministry. Chap. 9 seems to reflect the experience of the Johannine community laid over the tale of healing. It is conjectured that the Jesus story has been reinterpreted and told now with an eye to the situation of a band of Christians who were struggling to come to grips with their identity as a community isolated from their previous religious home in the synagogue and now set in conflict with those who had until only recently been colleagues in faith.

Such a hypothesis for the setting of the gospel gains credibility by virtue of the fact that it offers feasible explanations for a number of features of the writing. It makes understandable, for instance, the reasons for the apparent anti-Jewish polemic evident throughout the work. The term, "the Jews," is used in a pejorative way in such passages as 9:18; 10:31; 18:12, 36–38; and 19:12. Jesus is made to attack the Jews and declare that they are unfaithful to their heritage in refusing to believe in him (e.g., 8:42–44) and speaks as if he himself were not a Jew (e.g., 7:19; 8:17; 10:34). The superiority of the Christian to the Hebraic revelation is asserted a number of times (e.g., 1:18; 6:49–50; 8:58; cf. 2:1–22). Such a stance in relationship toward Judaism is made understandable, if the Johannine community stood in opposition to the synagogue from which it had been expelled.

But the thought of the gospel betrays, at the same time, a clearly Jewish quality. While the religious setting for Johannine thought has long been debated, there is increasing acknowledgment of its Jewish character. Not least among the factors which precipitated this acknowledgment are the allusions to the Passover (e.g., 2:13; 6:4; 11:55; 13:1), to Gen. 1:1 in the prologue, and the frequent use of OT images (e.g., 10:11; 15:1–4; 6:51). If the Johannine community had its origins in Jewish Christianity within the structure of the synagogue, such a Jewish interpretation of Christian faith would be only natural.

Other features of the gospel are also illumined by the proposal of an expulsion from the synagogue. Existing as a newly independent religious community set over against Judaism would account for the radical exclusivism of the gospel (e.g., 14:6), for the "sectarian" quality of the self-perception of the community as set in opposition to the "world" (e.g., 16:33), for the dualistic scheme which construes reality in terms of either one or the other allegiance (e.g., 1:5), and for the tendency to see Jesus in terms of a foreigner in this earthly realm (e.g., 8:23).

What was the event which occasioned the expulsion of the Johannine Christians from the synagogue? Some would argue that it was the introduction of another group of Christians into the community—a group which held to a christology intolerable to the Jews of the synagogue. Others suggest the occasion for the fracture was the enforcement of a formal benediction against the heretics (the *Birkath ha-Minim*) propagated, it is proposed, by the Council of Jamnia (ca. 90–95 C.E.). Still others would argue that it is more likely the expulsion took place earlier, in part as a result of the destruction of the Temple in 70 C.E. and the quest for a new Jewish identity brought about by that tragic event.

Although the details of the reconstruction remain controversial, there is a wide acceptance of the hypothesis in its general form. This proposed setting predisposes the reader to see the gospel as an effort to address the crisis resulting from the expulsion and the ensuing controversy with the synagogue. The evangelist attempted, it is thought, an interpretation of the Jesus tradition which helped the community deal with the issues involved in their situation, most especially with the relationship to Judaism, with questions of self-identity, and with Christian life in a situation of minority status and some oppression. Contemporary efforts to date the writing of the gospel depend heavily upon conjectures as to when such a situation might have existed.

E. Date and Authorship

1. Date. The gospel has been dated as early as 40 and as late as 110 C.E. But the latest possible date has been fixed by the discovery in Egypt of the Rylands Papyrus 457 (P^{52}) which contains 18:31–33, 37–38. This ms is usually dated between 125 and 150. Other textual finds make it undeniable that the gospel circulated in Egypt in numerous copies in the middle and last half of the 2d century. No one, therefore, is inclined to propose a date later than 100–10.

The earliest date for the gospel hinges upon the question of whether or not it presupposes the destruction of the Temple in 70 C.E. Most agree that it does, although there have been persistent attempts to argue otherwise. The reasons for positing a post-70 date include the view of the Temple implicit in 2:13–22. Most would argue that the passage attempts to present Christ as the replacement of the Temple that has been destroyed.

The argument that John is to be dated late in the 1st century has often invoked the high christology of the

evangelist. The contention is that such a lofty view of Christ necessitates an extensive period of time. Such a view has, however, increasingly lost credibility among scholars, since it is clear that such a perspective imposes an evolutionary schema upon the development of early Christian thought. Moreover, recent investigations of the christology of the NT have demonstrated the existence of a variety of views as early as the time of Paul (e.g., Rom 1:3–6, Phil 2:5–11). Therefore, the christology of the gospel does not dictate a late 1st century date.

The relationship of John and the Synoptics has significance for the dating of the Fourth Gospel. If it is supposed that the fourth evangelist employed the synoptics in the composition of the gospel, it then becomes necessary to date the Gospel of John after the writing of the synoptics (i.e., after 85). Unfortunately the issue of the fourth evangelist's knowledge and use of the synoptics is unsettled at the present (cf. F.1 below). However, a slim majority of scholars still maintain that there is not sufficient evidence in the gospel to hold that the evangelist knew or used any one of the synoptics. If such was the case, the gospel could have been composed before or contemporaneously with the composition of the synoptics.

Another issue in the dating of the gospel has to do with the nature of the tradition it contains. It is supposed that the tradition is a highly developed one and that the differences between the Johannine and synoptic materials are due to that tradition which has been carefully shaped in the Johannine community. How long a period of time would such a process of formulation take? The answer to that question influences the date one is compelled to assign to the gospel. But perhaps it is not so much the length of time a community has to shape a tradition in its own language and concepts as the character of the community. Therefore, the Johannine community with its peculiar circumstances and constituency might have formulated the Jesus tradition rather quickly into its own liking. Consequently, the quality of the distinctive Johannine tradition does not readily yield itself to use in the task of determining a date of origin for the gospel.

Of greatest importance to the dating of the gospel is the speculation as to what date is suggested by the setting proposed for the document. However, those who propose that the setting of the gospel was the experience of the expulsion from the synagogue (cf. D.2 above) cannot agree on a date when such a situation might have existed, for there is no agreement as to what caused the expelling of the Christians. Those who relate the expulsion to a formal effort on the part of Judaism to purge itself of Christian believers link the composition of the gospel with a date soon after the Council of Jamnia, which is supposed to have promulgated such an action. Hence, these scholars would date John after 90. Those inclined to see the expulsion more in terms of an informal action on the part of a local synagogue are free to propose an earlier date.

Given all these considerations most often the gospel is assigned a date of 90–95, which continues the inclination of previous decades of scholarship to conclude that John is the last of the four gospels to be written. There are others, however, who argue that the date might well have been as early as 80–85.

2. Authorship. The authorship of the gospel is no less easy to determine. Many are willing simply to plead ignorance on this question and confess that there is too little data upon which to build a viable thesis. And that conclusion proves to be the most prudent. Tradition has given us the handy name, "John," but the document itself is silent about its author's identity. Tradition has further linked the fourth evangelist with John, son of Zebedee, but again the internal evidence for such an association is slim (e.g., the fact that the sons of Zebedee are not mentioned in the gospel, except in the appendix at 21:2, while they figure so prominently in the synoptic accounts). Other candidates include John, the Elder, the supposed author of 2 and 3 John.

Intertwined with the question of authorship is the mysterious disciple "whom Jesus loved". This anonymous beloved disciple poses two related questions: Who was he/she, and is it possible that this is the author's way of referring to himself? The beloved disciple appears five times in the narrative of the gospel (13:23; 19:26–27; 20:1–8; 21:7; and 21:20–24) and is sometimes found in two references to "another disciple" who remains nameless (18:15–16 and 19:35). John, son of Zebedee, is most often nominated for the unique status of the one "whom Jesus loved," but other proposals include Nicodemus and Lazarus, among others.

Two interesting facts are worthy of note. First, the beloved disciple does not appear in the narrative until 13:23. Second, Peter appears in all but one (19:26) of the narratives in which the beloved disciple is mentioned. The first fact has been used to argue against the effort to identify the beloved disciple with John, Son of Zebedee (and sometimes for an identification with Lazarus, who appears in the narrative for the first time in chap. 11). The second fact has been employed to argue that some kind of contrast between the beloved disciple and Peter is suggested by the author.

Honesty dictates that the identity of this mysterious figure must remain unknown and that speculations are finally fruitless. The evidence is not sufficient to identify him with any of the popular candidates, nor are there enough hints to suggest just how the author might have wanted the reader to construe the relationship between the beloved disciple and Peter. However, it might be that this figure is intended to represent the Johannine community's founder, well known to the evangelist's first readers. As such the author may have wanted to show that the Johannine community was founded on the witness of one as close to Jesus and as reliable as Peter. It seems likely that the beloved disciple is appealed to as the source of the tradition upon which the community and the gospel were founded. This may be the most one can claim to know about the identity of the disciple for whom Jesus is said to have had a special affection.

Was the beloved disciple the fourth evangelist? Such an argument is still common in some circles of scholarship, but remains unlikely. It would seem presumptuous of the author to have claimed that special status for himself and far more likely that it is a status given to the revered founder of the community. See also BELOVED DISCIPLE.

Connected with this question is the query as to whether or not the author was an eyewitness to the historical Jesus. The supposition that the author was one and the same

with the beloved disciple is often advanced as a means of insuring that the evangelist did witness Jesus' ministry. Two other passages are advanced as evidence of the same—19:35 and 21:24. But both falter under close scrutiny. 19:35 does not claim that the author was the one who witnessed the scene but only that the scene is related on the sound basis of eyewitness. 21:24 is part of the appendix of the gospel and should not be assumed to have come from the same hand as that responsible for the body of the gospel. Neither of these passages, therefore, persuades many Johannine scholars that the author claims eyewitness status.

The most that can be concluded about the author is that he (or she) was a prominent and respected figure in the Johannine community who assumed sufficient authority to undertake the task of reinterpreting the tradition in the light of the crisis facing the Church. This figure was no doubt trained to some undetermined degree in Jewish thought while not ignorant of the Greek mentality, was a sophisticated thinker, and was a skillful writer. That Greek was a second language for the author is entirely possible, although efforts to prove that the gospel was first written in Aramaic are not convincing nor widely held today. It is likely, however, that the author was versed in Aramaic.

F. Sources and Composition

The gospel poses serious questions for the critical scholar. It presents itself as a careful and deliberate composition, yet not without serious flaws. For example, compare 3:22 and 4:2 (cf. B.1 above). It seems to give expression to a thoughtful and even sophisticated theological stance, yet not without serious contradictions. For example compare 3:17 and 9:39. Both in terms of its literary features and its content the gospel puzzles the careful reader. Efforts to solve those puzzles have in large part centered in a cluster of questions related to the composition of the gospel, namely, the sources used by the author and the process by which the gospel came into existence.

1. Relationship with the Synoptic Gospels. The question of the sources employed by the fourth evangelist has intrigued scholars for centuries. Foremost among the questions posed by the gospel is the literary relationship between it and the Synoptic Gospels. Were all or any of the Synoptic Gospels among the sources utilized in the composition of the Fourth Gospel? The answer is made difficult, if not impossible, by two contrasting features of the Fourth Gospel. On the one hand is the fact that there are clear similarities and parallels between Johannine materials and those which can be found in other gospels. On the other hand stands the fact that there are so many points at which the Fourth Gospel seems to depart from any synoptic materials and exhibits such striking features peculiar to itself.

The first fact can be illustrated by a number of narratives which are clearly parallels to synoptic stories. These include a passion narrative which, while clearly distinct, nonetheless follows a pattern found in the Synoptic Gospels. Moreover, narratives such as the entry into Jerusalem (12:12–19; compare Matt 21:1–9 = Mark 11:1–10, Luke 19:28–40), the cleansing of the Temple (2:13–22; compare Matt 21:10–17 = Mark 11:11–17, Luke 19:45–46), the feeding of the multitude (6:1–15; compare Matt 14:13–21 = Mark 6:32–44, Luke 9:10–17), and the wonder of Jesus' walking on the sea (6:16–21; compare Matt 14:22–33 = Mark 6:45–52) seem to betray a literary dependence of the fourth evangelist on the synoptics. Even when the parallels are not strict there appear to be resemblances between the Johannine and synoptic materials. Examples include several of the healing stories told by the fourth evangelist (e.g., 4:46–53; 5:1–9; 9:1–7) which have many features of synoptic healing stories.

Sayings material in John also occasionally has close affinities with that found in the synoptics. The best examples include 12:25 (cf. Mark 8:35 and parallels), 12:27 (cf. Mark 14:34–36 and parallels), 13:20 (cf. Matt 10:40) and 16:24 (cf. 14:13–14; 15:7 and Matt 7:7; Luke 11:9). The metaphor of the grain of wheat in 12:24 cannot help but call to mind Mark 4:30–32 or Mark 4:1–9, 26–29.

Still other similarities are less exact but hint at some relationship between the fourth and first three gospels. The Johannine anointing story has been seen as a conflation of the similar story in Mark 14:3–9 (and/or its parallels) and Luke 7:36–50. Jesus' identification with the "good shepherd" (10:11) and "the vine" (15:1) are sometimes seen in relation to the synoptic parables of the shepherd (e.g., Matt 18:10–14) and the vineyard (Matt 20:1–16).

These similarities provide evidence of a literary relationship of some kind among John and the synoptics. But the distinctive features of the Fourth Gospel pose a difficulty for evidencing such a relationship (cf. B.2 above). Those distinctive features demonstrate that, if there was a literary use of one or more of the Synoptic Gospels in the composition of the Fourth Gospel, the synoptic presentations have undergone drastic and thorough transformation in John. The distinctiveness of John does not in itself prove that the fourth evangelist wrote independently of the Synoptic Gospels. It does, however, demand an explanation from one who would argue that the fourth evangelist was indebted to one or more of the synoptics.

Those who argue for one or more of the synoptics as a source(s) employed by the fourth evangelist draw attention to the similarities between John and the first three gospels and emphasize that the fourth evangelist transformed the material at his disposal in the process of composition. Those who deny such a view contend that the distinctiveness of the Fourth Gospel is better explained by a theory of independence from the synoptics. They attribute the similarities to common traditions residing behind the literary forms of all of the gospels.

The debate over the question of the fourth evangelist's knowledge and use of one or more of the Synoptic Gospels as a source has swung back and forth. Within the period of modern critical scholarship consensus has moved from an assumption that the fourth evangelist knew and used the synoptics in the composition process to a widespread view that such was not the case. Most recently the discussion has become more heated with a significant number of scholars once again advancing the hypothesis that the relationship between John and the synoptics is best explained by reference to some form of literary dependence. Their argument has been strengthened by some success in showing that the incidents of contact between John and one or more of the synoptics are precisely at the points at which critics have been able to demonstrate evidence of

redactional themes in the synoptics. If the synoptic passage can be shown to reflect the peculiar redactional features of the evangelist, its presence in John cannot be explained as having been founded on common preliterary tradition. Efforts in accomplishing this complicated task have been, at this stage, only partially successful.

Until some greater degree of evidence of the presence of synoptic redactional features in John is forthcoming, the issue remains at a stalemate. Most of the parallels between Johannine and synoptic passages can be explained equally well by appeal to literary dependence or to common preliterary tradition. The decision hinges on the intrinsic appeal of one theory or the other and how well the theory coheres with other views one holds of the Fourth Gospel and its origin.

2. Source Theories. Other sources for the composition of the gospel in addition to or instead of the Synoptic Gospels are sometimes proposed. Most frequently it is those who hold that the fourth evangelist did not use the synoptics in the writing of the gospel who are interested in proposing other sources. This group is concerned to understand the nature of the tradition which rests behind the gospel, since it is often their view that it was in the development of that tradition that the similarities and differences between John and the synoptics were shaped. There is considerable consensus today that the fourth evangelist employed tradition in the production of the gospel, but beyond that general agreement there is little in common among the various views proposed.

Some would contend that any source analysis of the gospel is, however, impossible. This is so, they maintain, because of the peculiar nature of the Fourth Gospel. First, apart from those passages in which there seems to be some contact with synoptic passages, the source critic has nothing with which to compare the Johannine material. The source analysis of the Synoptic Gospels has been fruitful because a source methodology could work with the comparison of the three synoptics. Such is not the case with the Fourth Gospel, leaving the source critic without a fundamental basis for a credible method. Second, it is observed that, whatever sources the fourth evangelist used, the content of those sources has been thoroughly integrated with the Johannine literary style and theological perspective. The effect is that the evangelist has concealed the sources within the document, thus making it impossible to detect their influence upon the work.

Finally, there is no accepted method for source analysis of the Fourth Gospel. It is the method for detecting evidence of the use of sources which is crucial for the defense of any source analysis of the Fourth Gospel. What shall count as evidence that a source was employed in the composition of any given passage?

The criteria for source detection are usually of four kinds. First, stylistic features figure prominently in some methods. Variations from what is taken to be the general style of the gospel may signal the intrustion of source material (e.g., the use of different words for "boat" in 6:17 and 6:22). Once a source has been reconstructed, it is necessary to show that it has some stylistic unity. Second, *aporia* ("a difficulty") in the text may be an indication of the use of a source. That is, when there seems to be a break in the flow of the narrative or discourse, it may be due to the inclusion of a source. A classic example is 14:31, followed as it is by two additional chaps. of discourse. Third, form criticism has been invoked as a means of identifying sources. This method calls for the establishment, first, of the normative Johannine forms (e.g., the long narrative followed by a discourse in which the narrative is interpreted) and, second, the identification of passages which depart from those normal forms (e.g., the short healing narratives such as 4:46–53). The variant forms, it is argued, were drawn from a source. Finally, content or ideological tension may be taken as evidence of the use of a source. When a passage expresses an idea which contradicts another idea widely expressed in the gospel, one might assume that this passage has been included in the gospel from a source which taught a view different from the one advocated by the evangelist. A proposed example of such is in the positive view of signs expressed in 2:11 contrasted with 20:29. There is, unfortunately, no agreement on the relative validity of these criteria, and they are used in varying degrees and roles in source analyses.

It is seldom denied, however, that behind the Fourth Gospel resides an *oral* tradition which was rooted in pre-Johannine Christian history and then preserved and shaped by the Johannine community itself. Those not inclined to find evidence of a literary dependence on the Synoptic Gospels would contend that the synoptic contacts in the Fourth Gospel are due to the roots of the Johannine tradition in a common Christian tradition. In the process of the preservation and nurturing of that tradition, the Johannine community gave the Jesus material a peculiar interpretation and translated it into its own unique imagery and language. Thus, for instance, the saying attributed to Jesus in 12:25 demonstrates by its similarity with Mark 8:35 (and parallels) its basis in a common tradition shared by both the synoptic and Johannine communities. But the peculiar language (e.g., "loves-hates") and concepts (e.g., "world" and "eternal life") of 12:25 reflect the manner in which the saying has been preserved within the Johannine thought world.

It is sometimes argued that the fourth evangelist wrote the gospel directly from such oral tradition. Thus the author gave literary expression for the 1st time to a tradition that had before been only oral. But it might also be the case that the Johannine oral tradition had taken various written forms before the composition of the Fourth Gospel, and the evangelist may have used those written pieces in the production of the gospel along with oral traditions. Whether or not evidence of such written sources can be discerned in the gospel is a debated point.

The most widely held proposal for a literary source is that of a *signs source*. A number of things in the gospel contribute to the effort to reconstruct such a source: The presence of the series of wonder stories in the narrative, the unique use of the word, *sēmeia* ("signs"), to designate such wonders, the numbering of the signs in 2:11 and 4:54, and the reference to signs in the conclusion of the gospel. It is further proposed that the delicate and complicated attitude toward the role of signs in nurturing faith found throughout the gospel is explained by the fact that the evangelist was using a collection of wonder stories which purported a view of signs about which there was

some reservation on the part of the author of the gospel. What is proposed is that there was a collection of the wonders of Jesus circulating within the Johannine community prior to the writing of the gospel. That collection was absorbed in part into the content of the gospel. Efforts to reconstruct such a signs source from the gospel vary. At one extreme is the argument that it contained not only the wonders narrated in the gospel, but also the calling of the disciples in 1:19–51 and a passion story. At the other extreme is the suggestion that the collection was little more than seven wonder stories told consecutively. Some such thesis is embraced by a large number of Johannine scholars, but by no means has agreement been reached on such a proposal. See also SIGNS/SEMEIA SOURCE.

A second hypothesis is that a *saying source* was employed by the fourth evangelist. However, discourse has proven to be even more difficult for the source critic than narrative material. This is due, in large part, to the homogeneous style and content of the discourses. Still, at least two efforts are worthy of mention here. The first is Rudolf Bultmann's famous "Revelation Discourses" hypothesis in which he argued that the fourth evangelist employed a collection of sayings which originated in a pre-Christian gnostic community. The second is a less developed theory which argues that the discourses in part stem from homilies originating in the Johannine community which were collected and then incorporated into the gospel. One clue to such homilies in the Johannine discourses has been their midrashic quality, that is, the way in which they often elucidated an OT passage (e.g. 6:25–59). The effort to delineate a sayings source has not only been difficult; it has been rare. When it has been undertaken, it has been met with little scholarly acceptance.

Finally, many would agree that, if the evangelist was not dependent upon the Synoptic Gospels, the passion narrative reflects the influence of a source. Efforts to reconstruct such a *passion source* are seldom attempted. It is, nonetheless, widely assumed that some such source of a passion narrative was at the evangelist's disposal.

In general it must be concluded that the source analysis of the Fourth Gospel has been unsuccessful in delineating clear blocks of material which have been incorporated into the gospel from earlier documents. The enterprise has failed to influence scholarly treatment of the gospel in any comprehensive way.

3. Theories of Composition and Redaction. The solution to the difficulties of the Fourth Gospel may reside less in the question of the sources employed by the fourth evangelist than in the process by which the document was composed. Those difficulties often cited by source critics as the criteria for the isolation and reconstruction of the sources adapted by the author may better be explained by the process by which the gospel was written. What is proposed is that the gospel was not written in its entirety by its author in one single, short period of time. Rather, it is the result of a process which may have involved several editions of the gospel, plus revision at the hand of still another or several authors. Such "developmental" theories of composition have become widely discussed and embraced in scholarly circles.

For purposes of summary it may be said that these theories of composition fall into two types. The first emphasizes that the composition process involved a number of stages in which the gospel was gradually expanded into its present form. The earliest stage might have entailed the production of a "pre-gospel" out of oral tradition (and perhaps on the basis of some early literary source). That pre-gospel was then edited and expanded on a number of occasions until it reached a completed form. Often it is argued that there is no reason to think that a single author was not responsible for this whole of the process. The completed gospel then underwent some final revisions, most likely at the hand of another author (the redactor).

Less influential has been the proposals which suggest that the process involved a "basic gospel" which has been revised a number of times. The "basic gospel" hypothesis imagines a less evolutionary emergence of the present gospel and is less inclined to attribute so much of the process to a single author. A foundational and complete gospel was produced. That document was then radically revised once or twice at the hands of several persons and finally (perhaps) revised in minor ways to produce the present gospel. It is usually argued that the extensive revisions involved reordering of the basic gospel. For instance, the narrative of the cleansing of the Temple was placed toward the close of the ministry of Jesus in the basic gospel and moved in one of the subsequent revisions; and the three Passover structures of the present gospel were imposed upon the basic gospel in a later revision.

It is generally recognized that some revision-redaction of the gospel did take place, regardless of how one views the process of composition. Chap. 21 is almost universally acknowledged as a later addition to the gospel which ended at 20:31. Such testimony to the work of a redactor has encouraged scholars to look for redaction elsewhere in the gospel. Some understand that the completed gospel underwent extensive redaction with numerous additions, others that the final redaction was minimal (e.g., only the addition of chap. 21). The passages which seem to address the sacraments are sometimes thought to be redactional. Some maintain that "water and" in 3:5 and the discourse in 6:51–59 are insertions of a later hand by one interested in strengthening the explicit sacramental teachings of the gospel. It has been recently argued that portions of chaps. 13–17 come from a redactor at the time of the writing of the Johannine epistles some ten years or more after the completion of the gospel. While it has often been maintained that the prologue in 1:1–18 was a hymn incorporated into the gospel, it has also been argued that this passage was added to the gospel after its completion.

While none of these theories—a literary dependence upon one or more of the Synoptic Gospels, the use of other sources, or the process of composition—adequately solves all of the problems posed by the Fourth Gospel, they each make contributions toward a better way of reading the document. While often these three distinct approaches to the composition of the gospel are set in opposition to each other, there is no reason to view them as exclusive of one another. That is to say that the author of the gospel may have used one or more of the synoptics along with other sources in a lengthy process of composition.

G. Theology

The theological nature of the Fourth Gospel has long been recognized. It is clear that the fourth evangelist was

concerned to nurture the readers through the explication of a number of theological themes important to the Johannine community. It is clear, too, that the evangelist possessed a certain theological acumen. Therefore, the analysis of the gospel in terms of its religious teachings has persistently been one of the major efforts of the scholarly enterprise.

But it has not been an easy task, for the gospel evades systematic and clear elucidation. Among the significant tasks for the theological critic are these: First, some religious-philosophical setting must be established for the concepts used in the gospel. This has not been easy, and efforts to focus the religious background of the thought of the gospel have run the gamut of the options in the 1st century Greco-Roman world. Increasingly, however, a strong case has emerged for looking first of all to the Hebraic tradition and Judaism for the conceptuality which most influenced the fourth evangelist. Second, the theological critic must employ conceptual patterns which convey the thought of the author without doing violence to them. In particular this has involved the task of suspending, insofar as possible, modern conceptuality to allow the concepts of the gospel to speak for themselves. Third, the theological critic must come to grips with the conceptual tensions (or "paradoxes") expressed in the gospel and try to understand the theological method of a writer who employed such tensions. Fourth, the theological critic must contend with the fact that theological themes are hopelessly intertwined with one another in the Fourth Gospel, so that it is nearly impossible to isolate one theme for elucidation without thereby being forced to treat a number of related themes.

Notwithstanding such difficulties in the task, there is much to be learned from John with regard to the view of one segment of early Christianity.

1. Christ. At the heart of the theological concern of the fourth evangelist stands a view of Christ and everything else seems inseparably tied into that view. But typical of the mind(s) represented in the gospel that the singularly significant view is marvelously complex and is comprised of a series of motifs. The gospel explores a variety of images as means of expressing the relationship between Jesus and God and between Jesus and humanity.

While one may be suspicious that any distinction between "person" (or "nature") and "function" (or "work") is a modern and not a Johannine one, it appears to be the case that the evangelist strove to articulate the unique function and identity of Jesus. The gospel accomplishes this task by means of a number of images used of Christ.

a. God and the Word of God. Among the images employed to express the identity of Jesus are two which make the bold assertion that Jesus is God. The first of these is the use of the title, *logos* (Word), for Jesus in 1:1–18. The search for the religious and philosophical background out of which this title was drawn has led only to the recognition of the enormous breadth of meaning the word carried in 1st century Greek. It had associations with the creative and prophetic work of God in the OT and had become identified with both Torah and Wisdom in Jewish thought. Among Hellenists the word had a philosophical heritage which equated it, among other things, with the rational center of being itself. Very likely the word was chosen for its wide meaning, encompassing as it did both Hellenistic and Hebraic shades of meaning. Typical of the evangelist's love of words with multiple meanings, it engages the reader—regardless of his or her background—on the very first page of the gospel. It is clear, however, that the evangelist meant to claim that Jesus was the self-expression of God—the revealed, public side of the divine being. By claiming that Jesus is the Word of God the author supposes that Jesus is the divine medium of communication with humanity.

The Word is said both to be God and to be with *(pros)* God (1:1). The language suggests both identification with God and distinctive individuality—a paradoxical relationship typical of Johannine christological reflection. The existence of the Word precedes creation, and it is through the Word that creation is accomplished (1:2–3). The Word, therefore, is the "life" and "light" of humanity, i.e., the source of authentic and meaningful existence. Through the Word God sought to restore the divine human relationship, empowering humans to become "children of God," although such efforts were rejected (1:10–12). In Jesus the Word became incarnate and manifested the identity and nature of God (1:14).

As the prologue began with the assertion that Jesus (the Word) is God, so it would appear to end. 1:18 is marred by a textual problem but may have originally spoken of Jesus as the "only God" *(monogenēs theos)*. As the gospel began with the assertion that Jesus is God, so the gospel concludes with the confession of Thomas, "My Lord and my God" (20:28). Thus by identifying Jesus with the Word and attributing to him the title, God, the fourth evangelist boldly claims the divine identity of the central figure of the gospel. This is reinforced by the fact that Jesus is made to claim that to know and to see him is to know and see the Father (8:19; 14:9), a further articulation of 1:18.

Several additional suggestions have been offered with regard to the meaning of the confession, "Lord and God," in 20:28. The first is that the two titles encompass both the common name for the deity in Hellenistic and Jewish thought of the 1st century. Consequently, Thomas' confession makes a universal claim for the divinity of Christ. The second suggestion is that in Hellenistic Judaism the title, God, represented the creative power of the deity, and the title, Lord, the eschatological power of the deity. Thus, Thomas' confession is understood to attribute the two definitive divine powers to Christ.

It should be noted that pre-existence is claimed for Jesus in 17:24 as well as 1:1. (8:58 may also imply such a view.) While such a claim is not unique to the Fourth Gospel (cf., e.g., Col 1:15–16), nowhere else is it accompanied with such a clear identification of Christ with God.

This high and unequaled NT assertion regarding Jesus demonstrates the author's concern to say that Jesus is the one in whom humans encounter the true revelation of God. That concern is manifested in the other images used of Jesus. But associated with it is the necessity to claim that Jesus is related to the One he reveals. In this case, the claim is made that he is fully identified with the God whom he reveals.

b. The "I Am". Another image of Jesus, equally bold, may also address the concern to proclaim Jesus' identification with the One he reveals. One of the unique features

of the gospel is the frequent appearance of the emphatic "I am" *(egō eimi)* on the lips of Jesus. These are of three types. The first is the formula with a predicate (e.g., 11:25). Although this formula has been discussed in terms of a peculiar revelatory expression of a revealer god, it may be explained as a simple emphatic assertion. The second appearance of the formula is with an implied predicate (e.g., 6:20). But it is the third type which is most provocative. It is the use of the absolute "I am" without either an explicit or implicit predicate. Such expressions occur at least four times (8:24, 28, 58; 13:19).

There is common agreement that the use of the bare "I am" suggests at least a claim for divine authority, if not divine identity. There is less agreement as to the religious setting from which such a formula was drawn. The Hermetic writings, for instance, provide ample evidence of the propensity for the god to speak with the "I am" expression. Still, evidence for the absolute use of the formula is not readily found in Hellenistic literature. It seems clear that the usage is drawn from the OT tradition and suggests the sacred name of God in Exod 3:14. The LXX employs the "I am" in Isa 41:4; 43:10; 46:4 in rendering the speech of Yahweh.

The absolute formula implies Jesus' self-claim of divine identity and authority. This is borne out in a number of passages in the gospel. With the utterance of the *egō eimi* in 6:20 the boat wondrously reaches land immediately. In 8:58 the expression evokes the effort to stone Jesus. In the story of the arrest of Jesus the simple, "I am," in reply to the guards' inquiry causes them to fall back upon the ground (18:6). Such a use of the absolute formula suggests that the formula accompanied with a predicate is no less a revelatory expression.

The sacred name for God is placed on the lips of Jesus as a means by which the evangelist claims divine status for the main character of the story. In effect, the evangelist has employed another means of suggesting the divine identity and function of Jesus.

c. Son Titles. One of the most frequent titles for Jesus in the Gospel of John is "son." "The Son" is used seventeen times. "Son of man" is found thirteen times; "Son of God" eight times; "only Son" three times; and "only Son of God" once. It is clear that the son titles represented an important image in the thought of the fourth evangelist and one by which special claims for the identity and function of Jesus are made.

The simple title, "son," suggests an intimate relationship between God and Christ. It is said that the Father loves the Son (3:35), gives him authority (17:2), and bestows on him the power of judgment (5:22, 27). The Son does nothing on his own but only imitates the Father (6:38) and teaches only what has been given to him to say (8:28, 40; 12:49–50; 17:8, 14, 16–18). While the Father and the Son are said to be one (10:30; 17:11, 22), the Son is dependent on the Father (5:30, 36) and obeys the Father (8:25; 10:15; 15:10, 15). The Father is greater than the Son (14:28). Significantly, it is claimed that a response to the Son constitutes a response to God (3:18; 12:47–48). Divine functions are assigned to the Son, e.g., to bestow life and eternal life (6:44; 3:36).

As if to underline the uniqueness of the relationship implied in sonship, the evangelist four times uses the expression, "only" *(monogenēs)* to modify a son title (1:14; 3:16, 18; and possibly 1:18). This would seem to guard against any tendency to reduce the significance of the title to that which might be claimed by a human who stands in relationship with God as a "son".

Whether the son title was intended to suggest function exclusively is frequently debated. It is clear that, as the Father's Son, Jesus is given functions preserved elsewhere for God only (e.g., judgment, 8:16, resurrection of the dead, 6:39–40, and bestowal of life, 10:28; 11:25–26). But function here seems to make a correlative claim for divine identity. The son title connotes a unique bond of both identity and function between Jesus and God.

The titles, Son and only Son, are unique to the Fourth Gospel and its christology (cf., however, Matt 11:27). But the evangelist also employs the two more traditional son titles, "Son of man" and "Son of God". The first is used in two associations it has in the Synoptic Gospels, namely, with the cross and eschatological themes. The Johannine Son of man appears in conjunction with the expressions "lifted up" (3:14; 8:28; 12:34), "glorified" (12:23, 34; 13:31, 32), and "ascending" (3:13; 6:62)—all Johannine articulations of the meaning of the cross (cf. 2 below). 1:51 is still another use of the Son of man title which some argue is associated with the cross. The evangelist also uses the title to speak of the benefits of the crucifixion (6:27, 53). But it further appears in conjunction with judgment, which is said to be both present (9:39) and at the end of the age (5:27).

The less frequent title, Son of God, appears most often in its traditional role as a messianic designation (1:34, 49; 10:36; 11:27; 19:7; 20:31). It is likewise used in connection with eschatological themes, namely, judgment (3:18) and resurrection (5:25).

It is clear that the evangelist has employed the "Son of man" and "Son of God" titles from Christian tradition, but modified them in accord with the peculiar Johannine perspective. The traditional use of the "Son of man" title in association with the cross and eschatology is preserved but not without the special Johannine view of the two themes. The "Son of God" title is continued as a messianic claim but is set within the context of the Johannine understanding of what he is and does (e.g., he bestows "life," 20:31).

Most significantly the evangelist and/or the community fashioned the titles, Son and only Son, as a means to express all that was preserved in the two older son titles and perhaps even more. Through their unique son titles they sought to explore the relationship between Christ and God and to bring to a bolder and more radical affirmation the claim of absolute identity between the two without sacrificing the unique individuality of each.

d. The One Sent. Perhaps the most prominent of the images employed for Jesus in the gospel is that of one who has been sent (e.g., 5:24, 30; 10:36; 11:42; 12:44–45; 17:8; 20:21). The verbs employed in these statements alternate between *apostellō* and *pempō*. Efforts to discern some nuance of difference between the meaning of the two verbs with regard to the sending of Jesus have been attempted but with little success. It appears, rather, that the evangelist varies the verb as a means of stylistic richness and nothing more.

Christ here is conceived of as a special envoy of God

within the conceptuality of the 1st century Greco-Roman world. It has been suggested that the formula of being a "sent one" is investiture language whereby the envoy was given the authority of the sender and should, therefore, be accorded the same dignity as the sender. But the language also recalls the ancient Hebraic notion of the prophet of God, sent with the "Word of the Lord".

The result of this sort of language is to say once again that a response to Christ constitutes a response to God, which is perhaps the central theme of Jesus christological thought. It suggests that Jesus is one given a divine commission and standing in a special relationship with the divine Sender. Above all, however, it constitutes the christological credentials of the Johannine Jesus—his mission from the Father is what validates his claims (17:21).

e. Origin and Destiny. Being sent connotes origin and that image is tied with the picture of the Johannine Jesus as one who has come into this world from another realm and will eventually depart again to return to his original home. This picture is comprised of a number of metaphors for the origin and destiny of Jesus.

Jesus does not belong to this world but to some heavenly realm (8:23; 17:16; 18:36). He is then from "above" (*anō,* 8:23; *epanō,* 3:31), as opposed to others who are from "below" *(katō).* Jesus' origin is unknown to those who do not believe and is crucial knowledge for a proper understanding of his identity (8:14).

So Jesus is said to have descended (*katabainō,* 3:13; 6:33, 38, 41, 42, 50, 51, 58) and will once again ascend (*anabainō,* 3:13; 6:62; 20:17). The same language of movement is used of Jesus' return to the Father—he is said "to go away" (*hypagō,* 7:33; 8:14, 21, 22; 13:3, 33, 36; 14:4, 5; 16:5, 10, 17). The metaphor uses space to speak of the unique origin and destiny of Jesus.

Such images of the origin and destiny of Jesus fit the christology of the gospel within the dualistic structure of the evangelist's thought (cf. 3 below) and present Jesus as a "foreigner" in this worldly realm. As such Jesus is portrayed as one who comes from the divine into the human realm there to reveal that which humans must know about God and themselves to live an authentic life as it was intended by the Creator. This image seems to say in different words what is suggested by the image of Jesus as God's special envoy.

Through use of these five images, along with less frequent ones, the fourth evangelist has attempted to structure a claim for the absolute uniqueness of Jesus. Jesus is, above all, one who reveals God and the salvific intent of God. But such a revelation is possible only for one who participates in a special relationship with God. That relationship, the evangelist claims, is of a such a kind that Christ may be given the titles and functions of divinity.

But we miss the point of Johannine christology if we fail to see the evangelist's purpose is this portrayal. It is not simply to present a case for the divinity of Christ. That may have been one of the issues pressed upon the Johannine Christians by the dialogue with the synagogue. The purpose of the evangelist was not without an apologetic dimension. But it is the kerygmatic dimension which surfaces as central. The evangelist wants to say through the christological images that it is alone in the revelation of God in Christ that humans gain access to the benefits of a proper relationship with their Creator. The purpose of the christology of the gospel is to say that one's relationship with Christ is determinative of one's relationship with God. That kerygmatic purpose, too, has its roots in the relationship of the Johannine community with the synagogue, for it is the Christians' affirmation of Christ which gives them their essential identity over against their Jewish opponents.

2. The Cross. Soteriology is hardly separable from christology in the Fourth Gospel, since it is the view of Christ as the revealer of the Father which constitutes the salvific opportunity for humanity. Revelation comprises the central soteriological theme. The revelation is in itself saving (e.g., 14:7). But at the heart of the revelation is the cross and resurrection, and the Johannine view of the cross is like none other in the NT. Through a variety of themes the evangelist describes of the meaning of Jesus' death.

a. Enthronement. The cross is viewed in the Fourth Gospel as the enthronement of Jesus as king. This is evident in a number of ways. First, the expression, "lifted up" *(hypsoō)* is used four times to refer to the crucifixion (3:14; 8:28; 12:32, 34). These passages have been said to function in a manner similar to the three passion predictions of the synoptic tradition (e.g., Mark 8:31; 9:12; 10:33–34). As noted above (C.4), the Greek verb was used of both the lifting up of one on a cross and the enthronement of a royal figure. With this verb the evangelist expresses the enigma of the cross—it is both a scandalous death and the act by which Christ assumes his rightful position as king of humanity.

Second, the enthronement motif is expressed in the ironic title placed on the cross by Pilate, "Jesus of Nazareth, the King of the Jews" (19:19), as well as by the discussion of kingship in the trial of Jesus before Pilate. It is in that discussion that the essential question emerges—is it Caesar or Christ who is the authentic king (18:33; 19:15)? There, too, the true nature of Christ's kingship is articulated (18:36).

Third, it is the kingly posture of Jesus throughout the trial and crucifixion which underlines the meaning of the cross as an enthronement. Jesus is never really a victim throughout this ordeal but is always in control of the situation. He allows himself to be arrested (18:1–11) and is able to alter the course of events should he choose to do so (19:11). His death is a voluntary act in which he hands over his spirit (19:30). He is buried in a virgin tomb, as a king would be buried (19:41).

It is in the cross, then, that the true identity of Jesus is declared, as he is elevated to his status as the rightful ruler of creation.

b. Glorification and Ascension. The fourth evangelist understands the cross as a "glorification" of Jesus—the act by which divine presence is poured out upon Jesus. "Glory" *(doxa)* in Johannine theology seems to mean the revelation of God's presence. In Christ the divine reality is perceived through the eyes of faith (1:14; 2:11). "Glorification," therefore, is the manifestation of that divine presence.

Jesus is made to speak of the cross as his glorification (e.g., 12:23; 17:1, 5). The evangelist uses the expression almost as a synonym for crucifixion (e.g., 7:39; 12:16). The glorification of Christ is the glorification of God (13:31–32; 17:1). Consequently, as the cross reveals the

true identity of Son, it reveals the presence and identity of the Father. It is in the cross that God makes the divine presence known to the world. This is to say that the cross is salvific in that the cross is the revelation of God.

Closely aligned with the theme of glorification is that of ascension. The cross is viewed as part of the process by which Jesus returns to his divine origin. It is closely tied to the resurrection as a part of the ascending process, since Jesus ascends to his Father in the act of rising from the dead after having laid down his life (20:17). The cross and the resurrection are the means by which Jesus departs ("goes away," *hypagō,* 16:7). It is the completion of the sojourn of the revealer of God in this human realm (19:30).

It is evident that the evangelist saw the crucifixion, resurrection, and ascension as a single event in which time distinctions were transcended. Consequently, the cross is not viewed as the tragedy overcome in the resurrection, as much as it is taken to be the first stage of a revelatory occurrence. The cross cannot be separated from the resurrection, nor the resurrection from the cross. Both are dimensions of the manifestation of the divine presence in connection with the person and ministry of Jesus.

Again, the ascension-return theme is understood as revelation of God, and revelation is understood to have salvific effect.

c. The New Passover. The Passover pervades the entirety of the ministry of Jesus (2:13; 6:4; 11:55). The fourth evangelist obviously wanted to set the Christ event within the framework of the Exodus-Passover theme (cf., 6:1–59). In the passion story this is equally clear. Jesus is made to die at the very time the lambs are being slaughtered in preparation for the Passover meal that same evening (19:14—cf. B.2 above). The symbolism suggests that Christ is to be viewed as the new Passover lamb by which God liberates humanity from oppression, just as Israel was freed from slavery in Egypt with the first Passover. The point would seem to be that the cross is the revelation of God which unleashes a power to free humans from oppressive forces which hamper their being children of God (1:12). The title, "lamb of God," in 1:29 and 36 may mean the Passover lamb, although it has also been understood to refer to the sacrificial lamb or the apocalyptic lamb of Revelation.

This poses the question of whether one is to find in the Fourth Gospel the understanding of the cross as cultic sacrifice, as this is expressed, for instance, in 1 John 2:2. While Jesus' death is clearly viewed as an act of sacrifice (e.g., 15:13), the effort to explicate this theme in terms of analogies drawn from sacrificial cultic worship are notably absent. That the killing of the lambs for the Passover meal was regarded as a sacrifice by 1st century Judaism is uncertain. The lamb of God is said to "take away the sins of the world" (1:29), and that may be the one clear fragment of a cultic analogy for the death of Jesus to be found in the gospel. However, given the meaning of the passion narrative, it is safer to assume that the evangelist understood Jesus as the Passover lamb who removed sin by virtue of the revelation that frees humans from sin.

d. The Supreme Act of Divine Love. Jesus interprets his death as the supreme act of love (15:13)—an act which transforms the relationship of the believers to him from that of servants to "friends". The cross, therefore, emerges as the model of divine love.

Recognizing the cross as the revelation of God's love for humanity sheds light upon five other significant passages. First, the cross is spoken of as the divine "drawing" *(helkō)* of humans to God (12:32). If the cross is the supreme act of divine love, the drawing power is the power of love. Second, the cross is presented in parabolic form in 12:24. It is a death which yields results, as the planting of a seed produces growth. The death of Jesus is understood as the sprouting of divine love—the revelation of that love which saves humans from their predicament.

Third, the cross is presented in an acted parable in the foot washing. The washing of the disciples' feet is interpreted as a cleansing. The cleansing is a washing in the love mentioned in 3:16. Fourth, in 11:50 the cross is declared to be the death of one person on behalf of the whole people. It is an act of self-giving love for the sake of the results it yields for others.

Finally, the cross creates a new family of God (19:26–27). This is an often debated passage, but the proposal is that it be seen as the closure of the theme introduced in 1:12. By the cross the believers, represented by the beloved disciple, are brought into Jesus' family, represented by the mother of Jesus. It is an expression of love which draws humans together into a new family grouping (cf. 11:52).

Again, the meaning of the cross is found in its revelatory character. As it reveals the love of God for humans, it saves them from life in alienated lovelessness.

3. Dualism. The readers of the Fourth Gospel are made to feel that they stand in the midst of a divided reality. The entire thought of the gospel is framed within the bounds of a dualism between that which represents authentic life in relationship with God and that which represents inauthentic life without relationship with God.

The dualism is presented in the gospel with a series of symbolic polarities: Light and darkness (e.g., 1:5), above and below (e.g., 8:23), life and death (e.g., 3:36), truth and falsehood or lie (e.g., 8:44–45), heaven and earth (e.g., 3:31), God and the devil (8:42–44). In every case Christ is the representative of the positive pole, and believers are aligned with that pole. Opponents are, on the other hand, affiliated with the negative pole—that which opposes God, Christ, and the believer.

Two other dualistic symbols dominate the gospel. The first is the pejorative use of the word, "world" *(kosmos).* In some cases, the world is used in a neutral sense to describe the realm of human life and activity (e.g., 1:9; 16:21). But more often the word seems to stand for the realm of evil set over against the revelation. The world hates the believer but embraces the unbeliever (7:7; 15:18). Christ and the believers are not of the world, while unbelievers are (8:23; 15:19; 17:14). The "ruler" of the world is the satanic figure (12:31; 14:30). The world cannot receive the Spirit (14:17) and rejoices in Jesus' suffering (16:20). The world produces tribulation for the believers (16:33).

It is obvious that "world" is sometimes used to represent one of the negative poles of the Johannine dualism as a cipher for that which is opposed to Christ and the revelation.

Another dualistic symbol employed by the evangelist is the negative references to "the Jews". There is a variety of

uses of this term in the gospel, to be sure. In some cases it is used in a purely descriptive sense of the Jewish people and their heritage (e.g., 4:22). Other times it is used of a crowd of people, and there seems to be no negative flavor to the expression (e.g., 11:19). The Jews are sometimes said to be among those who believe in Jesus (e.g., 8:31).

But more often the term designates opponents of Jesus who are hostile to him and his message. Examples include 5:16, 18; 6:41; 7:1; 9:18, 22; 10:31; 11:8; 18:12; 19:14–15. Many efforts have been made to explain these pejorative uses of the expression. It has been proposed that "the Jews" means Judeans, as opposed to Galileans, and that sometimes does appear to be the case (e.g., 11:19). It is also clear that the term functions to designate the religious leaders, so that it may be used interchangeably with "the Pharisees" (e.g., 9:13 and 18) and the "chief priests" (19:14 and 15). But often "the Jews" stands for those who are unbelievers, hostile to Jesus and the revelation.

What is the reason for this dualistic scheme? It is one of the features of Johannine theology best understood in terms of the setting of the gospel (cf. D.2 above). The Johannine community expelled from the synagogue has a sense of themselves as an enclave of believers in a hostile world. The mentality has been described as "sectarian," meaning that they conceived of themselves as the possessors of the truth while all those around them live in error. Because of this dualistic social reality, the community imposed such a dualistic scheme upon the cosmos. They experienced their own fellowship as "light" over against the "darkness" of unbelief, and hence understood the whole of reality in this manner. The pejorative use of the term "the world" reflects their sense that the majority in their environment were hostile to them and their beliefs. Because their primary opponents were the Jews of the synagogue, the major opponents of Jesus are spoken of as "the Jews". It is clear that the evangelist had no interest in condemning the Jewish people as a whole and that the pejorative use of "the Jews" only reflects the concrete situation in which the community lived.

The degree to which the evangelist understood this dualism as cosmic is often discussed. In some sense it is surely the case that the whole of reality was conceived of as divided between truth and falsehood. But more important is the fact that the dualism of the gospel presents the readers with two alternatives by which they may live their lives—by faith or by unbelief. The primary function of the dualism is then "existential". That is to say, the impact of the dualistic language is to lead the readers to the point of decision with regard to Christ, i.e., the revelation. By the use of this scheme the evangelist wanted to reinforce the community in their unpopular stand in favor of Christ. But it is their faith in particular which marks them off from the others in their community.

4. Faith. It is through the acceptance of Christ and the revelation that one affiliates with the realm of the "light," "truth," and the "world above". It is by faith that persons move from out of the "world" to become part of the community of God's children. Faith is, then, the positive human response to the revelatory act of God in Christ. It is the personal appropriation of the revelation and its benefits.

The object of the verb "believe" *(pisteuein)* is almost without exception Jesus (cf. 14:1 for a rare exception). The most common constructions with the verb are three in number. The most frequent is "believe in," using the preposition *eis* (e.g. 1:12; 3:18; 12:46). This construction seems to denote a personal allegiance to Jesus. The second construction is the verb with Jesus or his words and works as objects (e.g., 2:22; 4:21; 8:46; 10:37–38; 14:11). Simple trust of Jesus and his message is suggested by this use of the verb. Something quite different is implied by the third construction, the use of the verb with "that" *(hoti)*. In this case, belief has as its object a statement about Jesus (e.g., 8:24; 14:10; 16:30; 17:8).

So, faith is a personal alignment of oneself with Jesus and entrusting him with confidence. But it is also a willingness to accept certain doctrinal statements about Jesus' identity and mission. For the evangelist all of this was part of the process of the faith acceptance of the revelation. It is instructive that for the Johannine community the personal trust of Jesus could not be separated from, but flowed into, the acceptance of creedal statements concerning him. In the Fourth Gospel one witnesses the movement of the understanding of faith toward an intellectual consent to certain propositions about Jesus.

The basis or ground of faith in the Fourth Gospel varies as well. In some cases it is the words of Jesus which become the foundation of faith (e.g., 4:50), in others the works of Jesus (e.g., 10:38; 14:11). Somewhat confusing is the role of the signs as the basis of faith. In a number of passages it is affirmed that the signs do evoke faith and that they are intended to do so (e.g., 2:11, 23; 6:26; 20:30–31). Elsewhere the impression is given that signs are less than a desirable basis of faith (e.g., 4:48; 6:14–15, 30; 10:41). 20:29 may be a clue to the Johannine understanding of signs in relation to faith. Faith is nurtured by the experience of signs and wonders, but the most mature faith does not depend upon "seeing signs" or marvels (cf. 14:11).

Believing is connected with "seeing" and "hearing" Jesus. To "see" Jesus holds within itself the possibility of seeing God (14:8–9), and to "hear" him is an invitation to hear the Father (5:24). By this association it is suggested that faith involves a willingness to perceive beyond the historical Jesus the One whom he reveals. Likewise, faith is associated with knowing (e.g., 8:31–32; 10:38; 6:69; 17:8). Faith as trust involves the intimate relationship between persons and Jesus implied in the Hebraic sense of "know" *(yāda^{c})* and produces a certain confidence in the believer.

The noun, faith *(pistis)*, never appears in the Fourth Gospel but the verb always does. This suggests the dynamic character of the act of believing, as the evangelist understood it. Faith is conceived not as a static possession but as a process of trust.

One further characteristic of faith in the Fourth Gospel is on the surface confusing. The evangelist alternates between speaking of faith as if it were an act for which humans are responsible and as if it were a gift for which God alone is responsible. Examples of the first are found in the invitation to believe (e.g., 12:44; 19:35; 20:31) and the command to believe (12:36; 14:11). It is also expressed in the narrative of 6:66–69 in which the freedom to withdraw faith is presumed.

But examples of the second are numerous. Believers are those "given" *(didōmi)* to Jesus (e.g., 6:37; 17:2). They are

"drawn" *(helkō)* by the Father (6:44). Believers are determined by their affiliation—whether they are "hearers" of God (8:47), children of God or of the Devil (8:44), "sheep" of Jesus (10:3), or "of the world" (14:17). Other passages which suggest the dominant role of God in determining faith are 12:39–40 and 15:16.

This apparent contradiction is resolved in several different ways by interpreters. Some stress one or the other of the two views represented in the gospel, while others suggest that the contradictory views constitute an intentional paradox.

It may be that this is an instance of a tension between tradition and the evangelist's redaction, supposing that one view is traditional and the other redactional. Whether or not that is the case, the result is that the evangelist holds in tension two quite contradictory thoughts, namely, that humans are free either to believe or not and belief is wholly determined by God's gift of faith. The thought of the gospel balances these two truths with the result that humans are not allowed to credit their faith to their own will but still are responsible for the absence of faith. Faith is ultimately a gift of God, but it is a gift for which humans alone are responsible to accept or reject. The relationship with God offered to humans in Christ is entirely a gift for which humans can take no credit but for the rejection of which they must bear responsibility.

5. Eschatology. The classical ideological tension in the Fourth Gospel is encountered when one attempts an analysis of what the evangelist teaches with regard to the acts of God at the end time. It has long been recognized that the fourth evangelist claims that the ultimate gifts of God, usually associated with the end times of history, are already accessible to the believer in Christ. This claim is made, however, without compromising the future dimension of those gifts. In effect there are two types of eschatological thought in the Fourth Gospel.

The first is the classical futuristic eschatology in which the events of the end times are spoken of as standing out in a future time—resurrection (e.g., 6:39–40, 54), judgment (e.g., 12:48), and eternal life (e.g., 12:25). The promised return of Jesus is mentioned in 14:3, 18, 28, and the intervening time is conceived as a period of tribulation (chaps. 15 and 16) in typical eschatological fashion.

But a present, realized eschatology stands alongside of the futuristic one. Resurrection is conceived as the experience of coming to faith in Jesus (e.g., 5:24) and is a present reality in Christ (11:25–26). Judgment is a present reality for believers (e.g., 3:18), and along with it eternal life is already a possession of—and not simply a promise to—the believers (e.g., 5:24). It is implied that the parousia has occurred in the giving of the Spirit (e.g., 14:3; 16:7).

These apparently contradictory views are not found, as one might suspect, in different parts of the gospel, but rather in close proximity to one another. For instance, in 5:24–26 a present eschatology is asserted and in 5:27–29 a futuristic one. The promise of a future resurrection of the dead is declared in 6:39, 40b, 44b, and 54b; but the believer is said to already have eternal life in 6:40a, 47, 51, 54a, and 58.

Again interpreters are divided on the solution to the juxtaposing of these views. It is suggested that one was the evangelist's view and that the other was the view of a redactor. It is argued that the evangelist intended one as the primary view, and the other to be interpreted in the light of the first. The fact that the views are found side by side in the gospel suggests, however, that here again the evangelist employed a tradition which had one eschatological view and supplemented it with the other view.

It has been proposed that still a third view of eschatology may be present in chaps. 14 and 17. In the first of these chaps. the heavenly home awaiting believers is discussed. It appears to some that the evangelist has in mind the access to this heavenly abode immediately upon death (e.g., 14:3). Chap. 17 speaks of the heavenly perfection and unity the believers will be accorded (e.g., 17:11, 23). However, such an interpretation remains uncertain.

The evangelist seemed to want to say that these eschatological realities are present in the life of the believer, although there is still a future and unfulfilled quality to them. The result of the evangelist's view is that believers are invited to turn their attention from the future to appreciate the quality of Christian existence in the present. But part of that Christian life style is to stand suspended between the present and the future. The evangelist may have wanted to correct an excessively future orientation without dispensing with the value of the future for the believer.

6. The Spirit. Surely one basis for the affirmation of the present eschatological realities in the Christian community is the way in which the evangelist conceived of the presence of the Spirit of God. Because of the presence of the Spirit, eternal life and resurrection are likewise present. The pneumatology of the gospel is rich and intriguing. It is comprised of two components.

The first is the role of the Spirit presented in the major part of the gospel. In many of these passages the Spirit is thought of in a manner not unlike that found elsewhere in the NT. The Spirit is the presence of God (4:24), and the power and character of God given to Jesus (1:32, 33; 3:34). The Spirit provides new life for believers and is the power which moves one into a new existence (3:5–8; 4:23; 6:63). These ideas are found expressed in the unique Johannine style, of course, but they are similar to views of the Spirit expressed in other early Christian literature.

The second dimension of the Johannine pneumatology is, however, unique to the Fourth Gospel, namely, the concept of the Spirit as the Paraclete ("Counselor," *paraklētos*). This view is found exclusively in a series of four passages within the farewell discourses—14:15–17, 26; 15:26–27; 16:7–11, 12–14. Here the Spirit is called the Paraclete. The word had associations with two different environments in Hellenistic Greek. It was a common forensic term, meaning one who speaks on behalf of another, supports, and intercedes for another in a legal setting. However, it was also used in the religious realm of one who brought words of eschatological comfort to the afflicted. It was also used of the proclaimer of religious truth. The Greek word is found only in the Fourth Gospel and in 1 John 2:1 in the NT. See also PARACLETE.

The religious background of the concept of the Paraclete has been explored with several different conclusions. One influential view suggests that the concept came to the Johannine community out of Jewish angelology of the intertestamental period.

The word may have been chosen for its rich and multiple meanings in a manner similar to the use of the word *logos* in 1:1–18. The evangelist (and/or the Johannine community) sought to enliven and enrich the meaning of the Spirit by designating it with this new word—a word which captured and articulated more of the Christian conviction about the identity and work of the Spirit than was possible in more traditional language. In typical Johannine fashion language is used to break open new meaning.

In the Paraclete passages it is said that the origin of the Spirit is divine. It is sent by the Father at the request of the Son (14:16) and in Jesus' name (14:26), or is sent by Jesus himself from the Father (15:26; 16:13). The Paraclete is termed "another Paraclete" (14:16), "the Spirit of Truth" (14:17; 15:26; 16:13), and "the Holy Spirit" (14:26). It comes only as a result of Jesus' departure (16:7, 8, 13). The function of the Paraclete has to do primarily with the believers' life together. The believers alone recognize the Paraclete (14:17), and it dwells within them (14:16–17). For the believers the Paraclete does a number of things. It teaches them (16:13), announces what will happen in the future (16:13), declares what belongs to Christ and what does not (16:14), glorifies (16:14) and witnesses to Christ (15:26), reminds persons of what Jesus said (14:26), and speaks only what it hears and not out of itself (16:13). With regard to those outside the community of faith the Paraclete is unknown and unrecognized (14:17). Consequently the Paraclete functions as a judge of the world (16:8–11).

The Spirit conceived as Paraclete accomplishes a number of things for the fourth evangelist and the Johannine community. (1) It makes Christ present to compensate for what was experienced as abandonment and loss by his departure. (2) It may have answered the doubt caused by the delay of the parousia. (3) It provided a divine strength for the community amid its crisis of isolation from the synagogue. (4) It provided a means by which persons separated by time from the historical revelation in Christ could avail themselves of its benefits. (5) It brought assurance of knowing that the community of faith was correct and the world wrong as to the identity of Christ. (6) It made present the benefits of the Christian life, including eternal life, resurrection, and release from judgment. (7) It provided divine guidance for the interpretation of the Johannine tradition in the light of the crisis caused by the expulsion from the synagogue.

The view of the Spirit in the gospel revises a traditional understanding of the Spirit with a new dimension and new meaning. In particular, it elucidates the role of the Spirit in making the revelation of God in Christ present for the believer.

7. The Sacraments. No other issue so divides modern scholarship as that of the view of the sacraments in the Gospel of John. The debate centers around several facts about the gospel: (1) the apparent silence of the gospel regarding baptism and eucharist, and (2) the way in which some passages seem to speak of those sacramental acts in a veiled or symbolic manner.

The first fact is that the Fourth Gospel presents the reader with no institution of the eucharist. In the place where the synoptics narrate the origin of the eucharist stands the account of the foot washing (13:1–10). The last meal Jesus celebrates with his disciples before his passion is not a Passover meal at all. Thus one of the basic features of the institution scenes in the synoptics is missing. Furthermore, there is no account of the baptism of Jesus, and there is confusion about whether or not Jesus practiced baptism (compare 3:22 and 4:2). Water baptism is treated critically and assigned strictly to the Baptizer in contrast with Spirit baptism (1:26, 31, 33). One is left with the impression that the sacraments of baptism and eucharist did not figure in the theology of the fourth evangelist.

The second fact with which we must contend, however, is that the gospel employs a number of symbols which, at least to the modern readers, call to mind these two sacraments. Many interpreters take the mention of water in 3:5 as a reference to baptismal water and understand 2:1–11 as a veiled allusion to baptism. Most would read 6:51–59 eucharistically. It has been proposed that the foot washing is a symbolic reference to one of the sacraments. 19:34 is also taken by some to mean that the water of baptism and the blood of the eucharist come from the side of Jesus as a result of his death. Still other passages suggest the sacraments to other interpreters (e.g., 15:1–10).

Efforts to understand these two disconcerting facts range widely. Some understand the evangelist to have been a profound sacramentarian who sought to explicate the meaning of the sacraments rather than to narrate their founding. It is thought that the evangelist may have taken the institutional accounts for granted and saw no reason to retell them. The feeding of the multitude and the bread of life discourse in chap. 6, it is proposed, is an effort to read the eucharist back into the ministry of Jesus, thus making any account of an institution of the meal redundant. The discourse in chap. 3 really has to do with the way in which baptism is the means by which the Spirit brings its gift of new life, contend some.

At the other extreme are those who would argue that the evangelist was either an antisacramentarian or else ignorant of the sacraments. They would argue that there is an effort to direct the attention of the readers away from such physical signs as sacraments. It has been proposed that the sacramental passages of the gospel ("water and" at 3:5 and the discourse in 6:51–59) are the results of efforts of a later redactor to write the sacraments into the original gospel which made no mention of them.

Midway between the two extremes are interpreters who proffer that the evangelist sought to revise a view of baptism and the eucharist. For instance, it is argued that the effort was to direct attention to the spiritual meaning of these rites and away from the physical elements involved in them (as in the insistence that Jesus baptizes with the Spirit and not with water—1:26, 33).

The problem is a difficult one, but one might conclude that there is little in the gospel which must be taken as reference to the sacraments. If the gospel did go through a process of composition in which additional materials were added to the document in the light of new experiences in the Johannine community, it may be that the baptismal and eucharistic hints are additions made at a later stage in the composition process. It may be that the community upon its expulsion from the synagogue did not know or practice the sacraments. This would have been the case as a result of their thoroughly Jewish/Christian

orientation. Later, however, baptism and the eucharist were introduced or reemphasized as part of their new identity as Christians separated from Judaism. This would account for the fact that the eucharistic section of the bread of life discourse (6:51–59) seems to stand out as a secondary revision of the earlier discourse. It would also explain why there is fleeting reference to water in 3:5. The result is that in the final form of the gospel, as we know it, the sacraments have only begun to emerge as significant. Perhaps in that final stage of composition some of the narratives and sayings of Jesus were beginning to be understood in terms of their sacramental importance.

8. The Church. If little can be said with confidence about the role of the sacraments in the Johannine community, little more can be said with regard to its own ecclesiological self-understanding. Interpreters have asserted that there is no developed doctrine of the Church in the gospel. But others have found extensive reference to a view of the Church in the same document. There are a number of important features of the self-understanding of the community which are ecclesiological in nature, even if one cannot justifiably claim on their basis a full Johannine doctrine of the Church.

First, the Johannine community understood itself as living under the influence of the Paraclete through whom the presence of Christ was made real (cf. 6 above). It is not far from the truth to characterize the Johannine church as charismatic (or, better, pneumatic) insofar as it gained its life and existence from the gift of the Spirit. The second thing which can be said of the Johannine community is that it conceived itself as the enclave of the children of God within a world that shared a far different orientation (1:12; cf. 3 above). To a large degree these two characteristics give the Johannine church its definitive shape.

Third, however, it must be said that the Johannine church understood itself as wedded inseparably to Christ. This is evident in the figure of the vine and branches (15:1–7), as well as in the recurrence of the concept of the mutual indwelling of Christ in the believers and believers in Christ (e.g., 6:56; 17:21, 26). The self-understanding of the Johannine community is christocentric.

Fourth, the Johannine community understood itself as a body sent in mission (4:35–38). Their mission is understood once again on a christocentric model. They are sent, even as Christ was sent (e.g., 17:18; 20:21).

Finally, the Church as it is presented to us in the gospel is a diverse and inclusive community. The mission to the Samaritans suggested by 4:1–42 implies that the community may have contained Samaritans and perhaps others of a diverse background. The tension between the Jewish and Hellenistic features of the gospel may be explained by the fact that persons of both backgrounds were part of the community. Furthermore, the prominence of women in the Gospel of John suggests that the community was inclusive in membership and leadership. Mary Magdalene is honored as the first to meet the resurrected Christ and to be sent forth with the news of the resurrection (20:11–18), and other women are portrayed in a positive manner (e.g., 4:1–42; 12:1–8).

H. Value

The value of the Fourth Gospel was debated in the early Church and continues to be a controversial subject. However, a number of clear contributions are made by this gospel. Not least among them is its literary quality (cf. C above). But two other kinds of contributions may be narrowed out for further discussion.

1. The Historical Jesus. In past decades the Fourth Gospel has been dismissed as valueless when it came to the investigation of the historical Jesus. It was thought that John was the "spiritual" or theological gospel that had little interest in the history of the founder of Christianity. More recently, however, that view has been shown to be false for several reasons. First, redaction criticism has demonstrated that the Synoptic Gospels are equally as interested in advancing certain theological ideas as is the fourth. The synoptics as well as John put history to the service of proclamation. Second, the study of the Fourth Gospel has opened avenues for a different assessment of its historical basis. It is rooted in a primitive tradition, just as are the synoptics. It is not necessarily dated as late as some would have thought a century ago (cf. E.1 above). Traditional words and acts of Jesus may in principle be presented in the Fourth Gospel.

In particular there is something to be said for the historicity of the three year ministry of Jesus, as presented in the Fourth Gospel. To be sure, the threefold Passover scheme may be present for theological reasons, but it may nonetheless reflect historical reality. Furthermore, there is no reason to doubt in principle that some of the unique narratives of the Fourth Gospel may have historical roots (e.g., a mission to the Samaritans, 4:1–42). Nor are the words of Jesus necessarily only the product of the mind of the fourth evangelist or the Johannine community. It has been proposed that the discourses may have been a form of midrash of traditional sayings of Jesus. It is possible, therefore, that in the discourse passages there resides authentic words of Jesus which have been reinterpreted in the light of the situation of the community.

This is not to argue that the Johannine gospel presents us with a faithful portrayal of the historical Jesus. Clearly that portrayal is thoroughly filtered through Johannine conceptuality and concerns, and the theological interests of the evangelist figure far more prominently than does the representation of history. But the point is that the value of the Fourth Gospel as a source for understanding the historical Jesus is in general no different than that of the other gospels. It must be critically mined for what might be historical, and each individual saying and each feature of every narrative must be evaluated. It may well be that something of the historical Jesus can be discerned amid the Johannine narratives and discourses.

2. Religious Value. Clearly the greatest contribution of the Fourth Gospel lies in its theological teachings. The Christian church has in practice made the Fourth Gospel definitive for a number of its doctrines, in particular the views of Christ, the Spirit, and the Trinity. But it may be that the religious value of the document lies as much in what it exemplifies theologically as what it specifically teaches.

The gospel represents the results of the efforts of a religious community to define its identity amid a life-threatening situation. In doing that the fourth evangelist invoked the tradition of the community and, so far as we can detect, presented that tradition as one of the resources

by which the community could survive its situation. The Fourth Gospel exemplifies, first of all, the way in which critical situations necessitate the redefinition of identity and the use of religious tradition for that purpose.

But the evangelist was not content simply to repeat the traditional as an answer to the question of Christian identity. There is ample evidence that the tradition of the Church was reinterpreted, expanded, and reshaped in an effort to make it useful to the Christians in the midst of their crisis. The methodology of the evangelist was to interpret tradition in the light of experience. The implication is that tradition is valuable not in and of itself but only as it is interpreted in the light of contemporary experience and need.

The value of this methodology is that it teaches the contemporary religious community that its traditions must always be read and reread in the light of experience. The value of tradition is lost if it is only propagated for its own sake—repeated as a static content to be received and recited generation after generation. Rather, the value of tradition is found in its very dynamic quality whereby it is subjected to new study and new interpretation within a specific, concrete historical situation.

ROBERT KYSAR

JOIADA (PERSON) [Heb *yôyādāʿ*]. Var. JEHOIADA. A name which means "Yahu knows". Joiada (LXX *Iōdae, Iōada*) is the contracted form of Jehoiada found elsewhere in the OT and used alternately in English versions (Neh 13:28; Neh 3:6 KJV).

1. A son of Paseah who worked with Messullam to repair the "Old Gate" on the Wall of Jerusalem under Nehemiah (Neh 3:6).

2. A postexilic high priest listed in genealogies as the son of Eliashib (Neh 12:10–11, 22; 13:38). There are two problems with these chronologies. First, there is some confusion concerning the listing of Joiada father of Jonathan (Neh 12:11) and Eliashib, Joiada, Johanan as the succession of high priests (Neh 12:22). Other passages (Ezra 2:43; Neh 12:23) designate Eliashib as the father of Johanan. Williamson (*Ezra, Nehemiah* WBC) notes that these two passages (Ezra 2:43; Neh 12:23) are related and may refer to another Eliashib and Johanan since they were common names. Also in the chronologies of the high priests (Neh 12:10–11; 22), the use of the word, son, does not necessarily mean father and son relationship. Joiada could be Johanan's brother or he could be Eliashib's grandson. Second, there is a problem with the time span of the list given. The list Eliashib to Joiada to Jonathan to Jaddua suggests a time span of 150 years. Williamson (1977) proposes that it is likely that some of the names of high priests have not been included.

Joiada's son who married the daughter of Sanballat the Horonite (Neh 13:28) is used to describe the enforcement of Nehemiah's ban on foreign marriages. The son was banished from Judah but there is no evidence that Joiada's family was punished in any other way.

GARY C. AUGUSTIN

JOIAKIM (PERSON) [Heb *yôyāqîm*]. A son of Jeshua, the high priest and father of Eliashib (Neh 12:10, 12, 16). His name means "Yahweh raises up" and is a variation of Jehoiakim. His name also occurs in Josephus's *Antiquities,* where he is noted as having died during the Feast of Tabernacles. Because his son Eliashib served as high priest during the time of Nehemiah, his tenure of office can be dated roughly to the early 5th century B.C.

JAMES M. KENNEDY

JOIARIB (PERSON) [Heb *yôyārîb*]. Var. JEHOIARIB. A personal name formed with the theophoric element *yô* (an alternate form uses *yĕhô*) and the imperfect of the Hebrew verb *rîb* which means "Yahweh will contend," "Yahweh contends," or "may Yahweh contend" in the sense of conducting a lawsuit or legal case on behalf of someone (*IPN,* 201, 245). The variety of forms of the name and the question whether, in certain instances, it is patronymic makes uncertain a determination of the number of individuals who bear it.

1. One of eleven (Ezra 8:16) sent by Ezra to Iddo at "Casiphia the place" with a request for "ministers for the house of our God" (v 17). He and another—Elnathan—are described as "men of understanding." It has been suggested that both names should be deleted (as does 1 Esdr 8:42–43—Eng 8:43–44) as a marginal gloss (Rudolph *Esra und Nehemia* HAT, 80; Williamson *Ezra-Nehemiah* WBC, 113); that the name may be a longer form of the previously listed Jarib (see Noth *IPN,* 201). This person's name appears in the LXX as *Iōarib* which is also the Greek spelling (RSV Joarib) of the ancestral head of the priestly family from which the family of Mattathias claimed descent (1 Macc 2:1 Codex Vaticanus; 14:29; Jos *Ant* 12.6.1 = *Iōaribos* where the name describes a priestly "division").

2. The son of Zechariah and father of Adaiah (Neh 11:5) who is listed in a linear genealogy of Maaseiah, one of the sons of Judah, who lived in Jerusalem following the return from Exile. His name in the LXX appears variously as *Iōiarib* (Codex Alexandrinus), *Iōreim* (original reading of Codex Sinaiticus) and *Iōrib* (Codex Vaticanus and the corrector of Codex Sinaiticus).

3. One whose name appears in several lists of priests who returned from the Babylonian exile. In the list preserved in Neh 11:10–13, *yôyārîb* (*Iōrib* = codices Vaticanus and Alexandrinus; *Iōreim* = Codex Sinaiticus) is described as the father of Jedaiah (11:10) who is the first-listed of six (Blenkinsopp *Ezra-Nehemiah* OTL, 322, 325), five (Myers *Ezra-Nehemiah* AB, 187, 236) or four (Rudolph *Esra und Nehemia* HAT, 184, who believes *yākîn* is an error for *ben* thus making *yôyārîb* the "son of" Seraiah) houses or groupings of priests whose number totals 1,192. The list in Neh 12:1–7 numbers twenty-two "heads of the priests and of their relatives in the days of Jeshua" the high priest. *Yôyārîb* (LXX = *Iōiarib*) is listed seventeenth (12:6) of those who came up from Babylon with Zerubbabel the governor and Jeshua. In this list, which Williamson (*Ezra, Nehemiah* WBC, 360) and Blenkinsopp (*Ezra-Nehemiah* OTL, 334) believe depends upon the Joiakim list (Neh 12:12–21), the priestly patronymics are represented as actual immigrants. The "master list" (Blenkinsopp *Ezra-Nehemiah* OTL, 335) in Neh 12:12–21 numbers twenty-one priestly "fathers' houses" with their corresponding "heads" during the time of the high priest Joiakim, the son of Jeshua (Neh 12:10), thus representing the generation after the return. The house or family of *yôyārîb* (LXX = *Iōiarib*) is positioned sixteenth in this list with Mattenai as its head (12:19).

There are two lists in 1 Chronicles where the name of *yĕhôyārîb* (see JEHOIARIB), a "head of a house of a father" of priests (24:4, 6), appears and is assumed to be identical to the *yôyārîb* mentioned in #3 above. The list in 1 Chr 24:7–18 numbers twenty-four divisions of Aaronide priests. This, according to Winter (1956: 216), was sufficient for each division to officiate in the Temple twice a year for a turn of one week according to the lunar calendar (48 seven-day-weeks). The Chronicler attributes this priestly organization of his own day to David (*HJP*^{2} 2: 247) who acted concurrently with representatives of the two recognized branches of the Aaronic priesthood (vv 1–3). This "procedure" *(mišpāṭ)* rested on divine command given to Aaron (v 19). The entire context, suggests Welch (1939: 86–87), reflects an impasse on the constitution of the higher clergy during the period of the Return which required resolution by appeal to a higher (and more revered) authority. The final development of priestly organization in the Hebrew Bible appears to have been reached with this enumeration (Rudolph *Chronikbücher* HAT, 162; Braun *1 Chronicles* WBC, 239) although attempts to date it vary. The method of organization was that of lots (vv 5, 7) and the first lot fell to *yĕhôyārîb* (*Iarib;* Codex Vaticanus = *Iareim*) (24:7). Rudolph (*Chronikbücher* HAT, 161–62) attributes this primary positioning to a genealogical connection with the Hasmoneans (see #1 above) during whose time the redaction of 1 Chronicles 24 occurred. The list in 1 Chr 9:10–13 numbers six priestly "heads of their fathers' houses." Here *yĕhôyārîb* (Codex Vaticanus = *Iōarim,* Codex Alexandrinus = *Iōareib*) is listed second following Jedaiah, a positioning which Rothstein (*Chronik* KAT, 436) attributes to listing the sequence from the standpoint of the Eleazar line rather than from the line of Ithamar to which he believes *yĕhôyārîb* belongs. Because Jedaiah precedes *yĕhôyārîb* here and *yôyārîb* in Neh 11:10 (where the former is called the son of the latter) and because Jedaiah follows *yĕhôyārîb* in 1 Chr 24:7 and *yôyārîb* in Neh 12:6, 19, it has been assumed that *yĕhôyārîb* and *yôyārîb* are variant spellings of the same patronymic.

Yĕhôyārîb is also mentioned in the Talmudic literature: *b. Taʿan.* 29a, where the priestly division so named is described as being on duty when the temple was destroyed; *m. Baba Qamma* 9:12 with corresponding Gemara (*b. Baba Qamma* 111a), where payments and offerings to priestly divisions related to committed robberies are regulated.

RODNEY H. SHEARER

JOKDEAM (PLACE) [Heb *yoqdĕʿām*]. A town situated in the south-central hill country of Judah (Josh 15:56), within the same district as Maon. This settlement is listed among the towns within the tribal allotment of Judah (Josh 15:21–

62). One common, but very tentative, suggestion places the ancient town at modern Khirbet er-Raqqa (M.R. 160096), located approximately 7 km S of Hebron (Boling and Wright *Joshua* AB, 389). LXX B provides the alternative reading *iorkeam,* suggesting a possible relationship between this settlement and a place known as Jorkeam, which appears as a metaphorical descendent of Hebron in 1 Chr 2:44.

WADE R. KOTTER

JOKIM (PERSON) [Heb *yôqîm*]. An individual of Judah, son of Shelah (1 Chr 4:22). The Vulgate seems to reflect a Rabbinic tradition linking Jokim with Elimelech of the book of Ruth. This passage reflects a partial or total conquest of Moab of which Jokim may have taken part.

DAVID CHANNING SMITH

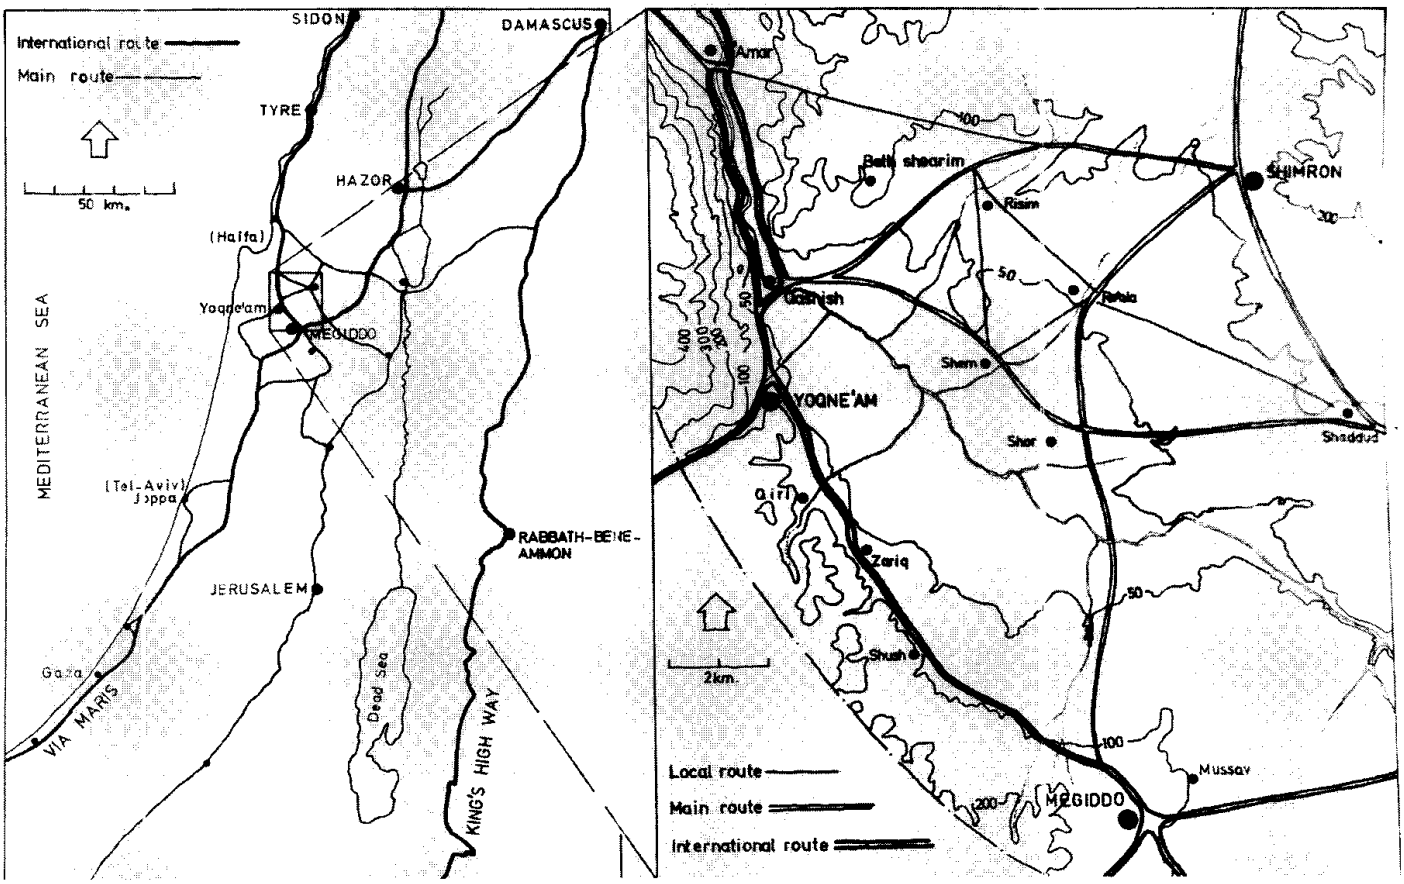
JOKMEAM (PLACE) [Heb *yoqmō*ʿ*ām* or *yoqmĕ*ʿ*ām*]. A levitical city of the Kohathites in Ephraim (1 Chr 6:53—Eng 6:68). In Josh 21:22, the corresponding place in the parallel list is taken by KIBZAIM. According to 1 Chr 23:19 and 24:23, a Hebronite levitical family bore the similar name Jekameam (Heb *yĕqamʿām),* and one could conjecture that since David assigned Hebronite levites to duties on the west side of the Jordan (according to 1 Chr 26:30) perhaps the family of Jekameam should be associated with the levitical city Jokmeam.

Jokmeam also appears as one of the cities in Solomon's fifth administrative district (1 Kgs 4:12). Judging from its placement after Abelmeholah and its placement at the end of the list of towns in that district, some have sought its location on the Ephraimite side in the Jordan valley and have suggested an identification with Tell el-Mazâr (M.R. 195171). According to this perspective, Jokmeam of 1 Kgs 4:12 is the same as the levitical city in 1 Chr 6:53—Eng 6:68. Alternatively, some scholars consider the elements in 1 Kgs 4:12b to be out of order or that some of the elements are explanatory additions, and they interpret that the verse describes the territory of Solomon's fifth district first from W to E from Taanach to Bethshean, and then from S to N extending as far as Jokmeam. According to this perspective, Jokmeam is an alternative spelling or a corruption for Jokneam of Zebulun (Josh 12:22, 19:11, 21:34). See also Aharoni *LBHG,* p. 313; Gray *I and II Kings* OTL, p. 134.

WESLEY I. TOEWS

JOKNEAM (PLACE) [Heb *yoqnĕ*ʿ*ām*]. A city in the Jezreel valley, mentioned in connection with the borders of the tribe of Zebulun and as a Levitical city (Josh 19:11; 21:34). Its king is mentioned in the list of rulers defeated by Joshua (Josh 12:22). The many LXX variants *(iek[o]nam, iekman, iekommam)* indicate some confusion of the labials. The place may be referred to in Judith (7:3) as Cyamon. Eusebius mentions a Kammona (which Jerome rendered as Cimona) located on the road from Legio (near Megiddo) to Ptolemais (= Acco), six miles from the former (*Onomast.* 116.21), which is precisely where Tel Yoqneam lies (M.R. 160229). In the Crusader period this site was called Caymont or Mons-Cain, from which derived the Arabic name of the site, Tell Qeimun.

A. Description of the Site



Tell Qeimun (or Tel Yoqneam) dominates the exit of Wadi Milḥ in the Jezreel valley, hence its strategic importance throughout history. The site is first mentioned in a topographical list of sites in Asia conquered by Thutmoses III: number 113 on this list, *ʿn qnʿm,* should most probably be read *ʿn (y)qnʿm,* "the spring of Jokneam." Numbers 112 and 114 on that list are *ḥrqt* (Helkath) and *kbʿ* (Gaba), identified respectively with Tel Qashish and Tel Shush to the N and S of Qeimun/Yoqneam. The tell itself measures some 40 dunams as it rises steeply to a height of 60 m above its surroundings. The highest point of the site is in its SW corner, from which the surface of the site more gradually slopes to the N and E. Due to the sloping terrain, the buildings of all periods were built upon, and supported by, a series of terraces.

B. The Excavation

The excavation of Tel Yoqneam is the focus of a regional archaeological research project, the Yoqneam Regional Project. See Fig. JOK.01. See also QASHISH, TEL; QIRI, TEL. The site has been excavated since 1977; nine seasons have so far been carried out, and one or two additional seasons are planned in order to reach the earliest (EB) levels of occupation. Several areas have so far been tested, but the main effort was focused in area A (and B) in the N and NW of the site, where an area of about 2 dunams (ca. 5 percent of the site's surface) is being investigated. Twenty-three layers of occupation have been encountered so far spanning MB I through the Ottoman period. Pottery found out of context indicates occupation at the site also during MB I and the EB Age. Such a long time span of ca. 4500 years is very unusual, and is so far unattested at any other site in Palestine, except Jerusalem. Neighboring Megiddo, for example, was abandoned 2000 years before Yoqneam. Not in all periods, however, did the occupation extend over the entire site: during the Mamluk, Byzantine, and Roman periods, for example, occupation was limited to the southern, high part of the site.

1. Bronze Age. The MB and LB strata so far have been unearthed only in two deep sections, located in the NW part of the Tel. During MB I, Yoqneam was fortified by a 3 m wide mudbrick wall, which was substituted in MB II by another fortification wall, only the inner face of its lowest course has been preserved in the area thus far excavated. No trace of any LB fortification has, however, been encountered, and it seems that the site was unfortified. The transition between MB and LB appears to have been peaceful since no sign of destruction between strata XXI and XX was noted. The ceramic assemblages of both periods are varied. An impression of a scarab on a bowl found out of context should be attributed to Amenemhet III (stratum XXIII). The practice of infant burials in jars under the house floors is characteristic of strata XXI–XX. The LB settlement ended in a great disaster evidenced by a 1.5 m thick destruction layer.

2. Iron Age. After the LB destruction, which occurred probably in the second half of the 13th century B.C., the site was abandoned for a period of time, and was reoccu-

JOK.01. Area map of the Jokneam Regional Project. *(Courtesy of the Institute of Archaeology, The Hebrew University, Jerusalem)*

pied towards the end of the 12th or early 11th century B.C. This settlement was unfortified, however; the houses situated at the edge of the site were built so that they formed a continuous defensive line. There are no clear cut criteria by which we can identify the ethnicity of the inhabitants of the site at the time (strata XVIII–XVII). It should be noted that Philistine pottery is extremely rare. By the end of the 11th century B.C. Yoqneam was violently destroyed (stratum XVII). In one of the buildings consumed by the conflagration, two installations designed for the production of olive oil were uncovered. Also found was a large amount of pottery, some of which was clearly imported from the Phoenician coast. Two knives and a sickle blade, all made of iron, are noteworthy. The entire assemblage shows a very close affinity to that of Megiddo VI A, which was also destroyed in a large conflagration at that time. The cause of this destruction is not yet clear: it could have been military (the Israelite conquest of the Canaanite enclaves in the valleys during the time of David?) or natural (the shattered nature of some of the walls suggests that the site was destroyed by an earthquake).

A very massive casemate wall was erected in Yoqneam in the 10th century, which in turn was substituted in the 9th century by an equally massive double wall. These two fortification systems, exposed over a length of ca. 60 m, are very impressive insofar as they were carefully planned and constructed, and accompanied by fine drainage systems. The city's water system should be dated to that period: it has not yet been entirely excavated, but its location (inside the defenses on the NW corner of the tower) has clearly been established. Strata XIV–XII represent a well-fortified Israelite town situated on the NW border of the kingdom facing Phoenicia. Indeed, a large part of the ceramic assemblage as well as other finds attributable to these strata exhibit a distinctively "Phoenician flavor."

Stratum XI reflects a rather limited occupation of the site, in part reusing houses of the previous stratum and partly built on top of the defenses (which were then no longer in use). This settlement probably represents the Assyrian control of the region following the campaign of Tiglath-pileser III in 733/2. No trace of destruction was noted between Strata XII–XI.

3. Persian and Hellenistic Periods. It appears that Yoqneam was rather intensively occupied during the Persian period (6th–4th centuries B.C.) even though it is not mentioned in the records of that time. The architectural features as well as several characteristics of the ceramic assemblage clearly indicate close contacts with the Phoenician coast. An ostracon on which were inscribed Hebrew, Phoenician, and Persian names was discovered, clearly demonstrating the "cosmopolitan" nature of Yoqneam (undoubtedly due to its location on an important international route). The remains of the Hellenistic period are rather scanty, including mainly an isolated watchtower on the N side of the site, several coins, and a ceramic assem-

blage including simple local ware, megarian bowls, terra sigilata, and wine jars imported from the island of Rhodes.

4. Later Periods. The early Islamic settlement (stratum IV: Late 9th/Early 10th century C.E.) is not known from any record of the time. This is a well-planned urban settlement, as evidenced by the regular layout of the streets and by the uniform planning and construction of the houses. Among the ceramic finds were some Egyptian imports. In the Crusader period, Yoqneam was encircled by a defensive wall. A square fortress with corner towers was built on the SW acropolis, and to its E was a church. Although its construction is massive, several features seem to indicate that the church was built in haste, and probably was never completed. The written records indicate that in 1139 Yoqneʿam/Caymont became the administrative center of the region. The site is last mentioned in the Crusader period in a contract dated 1283.

During the Mamluk period (14th–15th centuries) the settlement was confined to the S, higher part of the site: several phases of construction were distinguished in houses which were built over the ruined church and in its vicinity. A violent transition between the Crusader and Mamluk settlements is indicated. Literary sources mention a caravanserai built on the summit of the site by Dahir al-ʿUmar, the Bedouin ruler of the Galilee in the 18th century. This structure was apparently incorporated into the remains of the Crusader fortress, and its remains—which cover the entire area of the acropolis—are still noticeable above ground.

AMNON BEN-TOR

JOKSHAN (PERSON) [Heb *yoqšān*]. A clan name in the genealogy of Abraham by his wife Keturah in Gen 25:2. Jokshan is the second of seven sons born to Keturah. He is described in 25:3 as the father of Sheba and Dedan. This designation is problematic because of two statements in the genealogies in Genesis 10. In the Cushite genealogy of Gen 10:7 Sheba and Dedan are listed as the sons of Raamah. Then, in Gen 10:28, Sheba is described as one of the Arabian tribes descended from Joktan. Winnett (1970: 189) rejects the equation of Jokshan with Joktan on etymological grounds. He suggests that the people of the city of Raamah considered themselves to be descendants of an "eponymous ancestor" named Jokshan. The Dedanites and Sabeans, who later lived in Raamah, simply took up this ancestral line as well.

Like the other sons of Keturah, Jokshan is described as receiving gifts from his father Abraham. However, he was not to share in the inheritance of the land of Canaan and was sent "eastward to the east country" (Gen 10:6).

VICTOR H. MATTHEWS

JOKTAN (PERSON) [Heb *yoqtān*]. Son of Eber, brother of Peleg, and father of thirteen descendants, whose settlements ranged from Mesha to Sephar, in the hill country to the east (Gen 10: 25–30). As a descendant of Shem, Joktan represents that part of the line which, in the Table of Nations, is found in SW Arabia. There is a possible relationship between the name and a figure remembered as the ancestor of the S Arabs, *Qaḥṭān* (Winnett 1970: 181; Simons *GTTOT*, 48–49).

Although it is unclear whether Joktan is a prefixed verbal form of the Sabaean root *qṭn* (cf. Ryckmans 1934 1: 190; Biella 1982: 452), its meaning, "to be small," is associated with this root in West Semitic and appears in geographic names such as Qatna. Its possible appearance here as the last named figure of the Table of Nations to have descendants listed, raises the question of a word play between Joktan and Jepheth, the first named figure in the Table. Jepheth's name is related to the concept of enlarging *(pṯḥ)* in the word play of Gen 9:27, and is also a prefixed verbal form.

The relationship of Joktan to Jokshan, the son of Abraham and Keturah, in Gen 25:2, 3, is not clear. Despite the fact that both figures have "sons" named Sheba and Dedan, the equation of the two names is linguistically implausible, and all ancient versions follow the Hebrew in distinguishing the two. Further, since both are geographic names, the different ancestry in the two chapters may reflect distinct peoples among the inhabitants of both Sheba and Dedan.

RICHARD S. HESS

JOKTHEEL (PLACE) [Heb *yoqtēʾēl*]. **1.** A town situated in the Shephelah, or low-lands, of Judah (Jos 15:38), within the same district as Lachish. This settlement is listed among the towns within the tribal allotment of Judah (Josh 15:21–62). It has been suggested (Boling and Wright *Joshua* AB, 386) that Joktheel may be the same place as Jekuthiel, a place name which appears in 1 Chr 4:18 as the "father" of Zanoah and the "uncle" of Socoh. If this is the case, then a location in the vicinity of Zanoah and Socoh seems likely, although it is not possible at the present time to provide a more precise identification.

2. New name given to the Edomite stronghold Sela (modern Petra) after its capture by Amaziah (2 Kgs 14:7).

WADE R. KOTTER

JONADAB (PERSON) [Heb *yonādāb*]. Var. JEHONADAB. The name of two men in the OT. The name may mean "Yahu is liberal," ". . . is noble," and it has been found on an ancient Heb seal (*TPNAH*, 82, 351).

1. The son of Shimeah, David's brother. He is a friend of Amnon, and advises Amnon how to seduce his sister Tamar (2 Sam 13:3–5). Two years later, it is Jonadab who reassures David that only Amnon has been killed by Absalom, and not all of David's sons (13:32–35). 2 Sam 13:5 has the variant *yĕhônādāb* in all mss. Several mss of the LXX (codices Vaticanus, Alexandrinus, Coisilianus, and Basiliano-Vaticanus) have *iōnadam/b* in 2 Sam 13:3a, however. The Gk Lucian recension and 4QSam[a] read *(yĕ)hônātōn* in 2 Sam 13:3a, confusing Jonadab with Jonathon (see below).

The RSV renders the description of Jonadab in v 3 as "a crafty man". This is misleading, since the Heb literally means "wise". The rabbis elaborated this as "wise for doing evil" (*Sanh.* 21a). McCarter believes that the word "friend" used to describe Jonadab's relationship to Amnon is a technical term for a routine matchmaker, with parallels in Akk terms for a best man (*2 Samuel* AB, 321). The "King's Friend" may have been an actual official; and if part of Amnon's motivation for raping his sister was to succeed to the throne through a matrilineal claim (*ISBE* 2: 977), then Jonadab may have intended to raise himself to this office by helping Amnon. Certainly Jonadab's cool reaction to the news of Amnon's death seems to rule against a true friendship (McCarter *2 Samuel* AB, 333).

Jonadab may be the same as the Jonathan, also son of David's brother Shimeah (or SHIMEI), who slew a Gittite giant in 2 Sam 21:21 and 1 Chr 20:7. See JONATHAN (PERSON) #5; *IDB* 2: 964. In 2 Sam 21:21, most Gk uncials and many cursive mss, as well as the Syr, have *Iōnadab*. In 1 Chr 20:7, the Syr has Jonadab. This and the confusion of Jonadab and Jonathan in some mss of 2 Sam 13:3a make equating the two possible. McCarter, however, believes that Jonathan and Jonadab were brothers, and there was an ancient tendency to identify them (*2 Samuel* AB, 451).

ROBERT D. MILLER II

2. The son of Rechab and the founder of the Rechabite community (2 Kgs 10:15–28, Jer 35:6–7, 1 Chr 2:55) during the reign of Jehu (842–815 B.C.E.). In 2 Kgs 10:15–20, Jonadab accompanies Jehu during his massacre of the followers of Baal. The participation of Jonadab in the revolt of Jehu and zealous purge of the worshippers of Baal are indications of the fanatical devotion to Yahweh of Jonadab and his Rechabite followers.

Jeremiah's dealings with Rechabites in Jeremiah 35 provide further insight into Jonadab and the Rechabites. When Jeremiah offers the Rechabites wine during their visit to the temple, the Rechabites respond quoting the command of Jonadab: "You shall not drink wine, neither you nor your sons; you shall not build a house; you shall not sow seed; you shall not plant or have a vineyard, but you shall live in tents all your days, that you may live long days in the land where you sojourn" (Jer 35:6–7).

While the historical accuracy of the quotation is impossible to verify, it is the only clue available apart from 2 Kings 10 about the possible perspective of Jonadab and the Rechabite community. The quotation suggests that Jonadab and the Rechabites expressed Yahwistic faith by shunning settled life, rejecting agriculture, and holding to some form of pastoralist ideal (cf. Carroll *Jeremiah* OTL, 653; Bright *Jeremiah* AB, 190). Such expression of Yahwism would certainly be consistent with the fervid anti-Baalist crusade in which Jonadab participated with Jehu. 2 Chr 2:55 associates Rechab, Jonadab's father, with the Kenites. See KENITES. If authentic, this connection could support the pastoralist ideal suggested by Jer 35:6–7 (cf. Gottwald 1979: 577).

J. M. BRACKE

JONAH (PERSON) [Heb *yônâ*]. **1.** Jonah, son of Amittai. See JONAH, BOOK OF.

2. One of six Levites who divorced their foreign wives during Ezra's reform (1 Esdr 9:23; Gk *iōanes*). The parallel account in Ezra 10:23 also lists six Levites but differs from 1 Esdras in that it records the name "Eliezer" instead of "Jonah". The difficulties of identifying individuals such as Jonah raise questions about the sources of and literary relationships among Ezra, Nehemiah, and 1 Esdras.

MICHAEL DAVID MCGEHEE

JONAH, BOOK OF. A book of the OT/Hebrew Bible, the fifth in the collection of "Minor Prophets," recounting the story of Jonah, son of Amittai, who was called by God to prophesy against Nineveh.

The book of Jonah is one of the most familiar and popular in the Bible, yet it contains many puzzles. It is difficult to classify and to date. Its precise message is hard to determine. On the face of it it is a very simple, direct narrative, yet it has produced a wide variety of interpretations. The number of questions it raises can be multiplied: Is it "history" or a "story"? What could it have meant to those who included it in the Biblical canon? Is it a unity or the work of various hands? For example, does Jonah's long, psalm-like prayer in chapter 2 belong to the original book or was it added later? Is the book in the "right" place in the Bible? It is located among the prophetic writings but is the only one which consists solely of a story about the prophet, and the only "prophecy" it contains consists of five words in the Hebrew. What connection, if any, is there between the Jonah of the Book and the person of the same name in 2 Kgs 14:25?

To these, and many other questions, there are no simple answers and much critical debate. Furthermore any evaluation should also recognize the remarkable power of the book to move, stimulate, and challenge readers of different religious traditions for over two millennia.

C. Date and Authorship
D. Status of Text and Canonical Position
E. Theological Ideas and Motifs

A. Content and Structure

The book of Jonah, like any composition or work of art, is a self-contained world, one that works by its own rules and logic. Some rules it shares with the rest of the Bible, others are unique. So it is valuable to gain some understanding of how the book is constructed and what methods the author employs, its "internal" system, before asking "external" questions about the authorship, dating, and place in the Bible.

The book divides neatly into two parallel sections of two chapters each (Lohfink 1961; Landes 1967; Cohn 1969; Magonet 1976). Both sections contain certain "key words" whose recurrence highlights the comparison between them. Chapter 1 begins with God telling Jonah to *"arise"* and *"go"* to Nineveh and *"call out"* against it. When Jonah does indeed *"arise"* (1:3), as we would expect of an obedient prophet, it is, however, to flee in the opposite direction, to Tarshish, probably S Spain, at the other end of the world. In response, God unleashes the powers of nature to force him back. On the ship is a pagan crew of sailors who try to understand what is happening to them. They identify Jonah as the cause, seek to discover why and recognize the hand of God in the storm. They do their best to save Jonah. His invitation to them to throw him overboard may be seen as an exercise in self-sacrifice on their behalf or a manifestation of his own death wish—though his "correct" answer would have been a request to be taken back to Jaffa. However, by asking them to throw him overboard, rather than merely jumping himself, he brings them into another difficulty. Trapped between doing nothing, and thus drowning, or throwing him overboard, and thus being punished by death for shedding innocent blood, they pray to God who alone can resolve this "double-bind": "let us not *perish*" (1:14). They throw Jonah overboard and the storm abates. The sailors offer sacrifices and make vows to Israel's God and perhaps, as later Jewish tradition suggests, "convert" thereby to Israel's faith.

Chapter 2 sees Jonah saved from drowning by a "great fish" and praying to God from its belly. God responds and the fish vomits him out.

Chapter 3 introduces a second call, in almost identical language to that of chapter One, utilizing the same three terms: *"arise,"* *"go"* and *"call out"*. This time Jonah obeys completely, he *"arises"* and *"goes"* to Nineveh (3:3) and *"calls out"* (3:4). His few words to the Ninevites, another pagan community equivalent to the sailors, lead them to repent. Even though Jonah's decree offers no hope, their king argues that God might change His mind in response to their change in behavior, if they turn aside from their evil way and their violence. His hope is expressed using the same term that the captain and sailors had: "that we *perish* not" (3:6, 9). God sees how they turn from evil and does not destroy them.

Chapter 4 finds an angry Jonah again praying to God, as in Chapter Two, though here God's response is given in more detail as a dialogue, expressed in words and actions, ensues between them. God "appoints" three more natural agencies to act upon Jonah. As a result, Jonah's desire to die because of his "ideological" distress at the forgiving of Nineveh is replaced by a desire to die because of physical distress (compare 4:3–4 and 4:8–9). In a final question God suggests that Jonah felt "pity" for the plant that gave him shade, something never formerly said about Jonah's actual feelings, surely he could see by analogy why God should have pity on Nineveh with its myriad citizens and animals. The book ends with this question and challenge.

In very general terms chapters 1 and 3 put Jonah in the context of the outer "pagan" world. In both cases the leader of the pagans (the captain, the king) acknowledges that there is a single divine power to whom they turn. It is important to note that two different terms for "God" are used here in quite specific ways. The Heb *ʾelōhîm,* usually translated as "God," is a general term for God (and also divine beings, "other gods," "angels" and powerful human beings)—it is used here as the supreme divine power. The *tetragrammaton, YHWH,* is Israel's name for the supreme God of the world, but with whom Israel has a special covenantal relationship. Whereas the sailors identify the "God" *(ʾelōhîm)* who saves them as Israel's God, and thus make vows to *YHWH,* the Ninevites make an act of repentance before "God" *(ʾelōhîm)* but do not make that step of acknowledging *YHWH.*

Chapters 2 and 4 contain the inner discussion between Jonah and God represented in the language of prayer, of divine responses in words and actions, and some physical activity directed against Jonah's body. The two parts of the Book can be represented in the following table:

Table 1: Structure of the Book of Jonah

CHAPTER ONE	*CHAPTER THREE*
Call (Arise, Go, Call) (v 2)	Call (Arise, Go, Call) (v 2)
Jonah arises—flees to Tarshish (v 3)	Jonah arises—goes to Nineveh (v 3)
God acts—storm (v 4)	Jonah acts—prophesies destruction (v 4)
Sailors call to their gods (v 5)	Ninevites believe, fast, and don sackcloth (v 5)
Captain identifies *ʾelōhîm*'s power behind the storm (v 6)	King dons sackcloth, issues decree, seeks *ʾelōhîm*'s will (vv 6–8)
Sailors seek *YHWH's* will (vv 7–13)	
Sailors pray to *YHWH:* "let us not perish" (v 14)	King orders Ninevites to pray to *ʾelōhîm:* "lest we perish" (v 9)
Storm abates (v 15)	God "relents" (v 10)
CHAPTER TWO	*CHAPTER FOUR*
Jonah saved	Jonah angry
Jonah prays	Jonah prays
God responds	God responds

The symmetry of this structure helps us recognize certain elements of the story that we might otherwise overlook. The parallels between the sailors with their captain and the Ninevites with their king indicate that the former are not merely an accidental background against the story of Jonah's flight. Like the Ninevites they are representatives of the "pagan" world. Like them, they too acknowledge the hand of God in the world, but unlike them they go further in identifying that universal "God" through the name that Israel uses and may indeed come to join Israel. There is therefore a graded universalism within the book. Jonah becomes an instrument for spreading divine knowledge in the world whether consciously obedient or not.

B. Literary Character

1. Poetry and Prose. The book is for the most part a narrative. The "Psalm" in chapter 2 interrupts the story and is a different literary genre. This, among other factors, has led scholars to assume it is an addition. However, there is no *a priori* reason why a biblical book should not contain a mixture of genres or why the same author should not be capable of varying style to suit the point that is to be made. Moreover, recent work suggests that there is no hard and fast line of division between "poetry" and "prose" within the Bible, and that in the case of "poetry" it is more accurate to speak of "heightened language" within Hebrew texts, most of which have some sort of metrical component (Kugel 1981; Christensen 1987).

2. Narrative Devices. a. Word Repetitions. We have already noted that the repetition of the words associated with Jonah's "call" provide a method for comparing the two sections of the book, or, in terms of the narrative itself, comparing the consequences of Jonah's disobedience and ultimate obedience to God's word. This feature of word repetition is particularly common within the book and allows for "subliminal" messages to be conveyed to the reader. A few examples illustrate the effect:

(1) "Go down." The Hebrew root *yārad* occurs three times in the first chapter: Jonah "goes down" to Jaffa and "goes down" into the ship (1:3), during the storm he "goes down" into the inner part of the ship (1:5). In the "Psalm" in chapter 2 he says that he "went down" to the bottoms of the mountains (2:7). In addition there is a word play in 1:5, only recognizable in the Hebrew, where the statement that he "fell into a deep sleep" is expressed as *wayyērādam* in which *yārad* can clearly be heard. There is thus a continuous hint that Jonah's flight from God is not merely "horizontal" to another part of the world, but actually a "descent," ultimately into death and the underworld.

(2) "Great." One of the most frequently repeated words in the book is the term *gādôl,* meaning "great." Among those so designated are: Nineveh (1:2; 3:2, 3; 4:11); the storm wind (1:4) and the storm (1:4, 12); the fear of the sailors (1:10, 16); the fish (2:1); the "great ones" of Nineveh (3:5, 7); and Jonah's anger (4:1). It is also present as a verb meaning to "raise a child," but here in terms of Jonah not "raising" (growing) the plant (4:10). When one remembers that biblical Hebrew uses adjectives very sparingly and that this repetition is quite obtrusive, some explanation is demanded. It may imply that all the events in the story are "larger than life" and suggest that for the author and initial audience this was perceived as a sort of parable rather than true history. Other explanations are possible, but it is a factor that must be taken into account in any evaluation of the story.

(3) "Appointing." In the same vein it is very obvious that four "miraculous" events in the book are introduced by the same verbal root *mānāh,* "to count, number, reckon" and here "appoint": the great fish (2:1); the "plant" (4:6); the worm (4:7); and the wind (4:8). When we couple this information with the awareness that in each case a different divine name *ʾelōhîm* (sometimes with the definite article—*haʾelōhîm* or *YHWH*), or a combination of the two, is used, the reader becomes aware that something more is being conveyed.

Again, the precise nuance is a matter of interpretation, but such features require careful consideration. In this particular case the repetition of the same verbal form with a different subject each time forces the reader to examine the implications of the different usage of divine names on each occasion and suggests that they are not random changes. Whereas in chapters 1 and 3 the use of names is related to the religious perceptions of the "pagan world," the use in chapters 2 and 4 seems to relate to the "private" internal dialogue between Jonah and God. Thus the fish that saves Jonah is "appointed" by *YHWH,* whereas the worm and the wind are "appointed" by variants of the name *ʾelōhîm.* The plant itself, which has a twofold purpose—expressed as a powerful word-play in the Hebrew "to be a shade" over Jonah *(lihyôt ṣēl),* but also to "rescue him" *(lĕhaṣṣîl lô)* from his anger/evil (4:6)—is introduced by both divine names in combination *(YHWH-ʾelōhîm).* Though many commentators assume this division of names is arbitrary, given the general precision with which words are used throughout the book, this seems unlikely. A possible explanation is that for these two chapters a different system of interpreting the names is in operation, a prefiguration of the later Rabbinic view that they represented two different divine attributes—*ʾelōhîm* suggesting God's attribute of justice, *YHWH,* God's attribute of mercy (Strikowsky 1976). Thus the fish that saves Jonah is a "merciful" act, the worm and wind are part of the process of educating Jonah on his own physical person, and the plant, with its double function, to save and to instruct, serves both purposes. Again, other explanations may be possible, but the precision of the utilization of the names must be taken into account.

(4) "Evil." One final example is also highly suggestive, particularly because it shows the variety of meanings contained within the individual Heb root. Thus the word *rāʿâ* refers to the "evil" of the Ninevites that has risen up to God (1:2); the "great evil" of the storm according to the sailors (1:7, 8); and the "evil way" from which the king of Nineveh asks his citizens to turn back (3:8). It is this latter that introduces the most striking sequence utilizing this word. In 3:10, God sees that they turn from their "evil" way, and repents of the "evil" (i.e. punishment) that He had intended to do to them. But this will be experienced by Jonah as "a great evil" (4:1), a phrase usually translated in terms of Jonah being "displeased." Again, the significance of this is subject to a variety of interpretations, but the "evil" that shifts between the Ninevites, God, and Jonah within the space of two verses, binds the three "characters" of the story together at this crucial moment.

b. Use of Quotations. A feature of the book is the presence of a number of sentences and phrases that resemble passages from elsewhere in the Bible (Feuillet 1947; Fränkel 1967; Ackerman 1981). There is a relationship between 4:2 and Exodus 34:6–7 and other passages which we will explore further in the next section. The "Psalm" contains apparent "quotes" from other Psalms—compare 2:4 with Ps 42:8; Jonah 4:5 and 4:9 with Ps 31:23 and 31:7 respectively (see further below). The argument of the king of Nineveh that God might repent if they "turn from their evil way" reflects Jer 18:7, 8, 11; 26:3, 13, 19. Other statements (including the miraculous interventions and his request to die) reflect the episode of Elijah's flight from Jezebel into the desert (compare Jonah 4:8 with 1 Kgs 19:4). Jonah's argument with God (4:2) echoes the language of the children of Israel confronted by the Red Sea on escaping from Egypt (Exod 14:12).

When such parallel passages occur in different parts of the Bible, a number of possible explanations exist: that A quotes B; that B quotes A; that both have a common source; that both were edited in later; that it is purely a coincidence. The relatively large number of such apparent "quotations" and allusions in Jonah is suggestive of a conscious literary ploy by the author, though each case must be argued on its own merits. Nevertheless the contrast between the behavior of Jonah and that of Elijah, the irony of the king of Nineveh quoting Jeremiah's theology back at Jonah, as well as Jonah's use of God's "attributes," all complement the narrative and seem to conform with the author's overall strategy of reversing expectations and conventions.

c. Ironic Inversion. There is one major narrative device that runs throughout the book. We noted above that when God tells Jonah to "arise" and "go," our conditioning as readers of the Bible is to anticipate an obedient response—but our expectations are subverted when Jonah indeed arises, but to go in the opposite direction. The "hero," with whom we would expect to identify, acts in an inexcusable way. Conversely, in the same general way, the sailors, and more shockingly the "evil" Ninevites, behave in exemplary fashion: the former trying to save Jonah and displaying piety and integrity; the latter, in the person of the king, taking the mechanical responses of fasting and sackcloth into the higher dimension of turning away from evil and violence. In short the author reverses the conventions of biblical narrative in terms of the encounter between a prophet and the people, and between Israel and the outside world.

(1) Jonah Prays—Chapter 4. This technique of challenging the reader's natural identification with Jonah recurs in the presentation of Jonah's various statements throughout the book. The most shocking occurs in his prayer to God in the final chapter. What begins as a standard prayer formula "Please Lord" (4:2) (compare the identical opening words of the captain of the sailors, 1:14) concludes with the standard formula used in petitionary prayer, though somewhat disturbing in its content: "now, Lord, take, *please,* my soul from me. . . ." (Compare the negative formula of the captain in his petition: "*please* let us not perish. . . ."). But Jonah's prayerful opening is interrupted as his anger bursts through (4:2): "Is that not my word when I was back on my own land. . . ." But the reader is further shocked when Jonah quotes against God as an accusation the time-honored formula of God's "attributes" of mercy and compassion—"I knew you were a God who is gracious and compassionate, slow to anger and great in mercy and repenting of evil." This formula, expressed in its fullest form as God's response to Moses' request to learn about God's glory (Exod 34:6–7), recurs or is echoed in numerous variations (Num 14:18; Ps 103:8–13; Nah 1:3; Joel 2:13–14). Only here is it thrown back at God as an accusation, when God extends this compassion and willingness to forgive Nineveh. Thus Jonah's prayer, though it utilizes the correct opening and closing terminology, is quite inappropriate.

(2) Jonah Prays—Chapter 2. This device may also be operating in the case of the "Psalm" of chapter 2, which has been identified as a later addition, one of the grounds being its apparent inappropriateness—Jonah giving a psalm of thanksgiving when he is not yet saved (although he has been saved from drowning). Another problem is the absence of any reference in the "Psalm" to his mission or any acknowledgment that he was wrong in fleeing from God. If the author tends to put "inappropriate" prayers into the mouth of Jonah, these absences become quite significant. Jonah is willing to thank God for getting him out of trouble, but not to acknowledge his own responsibility in getting into trouble in the first place. Compare (2:4) "You cast me in . . ." and the concluding "You brought me up . . ." (2:7).

Arguments about the "genuineness" of the "Psalm" fall into two general categories: psychological or stylistic. The former include the suggestions given above that it is inappropriate. Since the "Psalm" does suggest that Jonah is capable of some degree of personal repentance and piety, those who wish to paint him as particularly unredeemable argue that it portrays a Jonah different from the rest of the book. However, since their case depends on excluding the "Psalm" from consideration, their argument is circular. (Incidently, that Jonah could compose a "psalm" while in the belly of a fish is no more absurd than the notion that he could survive in one for three days. Attempts to collect cases of sailors who underwent such an experience are unconvincing.)

Among the "stylistic" arguments, the one that the rest of the book is "prose" and this "poetry" is weak, considering the mixture of poetry and prose in other biblical books. The similarity of the "Psalm" to other "thanksgiving psalms," particularly in its opening and closing sentences, has reinforced the view that it belonged originally to such a collection and was edited into the book. Since the narrative part invokes the cultic area of sacrifices and vows (1:16), it is not inappropriate to have Jonah compose a typical cultic thanksgiving psalm to express his gratitude. More to the point, Jonah's "Psalm" differs significantly from others in the Psalter by maintaining the narrative form in the way it organizes the terminology of the "underworld," so that Jonah's descent is presented as a geographical sequence.

Furthermore, the "Psalm" contains two instances of a key word or phrase being repeated in a strategic manner. Twice Jonah is "surrounded" (the identical form of the Hebrew verb appearing both times)—by the "streams" (surface currents) in v 4 and by the "deep" in v 6; twice he

invokes "Your holy temple"—he looks to it (v 5); his prayer reaches it (v 8). Thus, his physical descent is contrasted with his "spiritual" ascent. This technique of repeating a word or phrase accompanied each time by additional words is also used in the narrative sections of the Book, which would again suggest a common author.

Whereas the opening and closing verses of the "Psalm" and the initial description of the stages of his descent echo similar phrases in other "Psalms" (compare 2:4 with Ps 42:8), during the second phase where he sinks into the very depths, the language is uniquely that of Jonah with no echo elsewhere. Jonah's descent from conventional experience is matched by a move beyond conventional language. The use of phrases from elsewhere in the Bible, with a strong possibility of deliberate borrowing, echoes the technique apparently used in the narrative parts of the book and again points to a common authorship.

A different approach to the authenticity of the "Psalm" is in terms of the structure of the book as a whole, whereby Jonah's "descent" is seen as the mirror-image of the "ascent" of the Ninevites in chapter 3 (Magonet 1976: 60–63).

All the above views can be argued in various ways; however, it is also evident that the narrative part of the book does seem to be dependent on the actual content of the "Psalm" itself (Ackerman 1981). The "Psalm" might be there precisely to indicate the inappropriateness of Jonah's response, in line with other similar inadequacies he has shown. This might explain the comic touch of the fish "vomiting" him out—the word used being particularly strong and implying some disgust. But more specifically, Jonah's closing words include the promise to make a major sacrifice of thanksgiving to God and pay his vows—the language being virtually identical to that of the sailors. Presumably this can only be done in the Temple. Jonah is thus ready to return to Jerusalem and make the appropriate pious gesture in gratitude for being saved. That is why God has to call him "a second time" at the beginning of chapter 3. This repetition of the call is not merely a stylistic device but, in terms of the story, is a necessary reminder to Jonah that he still has an unfulfilled task to complete.

3. Genre. Until the modern period, the historicity of the book, with a few exceptions, seems to have been taken for granted. Thus the references to the sign of Jonah in the Gospels (Matt 12:38–41; Luke 11:29–32) have been important for establishing the "truth" of the book for Christians. Likewise the reading of the book on the Jewish Day of Atonement *(Yom Kippur),* the most solemn day of the Jewish calendar, has given it considerable educational and moral force within the Jewish tradition.

With the rise of historical criticism came the search for sources, as well as scepticism about the miraculous elements and the lack of evidence in external sources of a massive act of "repentance" in Nineveh. This led, in turn, to conservative attempts to "prove" its historical truth. This concern has waned, at least in scholarly circles, and has been replaced with an attempt to identify the precise "genre" of the book: Is it a parable or legend, a folk tale or didactic story? Is it a "satire," or is the humor better defined as "irony" (Good 1965; Rauber 1970; Holbert 1981; Ackerman 1981; Golka 1986)? Should one avoid Western categories altogether and turn instead to biblical or rabbinic terminology in trying to define it—is it thus a *mashal* (a term used of proverbial and parabolic materials) or a *midrash* (a category of Rabbinic exegesis that also includes short parables)? Certainly the book is closer in tone to individual tales about Elijah or Elisha, or to the story of Balaam (Numbers 22–24) than to the historical books as a whole or the historical anecdotes within Isaiah and Jeremiah.

To a large extent these attempts reflect a scientific interest in precise definition and categorization of the biblical materials. However, on another level they may nevertheless indicate a concern with preserving the "religious truth" of the book in an age when its "historical truth" can no longer be assumed. The absence of consensus on an appropriate descriptive term reflects the difficulty of such an exercise given the limited amount of biblical and extra-biblical materials with which to compare it and the unique character of the book itself.

C. Date and Authorship

Dating the book is problematic because there is virtually no direct information and everything has to be derived by internal evidence of varying degrees of trustworthiness (see Wolff, *Dodekapropheton* BK; Allen; *Joel, Obadiah* . . . NICOT).

It is notable that there is no time signature to the book itself, listing the kings during whose reign he prophesied, unlike the majority of the prophetic books. Even if these are late editorial additions, they give a starting point for investigation. The absence of a date may be because the author, and subsequently the editors, assumed that the reader would identify the Jonah of the book as the Jonah of 2 Kgs 14:25, in which case no such additional information was needed. However, it must also be noted that the absence of a time may accord with other features of the author's literary technique. For example, Jonah is not referred to as a prophet throughout the book. This could also be because of assuming the Kings reference, but its effect is to make Jonah an anonymous individual, out of time, struggling with an unacceptable word of God.

Given the lack of direct evidence, scholars have had to work with a variety of factors, linguistic and historical, to determine the date.
